## Introduction

The first mercury thermometer was invented in 1714 A.D. The barometer was invented in 1643 A.D. This opened up a completely new scientific realm. Weather observations grew into the science of meteorology. One of the early American meteorologists was Charles Peirce. He meticulously recorded temperatures at three set times per day for a span exceeding 50 years. In 1847, his weather data was published in *A Meteorological Account of the Weather in Philadelphia from January 1, 1790 to January 1 1847*.<sup>1</sup> Additionally, this book also contained supplementary chapters that included a chronology of early accounts of abnormal weather observations throughout the world. This weather chronology began over 1,800 years ago.

The book by Charles Peirce was the initial source of the material used in this work. All other works cited are note numbered. Because this chronology begins almost eighteen hundred years ago, part of the purpose of including other references was to compare them against Peirce's chronology. I have combined and organized these accounts in chronological order.

At least that was the original intent! But as I delved deeper into validating the chronology given by Charles Peirce, I came across so many other different but complementary chronologies, I just found it hard to resist the desire of combining them into a greater global weather chronology. As a result, I just let this work go where it may and I followed.

The focus of this paper is early (historic) weather events. The chronology cuts off at the year 1900 A.D. Recent weather events are fairly well documented. Excluded from the chronology are events caused by man (such as the 1642 Kaifeng flood which killed 300,000 Chinese) and events caused by other non-weather related catastrophes (such as tsunami waves caused by earthquakes/volcanoes). In some cases, I have noted these events as comments within [brackets]. The chronology does include major volcano induced global cooling events.

This chronology begins at 1 A.D. A few of the source chronologies actually date some weather events as far back as 1,800 B.C. I have left these out of this chronology because the further one goes back in time, the less certain the dates. This is because these chronologies use calendars (such as AM – Anno Mundi), and the events in many cases were derived using a variety of ancient calendars systems. And date uncertainty is introduced in calendar conversion. This is also due to the inexactness within the narrative descriptions.

Why is a chronological listing of weather events of value? If one wishes to peer into the future, then a firm grasp of the past events is a key to that gateway. This is intrinsically true for the scientific underpinnings of weather and climate.

## Definition of Terms

In general, I have used the terminology found in the early chronologies. But I can see where this might be a little confusing to some. Therefore, a discussion of terms is in order.

**Frost Days** – the number of days during the winter when frost is present. Frost is the solid deposition of water vapor from saturated air. It is formed when solid surfaces are cooled to below the dew point of the adjacent air as well as below the freezing point of water, 32° F (0° C) or below.

**Hard Frost** – This type of frost occurs when both the air and soil temperatures drop below freezing. Generally, this happens when temperatures fall below 28° Fahrenheit (or -2° Celsius) for a few hours. A hard frost will kill tender plants.

**Hot Days / Very Hot Days / Extremely Hot Days** – after the invention of the thermometer, early European meteorologist began to describe the severity of summer in terms of the number of hot days, very hot days and extremely hot days. From the analysis of the temperature readings, it appears that hot days are defined as those with temperatures of 25° C (77° F) and greater but less than 31° C (87.8° F). Very hot days are those with temperatures 31° C (87.8° F) or greater but less than 35° C (95° F). And extremely hot days are those with temperatures of 35° C (95° F) or greater.

**Storm** – this term can describe a number of different weather conditions including a violent storm, a lightning storm, a hailstorm, a gale, a storm associated with tornado activity, a flash flood, a major hurricane.

**Inundation or Irruption of the Sea** – These are flood events, which can be caused by heavy rainfall, by unusually high tides, by storm surge or a combination of these. Some of these inundations from the sea are tsunami events caused by massive earthquakes or underwater landslides. (I have excluded non-weather related floods caused by earthquakes and landslides from the chronology when those events could be linked to the cause. But there are many instances where the flood cause is undetermined. These have not been filtered out.)

**Overflow** – Rivers can swell from heavy rains or during spring melt and rise above the banks of the river or levies and create massive floods.

**Freshet** – Most commonly used to describe a flood caused by a spring thaw from snow and ice melt in rivers located in the northern latitudes. Sometimes the term is used to describe a flood caused by a cloudburst.

**Interrupted by the Cold** – Cold weather can interrupt shipping by freezing harbors. Heavy snowfalls can interrupt transportation by blocking roads. Heavy snowfalls also can cause avalanches. Winds can create large snowdrifts that can block roads. Blocked roads and frozen ports can interrupt communications. The normal migration of birds can be interrupted by severe or prolonged cold weather.

**Freezing Rain** – Rain that freezes on contact. Raindrops become super-cooled while passing through a sub-freezing layer of air, and then freeze on contact with any object they encounter.

**Mercury Freezing** – Mercury in thermometers solidifies (freezes) at -37.89 °F (-38.83 °C).

**Norther** — In historical times in the central United States and Mexico, a “norther” was a sudden cold gale coming from the North. Today the term has been replaced by “blue norther”. A blue norther is a swift-moving cold frontal passage in the southern Great Plains, marked by a dark, blue-black sky with strong wintery winds from the northwest or north and temperatures that drop 20° F to 30° F in a few minutes.

**Corn** – Christopher Columbus brought corn [maize] from the West Indies to southern Spain in 1493 and first introducing this crop to Europe. Many early accounts in this chronology refer to corn. The name corn is given to the leading cereal crop of any major region. In England wheat is referred to as corn, while in Scotland and Ireland, it is oats.

**Vines** – Many of these early accounts refer to the vines. In general, these vines are grape vines primarily used in the production of wine.

**Hurricane** — A severe tropical cyclone. The intensity of a hurricane is often described as falling into Categories. Category 3-5 are considered major hurricanes. In general:

A Category 1 hurricane has a central barometric pressure of 28.94 inches (735.1 millimeters) or more and winds of 74 to 95 mph. The storm is accompanied by a 4 to 5 foot storm surge and causes minimal damage

A Category 2 hurricane has a central barometric pressure of 28.5 inches (723.9 millimeters) to 28.93 inches (734.8 millimeters), winds from 96 mph to 110 mph, storm surge 6 to 8 feet, damage moderate.

A Category 3 hurricane has a central barometric pressure of 27.91 inches (708.9 millimeters) to 28.49 inches (723.6 millimeters), winds from 111 mph to 130 mph, storm surge 9 to 12 feet, damage extensive.

A Category 4 hurricane has a central barometric pressure of 27.17 inches (690.1 millimeters) to 27.90 inches (708.7 millimeters), winds from 131 mph to 155 mph, storm surge 13 feet to 18 feet, damage extreme.

A Category 5 hurricane has a central barometric pressure of less than 27.17 inches (690.1 millimeters), winds greater than 155 mph, storm surge higher than 18 feet. Damage Catastrophic.

### Agricultural Cycles

**Nile River Inundation:** The flooding of the Nile River was the life-giving inundation which yearly fertilized the crops in *Egypt*. This annual flood generally peaked in September near Cairo. During the growing season (after the inundation had receded) the Egyptians planted their crops - around October and November - and tended to the fields. The Egyptians watered their crops using an irrigation system of canals or by bringing water to the fields in basins or by using the shaduf, to raise water from the river to the bank of the Nile. By the time the Nile reached its lowest level, some time around March or April, the crops would be ready for the harvest.

The highest point reached by the annual inundation, and very rarely reached, is a little above nineteen cubits. In this case, much cultivable land remains so long submerged that the sowing cannot take place; and it is as barren as a desert for that year, while in some spots which are ordinarily dry, yielded a rare harvest. But at this level, the inundation is accompanied by a great destruction of dwellings and of livestock. When the rise reaches eighteen cubits, there is great rejoicing, for the produce is then sufficient for two years' consumption, after the government dues are paid. When it reaches sixteen cubits, there is enough produce for the wants of the year; and this was called, "the Sultan's flood," because then the Sultan claimed his taxes. Below sixteen cubits, there is more or less scarcity. In these cases the south wind has prevailed, whereas during the good years, the north winds prevailed. The cubit at the Nilometer at Elephantine Island was equivalent to 19½ inches. There were 28 digits in a cubit.<sup>83</sup> [A Nilometer was an ancient structure used to measure the level of the Nile river during floods.]

**India Monsoon:** The success of India's crops from year to year depends upon two monsoons: the southwest, or *the rains*, and the northeast, which brings the winter rains. For a month or two before *the rains* (April and May), the greater part of the peninsula simmers in heat. The soil is baked and cultivation is impossible. With June comes the monsoon, which continues until the latter part of September. After the first showers the peasants plow their fields and sow the autumn harvest of millet and rice. The spring harvest, which consists largely of wheat and barley, is sown in October and November. Droughts can disarrange this schedule. Also prolonged rains, accompanied by east winds, cause the wheat to rust, while hot west winds cause the swelling grain to shrivel on the stalk.<sup>84</sup> More than 99 out of 100 famines in India are due to drought, the failure of the monsoon.<sup>179</sup>

**China Loess:** Over a large portion of the northern *China*, consisting of an area the size of France, there lies a deep deposit of the geological formation known as loess. The loess – from the German *löss* (loose) and called by the Chinese *hwang-tu* – is a sort of loose, sandy soil. This formation consists of a light friable soil, and covers the country to the depth of a hundred feet or more, leveling up the valleys and bringing low the hills. In favorable seasons when the rains are frequent and temperate, the crops grown on the loess are full and generous. It is only necessary for the farmer to scratch the surface and sow his seeds. Manure or other fertilizers are unnecessary, and the usual successions of rich crops, which are commonly yielded has earned for the district the name of the “Garden of China”. But all this fertility depends on the fall of sufficient rain and snow. In seasons when the clouds refuse their moisture; the winds, which prevail blow away the surface soil, and leave the seed grain exposed to the desiccating influence of the sun and the wind.<sup>154</sup>

## Discussion

This document is in *pdf* format. This format is printable and yet at the same time is viewable on computer screens. This format also allows single word searches, such as the name of specific cities, countries, and weather conditions. This format also allows phrase word searches provided they are contained within quotes, such as “diamond dust”.

Generally the original core chronology dates are tied to distinct events that occurred during a year. But within a winter season, several events can occur: the time of the first frost, the time a river first freezes, the time of a major snowfall, etc. This can give the false impression of two hard winters in a row rather than a single hard winter. For this reason, I felt it was important to tailor this chronology by separating out the winter seasons. The problem is that not every listing in the original core chronologies is dated to an exact month. As a result, I made a judgment call. And my judgment will be wrong, sometimes.

The date of these weather events can vary between different accounts. Part of this may be due to the use of different calendar systems such as the Julian calendar and the Gregorian calendar. Sometimes there is confusion between the date of the event and the date of the record. For example if a hurricane occurs in the West Indies in October in the 17<sup>th</sup> century, it might be months before the report reaches London and appears in a newspaper account. This can blur the dating. Sometimes there are no survivors or a few survivors whose sole focus is survival, not record-keeping.

The Japanese began using a Chinese style lunisolar calendar in the 7<sup>th</sup> century. To keep the solar calendar aligned with actual seasons, it was required that the winter solstice always occurs in a non-intercalary 11<sup>th</sup> month. Thus, generally in early lunar calendars, the New Year began on the second new moon following winter solstice. They adopted the Gregorian calendar in 1873. Early Japanese events presented in Aston “Chronicles of Japan” [reference 149] are given using the historical Japanese calendar system.

I have inserted supplementary material where I have felt it appropriate. These inserts are normally contained within brackets [ ]. The inserts are for clarification or to provide my best estimate of the region affected by the weather event. In many cases, when the region was not identified, I analyzed the origin of the material, such as the author’s history and location.

Generally, most famines are caused by abnormal weather such as floods, droughts, storms and frosts. Famines can be thought of as a product of abnormal weather. This is not always the case. Some famines are caused by plagues of insect or other pest, crop disease, or food shortages caused by the actions of man. *The Famines of the World, Past and Present* (Reference 57) identifies 350 famines in various parts of the world. Because of the close interrelationship between famines and weather, I have included this famine information in the chronology unless the cause of the famine was clearly not related to weather.

Since famines can span several years, I have in many instances group them together under multi-year headers.

I have recently added disease, plagues of insects and other pest, crop disease and food shortages in this chronology even though they are not weather events. This is because they are sometimes a secondary product of weather. In years of drought resulting in a severe shortage of water, combined with poor sanitation, plagues of diarrhea and dysentery ran rampant. Many times starvation caused by bad weather goes hand in hand with plagues and disease. Starvation weakens the ability of the body to fight off diseases.

One of the interesting observations noted during the compilation of this work is that hurricanes as they strike islands in the Caribbean and West Indies can sometimes spawn earthquakes or earthquake like events.

The United States [National Weather Service] issued Monthly Weather Reports beginning in 1873. These reports represent a gold standard of weather data. It is astonishing, the depth and breath of weather information contained within these monthly summaries. Because of the immense quantity of weather data contained within these report, only a small subset, which highlights the worst weather events or abnormal weather phenomena were included in this chronology. The records currently available are very incomplete. The following table identifies the reports that were currently available and as a result utilized in the chronology. Hopefully, the remainder of the missing material will surface in the future.

Available U.S. Monthly Weather Reviews

Year	Volume	Jan.	Feb.	Mar.	Apr.	May	Jun.	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.

1900	28							X	X	X	X	X	X

If a weather event is not listed in this chronology; this doesn't mean that the event didn't happen. It just means that I have not thus far stumbled upon a historical account that describes the event. This chronology despite its size is barely scratching the surface of past weather events. It's a hit-and-miss process.

Many of these described weather events resulted in great loss in both human life and property damage. In several cases, the damage from these events was estimated in terms of U.S. dollars or British pounds. These monetary estimates relate to the year of the event and inflation can minimize the true nature of the damage unless these damage figures are adjusted for these inflation rates. Within this weather chronology, I used an Inflation Calculator [<http://www.westegg.com/inflation/>] to adjust for inflation for U.S. dollars (\$) to the year 2010. I used Measuring Worth [<http://www.measuringworth.com/ppoweruk/>] to adjust for inflation of U.K. pounds (£) to the year 2013.

Sometimes it is a little difficult to relate to these early disasters. The number of people in the world has grown over the years. A disaster of the same magnitude today could claim many more lives and cause significantly more damage because the number of people affected and the property put in risk has greatly expanded. As an example, a flood occurred on the River Thames in England in 48 A.D. that claimed 10,000 lives. The population of England increased perhaps a hundred fold from 48 A.D. and today. If a similar event happened in England today, one might expect one million deaths.

China has a long history of recording weather events. Shan-yu Yoa described 1621 flood events and 1392 drought events in China between 206 B.C. and 1911 A.D. in his doctoral thesis (Reference 153). This data was compiled from the great Chinese encyclopaedia known as *T'u-shu Chi-ch'êng*, Section IV "Strange Phenomena" chüan 86-92 and 124-130 and the *Ch'ing Shih Kao* (Draft History of the Ch'ing Dynasty), chapters 40 and 43, "Treatise on Calamities and Anomalies." Shan-yu Yoa converted all the dates from the Chinese lunisolar calendar to the Gregorian calendar within his work. When the records indicate that a certain flood or drought occurred during a certain season or even a certain month, this does not mean that the flood or drought took place over the entire season or month but simply that it fell within that timeframe. [In other words, if a flood took place in May, it did not start on the first day of the month and end on the last day of May, only that the flood took place during the month of May. The converted Chinese month might equate to a period of 27 May – 24 June in the Gregorian calendar. The flood event took place sometime during the given time period.] In cases where there were two cities by identical names within a province, the longitude/latitude location for the specific city is included for clarity. [I lost the top half of page 97. This encompasses the flood data for the time period between 19 August 1362 and 19 July 1365]

I believe other historical chronologies exist that describe weather events and natural disasters caused by weather. If you know of others that can be added to the list, please contact me, so I can expand the search of historical weather data.

This work is not perfect. If while reviewing this work, you should come across an error, please let me know and I will make a correction in the next revision. Simply send an email to [impact@hughes.net](mailto:impact@hughes.net) and tell me about the mistake.

### Important Observations

In compiling this information, I have observed several major findings:

**1. Natural Variation:** Nature can produce a diverse and brutally extreme range of weather events. Every generation experiences weather events so extreme that they are described as "in the memory of the oldest inhabitant nothing like it had ever been known". Today's weather is no exception.

**2. Little Ice Age Weather:** During past Little Ice Ages, winters can be extreme with great snowfalls, frigid cold and significant ice formation on rivers and lakes. The length of winters can increase. But summers can also be very warm.

**3. Threat from Thaws:** When extreme winters strike, there is another threat that occurs. When the great snows melt and the ice on the rivers break up and float downstream, great ice jams can develop especially around the bends of rivers. Ice dams can develop and block the flow of rivers. This process can produce great spring floods.

**4. Great Global Drought:** Droughts can become so extensive that they can grip the entire globe. An example is the global drought of 1876-1879, which struck China, India, Australia, South Africa, Morocco, French Indo-China, the Dutch East Indies, Turkey, Brazil, the United States and Canada. In general, world trade offers a large safety net against future droughts and famines. But sometimes the world gets in a cycle where the entire world is engulfed in a great drought. This can cut holes in this safety net. During 1876-1879 over 16 million people starved to death. (World population has grown 5 fold since the 1870s. An equivalent lost today would be in the order of 84 million people.) The drought not only affected crops but also livestock. In Australia, 10 million sheep died.

**5. Hurricanes:** The intensity and frequency of hurricanes increased during periods of natural global cooling (i.e. Little Ice Ages). Natural global cooling also increases the frequency and intensity of strong Atlantic gales that strike the seaboard of the United States, Canada, England and Western Europe.

**6. Effect of Volcanoes on Weather:** In reviewing the temperature record, I have come to believe most volcanic eruptions have only a minimal impact on global climate. There appears to be two exceptions: the largest volcanoes (those with a Volcanic Explosivity Index (VEI) scale of 7 or greater) and flood basalt volcanic eruption.

**Large Volcanic Eruptions:** The Tambora eruption occurred on 10 April 1815 on Sumbawa Island in Indonesia. It was rated as a 7 on the Volcanic Explosivity Index (VEI). The volcanic eruptions of this size are very rare events typically occurring on a millennium scale. The volcano erupted more than 160 cubic kilometers (38 cubic miles) of magma. This volcanic eruption caused a significant drop in temperatures in the Northern Hemisphere. It is important to note this cooling effect was delayed for almost a year. Analysis of Peirce's temperature data shows that the eruption did not begin to affect Philadelphia, Pennsylvania's weather in the United States until 11 months later in March 1816. Then, temperatures were depressed for nine months before recovering. At its greatest extent, temperatures were 7.7° F (4.3° C) colder than average Dalton Minimum monthly averages. This was also observed in Paris, France. This year was known as the "Year Without Summer". But that does not really begin to describe the event for the people of Philadelphia, the Northeast United States and Canada. It was the year when a hard killer frost occurred in every month of the year. This extreme cold year also ravaged Europe, Africa, the West Indies and Northern China. The volcanic eruption also affected the rain patterns in 1816. The cooler temperatures delayed India's summer monsoon. It brought late torrential rains to India that spawned cholera epidemics. The monsoon in China caused massive floods in the Yangtze Valley. Although the present paradigm infers that this cooling effect is driven by the volcanic release of sulfur aerosols, I will suggest that it is rather due to the ejection of water vapor into the Earth's upper atmosphere where it is reformulated into microscopic ice crystals known as "diamond dust".

**Flood Basalt Volcanic Eruption:** The Laki or Lakagígar volcanic eruption in Iceland took place over an 8-month period during 1783-1784 beginning in 8 June 1783. The eruption produced 14.7 cubic kilometers (3.5 cubic miles) of basalt. Flood volcanic events are different from typical volcanic events in two important areas. First, they generally do not include extreme explosions and as a result do not score high on the VEI scale. The Earth's crust cracks and a large fissure forms, magma oozes out of the ground

rather than released through massive explosions. (The Laki eruption scored only a 4+ on the VEI scale.) Secondly, the magma comes from very deep inside the Earth core and generally releases a richer mixture of gases at the Earth's surface. The release of basalt lava and clouds of poisonous hydrofluoric acid/sulfur-dioxide compounds killed over 50% of Iceland's livestock population, leading to famine which killed approximately 25% of the population of Iceland. It has been said that the Laki eruption killed over two million people globally. But the years 1783-1784 produced a number of extreme anomalies and the Laki eruption was only one of these events. I have provided a discussion of these events within the listing of the year 1783 under the "Fractured Comet Impact Hypothesis".

---

*Notable events include:*

- \* The “Great Storm” that had the intensity of a major Category 2 hurricane which struck England in November 1703.
- \* The mega-tsunami that struck Taiwan and the 1783 comet impact hypothesis.
- \* The severity of winter in the Upper Midwest of the United States during the last Little Ice Age. Refer to the winters of 1680/1681 and 1747/1748.
- \* Massive firestorm that raced through Wisconsin, Illinois and Michigan and into Ontario, Canada in 1871.
- \* The severe winter of 1683/1684 when the English Channel froze.
- \* The drought in Egypt due to a lack of the annual inundation of the Nile River that resulted in a Great Famine of 1199-1202.
- \* The global droughts and famines of 1783-1785, 1876-1879, and 1895.
- \* The three forms of microscopic diamond dust ice crystal (hexagon plates, hexagon columns and the deadly long prisms). The latter type occurs in diamond dust icefalls called by the American Indian name “pogonip” which translates to “white death”.
- \* The tornado outbreaks that struck the United States in 1884 and 1896.
- \* The Galveston Island hurricane of September 1900.
- \* The great storms that struck the Spanish fleet in the Caribbean and the Atlantic Ocean during the summer of 1591.
- \* The severe winters of 642, 763/764, and 775 when the Black Sea froze.
- \* The effects of the Tambora volcanic eruption of 10 April 1815, which cause “a year without summer” in 1816.
- \* The great Atlantic hurricane of 9-16 October 1780.
- \* The Great September hurricanes of 1752, 1782 and 1804.
- \* The Great Storm that struck Wales during the winter of 1171/1172.
- \* The “day of darkness” in New England that occurred on 19 May 1780.
- \* The great flood of 48 A.D and the great storm of 67 A.D. that struck England.
- \* A typical winter in Boston, Massachusetts towards the end of the last Little Ice Age. (Refer to the winter of 1771/1772.)
- \* The thunderstorm that struck Greenland in 1755.
- \* The avalanche of snow in Italy in 1755.
- \* The Atlantic hurricanes of 1553, 1559, 1590, 1591, 1600, 1601, 1605, 1622, 1644, 1666, 1680, 1689, 1694, 1715, 1719, 1722, 1747, 1751, 1752, 1766, 1767, 1768, 1772, 1775, 1776, 1780, 1781, 1782, 1784, 1785, 1791, 1800, 1804, 1813, 1815, 1817, 1825, 1831, 1870, 1873, 1893, 1899, and 1900.
- \* Typhoons/Cyclones that struck
  - China in 1166, 1474, 1748, 1822, 1862, 1874, and 1881.
  - Vietnam 1881.
  - Bangladesh in 1584, 1699, 1737, 1767, 1787, 1822, 1831, 1876, 1886, and 1897.
  - India in 1737, 1749, 1782, 1789, 1833, 1839, 1854, 1864, 1867, 1875, 1876, 1882, and 1886.
  - Australia in 1795, and 1899.
  - Japan in 1828.
- \* The great lightning storm that struck southern France in 753.
- \* Powerful storms that struck the coasts of France, Spain and England in 1751.
- \* Powerful storm that struck the western coast of England in 1757.

- \* The great winter in Germany in 760/761, 1019/1020.
- \* The Canadian winter of 1741/1742.
- \* The severe European winters of 566/567, 821/822, 859/860, 874/875, 993/994, 1076/1077, 1114/1115, 1132/1133, 1149/1150, 1216, 1233/1234, 1305/1306, 1323/1324, 1363/1364, 1407/1408, 1433/1434, 1459/1460, 1490/1491, 1564/1565, 1594/1595, 1607/1608, 1620/1621, 1621/1622, 1657/1658, 1669/1670, 1680/1681, 1683/1684, 1691/1692, 1708/1709, 1739/1740, 1748/1749, 1753/1754, 1762/1763, 1766/1767, 1775/1776, 1781/1782, 1783/1784, 1784/1785, 1788/1789, 1794/1795, 1798/1799, 1812/1813, 1819/1820, 1829/1830, and 1844/1845.
- \* The Chinese winters of 1445/1446, 1510, 1574, 1627/1628, 1655, 1691, 1749, 1751/1752, and 1863/1864.
- \* The severe North American winters of 1696, 1697, 1716/1717, 1740/1741, 1742/1743, 1747/1748, 1761/1762, 1764/1765, 1765/1766, 1771/1772, 1779/1780, 1783/1784, 1786/1787, 1798/1799, 1799/1800, 1804/1805, 1806/1807, 1814/1815, 1816/1817, 1820/1821, 1830/1831, 1834/1835, 1835/1836, 1856/1857, 1863/1864, 1883/1884, 1884/1885, and 1898/1899.
- \* The winters when the Nile River froze: 829/830, 1011, and 1691/1692.
- \* The great winters of 1783/1784 and 1784/1785 in the Northern Hemisphere, followed by great spring floods as the snow melted.
- \* Mild Russian winters of 1303/1304, 1753/1754, 1758/1759, 1818/1819, and 1821/1822.
- \* This chronology is overflowing with times of Great Famines. Famines caused by excessive rainfall, droughts, hailstorms, severe winters, and summers robbed of the sun's heat. Here is but a few examples:
  - China in 463-464, 1033, 1328, 1333-1337, 1354, 1458, 1476, 1522, 1787, 1810-1811, 1846, 1849, and 1875-1878.
  - Japan in 626, 1230, and 1782-1788.
  - Korea in 1784.
  - India in 942, 1022, 1052, 1327, 1345, 1396, 1556, 1596, 1630-1631, 1661, 1769-1770, 1780-1784, 1790-1792, 1802-1807, 1810, 1812-1813, 1823, 1832-1835, 1865-1866, 1868-1870, 1873-1874, 1876-1878, and 1896-1900.
  - Bangladesh in 1780-1784, and 1873-1874.
  - Pakistan in 1780-1784.
  - North Africa in 484 and 1784-1785.
  - Egypt in 966/967, 1064-1071, 1199-1202, and 1784-1785.
  - Iran in 1870-1872.
  - Western Europe in 1033.
  - England in 310, 680, 700, 1004-1016, 1234, 1239, 1257-1259, and 1314-1316.
  - Ireland in 963-964, 1116, and 1845-1851.
  - France in 869, and 1030-1032.
  - Scotland in 936-939, 954, and 1695-1699.
  - Italy in 410, 450, 538, 776, 1230, and 1347.
  - Belgium in 1587.
  - Germany in 1310-1319, 1347, and 1772.
  - Poland and Bohemia in 1281, 1312, 1315, 1737, and 1770.
  - Hungary in 1505, 1782, and 1808.
  - Finland and Estonia in 1695-1697, and 1867-1868.
  - Russia in 1024, 1128, 1212, 1215, 1230, 1445, 1600-1602, 1701, and 1891-1892.
  - Turkey in 1873-1876.
  - Mexico in 1454, and 1785-1786.
  - Cape de Verde Island and the Island of Sumatra in 1775.
- \* The tornado that struck Charleston, South Carolina in 1761.
- \* The ice hill at Shanghai, China during the winter of 1769/1770.
- \* The dense fog in the Netherlands during the winter of 1790/1791.
- \* The great hailstorm of 13 July 1788.

- \* Many great hailstorms such as the ones that struck
  - France in 823, 1360, 1510, 1562, 1760, 1768, 1774, 1844 and 1865.
  - Italy in 1353, 1510, and 1834.
  - England in 130, 450, 459, 1479, 1697, 1765, 1784 and 1862.
  - Scotland in 1790.
  - China in 1724 and 1745.
  - Belgium in 1771.
  - Portugal in 1749.
  - Spain in 1829.
  - Mongolia in 1843.
  - Australia in 1796 and 1824.
  - The United States in 1878, 1882, 1894, and 1896.
  - Turkey in 367.
  - Hungary in 1808.
  - India in 1769, 1879 and 1888.
  - Germany in 1104, and 1767.
- \* Many great floods such as the ones that struck
  - France in 580, 1543, 1755, and 1875.
  - Italy in 590, 1165, 1530, and 1627.
  - Spain in 1617, 1787, and 1878.
  - England in 1736, and 1763.
  - Scotland in 1829.
  - China in 11 A.D., 516, 792, 1117, 1310, 1330, 1332, 1342, 1391, 1459, 1467, 1507, 1541, 1549, 1573, 1590, 1609, 1797, 1833, 1845, 1854, 1875, 1887, and 1888.
  - India in 1787-1788, and 1814.
  - Egypt in 393.
  - Belgium in 1108, 1113, and 1134.
  - Norway in 1216.
  - Denmark in 1630, and 1646.
  - The Netherlands in 1219, 1228, 1287, 1374, 1396, 1421, 1521, 1530, 1568, 1570, and 1646.
  - Germany in 1300, 1362, and 1515.
  - Poland in 1534, and 1813.
  - Austria in 1830.
  - Slovakia and Bulgaria in 1813.
  - Hungary in 1875.
  - Russia in 1777, and 1824.
  - European in 1342, 1595, 1816, and 1817.
  - Mississippi River in the United States in 1543, 1785, 1813, 1844, 1874, 1882, 1890, 1892, and 1897.
- \* The heat wave in
  - China in 1743.
  - France in 1793.
  - Italy in 1841.
  - Europe in 1817.
  - Australia in 1895/1896.
  - United States in 1896.
- \* A sandstorm that struck Syria in 1813.
- \* The tornado that struck Washington D.C. in 1814.
- \* The drought that produced great fires in the peat beds of Europe in 1834.
- \* The great brushfires in Australia known as *Black Thursday* in 1851. [Refer to Australian Drought of 1847-1860.]
- \* Violent cloudburst and flashfloods in the American West described in 1874.
- \* The great spring floods in North America in 1881 - 1884.
- \* The blizzards that struck the U.S. during the winter of 1887/1888.

- \* The severe droughts and forest fires in America in 1887, and 1889.
  - \* The great 3-day flood that struck the U.S. beginning 30 May 1889.
  - \* The electrostatic windstorms in the U.S. of December 1894, and January 1895.
  - \* Mudstorms of April 1895 & 30 April 1899; the black snowfall of 3 April 1889; and the black snow duststorm of 11/12 January 1895.
  - \* "Ignis Fatuus" (jack-o'-lantern or will-o'-the-wisp) of 1693/1694, March 1729, and 16 April 1897.
  - \* "Snow Rollers" of December 1895, and January 1898.
  - \* "Flaming Ocean" on 13 February 1785.
  - \* "Chain Lightning" (or bead lightning) on 18 August 1876 and in February 1894.
  - \* The legends of great dragons. Refer to 1189, 1214, 1221, 18 October 1224, 1452, 1512, 1519, 1605, 1608, 1609, 1660, 1667, 1735, 1739, 1749, 1773, and 1787.
  - \* "Pillar of Smoke" on 30 July 1662 and 5 May 1752.
  - \* The symbiotic relationship between reindeer and man. Refer to April 1737.
  - \* An ancient Roman castle buried under the Rhine River. Refer to 16 January 1750.
  - \* The ebony forest buried in Wales. Refer to 1171.
  - \* The ebony forest buried in the marshes of England. Refer to the summer of 1666.
  - \* The treasures from the Gothic Invasion buried in France. Refer to 1557.
  - \* The Temple of Hercules buried in Spain. Refer to 26 March 1731.
  - \* Unusual hailstorms of 25 May 1686, 14 March 1813, 26 March 1882, and 11 May 1894.
  - \* The forest that suddenly disappeared in Poland. Refer to 31 May 1783.
  - \* Meteors of 1526, 21 December 1876, and 19 March 1887
  - \* The people of France feared the millennial year 1000 A.D. marked the end of the world, so they stopped working; abandoned farming. And guess what followed!
-

**2 A.D.** In 2 A.D., there was a severe drought in Shantung (now Shandong province) on the east coast of *China* at Lin-tzū during the period of 1-30 May. This also brought on a plague of locusts.<sup>153</sup>

---

**6 A.D.** A famine struck Rome, *Italy*.<sup>57, 72, 91</sup>

In the 43<sup>rd</sup> year of Augustus Caesar, happened a terrible famine in Rome, on which Augustus sent away not only strangers, but most of his servants out of the city.<sup>72</sup>

---

**7 A.D.** There was a great flood in the valley of Thames in southern *England*; many persons were drowned and cattle destroyed.<sup>47, 92</sup>

In *England*, there was a flood in the River Thames, fatal to men, women, children and cattle.<sup>72</sup>

[Other sources place this event in the year 9 A.D.] The Thames destroyed a great number of the inhabitants of its banks, 9 years after Christ.<sup>40, 41, 43</sup>

---

**9 A.D.** There was a great overflow of River Humber in *England*, flooding the country all round.<sup>47, 92</sup>  
[The River Humber is located in northeast-central England. It is a large tidal estuary and North Sea inlet, separating Yorkshire from Lincolnshire.]

In *England*, the River Humber drowned the whole country for several miles.<sup>72</sup>

In 9 A.D., the town of Pickering in North Yorkshire, *England*, was burnt by lightning.<sup>72</sup>

In the 43<sup>rd</sup> year of Augustus Caesar, a terrible famine struck Rome, *Italy*. Augustus sent away not only strangers but also most of his servants out of the city. [Because he could no longer feed them.]<sup>72</sup>

---

#### **10 A.D. – 15 A.D. Ireland. Famine**

In *Ireland*, during this 6-year period, there was a general fruitlessness [poor harvest], which gave rise to famine and great mortality.<sup>57, 91</sup>

---

**11 A.D.** There was a great flood in *China*. The Yellow River [Huang He River] breached its dikes [levees], and the river changed course and forged a new path to the sea, a hundred miles away from its former mouth. Repair work took several decades.<sup>142</sup>

In 11 A.D., there was a flood in Honan (now Henan province) in central *China* at Lin-chang.<sup>153</sup>

---

**14 A.D.** There was a great overflow of River Severn in *England*, causing great damage.<sup>47, 72, 92</sup> [The River Severn is the longest river in Great Britain (354 kilometers, 220 miles). The river rises in Wales and enters Bristol Channel at Gloucestershire which in turn discharges into the Celtic Sea.]

*Also refer to the section 14 A.D. – 15 A.D. for information on the famine in Ireland during that timeframe.*

---

**15 A.D.** In Rome, *Italy*, the Tiber River overflowed and did such serious damage that it was proposed in the Roman Senate to diminish its waters by diverting some of the chief tributaries.<sup>47, 92</sup>

*Also refer to the section 14 A.D. – 15 A.D. for information on the famine in Ireland during that timeframe.*

---

**18 A.D.** In 18 A.D., a hurricane struck England and the city of *Westminster* was shattered.<sup>72</sup>

---

**24 A.D.** In 24 A.D., the city of Caerleon in south *Wales* was burnt by lightning.<sup>72</sup>

---

---

**27 A.D.** In 27 A.D., there was a severe drought in Honan (now Henan province) in central *China* at Loyang during the period of 21 August - 19 September.<sup>153</sup>

---

**28 A.D.** In 28 A.D., there was a flood in Hopei (now Hebei province) in northern *China* at P'u-yang.<sup>153</sup>

---

**29 A.D.** There was a great overflow of River Trent in *England*.<sup>47, 92</sup> [The River Trent flows from Staffordshire through the Midlands to the Humber Estuary where it empties into the North Sea.]

In *England*, the River Trent in the night drowned the country many miles.<sup>72</sup>

In 29 A.D., there was a drought in *China* during the period of 3-31 May and a plague of locusts.<sup>153</sup>

---

**30 A.D.** In 30 A.D., there was a drought in *China* during the period of 19 July - 17 August.<sup>153</sup>

---

**31 A.D.** In 31 A.D., there was a flood in Hunan province in south-central *China* on the Lo River during the period of 9 July - 6 August. People drowned and houses were damaged.<sup>153</sup>

---

**32 A.D.** In 32 A.D., there was a flood in *China* during the period 8 August - 8 November.<sup>153</sup>

---

**33 A.D.** There was a great overflow of River Dee, which caused great damage at Chester in northwest *England*.<sup>47, 72, 92</sup> [The River Dee travels through Wales and England.]

In 33 A.D., there was a drought in *China* during the period of 5 February - 6 May.<sup>153</sup>

---

**36 A.D.** In 36 A.D., there was a drought in *China* during the period of 13 June - 12 July.<sup>153</sup>

---

**37 A.D.** There was an overflow of River Medway in southeast *England*, and many cattle drowned.<sup>47, 72, 92</sup>

---

**42 A.D.** In Judea [*Israel*], the area was desolated by a famine.<sup>57, 91</sup>

Awful famine in *Egypt* in 42 A.D.<sup>90</sup>

In 42 A.D., there was a drought in *China* during the period of 13 June - 12 July.<sup>153</sup>

---

**43 A.D.** In the year 43, a violent storm almost destroyed Emperor Claudius near the islands of the southern coast of *France* [Claudius sailed from Rome to visit England. He was almost shipwrecked twice, first off the Ligurian coast and then near Isles d'Hyères. The storms were caused by the penetrating cold wind, known as the mistral.]<sup>79</sup>

---

**45 A.D.** In 45 A.D., there was a drought in *China* during the period of 4 July - 1 August.<sup>153</sup>

---

**46 A.D.** In *Syria*, there was a very great famine.<sup>72</sup>

---

**48 A.D.** The River Thames in *England* flooded and 10,000 drowned.<sup>28</sup>

The River Thames in southern *England* overflowed. The water extended through four counties. 10,000 people drowned and there was much damage to property.<sup>47, 92</sup> [The population of England increased perhaps a hundred fold from 48 A.D. and today. If a similar flood event happened in England today, one might expect one million deaths.]

The Thames in *England* drowned 10,000 people with much cattle in the night in 4 counties.<sup>72</sup>

In the year 48, there was a general [universal] famine.<sup>72</sup>

---

**50 A.D.** There was a severe winter in *England* and all rivers and lakes froze from November to April.<sup>28</sup>

---

**51 A.D.** A great famine in *Greece*.<sup>57, 72, 91</sup>

---

**52 A.D.** A great famine struck Rome, *Italy*.<sup>72</sup>

---

The city of Winchester in *England* was burnt by lightning.<sup>72</sup>

---

**54 A.D.** A grievous famine struck *England*.<sup>57, 72, 91</sup>

---

In 54 A.D., there was a flood in *China* during the period 25 June - 2 July.<sup>153</sup>

---

**55 A.D.** In 55 A.D., there was a flood in *China* during the period 14 June - 13 July.<sup>153</sup>

---

**57 A.D.** There was a great famine in *England* and dearth and plague after.<sup>72</sup>

---

**58 A.D.** In 58 A.D., there was a drought in *China* during the period of 11 June - 9 July.<sup>153</sup>

---

**60 A.D.** In 60 A.D., there was a flood in Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

In 60 A.D., there was a drought in *China* during the period of 6 May - 8 August.<sup>153</sup>

---

In 60 A.D., part of the city of Edinburgh, *Scotland* was burnt by lightning.<sup>72</sup>

---

**65 A.D.** In 65 A.D., there was a flood in 14 Commanderies of *China* during the period of 8 August - 8 November.<sup>153</sup>

---

In 65 A.D., there was a drought in *China* during the period of 8 November 65 - 5 February 66.<sup>153</sup>

---

**66 A.D.** In 66 A.D. in the Oise region of *France*, the winter was very cold.<sup>171</sup>

---

**67 A.D.** A hurricane blew down 15,000 houses in *England* and killed a multitude.<sup>72</sup>

---

**68 A.D.** [In *England*, there was a volcanic eruption followed by an inundation of the sea [tsunami]. The Isle of Wight separated from Hampshire.<sup>92</sup>]

---

In *England* by a Flood and Earthquake, Isle of Wight was torn from Hampshire.<sup>72</sup>

---

In 68 A.D., there was a drought in *China* during the period of 16 September - 15 October.<sup>153</sup>

---

**69 A.D.** In the year 69, part of London, *England* was burnt by lightning.<sup>72</sup>

---

**70 A.D.** Tacitus reports that an unprecedented drought took place in the year 70. There was no water in the north of *Gaul* [western Europe] and the Rhine River in western *Germany* was barely seaworthy [because of the low water level].<sup>79</sup>

---

**72 A.D.** In 72 A.D., there was a drought in *China* during the period of 2 September - 1 October.<sup>153</sup>

---

**75 A.D.** In 75 A.D., there was a drought in *China* during the period of 5 April - 4 May.<sup>153</sup>

---

**76 A.D.** A famine caused great scarcity in *Ireland*.<sup>57, 91</sup>

In 76 A.D., there was a drought in *China*.<sup>153</sup>

---

**77 A.D.** In 77 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 6 May - 8 August.<sup>153</sup>

---

**79 A.D.** In 79 A.D., there was a drought in *China* during the period of 6 May - 8 August.<sup>153</sup>

---

#### **79 A.D. – 88 A.D. Italy. Famine**

There was a terrible period of suffering from 79 to 88 A.D. when the Roman world seemed to be shaken to its physical foundations. A devastating drought and famine swept over the *Italian peninsula*. It is said that 10,000 citizens died in a single day at Rome during its height. Tacitus left a grim picture of the distress and suffering. Houses were filled with dead bodies and the streets with funerals.<sup>84</sup>

---

**80 A.D.** There was a great overflow of River Severn in *England*; many people and cattle were drowned.<sup>40, 41, 43, 47, 72, 92</sup>

In 80 A.D., there was a drought in *China*.<sup>153</sup>

*Also refer to the section 79 A.D. – 88 A.D. for information on the drought and famine in Italy during that timeframe.*

---

**84 A.D.** In 84 A.D., there was a drought in *China* during the period of 5 February - 6 May.<sup>153</sup>

In the year 84, the city of Canterbury, *England* was burnt by lightning.<sup>72</sup>

*Also refer to the section 79 A.D. – 88 A.D. for information on the drought and famine in Italy during that timeframe.*

---

**85 A.D.** In 85 A.D., there was a drought in *China*.<sup>153</sup>

*Also refer to the section 79 A.D. – 88 A.D. for information on the drought and famine in Italy during that timeframe.*

---

**86 A.D.** In 86 A.D., there was a great overflow of River Medway in southeastern *England*; causing a loss of life.<sup>47, 72, 92</sup> [Another source place this flood in the year 87.] In the year 87, the Medway overflowed its banks, and drowned the country.<sup>40, 43</sup>

*Also refer to the section 79 A.D. – 88 A.D. for information on the drought and famine in Italy during that timeframe.*

---

**88 A.D.** In 88 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 8 June – 6 July.<sup>153</sup>

*Also refer to the section 79 A.D. – 88 A.D. for information on the drought and famine in Italy during that timeframe.*

---

**89 A.D.** In 89 A.D., there was a flood in 9 Commanderies of *China* during the period of 26 July – 24 August.<sup>153</sup>

---

**90 A.D.** In 90 A.D., there was a drought in 14 Commanderies of *China*.<sup>153</sup>

---

---

**92 A.D.** In 92 A.D., there was a drought in *China* during the period of 5 February - 8 August. This brought on a plague of locust. Crops were damaged.<sup>153</sup>

---

**94 A.D.** In 94 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 31 July - 29 August.<sup>153</sup>

---

In the year 94, the city of Bangor, *Wales* was burnt by lightning.<sup>72</sup>

---

**95 A.D.** The Humber River in *England* overflowed and laid the adjacent country for 50 miles (80 kilometers) under water.<sup>40, 41, 43, 47, 72, 92</sup>

---

The Humber in *England* by a flood, drowned people and cattle for 50 miles.<sup>72</sup>

---

**97 A.D.** In 97 A.D., there was a drought in *China* during the period of 26 June - 27 July. This brought on a plague of locust.<sup>153</sup>

---

**98 A.D.** In 98 A.D., there was a flood in Honan (now Henan province) in central *China* at Loyang during the period of 18 June - 16 July. Houses were damaged.<sup>153</sup>

---

In the year 98, Camelon, *Scotland*, the Picts chief town, was burnt by lightning.<sup>72</sup>

---

**100 A.D.** In 100 A.D., there was a drought in *China* during the period of 5 February - 6 May. This was followed by a flood in Honan (now Henan province) in central *China* at Wu-yang and Yü during the period of 24 July - 22 August.<sup>153</sup>

---

**103 A.D.** In 103 A.D., there was a drought in Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng.<sup>153</sup>

---

**104 A.D.** A famine struck *England* and *Scotland*.<sup>57, 91</sup>

---

There was a famine in the north of *England* and *Scotland*.<sup>72</sup>

---

In 104 A.D., there was a drought in *China* during the period of 9 August - 7 September. [In order to minimize the effect,] 50% of the land tax was remitted [back to the taxpayers].<sup>153</sup>

---

### **105 A.D. – 125 A.D. China. Famine**

During the reign of Emperor Ngan-Ti [105-125 A.D.] of *China*, there was a time of great scarcity. Many people must have perished.<sup>186</sup>

---

**106 A.D.** In 106 A.D., there was a flood in 37 Commanderies of *China* during the period of 19 June – 18 July. It flooded again in *China* during the period of 15 October - 13 November.<sup>153</sup>

---

**107 A.D.** A famine struck *Britain* after long rains.<sup>57, 72, 91</sup>

---

In *England* in 107 A.D., it rained 9 months, washed corn [grain] out of the Earth, and drowned cattle.<sup>72</sup>

---

In 107 A.D., there was a drought in 8 Commanderies of *China*. In the same year, there was a flood in 41 Commanderies of *China*. There was a flood in Honan (now Henan province) in central *China* at Loyang during the period of 3 November - 2 December.<sup>153</sup>

---

**108 A.D.** In 108 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 28 May - 25 June. This was followed by a flood in Honan at Loyang during the period of 26 June - 25 July. In 108 A.D., there was a flood in 40 Commanderies of *China*.<sup>153</sup>

---

**109 A.D.** In 109 A.D., there was a drought in 8 Commanderies and a flood in 41 Commanderies of *China*. In the same year, there was a flood in Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**110 A.D.** In 110 A.D., there was a flood in 3 Commanderies of *China*. There was also drought in *China* during the period of 6 May - 8 August.<sup>153</sup>

---

**111 A.D.** In 111 A.D., there was a flood in 8 Commanderies of *China*. There was also drought in *China* during the period of 6 May - 8 August.<sup>153</sup>

---

In the year 111, Chester, *England* was burnt by lightning.<sup>72</sup>

---

**112 A.D.** In 112 A.D., there was a drought in *China* during the period of 12 June - 11 July.<sup>153</sup>

---

**113 A.D.** In 113 A.D., there was a drought in *China* during the period of 2 June - 30 July. The land tax was remitted.<sup>153</sup>

---

**114 A.D.** In 114 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang and also in 5 Commanderies of *China* during the period of 6 May - 8 August. Then there was a plague of locusts.<sup>153</sup>

---

**115 A.D.** There was an overflow of River Severn in *England* during the night; a great loss of life and cattle.<sup>47, 72, 92</sup>

The River Severn in *England* overflowed and drowned 5,000 head of cattle and people in their beds.<sup>40, 41, 43</sup>

In 115 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 10 June - 9 July.<sup>153</sup>

---

**116 A.D.** In 116 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 30 April - 28 May.<sup>153</sup>

---

**118 A.D.** In 118 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang and in 5 Commanderies of *China*.<sup>153</sup>

---

**119 A.D.** A famine struck *Britain* “after a pillar of fire was seen for several nights in the air”.<sup>57, 72, 91</sup>

In 119 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 27 May - 25 June.<sup>153</sup>

---

**120 A.D.** In 120 A.D. the Meuse River [in *northwestern Europe*] flooded.<sup>171</sup>

---

**121 A.D.** In 121 A.D., there was a drought in 4 Commanderies of *China*.<sup>153</sup>

---

**122 A.D.** In 122 A.D., there was a drought in 5 Commanderies of *China*. Crops were damaged.<sup>153</sup>

---

**123 A.D.** [In *England*], there was a flood which swept off much cattle.<sup>72</sup>

---

**124 A.D.** In 124 A.D., there was a flood in 36 Commanderies of *China*. People drowned and crops were damaged.<sup>153</sup>

There was as terrible hurricane at Winchester, *England*.<sup>72</sup>

---

**125 A.D.** There was an overflow of River Humber in *England*.<sup>41, 43, 47</sup> [Another reference give the year as 123 A.D.<sup>40</sup>]

In the year 125 [in *England*], there was a remarkable snowstorm that produced “great loads, and smothered much cattle”.<sup>72</sup>

---

**126 A.D.** In 126 A.D., there was a flood in *China* during the period of 3 November - 1 December. The land tax was remitted.<sup>153</sup>

---

**127 A.D.** In 127 A.D., there was a drought in *China* during the period 31 March - 28 April.<sup>153</sup>

---

**128 A.D.** In 128 A.D., there was a drought in *China* during the period 15 July - 13 August.<sup>153</sup>

In the year 128, part of Edinburgh, *Scotland* was burnt by lightning.<sup>72</sup>

---

**129 A.D.** In 129 A.D., there was a flood in Honan (now Henan province) in central *China* at Loyang during the period of 5 June - 3 July. During the same year, there was a flood in Hopei (now Hebei province) in northern *China* at Pai-hsiang.<sup>153</sup>

---

**130 A.D.** A great hailstorm struck *England* with hailstones 12 inches (30 centimeters) in diameter.<sup>28</sup>

In *England*, there were a hailstorm with hailstones 12 inches “about”, fatal to people and cattle.<sup>57, 72, 93</sup>

In 130 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 5 March - 4 April.<sup>153</sup>

---

**131 A.D.** In Dorsetshire in southwest *England*, there was an inundation of the sea, which came 20-miles inland. Great loss of life and property.<sup>47, 72, 92</sup>

---

**132 A.D.** In 132 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 25 May - 23 June.<sup>153</sup>

---

**133 A.D.** In 133 A.D., there was a drought in *China* during the period of 20 July - 18 August.<sup>153</sup>

---

**134 A.D.** A severe winter struck *England* and the River Thames was frozen for 2 months.<sup>28</sup>

The River Thames in *England* frozen for two months.<sup>47, 72, 93</sup>

In 134 A.D., there was a severe drought in *China*. Crops were damaged. A drought was reported during the period of 8 November 134 – 30 March 135.<sup>153</sup>

---

**136 A.D.** In 136 A.D., there was a flood in Honan (now Henan province) in central *China* at Loyang. One hundred persons drowned.<sup>153</sup>

---

**139 A.D.** In 139, the River Thames in *England* was dry for 2 days.<sup>72</sup>

---

In 139 A.D., there was a drought in Shansi (now Shanxi province) in northern *China* at Taiyuan during the period of 11 September - 10 October. Tax was remitted.<sup>153</sup>

---

**145 A.D.** In 145 A.D., there was a severe drought in *China* during the period of 5 February - 8 August.<sup>153</sup>

---

**146 A.D.** In 146 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 1-29 March.<sup>153</sup>

---

In 146 A.D., there was a flood in Shantung (now Shandong province) on the east coast of *China* at Po-hsiang during the period of 28 May - 26 June. People drowned.<sup>153</sup>

---

**147 A.D.** In 147 A.D., there was a drought in *China*.<sup>153</sup>

---

**148 A.D.** In 148 A.D., there was a flood in Honan (now Henan province) in central *China* at Loyang during the period of 3 August - 31 August.<sup>153</sup>

---

**149 A.D.** In 149 A.D., there was a flood in Honan (now Henan province) in central *China* at Loyang during the period of 20 September - 19 October.<sup>153</sup>

---

**151 A.D.** A grievous famine struck *Wales*.<sup>57, 72, 91</sup>

---

In 151 A.D., there was a severe drought in Honan (now Henan province) in central *China* at Loyang during the period 4 May - 1 June. [The resulting famine was so severe that] cannibalism was practiced.<sup>153</sup>

---

**153 A.D.** *England* experienced three months of frost and the River Thames froze.<sup>28</sup>

---

The River Thames and all rivers in *England* frozen nearly three months.<sup>47, 72, 93</sup>

---

In 153 A.D., there was a flood in Hopei (now Hebei province) in northern *China* at Pai-hsiang during the period of 8 August - 5 September. This resulted in a famine.<sup>153</sup>

---

**154 A.D.** In Rome, *Italy* in 154, during the 16<sup>th</sup> year of the reign of the emperor Antoninus, the city suffered from the following calamities. First the Tiber River overflowed its banks. Then a fire destroyed a greater part of the city. Then a famine swept away a great number of its citizens.<sup>92</sup>

---

---

In 155 A.D., a flood drowned several people in Edinburgh, *Scotland*.<sup>72</sup>

---

In 155 A.D., there was a flood in Honan (now Henan province) in central *China* at Nan-yang during the period of 17 June - 15 August.<sup>153</sup>

---

**158 A.D.** In 158 A.D., there was a drought in *China*.<sup>153</sup>

---

**159 A.D.** There was a hurricane at Chester, *England*.<sup>72</sup>

---

**160 A.D.** A great famine struck *England*; multitudes starved.<sup>57, 72, 91</sup>

---

**161 A.D.** In 161 A.D., there was a drought in *China* during the period of 8 August - 8 November.<sup>153</sup>

---

**164 A.D.** There was a hurricane at Edinburgh, *Scotland*.<sup>72</sup>

---

**167 A.D.** A great inundation of the Tiber River in *Italy*.<sup>72</sup>

In the year 167 or 170, there was a famine in *England*.<sup>72</sup>

In 167 A.D., there was a flood in the Gulf of Chihli [now Bohai Sea] at Hopei (now Hebei province) in northern *China* and Shantung (now Shandong province) on the east coast of *China* during the period of 2 September - 1 October. People drowned.<sup>153</sup>

---

**171 A.D.** In 171 there was a general plague [*Europe?*], which was fatal to most nobility. It was attended with a famine followed by floods.<sup>72</sup>

In 168 or 171 A.D., there was a great flood.<sup>72</sup>

In 171 A.D., there was a flood in *China* during the period of 24 March - 22 April.<sup>153</sup>

---

**173 A.D.** In *England*, three month's frost followed by dearth.<sup>47, 72, 93</sup> [A dearth is a scarcity and dearness of food, a famine.]

[In *England*], there was a great snowstorm that produced "a heavy load, lay 13 weeks, and frost".<sup>72</sup>

A famine struck *England* after severe frost and snow.<sup>57, 72, 91</sup>

In 173 A.D., there was a flood in Shantung (now Shandong province) on the east coast of *China* at Yeh during the period of 28 June - 27 July.<sup>153</sup>

---

**174 A.D.** In 174 A.D., there was a flood in Hunan province in south-central *China* on the Lo River.<sup>153</sup>

---

**175 A.D.** A famine struck Rome, *Italy*.<sup>57, 72, 91</sup>

In 175 A.D., there was a flood in 7 Commanderies of *China* during the period of 8 May - 6 June.<sup>153</sup>

---

**176 A.D.** In 176 A.D., there was a drought in *China* during the period of 6 May - 8 August.<sup>153</sup>

---

**177 A.D.** In 177 A.D., there was a severe drought in *China* during the period of 16 May - 13 June.<sup>153</sup>

---

**182 A.D.** In 182 A.D., there was a drought in *China* during the period of 6 May - 8 August.<sup>153</sup>

---

**183 A.D.** In 183 A.D., there was a severe drought in *China* during the period of 6 May - 8 August. This was followed by a flood in Kansu (now Gansu province) in northwest *China* at Lanchow during the period of 8 August - 8 November. It flooded a distance of 20 li [about 7 miles].<sup>153</sup>

During the reign of Emperor Whan-Ti [167-189 A.D.], there happened such a dreadful famine in several parts of the empire of *China*, that the people were driven to feed on human flesh.<sup>186</sup>

---

**188 A.D.** [In 188 A.D. swarms of locusts filled the air and covered the ground in the Roman province of Apulia [in southeastern *Italy*]. These locusts destroyed the crops and ushered in a famine. Sicinius was dispatched with an army to try to battle the winged pests. Thousand of peasants lay down to die on the highroads, and so dire was the pestilence, which accompanied the famine that even the vultures refused to feed upon the fallen.]<sup>84</sup>

In Rome, *Italy* in 188, a fire caused by lightning utterly destroyed a great part of the Capitol, a famous library, and several contiguous buildings. Eusebius says it consumed whole quarters of the city, and in them the libraries.<sup>92</sup>

In 188 A.D., several regions of *China* experienced flooding during the period of 12 July - 11 August.<sup>153</sup>  
 — Shantung (now Shandong province) on the east coast of *China* at Chin-hsiang, T'an-ch'êng, and Chu-ch'êng experienced flooding.  
 — Honan (now Henan province) in central *China* at Shang-ch'iu experienced flooding.  
 — Anhwei (now Anhui province) in eastern *China* at Su experienced flooding.  
 — Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and P'ei experienced flooding. [P'ei is located at 118.03 E. longitude and 34.30 N. latitude.]

**189 A.D.** A famine struck Rome, *Italy*.<sup>72</sup>

**191 A.D.** A famine struck Rome, *Italy*.<sup>72</sup>

**192 A.D.** A famine struck *Ireland*. Bad harvest caused general scarcity, mortality and immigration – “so the lands and houses, territories and tribes, were emptied.”<sup>57, 91</sup>

A famine afflicted the city of Rome, *Italy*.<sup>72</sup>

**194 A.D.** In 194 A.D., there was a severe drought in the central part of Shensi (now Shaanxi province) in central *China* during the period of 8 May - 2 September. [The resulting famine was so severe that] cannibalism was practiced. Innumerable people died.<sup>153</sup>

**195 A.D.** In 195 A.D., there was a severe drought in *China* during the period of 28 April - 26 May.<sup>153</sup>

**197 A.D.** In 197 A.D., there was a flood on the Han River (Yangtze River tributary) at Shensi (now Shaanxi province) in central *China* during the period of 30 September - 28 October. During the same year, there was a flood on the Han River at Hupeh (now Hubei province) in central *China*.<sup>153</sup>

**201 A.D.** Toward the end of 201 A.D., the Empress of Japan traveled across the sea and invaded *Korea*. A tide-wave following her ships reached far up into the interior of the country of Silla so by that the water of the sea encroached upon the land. [Silla was one of the Three Kingdoms of Korea, the southeast area of the Korean peninsula. The tide-wave might be the result of a tsunami or less likely the storm surge from a great typhoon.] The King of Silla took this tide-wave as an omen and surrendered his kingdom.<sup>149</sup>

**202 A.D.** In the year 202, the city of Bath in southwestern *England* was partly burnt by lightning.<sup>72</sup>

**207 A.D.** In *England*, hail, “bigger than ducks’ eggs.”<sup>57, 72, 93</sup>

In 207 A.D., there was a flood in *China* during the period of 11 August - 9 September.<sup>153</sup>

**212 A.D.** In 212 A.D., there was a flood at Honan (now Henan province) in central *China* on the Wei River and the Ying River during the period of 15 August - 13 September.<sup>153</sup>

In the year 212 at Leicester in the east Midlands of *England*, there was a thunder and lightning storm that was fatal to people and cattle.<sup>72</sup>

**213 A.D.** In 213 A.D., there was a flood in *China* during the period of 6 July - 4 August.<sup>153</sup>

---

**214 A.D.** The River Trent in *England*, flooded and overflowed its banks 20 miles (32 kilometers) on each side and drowned many people.<sup>28, 40, 41, 43</sup>

The River Trent flooded and drowned much people and cattle on both sides.<sup>72</sup>

In *England*, the Trent valley [in the Midlands] overflowed. Great destruction, extending 20 miles from normal course of stream.<sup>47</sup>

In 214 A.D., there was a drought in *China* during the period of 27 April - 26 May.<sup>153</sup>

---

**218 A.D.** In Northumberland, northern *England*, there was a great flood of the River Tweed; much damage.<sup>47, 92</sup> [The River Tweed flows through the Borders region of Great Britain.]

In *England*, the River Tweed had a sudden inundation, and destroyed a considerable number of the inhabitants on its banks.<sup>40, 41, 43</sup>

In *England* in 218 A.D., a great flood in Tweed, destroyed very much people and cattle.<sup>72</sup>

---

**219 A.D.** In 219 A.D., the Han River (Yangtze River tributary) flooded at Shensi (now Shaanxi province) in central *China* and at Hupeh (now Hubei province) in central *China* during the period of 28 August - 26 September.<sup>153</sup>

---

**220 A.D.** The winter was very severe in *England* in 220 A.D. with a frost lasting five months.<sup>28, 40, 41, 42, 43</sup>

In *Britain*, frost lasted five months continuously.<sup>47, 72, 92</sup>

In 220 A.D., there was a great frost in *England*, which lasted for 5 months.<sup>212</sup>

[Another source places this event in the year 202, which I believe is a misprint.] The winter in 202 was intensely cold for four months. The River Thames in *England* was frozen for 9 weeks.<sup>1</sup>

---

**223 A.D.** In 223 A.D., the I River and the Lo River flooded at Hunan province in south-central *China* during the period of 16 July - 13 August. People were drowned and houses damaged.<sup>153</sup>

---

**228 A.D.** A famine struck *Scotland*; thousands were starved.<sup>57, 72, 91</sup>

In 228 A.D., there was a severe drought in *China* during the period of 20 June - 18 July.<sup>153</sup>

---

**230 A.D.** In 230 A.D., there was a drought in *China* during the period of 23 November 230 - 8 May 231.<sup>153</sup>

In 230 A.D., there was a great frost in *England*. The River Thames at London was frozen over for 6 weeks (some sources give the date as 250 A.D.)<sup>212</sup>

---

**233 A.D.** In 233 A.D. in *Scotland*, it rained 7 months together causing a famine.<sup>72</sup>

---

**234 A.D.** In Canterbury in southeast *England*, a storm threw down 200 houses, and killed several families.<sup>40, 41, 43, 56, 72</sup>

---

**235 A.D.** In 235 A.D., there was a drought in *China* during the period of 8 August - 29 October.<sup>153</sup>

---

---

**237 A.D.** In 237 A.D., several areas of *China* were flooded during the period of 7 October - 5 November. As a result people were drowned and houses damaged. Hopei (now Hebei province) in northern *China* at Chi was flooded. [Chi is located at 115.34 E. longitude and 37.34 N. latitude.] Shantung (now Shandong province) on the east coast of *China* at P'u was flooded. Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow was flooded. Anhwei (now Anhui province) in eastern *China* at Po was flooded.<sup>153</sup>

---

**238 A.D.** A most grievous famine struck *Scotland*.<sup>57, 72, 91</sup>

---

**240 A.D.** In 240 A.D., there was a drought in *China* during the period of 12 January - 9 April.<sup>153</sup>

---

**242 A.D.** In *England* in the year 242, there was a great snowstorm. "Very deep, Northampton and neighbouring Shires, much Cattle and Sheep loft [lost] in it."<sup>72</sup>

---

**245 A.D.** In Lincolnshire in northeast-central *England*, an eruption of the sea laid underwater many thousands of acres, which have not been recovered to this time.<sup>40, 41, 43, 47, 72, 90, 212</sup>

In 245 A.D., there was a flood at Hunan province in south-central *China* at Ch'a-ling during the period of 6 May - 8 August. Two hundred families were flooded.<sup>153</sup>

---

**250 A.D.** In southeast *England*, the River Ouse [now called the Great Ouse] in Bedfordshire overflowed and drowned many people and cattle.<sup>40, 41, 43, 47</sup>

In 250 A.D., several regions of *China* experienced flooding.<sup>153</sup>

During the period of 8 August - 8 November, the following area was affected:

— Hunan province in south-central *China* at Ch'a-ling experienced flooding.

During the period of 14 September – 13 October, the following area was affected:

— Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking experienced flooding.

— Chekiang (now Zhejiang province) on the east coast of *China* at An-chi experienced flooding.

The winter was very similar to the winter of 220 A.D. and the River Thames in *England* was frozen for approximately the same length of time.<sup>1</sup>

The River Thames in *England* frozen nine weeks.<sup>2, 40, 41, 43, 47, 93</sup> [Another account places this event in 252 A.D.]<sup>72</sup>

Severe winter struck *England*. The River Thames was frozen for 9 weeks.<sup>28</sup>

---

**251 A.D.** In 251 A.D., there was a flood in *China* during the period of 4 September - 2 October.<sup>153</sup>

---

**253 A.D.** A hurricane blew down 900 houses in London, *England*.<sup>72</sup>

---

**254 A.D.** In 254 A.D., there was a flood in *China* during the period of 6 May – 8 August.<sup>153</sup>

---

**255 A.D.** In 255 A.D., there was a severe drought in *China* that led to a famine.<sup>153</sup>

---

**257 A.D.** In 257 A.D., there was a drought in *China* during the period of 8 August 257 - 22 March 258.<sup>153</sup>

---

**258 A.D.** In 258 A.D., there was a drought in *China* during the period of 16 September - 14 October.<sup>153</sup>

---

---

**259 A.D.** A famine struck *Wales*. Thousands were “pined to death”.<sup>57, 72, 91</sup>

---

**261 A.D.** In 261 A.D., there was a flood in *China* during the period of 16 June – 14 July.<sup>153</sup>

---

**262 A.D.** A famine at Rome, *Italy* attended by a plague.<sup>90</sup>

In 262 A.D., there was a flood in *China* during the period of 2 September - 30 September.<sup>153</sup>

---

**264 A.D.** In *Britain*, hail; each stone one pound or above in weight.<sup>57, 72, 93</sup>

---

**266 A.D.** In 266 A.D., there was a drought in *China* during the period of 5 February - 8 August.<sup>153</sup>

---

**268 A.D.** In *England*, the River Humber overflowed and did great damage.<sup>47, 92</sup> [Other sources place this flood in the year 269.<sup>40, 43</sup> In 269, Humber, in the night, carried down much people and cattle.<sup>72</sup>]

In the year 268, part of Worcester, *England* was burnt by lightning.<sup>72</sup>

In 268 A.D., several regions of *China* experienced flooding during the period of 23 October - 21 November. Shantung (now Shandong province) on the east coast of *China* at Lin-tzū and Fan was flooded. Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow was flooded. Honan (now Henan province) in central *China* at Hsiang-ch'êng was flooded.<sup>153</sup>

---

**269 A.D.** In 269 A.D., several regions of *China* experienced flooding during the period of 20 March - 18 May. Shantung (now Shandong province) on the east coast of *China* at Lin-tzū and Fan was flooded. Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow was flooded.<sup>153</sup>

---

**271 A.D.** Of Rome in 484, or in the year 271 of the Christian era, the winter was so severe, that the snow covered the square in Rome, *Italy* to a height of several feet for 40 days.<sup>80</sup>

In 271 A.D., there was a drought in *China* during the period of 25 June - 23 July. Then several rivers in *China* flooded during the period 24 July - 22 August. As a result, 4,000 families were flooded and 300 persons drowned. The I River and the Lo River in Hunan province in south-central *China* flooded. The Yellow River flooded. The Ch'in River at Shansi (now Shanxi province) in northern *China* and at Honan (now Henan province) in central *China* flooded.<sup>153</sup>

---

**272 A.D.** A famine struck *Britain*. People ate bread made from the bark of trees and roots.<sup>57, 72, 90, 91</sup>

In 272 A.D., there was so grievous a famine in *Britain*, that people were forced to eat the bark from trees.<sup>212</sup>

In 272 A.D., there was a drought in *China* during the period of 10 June - 12 July.<sup>153</sup>

---

**273 A.D.** In 273 A.D., there was a drought in *China* during the period of 5 February - 1 July.<sup>153</sup>

---

**274 A.D.** In 274 A.D., there was a drought in *China* during the period of 23 May - 21 June.<sup>153</sup>

---

**275 A.D.** In 275 A.D., there was a flood at Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow during the period of 7 October - 5 November.<sup>153</sup>

---

**276 A.D.** In the year 276, the climate in *Britain* was significantly warmer than present. Wines were first made in *Britain* in this year.<sup>128</sup>

In 276 A.D., there was a drought in *China* during the period of 5 February - 8 August.<sup>153</sup>

In 276 A.D., there were floods in several regions of *China*. Honan (now Henan province) in central *China* at Lin-chang during the period of 28 July - 26 August experienced flooding. Hupeh (now Hubei province) in central *China* at Hsiang-yang during 25 October - 22 November experienced flooding. As a result, 4,000 families were flooded and 100 persons drowned.<sup>153</sup>

**277 A.D.** In London, *England*, a storm killed several people.<sup>40, 41, 43, 56</sup>

In the year 277, London, *England* was partly burnt by lightning.<sup>72</sup>

In 277 A.D., there were floods in several regions of *China* during the period of 16 August - 14 September. Szechwan (now Sichuan province) in southwest *China* at Chungking experienced flooding. Shensi (now Shaanxi province) in central *China* at Nan-chêng experienced flooding. As a result, 300 persons were drowned.<sup>153</sup>

In 277 A.D., there were floods in several regions of *China* during the period of 14 October - 11 November.<sup>153</sup>

— Shensi (now Shaanxi province) in central *China* at Hsing-p'ing was flooded.

— Shantung (now Shandong province) on the east coast of *China* at Lin-tzũ and Fan was flooded. Crops were damaged.

— Honan (now Henan province) in central *China* at Hsiang-ch'êng was flooded. Crops were damaged.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow was flooded. Crops were damaged.

— Hupeh (now Hubei province) in central *China* at Hsiang-yang was flooded. Crops were damaged.

— Szechwan (now Sichuan province) in southwest *China* at Chungking was flooded. Crops were damaged.

— Shensi (now Shaanxi province) in central *China* at Nan-chêng was flooded. Crops were damaged.

**278 A.D.** In 278 A.D., there were floods in several regions of *China* during the period of 6 August – 3 September. As a result people were drowned and crops damaged.<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Fan was flooded.

— Honan (now Henan province) in central *China* at Hsiang-ch'êng and Loyang were flooded.

— Anhwei (now Anhui province) in eastern *China* at Shou was flooded.

— Hupeh (now Hubei province) in central *China* at Hsiang-yang was flooded.

— Hopei (now Hebei province) in northern *China* at Kao-i was flooded.

**280 A.D.** In 280 A.D., the city of Lyon, *France* flooded.<sup>171</sup>

**281 A.D.** In 281 A.D., there were floods in several regions of *China* during the period of 4 July – 1 August. Hupeh (now Hubei province) in central *China* at An-lu experienced flooding. Shantung (now Shandong province) on the east coast of *China* at T'aian experienced flooding. As a result, 300 families were flooded and 60 persons were drowned. Then there was a drought in *China* during the period of 8 November 281 - 6 May 282.<sup>153</sup>

**282 A.D.** In 282 A.D., there was a drought in *China* during the period of 8 November 282 - 5 February 283. The land tax was remitted.<sup>153</sup>

**283 A.D.** In 283 A.D., several regions of *China* experienced flooding. These included: Honan (now Henan province) in central *China* at Loyang, Hupeh (now Hubei province) in central *China* at Hsiang-yang, and Anhwei (now Anhui province) in eastern *China* at Shou.<sup>153</sup>

In 283 A.D., Shantung (now Shandong province) on the east coast of *China* at Fan experienced flooding during the period of 11 August - 8 September.<sup>153</sup>

---

**284 A.D.** In 284 A.D., there was a drought in *China* during the period of 30 June – 29 July. Then Kansu (now Gansu province) in northwest *China* at Lung-hsi and 4 Commanderies experienced flooding during the period of 27 September - 25 October.<sup>153</sup>

---

**285 A.D.** In 285 A.D., 10 Commanderies in *China* experienced flooding during the period of 21 May - 19 June. Houses were damaged. During this same time period, several other regions of *China* experienced droughts. These included: Shantung (now Shandong province) on the east coast of *China* at Lin-tzū, Hopei (now Hebei province) in northern *China* at Cho and Kao-i, and Shensi (now Shaanxi province) in central *China* at Nan-ch'êng. Following this during the period of 19 July - 17 August the following areas experience drought, which damaged crops: Shantung province at Ting-t'ao and Hunan province in south-central *China* at Ch'ang-tê.<sup>153</sup>

---

**286 A.D.** In 286 A.D., 13 Commanderies in *China* experienced severe droughts during the period of 9 June - 8 August.<sup>153</sup>

---

**287 A.D.** In 287 A.D., there were floods in *China* during the period of 2 January - 30 January. Then there was a flood in Shantung (now Shandong province) on the east coast of *China* at Lin-tzū during the period of 30 April - 28 May. During the same period of time, there was a drought in Hopei (now Hebei province) in northern *China* at Kao-i. Then there were floods in 8 Commanderies of *China* during the period of 28 June - 27 July.<sup>153</sup>

---

**288 A.D.** A famine struck all through *Britain*.<sup>57, 72, 91</sup>

In 288 A.D., there was a severe drought in several regions of *China* during the period of 16 July - 13 August. This led to crop damage. These regions included: Shensi (now Shaanxi province) in central *China* at Ching-yang and Hsing-p'ing, Kansu (now Gansu province) in northwest *China* at Chên-yüan, and Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**289 A.D.** In 289 A.D., there was a drought in *China* during the period of 9 March - 7 April.<sup>153</sup>

---

**290 A.D.** In 290 A.D., there was a drought in *China* during the period of 28 March - 27 April.<sup>153</sup>

---

**Winter of 290 / 291 A.D.** The winter was very similar to the winter of 220 A.D. and the River Thames in *England* was frozen for approximately the same length of time.<sup>1</sup>

Most of the rivers in *Britain* frozen six weeks.<sup>2, 40, 41, 43, 47, 93</sup>

The frost in 290 A.D. lasted 6 weeks and was severe over all of *Britain*.<sup>72</sup>

In 291 A.D., there was a frost in *England*. Most rivers were frozen for six weeks.<sup>212</sup>

The winter in *England* was very cold. Most rivers froze for 6 weeks.<sup>28</sup>

---

**291 A.D.** In 291 A.D., there was a severe drought in Anhwei (now Anhui province) in eastern *China* at Shou during the period of 12 August - 10 September. This led to a famine. [Some uncertainty exist in the name Shou which appeared as Yung-chou.]<sup>153</sup>

---

**Winter of 291 / 292 A.D.** The winter of 292 A.D. was very severe. The rivers in northern *France* froze.<sup>171</sup>

---

**292 A.D.** In 292 A.D., there were floods in *China*.<sup>153</sup>

---

**295 A.D.** In 295 A.D., there were floods in several regions of *China*.<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Hsiang-yang was flooded.
- Anhwei (now Anhui province) in eastern *China* at Shou was flooded.
- Shantung (now Shandong province) on the east coast of *China* at Lin-tzū and Fan was flooded.
- Honan (now Henan province) in central *China* at Hsiang-ch'êng was flooded.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow was flooded.

In 295 A.D., several regions of *China* experienced flooding.<sup>153</sup>

During the period of 30 May - 29 June, the following areas were affected:

- Honan (now Henan province) in central *China* at Hsü-ch'ang experienced flooding.
- Anhwei (now Anhui province) in eastern *China* at Shou experienced flooding.

During the period of 30 June - 28 July, the following area was affected:

- Honan (now Henan province) in central *China* at Têng-fêng experienced flooding. People drowned.
- 

**296 A.D.** In 296 A.D., there were floods in several regions of *China* during the period of 18 June - 16 July. Hupeh (now Hubei province) in central *China* at Hsiang-yang experienced flooding. Anhwei (now Anhui province) in eastern *China* at Shou experienced flooding.<sup>153</sup>

---

**297 A.D.** In 297 A.D., there was a severe drought in Shensi (now Shaanxi province) in central *China* at Sian and Nan-ch'êng during the period of 5 August - 3 September. This led to a famine.<sup>153</sup>

---

**298 A.D.** In *Wales*, there was a great drought.<sup>47</sup>

A famine struck *Wales*.<sup>57, 91</sup> . . . after a comet.<sup>72</sup>

In 298 A.D., there were floods in several regions of *China* during the period of 22 October - 20 November.<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Hsiang-yang was flooded.
  - Anhwei (now Anhui province) in eastern *China* at Shou was flooded.
  - Hopei (now Hebei province) in northern *China* at Kao-i was flooded.
  - Honan (now Henan province) in central *China* at Hsiang-ch'êng was flooded.
  - Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow was flooded.
- 

**Winter of 298 / 299 A.D.** Towards 299, the winter was very harsh in the north of *Gaul* [During the time of Ancient Rome, Gaul was a region of Western Europe encompassing present day *France*, *Luxembourg* and *Belgium*, most of *Switzerland*, the western part of Northern *Italy*, as well as the parts of the *Netherlands* and *Germany* on the left bank of the Rhine.].<sup>62</sup>

The winter of 299 A.D. was very severe in the north of *France*.<sup>171</sup>

---

**300 A.D. - 336 A.D. Cyprus. Famine**

In *Cyprus*, there was a thirty-six year drought; expelled all the inhabitants.<sup>47</sup>

In *Cyprus*, there was 36 years of drought from 300 to 336 which expelled the poor surviving inhabitants.<sup>72</sup>

The great island of *Cyprus* was 36 years without rain. A great famine ensued. Inhabitants forsook the island and fled.<sup>72</sup>

---

**301 A.D.** In the winter, the *Black Sea* was frozen entirely over.<sup>1</sup>

In Winchester in southeast *England*, there was a major storm.<sup>40, 41, 56</sup>

There was a great hurricane at Winchester, *England*.<sup>72</sup>

In 301 A.D. during the period between 6 May and 8 November, there was a drought in several regions of *China*.<sup>153</sup>

- Drought struck in Shantung (now Shandong province) on the east coast of *China* at Lin-tzū.
- Drought struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.
- Drought struck in Hopei (now Hebei province) in northern *China* at Cho.
- Drought struck in Shansi (now Shanxi province) in northern *China* at Taiyuan.

In 301 A.D. during the period between 21 August and 18 September, several regions of *China* experienced floods. These included Honan (now Henan province) in central *China* at Nan-yang and Shantung (now Shandong province) on the east coast of *China* at T'an-ch'êng.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**302 A.D.** In 302 A.D. during the period between 10 August and 8 September, several regions of *China* experienced floods. These included Shantung (now Shandong province) on the east coast of *China* at Fan; Honan (now Henan province) in central *China* at Hsiang-ch'êng; Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow; and Hopei (now Hebei province) in northern *China* at Kao-i.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**305 A.D.** In the year 305, the town of Dunbarton in *Scotland* was burnt by lightning.<sup>72</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**306 A.D.** A famine prevailed in *Scotland* beginning in 306 and lasting four years. Thousands died; “most grievous and fatal.”<sup>57, 72, 91</sup>

A famine in *Scotland* in 306. Thousands died.<sup>90, 212</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**307 A.D.** In 307, a famine prevailed in Cappadocia, *Turkey*.<sup>57, 91</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought in Cyprus during that timeframe.*

---

**309 A.D.** In 309 A.D. during the period between 28 March and 25 April, a severe drought struck *China*. Many rivers dried up.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**310 A.D.** In 310, a famine prevailed in *England*; 40,000 people perished.<sup>57, 90, 91, 212</sup> [Other sources place this event in the year 338.]

In 310 A.D. during the period between 15 May and 13 June, several regions of *China* experienced floods. These included Kiangsu (now Jiangsu province) on the east coast of *China* and Anhwei (now Anhui province) in eastern *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**311 A.D.** During the period between 8 November 311 and 6 May 312, a drought struck *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

### **313 A.D. – 315 A.D. Japan. Famine**

From 313 A.D. – 315 A.D., there was a famine in *Japan*. In 316 A.D. during spring on the 6<sup>th</sup> day of the 2<sup>nd</sup> month, the Emperor of Japan addressed his ministers, saying, “We ascended a lofty tower and looked far and wide, but no smoke arose in the land. From this we gather that the people are poor, and that in the houses there are none cooking their rice. We have heard that in the reigns of the wise sovereigns of antiquity, from every one was heard the sound of songs hymning their virtue, in every house there was the ditty, ‘How happy we are.’ But now when we observe the people, for three years past, no voice of eulogy is heard; the smoke of cooking has become rarer and rarer. By this we know that the five grains (hemp, millet, rice, wheat & barley, and pulse) do not come up, and that the people are in extreme want. Even in the home provinces there are some who are not supplied; what must it be in the provinces outside of our domain?” [The home provinces is the territory around the capital ruled immediately by the Emperor.]<sup>149</sup>

---

**316 A.D.** [In *England*], there was a famine.<sup>72</sup>

---

**317 A.D.** In southeast *England*, on the Isle of Thanet (Kent), there was a flood with loss of life and property.<sup>47, 92</sup> [Isle of Thanet lies at the most easterly point of Kent, England. While in the past it was separated from the mainland by the nearly 2,000 feet (610 m) wide River Wantsum, it is no longer an island.]

In *England*, on the Isle of Thanet, there was an inundation.<sup>43</sup>

Thanet flooded, people and cattle lost.<sup>72</sup>

In 317 A.D. during the period between 26 June and 24 July, there was a severe drought in Anhwei (now Anhui province) in eastern *China* at Shou.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**318 A.D.** In 318 A.D. during the period between 15 July and 12 August, there was a drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**319 A.D.** In 319 A.D., there was a severe drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**320 A.D.** In 320 A.D., *China* experienced floods during the period between 22 July and 20 August.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**321 A.D.** In 321 A.D. during the period between 12 June and 10 July, there was a drought in *China*.<sup>153</sup>

In 321 A.D., *China* experienced floods during the period between 10 August and 7 September.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**322 A.D.** In 322 A.D., *China* experienced floods during the period between 5 February and 6 May.<sup>153</sup>

In 322 A.D. during the period 1-29 July, there was a severe drought in *China*. Then during the period between 25 December 322 and 22 January 323 there was a severe drought in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and rivers dried up.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**323 A.D.** In northeast *England*, the inhabitants of Ferne Island off the coast of Northumberland were destroyed by an inundation of the sea.<sup>47</sup> [Ferne Island is now called Farne Island.]

In *England* in 323, there was a flood that destroyed all the inhabitants in Ferne Island, 7 miles southwest of Holy Island.<sup>40,43</sup> [Holy Island is now called Lindisfarne.]

In 323 A.D. during the period between 20 June and 19 July, several regions of *China* experienced floods. These included Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking; Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou; and Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Shou.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**325 A.D.** A severe famine struck *Britain*.<sup>57</sup>

In 325 A.D. during the period between 31 January and 26 July, there was a severe drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**326 A.D.** In 326 A.D., *China* experienced floods during the period between 17 June and 15 July.<sup>153</sup>

During the period between 16 July 326 and 8 January 327, there was a severe drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**327 A.D.** In 327 A.D. during the period between 8 May and 5 June, there was a drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**329 A.D.** The winter was severe in *England*. Most rivers were frozen for 6 weeks and there was deep snow in Wales.<sup>28</sup>

In 329 A.D., there was a frost in *Britain*. Most rivers were frozen for six weeks.<sup>212</sup>

In *Wales*, there was a great snowstorm “so much cattle smothered [smothered] in Wales as caused [caused] a Dearth.”<sup>72</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**330 A.D.** In northwest *England*, there was an irruption of the sea in Lancashire.<sup>40, 41, 43, 47</sup>

In 330 A.D. during the period between 3 June and 1 July, there was a drought in *China* followed by a famine and a plague.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**331 A.D.** A famine struck Antioch, *Turkey*. This city was afflicted by so terrible a famine that a bushel of wheat was sold for 400 pieces of silver. During this grievous distress, Constantine sent to the Bishop 30,000 bushels of corn [grain], besides an immense quantity of all kinds of provisions, to be distributed among the ecclesiastics, widows, orphans, etc.<sup>57</sup>

In 331 A.D. during the period between 23 May and 21 June, there was a drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**332 A.D.** In 332 A.D., *China* experienced floods during the period between 10 June and 9 July.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**333 A.D.** In 333, there was a great famine and pestilence in *Syria*.<sup>128</sup>

In 333 A.D. during the period between 28 June and 26 August, there was a drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**334 A.D.** In *England*, hail, “stones like goose eggs; fatal to people and cattle.”<sup>57, 93</sup>

In 334 A.D. during the period between 18 July and 15 August, there was a severe drought in *China*.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**335 A.D.** In 335 A.D. during the period between 7 July and 5 August, there was a severe drought in Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing and Yü-yao.<sup>153</sup>

In 335 A.D., *China* experienced floods during the period between 3 September and 3 October in Hunan province in south-central *China* at Changsha and Ch’ang-tê.<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**336 A.D.** In northern *England*, there was a great flood and overflowing of the River Tweed.<sup>40, 41, 47</sup>

In *England*, there was an inundation of the River Tweed.<sup>43</sup>

In *England*, there was a flood in the River Tweed that carried down many families and much cattle.<sup>72</sup>

A famine struck *Syria* along with a plague.<sup>57, 72, 91</sup>

Famine and plague depopulated *Syria* and *Cilicia* [Southeastern Anatolia].<sup>72</sup>

In 336 A.D. during the period between 29 March and 26 April, there was a drought in *China*. As a result, the corvée was remitted. [Corvée, under the feudal system, is compulsory, unpaid labor demanded by a lord or king.]<sup>153</sup>

*Also refer to the section 300 A.D. – 336 A.D. for information on the drought and famine in Cyprus during that timeframe.*

---

**337 A.D.** In 337 A.D. during the period between 14 July and 12 August, there was a drought in *China*.<sup>153</sup>

---

**338 A.D.** There was a famine in *Britain* and *Wales*. 40,000 people starved.<sup>72</sup>

---

**341 A.D.** The snow in *Britain* was 15 feet (4.6 meters) deep and stayed on the ground for 6 weeks.<sup>28</sup>

In 341 there was a great snowstorm [in *England*]. “It fell and lay 15 Foot deep, 6 Weeks; many people and Cattle loft [lost].”<sup>72</sup>

---

**343 A.D.** In 343 A.D. during the period between 9 June and 8 July, there was a drought in *China*.<sup>153</sup>

In the year 343 [in *England*], there was terrible thunder continuous for 8 hours.<sup>72</sup>

---

**344 A.D.** In *England*, hailstorm, “stones much bigger than hens’ eggs.”<sup>41, 43, 56, 57, 93</sup>

[In *England*], there were hailstones like goose eggs, fatal to people and cattle.<sup>72</sup>

---

**345 A.D.** In 345 A.D. during the period between 16 June and 15 July, there was a drought in *China*.<sup>153</sup>

[In *England*] it rained five months continuously and was followed by a dearth.<sup>72</sup>

---

**346 A.D.** In March 346 A.D., after 20 days of continuous rain, there were floods in *France*.<sup>171</sup>

---

**348 A.D.** In 348 A.D., *China* experienced floods during the period between 15 May and 12 June.<sup>153</sup>

---

**349 A.D.** In northwest *England*, 420 houses in Carlisle [now Carlisle-Cumbria], blown down by a storm and many people killed.<sup>40, 41, 43, 56, 72</sup>

In 349 A.D. during the period between 31 July and 26 November, there was a drought in *China*.<sup>153</sup>

---

**350 A.D.** In 350 A.D. during the period between 6 May and 8 August, there was a drought in *China*.<sup>153</sup>

In 350 A.D., *China* experienced floods during the period between 21 June and 20 July.<sup>153</sup>

---

**351 A.D.** In 351 A.D., *China* experienced floods during the period between 9 August and 6 September. Several hundred persons drowned.<sup>153</sup>

---

**352 A.D.** In *England*, the Severn valley flooded; great loss.<sup>47, 92</sup> [Other sources place this flood in the year 350.<sup>40, 43</sup>]

In 352, Severn carried off much people and cattle.<sup>72</sup>

On 5 August 352 A.D., it snowed on the Esquiline (seven hills of Rome, *Italy*), in the heart of the Roman summer.<sup>171</sup>

In 352 A.D. during the period between 28 July and 26 August, there was a drought in *China*.<sup>153</sup>

---

**353 A.D.** In 353, there was an inundation in Cheshire, *England* by which 3,000 persons and an innumerable quantity of cattle perished.<sup>90</sup>

In 353 A.D., there was a great flood in Cheshire, *England*. Five thousand people and an innumerable quantity of cattle perished.<sup>212</sup>

In 353 A.D. during the period between 20 April and 18 May, there was a drought in *China*.<sup>153</sup>

---

**354 A.D.** In 354 in northern *Gaul*, the spring rains, were more frequent than usual, causing the streams to swell.<sup>79</sup>

---

**Winter of 354 / 355 A.D.** The harsh winter of 355 in northern *Gaul* caused a large number of people to freeze to death.<sup>79</sup>

The winter of 355 A.D. was very severe [in *France*]. Many dead.<sup>171</sup>

---

**Winter of 356 / 357 A.D.** During the winter of 356-357 in northern *Gaul*, the Meuse River was frozen during the months of December and January. The winter had been preceded by a hot, dry summer.<sup>79</sup>

The winter of 357 A.D. was very hard from December to January. The Meuse River [in *northwestern Europe*] froze.<sup>171</sup>

---

**357 A.D.** The summer drought of 357 allowed individuals to ford and cross the Rhine River in *Germany*.<sup>79</sup>

---

**Winter of 357 / 358 A.D.** The winter of 358 A.D. was very hard. The Seine River in *France* carried ice the size of “blocks of marble”.<sup>171</sup>

In 358, the winter in Paris, *France* was extraordinarily cold.<sup>79</sup>

---

**358 A.D.** In Cheshire *England*, there was an irruption of the sea; several thousand (about 5,000) people drowned, and much damage.<sup>47, 72, 92</sup> [Other sources place this flood in the year 353.<sup>40, 43</sup>]

In 358 A.D., *China* experienced floods during the period between 23 June and 21 July.<sup>153</sup>

---

**Winter of 358 / 359 A.D.** The winter of 359 A.D. was very hard. Ice formed on the Seine River in *France*.<sup>171</sup>

The winter in *Scotland* produced a severe frost lasting 14 weeks.<sup>28, 40, 41, 43, 212</sup>

The winter in *Scotland* produced fourteen weeks of frost. The frost was also very severe in *England*.<sup>47, 93</sup>

The frost lasted 14 weeks in *Britain*, chiefly *Scotland* and was severe.<sup>72</sup>

---

**Winter of 359 / 360 A.D.** The winter of 360 A.D. in *France* was very harsh in the north.<sup>171</sup>

The winter of 360 in northern *Gaul* was much harsher than usual.<sup>79</sup>

During the period between 8 November 359 and 5 February 360, there was a severe drought in *China*.<sup>153</sup>

---

**Winter of 360 / 361 A.D.** During the period between 8 November 360 and 5 February 361, there was a severe drought in *China*.<sup>153</sup>

**361 A.D.** In 361 A.D., *China* experienced floods during the period between 21 May and 18 June.<sup>153</sup>

In the year 361, part of Dunbarton, *Scotland* was burnt by lightning.<sup>72</sup>

---

**362 A.D.** In *England*, “a prodigious drought.”<sup>47, 72</sup>

In 362, a prodigious drought and heat killed all the fruits of the earth. Hence people were forced to eat the flesh of uncommon and filthy beast.<sup>72</sup> [Another source indicated there was a great drought that was universal over all the world in the year 360.]

In 362 A.D. during the period between 10 May and 8 June, there was a drought in *China*.<sup>153</sup>

---

**365 A.D.** [In 365 in *Egypt*, there was an inundation consequent upon an earthquake [tsunami] destroyed many of the inhabitants.<sup>92</sup>]

In 365, there was a tempest in *Italy*.<sup>72</sup>

---

**Winter of 365 / 366 A.D.** The winter was extremely harsh in January 366 in northern *Gaul*.<sup>79</sup>

The winter of 366 A.D. in *France* was very harsh in the north during January.<sup>171</sup>

---

**366 A.D.** In 366 A.D. during the period between 26 April and 25 May, there was a drought in *China*.<sup>153</sup>

---

**367 A.D.** A shower of hail fell at Constantinople [Istanbul, *Turkey*] on July 2<sup>nd</sup>. The hailstones were so large that it filled a man's hand and each as solid as a stone. The hail killed many people and cattle.<sup>72</sup>

---

**368 A.D.** In Sicily *Italy*, there was an irruption of the sea; great destruction.<sup>47, 72, 92</sup>

---

**369 A.D.** During the period between 8 November 369 and 5 February 370, there was a drought in Kansu (now Gansu province) in northwest *China* at Wu-wei.<sup>153</sup>

---

**370 A.D.** An awful famine struck Phrygia [*Turkey*].<sup>57, 90, 91</sup>

---

**371 A.D.** In 371 A.D. during the period between 29 June and 28 July, several regions of *China* experienced floods. These included Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking, Wu-chin and Soochow; and Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Taichow. Crops were damaged and famine followed.<sup>153</sup>

In 371, there was a tempest of hail that struck Byzantium [Constantinople or Istanbul, *Turkey*].<sup>72</sup>

---

**372 A.D.** In 372 A.D. during the period between 22 January and 20 February, *China* experienced floods. "Great waves cutting into stone."<sup>153</sup>

In 372 A.D. during the period between 12 November and 11 December, there was a severe drought in *China* resulting in a famine.<sup>153</sup>

---

**373 A.D.** In 373 A.D. during the period between 7 June and 6 July, there was a drought in *China*.<sup>153</sup>

---

**374 A.D.** In *England*, there was a drought that was followed by a famine.<sup>47, 72</sup>

In Caesarea [*Palestine*], there was a great drought followed by a famine.<sup>72</sup> [During the Byzantine era Palestine was region between the Mediterranean Sea and the Jordan River and various adjoining lands. Caesarea is located mid-way between Tel Aviv and Haifa, Israel]

---

**375 A.D.** A most grievous famine afflicted Phrygia [*Turkey*], so as the inhabitants were obligated to shift their habitations elsewhere.<sup>72</sup>

During the period between 8 November 375 and 5 February 376, there was a drought in *China*.<sup>153</sup>

---

**377 A.D.** In February 377 in northern *Gaul*, the barbarians cross the Rhine River on the ice.<sup>79</sup>

---

**378 A.D.** In 378 A.D., *China* experienced floods during the period between 11 July and 9 August.<sup>153</sup>

---

**379 A.D.** In 379 A.D. during the period 1-29 July, there was a severe drought in *China*.<sup>153</sup>

---

**380 A.D.** In 380 A.D. during the period between 21 May and 18 June, there was a severe drought in *China*. This was then followed by floods during the period between 19 June and 18 July.<sup>153</sup>

---

**381 A.D.** A famine struck Antioch, *Turkey*. During the reign of Theodosius the Great, the country was again visited by a famine; which was accompanied by grievous plagues. There was also a terrible famine amongst the Goths [East Germanic tribes].<sup>57</sup>

There was a terrible famine among the Goths.<sup>72, 91</sup>

In 381 A.D. during the period between 8 July and 6 August, several regions of *China* experienced floods. These included Hupeh (now Hubei province) in central *China* at Hsiang-yang; Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang; and Anhwei (now Anhui province) in eastern *China* at Shou.<sup>153</sup>

---

**383 A.D.** In 383 A.D. during the period between 19 April and 17 May, several regions of *China* experienced floods. These included Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ü-chiang; and Kiangsi (now Jiangxi province) in southern *China* at Nan-k'ang and Chi-an.<sup>153</sup>

In 383 A.D. during the period between 16 July and 14 August, there was a drought in *China*.<sup>153</sup>

---

**384 A.D.** In 384 A.D. during the period between 13 January and 11 February, *China* experienced floods. "Great waves cutting into stone."<sup>153</sup>

---

**385 A.D.** In 385 A.D., *China* experienced floods during the period between 24 June and 23 July. Then during the period between 22 August and 20 September, there was a drought that resulted in a famine.<sup>153</sup>

---

**387 A.D.** In Cheshire, *England*, there was an overflowing of the River Dee, and great destruction.<sup>47, 92</sup> drowned much people and cattle.<sup>72</sup>

There was an inundation of the River Dee in *England*.<sup>40, 41, 43</sup>

---

**388 A.D.** In 388 A.D. during the period 2-31 July, there was a drought in *China*.<sup>153</sup>

---

**390 A.D.** In 390 A.D. during the period between 28 July and 26 August, there was a drought in *China*. Then *China* experienced floods during the period between 27 August and 25 September in Shensi (now Shaanxi province) in central *China* at Mien and in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.<sup>153</sup>

---

**392 A.D.** In 392 A.D., there was a flood in Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou. People were killed by a tidal flow.<sup>153</sup>

In 392 A.D. during the period between 6 July and 4 August in Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang, ships were destroyed by waves.<sup>153</sup>

During the period between 8 August 392 and 5 February 393, there was a drought in *China*.<sup>153</sup>

---

**393 A.D.** In 393 in *Egypt*, there was a great inundation of the Nile River, which threatened ruin to Alexandria and Libya.<sup>72</sup>

In 393 in *Egypt*, there was an unusual overflow of the Nile River; great damage.<sup>92</sup> [Another source places this event in the year 398.<sup>47</sup>]

In 393 A.D., *China* experienced floods during the period between 26 June and 24 July in Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ü-chiang and in Kiangsi (now Jiangxi province) in southern *China* at Nan-k'ang and Chi-an.<sup>153</sup>

In 393 A.D. during the period between 25 July and 23 August, there was a drought in *China*.<sup>153</sup>

---

**394 A.D.** In 394 A.D., *China* experienced floods during the period between 13 August and 11 September in Hupeh (now Hubei province) in central *China* at Hsiang-yang and in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. Crops were damaged.<sup>153</sup>

---

**395 A.D.** In 395 A.D., *China* experienced floods during the period between 4 July and 1 August in Hupeh (now Hubei province) in central *China* at Hsiang-yang and in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.<sup>153</sup>

---

**396 A.D.** In 396 A.D., *China* experienced floods during the period between 22 June and 21 July.<sup>153</sup>

---

**397 A.D.** The weather [in *France*] between 8-11 November 397 A.D. was very gentle. It was the origin of “Summer of Saint Martin”. [The period following the first autumn frosts, where the climate offered a short glimpse of pleasant warm summer-like weather before the harshness of winter returns. In Anglo-Saxon countries, it is often called an “Indian Summer”. In Slavic countries, it goes by the name “Summer of Grandmothers”.]<sup>171</sup>

---

**399 A.D.** In 399 A.D., *China* experienced floods during the period between 20 May and 18 July in Hupeh (now Hubei province) in central *China* at Hsiang-yang.<sup>153</sup>

During the period between 8 November 399 and 5 February 400, there was a drought in *China*.<sup>153</sup>

---

**Winter of 399 / 400 A.D.** The winter in 400 A.D. was very severe, even in Provence in southeastern *France*. The Rhône River froze along its entire length.<sup>171</sup>

---

**400 A.D.** In 400 A.D. during the period between 8 July and 5 August, there was a drought in *China*.<sup>153</sup>

---

**Winter of 400 A.D. / 401 A.D.** In the winter of 401, the *Pontus Sea* (Black Sea) was frozen over, also the Sea between Constantinople (now Istanbul) and Scutari (Üsküdar) [inlet to the *Sea of Marmara* from the *Black Sea*] in *Turkey*.<sup>1</sup>

In the year 401, the Pontus Sea was entirely frozen over for the space of 20 days, and the sea between Constantinople and Scutari, *Turkey*.<sup>2, 41, 42, 43</sup>

The winter of 401 was very cold in *Asia Minor*. The *Black Sea* froze over and there was sea ice near Constantinople.<sup>28</sup>

In the year 401 in *Europe*, the Euxine Sea (*Black Sea*) was frozen and also parts of the *Bosphorus* (*Bosphorus* is the strait between the *Black Sea* and the *Sea of Marmara*).<sup>47, 93</sup>

In the year 400, the *Black Sea* froze completely. The Rhône River in *France* was frozen firm across its entire width.<sup>60, 62</sup>

In the year 401, the *Black Sea* was frozen over for twenty days, and men crossed from *Asia Minor* to the *Crimea*.<sup>63</sup>

In the year 401, the Euxine Sea (*Black Sea*) was frozen over for 20 days.<sup>90</sup>

In the year 401, there was a great frost in the reign of Phocas it was the severest.<sup>72</sup>

The *Black Sea* was frozen for 20 days, and when the thaw came, such mountains of ice passed by Constantinople [Istanbul, *Turkey*] that they frightened the citizens.<sup>72</sup>

In the year 400, the cold was so severe that on January 28, the Rhône River in *France* was frozen over its entire width and the passengers on foot and horseback went on the ice, without running any risk, between Dauphine (in the Alps) and Vivarais.<sup>61</sup>

In 400 the Rhône River in Provence, *France* froze across its width.<sup>79</sup>

In the year 400, the winter in *Provence* and along the coast of the *Black Sea* was very severe.<sup>62</sup>

The winter of 401 A.D. was very severe in Provence, *France*.<sup>171</sup>

In the year 401, the River Thames in *England* was frozen over for two months.<sup>29</sup>

**401 A.D.** In 401 A.D. during the period between 6 May and 8 August, there was a severe drought in *China*.<sup>153</sup>

In 401 A.D., *China* experienced floods during the period between 29 May and 26 June.<sup>153</sup>

**402 A.D.** In 402 A.D. during the period between 13 October and 10 December, there was a drought in *China*.<sup>153</sup>

**403 A.D.** During the period between 8 November 403 and 5 February 404, there was a drought in *China*.<sup>153</sup>

**404 A.D.** In 404 A.D. during the period between 27 February and 26 March, *China* experienced floods. “Great waves cutting into stone.”<sup>153</sup>

In 404 A.D. during the period between 20 September and 19 October, there was a drought in *China*.<sup>153</sup>

**406 A.D.** In 406 A.D. during the period between 6 January and 3 February, *China* experienced floods. “Great waves cutting into stone.” Flooding also occurred between 30 August and 28 September and at the end of the year between 26 December 406 and 24 January 407.<sup>153</sup>

**407 A.D.** In 407 A.D., *China* experienced floods during the period between 21 June and 20 July.<sup>153</sup>

**408 A.D.** During the period between 8 November 408 and 8 February 409, there was a drought in *China*.<sup>153</sup>

**409 A.D.** In 409 A.D. during the period between 2 and 31 January, *China* experienced floods. “Great waves cutting into stone.”<sup>153</sup>

**410 A.D.** In Rome, *Italy*, there was a famine followed by a plague.<sup>57, 72, 91</sup>

Under the Emperor Honorius (who reigned from 395 to 414), so great was the scarcity and dearth of victuals in Rome, *Italy*, that in the open marketplace, this voice was heard – set a price on man’s flesh. St. Jerome alluding to this plague, says: the rage of the starved with hunger broke forth into abominable excess, so as people mutually devoured the members of each other. Nay, even the tender mother spared not the flesh of her sucking child, but received him again into her bowels whom she had brought forth a little before.<sup>72</sup>

In Rome, *Italy*, when Lucius Minutius was first made overseer of the grain, many commoners left so that they should not be tortured with a long famine, covered their faces and cast themselves headlong into the Tiber River.<sup>72</sup>

In 410 A.D., *China* experienced floods during the period between 18 June and 17 July. Then during the period between 14 October and 12 November, *China* experienced a drought.<sup>153</sup>

---

**Winter of 410 / 411 A.D.** The winter of 411 was very cold [in *France*] from 30 November to 10 February.<sup>171</sup>

---

**412 A.D.** In 412 A.D., *China* experienced floods. Then during the period between 20 November and 18 December, *China* experienced a drought.<sup>153</sup>

---

**413 A.D.** In 413 A.D., *China* experienced floods.<sup>153</sup>

During the period between 8 August 413 and 5 February 414, *China* experienced a drought.<sup>153</sup>

---

**414 A.D.** In 414 A.D., *China* experienced floods during the period between 4 June and 3 July. Then between 30 September and 29 October, *China* experienced a drought. Then between 28 December 414 and 25 January 415, *China* was again in a drought.<sup>153</sup>

---

**415 A.D.** In *England*, an inundation of the River Dee drowned 40 families.<sup>40, 41, 43</sup>

In 415 A.D., *China* experienced floods during the period between 21 August and 19 September in Hopei (now Hebei province) in northern *China* at Chiao-ho [location possibly a misprint].<sup>153</sup>

---

**416 A.D.** In *England*, a great part of Colchester destroyed, and several people killed by a storm.<sup>40, 41, 43, 56</sup> [Colchester is located in Essex, in the east coast of England.]

In *England*, part of Colchester was burnt by lightning and people were burnt by it.<sup>72</sup>

In 416 A.D., *China* experienced floods during the period between 13 April and 12 May in Hopei (now Hebei province) in northern *China* at Cho.<sup>153</sup>

---

**418 A.D.** In 418 A.D., *China* experienced floods during the period between 16 September and 15 October in Honan (now Henan province) in central *China* at Wu-chin.<sup>153</sup>

In 418 or 421 [in *England*], there was earthquakes, rain, snow, floods, meteors, hailstorms, cold, famine and plague.<sup>72</sup>

In 418 or 421 [in *England*], there was a very great snowstorm.<sup>72</sup>

---

**419 A.D.** In Hampshire in southeast *England*, there was an inundation of the sea and great destruction, near Southampton.<sup>40, 41, 47, 92</sup> drowned many people.<sup>72</sup>

In 419, there was an irruption of the sea in Hampshire, *England*.<sup>43</sup>

---

**421 A.D. – 422 A.D. Turkey. Famine**

During 421-422 in the provinces of Pontus and Paphlagonia [currently located in northeastern and north central *Turkey* respectively] on the coast of the Black Sea, because of the severity of the famine, many

parents had their children castrated and sold as eunuch slaves.<sup>86</sup>

---

**425 A.D.** In 425 A.D. during the period between 6 May and 8 August, *China* experienced a drought.<sup>153</sup>

---

**426 A.D.** In 426 A.D. during the period between 8 August and 8 November, *China* experienced a drought.<sup>153</sup>

---

**427 A.D.** In 427 A.D. during the period between 8 August and 8 November, there was a drought in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

---

**428 A.D.** In 428 A.D., *China* experienced floods during the period between 28 June and 27 July in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

---

**430 A.D.** In 430 A.D., *China* experienced floods in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and in Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin and I-hsing.<sup>153</sup>

In 430 A.D., there was a plague in *Britain*, in which so many people died that the living were scarcely sufficient to bury the dead.<sup>212</sup>

---

**431 A.D.** In 431 A.D. during the period between 26 July and 23 August, there was a drought in Anhwei (now Anhui province) in eastern *China* at Tang-t'u.<sup>153</sup>

---

**432 A.D.** In 432 A.D., *China* experienced floods during the period between 14 July and 11 August in Honan (now Henan province) in central *China* at Loyang. Several houses were damaged.<sup>153</sup>

---

**434 A.D.** In *Italy*, there was a famine.<sup>57, 72, 91</sup>

In 434 A.D., *China* experienced floods during the period between 23 June and 21 July in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

---

**435 A.D.** In 435 A.D., *China* experienced floods during the period between 12 July and 9 August at several locations. Floods occurred in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking, and I-hsing; in Anhwei (now Anhui province) in eastern *China* at Shou; and in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou.<sup>153</sup>

---

**439 A.D.** In *England*, there was a drought.<sup>47</sup>

In *England*, there was a famine after the comet.<sup>57, 72, 91</sup>

---

**440 A.D.** In 440 A.D., *China* experienced floods during the period between 12 September and 11 October in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and in Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing, I-tu, and Tsinan.<sup>153</sup>

---

**441 A.D.** In *Wales*, the sea made great inroads, both north and south coasts, many people and much cattle drowned.<sup>47, 72, 92</sup>

In north and south *Wales*, an irruption of the sea.<sup>40, 41, 43</sup>

In 441 A.D., *China* experienced floods during the period between 5 June and 4 July in Hupeh (now Hubei province) in central *China* on the Mien River.<sup>153</sup>

---

**442 A.D.** In 442 A.D., floods occurred in Honan (now Henan province) in central *China* at Loyang. Floods also struck during the period between 24 June and 23 July in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

In 442 A.D., there was a drought in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and in Anhwei (now Anhui province) in eastern *China* at Shou.<sup>153</sup>

---

**443 A.D.** There was an extraordinary severe winter [in England]. There was so much snow that covered the ground for such a long time (scarcely dissolved in six months after) that it cause great destruction of people and cattle.<sup>72</sup>

[In *England*] during the winter of 443, there was the deepest snowstorm.<sup>72</sup>

In 443 A.D., floods struck *China* and resulted in a famine.<sup>153</sup>

In 443 A.D., there was a drought in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and in Anhwei (now Anhui province) in eastern *China* at Shou. The crops were damaged and there was a great famine.<sup>153</sup>

---

**444 A.D.** In 444 A.D., floods struck *China*.<sup>153</sup>

---

**446 A.D.** In Constantinople [Istanbul], *Turkey*, there was a severe famine.<sup>57</sup>

---

**447 A.D.** In 447 A.D., floods occurred in Anhwei (now Anhui province) in eastern *China* at Fêng-yang and in Shantung (now Shandong province) on the east coast of *China* at Tzū-yang, I-tu, and Tsinan. During the period between 29 July and 26 August, floods struck Hopei (now Hebei province) in northern *China* at Lu-lung.<sup>153</sup>

---

**449 A.D.** In 449, there was a great famine in *Italy*.<sup>128</sup>

---

**450 A.D.** In *Gaul* in the year 450, the weather seasons were extraordinary.<sup>79</sup>

In Rome, there was a famine followed by a plague.<sup>72</sup>

In *Italy*, there was a severe famine – so severe that parents ate their children.<sup>57, 90, 91</sup>

During the severe famine of 450 in *Italy*, the Roman emperor decreed that parents who sold their children into slavery had the right to purchase them back with a 20% surcharge.<sup>86</sup>

A grievous famine afflicted *Italy*, so that many people sold their children to buy food. This was followed by a plague.<sup>72</sup>

During the reign of Turgina about 450 A.D. there was a great famine in Kashmir region of *India*. This famine was attributed to frost.<sup>179</sup>

During the period between 24 August 450 and 16 May 451, there was a severe drought in *China*.<sup>153</sup>

---

**451 A.D.** The years 451 and 452 A.D. in *Britain* were terrible drought years. They were followed by floods.<sup>171</sup>

---

**452 A.D.** In 452 A.D., *China* experienced floods during the period between 3 June and 2 July in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

The years 451 and 452 A.D. in *Britain* were terrible drought years. They were followed by floods.<sup>171</sup>

---

**454 A.D.** In what is now present-day *Turkey*, in the former regions called Phrygia, Galatia, Cappadocia, and others, there was a great drought, followed by famine and then the plague struck.<sup>47, 72</sup> . . . from January to September a famine and a plague of locust from 2 to 5 years.<sup>72</sup>

Under Martianus, the Emperor of the East, happened a great drought in both Phrygia [*Turkey*], in both Galatias, in Cappadocia and in Cilicia, followed by a famine. This compelled men to eat uncommon and hurtful food. From this drought and bad food, ensued a plague. It caused inflammation for the first two days, so as the bodies of the sick swelled, they lost their eyes, had a cough at the same time which killed them the third day. For no cure could be found; delirium and watchings attended it. This calamity laid wastes *Palestine* and many other provinces; for famine and pestilence overspread the earth.<sup>72</sup>

In *England*, there was a drought from July to September followed by a famine.<sup>47</sup>

[In *England*] in the year 454, there was a plague preceded by drought and famine.<sup>72</sup>

In 454 A.D., *China* experienced floods during the period between 8 September and 7 October in Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.<sup>153</sup>

---

**457 A.D.** In 457 A.D., *China* experienced floods during the period between 8 June and 7 July in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and in Kiangsu (now Jiangsu province) on the east coast of *China* at I-hsing.<sup>153</sup>

---

**458 A.D.** In 458 A.D., *China* experienced floods during the period between 24 September and 22 October in Hupeh (now Hubei province) in central *China* at Hsiang-yang.<sup>153</sup>

In York in northeast *England*, a storm blew down several houses, and killed many people.<sup>40, 41, 43, 56</sup>

In York, *England*, a hurricane ruined many houses and killed people.<sup>72</sup>

---

**459 A.D.** In *Britain*, hail in many parts of the country; stones 3 inches in diameter. "Killed many men and much cattle."<sup>40, 41, 43, 56, 57, 72, 93</sup>

A great hailstorm struck *Britain* in 459 A.D. with hailstones 3 inches (8 centimeters) in diameter. Killed many people and cattle.<sup>28</sup>

[Another source identifies this year as 450.] A great hailstorm was recorded in *England* with hailstones measuring three inches (8 centimeters) in diameter. The hailstones killed many men, beasts, fowls and birds.<sup>1</sup>

During the period between 8 November 459 and 5 February 460, there was a drought in several regions of *China*. Regions affected included:<sup>153</sup>

- Suiyuan province (now part of *Inner Mongolia*).
- Chahar province (now eastern *Inner Mongolia*).
- Shansi (now Shanxi province) in northern *China* at Kuo.
- Kansu (now Gansu province) in northwest *China* at Ku-yüan.
- Shensi (now Shaanxi province) in central *China* at Sian, Hua, and T'ien-shui.

---

**460 A.D.** The Ardèche and the Durance rivers in *France* were entirely frozen. The winter was very severe.<sup>61</sup> [The Ardèche River is located in southcentral France and the Durance River is located in southeastern France.]

In 460 A.D. during the period between 6 May and 4 June, there was a drought in *China*. In the same year, floods struck several regions of *China* including Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang and in Shantung (now Shandong province) on the east coast of *China* at Tzū-yang (where the land tax was deferred). Floods also struck during the period between 2 and 30 September in Hupeh (now Hubei province) in central *China* at Hsiang-yang.<sup>153</sup>

---

**Winter of 461 / 462 A.D.** Danube River was frozen.<sup>1</sup>

Theodimir (King Theodimir of the Ostragoths Amal) with his army crossed the ice on the frozen Danube River to avenge his brother's death. The Var River in southeast *France* was frozen.<sup>60, 62</sup>

The winter in Swabia (currently a region of Bavaria, *Germany*) and Provence (a region of southeastern *France*) was very severe.<sup>62</sup>

In 462, the Var River in southeast *France* also froze completely.<sup>79</sup>

The winter of 462 A.D. was very severe in Province, *France*. The Var River was frozen.<sup>171</sup>

The *Black Sea* froze completely. The Rhône River in *France* was frozen across its width.<sup>61</sup>

---

**463 A.D.** In 463 A.D., in the Eastern Commanderies of *China* there was a severe drought during the period of 30 August and 28 September. The drought was very severe and caused a great famine. 60% to 70% of the people died of starvation.<sup>153</sup>

In 463 A.D., floods struck 13 districts in *China*.<sup>153</sup>

---

**464 A.D.** In 464 A.D., in the Eastern Commanderies of *China* there was a severe drought during the period of 22 May and 19 June. The drought was very severe and caused a great famine. 60% to 70% of the people died of starvation.<sup>153</sup>

---

**466 A.D.** In *Britain*, there was a famine “and bad fatal air”.<sup>57, 72, 91</sup>

A grievous famine prevailed in *Britain*; and a pestiferous smell in the air [plague] killed both man and beast.<sup>72</sup>

In 466 A.D., there was a drought in 11 districts of *China* that led to a famine.<sup>153</sup>

---

**Winter of 467 / 468 A.D.** During the period between 12 December 467 and 10 January 468, floods struck 27 districts in *China*.<sup>153</sup>

The winter of 468 A.D. was very severe [in *France*]. There was an unusual “reversal of the seasons”.<sup>171</sup>

---

**468 A.D.** The extreme rigor of the year 468 in *Gaul* was due solely to the complete reversal of the four seasons and their weather.<sup>79</sup>

In 468 A.D. during the period between 6 July and 4 August, floods struck Hopei (now Hebei province) in northern *China* at Mi-yün. Then during the period between 3 and 31 October, floods struck 11 districts of *China*. Then during the period 1-29 December, drought struck in 27 districts of *China*.<sup>153</sup>

---

**469 A.D.** In Constantinople (Istanbul, *Turkey*), there was much flooding, consequence of four days of incessant rain.<sup>47, 72, 92</sup>

Terrible rains fell in Constantinople and Bythina, which ceased not for four days. Floods turned mountains to a plain. Towns were drowned.<sup>72</sup> [Bythina is the Sea of Marmara region south of Istanbul, Turkey.]

---

**470 A.D.** In the year 470 in *Scotland*, there were 10 months of rain together. This caused the death of beast [livestock] and a dearth.<sup>72</sup>

---

**472 A.D.** In 472 A.D., there was a great fall of black dust in the neighborhood of Constantinople [now Istanbul, *Turkey*].<sup>205</sup>

---

**473 A.D.** In 473 A.D., during the period between 11 July and 8 August, floods struck Anhwei (now Anhui province) in eastern *China* at Shou. Then during the period between 8 September and 6 October, a drought struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. Eleven districts of *China* were affected. As a result, the land tax was remitted and 2,845 persons died.<sup>153</sup>

---

**Winter of 473 / 474 A.D.** In the year 473 in north and south *Wales*, there was a great snowstorm. Snow lay 4 months and caused the destruction of much cattle.<sup>72</sup>

The winter of 474 in *Britain* was very cold. There was 4 months of frost and great snow.<sup>28</sup>

In the year 474, frost with great snow for four months in *England*.<sup>47, 72, 93</sup>

---

**475 A.D.** Famine oppressed the Gallicans, Rhaetians, Noricans, and other Northern Nations [most of *Europe*].<sup>72</sup> [The Gallicans refers to the people from Gaul. Rhaetians refers to the people from an ancient Roman province that included present-day eastern Switzerland and western Austria. Noricans or Noricum refers to the people from mostly modern day Austria.]

There was a famine in the Northern Nations [of *Europe*].<sup>72</sup>

In 475, there was a famine in the Northern Nations [of *Europe*], partly caused by locusts.<sup>91</sup> [Under certain weather related conditions, solitary grasshoppers can undergo a physical transformation into a locust, develop swarming behavior. Swarms of locust can travel great distances, rapidly stripping fields and greatly damaging crops.]

In 475 A.D., *China* experienced floods during the period between 22 April and 20 May in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

---

**476 A.D.** In Rome, *Italy*, there was a plague from rains, thunder and lightning.<sup>72</sup>

---

**477 A.D.** In 477 A.D. during the period between 26 July and 24 August, floods struck Anhwei (now Anhui province) in eastern *China* at Shou [possibly a misprint for Yung-chou].<sup>153</sup>

In 477, there was a famine in *Britain* from locust.<sup>72</sup>

---

**478 A.D.** In 478 A.D., during the period between 20 January and 17 February, a drought struck 8 districts of *China* resulting in famine and locusts. Also in 478 A.D., floods struck over 20 districts of *China* causing a famine. During the period between 20 March and 17 April, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-ch'ien. During the period between 18 April and 17 May, a drought struck Honan (now Henan province) in central *China* at Loyang producing a famine. During the period between 18 May and 15 June, floods struck Anhwei (now Anhui province) in eastern *China* at Ho [possibly Nan-yü]; Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow; and Shantung (now Shandong province) on the east coast of *China* at Tzū-yang. Flooding also struck *China* between 14 August and 12 September.<sup>153</sup>

In the year 478, great damage was done to the city of Winchester in *England* from lightning.<sup>72</sup>

---

**479 A.D.** In London *England*, the River Thames for many miles above and below much flooded; great damage.<sup>47, 92</sup>

Thames 10 miles above and 10 miles below London, *England*, drowned much people and cattle.<sup>72</sup>

In 479 A.D. during the period between 6 June and 4 July, a drought struck *China*. Then during the period between 2 and 30 October, floods struck several regions of *China* including in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and I-hsing, and in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou. As a result of these floods, the land tax was remitted.<sup>153</sup>

---

**480 A.D.** The Tiber River in Rome, *Italy* froze over.<sup>33</sup>

In *Scotland*, there was a drought.<sup>47</sup>

In *Scotland*, there was a famine after the appearance of a comet.<sup>57, 72, 91</sup>

In 480 A.D. during the period between 26 February and 26 March, a drought struck *China*.<sup>153</sup>

In 480 A.D., several regions of *China* experienced flooding. Eighteen districts of *China* were affected and the flooding resulted in famine.<sup>153</sup>

During the period of 6 May – 8 August, the following area was affected:

— Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Soochow experienced flooding.

During the period of 31 July – 29 August, the following areas were affected:

— Shantung (now Shandong province) on the east coast of *China* at I-tu experienced flooding.

— Hupeh (now Hubei province) in central *China* at Hsiang-yang experienced flooding.

During the period of 30 August – 27 September, the following areas were affected:

— Shantung (now Shandong province) on the east coast of *China* at Tzū-yang, Chi-ning, Yeh, An-ch'iu, and Chang-ch'iu experienced flooding.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and Su-ch'ien experienced flooding.

— Hopei (now Hebei province) in northern *China* at Lu-lung and Lung-p'ing experienced flooding.

— Honan (now Henan province) in central *China* at Ju-nan and Chün experienced flooding.

---

**481 A.D.** In 481 A.D. during the period between 5 February and 6 May, a drought struck *China*.<sup>153</sup>

---

**482 A.D.** In 482 A.D. during the period between 4 May and 1 June, a drought struck *China*. Then during the period between 2 and 30 July, floods struck several regions of *China* including in Kiangsu (now Jiangsu province) on the east coast of *China* at I-hsing, and in Chekiang (now Zhejiang province) on the

east coast of *China* at Hu-chou. As a result of these floods, the land tax and the corvée was reduced. [Corvée, under the feudal system, is compulsory, unpaid labor demanded by a lord or king.]<sup>153</sup>

---

**484 A.D.** In *Africa*, there was a terrible drought.<sup>47, 72</sup>

In *Africa*, there was a famine caused by drought.<sup>57, 72, 91</sup>

There was such a drought as dried up all springs and rivers. Rational and brute animals strove for the withered grass roots in the open fields. So great was the famine; that men died on heaps. All roads were lined with their dead carcasses, without anybody to bury them. This laid waste to *Africa* and the *Vendals*. There was neither dew nor rain. The earth was parched. There was no corn [grain], vines, olives, or other fruits, nor leaves on any trees. Hence there came a grievous plague.<sup>72</sup> [During this period of time, *Africa* generally referred to North Africa (north Tunisia and eastern Algeria). *Vendals* were Germanic people who crossed into North Africa from Spain in the year 429.]

---

**485 A.D.** In 485 A.D., during the period 2-31 January, drought struck 15 districts of *China*. In 13 of these districts the crops were damaged. The drought struck Honan (now Henan province) in central *China* at Loyang. A severe drought struck Shantung (now Shandong province) on the east coast of *China* at Lin-i [located at 118.24° East longitude and 35.07° North latitude.] Then during the period between 28 June and 27 July, floods struck Shansi (now Shanxi province) in northern *China* at Fan-chih. Houses were damaged.<sup>153</sup>

---

**486 A.D.** In 486 A.D., floods struck 13 districts of *China*. Floods struck Honan (now Henan province) in central *China* at Loyang. During the period between 24 October and 11 November, Anhwei (now Anhui province) in eastern *China* at Ho [uncertainty in location name Nan-yü] experienced flooding and 1,000 persons were drowned.<sup>153</sup>

---

**487 A.D.** In *England*, the Severn valley overflowed; great damage.<sup>40, 41, 47, 92</sup>

In 487, there was an inundation of the Severn.<sup>43</sup>

In the year 487 in *England*, the River Severn carried down much people and cattle in a flood.<sup>72</sup>

In 487 A.D. during the period between 5 February and 4 August, there was a drought in Kansu (now Gansu province) in northwest *China* at T'ien-shui, which caused a famine. Then during the period between 6 May and 8 August, floods struck on the east coast of *China* in Chekiang (now Zhejiang province) at Hu-chou and in Kiangsu (now Jiangsu province) at I-hsing. As a result of these floods, crops were damaged, the land tax and the corvée was reduced. [Corvée, under the feudal system, is compulsory, unpaid labor demanded by a lord or king.]<sup>153</sup>

---

**488 A.D.** In 488 A.D. during the period between 23 August and 21 September, floods struck on the east coast of *China* in Chekiang (now Zhejiang province) at Hu-chou and in Kiangsu (now Jiangsu province) at I-hsing.<sup>153</sup>

---

**490 A.D.** The heavy rains and flooding of the year 490 in *Gaul* caused the plague.<sup>79</sup>

In 490 A.D. during the period between 8 August and 8 November, there was a drought in *China*.<sup>153</sup>

---

**491 A.D.** In 491 A.D. during the period between 26 January and 23 May, there was a drought in *China*. Then during the period between 19 September and 18 October, floods struck on the east coast of *China* in Chekiang (now Zhejiang province) at Hu-chou and in Kiangsu (now Jiangsu province) at I-hsing.<sup>153</sup>

---

**492 A.D.** Stamford, *England* was burnt down from lightning.<sup>72</sup>

---

**493 A.D.** In 493 A.D. during the period between 31 May and 29 June, there was a drought in Kiangsu (now Jiangsu province) at Nanking. As a result, the making of wine was prohibited.<sup>153</sup>

---

**495 A.D.** In 495 A.D., there was a severe drought in *China*. Then during the period between 8 November 495 and 5 February 496, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow and Wu-chin. As a result of these floods, crops were damaged.<sup>153</sup>

---

**496 A.D.** In 496 A.D. during the period between 26 July and 24 August, there was a drought in *China*.<sup>153</sup>

In 496 A.D. during the 7<sup>th</sup> moon, began violent storms in the vicinity of Shanghai, *China*. This and the two years following, violent wind, destroyed houses, broke trees and killed people.<sup>166</sup>

---

**499 A.D.** In 499 A.D., floods struck in 18 districts of *China* resulting in a famine. Flooding occurred in Shantung (now Shandong province) on the east coast of *China* at I-tu, Tsinan, Yeh, I-shui, and Tzū-yang. Flooding occurred in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. Flooding occurred in Honan (now Henan province) in central *China* at Ju-nan and Hsi. During the period between 24 July and 21 August, floods also struck in Kiangsu at Nanking where many people drowned.<sup>153</sup>

---

**500 A.D.** In 500 A.D. during the period between 11 August and 8 September, floods struck several regions of *China* damaging houses. Floods struck Shantung (now Shandong province) on the east coast of *China* at I-tu, Tsinan, Yeh, I-shui, and Tzū-yang. Flooding occurred in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. Flooding occurred in Honan (now Henan province) in central *China* at Ju-nan, Hsi, Huang-ch'uan, and Chi.<sup>153</sup>

---

**502 A.D.** In 502 A.D., a severe drought struck *China*. Many people died of starvation. A drought occurred in the period between 23 February and 23 March.<sup>153</sup>

In 502 A.D. in the vicinity of Shanghai, *China*, there was a great drought; the five grains all failed. Rice sold for 5,000 cash a *tau*. Many starved to death. [The source also lists this event as occurring in 504 A.D.]<sup>166</sup>

---

**503 A.D.** In 503 A.D. during the period between 12 May and 9 June, a severe drought struck *China*. Then during the period between 10 July and 7 August, floods struck in Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua and Ch'ü and in Anhwei (now Anhui province) in eastern *China* at Shou.<sup>153</sup>

---

**504 A.D.** In 504 A.D. during the period between 28 June and 27 July, a drought struck *China*.<sup>153</sup>

---

**505 A.D.** In 505 A.D., floods struck in Shantung (now Shandong province) on the east coast of *China* at Po-hsing. One hundred fifty two people drowned.<sup>153</sup>

---

**507 A.D.** In 507 A.D., a drought struck *China*.<sup>153</sup>

In 507 A.D. during the period between 28 April and 26 May, floods struck in Honan (now Henan province) in central *China* at Pi-yüan. Then during the period between 24 August and 21 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

---

**Winter of 507 / 508 A.D.** Danube River was frozen over and more or less all the rivers of *Europe* were frozen.<sup>1</sup>

So severe a frost all over *Britain* that the rivers were frozen up for about two months.<sup>2, 40, 41, 42, 43, 47, 93</sup>

In the year 507, the frost [in *Britain*] was the severest for 2 months.<sup>72</sup>

In 508 A.D., there was a frost in *Britain*. All the rivers in *Britain* were frozen for over 2 months.<sup>212</sup>

It was very cold in *Britain* and the rivers were frozen for 2 months.<sup>28</sup>

---

**508 A.D.** In 508 A.D. during the period between 14 June and 13 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. During the same time period, there were also droughts in *China*.<sup>153</sup>

---

**509 A.D.** In 509 A.D. during the period between 3 June and 2 July, a drought struck *China*.<sup>153</sup>

---

**510 A.D.** In 510 A.D. during the period between 24 May and 21 June, droughts struck in Shantung (now Shandong province) on the east coast of *China* at Tsinan and in Hopei (now Hebei province) in northern *China* at Ting. Then during the period between 20 August and 18 September, floods struck 20 districts of *China*.<sup>153</sup>

---

**512 A.D.** In 512 A.D., during the period between 3 February and 3 March, a drought struck *China* and produced a famine. During the period between 22 March and 20 April, drought struck in Anhwei (now Anhui province) in eastern *China* at Tang-t'u and in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. Then floods struck in Honan (now Henan province) in central *China* at Loyang. During the period of 4 March and 1 April, floods struck 11 districts of *China*.<sup>153</sup>

---

**513 A.D.** In 513 A.D. during the period between 6 May and 8 August, floods struck 13 districts of *China*. During the period between 20 May and 18 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. During the period between 19 June and 18 July, floods struck in Anhwei (now Anhui province) in eastern *China* at Shou.<sup>153</sup>

---

**514 A.D.** In 514, during the reign of Cissa, King [of Sussex] of the *West Saxons*, reigned so severe a famine, that both men and women in great flocks and companies cast themselves from the rocks into the sea.<sup>72</sup> [In the Anglo-Saxon Chronicle, Cissa is identified as one of the three sons of Ælle, who arrived in Britain in the year 477, at Cymenshore (traditionally thought to have been in the Selsey area of Sussex).]

---

**515 A.D.** *England* was most afflicted by a famine.<sup>57, 72, 91</sup>

---

**516 A.D.** In 516 A.D. during the period between 16 June and 14 July, a drought struck *China*.<sup>153</sup>

In 516 A.D., there was a flood in Kiangsu (now Jiangsu province) on the east coast of *China* during the period 15 July - 13 August.<sup>153</sup>

In 516 A.D., there was a flood in *China* during the period 12 October - 9 November. As a result 10,000 persons drowned.<sup>153</sup>

---

**517 A.D.** Beginning in 517, there were five years of drought and pestilence in *Palestine*.<sup>128</sup>

In 517 A.D. during the period 1-30 October, floods struck Hopei (now Hebei province) in northern *China* at Chi', Ho-chien, and Nan-p'i.<sup>153</sup>

---

**518 A.D.** In 518 A.D. during the period between 27 January and 22 July, a drought struck *China*.<sup>153</sup>

---

**519 A.D.** In 519 A.D. during the period between 17 March and 14 April, a drought struck *China*.<sup>153</sup>

---

**520 A.D.** In Venice, *Italy*, there was a famine. The city received relief from Theodoric the Great.<sup>57, 91</sup>

In 520 A.D. during the period 2-30 June, a drought struck *China*. Then during the period between 31 July and 28 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* and in Anhwei (now Anhui province) in eastern *China*.<sup>153</sup>

---

**521 A.D.** In 521 A.D. during the period between 6 May and 8 August, floods struck Hopei (now Hebei province) in northern *China* at Ting, Chi [located at 115.34° East longitude and 37.34° North latitude], and Ho-chien and in Honan (now Henan province) in central *China* at Lin-chang. Then during the period between 19 August and 16 September, a drought struck *China*.<sup>153</sup>

---

**522 A.D.** In 522 A.D. during the period between 9 July and 7 August, a drought struck *China*.<sup>153</sup>

---

**523 A.D.** In *Scotland*, a terrible famine struck.<sup>57, 72, 91</sup>

---

**525 A.D.** In *England*, the River Thames hard frozen for six weeks.<sup>47, 72, 93</sup>

In *England*, the River Trent overflowed. Great number of cattle drowned.<sup>47, 92</sup>

In *England*, the River Trent flooded and drowned 6,000 cattle.<sup>72</sup>

In Edessa, Mesopotamia, (now Şanlıurfa, *Turkey*), sometimes called “Antioch of the Fair Streams”, a destructive flood did considerable damage to the city.<sup>47, 92</sup>

---

**526 A.D.** In 526 A.D., there was a dry fog in *England*. This was accompanied by an earthquake and volcanic eruptions.<sup>212</sup>

---

**527 A.D.** A famine struck in *North Wales*.<sup>57, 72, 91</sup>

In 527 A.D. during the period between 8 August and 8 November, floods struck Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**529 A.D.** In *England*, the River Humber overflowed.<sup>40, 41, 43</sup> Many people and cattle drowned.<sup>47, 72, 92</sup>

---

**530 A.D.** The town of Colchester, Essex, *England* was burnt by lightning.<sup>72</sup>

---

**531 A.D.** A famine struck in *South Wales* and a small plague.<sup>57, 72, 91</sup>

In 531 A.D. during the period between 30 June and 27 August, a drought struck *China*.<sup>153</sup>

---

**532 A.D.** In 532 A.D. during the period between 18 July and 16 August, floods struck Honan (now Henan province) in central *China* at Loyang. Three hundred houses were damaged.<sup>153</sup>

---

**533 A.D.** In 533 A.D. during the period between 8 June and 7 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

---

**534 A.D.** A sore famine struck in *Italy*.<sup>72</sup>

---

**535 A.D.** A famine struck *Ireland*. It was caused by the destruction of food and scarcity. The famine last four years.<sup>57, 91</sup>

An extreme weather event took place in 535-536. The effects were widespread. It caused unseasonable weather, crop failures and famines worldwide. The Byzantine historian Procopius recorded of 536, in his report on the wars with the Vandals, "during this year a most dread portent took place. For the sun gave forth its light without brightness...and it seemed exceedingly like the sun in eclipse, for the beams it shed were not clear." There were low temperatures during the summer. Snow reportedly fell in August in *China* delaying the harvest. There was a dense dry fog in the *Middle East, China* and *Europe*. Droughts occurred in *Peru*, which affected the Moche culture.<sup>73</sup>

During the reign of Emperor Justinian [Justinian the Great who ruled the Roman (Byzantine) Empire from 527 to 565], the sun for the greatest part of the year, gave so little light, that it was but equal to the light of the moon, the sky being clear, without clouds or any interposing bodies, after which followed a great famine.<sup>72</sup> [The source indicated this event took place in the year 564. I have placed it in this year because it appears to align with the account by Procopius.]

In 535 A.D. during the period between 16 June and 15 July, a severe drought struck *China*.<sup>153</sup>

---

**536 A.D.** In Northumberland *England*, the River Tweed overflowed. People and cattle drowned.<sup>47, 72, 92</sup>

In the years 536 and 537 A.D., there was a persistent dry mist on the *Mediterranean Sea*. This caused rotten cold summers and snowy cold winters.<sup>171</sup>

---

**537 A.D.** A dearth struck *Scotland* and *Wales*.<sup>57, 72, 91</sup>

In the years 536 and 537 A.D., there was a persistent dry mist on the *Mediterranean Sea*. This caused rotten cold summers and snowy cold winters.<sup>171</sup>

In 537 A.D. during the period between 26 April and 24 May, a severe drought struck many regions of *China*. This drought was accompanied by a frost and caused a famine. Regions affected were:<sup>153</sup>

- Shansi (now Shanxi province) in northern *China* at Taiyuan, Hsin, Hsi, Chin-ch'êng, Lin-fên, and Chi.
- Shensi (now Shaanxi province) in central *China* at Sian.
- Kansu (now Gansu province) in northwest *China* at T'ien-shui.
- Honan (now Henan province) in central *China* at Shan.

---

**538 A.D.** The land of *Italy* lay uncultivated last year, hence a great famine. Such as dwelt in the region of Emilia in northern *Italy* left their seats and goods, and went into the region of Picenum in east-central *Italy* and even there no less than 50,000 died of famine. Then the starved throwing off all humanity killed and ate one another. Delicate mothers eat their tender babes. Two women killed 17 men and ate them. A woman in Milan in northern *Italy* ate her dead son. People kneeling down on their knees and hands to eat grass and herbs, fell down with weakness and died. Nor was there any to bury them. Others eat dogs, mice, cats and the vilest animals. The Tuscans [from Tuscany in north-central Italy] were also starved, but bread made of earthnuts was a help to them. Far greater still were the numbers of starved beyond the Ionian borders. When they had nothing to eat, they became extenuated and pale, their flesh withered away and became black. The disease spread as among great herds of cattle. Their bile was redundant,

there was no juice left in their bodies. Their skin was hardened, and became dried like leather, and clave to the bones. Their livid color became black. Men looked like charcoal wood, their countenance was senseless and stern. They died everywhere, partly from hunger and partly from too great satiety. Having been burnt up within, after the natural heat was extinguished. For having been starved, if they had any opportunity to feed freely, being not able to digest their food, they died so much sooner. The famine was so great in the region of Liguria in the coastal region of northwestern *Italy* that many mothers ate their own dearest children. The west coast region of Campania in southern *Italy* also suffered. Nor did Picenum's being a seacoast save it. In the following year, 539, the grain sprang up by themselves, without the labor of farmers and oxen. They shook in the wind because there was no one left to reap them.<sup>72</sup>

In 538 in *Italy* there was a great famine.<sup>57, 72, 91</sup>

In 538 A.D., floods struck Hopei (now Hebei province) in northern *China* at Ting, Chi [located at 115.34° East longitude and 37.34° North latitude], Ho-chien, and Nan-p'i. During the period between 6 May and 8 August, floods struck Shantung (now Shandong province) on the east coast of *China*.<sup>153</sup>

---

**540 A.D.** In *France* and *Italy*, there were great floods from rain.<sup>47, 72, 92</sup>

There were great inundations in *France*, from excessive rains. The Tiber River in central *Italy* overflowed and caused a terrible slaughter.<sup>57</sup>

---

**542 A.D.** In 542 A.D., floods struck Hopei (now Hebei province) in northern *China* at Nan-p'i. Then during the period between 8 November 542 and 6 May 543, a drought struck *China*.<sup>153</sup>

---

**543 A.D.** During the period between 8 November 543 and 7 May 544, a drought struck *China*.<sup>153</sup>

---

**Winter of 543 / 544 A.D.** The winter [in Gaul – *Western Europe*] was so severe because of the ice and snow that the birds and other wild animals that one could catch them by hand.<sup>62</sup>

The winter of 544 A.D. was very cold and there was an extreme abundance of ice and snow [in *France*]. It was so cold that many wild animals could be approached and picked up by hand.<sup>171</sup>

---

**Winter of 544 / 545 A.D.** The winter of 545 A.D. was very cold [in *France*] similar to the winter of 544.<sup>171</sup>

During the winter of 545 A.D. [in *England*], the cold was so intense that birds allowed themselves to be caught by hand.<sup>212</sup>

---

**545 A.D.** In 545, there was the greatest famine of grain, wine and oil. Then came the terriblest and greatest plague over all the world that ever was paralleled or recorded in history. It spared neither age, sex, rank, nor place. God only could afford the least help, not man or art. It began among the Egyptians at Pelusium, *Egypt*; thence it spread over the globe, not missing one corner, nor did it seize the same person twice. It began thus: Demons in human shape appeared to many, and when they fell upon them, they imagined themselves struck by some man, and disease quickly fell on them. Some from the beginning, as they were able, prayed that the distemper might be removed; and as if agitated by some evil spirit, did not hear their friends calling on them. They were shut up in close places. The same happened to some in their sleep, for they were quickly taken with a fever, both heat and color of the body continuing the same, nor was there any inflammations, as is common with feverish people, but a cough from the first evening of the fever. No medicines were given, none being suspicious of the danger. The same day in some, although in others later, a tuber appeared in one place or another [on their body].

Moreover, some were lethargic, or comatose. Others were foolish, some lost all memory, neglecting even their food, and they died. In their foolishness, they imagined themselves caught by someone and cried out they were assaulted and turning from they fled. Their servants and nurses suffered severe and intolerable things from them. So that they as well as the sick challenged compassion, not that they were affected with the disease, for that at present hurt none by contagion. But being furious, they either leaped out of bed, or hurried to the rivers to quench their thirst. They could hardly be restrained by force. Some died the same day, others several days after. This plague raged three months in Constantinople, [Istanbul, *Turkey*]. At first only a few died. After five or ten thousand were carried out daily. Many rich men, having all their servants dead, died rather from want of assistance than of the disease, and laid unburied.<sup>72</sup> [Pelusium is located in the easternmost mouth of the Nile River. Today it is called Tell el-Farama, located in the extreme northwestern Sinai not really very far to the east of Port Said, Egypt.]

In 545, there was a grievous famine.<sup>72</sup>

---

**Winter of 545 / 546 A.D.** In winter 545 A.D. in the 11<sup>th</sup> month, the southwest region of *Korea* experienced a heavy snowfall along the coast.<sup>149</sup>

— On the 3<sup>rd</sup> month of 545 A.D., Hasuhi, Kashihade no Omi was sent on a mission [by the Japanese emperor] to Pekché. [Pekché or Baekje was a kingdom located in southwest Korea.] On the 11<sup>th</sup> month, Hasuhi, Kashihade no Omi began his return journey back to Japan. He departed with his family and arrived at the seashore of Pekché. The sun went down and they took lodging for the night. One of his children suddenly disappeared, and they could not tell where he had disappeared. That night there had been a great fall of snow, and they could not search for him until the morning. In the morning, they found the footprints of a tiger in a row one after another. Hasuhi, Kashihade no Omi put on his armor and sword and went out to search. He loved his child and wanted the child to succeed to his father's office. But now this child was gone and he went out to seek his revenge upon the tiger that killed him. The tiger attacked and he stabbed it to death and stripped off its skin and returned with it.

---

**Winter of 546 / 547 A.D.** The winter of 547 A.D. was very cold, like the year 544. The frozen rivers of *France* could be traversed as if it was on dry land.<sup>171</sup>

In 547, this was the time in Gaul [*Western Europe*] that was so very cold that the [ice on the frozen] rivers carried [the weight of] people.<sup>62, 79</sup>

In 547, the winter was very harsh in Gaul [*Western Europe*]. The birds were so weak from hunger and cold that a person could easily reach and pick them up with their hands from the snow.<sup>62</sup>

---

**547 A.D.** In 547, there was a famine in *Italy*.<sup>57, 72, 91</sup>

During the period between 8 November 547 and 5 February 548, a drought struck *China*. Another account gives this period as 8 November 547 and 23 April 548.<sup>153</sup>

---

**Winter of 547 / 548 A.D.** In the year 548, the winter in *France* was very cold and produced deep snow.<sup>28</sup>

**549 A.D.** A terrific storm struck London, *England* blowing down many houses and killing two hundred and fifty persons.<sup>1, 40, 41, 43, 56</sup> [Another account places this event in the year 548 A.D. In 548, a hurricane struck London, *England*. Two hundred and fifty people were killed and many houses were blown down.<sup>72</sup>]

---

**550 A.D.** In *Scotland*, hail, “like pullets’ eggs.”<sup>57, 72, 93</sup>

In 550 A.D., there was a severe drought in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking during the period of 5 February and 8 August. [The resulting famine was so severe that] cannibalism was practiced.<sup>153</sup>

During the period between 8 August 550 and 5 February 551, floods struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

---

**552 A.D.** In *Greece*, there was an inundation from the sea; part submerged.<sup>47, 92</sup> [This inundation was likely caused by a tsunami from a massive earthquake. Thomas Short has the following entry for the year 552 A.C.: “There was a great Earthquake in *Greece* which overturned many towns, as Naupaictum, Petra, Corona, and others. The sea also broke in and overflowed many places in *Greece*, and on its going back left innumerable unknown fishes on the shore.”<sup>72</sup> Robert A. Juhl believes this event occurred in 551. An earthquake generated tsunami struck *Greece* on 7 July 551. It destroyed and temporarily submerged the Temple of Olympus in Etolia, *Greece*. A second tsunami struck Beirut, *Lebanon* two days later on 9 July.]

---

**553 A.D.** It rained most of the year in *Scotland*.<sup>1</sup>

The rainstorms were violent in *Scotland* for five months.<sup>2, 40, 41, 47, 92</sup> [Another source places this event in the year 552. It rained five months incessantly in Scotland producing a dearth.<sup>72</sup>]

---

**Winter of 553 / 554 A.D.** The winter is recorded in Holland [now *the Netherlands*] as very severe.<sup>62</sup>

In the year 554, there was a frost [in *Britain*].<sup>72</sup>

The winter of 554 A.D. was very cold. The rivers [of *France*] could be traversed on foot as if on dry land.<sup>171</sup>

[In *Western Europe*] the winter was so severe that wild fowl and great wild beast might be caught [by hand].<sup>72</sup>

---

**555 A.D.** In the year 555, there was a frightful thunder and lightning storm over all of *England* and *Scotland*.<sup>72</sup>

---

**556 A.D.** In the year 556, a hurricane did infinite damage both by land and sea [near *England*].<sup>72</sup>

---

**557 A.D.** During the period between 8 November 557 and 3 April 558, a drought struck *China*.<sup>153</sup>

---

**558 A.D.** In 558 A.D. during the period between 3 May and 1 June, a severe drought struck *China*. As a result, the land tax was remitted. Then during the period between 30 August and 27 September, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Chinkiang and in Shantung (now Shandong province) at T'êng.<sup>153</sup>

In 558 A.D., there was a dreadful plague that extended all over *Europe*, *Asia* and *Africa*, and did not cease for many years.<sup>212</sup>

---

**Winter of 558 / 559 A.D.** In 558, the Danube River was frozen over and more or less all the rivers of *Europe* were frozen.<sup>1</sup>

In 558, in *Eastern Europe*, the frost was so great that the Danube River was quite frozen over.<sup>2, 39, 40, 41, 42, 43, 47, 93</sup>

In 559, the Danube River was frozen this winter.<sup>62</sup>

In the year 559, the Bulgarians crossed the frozen Danube River, spread over the *region of Thrace*, and were close to the suburbs of Constantinople.<sup>62</sup>

The winter of 559 A.D. [in *France*] was very severe in the south.<sup>171</sup>

In 558, the River Thames in *England* was frozen for six weeks.<sup>29</sup>

**559 A.D.** In 559 A.D. during the period between 22 May and 20 June, a drought struck *China*.<sup>153</sup>

Both July and August of 559 in *Western Europe*, were terribly agitated from east to west by an overflow of the sea, and by storms and earthquakes.<sup>79</sup>

**560 A.D.** In 560 A.D. during the period between 5 February and 6 May, a drought struck *China*.<sup>153</sup>

**561 A.D.** In 561 A.D. during the period between 28 July and 25 August, a drought struck *China*.<sup>153</sup>

**562 A.D.** In 562 A.D. during the period between 19 May and 17 June, a drought struck *China*.<sup>153</sup>

**563 A.D.** In 563 A.D. during the period between 8 May and 6 June, a drought struck in Shansi (now Shanxi province) in northern *China* at Taiyuan, His, and Chi and in Shensi (now Shaanxi province) in central *China* at Sian. This drought was accompanied by locust and caused crop damage. During the same period, other regions of *China* were affected by the drought. During the period between 31 December 563 and 28 January 564, floods struck in Shantung (now Shandong province) on the east coast of *China* at Tzū-yang and in Hopei (now Hebei province) in northern *China* at Chao and Ta-ming.<sup>153</sup>

**564 A.D.** In *England*, great rain floods.<sup>47, 72, 92</sup>

After long continued rains, followed a great inundation of the Tiber River in *Italy*, which overflowed the whole low country. Then came a sweeping epidemic.<sup>72</sup>

**565 A.D.** There was a plague in Rome, *Italy* from the rains and floods of 564.<sup>72</sup>

In 565 A.D. during the period between 16 April and 15 May, floods struck several regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Hua.
- Shensi (now Shaanxi province) in central *China* at Nan-chêng.
- Hopei (now Hebei province) in northern *China* at Nan-p'i, Chao, Ch'ing-ho and Chi [located at 115.34° East longitude and 37.34° North latitude].
- Shantung (now Shandong province) on the east coast of *China* at Kuan-t'ao.
- Kansu (now Gansu province) in northwest *China* at Wu-tu.

**566 A.D.** On the coast of Kent, Sussex and Hampshire in southern and southeastern *England*, there was a great storm.<sup>40, 41, 43</sup>

In 566 A.D. during the period between 5 April and 3 June, a drought struck *China*.<sup>153</sup>

**Winter of 566 / 567 A.D.** In the year 566, the winter was very severe in Gaul [*Western Europe*]. The Earth was covered with snow for more than five months. A large amount of animals were killed.<sup>62</sup>

The winter of 566 was very rigorous in southern *France*. The large amount of snow covered the earth for more than five months. The intensity of the cold destroyed many animals.<sup>79</sup>

The winter of 567 was called the “Winter of the Comet”. [In *France*] there was a huge abundance of ice and snow. Wild animals could be taken by hand. It snowed for five months. There were many dead birds.<sup>171</sup>

---

**567 A.D.** In 567 A.D., there were floods in the districts and provinces of *Japan*. These produced famines. In some cases men ate each other. Mutual assistance was rendered by transporting grain from the neighboring districts.<sup>149</sup>

In 567 A.D., floods struck Shansi (now Shanxi province) in northern *China* at Taiyuan. During the period between 8 August and 8 November, floods struck Shantung (now Shandong province) on the east coast of *China* causing a famine.<sup>153</sup>

---

**568 A.D.** In 568 A.D. during the period between 14 February and 9 July, a drought struck *China*.<sup>153</sup>

---

**569 A.D.** In 569 A.D. during the period between 29 July and 27 August, a drought struck Hopei (now Hebei province) in northern *China*. As a result, the land tax was remitted.<sup>153</sup>

---

**570 A.D.** In *Italy*, great rain and floods.<sup>47, 72, 92</sup>

In 570 A.D., envoys from Koryō [*Korea*], suffered by reason of the winds and waves, lost their way, and missing their harbor and drifted by the mercy of the current, until they suddenly reached the shore of Koshi [a historic province of *Japan*]. The damage from the storm must have been severe because the Emperor of Japan remarked, “though suffering from being cast away and submerged, yet their lives have been preserved”. [This seems to indicate that their ships had been destroyed and they were cast away.]<sup>149</sup>

---

**571 A.D.** In 571 A.D. (or 511), heavy rainfall in central *France* caused flooding of the Allier River and its tributaries. There were epidemics.<sup>171</sup>

---

**572 A.D.** In 572 A.D., there were torrential rains [in *France*] that caused floods and destroyed roads.<sup>171</sup>

In 572 A.D. during the period between 28 May and 26 June, a severe drought struck *China*.<sup>153</sup>

---

**573 A.D.** In 573 A.D. during the period between 5 February and 12 September, a drought struck *China*.<sup>153</sup>

In 573 A.D. during the summer on the 5<sup>th</sup> month, 2<sup>nd</sup> day, Koryō [*Korea*] envoys anchored on the coast of the sea of Koshi [a historic province of *Japan*]. Their ship was wrecked and a great many were drowned. [This damage likely occurred from a great storm although the passage does not specifically state that.]<sup>149</sup>

---

**574 A.D.** In 574 A.D. during the period between 5 June and 4 July, a severe drought struck *China*.<sup>153</sup>

---

**575 A.D.** In the coastal regions of southeastern *England*, parts of Essex, Suffolk, and Norfolk inundated from the sea.<sup>40, 41, 43, 47, 92</sup> . . . sea drowned much people and cattle.<sup>72</sup>

In 575 A.D. during the period between 21 September and 19 October, floods struck Hopei (now Hebei province) in northern *China* at Chi [located at 115.34° East longitude and 37.34° North latitude], Ting, Chao, Ta-hsing, Nan-p’i, and Ho-chien.<sup>153</sup>

---

**576 A.D.** A fatal famine struck *Scotland*.<sup>57, 72, 91</sup>

In 576 A.D., the Loire River in *France* flooded.<sup>171</sup>

In 576 A.D. during the period between 11 August and 8 September, a drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

---

**579 A.D.** In *France* and *Italy*, there were great rain and floods.<sup>47, 72, 92</sup>

In 579, there were terrible rains that lasted 20 days together.<sup>72</sup>

---

**580 A.D.** In Anglesea, *Wales*, there was much damage by the sea.<sup>47, 92</sup>

Great many people and cattle drowned in Anglesea.<sup>72</sup>

In 580 A.D. during the period between 30 April and 29 May, a drought struck *China*.<sup>153</sup>

In the year 580, a great flood occurred in east-central *France*. This was the oldest recording of an overflow of the Rhône River. The plain of Brotteaux in Lyon, was changed into a huge lake, and the damage was considerable. The Rhône and the Saône rivers, which formed a junction, towards St. Nizier; waters rose to such heights that many of the walls of the city (Lyon) was taken and many buildings destroyed. The water, after four days of flooding, seemed finally to begin retreating, when the sky again was covered with dark clouds and heavy rain fell. All the inhabitants of the plain before this calamity, fled with their wives, their children and their most valuable property to the hills of Saint-Just and Saint Sebastian. There, night and day they spent in prayer.<sup>61</sup>

The people of *France*, lying near the Liger [now Loire River] and Phadan [now Rhône River], were almost swallowed up by inundations, from great rains, which poured down continuously for 20 days. *Italy* suffered prodigiously from inundations; the whole wall of Lyons was thrown down by one.<sup>72</sup> [This source identified the year of this flood as 570 and also stated that the flood occurred during the third year of the reign of Flavius Tiberius Constantinus Augustus. But Tiberius Constantine ruled the Eastern Roman (Byzantine) Empire from 574 to 582.]

In 580, the fifth year of the reign of Childebert [Childebert II, King of *Austrasia*] huge rains swelled prodigiously all the rivers of *France*. Terrible floods followed, especially in Lyon and Limagne [large plain in the Auvergne region of *France*]. The violence of the waters submerged the herds, destroyed crops, and ruined many homes. In Auvergne in south-central *France*, they could not sow the land. In Lyon, where the Rhône and Saône rivers joined together, the rivers overflowed their banks and destroyed many buildings, and even overturned a portion of the city walls. The terrified inhabitants, fearing a new flood, took refuge with their wives, their children and what they value most in the hills of Saint-Just and Saint Sebastian. Hail, earthquakes, explosions of lightning and a terrible storm came and add to the spectacle of desolation. This upheaval broke out towards the beginning of autumn. Once the rain had ceased, the trees flowered a second time during the year. The rain fell in torrents for twelve consecutive days in the Auvergne, and for twenty days in Lyon.<sup>79</sup> [Austrasia formed the northeastern portion of the Kingdom of the Merovingian Franks, comprising parts of the territory of present-day eastern France, western Germany, Belgium, Luxembourg and the Netherlands. Metz served as its capital, although some Austrasian kings ruled from Rheims, Trier, and Cologne.]

In 580 in *France*, the trees flowered a second time during September and October. Heavy rains and flooding preceded this terrible unusual flowering, and heat. It was later accompanied by earthquakes, fires and hailstorms, especially in Bordeaux in southwestern France, Arles in southeastern France and Bourges in central France.<sup>79</sup>

In September 580 A.D., it was unusually warm and trees blossomed in *France*. In October, the Rhône and Saône rivers flooded and rose much higher than usual.<sup>171</sup>

In 580 in *Western Europe*, there was the earthquake, large hail, fierce storms and rains.<sup>79</sup>

**Winter of 581 / 582 A.D.** In 582 in *Western Europe*, the heat during the winter caused the trees to bloom in the month January. This month also was filled with violent rain, lightning and thunder.<sup>79</sup>

January 582 produced heavy rains accompanied by lightning and thunder in *Western Europe*.<sup>79</sup>

The winter of 582 A.D. was very soft and gentle [in *France*]. Many trees flowered. There were frequent storms.<sup>171</sup>

**582 A.D.** In 582 A.D. during the period between 6 June and 6 July, a drought struck *China*.<sup>153</sup>

**Winter of 582 / 583 A.D.** The winter of 583 A.D. was very severe [in *France*]. Disasters on the Seine, Marne and Yonne rivers caused many deaths. Wolves entered Bordeaux.<sup>171</sup>

**583 A.D.** In 583 A.D., a storm struck near the Japanese coast. Eun-sol and Associate conspired to kill Illa. Illa was slain during the 12<sup>th</sup> month. His body was removed for interment at Ashigita, *Japan*. [Ashigita in the province of Higo, which was an old province of Japan in the area that is today Kumamoto Prefecture on the island of Kyūshū.] Later the coast people reported that the Eun-sol ship had met with a storm and foundered, and that the Associate's ship had not been able to return until it had first drifted to Tsushima. [Tsushima Island is an island of the Japanese archipelago situated between Japan and Korea.]<sup>149</sup>

In 583 A.D. during the period between 28 April and 26 May, a drought struck *China*.<sup>153</sup>

**Winter of 583 / 584 A.D.** The winter [in *Europe*] was of such persistent gentleness; that in the month of January one could see roses.<sup>62</sup>

The winter of 584 A.D. was very gentle and sweet [in *France*]. Roses bloomed in January. Then there was a hailstorm and a drought.<sup>171</sup>

In 584 the month of January in *Western Europe* produced roses. This was followed by a white frost, a hurricane and several disastrous incidents of hail that ravaged successive harvests of crops and vineyards. At the same time there was an excessive drought. The year produced almost no grapes. Desperate farmers delivered their vines at the mercy of the herds. But the trees, which had already borne fruit in July, producing a new crop in September, and some even bore again in December, and the vines offered at the same time well-formed clusters.<sup>79</sup>

**584 A.D.** In 584 there were roses in the month of January in *Western Europe*. Frosts followed soon after and damaged the [grape] vines. Then storms ravaged the crops and vineyards. Later came a terrible drought to destroy what the hail had left. But the fruit trees, which had borne fruit in July, blossomed a second time three months later, [and bore fruit] in December. The [grape] vine in turn pushed new jets, and new grapes formed.<sup>79</sup>

In Gaul [*Western Europe*], the trees bore fruit in July and then again in September. The drought was very great.<sup>62</sup>

In 584 in *Western Europe*, an immense drought finally ruined the vineyards and the harvest, which was already compromised by earlier hailstorms and frosts.<sup>79</sup>

In 584 A.D. during the period between 17 February and 16 March, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan. Then during the period between 14 July and 11 August, droughts struck in Shensi (now Shaanxi province) in central *China* at Sian, Ta-li, Hua, and Fêng-hsiang and in Hupeh (now Hubei province) in central *China* at I-ch'ang. As a result of the droughts, one year's land tax was remitted.<sup>153</sup>

---

**585 A.D.** The spring and summer of 585 in *Western Europe* was so rainy, that it could be confused with winter. The bulk of the rains this year caused rivers to overflow their banks and flood the fields and meadows. These floods seriously compromised the crop yields.<sup>79</sup>

In 585 A.D., the Loire River in *France* flooded. There were floods and famines.<sup>171</sup>

During the autumn of 585 A.D. and the winter of 585-586 A.D. [in *France*], the weather produced extreme sweetness. The trees bloomed again in September and again before Christmas and bore fruit.<sup>171</sup>

---

**586 A.D.** [Because of the warm weather] in *Western Europe* the trees blossomed in the month of July 585 [586?], bloom again in September 586 and a large number of these who had already borne fruit produced a second crop of fruit until the Christmas holidays.<sup>79</sup>

During the autumn of 586 A.D. and the winter of 586-587 A.D. [in *France*], the weather produced a strange new sweetness. The [grape] vines bloomed twice.<sup>171</sup>

There was extensive flooding in 586 in the north of *Western Europe*.<sup>79</sup>

In 586 A.D. during the period between 24 February and 26 March, floods struck in Hupeh (now Hubei province) in central *China* at Chiang-ling and in Chekiang (now Zhejiang province) on the east coast of *China*. Then during the period between 22 July and 19 August, floods struck in Honan (now Henan province) in central *China* at Loyang. Then during the period between 19 September and 17 October, a drought struck 7 districts in Shensi (now Shaanxi province) in central *China*. As a result of the drought, the [land] tax was remitted.<sup>153</sup>

---

**587 A.D.** In 587 the great rainfalls caused the rivers to swell prodigiously. This flood was especially severe in Burgundy in east-central *France*.<sup>79</sup>

[In *France*] in October, after the harvest, new vines covered with grapes appeared and on the trees, new leaves and new fruit.<sup>62</sup>

In October 587 after the harvest in *Western Europe*, the vines grew new shoots and new grapes formed.<sup>79</sup>

---

**Winter of 587 / 588 A.D.** [In *France*], the trees were blooming in the fall and gave fruit a second time after already being harvested once. Roses appeared in December.<sup>62</sup>

The winter of 588 A.D. [in *France*] had an unusual sweetness. Trees flowered in autumn. Roses bloomed in December.<sup>171</sup>

---

**588 A.D.** In 588 A.D. during the period 2-30 July, floods struck *China*.<sup>153</sup>

---

**Winter of 588 / 589 A.D.** The winter of 589 A.D. was mild [in *France*]. The roses bloomed in November.<sup>171</sup>

---

**589 A.D.** After Easter 589, rain with hail fell in *Western Europe*. In less than two hours, smaller streams were turned into major rivers. These rivers rose to unprecedented heights and overflowed their banks.<sup>79</sup>

The trees bloomed again in the autumn of 589 in *Western Europe*, and then they produced other fruit. The fruit was pink in November.<sup>79</sup>

---

**590 A.D.** In *Italy*, there were great floods from tempest; followed by a plague.<sup>47, 72, 92</sup>

In 590, there were long rains and a plague after.<sup>72</sup>

In 590, there was a famine from a tempest that raised a great flood.<sup>57, 72, 91</sup>

Rain fell in the months of September and October incessantly for many days and raised such floods in all rivers and lakes in *Italy*, as to overflow their banks and drown an infinite number of people and cattle. The rain was accompanied by tremendous tempest of thunder and lightning. The river Tiber swelled so high that all the fields, which were not hilly and mountainous, were overflowed. Many people believed it was a second great flood. In Rome, *Italy*, the Tiber swelled so high that in some places it reached to, and in other places overflowed the cities high walls. And the water rushed in with such fury that it spoiled and defaced the greatest part of the buildings that were near the river. When the floods ceased, the fields were so soft and covered with slime and mud, that they could not be tilled or sown, hence a general famine. The flood not only demolished many stately buildings and ancient monuments, but also got into the church granaries, and carried away many thousand measures of wheat. After the flood, the river brought down innumerable multitude of serpents, and among them a monstrous great one as big as a great beam. All these serpents were swimming down the river into the sea, where they choked, and their carcasses being cast on the shore. There they rotted and by the stench of the slime and mud and excessive moisture, and the air was so corrupted, that a most desolating plague ensued over all *Italy*, *Spain* and *France*. The plague raged and laid waste to many towns. In many 2/3 of the people died. It was most severe at Rome, followed by Liguria [in the coastal region of northwestern Italy] and the Venetian territories [in northeastern Italy], both by floods, famine and plague.<sup>72</sup> [The source identified this flood in the year 588 or 589.]

Powerful rains with violent thunder produced severe flooding in *Western Europe*. These heavy rains reigned in the fall of 590.<sup>79</sup>

---

**591 A.D.** Following the heavy rains, and disastrous floods of 590, the year 591 produced a drought in *Western Europe*.<sup>79</sup>

The summer of 591 was unusually hot [in *France*].<sup>171</sup>

The year 591 in *Western Europe* was divided as it were between an excessive droughts, which ruined all the meadows, and heavy rainfalls followed by floods, which destroyed much of the hay harvest.<sup>79</sup>

The excessive dryness of 591 in *Western Europe* consumed all the fields.<sup>79</sup>

---

**592 A.D.** There was a drought that lasted from 10 January to September, along with a plague of locust. This produced a famine.<sup>57, 72, 91</sup>

There was a remarkably great drought from January to September, attended with a grievous famine and great swarms of locusts, which for two years ate up every green thing and caused a terrible famine in *Italy*. But they continued for 5 years in Capitanéo, then shifted to another province.<sup>72</sup> [Capitanéo may have been end of the Italian peninsula near Bari in the southern Adriatic.]

---

**Winter of 592 / 593 A.D.** It was in southern Gaul [*Western Europe*] such a severe winter that no one living ever remembered a similar winter.<sup>62</sup>

The winter of 593 was “unprecedented” and extremely harsh in Provence, *France*.<sup>171</sup>

---

**594 A.D.** In 594 A.D. during the period between 25 May and 19 September, a severe drought struck Shensi (now Shaanxi province) in central *China* producing a famine.<sup>153</sup>

---

**595 A.D.** In 595 A.D. during the period between 15 February and 16 March, a drought struck *China*.<sup>153</sup>

---

**598 A.D.** In 598 A.D., floods struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Ch’i, Shang-ch’iu, Huai-yang, K’ao-ch’êng, and Hsü-ch’ang.

— Anhwei (now Anhui province) in eastern *China* at Fêng-yang.

— Shantung (now Shandong province) on the east coast of *China* at Ts’ao.

---

**600 A.D. – 604 A.D. France. Famine**

In *France*, there was a famine.<sup>57, 72, 91</sup>

---

**601 A.D.** In 601 A.D. in summer, the 5<sup>th</sup> month, heavy rains caused a flood in the Palace of Miminashi in *Japan* causing the rivers to overflow and fill the Court of the Palace.<sup>149</sup>

---

**Winter of 601 / 602 A.D.** The winter of 602 A.D. was very severe [in *France*]. The sea froze in places normally sheltered. Many fish were decimated. As a result, there was a famine.<sup>171</sup>

---

**602 A.D.** In 602 A.D. during the period between 27 February and 28 March, floods struck in Honan (now Henan province) in central *China* at Loyang and in Shansi (now Shanxi province) in northern *China* at P’ing-lu [located at 111.00° East longitude and 34.51° North latitude].<sup>153</sup>

---

**Winter of 602 / 603 A.D.** The winter of 603 A.D. was unusually cold and destroyed the vineyards [in *France*].<sup>171</sup>

The unusual cold of the year 603 in *Western Europe* killed much of the vineyards.<sup>79</sup>

---

**Winter of 603 / 604 A.D.** In 604 in *Scotland* there was four months of frost, followed by dearth [famine]. The frost was also severe in *England*.<sup>47, 93</sup>

In the year 604, there was the severest frost for 4 months, chiefly in *Scotland*, followed by a dearth.<sup>72</sup>

[In *Europe*] in 604, there was the most severe rigorous winter. The [grape] vines mostly died in all places. The *Sea* was frozen, and killed the fishes in it. This produced a great famine.<sup>72</sup>

The winter of 604 A.D. was very cold [in *France*] and then there was a famine.<sup>171</sup>

---

**604 A.D.** In 604 A.D. during the period between 7 January and 5 February, floods struck in Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**Winter of 604 / 605 A.D.** The winter of 605 A.D. was very severe in Oise region of *France*. It destroyed the [grape] vines.<sup>171</sup>

Due to a harsh winter in *France*, a very large portion of the (grape) vines were lost.<sup>62</sup>

---

**605 A.D.** In *England*, there was a drought with scorching heat.<sup>47, 72</sup>

In *England*, there was heat and drought that caused a famine.<sup>57, 72, 91</sup>

In *Italy* there was extraordinary heat and drought.<sup>62</sup>

There was excessive heat and drought, hence a famine and plague on man and beast in *Italy*.<sup>72</sup>

---

**Winter of 606 / 607 A.D.** The winter of 607 A.D. was very cold in Oise region of *France*.<sup>171</sup>

---

**607 A.D.** There was extensive flooding in 607 in the north of *Western Europe*.<sup>79</sup>

In 607 A.D., floods struck in Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**Winter of 607 / 608 A.D.** The winter of 608 A.D. was very cold in Oise region of *France*. It destroyed the [grape] vines.<sup>171</sup>

---

**608 A.D.** In 608 A.D., a drought struck in Hopei (now Hebei province) in northern *China* at Shun-i and in Shansi (now Shanxi province) in northern *China* at Tai.<sup>153</sup>

In the year 608, part of Edinburgh, *Scotland* was burnt by lightning.<sup>72</sup>

---

**611 A.D.** In 611 A.D. during the period between 8 August and 8 November, floods struck *China*.<sup>153</sup>

---

**612 A.D.** In 612 A.D., a severe drought struck Shantung (now Shandong province) on the east coast of *China*. Many people died from the drought and the plague.<sup>153</sup>

---

**Winter of 615 A.D. / 616 A.D.**

In 616 A.D. in spring, the 1<sup>st</sup> month, in *Japan*, the peach trees and plum trees bore fruit. [This might come about if the winter was exceeding warm.]<sup>149</sup>

---

**617 A.D.** In 617 A.D., a severe drought struck *China*.<sup>153</sup>

---

**620 A.D.** In 620 A.D. during the period between 6 May and 1 October, a drought struck *China*.<sup>153</sup>

In 620 A.D. during the spring, summer and autumn, there was a drought in *China*.<sup>165</sup>

---

**621 A.D.** In 621 A.D. during the period between 5 February and 22 August, a drought struck *China*.<sup>153</sup>

In 621 A.D. during the spring, summer and autumn, there was a drought in *China*.<sup>165</sup>

---

**622 A.D.** In 622 A.D. in *Japan*, there were heavy rains and floods from spring to autumn. The rains caused the five type of grain grown in *Japan* to not reach maturity.<sup>149</sup>

---

**624 A.D.** In 624 A.D. during the period between 8 August and 8 November, a drought struck Shensi (now Shaanxi province) in central *China*.<sup>153</sup>

In 624 A.D. during the autumn, there was a drought in Shantung and Shensi provinces in *China*.<sup>165</sup>

**625 A.D.** In *Britain*, there was a grievous famine.<sup>57, 72, 91</sup>

**626 A.D.** In 626 A.D. in *Japan*, during spring, 1<sup>st</sup> month, peach and plum trees blossomed but in the 3<sup>rd</sup> month it was cold and hoarfrost fell. [Winter was warm but during the end of spring the weather turned remarkably cold.] During the 6<sup>th</sup> month, snow fell. From the 3<sup>rd</sup> to the 7<sup>th</sup> month there were continual rains, and great famine in the Empire. The old ate the roots of herbs, and died by the roadside. Infants at the breast died with their mothers. Thieves and robbers sprang up in great numbers, and could not be put down.<sup>149</sup>

**627 A.D.** In 627 A.D. during the period between 6 May and 8 August, a drought struck in Shantung (now Shandong province) on the east coast of *China*; in Shensi (now Shaanxi province) in central *China* at Sian; and in Shansi (now Shanxi province) in northern *China* at Yung-chi. As a result, this year's land tax was remitted.<sup>153</sup>

In 627 A.D. during the summer, there was a drought in Shantung province in *China*. The land tax was remitted.<sup>165</sup>

**628 A.D.** In 628 A.D. during the summer, on the 15<sup>th</sup> day of the 4<sup>th</sup> month in *Japan*, hail fell of the size of peaches. Then on the 16<sup>th</sup> day, hail fell that was the size of plums. There was a drought, which lasted from spring till summer.<sup>149</sup>

In 628 A.D. during the period between 10 April and 8 May, a drought struck *China* and was accompanied by locusts.<sup>153</sup>

In 628 A.D. during the spring, there was a drought in *China*. The drought was accompanied with a plague of locusts.<sup>165</sup>

[In 629 A.D.], during the second year of the reign of Emperor Tay-Tsong, devouring locusts plagued *China*.<sup>186</sup>

**629 A.D.** In 629 A.D., during the period between 30 January and 25 July, a very severe drought struck Shensi (now Shaanxi province) in central *China*.<sup>153</sup>

In 629 A.D. during the spring and summer, there was a very severe drought in Shensi province in *China*.<sup>165</sup>

In 629 A.D. during the period between 8 August and 8 November, floods struck several regions of *China* including:<sup>153</sup>

- Hopei (now Hebei province) in northern *China* at Ch'ing-ho.
- Anhwei (now Anhui province) in eastern *China* at Po.
- Shantung (now Shandong province) on the east coast of *China* at Yün-ch'êng and Lin-i [located at 118.24° East longitude and 35.07° North latitude].
- Kiangsu (now Jiangsu province) on the east coast of *China* at Su-ch'ien, Suchow, and Soochow.
- Shensi (now Shaanxi province) in central *China* at Lung.

In the year 629, there was a great snowstorm in *Scotland*. "It lay a Fortnight 5 Foot in Scotland."<sup>72</sup>

---

**630 A.D.** In 630 A.D. during the period between 20 March and 17 April, a drought struck *China*.<sup>153</sup>

In 630 A.D. during the period between 8 August and 8 November, floods struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Hsü-ch'ang and K'ao-ch'êng.

— Szechwan (now Sichuan province) in southwest *China* at Nan-chiang.

In 630 A.D. during the spring, there was a drought in *China* along with floods.<sup>165</sup>

---

**633 A.D.** In 633 A.D. during the period between 9 September and 8 October, floods struck Shantung (now Shandong province) on the east coast of *China*.<sup>153</sup>

---

**634 A.D.** There were great snows in the Country of Berg (*Germany*) that killed many people. [The Country of Berg today is within the Nordrhein-Westfalen State in western Germany, east of Rhine river, south of the Ruhr.]

In southwestern *Ireland*, there were floods in Munster.<sup>47, 92</sup>

In 634 A.D. during the period between 31 July and 28 August, floods struck Shantung (now Shandong province) on the east coast of *China*, Kiangsu (now Jiangsu province) on the east coast of *China*, and Anhwei (now Anhui province) in eastern *China*.<sup>153</sup>

---

**635 A.D.** In 635 A.D. during the period between 8 August and 8 November, a drought struck in Szechwan (now Sichuan province) in southwest *China*, in Honan (now Henan province) in central *China*, and in Shantung (now Shandong province) on the east coast of *China*. During the period between 8 November 635 and 16 July 636, a drought struck several regions of *China*.<sup>153</sup>

In 635 A.D. during the autumn, there was a drought in Shansi and Sze-ch'wan provinces in *China*.<sup>165</sup>

---

**636 A.D.** In 636 A.D. during the summer in the 5<sup>th</sup> month in *Japan*, there were great rains and floods.<sup>149</sup>

In 636 A.D. in *Japan*, the year produced a great drought and there was famine throughout the Empire.<sup>149</sup>

In 636 A.D., floods struck in Shantung (now Shandong province) on the east coast of *China* and in Honan (now Henan province) in central *China*.<sup>153</sup>

---

**637 A.D.** In 637 A.D. during the period between 27 July and 25 August, floods struck in Honan (now Henan province) in central *China* at Loyang. Then during the period between 24 September and 23 October, floods struck Honan at Shan.<sup>153</sup>

---

**638 A.D.** In 638 A.D. during the autumn in the 7<sup>th</sup> month and 19<sup>th</sup> day in *Japan*, there was a great storm, which broke trees and tore up houses.<sup>149</sup>

In 638 A.D. during the 9<sup>th</sup> month in *Japan*, there were continuous rains, and peaches and plums blossomed. [This passage implies a second blossoming during the year.]<sup>149</sup>

During the period between 8 November 638 and 5 July 639, a drought struck in Szechwan (now Sichuan province) in southwest *China*, in Hunan province in south-central *China*, in Hupeh (now Hubei province) in central *China*, and in Kiangsu (now Jiangsu province) on the east coast of *China*.<sup>153</sup>

In 638 A.D. during the summer, there was a drought in Hunan, Hupeh, Kiangsu and Sze-ch'wan provinces in *China*.<sup>165</sup>

---

**639 A.D.** In 639 A.D. during the summer, there was a drought in Hunan, Hupeh, Kiangsu and Sze-ch'wan provinces in *China*.<sup>165</sup>

---

**641 A.D.** In 641 A.D. during the period between 8 August and 8 November, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and in Honan (now Henan province) in central *China* at K'ao-ch'êng.<sup>153</sup>

---

**642 A.D.** The winter in *Europe* was severe. The *Black Sea* was frozen. There were snowdrifts 90 feet (27 meters) deep.<sup>28</sup>

In 642 A.D. in *Japan*, there were continuous rains during the 3<sup>rd</sup> and 4<sup>th</sup> month. But during the 6<sup>th</sup> month there was a great drought. On the 16<sup>th</sup> day of the 6<sup>th</sup> month, fine rain fell and on the 28<sup>th</sup> slight rain fell. On the 1<sup>st</sup> day of the 8<sup>th</sup> month [August 1<sup>st</sup>], there was thunder and a great rain that fell continuously for 5 days. As a result, the nine types of grain grown in Japan ripened. On the 6<sup>th</sup> day of the 8<sup>th</sup> month, the Pekché Envoys, viz. the Associate Official and the rest [Pekché or Baekje was a kingdom located in southwest Korea.] took their departure [to return to *Korea*]. They were given a large ship and three boats. Around midnight, it thundered in the southwest corner and there was wind and rain. The ship in which the Associate Official and his companions were embarked ran ashore and was wrecked. On the 9<sup>th</sup>, 11<sup>th</sup>, 16<sup>th</sup> of November, and the 1<sup>st</sup> and 30<sup>th</sup> of December the weather was mild as in the spring.<sup>149</sup>

---

**643 A.D.** In 643 A.D. in *Japan*, there was a great storm on the 10<sup>th</sup> day of the 1<sup>st</sup> month. The peach blossoms first appeared on the 20<sup>th</sup> day of the 2<sup>nd</sup> month. The leaves and flowers of herbs and trees were injured by hail on the 25<sup>th</sup> day of the 2<sup>nd</sup> month. During the 2<sup>nd</sup> month, there were wind, thunder, and ice rain. On the 25<sup>th</sup> day of the 3<sup>rd</sup> month, the flowers and leaves of the herbs were injured by frost. On the 7<sup>th</sup> day of the 4<sup>th</sup> month, there was a great storm with rain. On the next day, the 8<sup>th</sup>, the wind sprang up and the weather was chilly. On the 20<sup>th</sup> day of the 4<sup>th</sup> month, there was a west wind and hail. The weather was cold and people wore three wadded garments. On the 25<sup>th</sup> day of the 4<sup>th</sup> month, hail one inch in diameter fell in the province of Ohomi. On the 19<sup>th</sup> day of the 9<sup>th</sup> month, there was a great rain with hail.<sup>149</sup>

---

In 643 A.D. during the period between 5 February and 19 August, a severe drought struck *China*. Then during the period between 8 August and 8 November, floods struck several regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Ku-ch'êng, Hsiang-yang, and Chiang-ling.
- Honan (now Henan province) in central *China* at Ju-nan and Shang-ch'iu.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.
- Anhwei (now Anhui province) in eastern *China* at Po.
- Szechwan (now Sichuan province) in southwest *China* at San-t'ai, Chung, and Mien-yang.

In 643 A.D. during the spring and summer, there was a great drought in *China*.<sup>165</sup>

---

**644 A.D.** In 644 A.D. during the period between 8 August and 8 November, floods struck in northern *China* in Shansi (now Shanxi province) at Ch'in-yüan and in Hopei (now Hebei province) at I. Crops were damaged.<sup>153</sup>

---

**646 A.D.** In 646 A.D., floods struck Fukien (now Fujian province) on the southeast coast of *China* at Foochow. During the period between 15 September and 14 October, floods struck in Hopei (now Hebei province) in northern *China* at Ta-ming and in *Indochina*.<sup>153</sup>

---

**647 A.D.** In 647 A.D. during the period between 8 August and 8 November, a drought struck in Honan (now Henan province) in central *China* at Shan; in Shansi (now Shanxi province) in northern *China* at Yung-chi and Chiang; and in Szechwan (now Sichuan province) in southwest *China* at Fêng-chieh.<sup>153</sup>

In 647 A.D. during the autumn, there was a drought in Shansi, Shensi and Sze-ch'wan provinces in *China*.<sup>165</sup>

---

**648 A.D.** In 648 A.D. during the period between 6 May and 8 August, floods struck several regions of *China* including:<sup>153</sup>

- Szechwan (now Sichuan province) in southwest *China* at Lu and Chungking.
- Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.
- Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton.

In 648 A.D. during the period between 8 August and 8 November, a drought struck Szechwan (now Sichuan province) in southwest *China* at K'ai and Wan. Then during the period between 8 November 648 and 16 May 649, a drought struck the central part of Shansi (now Shanxi province) in northern *China*.<sup>153</sup>

In 648 A.D. during the autumn and winter, there was a drought in Sze-ch'wan province in *China*.<sup>165</sup>

In 648, there was a tempest of wind at Byzantium [Constantinople or Istanbul, *Turkey*].<sup>72</sup>

---

**649 A.D.** In Cheshire and Lancashire, *England*, there was great damage from an inundation of the sea.<sup>40, 41, 43, 47, 72, 92</sup>

In 649 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**650 A.D.** In 650 A.D. during the period between 6 May and 31 August, a drought struck Shensi (now Shaanxi province) in central *China* at Sian, Ta-li, and Hsin-chiang.<sup>153</sup>

In 650 A.D. during the spring, summer and autumn, there was a drought in Shansi and Shensi provinces in *China*.<sup>165</sup>

In 650 A.D., floods struck several regions of *China*. As a result several hundred people drowned. The regions affected include:<sup>153</sup>

- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Hsi.
- Kiangsi (now Jiangxi province) in southern *China* at P'o-yang.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin.

During the period between 4 July and 2 August, floods struck Shansi (now Shanxi province) in northern *China* at Lin-t'ung and Wei-nan. Houses were damaged. During the period between 8 August and 8 November, floods struck in Shantung (now Shandong province) on the east coast of *China* at Tsinan and in Hopei (now Hebei province) in northern *China* at Ting.

---

**651 A.D.** In 651 A.D. during the period between 8 August and 8 November, floods struck several regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Kaifeng.
- Hopei (now Hebei province) in northern *China* at Ting.
- Shantung (now Shandong province) on the east coast of *China* at P'u.
- Anhwei (now Anhui province) in eastern *China* at Po.

During the period of 20 September 651 and 13 April 652, there was a drought in *China*. The period was unusual because of the lack of snowfall.<sup>153</sup>

In 651 A.D. during the autumn and winter, there was a drought in *China*.<sup>165</sup>

---

**652 A.D.** In 652 A.D. in summer in the 20<sup>th</sup> day of the 4<sup>th</sup> month in *Japan*, rain fell continuously for 9 days. It demolished buildings and destroyed young rice plants in the fields. Many men, horses, and oxen were drowned.<sup>149</sup>

In 652 A.D. during the period between 15 February and 13 May, there was a drought in *China*.<sup>153</sup>

In 652 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**653 A.D.** In 653 A.D. in autumn in the 7<sup>th</sup> month, Takada no Nemaro and his colleagues, the Ambassadors sent to Great Thang, were drowned by the sinking of their ship in the Gate of Takashima, off the coast of Satsuma. [The Great Thang probably relates to the Tang Dynasty, centered near Laichou, later called Shantung, but now called Shandong Province, *China*. Tsushima Island is an island of the Japanese archipelago situated between *Japan* and *Korea*.] Only five men who lashed themselves to plank floated ashore on the island of Takashima. On the island they gathered bamboos and made a raft, with which they anchored at the island of Shitoji-shima. These five men passed six days and six nights without any food whatsoever. [I have included this account because the sinking was likely caused by a storm although the account does not specify the cause.]<sup>149</sup>

In 653 A.D., floods struck several regions of *China* including:<sup>153</sup>

- Szechwan (now Sichuan province) in southwest *China* at Fêng-chieh and Chung.
- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.
- Shensi (now Shaanxi province) in central *China* at Nan-chêng.

In 653 A.D. during the period between 6 May and 8 November, droughts struck several regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Huang-ch'uan.
- Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua.
- Anhwei (now Anhui province) in eastern *China* at Ch'u and Fou-yang.

In 653 A.D. during the summer and autumn, there was a very severe drought in Anhwei and Honan provinces in *China*.<sup>165</sup>

---

**654 A.D.** In 654 A.D. during the summer in the 4<sup>th</sup> month, two men and two women of the Land of Tukhara and one woman from S'râvastî were driven by a storm to Hiuga.<sup>149</sup> [The Land of Tukhara is the region around Badakhshan. This historical region today comprises northeastern *Afghanistan* and southeastern *Tajikistan*. S'râvastî is an ancient city of *India* situated near Fuzabad (Faizabad). Hiuga or Hyuga is a city located in the northern part of Miyazaki Prefecture, *Japan* and faces the Sea of Hyuga.]

In 654 A.D. during the period between 24 January and 21 February, a drought struck *China*. Then during the period between 22 May and 19 June, floods struck in Shensi (now Shaanxi province) in central *China* at Lin-yu. Then during the period between 20 July and 17 August, floods struck in Hopei (now Hebei province) in northern *China* at Ta-ming and in Shansi (now Shanxi province) in northern *China* along the Hu-t'o River where 5,000 families were flooded.<sup>153</sup>

In 654 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**655 A.D.** In 655 A.D., several regions of *China* experienced flooding.<sup>153</sup>

During the period between 9 July and 7 August, the following area was affected:

— Shensi (now Shaanxi province) in central *China* at Shang experienced flooding.

During the period of 8 August – 8 November, the following areas were affected:

— Hopei (now Hebei province) in northern *China* at Chi [located at 115.34° East longitude and 37.34° North latitude] experienced flooding and crops were damaged.

— Shantung (now Shandong province) on the east coast of *China* at Lin-i [located at 118.24° East longitude and 35.07° North latitude], Chu-ch'êng and Tzū-yang experienced flooding and crops were damaged.

— Honan (now Henan province) in central *China* at Hua, Chêng, and Kaifeng experienced flooding and crops were damaged.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua experienced flooding and crops were damaged.

During the period between 6 October and 3 November, the following areas were affected:

— Shensi (now Shaanxi province) in central *China* along the Lo River experienced flooding.

— Honan (now Henan province) in central *China* along the Lo River experienced flooding.

During the period between 4 November and 3 December, the following area was affected:

— Shantung (now Shandong province) on the east coast of *China* at Tsinan experienced flooding.

---

**659 A.D.** In 659 A.D. during the period between 25 July and 22 August, a drought struck *China*.<sup>153</sup>

In 659 A.D. during the autumn, there was a drought in *China*.<sup>165</sup>

---

**660 A.D.** In 660 A.D. during the period between 5 February and 6 May, a drought of long duration struck Hopei (now Hebei province) in northern *China* at Ta-ming. There was no snowfall.<sup>153</sup>

In 660 A.D. during the spring, there was a drought in Chihli [now Hebei province] in *China*.<sup>165</sup>

---

**Winter of 661 / 662 A.D.** In 661 A.D. in the 12<sup>th</sup> month, the cold was so intense in Koryö [*Korea*] that the River Phè-kang was frozen.<sup>149</sup>

---

**Winter of 662 / 663 A.D.** The winter of 663 A.D. was very cold in Oise region of *France*.<sup>171</sup>

---

**664 A.D.** In *Ireland*, a great famine preceding second appearance of *Buidhe Chonail* [yellow pestilence].<sup>57, 91</sup>

In 664 A.D. during the period between 31 May and 29 June, a drought struck *China*.<sup>153</sup>

In 664 A.D., there was a drought of long duration during the summer in *China*. There had been no snowfall during the winter.<sup>165</sup>

---

**665 A.D.** In 665 A.D., there was a flood in Hopei (now Hebei province) in northern *China* at Chi [located at 117.24 E. longitude and 40.03 N. latitude]. As a result 10,000 families flooded.<sup>153</sup>

In 665 A.D. during the period between 18 July and 16 August, floods struck several regions of *China* including:<sup>153</sup>

— Shensi (now Shaanxi province) in central *China* at Fu. Houses were damaged.

— Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui, Wên-chou and Shui-an. Nine thousand seventy houses were damaged.

---

**666 A.D.** In 666 A.D. during autumn in the 7<sup>th</sup> month, there were great floods in *Japan*.<sup>149</sup>

---

**667 A.D.** A grievous famine struck *Scotland*.<sup>57, 72, 91</sup>

In 667 A.D. during the period between 30 January and 28 February and during the period between 27 July and 24 August, a drought struck *China*.<sup>153</sup>

In 667 A.D. during the summer, there was a great drought of long duration in the Chihli and Honan provinces in *China*.<sup>165</sup>

---

**668 A.D.** In 668 A.D., a severe drought struck several regions of *China* including:<sup>153</sup>

- Shensi (now Shaanxi province) in central *China* at Sian.
- Shantung (now Shandong province) on the east coast of *China*.
- Kiangsu (now Jiangsu province) on the east coast of *China*.
- Anhwei (now Anhui province) in eastern *China*.

In 668 A.D., there was a great drought in Kiangsu, Shantung and Shensi provinces in *China*.<sup>165</sup>

---

**669 A.D.** In Kent, *England*, the River Medway overflowed; great damage.<sup>40, 41, 47, 92</sup>

During the flood, Medway carried down much cattle.<sup>72</sup>

In 669, there was an inundation of the Medway.<sup>43</sup>

In the year 669 [in *England*], twenty-five houses in the bishoprick were burnt from lightning.<sup>72</sup>

A great famine struck *France*.<sup>57, 72, 91</sup>

There was a great famine in *France*. The king sold his jewels to relieve the poor.<sup>62</sup>

In *Ireland* there was a great scarcity in 669 and in the following year.<sup>57, 91</sup>

In 669 A.D. during the period 2-31 August, a drought struck 19 cities in Szechwan (now Sichuan province) in southwest *China*. Also there had been no snowfall.<sup>153</sup>

In 669 A.D. during the autumn, there was a drought in Sze-ch'wan province in *China*. No snowfall during the winter.<sup>165</sup>

---

**Winter of 669 / 670 A.D.** A fatal frost in *England*.<sup>47, 72, 93</sup>

The winter on the Coast of Constantinople [now Istanbul, *Turkey*] was very severe and long and a large number of people and animals perished.<sup>62</sup>

The winter of 670 A.D. produced an abundance of snow and ice [in *France*]. As a result, wildlife could be picked up by hand.<sup>171</sup>

The winter was most severe and long. It killed many people and cattle.<sup>72</sup>

---

**670 A.D.** In 670 A.D. during summer in the 4<sup>th</sup> month, there was great rain with thunder in *Japan*.<sup>149</sup>

In 670 A.D., there was a flood in *China* during the period 25 May - 22 June, resulting in 9,000 persons drowned.<sup>153</sup>

In 670 A.D. during the period between 23 July and 17 December, droughts struck in Shensi (now Shaanxi province) in central *China* at Sian, Hua and Ta-li and in Shansi (now Shanxi province) in northern *China* at Yung-chi. This drought caused a great famine.<sup>153</sup>

In 670 A.D. during the spring and autumn, there was a very severe drought in Shansi and Shensi provinces in *China*.<sup>165</sup>

---

**671 A.D.** In 671 A.D. during the period between 12 July and 9 August, a drought struck *China*. Then during the period between 9 September and 8 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. One hundred families were flooded.<sup>153</sup>

In 671 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

[In *England*], there was a tempest causing a great slaughter of men.<sup>72</sup>

---

**673 A.D.** In 673 A.D. during the period between 18 August and 15 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua. Five thousand persons drowned.<sup>153</sup>

---

**675 A.D.** In 675, there were three months without rain. The drought was extreme. The wells were completely dry at Chalons in *Austrie* [*Austria*] until early August.<sup>79</sup>

The summer of 675 A.D. was unusually hot [in *France*].<sup>171</sup>

In 675 A.D. during the autumn on the 22<sup>nd</sup> day of the 8<sup>th</sup> month in *Japan*, there was a storm, which made the sand to fly, and damaged houses.<sup>149</sup>

In 675 A.D. during the period 1-30 May, a drought of long duration struck *China*.<sup>153</sup>

In 675 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**676 A.D.** In 676 A.D. on the 7<sup>th</sup> day of the 5<sup>th</sup> month, the Governor of the province of Shimotsuke represented to the Emperor of Japan that, owing to a bad year, the peasantry in his domain were starving and wished to sell their children. The Court refused permission. During the 6<sup>th</sup> month, the summer produced a great drought. Still there was no rain and therefore the five grains did not grow, and the peasants were starving.<sup>149</sup>

In 676 A.D., floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan and Tzū-ch'uan. During the period between 13 September and 12 October, flooding occurred in Shantung at I-tu where five thousand families drowned.<sup>153</sup>

In the year 676 in Rome and *Italy*, there was 4 months of constant rain, thunder, lightning, fatal to people and grains.<sup>72</sup>

---

**677 A.D.** In 677 A.D. in the 5<sup>th</sup> month, there was a drought in the capital of *Japan* and the home provinces. [The home provinces is the territory around the capital ruled immediately by the Emperor.]<sup>149</sup>

During the period between 6 May 677 and 5 February 678, a severe drought struck Honan (now Henan province) in central *China* at Loyang and Hopei (now Hebei province) in northern *China* at Ta-ming. There was no snowfall.<sup>153</sup>

In 677 A.D. during the summer, there was a great drought of long duration in Chihli and Honan provinces in *China*.<sup>165</sup>

**678 A.D.** In 678 A.D. during the 12<sup>th</sup> month, the King of Silla [one of the Three Kingdoms of *Korea*] dispatched Kim Syo-mul and Kim Syé-syé as envoys to bring this year's tribute to Japan. Chyöng-san was sent to escort Syo-mul and colleagues to *Japan*. In mid-ocean, however, they ran into a storm. Chyöng-san alone with difficulty succeeded in reaching [the shore of Tsushima Island in the archipelago situated between *Japan* and *Korea*.] Syo-mul and his colleagues never arrived.<sup>149</sup>

In 678 A.D. during the period between 27 April and 25 May, a drought struck *China*.<sup>153</sup>

In 678 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

**679 A.D.** In 679 A.D. in the 1<sup>st</sup> day of the 6<sup>th</sup> month, hail fell in *Japan* as big as peaches.<sup>149</sup>

**Winter of 679 / 680 A.D.** In 680 A.D. on the 20<sup>th</sup> day of the 1<sup>st</sup> month, it was reported from the Province of Settsu, *Japan* that at the village of Ikuta, peach trees and plum trees had borne fruit. [An unusually warm winter]<sup>149</sup>

**680 A.D.** In *England*, there was famine from a drought that lasted for three years.<sup>47, 57, 72, 91</sup>

In the days of Ethelwald, King of Saxons, was a great drought for three years. This drought caused such a famine that people pined with hunger and long fasting, went in companies, and climbing some precipice, joining hand in hand, threw themselves either over a rock or into the sea.<sup>72</sup> [Æthelwold, a 7th century king of East Anglia, the long-lived Anglo-Saxon kingdom which today includes the English counties of Norfolk and Suffolk.]

In 680 A.D. on the 8<sup>th</sup> day of the 6<sup>th</sup> month, there was a rain of ashes [Oshima volcanic eruption?] in *Japan*. On the 14<sup>th</sup> day, there was a great thunderstorm. On the 5<sup>th</sup> day of the 8<sup>th</sup> month, there were 3 days of rain with floods. On the 14<sup>th</sup> day, there was a storm, which broke trees and damaged houses.<sup>149</sup>

In 680 A.D. during the period between 28 September and 27 October, floods struck in Honan (now Henan province) in central *China* at Loyang and in Hopei (now Hebei province) in northern *China* at Ta-ming. Many people drowned.<sup>153</sup>

**681 A.D.** In 681 A.D. during the period between 25 January and 23 February, a drought struck in Shensi (now Shaanxi province) in central *China* at Sian, Fêng-hsiang, Hua and Ta-li. As a result, two years' land tax was remitted. Then during the period between 18 September and 16 October, floods struck Honan (now Henan province) in central *China* at Loyang and in Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

In 681 A.D. during the spring, there was a drought in Shansi and Shensi provinces in *China*. Two years' land tax was remitted. Also during this time, there was a great flood in Chihli province and as a result, one year's land tax was remitted.<sup>165</sup>

**682 A.D.** In 682 A.D. on the 27<sup>th</sup> day of the 7<sup>th</sup> month in *Japan*, the provinces of Shinano and Kibi reported hoarfrost had fallen, moreover that owing to the storms, the five grains had not formed.<sup>149</sup>

In 682 A.D., a severe drought struck Shensi (now Shaanxi province) in central *China* producing a famine.<sup>153</sup>

In 682 A.D., floods struck several regions of *China*:<sup>153</sup>

— During the period between 11 June and 9 July, floods struck Honan (now Henan province) in central *China* at Loyang. One thousand persons drowned.

— During the period between 10 July and 8 August, floods struck Shensi (now Shaanxi province) in central *China* at Sian.

— During the period between 8 August and 8 November, floods struck Shantung (now Shandong province) on the east coast of *China*. These floods produced a famine.

In 682 A.D., there was a great drought in Shensi province in *China*.<sup>165</sup>

**683 A.D.** There was a famine in *Syria* and *Libya*.<sup>57,91</sup> [Another source places this famine in 682 and also caused a plague.]<sup>72</sup>

[Another source cites this as the year 689] In 689 a famine afflicted *Syria* that many removed out of it into Romania.<sup>72</sup>

In 683 A.D. during the 7<sup>th</sup> and 8<sup>th</sup> month, there was a drought in *Japan*. On the 2<sup>nd</sup> day of the 9<sup>th</sup> month, there was a great storm.<sup>149</sup>

In 683 A.D. during the period between 6 May and 8 August, a drought struck in Honan (now Henan province) in central *China* at Loyang and in Hopei (now Hebei province) in northern *China* at Ta-ming. During the period between 29 July and 27 August, floods struck *China*. Then during the period between 28 August and 25 September floods struck in Hopei (now Hebei province) in northern *China* at Hua-lu and in Shansi (now Shanxi province) in northern *China* along the Hu-t'o River causing crop damage.<sup>153</sup>

In 683 A.D. during the summer, there was a drought in Chihli and Honan provinces in *China*.<sup>165</sup>

**684 A.D.** The winter in *Scotland* was very cold. Many lakes, rivers and the sea froze.<sup>28</sup>

In 684, there was a famine and plague in *Syria* and *Libya*.<sup>72</sup>

[On 26 November 684 (Julian calendar) or 29 November 684 (Gregorian calendar), a massive earthquake magnitude 8.4 struck the Hakuhou Nankai region of *Japan*. In 684 on the 14<sup>th</sup> day of the 10<sup>th</sup> month (ancient Japanese calendar) at the hour of the boar (10 p.m.), there was a great earthquake. Throughout the country men and women shrieked aloud, and knew not East from West. Mountains fell down and rivers gushed forth; the official buildings of the provinces and districts, the barns and houses of the common people, the temples, pagodas and shrines were destroyed in numbers, which surpass all estimates. In consequence, many of the people and domestic animals were killed or injured. The hot springs of Iyo were dried up at this time and ceased to flow. In the province of Tosa [today the Kōchi Prefecture on Shikoku] more than 500,000 shiro of cultivated land were swallowed up and became sea. Old men said that never before had there been such an earthquake. On this night a rumbling noise like that of drums was heard in the East. Some said that the island of Idzu had increased of itself on two sides, the north and west, to the extent of more than 300 rods, and that a new island had been formed. The noise like that of drums was thought to be the construction of island.] Then on the 3<sup>rd</sup> day of the 11<sup>th</sup> month, the Governor of the province of Tosa reported that owing to a great tide, which rose high, and an overflowing rush of sea-water, many of the ships used for conveying tribute had been sunk and lost [a tsunami event].<sup>149</sup>

In 684 A.D., floods struck several regions of *China*:<sup>153</sup>

— Floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui where 100 persons drowned.

— During the period between 20 April and 19 May, floods struck along the Lo River in central *China* where 400 families were flooded. This occurred in Shensi (now Shaanxi province) and in Honan (now Henan province).

— During the period between 16 August and 14 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou flooding 1,000 families. Flooding also struck along the Lo River in central *China* where 5,000 families were flooded. This occurred in Shensi (now Shaanxi province) and in Honan (now Henan province).

— During the period between 15 September and 13 October, floods struck Honan (now Henan province) in central *China* at Mêng.

**685 A.D.** In *Ireland*, there was a great inundation of the sea.<sup>47, 92</sup>

In 685 A.D. in the 3<sup>rd</sup> month, there was a rain of ashes in the province of Shinano, *Japan*. The herbs and trees all withered up. [Most likely a fall of volcanic ash.]<sup>149</sup>

In 685 A.D. during the period between 8 June and 6 July, a drought struck *China*.<sup>153</sup>

In 685 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

**Winter of 685 / 686 A.D.** In 686 A.D. in the 10<sup>th</sup> day of the 3<sup>rd</sup> month, there was [a late season] snow in *Japan*.<sup>149</sup>

**686 A.D.** In 686 A.D. during autumn in the 7<sup>th</sup> month there was a drought in *Japan* that ended when plentiful rain fell throughout the Empire on the 20<sup>th</sup> of the month.<sup>149</sup>

During the period between 8 November 686 and 5 February 687, a drought struck *China*. There was no snowfall.<sup>153</sup>

In 686 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

**687 A.D.** In 687 A.D. during the period between 19 March and 15 June, a drought struck *China*.<sup>153</sup>

In 687 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

**689 A.D.** In 689 A.D., drought struck *China*.<sup>153, 165</sup>

In 689, there was a great famine in *Syria*.<sup>72</sup>

**690 A.D.** At Venice and Liguria *Italy*, there were great floods from violent rainstorms.<sup>47, 92</sup>

In 690, Venice, *Italy* and other regions had often rains, thunder, lightning and great floods.<sup>72</sup>

In Venice and Liguria, *Italy*, happened the greatest tempest of rain, thunder, lightning and inundation, felt or seen since Noah's Flood, with the greatest damage.<sup>72</sup>

In 690 A.D. during the period between 15 April and 13 May, a drought struck *China*.<sup>153</sup>

In 690 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**691 A.D.** In 691 A.D. during the summer from the 4<sup>th</sup> month to the 6<sup>th</sup> month, profuse rain fell in *Japan* beyond measure and it was feared that the grain crops would certainly be destroyed. During the 6<sup>th</sup> month, sleet fell in forty places in the capital and provinces.<sup>149</sup>

---

**692 A.D.** In 692 A.D. on the 3<sup>rd</sup> day (intercalary – leap day) of the 5<sup>th</sup> month, there were great floods in *Japan*. Commissioners were sent to visit the districts and provinces, one after another, making loans to those who, having met with disaster, were unable to support themselves, and allowing them to fish and cut wood in the hills and forests, the ponds and marshes.<sup>149</sup>

---

**693 A.D.** In eastern *Ireland*, there were floods caused by rainstorms in Leinster.<sup>47, 92</sup>

In 693 A.D., floods struck Honan (now Henan province) in central *China* at Mêng. Then during the period between 9 June and 8 July, floods struck Shantung (now Shandong province) on the east coast of *China* at Hui-min where 2,000 families were flooded.<sup>153</sup>

---

**694 A.D.** In 694 A.D. during the period 2-30 March, a drought struck *China*.<sup>153</sup>

In 694 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**695 A.D.** The River Thames in *England* was frozen so hard that many booths were built thereon.<sup>1</sup>

The River Thames in *England* was frozen for six weeks, when booths were built on it.<sup>2, 40, 41, 42, 43</sup>

The Thames in *England* was frozen for six weeks, when booths were built, and a market held upon the ice.<sup>29</sup>

In *England*, the River Thames was frozen over for six weeks.<sup>72</sup> Trade were carried on in booths.<sup>47, 93</sup>

A severe winter struck *England*. The River Thames was frozen for 6 weeks and it was cold in *Europe*.<sup>28</sup>

In 695 A.D., there was a great frost in *England*. The River Thames was frozen over for 6 weeks.<sup>212</sup>

---

**696 A.D.** In 696 A.D. during the period between 2 June and 1 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. Crops were damaged.<sup>153</sup>

---

**697 A.D.** In 697 A.D., a drought struck *China*.<sup>153, 165</sup>

---

**698 A.D.** In 698 A.D., floods struck Honan (now Henan province) in central *China* at Loyang. Then during the period between 28 March and 25 April, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui where 700 families were damaged.<sup>153</sup>

---

**699 A.D.** In 699 A.D., floods struck several regions of *China*:<sup>153</sup>

— During the period between 8 August and 8 November, floods struck Honan (now Henan province) in central *China* at Ch'in-yang where 1,000 families were flooded.

— During the period 1-29 August, floods struck along the Lo River in central *China*. This occurred in Shensi (now Shaanxi province) and in Honan (now Henan province).

---

**700 A.D.** In *England* and *Ireland*, there was a famine and pestilence during three years, “so that men ate each other”.<sup>57, 91</sup>

In 700, our Saxon ancestors being yet heathens were plagued with such severe famine for three years together, that many died of hunger. And in Sussex, *England* many were so tormented with it, that sometimes groups of 40 people would get up on the rocks by the seaside and throw themselves down headlong into the sea and were drowned.<sup>72</sup>

In 700, a great drought prevailed in the Auvergne, *France*.<sup>79</sup>

The summer of 700 A.D. was unusually hot [in *France*].<sup>171</sup>

In 700 A.D. during the period between 6 May and 8 August, a drought struck in Shansi (now Shanxi province) in northern *China* at Yung-chi and in Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 700 A.D. during the summer, there was a drought in Shantung and Shensi provinces in *China*.<sup>165</sup>

In 700 A.D., floods also struck several regions of *China*:<sup>153</sup>

— During the period between 13 April and 12 May, floods struck Szechwan (now Sichuan province) in southwest *China* at Hung-chou [some doubt on location]. One thousand families were flooded and 400 persons drowned.

— During the period between 5 November and 3 December, floods struck Honan (now Henan province) in central *China* at Loyang.

**701 A.D.** In Lincoln, *England*, a storm (hurricane) threw down above 100 houses.<sup>40, 41, 43, 56, 72</sup>

**702 A.D.** In 702 A.D. during the period between 5 February and 28 July, a drought struck *China*.<sup>153</sup>

In 702 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

**703 A.D.** In *Italy*, there were three years of famine.<sup>57, 72, 91</sup>

In 703 A.D., there was no snowfall in *China* during the winter. During the period between 20 May and 18 June, there was a drought in *China*. Then during the period between 16 July and 16 August, floods struck Kansu (now Gansu province) in northwest *China* at Ning. Two thousand families were flooded and 1,000 persons drowned.<sup>153</sup>

In 703 A.D. during the summer, there was a drought in *China*. No snowfall during the winter.<sup>165</sup>

**704 A.D.** In 704 A.D. during the period between 4 September and 3 October, floods struck Hopei (now Hebei province) in northern *China* at Ho-chien. Several thousand families were flooded.<sup>153</sup>

**705 A.D.** In 705 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 28 April and 26 May, Shensi (now Shaanxi province) in central *China* at T'ung-kuan experienced floods. Five hundred families flooded.

— During the period between 26 June and 24 July, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.

— During the period between 25 July and 23 August, floods struck central *China* along the Lo River in Shensi (now Shaanxi province) and in Honan (now Henan province). Two thousand families flooded.

**706 A.D.** In 706 A.D. during the period between 17 May and 14 June, floods struck central *China* along the Lo River in Shensi (now Shaanxi province) and in Honan (now Henan province). Several hundred

persons drowned. Then during the period between 15 June and 14 July, drought struck in Shensi, in Shantung (now Shandong province) on the east coast of *China*; in Hopei (now Hebei province) in northern *China* at Ta-ming; and in Honan at Loyang. Then during the period between 12 September and 11 October, floods struck Hopei at Ta-ming.<sup>153</sup>

In 706 A.D. during the summer and winter, there was a severe drought in Chihli, Honan, Shantung and Shensi provinces in *China*. Also during this year, there were floods in Chihli province.<sup>165</sup>

---

**707 A.D.** In *Asia*, there was a terrible frost.<sup>47, 72, 93</sup>

There was a most severe winter, so that in *Asia*, the earth was covered with snow for 30 days and most animals died.<sup>72</sup>

In 707 A.D. during the period between 7 February and 3 July, a drought struck *China*.<sup>153</sup>

In 707 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**709 A.D.** In 709 A.D. during the period between 12 July and 10 August, a drought struck *China*. There was excessive heat. Then during the period between 10 August and 8 September, floods struck central *China* along the Li River in Honan (now Henan province). Crops were damaged. Then during the period between 8 October and 5 November, floods struck Shantung (now Shandong province) on the east coast of *China* at Chu-ch'êng. Thousands of families were flooded.<sup>153</sup>

In 709 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**710 A.D.** In 710 A.D. during the period between 4 May and 1 June, floods struck Shensi (now Shaanxi province) in central *China* at Sian. Wells overflowed.<sup>153</sup>

---

**712 A.D.** A famine struck *Wales*.<sup>57, 72, 91</sup>

There was extensive flooding in 712 in the north of *Western Europe*.<sup>79</sup>

In 712 A.D. during the period between 7 August and 5 September, a drought struck *China*.<sup>153</sup>

In 712 A.D. during the autumn in *China*, there was excessive heat.<sup>165</sup>

---

**713 A.D.** In 713 A.D. during the period between 30 March and 29 April, a drought struck *China*.<sup>153</sup>

In 713 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**714 A.D.** In 714 A.D. during the period between 19 February and 20 March, a severe drought struck Shensi (now Shaanxi province) in central *China* at Sian. This led to a famine.<sup>153</sup>

In 714 A.D. during the spring, there was a great drought in Shensi province in *China*.<sup>165</sup>

---

**715 A.D.** In 715 A.D., floods struck in Honan (now Henan province) in central *China* at Loyang and in Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

In 715 A.D. during the period between 6 June and 5 July, a drought struck *China*.<sup>153</sup>

In 715 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**716 A.D.** In 716 A.D. during the period between 24 July and 21 August, floods struck central *China* along the Lo River in Shensi (now Shaanxi province) and in Honan (now Henan province).<sup>153</sup>

---

**717 A.D.** In Rome *Italy*, the Tiber River greatly overflowed from rain.<sup>47, 72, 92</sup>

The Tiber River in *Italy* overflowed its banks in Rome and in low lying places, the river flowed over the city walls, overturning houses, laying waste to the land and destroying corn [grains].<sup>72</sup>

The Calvisio says in 717 in the region of *Tracia* and on the side of Constantinople [now Istanbul, *Turkey*], the winter was so violent that the horses and camels of the Saracen army perished in great numbers.<sup>58, 80</sup> [Tracia is Italian for Thrace. Thrace designates a region bounded by the Balkan Mountains on the north, Rhodope Mountains and the Aegean Sea on the south, and by the Black Sea and the Sea of Marmara on the east.]

In Constantinople [now Istanbul, *Turkey*], the winter was so severe that the horses and camels of the Saracen army that was besieging the city perished in large numbers.<sup>62</sup>

In 717 A.D., floods struck Honan (now Henan province) in central *China* at Kung where several hundred families were flooded. Floods struck Honan at Loyang where crops were damaged. During the period between 18 March and 15 April, floods struck along the Ch'an River in Honan where 1,000 persons drowned.<sup>153</sup>

---

**718 A.D.** A famine struck *Syria*.<sup>57, 72, 91</sup>

In 718 A.D. during the period 3-31 July, floods struck along the Ch'an River in Honan (now Henan province) in central *China*. Then during the period between 1 August and 28 September, a severe drought struck *China*.<sup>153</sup>

In 718 A.D. during the autumn, there was a very severe drought in *China*.<sup>165</sup>

---

**719 A.D.** In *Ireland*, there was a rainy summer and a great inundation of the sea.<sup>47, 92</sup>

In 719 A.D. during the period between 20 August and 17 September, a drought struck *China*.<sup>153</sup>

In 719 A.D. during the autumn, there was a drought in *China*.<sup>165</sup>

In 719, there was firey hail, that burnt ships and the sea boiled up.<sup>72</sup>

---

**720 A.D.** In 720 A.D., there was a flood in Honan (now Henan province) in central *China* at Mien-ch'ih during the period 6 May - 8 August. This flood resulted in the drowning of 10,000 persons. Then during the period 10 July - 8 August, Shensi (now Shaanxi province) in central *China* was flooded at Sian. This flood caused damaged houses, damaged 500 families and drowned 1,000 people.<sup>153</sup>

In 720 A.D., floods struck Hupeh (now Hubei province) in central *China* at Hsiang-yang. Several hundred families were flooded.<sup>153</sup>

---

**Winter of 721 / 722 A.D.** During the period between 8 November 721 and 5 February 722, a drought struck *China*. There was no snowfall during the winter.<sup>153</sup>

In 721 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**722 A.D.** In 722 A.D., floods struck Honan (now Henan province) in central *China* at Hsü-ch'ang, Yeh, Ju-nan, Huai-yang, Lin-ju, Pi-yang, and Têng. Crops and houses were damaged and many people drowned. During the period between 20 May and 18 June, flood struck Honan at Loyang. During the period between 18 July and 16 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng and Hui-ming.<sup>153</sup>

---

**724 A.D.** In 724 A.D. during the period between 25 June and 24 July, floods struck Honan (now Henan province) in central *China* at Ju-nan. Then during the period between 24 August and 21 September, floods struck Shantung (now Shandong province) on the east coast of *China* at Tzū-yang.<sup>153</sup>

In 724 A.D. during the period between 25 July and 23 August, a drought struck in Shansi (now Shanxi province) in northern *China* at Yung-chi and in Hopei (now Hebei province) in northern *China* at Ta-ming. Then during the period between 15 October and 13 November, a drought struck in Shansi at Yung-chi and in Shensi (now Shaanxi province) in central *China* at Ta-li.<sup>153</sup>

In 724 A.D. during the autumn, there was a drought in Chihli, Shansi and Shantung provinces in *China*.<sup>165</sup>

---

**726 A.D.** In 726 A.D., floods struck several regions of *China* including:<sup>153</sup>  
 — Honan (now Henan province) in central *China* at Loyang, Ch'in-yang, Chi, Chêng, Hua and Kaifeng; Hopei (now Hebei province) in northern *China* at Ta-ming; and Shantung (now Shandong province) on the east coast of *China* at P'u. Thousands drowned.  
 — During the period 2-31 August, floods struck along the Ch'an River in Honan.  
 — During the period 1-29 September, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.

In 726 A.D. during the period between 4 July and 1 August, a drought of long duration struck in Hopei (now Hebei province) in northern *China* at Ta-ming and in Shansi (now Shanxi province) in northern *China* at Taiyuan, Yang-ch'êng and Ch'ang-chih.<sup>153</sup>

In 726 A.D. during the summer and autumn, there was a drought of long duration in Chihli and Shansi provinces in *China*.<sup>165</sup>

---

**727 A.D.** In 727 A.D., floods struck several regions of *China* including:  
 — Floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.  
 — During the period between 26 May and 23 June, floods struck Shansi (now Shanxi province) in northern *China* at Lin-fên.  
 — During the period between 23 July and 21 August, floods struck in Honan (now Henan province) in central *China* at Têng where thousands drowned and in Shensi (now Shaanxi province) in central *China* at Lo-ch'uan and Ta-li where many people drowned and 2,000 families were flooded.  
 — During the period between 22 August and 19 September, floods struck in Honan at Mien-ch'ih. And during the same year a drought struck 17 cities in *China*.<sup>153</sup>

In 727 A.D., there was a drought in *China*.<sup>165</sup>

---

**728 A.D.** In 728 A.D., a drought struck in Honan (now Henan province) in central *China* at Loyang and Shang-ch'iu and in Anhwei (now Anhui province) in eastern *China* at Po.<sup>153</sup>

In 728 A.D., there was a drought in Honan province in *China*.<sup>165</sup>

---

**729 A.D.** In 729 A.D. during the period between 8 January and 5 February, a drought struck *China*. There had been no snowfall during the winter. Then during the period between 29 August and 26 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.<sup>153</sup>

In 729 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**730 A.D.** In Edinburgh, *Scotland*, there was great damage by rain or inundation.<sup>40, 41, 43, 47, 92</sup>

Many families in Edinburgh, *Scotland* drowned by a flood.<sup>72</sup>

In 730 in *England, Wales* and *Scotland*, there was a great famine.<sup>57, 91</sup>

[Another account places this event in the year 739.] In 739. there was a famine in *England, Wales*, and *Scotland*.<sup>90</sup>

In 730 A.D. during the period between 20 June and 19 July, floods struck in Honan (now Henan province) in central *China* at Loyang. At the same time, the Lo River was flooded in Shensi and Honan causing 1,000 families to be flooded.<sup>153</sup>

---

**731 A.D.** In 731 A.D. during the period between 9 June and 5 September, a drought of long duration struck Shensi (now Shaanxi province) in central *China* at Sian. Then during the period between 8 August and 8 November, floods struck in Honan (now Henan province) in central *China* at Loyang. Crops were damaged.<sup>153</sup>

In 731 A.D. during the summer, there was a drought of long duration in Shensi province in *China*.<sup>165</sup>

---

**732 A.D.** In 732 A.D. during the period between 24 September and 23 October, floods struck in Honan (now Henan province) in central *China* at Shang-ch'iu and Hua and in Shantung (now Shandong province) on the east coast of *China* at Tzū-yang and Tung-p'ing. As a consequence, the land tax was remitted.<sup>153</sup>

In October 732 A.D., there were torrential rains in *France*. The Loire River flooded. Entire villages were swept away.<sup>171</sup>

---

**733 A.D.** In 733 A.D. during the period between 18 May and 16 June, a drought of long duration struck *China*.<sup>153</sup>

In 733 A.D. during the summer, there was a drought of long duration in *China*.<sup>165</sup>

---

**734 A.D.** In 734 A.D. during the period between 8 August and 8 November, floods struck in central *China* in Honan (now Henan province) at Loyang and in Shensi (now Shaanxi province). Crops were damaged.<sup>153</sup>

---

**736 A.D.** In 736 A.D. during the period between 6 May and 8 August, a drought struck *China*.<sup>153</sup>

In 736 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**737 A.D.** In *Britain*, there was a great drought that produced scarcity.<sup>47, 72</sup>

---

**738 A.D.** In Glasgow *Scotland*, there were great floods; more than 400 families drowned.<sup>40, 41, 43, 47, 72, 92</sup>  
[Some authorities give the date 758 A.D.]

In 738 A.D., there was an inundation in Glasgow, *Scotland*. More than 400 families were drowned.<sup>212</sup>

In 738 A.D., floods struck in Honan (now Henan province) in central *China* at Li and in Kiangsi (now Jiangxi province) in southern *China* at I-ch'un and Kiukiang.<sup>153</sup>

---

**739 A.D.** In 739 A.D., there was a famine in *England, Wales, and Scotland*.<sup>212</sup>

In 739 A.D. during the period between 6 November and 4 December, floods struck in Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**741 A.D.** In *Britain*, there was a great drought that produced scarcity.<sup>47, 72</sup>

In 741 A.D. during the period between 8 August and 8 November, floods struck in Honan (now Henan province) in central *China* at Loyang and in Hopei (now Hebei province) in northern *China* at Ta-ming. Crops were damaged. During the period between 16 August and 14 September, floods struck the I River and the Lo River in Honan causing crop damage and the drowning of 1,000 persons.<sup>153</sup>

---

**743 A.D.** In *Britain*, there was a great drought with an earthquake.<sup>47, 72</sup>

---

**Winter of 743 / 744 A.D.** During the period between 8 November 743 and 5 February 744, a drought struck *China*. There had been no snowfall during the winter.<sup>153</sup>

In 743 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**745 A.D.** In 745 A.D. during the period between 30 September and 29 October, floods struck in Honan (now Henan province) in central *China* at Loyang, Huai-yang, and Shang-ch'iu and in Anhwei (now Anhui province) in eastern *China* at Po.<sup>153</sup>

---

**746 A.D.** In *Wales*, there was a dearth [famine].<sup>57, 72, 91</sup>

---

**747 A.D.** In 747 A.D. during the period between 11 August and 8 September, there was a drought in *China*.<sup>153</sup>

In 747 A.D. during the autumn, there was a drought in *China*.<sup>165</sup>

---

**748 A.D.** In *Scotland*, there was a famine.<sup>57, 72, 91</sup>

---

**750 A.D.** In 750 A.D. during the period between 11 April and 10 May, a drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 750 A.D. during the spring, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**751 A.D.** In 751 A.D., there was a flood in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow during the period 26 August - 23 September. As a result several thousand ships were damaged.<sup>153</sup>

---

**753 A.D.** In 753, at the time of the taking of Clermont in the region of Auvergne, *France* by Pepin the Short [king of the Franks], there was over all of *France* a horrible storm. This thunderstorm lasted 22 hours. It spoiled wine cellars. Three thousand people and more than twenty-four thousand animals died

of fright during this storm. [I suggest these deaths were more likely attributed to lightning strikes. Clermont today is called Clermont-Ferrand and is located in the south of France]<sup>79</sup>

**754 A.D.** In 754 A.D. during the period between 21 September and 20 October, floods struck in Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

**755 A.D.** In 755 A.D. during the period between 16 April and 15 May, a drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 755 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

**757 A.D.** A great famine followed the continuous rains in the year 757 in the north of *Western Europe*.<sup>79</sup>

**758 A.D.** In 758, there was an inundation at Glasgow in the west-central lowlands of *Scotland*, which drowned more than 400 families.<sup>90</sup>

In 758 A.D. during the period between 11 June and 9 July, a severe drought struck *China*.<sup>153</sup>

In 758 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

**759 A.D.** In *Ireland*, there was a great famine throughout the kingdom, which lasted for several years.<sup>57, 91</sup>

In 759 A.D. during the period between 2 April and 1 May, a drought of long duration struck *China*.<sup>153</sup>

In 759 A.D. during the spring, there was a drought of long duration in *China*.<sup>165</sup>

**Winter of 759 / 760 A.D.** The frost in *Britain* continued from 1 October 759 to 26 February 760.<sup>40, 41, 42, 43, 47, 93, 212</sup>

**Winter of 760 / 761 A.D.** In the year 761 according to the Helgoländer Chronik (of Helgoland and Norddeutschland in northern *Germany*), the winter was very severe. It began in October when the open sea and large lakes were clogged with ice for many miles. More than 20 Ellen [46 feet, 14 meters] of snow fell. In the following February, the ice broke with the most unheard of incredible bang, that could be conceived on heaven or earth. Some of the ice was like high trees or mountains. The ice was 31 Ellen [71 feet, 22 meters] thick. [The source places this event in the year 761. The passage starts off with “The chronicle available to me reaches back to the year 761. The things presupposed, however, only reach back to the year 800 or so. So in the year 761:”]<sup>172</sup>

**762 A.D.** In *Britain*, there was a long and terrible drought, with heat.<sup>47, 72</sup>

**763 A.D.** In 763 A.D., there was a drought [in *England*]. The summer was so hot that the springs dried up.<sup>212</sup>

In 763 A.D. during the period between 16 June and 15 July, floods struck in Honan (now Henan province) in central *China* at Loyang. During the period between 12 October and 9 November, floods struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 763 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

**Winter of 763 / 764 A.D.** In the same year (763 A.D.), it was bitterly cold after the beginning of October, not only in our land, but even more so to the east, west, and north. Because of the cold, the north shore of the *Black Sea* froze to a depth of 30 cubits (~ 45 feet) a hundred miles out. This was so from Ninkhia to the Danube River, including the Kouphis, Dniester, and Dnieper Rivers, the Nekrophela, and the remaining promontories all the way to Mesembria and Medeia. Since the ice and snow kept on falling, its depth increased another twenty cubits (~ 30 feet), so that the sea became dry land. It was traveled by wild men and tame beasts from Khazaria, and the lands of other adjacent people. By divine command, during February of the same (winter in 764 A.D.) second indication the ice divided into a great number of mountainous chunks. The force of the wind brought them down to Daphnusia and Hieron, so that they came through the *Bosporos* to the city (Constantinople or Istanbul) and all the way to Propontis, Abydos, and the islands, filling every shore. We ourselves were an eyewitness and, with thirty companions, went out onto one of them and played on it. The icebergs had many dead animals, both wild and domestic, on them. Anyone who wanted to could travel unhindered on dry land from Sophianai to the city and from Chrysopolis to St. Mamas or Galata. One of these icebergs was dashed against the harbor of the acropolis, and shattered it. Another mammoth one smashed against the wall and badly shook it, so that the houses inside trembled along with it. It broke into three pieces, which girdled the city from Magnaura to the Bosporos, and was taller than the walls. All the city's men, women, and children could not stop staring at the icebergs, then went back home lamenting and in tears, at a loss as to what to say about this phenomenon. (Theophanes the Confessor).<sup>3</sup> [The Danube Delta on the Black Sea is located in eastern Romania and southwestern Ukraine. Dniester and Dnieper are located in the Ukraine. Mesembria is an ancient name for Nesebŭr, Bulgaria. Medeia is a city on the eastern Black Sea coast of present day Turkey. Propontis is an ancient name for the Sea of Marmara, between the Bosphorus Strait and the Dardanelles Strait in Turkey. Abydos is the name of an ancient city located in the south of Nara Point (Nara Burnu ) in the Dardanelle Strait of Turkey. From the 6th century, the port of Çengelköy in Turkey was called Sophianai because of the palace Justin II built nearby for his consort Sophia. Chrysopolis or Üsküdar is a municipality of Istanbul, Turkey. St. Mamas or Galata is a district of Istanbul, Turkey. The Magnaura was a large building in Constantinople [now Istanbul, Turkey] It was located east of the Augustaion, close to the Hagia Sophia and next to the Chalke gate of the Great Palace.]

Around Constantinople (now Istanbul, *Turkey*), the two seas frozen.<sup>47, 93</sup>

In the winter of 762 A.D., the *Dardanelles* and *Black Sea* were frozen over, and snow drifted to an astonishing depth of 50 feet (15 meters).<sup>1</sup> [misprint for 763 A.D.]

In the year 763, the *Black Sea* and the Straits of the *Dardanelles* were frozen.<sup>60, 62</sup> [The Dardanelles is a narrow strait in northwestern Turkey connecting the Aegean Sea to the Sea of Marmara.]

In another account the Byzantine historian Nicephorus described the winter in Constantinople (now Istanbul, *Turkey*): In the beginning of autumn, winter has come with abnormal colds; also saline waters are frozen which affected inhabitants of the city severely. One hundred mile (161 kilometer) stretch of the sea is covered by ice like in the regions north of *Black Sea*. Ice invaded most of the rivers; the coasts of Mesembria and Medeia were a solid mass of ice was 30 coudée thick (13-14 meters). Also snowfall was so heavy that his ice is enclosed by 20 coudée of snow and all morphological differences between sea and coast disappeared. Now a white cover unified sea and land. All parts of the North Sea facing north were solidified. Especially the areas of Hazars and round the Scythian's Lands were inaccessible and unsuitable for human and animal life. After a while this significant crystal crust broke into several pieces and these were uplifted in the middle of the sea like Pyramids. Most of them, dragged by winds, were smashed and sunk in the opening of the *Bosporos* to the *Black Sea* near Daphnusia, which was a powerful castle. Most of them entered into the *Bosporos*. They filled up all the curls of the water way and connected *Asia* and *Europe*. They formed a land bridge between two continents and it was easier to pass the strait by walking instead of using boats. Accumulated ice masses in the Bosporos without any

delay were dragged into Propontis (*Marmara Sea*) and even reached Abydos. There they accumulated again in a perfect way to form a structure like a monolith and Propontis lost its sea characteristics. One of these huge icebergs was grounded in the bottom of Constantinople Fortress, and shook the city walls so that inhabitants were excited. Icebergs accumulated in front of the Fortress, then invaded all waterways. They accumulated to the same height as the city walls. As a result, inhabitants of the city were able to go out of the city from the harbor by crossing these icebergs and they can walk to the Galata Castle on the other side from Constantinople Fortress.<sup>4</sup> [*Mesembria* is an ancient name for Nesebŭr, Bulgaria. *Medeia* is a city on the eastern Black Sea coast of present day Turkey. *Hazars and around the Scythian's Lands* today possibly refers to northwestern Turkey, Georgia and Abkhazia. *Bosphorus* is the strait between the Black Sea and the Sea of Marmara, Turkey.]

A severe winter struck *Europe* beginning in 14 December 763. *Black Sea* was frozen with snow 30 feet (9 meters) deep. Lasted to 16 March 764.<sup>28</sup>

In 764, the *Black Sea* was frozen to a distance of fifty miles from shore. The Hellespont and Dardanelles were frozen and the Sea of Marmara was passable for cavalry.<sup>63</sup> [The Hellespont is where the Dardanelle Strait narrows between Abydos on the Asian side to a point near Sestos on the European side, a distance of about 1.5 kilometers.]

From October 763 to February 764, a frost at Constantinople, when the two seas there were frozen a hundred miles from the shore.<sup>90</sup>

During the winter of 763-764, very severe cold reigned in Gaul [*Western Europe*] and in Illyria (*western part of today's Balkan Peninsula*) to the shores of the *Black Sea*. According to the Frankish chronicles, this cold was exceptional severity and could not be compared with any previous cold winter. The Bosphorus and the *Black Sea* froze. In many areas the snow was 30 feet high. In Gaul [*Western Europe*] from 1 October 763 to February 764 there was a very severe frost. The olive and fig trees were damaged because the soil froze to their roots. As a result over vast regions of the earth a terrible famine broke out in the following years, which killed many people.<sup>62</sup>

During the winter of 763-764 in *Western Europe*, the cold started October 1<sup>st</sup> and ran until February 764.<sup>79</sup>

The winter of 764 A.D. was exceptionally cold [in *France*]; first in October, then from 1 January to late February. There were up to 10 meters [33 feet] of snow in places. The olive trees in the south froze. There were frozen seas. The rivers were frozen "to the bottom". Then there was a famine.<sup>171</sup>

On October the 1<sup>st</sup>, came a most rigorous bitter frost, which lasted until February. It affected not only *Europe* but also all over *the North* and *the East*. The main sea was frozen near the pole and snow laid 20 feet deep upon the ice. It killed most vegetables and many sea animals. The snow destroyed many forests. During the severe frost, the *Sea of Bosphorus* brought great sheets of ice into Propontis [*Sea of Marmara*] that above 30 men might stand on each sheet of ice and be carried safely into the sea. These sheets of ice did great damage to the walls of Constantinople [*Istanbul, Turkey*]. March was followed by an excessive drought.<sup>72</sup>

In 763 in *England*, there was a violent frost, which continues about 150 days.<sup>128</sup>

In the year 764 in *England*, there was the severest frost.<sup>72</sup>

---

**764 A.D.** In *Britain*, there was a drought after a long and severe frost.<sup>47, 72</sup>

In 764 A.D. during the spring and summer in Shensi province in *China*, there was a great drought.<sup>165</sup>

---

**765 A.D.** In 765 A.D. during the period between 5 February and 8 August, a drought of long duration struck *China*.<sup>153</sup>

During the period of 26 March to 24 April in 765 A.D., there was a famine in *China*.<sup>210</sup>

In 765 A.D. during the summer in *China*, there was a great drought.<sup>165</sup>

---

**766 A.D.** In 766 A.D., floods struck central *China* along the Lo River in Shensi (now Shaanxi province) and in Honan (now Henan province).<sup>153</sup>

In 766 A.D. during the period between 14 April and 9 August, a severe drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

---

**Winter of 766 / 767 A.D.** During the period between 8 November 766 and 5 February 767, a drought struck *China*. There had been no snowfall during the winter.<sup>153</sup>

In 766 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**767 A.D.** In *Asia*, there was a great drought.<sup>47, 72</sup>

So great a drought in Thracia [*Southeast Europe*] without either rain or dew, that all springs, fountains and rivers at Constantinople were dried up.<sup>72</sup>

In 767 A.D. during the period 1-29 July, a severe drought struck *China*. [This was originally recorded as the third year of the Yung-t'ai period, but since the Yung-t'ai had only two years and ended in the year 766, there apparently was a mistake. Here, it was recorded as if Yung-t'ai did last until 767.]<sup>153</sup>

In 767 A.D. during the period between 8 August and 8 November, floods struck several regions of *China* including:<sup>153</sup>

- Hunan province in south-central *China*.
  - Shansi (now Shanxi province) in northern *China* at Yung-chi.
  - Honan (now Henan province) in central *China* at Kaifeng.
  - Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, Soochow, Sung-chiang and T'ai-ts'ang.
  - Chekiang (now Zhejiang province) on the east coast of *China* at Ning-po, Shao-hsing, Taichow, Ch'ü, Chin-hua, Chien-tê, Wên-chou, Hangchow, Chia-hsing, and Hu-chou.
  - Fukien (now Fujian province) on the southeast coast of *China*.
- 

**Winter of 767 / 768 A.D.** The winter of 768 A.D. was cold [in *France*].<sup>171</sup>

On 20 December 767, there was an ice storm in *China*.<sup>210</sup>

---

**768 A.D.** In *Ireland*, there was famine and an earthquake.<sup>57, 91</sup>

---

**769 A.D.** During the dog days of summer of 769 A.D. [28 July – 5 August] in *China*, the weather was cold.<sup>210</sup>

---

**771 A.D.** In 771 A.D. during the period between 5 February and 12 October, a drought struck *China*.<sup>153</sup>

In 771 A.D. during the spring, summer and autumn, there was a drought in *China*.<sup>165</sup>

---

**772 A.D.** In *Ireland*, there was a great drought.<sup>47</sup>

In *Ireland*, there was a famine from a drought.<sup>57, 91</sup>

A storm struck Wells, *England*.<sup>40, 41</sup>

In *Wales*, a thunder and lightning storm killed people.<sup>72</sup>

In 772 there was an epidemic at Chichester in Sussex, *England*, where 34,000 people were killed.<sup>212</sup>

In 772 A.D. during the period between 9 March and 7 April, floods struck Kiangsi (now Jiangxi province) in southern *China* at Kiukiang. Then during the period between 6 June and 4 July, a drought struck *China*.<sup>153</sup>

In 772 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**773 A.D.** In 773 A.D., a severe drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 773 A.D., there was a great drought in Shensi province in *China*.<sup>165</sup>

In 773 A.D., there was a drought in *China*.<sup>210</sup>

---

**774 A.D.** In *Scotland*, there was a severe famine with a plague.<sup>57, 72, 91</sup>

---

**Winter of 774 / 775 A.D.** In the year 675, there was the greatest frost in *England*.<sup>72</sup> [This entry was out of chronological order and I believe Short was referencing the year 775 A.D.]

On 10 December 774 A.D., there was a great snow in *China*.<sup>210</sup>

---

**775 A.D.** In *England*, there was a drought with excessive heat, after a great frost.<sup>47, 72</sup>

The winter was so hard that the Euxine Sea (*Black Sea*) was quite frozen over. The ice was 30 foot or cubits thick. People could walk 50 or 100 leagues (150 to 300 miles, 240 to 480 kilometers) on the ice from the Danube River to the Euphrates River. On the ice fell 30 cubits deep of snow. When the ice broke, it appeared like great mountains on the sea, which demolished and carried down whole villages standing on the shore. This winter was succeeded by so excessive heat during the summer that all springs dried up.<sup>72</sup> [The Danube River probably refers to the Danube Delta in Europe, eastern Romania and south western Ukraine. The Euphrates River rises in Turkey, passes through Syria, and joins with the Tigris River in southeastern Iraq to form the Shatt al Arab, which empties into the Persian Gulf.]

In the year 775, “Snow fell, and lay 30 Cubits on a Level.”<sup>72</sup>

[In *Byzantium*], the summer was hot and all the wells dried up.<sup>62</sup> [Byzantium at this time included Turkey, and the western part of the Balkan peninsula.]

In 775 A.D. during the period 1-30 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.<sup>153</sup>

---

**776 A.D.** In *Ireland*, there were great fall of rain, and consequent flood.<sup>47, 92</sup>

Because of the famine [in *Northern Italy*] in 776, the supply of Lombard slaves sold by the Greeks to the Arabs increased. Some free men boarded the slave ships voluntarily becoming slaves in order to survive the severe effects of starvation.<sup>86</sup>

In 776 A.D. during the period between 20 July and 18 August, floods struck Shensi (now Shaanxi province) in central *China* at Sian. One thousand families were flooded.<sup>153</sup>

---

**777 A.D.** During the period of 13 February to 13 March in 777 A.D., there was a drought in *China*.<sup>210</sup>

In 777 A.D. during the period between 10 July and 7 August, a drought struck *China*. There had been no snowfall during the winter. Then during the period between 8 August and 8 November, floods struck several regions of *China* causing crop damage. The floods occurred in:<sup>153</sup>

— Shensi (now Shaanxi province) in central *China* at Sian.

— Honan (now Henan province) in central *China* at Shang-ch'iu, Hua, and Kaifeng.

— Anhwei (now Anhui province) in eastern *China* at Po.

In 777 A.D. during the summer, there was a drought in *China*. No snowfall during winter.<sup>165</sup>

---

**779 A.D.** A famine and plague grievously afflicted *France*.<sup>72</sup>

---

**780 A.D.** In 780 A.D., the Loire River at Roanne, *France* flooded.<sup>171</sup>

**Winter of 780 / 781 A.D.** During the period between 8 November 780 and 5 February 781, floods struck several regions of *China* causing crop damage. The floods occurred in:

— Hopei (now Hebei province) in northern *China* at Ta-ming, and Chêng-ting.

— Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng.

During the same period of time, a drought struck other regions of *China*. There had been no snowfall during the winter.<sup>153</sup>

In 780 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**781 A.D.** A storm (hurricane) struck Coventry, *England*.<sup>40, 41, 72</sup> [Coventry is located in Warwickshire in the West Midlands.]

---

**782 A.D.** In 782 A.D. during the period between 16 June and 11 September, a drought struck *China*.<sup>153</sup>

In 782 A.D. during the summer and autumn, there was a drought in *China*.<sup>165</sup>

---

**783 A.D.** [In *Germany*], the summer was so burning that many people perished from the heat.<sup>62</sup>

In 783 A.D. [in *France*] the summer was unusually hot.<sup>171</sup>

The heat during the summer of 783 in southern *France* was so extreme that many people died from it.<sup>79</sup>

---

**Winter of 784 / 785 A.D.** During the period between 8 November 784 and 5 February 785, a severe drought struck *China*.<sup>153</sup>

In 784 A.D. during the winter, there was a great drought in *China*.<sup>165</sup>

---

**785 A.D.** On 15 February 785 A.D., there was a great wind with snow and cold weather in *China*.<sup>210</sup>

In southwest *Ireland*, there was a flood in Darinis [now Molana Island in the County of Cork].<sup>47, 92</sup>

In 785 A.D. during the period between 5 February and 7 October, a very severe drought struck *China*. Crops were damaged. Wells and rivers dried up.<sup>153</sup>

During the period between 15 March and 13 April in 785 A.D., there was a famine in Henan, *China*.<sup>210</sup>

In 785 A.D. during the spring, summer and autumn, there was a very severe drought in *China*. Wells and rivers dried up.<sup>165</sup>

**786 A.D.** During the period between 5 January and 3 February in 786 A.D., there was an ice storm in *China*.<sup>210</sup>

In 786 A.D., floods struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Loyang and Kaifeng.

— Hupeh (now Hubei province) in central *China* at Chiang-ling.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.

— During the period between 30 June and 29 July, floods struck Shensi (now Shaanxi province) in central *China* at Sian.

**787 A.D.** In 787 A.D., during the period between 24 March and 22 April, floods struck several regions of *China* including:

— Honan (now Henan province) in central *China* at Loyang and Kaifeng.

— Hupeh (now Hubei province) in central *China* at Chiang-ling.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.

Then during the period between 22 May and 19 June, floods struck Kiangsu at Yangchow.<sup>153</sup>

**788 A.D.** In *Italy*, the Tiber River much flooded by rain.<sup>47, 92</sup> . . . causing a Great Flood.<sup>72</sup>

In *England* there was a famine. In *Italy* the Tiber River also overflowed and did inestimable damage.<sup>72</sup>

In 788 A.D., floods struck along the Pa River at Kiangsi (now Jiangxi province) in southern *China*.<sup>153</sup>

**790 A.D.** In 790 A.D., a drought struck several regions of *China* including:<sup>153</sup>

— During the period between 5 February and 5 May, a severe drought struck Shensi (now Shaanxi province) in central *China*. Crops were damaged and the summer [land] tax in Sian was remitted.

— During the period between 6 May and 8 August, a severe drought struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Hu-chou, and Chia-hsing. Wells and rivers were dried up and typhus fever raged.

— During the period between 6 May and 8 August, a severe drought struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang, and Yangchow. Wells and rivers were dried up and typhus fever raged.

— During the period between 6 May and 8 August, a severe drought struck Fukien (now Fujian province) on the southeast coast of *China*. Wells and rivers were dried up and typhus fever raged.

In 790 A.D. during the spring and summer, there was a drought in Chêhkiang, Fuhkien, Honan, Kiangsu, and Shensi provinces in *China*. In Shensi, this was a great drought. Wells and rivers dried up. Typhus fever raged.<sup>165</sup>

**Winter of 790 / 791 A.D.** This winter the vines in Provence in southeastern *France* suffered very much and the flocks came into the stables.<sup>62</sup>

The winter of 791 A.D. was very cold. The grapes in Provence, *France* froze. The livestock was decimated. There was an abundance of snow and ice. Wild animals could be taken up by hand.<sup>171</sup>

---

**791 A.D.** In *Wales*, there was a grievous famine.<sup>57, 72, 91</sup>

---

**Winter of 791 / 792 A.D.** During the period between 8 November 791 and 5 February 792, a drought struck several regions of *China*. There had been no snowfall during the winter. The regions affected included:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Yangchow.
- Anhwei (now Anhui province) in eastern *China* at Ch'u and Shou.
- Hunan province in south-central *China* at Li.

In 791 A.D. during the winter, there was a drought in Anhwei, Kiangsu and Hupeh provinces in *China*. No snowfall.<sup>165</sup>

---

**792 A.D.** In *Scotland*, there was a dearth [famine].<sup>57, 72, 91</sup>

In 792 A.D., floods struck in many areas of *China* causing crop damage, loss of houses and the drowning of over 20,000 people. Honan (now Henan province) in central *China* was flooded. Shantung (now Shandong province) on the east coast of *China* was flooded. Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, Soochow, Sung-chiang and T'ai-ts'ang was flooded. Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou was flooded. During the period between 24 June and 23 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Su-ch'ien. During the period of 8 August - 8 November floods struck in the following locations: Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow was flooded. Anhwei (now Anhui province) in eastern *China* was flooded. Hupeh (now Hubei province) in central *China* at Chiang-ling and Hsiang-yang was flooded. Honan (now Henan province) in central *China* at Huai-yang, Shang-ch'iu and Chêng was flooded. Kansu (now Gansu province) in northwest *China* at Lin-hsia was flooded. Shansi (now Shanxi province) in northern *China* at Shuo was flooded. Hopei (now Hebei province) in northern *China* at Ta-ming, Cho, Chi, Mi-yün, and Lu-lung was flooded. [Chi is located at 117.24 E. longitude, 40.03 N latitude.]<sup>153</sup>

---

**Winter of 792 / 793 A.D.** On 7 November, there was an inundation of the West Sea in *Friesland*. Countless people and cattle were devoured. Around this time, the island of Helgeland was more than 2 miles long and one mile wide. [The source places this event in the winter of 892-893, which represents an unresolved conflict.]<sup>172</sup>

---

**793 A.D.** Frightful thunder and lightning storms, especially at Northumberland in *England* soon after followed by a severe famine.<sup>72</sup>

In *England*, there was a great thunderstorm.<sup>72</sup>

In *England*, there was a famine "after many meteors;" and this famine was spread through other parts of the world.<sup>91</sup>

In 793 A.D., there was a famine [in *England*]. The famine was so great that people made bread from acorns.<sup>212</sup>

In *England* in the year 793 after many meteors, there was a famine under the Pontificate of Sabinianus; a famine and plague under Boniface the 4<sup>th</sup>; and a famine and plague under Phocas the Emperor.<sup>72</sup>

---

**794 A.D.** In 794 A.D. during the period between 5 February and 31 July, a drought struck *China*.<sup>153</sup>

In 794 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**795 A.D.** In 795 A.D. during the period between 23 March and 21 June, a drought struck *China*. Then during the period between 16 November and 15 December, floods struck in Hunan province in south-central *China* at Ch'ang-tê and in Szechwan (now Sichuan province) in southwest *China* at Ch'ung-ch'ing.<sup>153</sup>

In 795 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

In 795 A.D., a terrible famine struck *Europe*.<sup>155</sup>

---

**796 A.D.** In 796 A.D., floods struck in Fukien (now Fujian province) on the southeast coast of *China* and in Shansi (now Shanxi province) in northern *China* at Lan.<sup>153</sup>

In 796 A.D. during the period between 12 May and 9 June, a drought of long duration struck *China*.<sup>153</sup>

In 796 A.D. during the summer, there was a drought of long duration in *China*.<sup>165</sup>

---

**797 A.D.** In 797 A.D. during the period between 5 February and 31 May, a drought struck Shensi (now Shaanxi province) in central *China* at Sian. Then during the period between 28 July and 26 August, floods struck in Anhwei (now Anhui province) in eastern *China* at Po.<sup>153</sup>

In 797 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**Winter of 798 / 799 A.D.** During the period between 8 November 798 and 5 February 799, a drought struck *China*. There had been no snowfall during the winter.<sup>153</sup>

In 798 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**799 A.D.** In 799 A.D. during the period between 10 April and 7 June, a drought of long duration struck *China*.<sup>153</sup>

In 799 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**Winter of 799 / 800 A.D.** During the winter of 799-800 A.D., a huge storm surge damaged Helgoland [now Heligoland - a small *German* archipelago] in the North Sea, which then consisted of two mesas, which were of almost identical size.<sup>172</sup>

---

**800 A.D.** [In *England*] on the 9<sup>th</sup> of January came a most prodigious hurricane from Africa, with irresistible force. It cast down to the ground and destroyed infinite towns, houses, villages and trees. The same year happened a very great inundation of the sea, which carried away much cattle.<sup>72</sup>

---

**Winter of 800 / 801 A.D.** The winter of 801 A.D. [in *France*] was very cold. A plague ensued.<sup>171</sup>

---

**Winter of 801 / 802 A.D.** The Pontus Euxine [*Black Sea*] was totally blocked by the ice.<sup>62</sup>

In the year 801, the winter was very severe on the coast of the *Black Sea*.<sup>62</sup>

The winter of 802 A.D. [in *France*] was very cold from 11 November to 12 March.<sup>171</sup>

**802 A.D.** In 802 A.D. during the period between 5 February and 6 May, floods struck Honan (now Henan province) in central *China* at Huang-ch'uan, Ju-nan, and Hsin-yang.<sup>153</sup>

In 802 A.D., a drought also struck Honan (now Henan province) in central *China* at Huang-ch'uan, Ju-nan, and Hsin-yang.<sup>153</sup>

In 802 A.D., there was a drought in Honan province in *China*.<sup>165</sup>

**803 A.D.** In *Scotland* there was a terrible famine.<sup>57, 72, 91</sup>

In 803 A.D. during the period between 27 January and 20 August, a severe drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 803 A.D. during the spring, summer and autumn, there was a great drought in *China*.<sup>165</sup>

**804 A.D.** In 804 A.D., a drought struck Shensi (now Shaanxi province) in central *China* causing a famine.<sup>153</sup>

In 804 A.D., there was a drought in Honan and Shensi provinces in *China*.<sup>165</sup>

**805 A.D.** In the South of *Wales*, hail; each stone like hen's egg.<sup>57, 72, 93</sup>

In 805 A.D., floods struck several regions of *China* including:<sup>153</sup>

— Shensi (now Shaanxi province) in central *China* at Sian. Crops were damaged.

— During the period between 6 May and 8 August, floods struck Hunan province in south-central *China* at Ch'ang-tê.

— During the period between 8 August and 8 November, floods struck in Hupeh (now Hubei province) in central *China* at Chu-ch'i and in Hunan province in south-central *China* at Ch'ang-tê. Ten thousand families were flooded.

In 805 A.D. during the period between 8 August and 8 November, a drought struck several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China*.

— Kiangsu (now Jiangsu province) on the east coast of *China*.

— Hupeh (now Hubei province) in central *China* at Wuchang.

— Hunan province in south-central *China* at Yüeh-yang.

— Honan (now Henan province) in central *China* at Huai-yang and Hsü-ch'ang.

In 805 A.D. during the autumn, there was a drought in Chêhkiang, Honan, Hunan, Hupeh and Kiangsu provinces in *China*.<sup>165</sup>

**806 A.D.** The Rhône River [in *France*] was frozen over.<sup>38</sup>

In 806 A.D., the winter [in *England*] was intensely cold.<sup>212</sup>

In 806 A.D. during the period between 6 May and 8 August, floods struck several regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Chiang-ling.
- Anhwei (now Anhui province) in eastern *China* at Shou.
- Hopei (now Hebei province) in northern *China* at Ta-hsing.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.

**807 A.D.** In 807 A.D. during the period between 9 July and 6 August, floods struck Honan (now Henan province) in central *China* at Ju-nan.<sup>153</sup>

**Winter of 807 / 808 A.D.** The winter of 808 A.D. [in *France*] produced soft unwholesomeness. There were terrible floods. [The winter was mild in temperature but as a result there were destructive floods.]<sup>171</sup>

[In *Europe*], during the winter of 808, the weather was warm but also very destructive because of the terrible floods.<sup>62</sup>

**808 A.D.** In 808 A.D., a drought struck several regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Soochow.
- Kiangsi (now Jiangxi province) in southern *China*.
- Hunan province in south-central *China*.
- Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea.
- Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*.
- *Indochina*.
- Shantung (now Shandong province) on the east coast of *China*.

In 808 A.D., there was a drought in Anhwei, Hunan, Kiangsu, Kiangsi, Kwangtung, Shantung and Shansi provinces in *China*.<sup>165</sup>

**809 A.D.** The flood of 809 surpassed all known floods in *Western Europe*. The floods took [drowned] the harvest fields residents and forced the inhabitants of riverbanks to seek refuge on higher ground. The floods were caused by an abundance of rainfall. The floods reached its climax on December 28.<sup>79</sup>

In 809 A.D., flood records were broken on the Loire River at Burgundy, *France*. Residents were forced to take refuge in the hills. The floods peaked on 28 December.<sup>171</sup>

In 809 A.D. during the period between 20 January and 8 August, a severe drought struck several regions of *China*. As a result the land tax was remitted. The regions affected included:

- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Hu-chou, and Chia-hsing.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Sung-chiang, T'ai-ts'ang, Nanking, Yangchow and Soochow.
- Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, and Kuang-tê.
- Kiangsi (now Jiangxi province) in southern *China*.

Then during the period between 11 November and 10 December, floods struck Shensi (now Shaanxi province) in central *China* at Wei-nan. Two hundred families were flooded.<sup>153</sup>

In 809 A.D. during the spring, summer and autumn, there was a great drought in Chêhkiang, Hunan, Hupeh, Kiangsi and Kiangsu provinces in *China*. As a result the land tax was remitted.<sup>165</sup>

**Winter of 810 / 811 A.D.** The winter of 811 was rough and lasted until the end of March.<sup>62</sup>

The winter of 811 seemed very harsh in *Western Europe* in the north. It lasted until the end of March.<sup>79</sup>

The winter of 811 A.D. [in *France*] was very cold through March.<sup>171</sup>

---

**811 A.D.** In 811 A.D. during the period between 21 October and 19 November, floods struck in Shensi (now Shaanxi province) in central *China* at Fu and Chung-pu and in Szechwan (now Sichuan province) in southwest *China* at P'êng-shui.<sup>153</sup>

---

**Winter of 811 / 812 A.D.** During the period between 20 December 811 A.D. and 17 January 812 A.D. there was a great cold in *China*.<sup>210</sup>

---

**812 A.D.** In 812 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 17 February and 16 March, floods struck Suiyuan province (now part of *Inner Mongolia*) at Horinkar.

— During the period between 13 June and 11 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at P'o-yang, Lin-ch'uan, I-ch'un, and Chi-an.

— Also, during the period between 13 June and 11 July, floods struck Szechwan (now Sichuan province) in southwest *China* at Fêng-chieh.

In 812 A.D., droughts struck several regions of *China* including:<sup>153</sup>

— During the period between 15 April and 13 May, a drought struck Shensi (now Shaanxi province) in central *China* at Sian.

— During the period between 6 May and 8 August, a drought struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Chinkiang.

In 812 A.D. during the summer, there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**813 A.D.** In *England*, there was a great overflow of the River Severn in the night; 2,000 people and 7,000 cattle drowned.<sup>47, 72, 92</sup>

In 813 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 2 June and 1 July, floods struck Honan (now Henan province) in central *China* at Huai-yang and Hsü-ch'ang. One thousand persons drowned.

— During the period 2-30 July, floods struck in Shensi (now Shaanxi province) in central *China* at Sian and in Hopei (now Hebei province) in northern *China* at Ts'ang and Yen-shan.

In 813 A.D. during the period between 6 May and 8 August, a drought struck Shensi (now Shaanxi province) in central *China* at Ta-li and Hua.<sup>153</sup>

In 813 A.D. during the summer, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**814 A.D.** In 814 A.D. during the period between 8 August and 8 November, floods struck several regions of *China* causing crop damage. Regions that were affected included:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.

— Hunan province in south-central *China* at Yüeh-yang.

— Hupeh (now Hubei province) in central *China* at An-lu.

— Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng.

— Kiangsi (now Jiangxi province) in southern *China* at Kiukiang, Lin-ch'uan, and I-ch'un.

In 814 A.D. during the period between 23 May and 20 June, a drought struck the central part of Shensi (now Shaanxi province) in central *China*. As a result the summer [land] tax was remitted. Then during the period between 8 November 814 and 13 April 815, a drought struck *China*.<sup>153</sup>

In 814 A.D. during the summer, there was a drought in Honan and Shensi provinces in *China*. The land tax was remitted.<sup>165</sup>

---

**815 A.D.** In 815 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

In 815 A.D., the Rhine River flooded.<sup>171</sup>

---

**816 A.D.** In 816 A.D., floods struck several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü. Crops were damaged and 100 persons drowned.

— Kiangsi (now Jiangxi province) in southern *China* at P'o-yang, Fu-liang, and Yüeh-p'ing. Four thousand families were flooded.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang and Wu-chin. Crops were damaged.

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ao-an. Crops were damaged.

— Honan (now Henan province) in central *China* at Huai-yang and Hsü-ch'ang. Crops were damaged.

— Shensi (now Shaanxi province) in central *China* at Sian. Crops were damaged.

— During the period between 31 May and 28 June, floods struck Shensi (now Shaanxi province) in central *China* at Sian.

— During the period between 29 June and 28 July, floods struck Shantung (now Shandong province) on the east coast of *China* at Chu-ch'êng.

— During the period between 27 August and 24 September, floods struck along the Wei River in Kansu (now Gansu province) in northwest *China* and in Shensi (now Shaanxi province) in central *China*.

---

**817 A.D.** In 817 A.D., floods struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Loyang.

— Hopei (now Hebei province) in northern *China* at Ta-ming, Yung-nien and Hsing-t'ai.

— Shansi (now Shanxi province) in northern *China* at Yung-chi, Chin-ch'êng, Ch'ang-chih, Lin-fên, and Hsi. Crops were damaged.

— Hupeh (now Hubei province) in central *China* at Chiang-ling. Crops were damaged.

— Hopei (now Hebei province) in northern *China* at Ta-hsing. Crops were damaged.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow. Crops were damaged.

— Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing and Taichow. Crops were damaged.

— During the period between 18 July and 15 August, floods struck Shensi (now Shaanxi province) in central *China* at Sian. Two thousand families were flooded.

---

In 817 A.D., the Seine River in *France* flooded.<sup>171</sup>

---

**818 A.D.** In 818 A.D. during the period between 7 July and 5 August, floods struck along the Huai River in several provinces including Honan (now Henan province) in central *China*, Kiangsu (now Jiangsu province) on the east coast of *China*, and Anhwei (now Anhui province) in eastern *China*.<sup>153</sup>

In 818 [in *England*], there was a plague on man and beast from 3 rainy years and moisture. The grain and grapes were all rotten.<sup>72</sup>

In 818 or 820 in *France*, there was great rains and floods; many and great floods under Boniface the 4<sup>th</sup> from rain.<sup>72</sup>

---

**820 A.D.** In *France*, there were great rains and floods.<sup>47, 92</sup>

The year 820 A.D. was a rotten year in *France*. The Seine River flooded and spoiled the fruit crop. This was followed by famines and plagues.<sup>171</sup>

In 820 excessive rainfall caused rivers to overflow their banks in *Western Europe*. The rainfall prevented the autumn sowing. The rain and humidity corrupted the grains and vegetables. The lack of warm temperatures, combined with the excessive rains and the humidity, impoverished and deteriorated crop of wine. There were even countries where the farmers could not sow their seeds during the spring.<sup>79</sup>

In 818 or 820, from long continued rains in *France*, and moisture in the air for two or three years, came a terrible plague on man and cattle, far and near. All corn and other grains were rotten. Wine was useless. There were great floods and stagnant air. No hard corn was sown in *England* before the next spring.<sup>72</sup>

[In *Western Europe*], the summer of 820 was strangely cold. There were abundant and persistent rains, which caused inundation of the fields because many rivers overflowed their banks. This was especially true for the Gironde River near Bordeaux, *France*. The grains and vegetables were spoiled by the wetness and could not be stored without rotting. The grape harvest was very mediocre, because of the lack of heat. The wine produced was quite tasteless. Because of a roughness of the weather, an infectious disease raged among people and the cattle. No part of Gaul [*Western Europe*] was spared from this scourge, and to make this misfortune worse, the flooding also prevented the autumn sowing.<sup>62</sup>

In 820, it rained a lot [in *Germany*] and spoiled the grain in the field. This was followed by a great plague, in which people as well as cattle frequently died.<sup>172</sup>

In 820 A.D. during the period between 8 August and 8 November, floods struck several regions of *China* including:<sup>153</sup>

- Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang and Chi-an.
- Szechwan (now Sichuan province) in southwest *China* at Fêng-chieh.
- Hopei (now Hebei province) in northern *China* at Ts'ang.

In 820 A.D., a drought struck *China*.<sup>153, 165</sup>

**Winter of 820 / 821 A.D.** The winter of 821 A.D. was very cold and grim [in *Germany*].<sup>172</sup>

**821 A.D.** The abundant rainfall of 821 in the north of *Western Europe* prevented the sowing of autumn [fall crops].<sup>79</sup>

During the summer and autumn of 821 A.D., there were torrential rains [in *France*], which spoiled the crops.<sup>171</sup>

**Winter of 821 A.D / 822 A.D.** The great rivers in *France* and *Germany* were frozen for 30 days. Snow was on the ground in Vienna, *Austria* from 22 September 821 until 12 April 822.<sup>28</sup>

In 822, the Rhône River in *France* froze.<sup>58, 80</sup>

The winter of 822 A.D. was very long and very cold. All the rivers in *Europe* were frozen for more than a month. Rivers could be crossed on the ice as if on dry land. There were disasters on the Rhine, the Seine and Yonne rivers.<sup>171</sup>

In 822, the Po River in *Italy* froze.<sup>58, 80</sup>

In *England*, the frost was great following two or three weeks of rain.<sup>47,93</sup>

In the year 821, there was the greatest frost in *England* following 2 or 3 years of rains.<sup>72</sup>

In the year 822 in *Europe*, heavily loaded carts crossed the ice on the frozen Danube, the Rhine, the Elbe and the Seine rivers, for more than a month. The Rhône, the Po, the *Adriatic* and several *Mediterranean* ports were frozen.<sup>60,61,62</sup> [The Danube River is located in Central and Eastern Europe. The Rhine River runs through Switzerland, Germany and the Netherlands. The Elbe River is located in Central Europe. The Seine River is located in northern France. The Rhône River runs through Switzerland and France. The Po River is located in northern Italy. The Adriatic is the Adriatic Sea.]

During the winter of 821-822 in *Western Europe*, the [frozen] rivers bore the weight of carriages for more than thirty days.<sup>79</sup>

In the year 822, very heavy rains in *France* spoiled all the fruits of the earth (crops destroyed), which could not be planted until the next spring. The rivers came out of their beds and the water flowed far into the country. "These evils followed a long and very severe winter, so that not only the streams and small rivers, but also the great rivers, the Rhine, Danube, Elbe and Seine were frozen, and wagons drove on the ice." The ice caused great devastation along the banks of the Rhine River to the banks of Meierhöfen, *Austria*.<sup>62</sup> [Maierhofen is located in southern Bavaria near Bregenz, Austria, on the banks of Lake Constance.]

In the year 821, the winter was so long and frosty that not only small brooks, but streams and rivers including the Rhine, Danube, Albis [Elbe], and Seine, and generally all great rivers both in *France* and *Germany* were so hard frozen, that for 30 days loaded carriages went over the rivers as if the ice were bridges.<sup>72</sup>

In the year 822 or 824, there was a great frost in *England*.<sup>72</sup>

### **822 A.D. – 823 A.D. England, Wales and Scotland. Famine**

In 822-823 in *England* and *Scotland*, thousands starved.<sup>57,91</sup>

In 823, there was a famine in *England*, *Wales*, and *Scotland*. Thousands starved.<sup>90,212</sup>

In 823, there was a famine in *Scotland*; many thousands starved.<sup>72</sup>

**822 A.D.** In the year 822 in *Western Europe*, there were severe frosts on 2 July and 22 July.<sup>79</sup>

In 822 A.D., floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. The city walls and the mulberry trees were damaged. Then during the period between 22 July and 20 August, floods struck Honan (now Henan province) in central *China* at Huai-yang, Hsü-yang and Ju-nan. Three hundred families were flooded. Then during the period between 8 November 822 and 14 February 823, a drought struck *China*.<sup>153</sup>

In 822 A.D. during the winter, there was a drought in *China*.<sup>165</sup>

*Also refer to the section 822 A.D. – 823 A.D. for information on the famine in England, Wales and Scotland during that timeframe.*

**Winter of 822 / 823 A.D.** The winter of 823 A.D. was unusually severe. Winter's cold began on 22 September. Frost and snow continued until 12 April. For a month, all the rivers of *Europe* bore the load

of the heaviest wagons almost without interruption.<sup>172</sup>

---

**823 A.D.** In 823 thunder and lightning this summer did great damage by killing people and cattle. Hail destroyed the corn.<sup>72</sup>

[In *England*], there were tempests of hail, thunder, lightning that was fatal to grain, grass, people and cattle which lasted all summer.<sup>72</sup>

In the year 823 or 824, lightning set fire to a multitude of buildings and killed many people and huge hail ravaged the countryside in *France*. In addition, all historians assure, that we dare not believe without the unanimity of their testimony, that by the summer solstice [around 20 or 21 June] in Autun in the region of Burgundy, *France*, was seen falling from the sky, following a sudden storm and amidst a terrible hailstorm, real ice blocks (we are sure of these measures) of 4.6 meters (15 feet) long by 1.8 meters (6 feet) wide and 0.6 meters (2 feet) thick. (These facts were confirmed in the Annals of Einhard, the chronicle of Adhemar, the short Chronicle of Reims, the Annals of Fulda, the Chronicle of Hermann, all contemporary sources. Paradin, in *Annales de Bourgogne*, bk. 1, p. 149, also speaks of a miraculous ice stone that fell in the year 956 in *Germany*, and another one that fell in April 1562 in the Beaujolais region of central *France*.)<sup>79</sup>

Another source places this event in the year 824. In 824, a hailstone fifteen feet (4.6 meters) in length fell upon the city of Autun [Autun is a commune in the Saône-et-Loire department in Burgundy in eastern *France*].<sup>190</sup>

Another source places this event in the year 825. “In 825 there was a fall of huge hail [in *France*]. A piece of ice fell that was 15 feet long by 6 feet wide.”<sup>171</sup>

In 823 A.D. during the period between 15 April and 13 May, a drought struck several regions of *China* including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Shao-hsing, Taichow, Ching-hua, Ch’ü, Chien-tê, Wên-chou, Li-shui, Hangchow, Chia-hsing, and Hu-chou.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T’ai-ts’ang, and Yangchow.
- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch’êng and Hsi.
- Kiangsi (now Jiangxi province) in southern *China*.

In 823 A.D. during the spring, there was a drought in Chêhkiang, Kiangsu and Kiangsi provinces in *China*.<sup>165</sup>

*Also refer to the section 822 A.D. – 823 A.D. for information on the famine in England, Wales and Scotland during that timeframe.*

---

**Winter of 823 A.D / 824 A.D.** The winter in Gaul [*Western Europe*] was severe and lasted longer than usual. Many beast and even humans were subjected to extreme cold. A disease followed and snatched away many people of both sexes and ages.<sup>62</sup>

The winter of 824 in *Western Europe* in the north was as long as it was rigorous.<sup>79</sup>

In 823, a bitter sharp and long winter ensued. A load of snow fell, which laid 29 weeks, even to Easter. This also was fatal to many people and cattle in *England*.<sup>72</sup>

In the year 822 or 824, there was a great snow that killed many people and cattle [in *England*].<sup>72</sup>

The winter of 824 A.D. was very long and very cold [in *France*]. This was followed by epidemics that affected all age groups.<sup>171</sup>

**824 A.D.** In 824-825, *Ireland* was afflicted with a great dearth [famine].<sup>57, 91</sup>

In *France* in 824 after a rainy year, then a severe frost and drought and plague.<sup>72</sup>

In 824 A.D. during the period between 6 May and 8 August, floods struck several regions of *China* causing damage to houses and crops. These regions included:

- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow.
  - Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Chien-tê.
  - Anhwei (now Anhui province) in eastern *China* at Shou.
  - Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing, Ts'ao, and P'u.
  - Hupeh (now Hubei province) in central *China* at Hsiang-yang, Chün, Mien-yang, and Chung-hsiang.
- Then during the period between 8 August and 8 November, floods struck Honan (now Henan province) in central *China* at Loyang, Huai-yang, and Hsü-ch'ang. Crops were damaged.<sup>153</sup>

**825 A.D.** In *France* great hail killed several people and much cattle.<sup>72</sup>

In 824-825, *Ireland* was afflicted with a great dearth [famine].<sup>57, 91</sup>

In 825 A.D., floods struck several regions of *China* causing damage to crops. These regions included:<sup>153</sup>

- Shantung (now Shandong province) on the east coast of *China* at Tzū-yang.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Tung-hai.
- Shensi (now Shaanxi province) in central *China* at Hua, Sian, and Ch'ien.

Then during the period between 8 August and 8 November, floods struck Shensi province at Fu and Chung-pu.

In 825 A.D., the Great Taihu Lake in *China* overflowed.<sup>166</sup>

In 825 A.D. during the period between 8 August and 8 November, a drought struck several regions of *China* including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, and Hu-chou.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang, and Yangchow.
- Kiangsi (now Jiangxi province) in southern *China*.
- Hunan province in south-central *China*.
- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng.
- Hupeh (now Hubei province) in central *China* at Hsiang-yang, Chiang-ling, and Wuchang.

In 825 A.D. during the autumn, there was a drought in Chêhkiang, Hunan, Hupeh, Kiangsu and Kiangsi provinces in *China*.<sup>165</sup>

**826 A.D.** In 826 A.D. during the period between 9 July and 6 August, a drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 826 A.D. during the summer, there was a drought in Shensi province in *China*.<sup>165</sup>

**827 A.D.** In *England*, the River Thames was frozen for 9 weeks.<sup>28, 29, 47, 72, 93</sup>

The frost in *England* lasted nine weeks.<sup>40, 41, 42, 43, 212</sup>

In 827 A.D. during the period between 28 June and 27 July, a drought struck in Shensi (now Shaanxi province) in central *China* at Sian and Ta-li and in Shansi (now Shanxi province) in northern *China* at Yung-chi.<sup>153</sup>

In 827 A.D. during the summer, there was a drought in Shensi and Shansi provinces in *China*.<sup>165</sup>

**828 A.D.** "In *Italy*, raised scorching winds, accompanied by fiery meteors. But this year was very fruitful." <sup>62</sup>

In 828 A.D., floods struck several regions of *China* including: <sup>153</sup>

— Honan (now Henan province) in central *China* at Mêng and Loyang.

— Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing, Ts'ao, P'u, I-tu, Ling, Tzū-ch'uan, Tsinan, Tzū-yang, and Tung-hai.

— During the period between 6 May and 8 August, floods struck in Shensi (now Shaanxi province) in central *China* at Sian and in Honan at Huai-yang and Hua. Crops were damaged.

— During the period between 16 July and 14 August, floods struck on the east coast of *China* in Shantung (now Shandong province) at Hui-min and in Chekiang (now Zhejiang province) at Shao-hsing.

**829 A.D.** The year 829 in *Western Europe* produced famines, plagues, and all kinds of evils.<sup>79</sup>

[In *England*], there was a tempest of wind.<sup>72</sup>

[In *England*], there was a great hurricane with twinkling fires like stars running to and fro.<sup>72</sup>

In 829 A.D., floods struck several regions of *China* including: <sup>153</sup>

— Honan (now Henan province) in central *China* at Shang-ch'iu. Crops were damaged.

— Anhwei (now Anhui province) in eastern *China* at Po. Crops were damaged.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. Crops were damaged.

— During the period between 7 May and 4 June, floods struck in Shensi (now Shaanxi province) in central *China* at T'ung-kuan. Two hundred families were flooded.

In 829 A.D. during the period between 2 September and 1 October, a drought struck the central part of Shensi (now Shaanxi province) in central *China*. As a result, the land tax of 9 districts was remitted.<sup>153</sup>

In 829 A.D. during the autumn, there was a drought in Shensi province in *China*. The land tax of nine districts was remitted.<sup>165</sup>

**Winter of 829 / 830 A.D.** *Europe* experienced a very severe winter in 829. Ice was present on the Nile River in *Egypt*.<sup>28</sup>

In the year 829, the Patriarch of Antioch, Dionysius of Telmahre, went with the Caliph Al-Ma'mun to *Egypt*; they found the Nile River frozen.<sup>60, 62</sup>

In the year 829, the winter in *Egypt* was very severe.<sup>62</sup>

The year 830 produced a very harsh winter in *Western Europe* in the north.<sup>79</sup>

The winter of 830 A.D. [in *France*] was very harsh in the north.<sup>171</sup>

**830 A.D.** In 830 A.D., floods struck several regions of *China* including:<sup>153</sup>

- Shensi (now Shaanxi province) in central *China* at Fu and Chung-pu. Over 300 families were flooded.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang, and Yangchow. Crops were damaged.
- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, Hu-chou, Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'ü, Chien-tê, Wên-chou, and Li-shui. Crops were damaged.
- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Hsi. Crops were damaged.
- Kiangsi (now Jiangxi province) in southern *China*. Crops were damaged.
- Shensi at Fu, Chung-pu, and Sian. Crops were damaged.
- Hupeh (now Hubei province) in central *China* at Hsiang-yang, Chiang-ling, and Wuchang. Crops were damaged.
- Honan (now Henan province) in central *China* at Loyang. Crops were damaged.
- Hunan province in south-central *China* at Yüeh-yang. Crops were damaged.
- During the period between 24 June and 23 July, floods struck in Anhwei province at Ch'ien-shan, T'ai-hu, Su-sung, and Wang-chiang.

In the year 830, there was a terrible thunderstorm in *Wales*.<sup>72</sup>

**831 A.D.** In 831 A.D. during the period between 13 July and 11 August, floods struck several regions of *China* damaging crops. These regions included:<sup>153</sup>

- Szechwan (now Sichuan province) in southwest *China* at San-t'ai and Sui-ning.
- Kiangsi (now Jiangxi province) in southern *China* at Lo-ch'êng.
- Honan (now Henan province) in central *China* at Ju-nan [location in dispute under Huai-hsi].
- Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Shao-hsing, Taichow, Ch'ü, Chin-hua, Chien-tê, Wên-chou, Li-shui, Hangchow, Chia-hsing, and Hu-chou.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, and T'ai-ts'ang.
- Hupeh (now Hubei province) in central *China* at Chiang-ling, Hsiang-yang, and Wuchang.
- Hunan province in south-central *China* at Yüeh-yang.

In 831 A.D., the Seine River in *France* flooded. [Tree rings in giant oaks showed this year was a very wet year.]<sup>171</sup>

**832 A.D.** In 832 A.D. during the period between 5 March and 4 April, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou. Then during the period 2-30 July, floods struck Kiangsu at Soochow causing 900 families to be flooded. Then during the period between 31 July and 29 August, a drought struck in Shensi (now Shaanxi province) in central *China*; in Shansi (now Shanxi province) in northern *China* at Yung-chi; and in Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

In 832 A.D. during the autumn, there was a drought in Honan, Shantung and Shensi provinces in *China*.<sup>165</sup>

**833 A.D.** In 833 A.D. during the period between 8 August and 8 November, floods struck several regions of *China* causing crop damage. This occurred at:

- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, and Hu-chou.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang, Yangchow, and Huai-an.
- Anhwei (now Anhui province) in eastern *China* at Ch'ien-shan, Shou, Ch'u, Ho, Hsüan-ch'êng and Ho-fei.

During the period between 19 August and 16 September, in other regions of *China* a severe drought prevailed.<sup>153</sup>

In 833 A.D. during the autumn, there was a great drought in *China*.<sup>165</sup>

---

**834 A.D.** In 834 A.D., Anhwei (now Anhui province) in eastern *China* at Ch'u sustained flooding. Over 10,000 families were flooded. Hupeh (now Hubei province) in central *China* at Ch'i-ch'un also experienced flooding.<sup>153</sup>

In 834 A.D. during the period between 10 July and 8 August, a drought struck in Kiangsu (now Jiangsu province) on the east coast of *China*; in Anhwei (now Anhui province) in eastern *China*; in Honan (now Henan province) in central *China* at Shan; and in Shensi (now Shaanxi province) in central *China* at Hua. Then during the period between 8 August and 8 November, floods struck in Kiangsi (now Jiangxi province) in southern *China* and in Hupeh (now Hubei province) in central *China* at Hsiang-yang. Crops were damaged.<sup>153</sup>

In 834 A.D. during the summer, there was a drought in Kiangsu and Shensi provinces in *China*.<sup>165</sup>

In 834 A.D., the Seine River in *France* flooded.<sup>171</sup>

---

**835 A.D.** In 835 A.D. during the period between 29 July and 27 August, a drought struck several regions of *China* including:<sup>153</sup>

- Shensi (now Shaanxi province) in central *China* at Sian, Hua, and Ta-li.
- Shansi (now Shanxi province) in northern *China* at Yung-chi.
- Honan (now Henan province) in central *China* at Loyang and Shan.

In 835 A.D. during the autumn, there was a drought in Honan, Shansi and Shensi provinces in *China*.<sup>165</sup>

---

**836 A.D.** In *Wales*, due to a famine, “the ground covered with dead bodies of men and beast.”<sup>57, 72, 91</sup>

In 836, the River Tweed in *Great Britain* overflowed its banks, and laid waste the country for 30 miles round.<sup>90</sup>

In 836 A.D., there was an inundation of the River Tweed in *England*. The country for 30 miles [48 kilometers] round was laid to waste.<sup>212</sup>

In 836, there was an inundation of the Tweed, which did immense damage.<sup>43</sup>

[Another source places this flood in the year 834.] In 834 in Northumberland, *England*, the River Tweed overflowed and extended 30 miles round. Loss of life and cattle.<sup>47, 92</sup> In 834, Tweed drowned many people and far more cattle.<sup>72</sup>

In 836 A.D. during the period between 25 February and 20 March, a drought struck *China*. Then floods struck Hopei (now Hebei province) in northern *China* at Chêng-ting damaging crops. Then during the period between 6 May and 8 August, floods struck Shensi (now Shaanxi province) in central *China* at Fêng-hsiang and Lin-yu. Several hundred families were damaged and over 100 persons drowned.<sup>153</sup>

In 836 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**837 A.D.** In 837 A.D. during the period between 5 February and 4 September, a severe drought struck *China*.<sup>153</sup>

In 837 A.D. during the spring and summer, there was a great drought in *China*.<sup>165</sup>

---

**Winter of 837 / 838 A.D.** The winter [in *Europe*] was completely taken up by rain and wind. Thunder was heard from January to mid-February, just as in March, and the extraordinary heat of the sun dried up the earth.<sup>62</sup>

The winter of 838 A.D. was rainy and windy [in *France*]. There were winter storms and then extreme sun.<sup>171</sup>

---

**838 A.D.** The year 838 produced diluvial rains [heavy rainfalls that produced floods] in *Western Europe*.<sup>79</sup>

There were massive rainfalls in 838 in the north of *Western Europe*, which ruined the entire crops.<sup>79</sup>

[In *Germany*] this year was marked by unusual atmospheric changes. A terrible burning sun scorched the earth.<sup>62</sup>

On 26 December 838 A.D., there was a severe storm surge which reached the height of the dune ridges overran the coast. This was probably the first emergence of Leybucht [second largest bay in East Frisia in northwest *Germany* after the Dollart]. Many of the survivors between the Ems and Weser Ostfriesen emigrated to North Friesland.<sup>172</sup>

In 838 A.D. during the period between 30 January and 27 February, a drought struck *China*. As a result, the summer [land] tax was remitted.<sup>153</sup>

In 838 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

In 838 A.D., floods struck several regions of *China* including:<sup>153</sup>

— Floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow.

— Floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Li-shui.

— Floods struck Hupeh (now Hubei province) in central *China* at Chün, Chiang-ling and Hsiang-yang. Houses were damaged.

— During the period between 6 May and 8 August, floods struck Honan (now Henan province) in central *China* at Chêng, Hua, Huai-yang and Hsü-ch'ang. Houses were damaged.

— During the period between 6 May and 8 August, floods struck Shensi (now Shaanxi province) in central *China* at Fu and Chung-pu. Houses were damaged.

— During the period between 6 May and 8 August, floods struck Hupeh at Wuchang and Hsiang-yang. Houses were damaged.

— During the period between 6 May and 8 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Ts'ao, P'u, and Liao-ch'êng. Houses were damaged.

— During the period between 6 May and 8 August, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming. Houses were damaged.

— During the period between 8 August and 8 November, floods struck Szechwan (now Sichuan province) in southwest *China* at Chengtu causing flood damage to houses and crops.

— During the period between 8 August and 8 November, floods struck Hopei province at Ts'ang and Ching causing flood damage to houses and crops.

— During the period between 8 August and 8 November, floods struck Shantung province at Tzū-yang, Tê and I-tu causing flood damage to houses and crops.

---

**839 A.D.** In 839 A.D. during the period between 15 July and 13 August, a severe drought of long duration struck Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'ü, Chien-tê, Wên-chou, and Li-shui.<sup>153</sup>

In 839 A.D. during the summer, there was a very severe drought in Chêhkiang province in *China*.<sup>165</sup>

---

**840 A.D.** In *Germany*, the Rhine River flooded from rains.<sup>47, 72, 92</sup>

From excessive rains, the Rhine River overflowed.<sup>72</sup>

In 840 A.D. during the period between 3 July and 2 August, a drought struck *China*. Then during the period 2-30 August, floods struck in Hopei (now Hebei province) in northern *China* at Chêng-ting and in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow.<sup>153</sup>

In 840 A.D. during the summer, there was a drought in Chêhkiang, Chihli, Fuhkien, Honan, and Kiangsu provinces in *China*. The land tax was remitted. The drought was accompanied by a plague of locusts. Typhus fever raged.<sup>165</sup>

---

**Winter of 840 / 841 A.D.** In the winter of 841 A.D., the Seine and Yonne rivers in *France* flooded.<sup>171</sup>

---

**841 A.D.** In Herbipolis [now Würzburgnorth, Bavaria in southern *Germany*], people cattle and the lands were greatly harassed by hail, whirlwinds and unusual temperatures.<sup>72</sup>

In 841, there was a terrible storm accompanied by lightning, thunder and heavy rains on the territory of Glandfeuil [Le Thoureil, Maine-et-Loire in western *France*].<sup>79</sup>

In 841 A.D. during the period between 22 July and 19 August, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and in Hupeh (now Hubei province) in central *China* at Hsiang-yang and Chün where houses were damaged.<sup>153</sup>

---

**Winter of 841 / 842 A.D.** The cold during the winter of 842 in *Western Europe* in the north was neither less intense nor less permanent. A lot of snow fell on the night of April 14.<sup>79</sup>

In the winter of 842 A.D. was intense and lasting. The Seine and Yonne rivers in *France* flooded.<sup>171</sup>

---

**Winter of 842 / 843 A.D.** The winter of this year was very long and very cold, producing many diseases and in agriculture, the weather injured cattle and bees.<sup>62</sup>

The winter of 843 A.D. was very long and cold [in *France*]. The cold weather decimated the livestock and the bees. Then a disease struck.<sup>171</sup>

---

**Winter of 843 / 844 A.D.** The winter was exceptionally mild [in *Europe*] and rainy up to early February, with some intervals of bright sky.<sup>62</sup>

The winter of 844 A.D. [in *France*] was mild and rainy until February.<sup>171</sup>

---

**Winter of 844 / 845 A.D.** The winter was very severe in Normandy in northern *France*.<sup>62</sup>

The winter of 845 A.D. [in *France*] was very cold in the north.<sup>171</sup>

---

**845 A.D.** In *Bulgaria*, there was a great famine.<sup>57, 72, 91</sup>

In 845 A.D. during the period between 11 April and 9 May, a drought struck *China*.<sup>153</sup>

In 845 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**Winter of 845 / 846 A.D.** The winter of 846 A.D. [in *France*] saw a persisting north wind until May. This was very harmful to the crops. The city of Troyes in north-central *France* was flooded.<sup>171</sup>

---

**846 A.D.** In May 846, Auxerre in the Burgundy region of northern *France* experienced such a flood. The Yonne River in northern *France* swelled prodigiously, entered houses and dragged the casks of wine from the cellars. The violent waters removed whole vines, and carried them to the opposite shore.<sup>79</sup>

In 846 A.D. during the period 1-31 March, a drought struck *China*. As a result, the summer tax was remitted. Then during the period between 8 November 846 and 20 March 847, another drought struck *China*.<sup>153</sup>

In 846 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**847 A.D.** In the year 847, there was a frost in Britain.<sup>72</sup>

In 847 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**Winter in 848 / 849 A.D.** The Seine River in *France* was frozen; so people used the river as a bridge.<sup>62</sup>

The winter of 849 A.D. was very cold in *France*. The Seine River was passable on the ice as if it was dry land.<sup>171</sup>

We crossed the Seine River in *France* on the ice in 6 January 849.<sup>79</sup>

In the year 849, the winter in Gaul [*Western Europe*] was very harsh.<sup>62</sup>

---

**849 A.D.** The fall of 849 produced excessive rainfall in the north of *Western Europe*.<sup>79</sup>

---

**850 A.D.** In 850 A.D., a severe drought struck *China*.<sup>153</sup>

In 850 A.D., there was a great drought in *China*.<sup>165</sup>

---

**850 A.D. - 855 A.D. France, Italy and Germany. Famine**

During the years 850-851 in *Italy* and *Germany* there was a drought with famine.<sup>47, 72</sup>

In 850, a famine prevailed in Paris, *France*.<sup>57, 91</sup>

In 851 there was a famine in *Italy* and *Germany*.<sup>57, 91</sup>

In 850 A.D., a terrible famine struck *Europe*.<sup>155</sup>

In the year 851 and 852, the sun was glowing extremely hot in *Gaul* [*Western Europe*] *Germany* and *Italy*. The drought was so great that food shortage for the cattle occurred. It became clear that a terrible famine was beginning, which continued to the year 855. "You could see parents eating their own children."<sup>62</sup>

In 851 and 855, there was so great a drought over all of *Italy* and *Germany* as caused such a famine that parents eat their own children and children their parents.<sup>72</sup>

---

**Winter of 853 / 854 A.D.** From 11 to 28 November 853 A.D., there were a series of frost [in *France*].<sup>171</sup>

---

**854 A.D.** In 854 A.D. during the period 1-30 April, a drought struck *China*.<sup>153</sup>

In 854 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

*Also refer to the section 850 A.D. – 855 A.D. for information on the drought and famine in France, Italy and Germany during that timeframe.*

---

**855 A.D.** In 855 A.D. during the period between 17 August and 14 September, a drought struck several regions of *China* including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, and Hu-chou.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang, and Yangchow.
- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Hsi.

In 855 A.D. during the autumn, there was a drought in Anhwei, Chêhkiang and Kiangsu provinces in *China*.<sup>165</sup>

[In *England*], there was a tempest of hail, whirlwind and thunder.<sup>72</sup>

*Also refer to the section 850 A.D. – 855 A.D. for information on the drought and famine in France, Italy and Germany during that timeframe.*

---

**Winter of 855 / 856 A.D.** On 6 January, there was a shocking inundation of the Tiber River in *Italy*. This was followed by a plague, wherein the throat being obstructed by great defluxions [inflammations], the sick died suddenly.<sup>72</sup>

In *Poland*, there was a great frost.<sup>47, 72, 93</sup>

The winter in 856 was very harsh and very dry, a violent epidemic pulled out many people.<sup>62</sup>

The winter of 856 A.D. was very rigorous and dry [in *France*]. It was followed by epidemics.<sup>171</sup>

---

**856 A.D.** In *England*, there were great rains and floods, followed by an epidemic of quinsy.<sup>47, 72, 92</sup>

In the year 856 in *Scotland*, a four year famine began.<sup>57, 72, 91</sup>

---

**858 A.D.** In 858 A.D., floods struck several regions of *China* including:<sup>153</sup>

- Floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Su-ch'ien. Thousands of houses were flooded.
- During the period between 11 September and 10 October, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming and Chêng-ting. Crops were damaged.
- During the period between 11 September and 10 October, floods struck Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng, Tzû-yang, and Tung-p'ing. Crops were damaged.
- During the period between 11 September and 10 October, floods struck Honan (now Henan province) in central *China* at Hua, Kaifeng, and Shang-ch'iu. Crops were damaged.
- During the period between 11 September and 10 October, floods struck Anhwei (now Anhui province) in eastern *China* at Ch'ien-shan, Shou, and Ho. Crops were damaged.
- During the period between 11 September and 10 October, floods struck Kiangsu province at Chinkiang. Crops were damaged.

---

**Winter of 858 / 859 A.D.** During the period between 10 November 858 and 25 March 859, a drought struck *China*.<sup>153</sup>

In 858 A.D. during the winter, there was a drought in *China*.<sup>165</sup>

---

**859 A.D.** In 859 A.D., floods struck *China* during the period between 6 May and 8 August.<sup>153</sup>

---

**Winter of 859 / 860 A.D.** During the winter most of the rivers in *Europe* were frozen for two months.<sup>1</sup>

In the year 860, the Rhône River in *France* froze.<sup>58, 80</sup>

The winter of 860 A.D. was very long and very cold [in *France*]. It lasted from November to April. There was an overabundance of snow. The winter destroyed the [grape] vines. The Rhône River was frozen over its entire length. Wild animals could be taken up by hand. This was followed by a famine.<sup>171</sup>

In the year 860, the *Adriatic Sea* and the Rhône River froze.<sup>60</sup>

In the year 859, the ice was so great that carriages were used on the *Adriatic Sea*. The *Mediterranean Sea* was frozen over, and passable by carts in 860 A.D.<sup>2, 39, 40, 41, 42, 43, 47, 93</sup>

In 860, frosts and snows were continuously beginning in November until April. The Ionian Sea froze. People went to Venice, *Italy* on horseback [over the frozen water].<sup>79</sup>

The winter was very severe over nearly all of *Europe*. The *Ionian and Adriatic Seas* were frozen during 860 A.D.<sup>28</sup> [The Ionian Sea is an arm of the Mediterranean Sea, south of the Adriatic Sea, bounded by southern Italy including Calabria, Sicily and the Salento peninsula to the west, southern Albania to the north, and a large number of Greek islands. The Adriatic Sea separates the Italian Peninsula from the Balkan peninsula.]

So severe a winter that the *Adriatic Sea* was frozen over and people walked on foot to Venice, *Italy* [on the ice].<sup>72</sup>

In the year 860, the *Adriatic Sea* was so frozen that one could travel on foot from the continent and walk to Venice, *Italy*. The Rhône River in *France* also shivered.<sup>62</sup>

In 860 in *Italy*, the Port of Venice was frozen.<sup>58, 80</sup>

In the year 859, there was a very severe and long frost [in *Britain*].<sup>72</sup>

In the winter of 859-860 in Gaul [*Western Europe*] and *Germany*, the winter was very harsh and long. The winter in *France* lasted from November to April with snow and solid ice. In *Italy*, the frost was violent and persistent, and the earth was covered with immense snow. The seeds in the ground and the vines froze and died. The wine froze in the cask, where it has been preserved. The mortality rate among people and animals was large, and then a famine broke out, which was terrible in the next year.<sup>62</sup>

---

**860 A.D.** In 860 A.D., floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang.<sup>153</sup>

---

**861 A.D.** In Kent, *England*, there were floods in the River Medway.<sup>40, 41, 43</sup> Great loss of cattle.<sup>47, 72, 92</sup>

During the period between 8 August 861 and 30 July 862, a drought struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

In 861 A.D. during the autumn, there was a drought in Honan and Kiangsu provinces in *China*.<sup>165</sup>

---

**862 A.D.** At the headquarters of Haslou on the Meuse River in *the Netherlands* in July 862, as a result of excessive heat, the sky became so dark a little after noon. One could not see much more than if it was dark. Incessant lightning pierced the darkness and set the whole sky on fire. Soon there were burst of appalling thunder amid torrents of terrible hail. Some of the hailstones were 1.5 inches (38 millimeters) in circumference. Furious eddies intensified the uproar of the storm.<sup>79</sup> [Haslou or Elsloo is a town in the Netherlands. The Meuse River runs through France, Belgium and the Netherlands.]

During the period between 8 August 861 and 30 July 862, a drought struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**863 A.D.** In *Scotland*, there was a famine with a plague.<sup>57, 72, 91</sup>

In 863 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 27 June and 17 August, floods struck Honan (now Henan province) in central *China* at Loyang. Many people drowned.

— During the period between 18 August and 16 September, floods struck Honan province at Hsü-ch'ang and Lin-ju causing crop damage.

— During the period between 18 August and 16 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and Su-ch'ien causing crop damage.

— During the period between 16 October and 14 November, floods struck Shansi (now Shanxi province) in northern *China* at Hsiao-i.

---

**Winter of 863 / 864 A.D.** The winter of 864 A.D. was very cold in *France*. The Rhône River was covered with ice.<sup>171</sup>

In 864 in *England*, there was a sharp and long frosty winter.<sup>72</sup>

In the year 864, there was a frost in *England*.<sup>72</sup> There was a deep snowfall.<sup>72</sup>

In the year 864 in *Italy* and *Germany*, the winter was long and harsh. The *Adriatic Sea* was frozen around Venice and on its lagoon; riders and wagons laden with goods traveled across the ice.<sup>62</sup>

---

**864 A.D.** In *England*, the River Humber greatly flooded.<sup>40, 41, 43, 47, 92</sup> much loss of cattle.<sup>72</sup>

---

**865 A.D.** In 865 there was a great flood of water [in *Germany*] and the next year 866 produced a cruel famine.<sup>172</sup>

---

**866 A.D.** In 866 A.D. during the period between 6 May and 8 August, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* and in Anhwei (now Anhui province) in eastern *China*. Then during the period between 8 August and 8 November, floods struck Honan (now Henan province) in central *China* at Loyang causing crop damage.<sup>153</sup>

On 6 February 866 A.D., the Seine River in *France* flooded.<sup>171</sup>

In March 866 A.D., the Seine River in *France* flooded (twice).<sup>171</sup>

---

**867 A.D.** Excessive rains fell in 867 in the north of *Western Europe*.<sup>79</sup>

There was a tempest of wind, that was fatal in many places.<sup>72</sup>

---

**868 A.D.** Paris, *France* suffered again from famine.<sup>57, 91</sup>

A great famine afflicted not only *Germany*, but also all other countries of *Europe*.<sup>72</sup>

In 868 A.D., a terrible famine struck *Europe*.<sup>155</sup>

The heavy rainfalls in 868 caused floods fatal to the grains in *Western Europe*.<sup>79</sup>

In 868 A.D., there was a flood of many rivers [in *France*].<sup>171</sup>

In 868 A.D., a drought struck Kiangsu (now Jiangsu province) on the east coast of *China* and Anhwei (now Anhui province) in eastern *China*.<sup>153</sup>

In 868 A.D., there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**Winter of 868 / 869 A.D.** The winter of 869 A.D. was cold and produced a famine. As a result, in the province of Quercy in southwestern *France*, one-third of the population died.<sup>171</sup>

---

**869 A.D.** During the summer a terrible famine arose in many provinces of *France* and *Burgundy*. A frightening amount of people died. So great was the hunger that people resorted to eating human flesh.<sup>62</sup> [Burgundy during this period of time was part of the Frankish Kingdom.]

In 869 A.D. during the period between 13 July and 11 August, a drought struck *China* followed by a plague of locust.<sup>153</sup>

In 869 A.D. during the summer, there was a drought in *China*. The drought was accompanied by a plague of locusts.<sup>165</sup>

---

**870 A.D.** In the region around Worms in southeastern *Germany*, there was such violent heat that the reapers in the field fell down dead [from heatstroke]. And several people died of suffocation while traveling on the Rhine.<sup>62</sup>

[In *England*], there was a tempest of hail and lightning, which was fatal to corn (grain), people and cattle.<sup>72</sup>

In 870 A.D. during the period between 6 May and 8 August, a drought struck *China*.<sup>153</sup>

In 870 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**872 A.D.** In *Germany* and in Gaul [*Western Europe*] the summer was characterized by a suffocating heat and almost constant storm. Saint Peter's Church in Worms, *Germany* was destroyed by lightning. Many people were killed, and the harvests were poor. *England* was hit by an all-consuming drought and heat.<sup>62</sup>

In *England*, there was a famine “from ugly locusts.”<sup>72, 91</sup>

Worms, *Germany* was burnt to the ground by lightning.<sup>72</sup> [The source list this event in the year 873]

There was a great drought and unusual scorching heat.<sup>72</sup>

The summer of 872 [in *Germany*] was unusually warm. Because of the heat, the corn [grain] harvest turned out badly. Then grains became expensive.<sup>172</sup>

Due to the extreme dryness during the summer of 872 in the north of *Western Europe*, almost all the fruit was destroyed.<sup>79</sup>

The extreme heat and drought of the summer of 872 destroyed almost all fruit in the north of *Western Europe*. Lightning consumed many houses with their inhabitants.<sup>79</sup>

---

**873 A.D.** In Paris, *France*, there was much suffering from a famine.<sup>91</sup>

In 873 A.D., a terrible famine struck *Europe*.<sup>155</sup>

The summer of 873 A.D. was very hot [in western *Europe*]. There was a plague of locusts in *Germany* and *Spain*.<sup>171</sup>

In the year 873, the city of Worms, *Germany* was burnt down from thunder.<sup>72</sup>

In 873 A.D. during the period between 27 August and 25 September, floods struck in Honan (now Henan province) in central *China* at Loyang and other areas in Honan, and in Shantung (now Shandong province) on the east coast of *China*. Then during the period between 24 December 873 and 21 January 874, a drought struck *China*. As a result, the land tax was remitted.<sup>153</sup>

In 873 A.D. during the autumn, there was a drought in *China*.<sup>165</sup>

---

**Winter of 873 / 874 A.D.** In the north of *Western Europe* the winter of 873-874 was harsh and prolonged, characterized in particular by the prodigious mass of snowfall.<sup>79</sup>

---

#### **Within 874 A.D. – 889 A.D. China. Famine**

During the reign of Emperor Hi-Tsong [874-889 A.D.] in *China*, there was a grievous famine, which was caused by the overflowing of the rivers and by vast swarms of locusts, which destroyed most of the corn [grain].<sup>186</sup>

---

**874 A.D.** [In *France*] the heat of summer and long duration caused the pastures to dry up and this resulted in a shortage of grains. As a result of the famine and plague in *France*, one third of the population was swept away.<sup>62</sup>

In 874, a plague of ugly deformed locusts ate up the fields in *France*. They had six feet and two teeth harder than stone. So numerous were they, that they darkened the sun. In one day and night they eat up all greens and trees. But strong winds drove them into the sea where they drowned. The waves cast their bodies ashore where the putrefaction proved fatal to many. So that by famine and plague, a third part of the people died.<sup>72</sup>

The long summer of 874 in *Western Europe* produced a long drought that was so great that it destroyed the hay and grains.<sup>79</sup>

The summer of 874 in the north of *Western Europe* was long and dry. This cruel drought consumed the hay and corn [grains].<sup>79</sup>

Paris, *France* suffered again from famine.<sup>57</sup> [Another source list this event in the year 873]

In 874 A.D., a terrible famine struck *Europe*.<sup>155</sup>

In 874 A.D. during the period between 20 May and 17 June, a drought struck *China*.<sup>153</sup>

In 874 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**Winter of 874 / 875 A.D.** Cold weather brought great frost to *Scotland* from November to April. The winter thaw produced floods.<sup>28</sup>

In the year 875, there was a frost in *England*.<sup>72</sup>

In 874 A.D., there was a very severe frost [in *England*]. The winter was long. There was snow from November to the end of March. Because of the deep snow, the forest was inaccessible for the supply of fuel [firewood].<sup>212</sup>

In the year 874, the Rhine and the Meuse rivers remained frozen for a long time and were accessible to pedestrians.<sup>62</sup>

In the year 874, the winter in Gaul [*Western Europe*], was so long and so strong in frost and snow, that, as the chronicles of St. Denys records, "No man who lived at that time had seen such a severe winter." The winter lasted from September to March. The snow fell in such a large quantity that the forests had become inaccessible and as a result people could procure no wood. The earth was covered with snow for five months, and the effects of this winter were very disastrous. The domestic animals, especially the horses died in great numbers, as did many people from the cold. The famine and the diseases that followed this winter snatched up, according to the chronicles of Fulda, a third of the population there [*Bavaria*]. *Italy* felt similar effects of the snow and the cold.<sup>62</sup>

The winter of 875 was very long and very cold in *France*. It lasted from early September to the end of March. There was so much snow that many forests were inaccessible. There was up to 15 feet of snow in the mountains of Burgundy. There were 5 months of heavy snow. The Rhine and Meuse rivers were frozen and could be crossed as if on dry land. There was a catastrophic thaw, which caused flooded. Horses were decimated. There were epidemics. One-third of the population of *France* died from this winter.<sup>171</sup>

The winter of 875 was sharper and longer than ordinary. The Earth was covered with snow and ice from November to the vernal equinox [around March 20/21].<sup>72</sup>

[Another account places this winter in 873.] In 873 in *Western Europe*, frost and snow continued without interruption from November 1<sup>st</sup> until the spring equinox.<sup>79</sup>

---

**876 A.D.** In Saxony [now part of northwest *Germany*], there were great rains in June that produced extensive flood damage.<sup>47, 72, 92</sup>

A sudden tempest and inundation of rain in *Saxony*, to the ruin of many men, beast, buildings and trees.<sup>72</sup>

In 876 A.D., no snow fell during the winter. During the period between 4 March and 24 June a drought struck several regions on the east coast of *China*. As a result, one year's land tax was remitted. The regions affected included: <sup>153</sup>

— Chekiang (now Zhejiang province) at Ningpo, Shao-hsing, Taichow, Chin-hua, Chien-tê, Wên-chou, Ch'ü, Li-shui, Hangchow, Chia-hsing and Hu-chou.

— Kiangsu (now Jiangsu province) at Soochow, Sung-chiang, and T'ai-ts'ang

In 876 A.D. during the spring and summer, there was a drought in Chêhkiang and Kiangsi provinces in *China*. The land tax was remitted. No snowfall during the winter. <sup>165</sup>

In 876 A.D., floods struck in Honan (now Henan province) in central *China* and in Shantung (now Shandong province) on the east coast of *China*. <sup>153</sup>

**878 A.D.** In *England*, there was a famine “from ugly locusts.” <sup>72</sup>

**879 A.D.** In 879, a universal famine prevailed. <sup>57, 72, 91</sup>

**880 A.D.** In 880 A.D. during the period between 13 April and 12 May, a severe drought struck *China*. <sup>153</sup>

In 880 A.D. during the spring, there was a great drought in *China*. <sup>165</sup>

In 880 A.D., a terrible famine struck *Europe*. <sup>155</sup>

**Winter of 880 / 881 A.D.** In the year 880 in *Germany*, the winter was severe and of extraordinary length. The Rhine and the Main rivers froze for a long time and individuals could travel across these rivers on the dry ice. <sup>61</sup>

The winter of 880-881 was very long and very cold in *Western Europe* in the north. The Rhine River and the Main River froze for a long time. We crossed the firm ice on foot. The frosts persevered until the spring. <sup>79</sup> [The Main River is located in southwest Germany.]

The winter of 881 A.D. was very long and very cold. The Rhine and Meuse rivers were frozen for a long time. There were frosts in the spring. As a result, the pastures did not grow. There were famines. <sup>171</sup>

In the year 880, the Rhine and the Meuse rivers froze for a long time. <sup>62</sup>

The winter of 880-881 was very cold and persistent in *France*, Flanders [now *Belgium*] and *Germany*. The winter showed itself to be very dangerous for several species of domestic animals because “in the spring, the very severe frost compressed the earth” and yielded no green feed. The cold and famine by the very barrenness of the previous year brought suffering to the utmost. <sup>62</sup> [When Flandria appeared in the 8<sup>th</sup> century, it was a Frankish fief centered in Bruges in northwestern Belgium].

**882 A.D.** In 882 A.D., there were destructive hailstorms [in *France*]. <sup>171</sup>

**883 A.D.** There was a terrible famine in *Italy*. <sup>57, 72, 91</sup>

There was a terrible thunder and lightning storm [in *England*]. <sup>72</sup>

**884 A.D.** In 884 A.D., there was a severe drought in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow. The resulting famine was so severe that cannibalism was practiced. <sup>153</sup>

In 884 A.D., there was a great drought in Anhwei, Kiangsi and Kiangsu provinces in *China*. The resulting famine was so severe that it led to cannibalism.<sup>165</sup>

---

**885 A.D.** In Cheshire, *England*, the River Dee greatly overflowed; many villages injured.<sup>40, 41, 47, 92</sup>

Dee demolished many villages, people and cattle.<sup>72</sup>

In 885, there was an inundation of the River Dee.<sup>43</sup>

---

**886 A.D.** On 6 February 886, the Loire River in *France* flooded.<sup>171</sup>

In March 886, the flooding of the Seine River in *France* help the Parisians that were besieged by the Normans.<sup>171</sup>

In 886, it rained day and night almost without interruption during the months of March, June and July in the vicinity of Mainz in west-central *Germany*, which led to flooding of a frightening part of the Rhine River and other rivers.<sup>79</sup>

---

**Winter of 886 / 887 A.D.** The winter was very severe and of unusually long duration. It was accompanied by such a severe disease among the oxen and sheep, that in *France* few animals of this kind remained.<sup>62</sup>

The winter of 887 [in *France*] was very long or maybe the term “unusually” long would be appropriate. It caused the near extinction of oxen and sheep.<sup>171</sup>

---

**887 A.D.** In 887 in *England*, there was a grievous famine that lasted 2 years.<sup>57, 72, 91</sup>

---

**889 A.D.** In 889, the extraordinary floods desolated northern *Italy*. The mass of rains in Thuringia in central *Germany* destroyed in a short time three villages, and three hundred people drowned there.<sup>79</sup>

In 889 A.D., the Seine River in *France* flooded.<sup>171</sup>

In 889 A.D., a terrible famine struck *Europe*.<sup>155</sup>

---

**890 A.D.** In *Scotland*, there was a great dearth [famine].<sup>57, 72, 91</sup>

---

**Winter of 890 / 891 A.D.** In *Western Europe*, the Meuse River was frozen.<sup>62</sup>

The winter of 891 A.D. was very cold in *France*. The vineyards and herds were decimated. The Meuse River froze.<sup>171</sup>

In the year 891 in Flanders [now *Belgium*] and Holland [now *the Netherlands*], the winter was severe.<sup>62</sup>

---

**892 A.D.** The months of April and May 892 in *Western Europe* produced an extreme drought.<sup>79</sup>

In April and May 892 A.D., it was extremely dry [in *France*].<sup>171</sup>

In 892 in *Western Europe*, excessive drought struck beginning in the first of April and continuing through May. Then disastrous frosts struck on May 18 and July 17. These late frosts destroyed the [grape] vines and wheat.<sup>79</sup>

In 892 A.D. during the period between 8 August and 8 November, a severe drought struck *China*.<sup>153</sup>

---

**Winter of 892 / 893 A.D.** In the year 893, the vine and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

The winter of 893 A.D. was very cold in *France*. The Rhône River was frozen. Livestock was decimated. There was 5 days of very heavy snowfall in March.<sup>171</sup>

The Rhône River in *France* froze.<sup>62</sup>

The winter of 893 was at once so hard and so long, we could see in some places a foot of snow for five days in March. This cold led to a great scarcity of wine in the territory of Bayeux in northwestern *France*.<sup>79</sup>

The winter of 893 was severe and of a longer duration than usual. In March, a foot of snow fell in 5 days. As a result of this severe winter in *Bavaria*, there was almost a total lack of wine and many sheep and bees were killed.<sup>62</sup>

---

**893 A. D.** In 893, there was a great flood in *China*. The Yellow River cut a new course to the sea.<sup>142</sup>

In 893 A.D. during the autumn, there was a great drought in *China*.<sup>165</sup>

---

#### **895 A.D. - 897 A.D. Ireland. Famine**

In *Ireland*, there was a famine from an invasion of locusts.<sup>91</sup>

---

**895 A.D.** In York, *England*, hail; stones like ducks' eggs.<sup>57, 93</sup> [Another source places this event in the year 896.<sup>72</sup>]

In the year 895, part of the town of Shaftesbury, Dorset, *England* was burnt by lightning.<sup>72</sup>

In 895 in the north of *Western Europe*, the trees bloom a second time in December.<sup>79</sup>

*Also refer to the section 895 A.D. – 897 A.D. for information on the famine in Ireland during that timeframe.*

---

#### **896 A.D. - 899 A.D. France. Famine**

In 896-899, Paris, *France* suffered from a famine.<sup>91</sup>

In 898, the famine was so great in *France* that people out of necessity ate one another.<sup>72</sup>

From 896 to 899, Paris, *France*, once again suffered from a famine.<sup>57</sup>

In 898 in *France* a sore famine.<sup>57, 72, 91</sup>

---

**896 A.D.** Due to the extreme cold and hard frost, the Lagoons in Venice, *Italy* in 1709 froze to a depth of several inches in thickness. The same phenomenon had occurred in 896 according to the annals of Fulda.<sup>81</sup>

In 896 A.D. the Rhine River flooded.<sup>171</sup>

In 896 A.D., Honan (now Henan province) in central *China* at Hua during the period 17 May - 14 June experienced flooding. Over 1,000 li [333 miles] flooded.<sup>153</sup>

Also refer to the section **895 A.D. – 897 A.D.** for information on the famine in Ireland during that timeframe.  
Also refer to the section **896 A.D. – 899 A.D.** for information on the famine in France during that timeframe.

---

**897 A.D.** In 897, there was a great famine in *Germany*.<sup>128</sup>

Also refer to the section **895 A.D. – 897 A.D.** for information on the famine in Ireland during that timeframe.  
Also refer to the section **896 A.D. – 899 A.D.** for information on the famine in France during that timeframe.

---

**900 A.D.** *England* was visited by a sore famine.<sup>57, 72, 91</sup>

In 900 A.D. during the period between 29 July and 27 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China*. Then during the period between 8 November 900 and 6 May 901, a drought struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 900 A.D. during the winter, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**901 A.D.** In 901 A.D. during the period between 22 February and 22 March, a drought struck *China*.<sup>153</sup>

In 901 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**Winter of 901 / 902 A.D.** In 901 in *England*, there was a frost of 120 days that began at the end of the year.<sup>128</sup>

---

**902 A.D.** In 902 the Nile River in *Egypt* only rose to thirteen cubits during the peak of the annual inundation. [Generally this means that *Egypt* experience a strong famine during the harvest in the following year.]<sup>83</sup>

In 902 A.D., a flood struck Szechwan (now Sichuan province) in southwest *China* at Yüeh-shan.<sup>153</sup>

---

**905 A.D.** In 905 A.D. during the period between 18 May and 16 June, a drought struck *China*.<sup>153</sup>

In 905 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**908 A.D.** Most of the rivers in *England* were frozen for two months.<sup>2, 28, 40, 41, 42, 43, 47, 93</sup>

The frost in *England* was severe for 2 months.<sup>72</sup>

The River Thames in *England* was frozen for two months.<sup>29</sup>

During the winter of 908 A.D., there was a severe frost. Most of the rivers in *England* were frozen for 2 months.<sup>212</sup>

In 908 A.D. during the period between 5 March and 3 April, a drought struck *China*.<sup>153</sup>

In 908 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**911 A.D.** In 911 A.D. during the period between 2 April and 1 May, a drought of long duration struck *China*.<sup>153</sup>

In 911 A.D. during the spring, there was a drought of long duration in *China*.<sup>165</sup>

In the year 911, there was a great snowfall in *Scotland*. Snow “lay deep in Scotland, the Death of much Cattle.”<sup>72</sup>

---

**912 A.D.** *Saxony* was flooded by rain.<sup>47, 92</sup>

There was a great inundation in *Saxony*.<sup>72</sup>

In 912 there was a scarcity [famine] in *Egypt*.<sup>83</sup>

In 912 A.D. during the period between 22 March and 17 June, a drought struck *China*.<sup>153</sup>

In 912 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**Winter of 912 / 913 A.D.** In *Germany* and *Northern Europe*, the winter was very severe.<sup>62</sup>

In the year 913, there was a frost in *England*. A most severe winter.<sup>72</sup>

The winter of 913 A.D. was cold [in *France*].<sup>171</sup>

---

**914 A.D.** A great famine in *Germany*.<sup>72</sup>

---

**916 A.D.** There was a terrible thunder and lightning storm in *Scotland*.<sup>72</sup>

---

**918 A.D.** It rained most of the year in *Scotland*.<sup>1</sup>

A continual rain in *Scotland* for five months.<sup>2, 40, 41, 56</sup>

There was 5 or 6 months of continual rain in *Scotland*.<sup>72</sup>

In *Scotland*, rains extended over five months producing floods. In *Ireland*, a great flood occurred.<sup>47, 92</sup>

---

**919 A.D.** In Cambridge in southeastern *England*, a storm destroyed more than 40 houses.<sup>41, 56, 72</sup>

---

**921 A.D.** A storm (great hurricane) struck Manchester, Lancashire in northwestern *England*.<sup>40, 41, 72</sup>

[In *England/Normandy*] the heat of the summer was very great; this year produced an abundance of wine. The drought was almost constantly during the months of July, August and September.<sup>62</sup>

Intense heat and extreme drought ruled almost without interruption during the months of July, August, and September of 921 in *Western Europe*. As the year came to an end, there were many storms.<sup>79</sup>

In 921 A.D. from July to September, there were heat, drought and thunderstorms [in *France*].<sup>171</sup>

In *Western Europe*, terrible storms filled the summer of 921.<sup>79</sup>

---

**Winter of 922 / 923 A.D.** In the winter of the year 923, the River Thames in *England* was frozen for nine weeks.<sup>1</sup>

In 923 A.D., the River Thames at London, *England*, was frozen for 13 weeks.<sup>212</sup>

In the year 923, there was a frost in *England*.<sup>72</sup>

The winter of 923 A.D. [in *France*] was cold.<sup>171</sup>

The winter of the year 922 [in *Western Europe*] is recorded as very severe.<sup>62</sup>

---

**923 A.D.** In 923 A.D. during the period between 20 January and 18 May, a drought struck *China*. There was no snowfall during the winter.<sup>153</sup>

In 923 A.D. during the spring and summer, there was a drought in *China*. No snowfall during the winter.<sup>165</sup>

---

**924 A.D.** In 924 A.D. during the period between 8 March and 6 April, a drought struck *China*.<sup>153</sup>

In 924 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**925 A.D.** In 925 A.D. during the period between 27 January and 23 June, a drought struck *China*.<sup>153</sup>

In 925 A.D. during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**926 A.D.** In 926 A.D. during the period between 13 June and 12 July, a drought struck *China*.<sup>153</sup>

In 926 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**927 A.D.** Cold weather struck *Byzantium*. The frost lasted 120 days.<sup>28</sup> [Byzantium at this time included Turkey, Bulgaria, Macedonia, Albania, Greece and the southern and eastern Italian peninsula.]

In 927 A.D. during the period 2-31 July, a drought struck *China*.<sup>153</sup>

In 927 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**Winter of 927 / 928 A.D.** The winter was very severe in northern *France* and Flanders [now *Belgium*].<sup>62, 79</sup>

The winter of 928 A.D. [in *France*] was very cold in the north. Ten thousand people died.<sup>171</sup>

The winter of 928 A.D. was an extremely severe winter. The whole River Thames in *England* was frozen for 3 months. The army of the first emperor at the siege of Brandenburg, *Germany* set up camp on the frozen Havel River. [Frozen solid enough to bear the weight of his army].<sup>172</sup>

---

**928 A.D.** In Reims in northeastern *France*, the harvest was almost finished before August.<sup>62</sup>

---

**Winter of 928 / 929 A.D.** During the period between 15 November 928 and 12 February 929, a drought struck *China*. There was no snowfall during the winter. The drought continued during the period between 14 March and 12 April.<sup>153</sup>

In 928 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**929 A.D.** In the year 929, the River Thames in England was frozen for 13 weeks.<sup>72</sup> [Other accounts place this year in 923. In the year 923, the River Thames in London, *England* was frozen for 13 weeks.<sup>2, 28, 40, 41, 42, 43, 47, 93</sup>]

In 929 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

---

**930 A.D.** In 930 A.D. during the period 6-30 May, a drought struck *China*.<sup>153</sup>

In 930 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**931 A.D.** A famine in *Wales*.<sup>57, 72, 91</sup>

In 931 A.D. during the period between 21 April and 19 May, a drought struck *China*.<sup>153</sup>

In 931 A.D. during the summer, there was a drought in *China*.<sup>165</sup>

---

**932 A.D.** A great famine in *France*.<sup>57, 72, 91</sup>

In 932 A.D. during the period between 5 August and 2 September, a severe drought struck *China*.<sup>153</sup>

In 932 A.D. during the autumn, there was a great drought in Hunan province in *China*.<sup>165</sup>

---

**933 A.D.** In 933 A.D. during the period between 25 July and 23 August, a drought struck *China*.<sup>153</sup>

In 933 A.D. during the autumn, there was a drought in *China*.<sup>165</sup>

---

**Winter of 933 / 934 A.D.** In 933 in *England*, there was a frost of 120 days that began at the end of the year.<sup>128</sup>

The winter of 934 A.D. in *France* was very cold from 30 November to March. The frozen Meuse River was passable as if on dry land.<sup>171</sup>

---

**934 A.D.** A terrible whirlwind [tornado] blew down Saint Maximinus's Church at Treves [now Trier] in southwestern *Germany*.<sup>72</sup>

In 934 A.D., there was a drought in Honan (now Henan province) in central *China* at Loyang during the period of 15 July - 12 August. Many people died from excessive heat.<sup>153</sup>

In 934 A.D. during the summer, there was a drought of long duration in Honan province in *China*. Many people died from sunstroke.<sup>165</sup>

---

**935 A.D.** In Southampton in Hampshire in southeastern *England*, there were great floods; many people drowned.<sup>40, 41, 43, 47, 72, 92</sup>

In 935 A.D. during the period between 6 April and 5 May, a drought struck Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

In 935 A.D. during the spring and summer, there was a drought in Honan province in *China*.<sup>165</sup>

---

**Winter of 935 / 936 A.D.** There had been no snowfall during the winter in *China*.<sup>153</sup>

---

**936 A.D.** In *Scotland*, after the appearance of a comet, there were four years of continuous famine "till people began to devour one another."<sup>57, 72, 91</sup>

In 936 A.D. during the period between 24 May and 21 June, a drought struck Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

In 936 A.D. during the spring, summer and autumn, there was a drought Honan province in *China*. No snowfall [during the winter].<sup>165</sup>

---

**Winter of 936 / 937 A.D.** During the period between 8 August 936 and 5 February 937, a drought struck *China*. There had been no snowfall during the winter.<sup>153</sup>

---

**Winter of 937 / 938 A.D.** In 938 A.D. during the period between 4 January and 1 February, a drought struck *China*. There had been no snowfall during the winter.<sup>153</sup>

In 937 A.D. during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**938 A.D.** In 938 A.D., during the period between 28 August and 26 September, a drought struck *China*. As a result the land tax was remitted. Also during the same year, a flood struck *China* and damaged the imperial ancestral temple.<sup>153</sup>

In 938 A.D. during the autumn, there was a drought in *China*. In some areas there were floods.<sup>165</sup>

---

**939 A.D.** In 939 A.D. during the period between 22 May and 15 September, a drought struck *China*.<sup>153</sup>

In 939 A.D. during the summer and autumn, there was a drought in *China*.<sup>165</sup>

---

**Winter of 939 / 940 A.D.** The winter was extremely severe in *Germany* and *France*. The harvest was destroyed by the bad weather. There was famine and disease, and the mortality among cattle was particularly large.<sup>62</sup>

The winter of 940 A.D. [in *France*] was very cold. The cold decimated the herd of cattle. This was followed by epidemics and famines.<sup>171</sup>

---

**940 A.D.** In 940 A.D., floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and in Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.<sup>153</sup>

---

**941 A.D.** In 941 A.D. during the period between 25 August and 23 September, a drought struck Hupeh (now Hubei province) in central *China* at Huang-kang. Some people died [of famine].<sup>153</sup>

In 941 A.D. during the autumn in Hupeh province in *China*, there was a drought that cause a great mortality.<sup>165</sup>

---

**942 A.D.** In *England* in December, there were great rains and floods.<sup>47, 72, 92</sup>

In *Ireland*, there was a great flood of the River Shannon.<sup>47, 92</sup> [The River Shannon travels through northern, central and southwestern Ireland.]

In 942 A.D. during the period between 20 March and 17 April, a drought struck *China*. During the period between 18 April and 17 May, a flood struck Honan (now Henan province) in central *China* at Kaifeng. During the period between 16 July and 14 August, a flood struck Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin. During the period between 16 July and 14 August, a flood struck Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Hsi.<sup>153</sup>

In 942 A.D. during the spring, there was a drought in *China*.<sup>165</sup>

In 942 A.D., a famine struck *Upper India*.<sup>156</sup>

— “In 330 A.H. (941-942 A.D.), a comet made its appearance, the tail of which reached from the eastern to the western horizon. It remained in the heavens eighteen days, and its blighting influence caused so severe a famine that wheat, the produce of one jarib [a measuring chain] of land was sold for 320 miskāls of gold. [A miskāl is a unit of weight equivalent to approximately 4.25 grams.] When the value of a spike of corn was esteemed as high as the Pleiades [star cluster], conceive what must have been the value of wheat!”

— “The famine in the land was so severe that man was driven to feed on his own species [cannibalism], and a pestilence prevailed with such virulence that it was impossible to bury the dead who fell victims to it.”

**943 A.D.** In 943 A.D. during the period between 6 June and 4 July, a drought of long duration struck Honan (now Henan province) in central *China* at Kaifeng and An-yang. The drought was accompanied by [a plague of] locusts.<sup>153</sup>

In 943 A.D. during the summer, there was a drought of long duration in *China*. The drought was accompanied with a plague of locusts.<sup>165</sup>

**944 A.D.** In *England*, a great storm raged in and near London, which destroyed 1,500 houses.<sup>40, 41, 43, 56, 57, 72</sup>

In 944 A.D., there was a severe gale throughout the whole of *England*. In London alone, over 1,500 houses were unroofed and destroyed.<sup>212</sup>

In 944 A.D., a great hurricane struck London, *England* destroying 1,500 houses. Different accounts from early chroniclers report that between 1,000 and 6,000 people were killed.<sup>197</sup>

[In *Western Europe*] in the year 944, the frost froze the grapevines in the beginning of May. It rained constantly during the whole summer.<sup>62</sup>

In the north of *Western Europe*, the frost burnt the vines around May 1, 944. Then the weather turned rainy which lasted all summer.<sup>79</sup>

The entire summer of 944 was rainy in the north of *Western Europe*.<sup>79</sup>

In 944 A.D. during the period between 23 June and 22 July, a flood struck Honan (now Henan province) in central *China* at Hua.<sup>153</sup>

#### **945 A.D. – 946 A.D. France and Italy. Famine**

In 945-946, a famine struck *France*.<sup>57, 72, 91</sup>

In 945, a famine over all *Italy*, which with war reached *France* in 946.<sup>72</sup>

In 946, a shocking famine in *Italy*.<sup>57, 72, 91</sup>

**946 A.D.** In 946 A.D. during the period between 6 March and 1 June, a drought of long duration struck *China*. This was followed by floods that struck several regions of *China* including:<sup>153</sup>

— During the period between 31 July and 29 August, floods struck in Shantung (now Shandong province) on the east coast of *China* at Tung-a and Chao-ch'êng and in Honan (now Henan province) in central *China* at Ch'in-yang.

— During the period between 30 August and 27 September, floods struck Shantung province at Ên.

— During the period between 28 September and 27 October, floods struck in Hopei (now Hebei province) in northern *China* at P'u-yang; in Honan province at Hua and Ch'in-yang; and in Shantung province at Kuan-ch'êng.

— During the period between 28 October and 26 November, floods struck Honan province at Chi and Yüan-wu.

In 946 A.D. during the spring and summer, there was a drought of long duration in *China*.<sup>165</sup>

---

**947 A.D.** A cold frosty snowy winter in *Poland* from 1 November to the middle of March.<sup>72</sup>

---

**948 A.D.** In 948 A.D. during the period between 5 February and 5 September, a drought of long duration struck *China*.<sup>153</sup>

In 948 A.D. during the spring and summer, there was a drought of long duration in *China*.<sup>165</sup>

---

**951 A.D.** Southampton, *England*, was nearly destroyed in a storm by lightning.<sup>40, 41, 43, 56.</sup>

There was a terrible lightning storm at Southampton, *England* that lasted 4 days.<sup>72</sup>

In 951 [in *England*], there were great thunders.<sup>72</sup>

---

**Winter of 951 / 952 A.D.** The winter of 952 A.D. [in *France*] was cold from November to February.<sup>171</sup>

---

**952 A.D.** In Bagdad, *Iraq*, half of the city was inundated from a great overflow of the Euphrates River.<sup>47, 92</sup>

In 952 A.D. during the period between 27 April and 26 May, a severe drought struck *China*. Then during the period between 25 June and 24 July, floods struck Szechwan (now Sichuan province) in southwest *China* at Chengtu and Hua-yang. Over 1,000 families were flooded and 5,000 persons drowned.<sup>153</sup>

In 952 A.D. during the summer, there was a great drought in *China*. No snowfall during the winter.<sup>165</sup>

---

**Winter of 952 / 953 A.D.** There had been no snowfall during the winter in [*China*].<sup>153</sup>

---

**953 A.D.** In 953 A.D. during the period between 14 July and 11 August, a drought struck Honan (now Henan province) in central *China* at Kaifeng. There had been no snowfall during the winter. Wells and rivers dried up. There was [a plague of] locust. There was a famine.<sup>153</sup>

During the period between 14 July 953 and 4 May 954, there was a drought in *China* which produced a great famine and a plague.<sup>153</sup>

In 953 A.D. during the period between 20 October and 18 November, a severe drought struck the east coast of *China* in Kiangsu (now Jiangsu province) at Suchow and in Chekiang (now Zhejiang province) at Hangchow.<sup>153</sup>

In 953 A.D., a flood struck Hopei (now Hebei province) in northern *China* at Peiping. As a result, the land tax was remitted.<sup>153</sup>

In 953 A.D. during the spring and summer, there was a great drought in *China*. Wells and rivers dried up. The Hwang Ho River was fordable on foot. The drought was accompanied by a plague of locusts.<sup>165</sup>

---

**954 A.D.** In *England, Wales* and *Scotland*, a great famine which lasted four years.<sup>57, 90, 91, 212</sup>

In 954 A.D., there was pestilence in *Scotland* in which 40,000 people perished.<sup>212</sup>

In 954 A.D. during the spring and summer, there was a drought in *China*. Typhus fever raged. Due to the hardship, soup kitchens were opened.<sup>165</sup>

---

**956 A.D.** A very severe winter followed by a grievous famine, especially in *France* and *Burgundy*.<sup>72</sup>

Paradin, in *Annales de Bourgogne*, bk. 1, p. 149, speaks of a miraculous ice stone that fell in the year 956 in *Germany*.<sup>79</sup>

---

**959 A.D.** In *Baghdad, Iraq*, nearly three-fourths of the city was inundated from a great overflow of the *Euphrates River*.<sup>47, 92</sup>

---

**960 A.D.** In 960 A.D. during the period between 28 August and 23 September, a drought struck *China*. Then during the period between 23 October and 21 November, floods struck Shantung (now Shandong province) on the east coast of *China* at Hui-min and Shang-ho. Houses and fields were damaged by the floodwaters.<sup>153</sup>

In 960 A.D. during the autumn, there was a drought in *China*.<sup>165</sup>

---

**961 A.D.** In 961 A.D., floods struck in central *China* in Honan (now Henan province) at Shang-ch'iu and Mêng and in Hupeh (now Hubei province) at Hsiang-yang. During the same year between 16 July and 13 August, a drought struck Honan province at Kaifeng.<sup>153</sup>

In 961 A.D. during the summer and winter, there was a drought in Honan province in *China*.<sup>165</sup>

---

**Winter of 961 / 962 A.D.** During the period between 8 November 961 and 5 February 962, a drought struck *China* in Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

---

**962 A.D.** In *England*, the frost was so great as to cause a famine.<sup>47, 57, 72, 91, 93</sup>

A most severe winter, a great famine and horrible fire.<sup>72</sup>

In 962 A.D. during the period between 5 February and 8 August, a severe drought struck many regions of *China*. The areas affected included: <sup>153</sup>

- Honan (now Henan province) in central *China* at Loyang, Kaifeng, Mêng-ching, and Hua.
- Hopei (now Hebei province) in northern *China* at Ta-ming.
- Shansi (now Shanxi province) in northern *China* at Yung-chi and Hsi.
- Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing, Tsinan, Chü-yeh and P'u.
- Anhwei (now Anhui province) in eastern *China* at Su.
- Shensi (now Shaanxi province) in central *China* at Fu-shih.

Generally during the period between 2 June and 4 July, the drought affected many regions of *China*.

In 962 A.D. during the spring and summer, there was a drought in Chihli and Honan provinces in *China*.

In Chihli, this was a great drought.<sup>165</sup>

In 962 A.D. during the 7<sup>th</sup> moon, there were violent winds, which tore up trees in the vicinity of Shanghai, *China*.<sup>166</sup>

**963 A.D.** In 963 A.D. during the period between 22 August and 20 September, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan. Then during the period between 21 September and 19 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow causing fields to be damaged.<sup>153</sup>

During the period between 26 April 963 and 5 February 964, a drought struck Honan (now Henan province) in central *China* at Kaifeng. In 963 A.D. during the period 6 May and 8 November, the drought also struck in Honan province at Ch'in-yang.<sup>153</sup>

In 963 A.D. during the summer, autumn and winter, there was a drought in Honan province in *China*.<sup>165</sup>

### **963 A.D. – 964 A.D. Ireland. Famine**

In 963-964, an intolerable famine visited *Ireland*, and parents are said to have sold their children in order to get money with which to buy food.<sup>84</sup>

In *Ireland* in 963-964, an intolerable famine, “so that parents sold their children for food.”<sup>57, 91</sup>

**Winter of 963 / 964 A.D.** Up to the beginning of February, the winter [in *Western Europe*] was very hard and rough.<sup>62</sup>

The winter of 964 A.D. [in *France*] was cold until February.<sup>171</sup>

The excessive harshness of the cold in 964 in *Western Europe* in the north persisted until 1 February.<sup>79</sup>

**964 A.D.** In 964 A.D. during the period between 16 February and 8 August, a very severe drought struck several regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Loyang, Shan and Ling-pao.
- Shensi (now Shaanxi province) in central *China* at Shen-mu.
- Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng.
- Ningsia (now Ningxia province) in northwest *China* on the Loess Plateau at Ling-wu.
- Shansi (now Shanxi province) in northern *China* at Yung-chi.

In 964 A.D. during the spring and summer, there was a very severe drought in Honan and Shensi provinces in *China*.<sup>165</sup>

In 964 A.D., floods struck several regions of *China* including:<sup>153</sup>

- During the period between 15 May and 12 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and I-chêng. Fields were damaged.
- During the period between 10 August and 8 September, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yang-ch'un.
- During the period between 10 August and 8 September, floods struck Kiangsu province at T'ai. Houses were damaged and cattle drowned.

*Also refer to the section 963 A.D. – 964 A.D. for information on the famine in Ireland during that timeframe.*

**965 A.D.** In 965 A.D., floods struck many regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Mêng. Houses were damaged by the floodwaters.
- Kiangsu (now Jiangsu province) on the east coast of *China* at T'ai. Fields were damaged.
- Shantung (now Shandong province) on the east coast of *China* at Chi-yang and Kao-wan. Fields were damaged.
- During the period between 6 March and 4 April, floods struck Kiangsi (now Jiangxi province) in southern *China* at Ch'üan.
- During the period between 31 July and 28 August, floods struck Hupeh (now Hubei province) in central *China* at Ch'i-ch'un. Houses were damaged by the floodwaters.
- During the period between 29 August and 27 September, floods struck Honan province at Yang-wu and Mêng. Houses were damaged by the floodwaters.
- During the period between 29 August and 27 September, floods struck Shantung province at Tung-p'ing. Fields were damaged.
- During the period between 28 September and 26 October, floods struck Hopei (now Hebei province) in northern *China* at P'u-yang.
- During the period between 27 October and 25 November, floods struck Shantung province at Chi-yang.

In 965 [in *Germany*], there was a large persistent summer drought.<sup>172</sup>

**966 A.D.** In 966 A.D. during the period between 5 February and 8 August, a drought struck central *China* in Honan (now Henan province) at Kaifeng and in Shensi (now Shaanxi province) at Hua. The land tax was remitted at Hua. During the period between 26 May and 23 July, a drought struck several regions of *China*.<sup>153</sup>

In 966 A.D. during the spring, summer and autumn, there was a drought in Shensi province in *China*. The land tax was remitted.<sup>165</sup>

In 966 A.D., floods struck many regions of *China* including:<sup>153</sup>

- Floods struck Shantung (now Shandong province) on the east coast of *China* at Kuan-ch'êng where houses were damaged and at Chi-yang where houses and fields were damaged.
- Anhwei (now Anhui province) in eastern *China* at Hsü-i.
- Hunan province in south-central *China* at Hêng-yang. The floods were caused by heavy protracted rains.
- During the period between 21 June and 20 July, floods struck Shantung province at Tung-a. Fields were damaged.
- During the period between 21 July and 18 August, floods struck Honan (now Henan province) in central *China* at Jung-tsê. The dikes were damaged.
- During the period between 19 August and 16 September, floods struck Honan province at Hua and Anhwei at Su. The dikes were damaged.
- During the period between 19 August and 16 September, floods struck Shantung province at Tzū-ch'uan and Kao-wan. Several hundred families were flooded.
- During the period between 17 September and 16 October, floods struck in Honan province at Hua and in Hopei (now Hebei province) in northern *China* at Tung-ming.

### **966 A.D. – 967 A.D. Egypt. Famine**

The lowest Nile flood peak ever known seems to have been that of A. D. 966, when the waters rose only to twelve cubits, seventeen digits.<sup>83</sup> [The famine the following year swept away 600,000 people in the vicinity of the city of Al-Fustat, *Egypt*.<sup>84</sup> Al-Fustat was the first capital of *Egypt* under Arab rule. Today Al-Fustat is contained in the older part of Cairo.]

The death toll could have even been greater except for the actions of G'awhar, a lieutenant of the Caliph

Mo'izz. G'awhar organized relief measures. The Caliph lent him every assistance by sending many ships laden with grain. But the price of bread still remained high. G'awhar, being a food controller who had no patience with persuasive methods, ordered his soldiers to seize all the millers and grain dealers and flog them in the public market place. The administrator then established central grain depots and grain was sold throughout the two years of the famine under the eyes of a government inspector.<sup>84</sup>

During the famine, G'awhar allowed the natives to cast their hundreds of unburied dead into the Nile River, thereby contaminating the waters all the way to the sea and ushering in plagues of disease.<sup>84</sup>

---

**967 A.D.** In 967 A.D. during the period between 12 February and 8 November, a drought struck Honan (now Henan province) in central *China* at Kaifeng. As a consequence, one year's land tax was remitted. Then during the period between 7 September and 5 October, floods struck Honan province at Chi. Several hundred persons drowned.<sup>153</sup>

In 967 A.D. during the spring and autumn, there was a drought in Honan province in *China*. The land tax was remitted.<sup>165</sup>

In 967, neither the sun nor the moon could be seen in *Scotland* for 6 months. This was followed by a famine.<sup>72</sup>

*Also refer to the section 966 A.D. – 967 A.D. for information on the famine in Egypt during that timeframe.*

---

**968 A.D.** A famine in all of *Europe*, but chiefly *Germany* and *Scotland*.<sup>57, 72, 91</sup>

[In *Europe*], there was a tempest of wind and rain, that rotted the corn [grain] and caused a famine.<sup>72</sup>

[In 968 in the *Persian Gulf*, there were severe irruption following an earthquake [tsunami]. Several cities destroyed, and new islands formed.<sup>92</sup>]

In 968 A.D., a drought struck several regions of *China* including Kiangsu (now Jiangsu province) on the east coast of *China*; Anhwei (now Anhui province) in eastern *China*; Fukien (now Fujian province) on the southeast coast of *China*; and Kiangsi (now Jiangxi province) in southern *China*.<sup>153</sup>

In 968 A.D., there was a drought in Honan province in *China*.<sup>165</sup>

In 968 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 29 June and 27 July, the floods damaged houses and fields.

— During the period between 28 July and 26 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at T'ai. Crops were damaged.

— During the period between 27 August and 24 September, floods struck Szechwan (now Sichuan province) in southwest *China* at Nan-chiang. Houses were damaged by the floodwaters.

---

**969 A.D.** In May 969, the corn [grains] burnt by the winds, died; hence a sore famine.<sup>72</sup>

In 969 in *England*, “All grain burnt by the winds.” As a result, there was a famine.<sup>72, 91</sup>

[Another source places this famine in 968.] In May 968, there were very tempestuous and strong winds, which corrupted the corn [grains], vines and fruit trees; hence arose a great famine.<sup>72</sup>

In 969 A.D., floods struck many regions of *China* including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at I-tu and Tzū-ch'uan.

- Honan (now Henan province) in central *China* at Ju-nan and Shang-ch'iu.
- Anhwei (now Anhui province) in eastern *China* at Su.
- Hopei (now Hebei province) in northern *China* at Chêng-ting, P'u-yang and Yung-nien. Crops were damaged.
- Honan province at Hua, Ju-nan, Huai-yang and Hsü-ch'ang. Crops were damaged.
- Shantung province at Liao-ch'êng and Tsinan. Crops were damaged.
- Anhwei province at Fou-yang, Po, and Su. Crops were damaged.
- During the period between 16 August and 14 September, floods struck Honan province at Hsia-i.

In 969 A.D. during the period between 6 May and 14 September, a drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 969 A.D. during the summer and autumn, there was a drought in Honan province in *China*.<sup>165</sup>

---

**970 A.D.** In 970 A.D. during the period between 5 February and 8 August, a drought struck in central *China* in Honan (now Henan province) at Kaifeng and in Shensi (now Shaanxi province) at Pin.<sup>153</sup>

In 970 A.D. during the spring and summer, there was a drought in Honan and Shensi provinces in *China*.<sup>165</sup>

In 970 A.D., floods struck many regions of *China* damaging fields including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Chêng, Ling-pao, and Ju-nan.
  - Hopei (now Hebei province) in northern *China* at P'u-yang.
  - Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing, Tzū-ch'uan and Chi-ning.
  - Shansi (now Shanxi province) in northern *China* at Chieh.
  - Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.
  - Hunan province in south-central *China* at Yüeh-yang
- 

**971 A.D.** A great famine in *England*.<sup>72</sup>

In 971 A.D., according to legend, it rained for 40 days in *Southern England*. Swithin or Swithun, Bishop of Winchester died on 2 July 862. He desired to be buried in the open churchyard and not in the chancel of the minster, as was usual with other bishops and his request was complied with. But the monks on his being canonized, considering it disgraceful for the saint to lie in a public cemetery, resolved to remove his body into the choir; which had been done with a solemn procession, on the 15<sup>th</sup> of July [971?]. It rained however so violently for forty days together at this season, that the design was abandoned. The Feast Day of St. Swithun is observed on July 15. As a result, a popular superstition, expressed in this rhyme, was attached to Swithun's name.<sup>175</sup>

*St. Swithin's day if thou dost rain  
For forty days it will remain  
St. Swithin's day if thou be fair  
For forty days 'twill rain nae mair.*

In 971 A.D., floods struck many regions of *China* including:<sup>153</sup>

- Shantung (now Shandong province) on the east coast of *China* at Tung-a. Granaries and houses were damaged by the floodwaters.
- Honan (now Henan province) in central *China* at Ju-nan, Yüan-wu, and Shang-ch'iu.
- During the period between 25 July and 23 August, floods struck Honan province at Shang-ch'iu.
- During the period between 25 July and 23 August, floods struck Shantung province at I-tu and Tsinan. Farm fields were damaged.

— During the period between 21 November and 20 December, floods struck Hopei (now Hebei province) in northern *China* at P'u-yang.

---

**972 A.D.** In 972 A.D., floods struck many regions of *China* including:<sup>153</sup>

— Hopei (now Hebei province) in northern *China* at P'u-yang.

— Shansi (now Shanxi province) in northern *China* at Hsin-chiang.

— Anhwei (now Anhui province) in eastern *China* at Ho, Ho-fei, and Fêng-t'ai.

— During the period between 14 June and 12 July, floods struck Hopei province at P'u-yang.

— During the period between 13 July and 11 August, floods struck Honan (now Henan province) in central *China* at Yang-wu, Shang-ch'iu, and Chêng.

— During the period between 13 July and 11 August, floods struck Szechwan (now Sichuan province) in southwest *China* at Chung.

In 972 A.D. during the period between 5 February and 6 May, a drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 972 A.D. during the spring and winter, there was a drought in Honan province in *China*.<sup>165</sup>

---

**Winter of 972 / 973 A.D.** During the period between 8 November 972 and 5 February 973, a drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

---

**973 A.D.** In *England*, the River Thames greatly overflowed; many people drowned.<sup>40, 41, 47, 92</sup>

Thames in the night drowned much people and cattle.<sup>72</sup>

In 973, there was an inundation of the Thames.<sup>43</sup>

In 973 A.D., floods struck in Shantung (now Shandong province) on the east coast of *China* at P'u and in Hopei (now Hebei province) in northern *China* at P'u-yang and Ch'ing-fêng.<sup>153</sup>

---

**Winter of 973 / 974 A.D.** During the period between 28 December 973 and 25 January 974, a drought struck Honan (now Henan province) in central *China* at Kaifeng. [This drought continued between 5 February 974 and 5 February 975. It reappeared again in 975 during the period between 14 April and 13 May.]<sup>153</sup>

In 973 A.D. during the winter, there was a drought in Honan province in *China*.<sup>165</sup>

---

**974 A.D.** In 974 A.D. during the period between 6 May and 8 August, a drought struck Shansi (now Shanxi province) in northern *China* at Lin-fên and Chieh. During the period between 5 February 974 and 5 February 975, a drought struck Honan (now Henan province) in central *China* at Kaifeng. In 974 A.D. during the period between 8 August and 8 November, a drought struck Honan province at Hua.<sup>153</sup>

In 974 A.D. during the spring, summer and autumn, there was a drought in Chihli, Honan and Shansi province in *China*.<sup>165</sup>

---

**Winter of 974 / 975 A.D.** *Europe* experienced a cold winter which began on 1 November 974 lasting to 11 March 975.<sup>28</sup>

A most rigorous strong frost took place from 1 November to 11 March. Famine affected those that lived in the mountains.<sup>72</sup>

In the year 975 in Gaul [*Western Europe*], the winter was "long, dry and hard." A heavy frost lasted from early November until 22 March. In mid-May heavy snow fell.<sup>62</sup>

The winter of 975 A.D. was very cold for very long time. It lasted from November to 22 March. As a result, one-third of the population of *France* was decimated by famine and epidemics. It snowed in May.<sup>171</sup>

The winter of 975 in the north of *Western Europe* was dry, despite its great snow.<sup>79</sup>

The winter of 975 in *Western Europe* in the north was tough, long, dry, and accompanied by deep snow.<sup>79</sup>

In *England*, the frost was severe in 975 A.D.<sup>47, 93</sup> The frost was the severest.<sup>72</sup>

**975 A.D.** In Paris, *France*, a great number of inhabitants carried off by famine.<sup>57, 91</sup>

In *England*, famine scoured the hills.<sup>91</sup>

In 975, there was a famine in the mountains of *England*.<sup>72</sup>

In 975 A.D., there was a very terrible famine [in *England*].<sup>212</sup>

After a hard winter, on 14 May 975, there was a very heavy snowfall [in *Germany*].<sup>172</sup>

In 975 A.D. during the period between 14 April and 13 May, a drought struck in central *China* in Honan (now Henan province) at Kaifeng and in Shensi (now Shaanxi province). At Shensi, the drought was severe and brought on a famine.<sup>153</sup>

In 975 A.D. during the spring, there was a very severe drought in Honan and Shensi provinces in *China*.<sup>165</sup>

In 975 A.D., floods struck several regions of *China* including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Lin-i [located at 118.24° East longitude and 35.07° North latitude]. The floods were caused by heavy and protracted rains. The floods caused damage to the fields and crops.

— During the period between 12 June and 11 July, floods struck Honan (now Henan province) in central *China* at Kaifeng. The floods were caused by heavy and protracted rains.

— During the period between 12 July and 9 August, floods struck in Shantung province at P'u and in Hopei (now Hebei province) in northern *China* at P'u-yang and Ch'ing-fêng.

**976 A.D.** A grievous famine over all *England*.<sup>72</sup>

In *England*, this was the *micla hungor* (great famine).<sup>57, 91</sup>

In 976 A.D., floods struck Shantung (now Shandong province) on the east coast of *China* at Tzū-ch'uan. Fields were damaged. Then during the period between 3 April and 1 May, floods struck Honan at Kaifeng. This flood was caused by a heavy and protracted rainfall.<sup>153</sup>

**977 A.D.** In 977 A.D. during the period between 22 January and 20 February, a drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 977 A.D. during the spring, there was a drought in Honan province in *China*.<sup>165</sup>

In 977 A.D., floods struck many regions of *China* including: <sup>153</sup>

- Shantung (now Shandong province) on the east coast of *China* at P'u. The flood damaged the fields.
- Honan (now Henan province) in central *China* at Chêng.
- Szechwan (now Sichuan province) in southwest *China* at Nan-chiang and Kuang-yüan
- During the period between 20 June and 18 July, floods struck Shantung province at Tzū-ch'uan. Houses were damaged by the floodwaters.
- During the period between 20 June and 18 July, floods struck Hunan province in south-central *China* at Yung-shun. Dikes were damaged.
- During the period between 19 July and 17 August, floods struck Honan province at Jung-tsê.
- During the period between 19 July and 17 August, floods struck Hopei (now Hebei province) in northern *China* at Ch'ing-fêng.
- During the period between 19 July and 17 August, floods struck Hupeh (now Hubei province) in central *China* at Mien-yang. Houses and fields were damaged by the floodwaters.
- During the period between 18 August and 15 September, floods struck Honan province at Kaifeng. Crops were damaged.
- During the period between 16 September and 15 October, floods struck Honan province at Shan; Hopei at P'u-yang; and Hunan at Tao; Szechwan at Chung; and Anhwei (now Anhui province) in eastern *China* at Fêng-t'ai.
- During the period between 16 October and 13 November, floods struck Shensi (now Shaanxi province) in central *China* at Liao-yang.

**978 A.D.** In 978 A.D. during the period between 2 February and 8 August, a drought struck Honan (now Henan province) in central *China* at Kaifeng. <sup>153</sup>

In 978 A.D. during the spring and summer, there was a drought in Honan province in *China*. <sup>165</sup>

In 978 A.D., floods struck several regions of *China* including: <sup>153</sup>

- During the period between 10 May and 8 June, floods struck Honan (now Henan province) in central *China* at Huai-chia.
- During the period between 8 July and 6 September, floods struck Anhwei (now Anhui province) in eastern *China* at Hsü-i.
- During the period between 8 July and 6 September, floods struck Honan province at Ning-ling.
- During the period between 4 November and 2 December, floods struck Honan province at Hua.

**979 A.D.** In 979 A.D., floods struck several regions of *China* including: <sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Mien-yang. Houses and fields were damaged by the floodwaters.
- Chekiang (now Zhejiang province) on the east coast of *China* at Tung-yang. Houses were damaged by the floodwaters.
- During the period between 31 March and 28 April, floods struck Honan (now Henan province) in central *China* at Loyang. Houses were damaged by the floodwaters.
- During the period between 26 August and 23 September, floods struck Honan province at Shang-ch'iu.
- During the period between 26 August and 23 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at T'ai.
- During the period between 24 September and 23 October, floods struck Honan province at Chi.
- During the period between 24 September and 23 October, floods struck Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing.

In 979 A.D. during the summer and winter, there was a drought in Honan province in *China*. <sup>165</sup>

In 979, there was a grievous famine in *England*.<sup>72</sup>

---

**Winter of 979 / 980 A.D.** During the period between 8 November 979 and 5 February 980, a drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

---

**980 A.D.** In 980 A.D. during the period between 6 May and 8 November, a drought struck Honan (now Henan province) in central *China* at Kaifeng. During the period between 17 May and 15 June, a drought was prevalent across much of *China*.<sup>153</sup>

In 980 A.D. during the summer and autumn, there was a drought in Honan province in *China*.<sup>165</sup>

In 980 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 15 July and 13 August, floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang. Houses were damaged by the floodwaters.

— During the period between 15 July and 13 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.

— During the period between 14 August and 11 September, floods struck Hupeh (now Hubei province) in central *China* at Mien-yang. Houses and dikes were damaged.

---

**981 A.D.** In 981 A.D. during the period between 5 February and 4 June, a drought struck Honan (now Henan province) in central *China* at Kaifeng. Then during the period 3-31 August, floods struck several regions of *China* and the houses were damaged by floodwaters. Areas affected by floods included: Shensi (now Shaanxi province) in central *China* at Fu and Fu-shih; Kansu (now Gansu province) in northwest *China* at Ning; and Shansi (now Shanxi province) in northern *China* at Yung-chi.<sup>153</sup>

In 981 A.D. during the spring and summer, there was a drought in Honan province in *China*.<sup>165</sup>

In 981, there was a famine over all of *England*.<sup>72</sup>

---

**982 A.D.** In 982 A.D. during the period between 28 March and 25 April, a drought struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Kaifeng, Mêng, Ling-pao, and Chi.

— Shansi (now Shanxi province) in northern *China* at Hsin-chiang.

— Shantung (now Shandong province) on the east coast of *China* at Chu-ch'êng, Ts'ao, and Tzŭ-ch'uan.

— Hopei (now Hebei province) in northern *China* at Ho-chien.

In 982 A.D., floods struck many regions of *China* including:<sup>153</sup>

— During the period between 28 March and 25 April, floods struck Honan (now Henan province) in central *China* at Kaifeng. Fifty-four persons drowned.

— During the period between 26 April and 25 May, floods struck Shensi (now Shaanxi province) in central *China* at Yao. Crops were damaged.

— During the period between 26 April and 25 May, floods struck Shantung (now Shandong province) on the east coast of *China* at Chu-ch'êng and Liao-ch'êng. Crops were damaged.

— During the period between 26 April and 25 May, floods struck Honan province at Chi. Crops were damaged.

— During the period between 26 April and 25 May, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin and Chinkiang. Crops were damaged.

— During the period between 24 June and 22 July, floods struck Shantung province at Chang-ch'iu.

— During the period between 24 June and 22 July, floods struck Hupeh (now Hubei province) in central *China* at Hanyang and Chün. Houses were damaged by the floodwaters and people and cattle drowned.

— During the period between 23 July and 21 August, floods struck Shensi province.

- During the period between 23 July and 21 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Nan-p'ing. Houses were damaged by the floodwaters.
- During the period between 20 September and 19 October, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu. Granaries and houses were damaged by the floodwaters.
- During the period between 20 October and 18 November, floods struck Honan province at Ch'in-yang and Wu-chih. Farm fields were damaged.

**983 A.D.** A grievous famine everywhere.<sup>72</sup>

In 983 A.D., floods struck many regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Mêng-ching. Granaries and houses were damaged by the floodwaters.
- Hopei (now Hebei province) in northern *China* at Hsiung. Houses were damaged by the floodwaters.
- Shensi (now Shaanxi province) in central *China* at Fu.
- Hupeh (now Hubei province) in central *China* at Ching-mên. Houses were damaged by the floodwaters. Over 50 persons drowned.
- During the period between 5 February and 8 November, floods struck Honan province at Kaifeng, Yen-ching, Yang-wu, Fêng-ch'iu, Chung-mou, Yü-shih, Sui, and Ch'i. Farm fields were damaged.
- During the period between 5 February and 8 November, floods struck Hopei province at Ch'ang-yüan. Farm fields were damaged.
- During the period between 14 June and 12 July, floods struck Honan province at Hua. Houses and fields were damaged.
- During the period between 14 June and 12 July, floods struck Hopei province at P'u-yang. Houses and fields were damaged.
- During the period between 14 June and 12 July, floods struck Shantung (now Shandong province) on the east coast of *China* at P'u, Ts'ao, and Chi-ning. Houses and fields were damaged.
- During the period between 13 July and 10 August, floods struck Honan province at Kung and Kaifeng. Houses were damaged and many people drowned.
- During the period between 11 August and 9 September, floods struck *China*.
- During the period between 10 September and 8 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.
- During the period between 9 October and 7 November, floods struck Honan province at Hua.
- During the period between 9 October and 7 November, floods struck Anhwei (now Anhui province) in eastern *China* at Su. Houses were damaged by the floodwaters.

**984 A.D.** In 984 A.D. during the period between 6 May and 8 August, a drought struck Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 8 August and 8 November, a severe drought struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

In 984 A.D., floods struck many regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Mêng. Farm fields were damaged by the floodwaters.
- Szechwan (now Sichuan province) in southwest *China* at Ya-an. Houses were damaged by the floodwaters.
- Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsin-hsing. The army camp was damaged by the floodwaters.
- During the period between 4 April and 3 May, floods struck Honan province at Hua.
- During the period between 31 July and 28 August, floods struck Szechwan province at Yüeh-shan. Houses were damaged by the floodwaters and over 1,000 persons drowned.

— During the period between 29 August and 27 September, floods struck Shensi (now Shaanxi province) in central *China* at Fu-shih. Houses were damaged.

— During the period between 29 August and 27 September, floods struck Shantung (now Shandong province) on the east coast of *China* at Tzū-ch'uan. Houses were damaged.

**Winter of 984 / 985 A.D.** The winter of 985 A.D. was a very cold winter [in *Germany*], which lasted from November to May.<sup>172</sup>

**985 A.D.** In 985 A.D. during the period between 19 August and 16 September, floods struck Hopei (now Hebei province) in northern *China* at Ho-chien and Jên-ch'iu. Fields were damaged.<sup>153</sup>

**Winter of 985 / 986 A.D.** During the period between 15 December 985 and 12 January 986, a drought struck Honan (now Henan province) in central *China* at Kaifeng. There had been no snowfall during the winter.<sup>153</sup>

**986 A.D.** In 986 A.D. during the period between 10 July and 8 August, floods struck Anhwei (now Anhui province) in eastern *China* at Fêng-t'ai.<sup>153</sup>

**Winter of 986 / 987 A.D.** During the period between 4 December 986 and 2 January 987, a drought struck Honan (now Henan province) in central *China* at Kaifeng. There had been no snowfall during the winter.<sup>153</sup>

**987 A.D.** [In *England*], the extreme heat of summer killed many people; and they harvested almost nothing in fruits [of the earth].<sup>62</sup>

There was a dearth [famine] in *Albania*.<sup>57, 72, 91</sup>

A great dearth in *Albania*; but the unseasonableness of the weather brought barrenness of lands, and a grievous famine on many countries.<sup>72</sup>

In 987, the sudden thaw of unusually high snow brings powerful floods to the river Weser in *Germany*.<sup>172</sup>

In 987 a strong storm struck *Germany*. The great storm winds and high water occurred almost everywhere causing a lot of damage.<sup>172</sup>

The extreme summer heat of 987 in *Western Europe* caused a great reduction in crop yield.<sup>79</sup>

The summer of 987 A.D. produced extreme heat [in *France*].<sup>171</sup>

The summer of 987 in *Western Europe* produced frightening storms with extraordinary lightning and thunder.<sup>79</sup>

[In *England*], there were tempest all winter.<sup>72</sup>

**Winter of 987 / 988 A.D.** In the winter, the River Thames in *England* was frozen for 120 days.<sup>1</sup>

The River Thames in *England* was frozen for 120 days, which began on 22 December 987.<sup>2</sup>

In 987 A.D., there was a frost in London, *England*. It began on 22 December and lasted for 120 days.<sup>212</sup>

In *England*, the frost began on 22 December 987 which lasted for 120 days.<sup>28, 40, 41, 42, 43, 47, 93</sup>

*Byzantium* experienced a very cold winter.<sup>28</sup>

In the year 988, the winter [in *Western Europe*] was rough. The winter crop was destroyed by the cold. There was a drought in the spring. A great famine ensued.<sup>62</sup>

The winter of 988 A.D. was very severe [in *France*]. There were droughts in the spring. Then came famines.<sup>171</sup>

During the period between 23 December 987 and 21 January 988, a drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 987 A.D. during the winter, there was a drought in Honan province in *China*.<sup>165</sup>

---

**988 A.D.** In *England*, there was a great drought with excessive heat, both years (988-989).<sup>47, 72</sup>

[In *England*] from mid-July to mid-August in the year 988, there was such searing heat that many people were affected. The harvest of the fruits [of the earth] was much lower than usual. The burning sun and the drought consumed all and then there came a famine.<sup>62</sup>

Repeated flooding preceded the great summer of 988 in the north of *Western Europe*.<sup>79</sup>

In 988 A.D., the summer [in *Germany*] was extremely dry. This was soon followed by a famine.<sup>172</sup>

A harsh winter was followed by long copious rains. Then there was sudden heat, sustained and passionate. This characterized the weather in 988 in the north of *Western Europe*.<sup>79</sup>

From 15 July to 13 August 988 in the north of *Western Europe*, a scorching heat burnt the harvest. The heat broke out suddenly after a very cold winter and a great flood.<sup>79</sup>

In 988 in *England*, there was a famine from rains and barren land.<sup>57, 72, 91</sup>

In 988, there was an excessive drought and a most scorching heat.<sup>72</sup>

In 988 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 20 February and 20 March, floods struck Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng. Fields were damaged.

— During the period between 19 May and 16 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ying-tê. Fields and houses were damaged by the floodwaters.

— During the period between 15 August and 13 September, floods struck Hopei (now Hebei province) in northern *China* at Tz'ŭ.

---

**989 A.D.** In *England*, there were floods all the winter.<sup>47, 72, 92</sup>

There were great and often inundations in winter and violent winds, which threw down many buildings. In spring there was so great a drought, that it hindered sowing. The heat of the summer was past enduring. Hence came a famine. Then there were unseasonable snows and continual rains at harvest time. This prevented both plowing and sowing. A great famine in *Albania* and *Saxony*.<sup>72</sup>

In 989 in *England*, there was a grievous famine from a rainy winter and bad spring. There was neither plowing nor sowing. There was a snowy harvest.<sup>57, 72, 91</sup>

In 989 [in *England*], there was a snowy rainy harvest and as a result no sowing [during the fall planting] followed by a rainy winter.<sup>72</sup>

In *England*, there was a great drought with heat, both years (988-989).<sup>47</sup>

In 989 A.D. it rained fish in Saxony [now part of *Germany*].<sup>171</sup>

In 989 A.D., there was a large flood in *Friesland*. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In the year 989 in the north of *Western Europe*, an excessive drought during the spring prevented the first seeds from being planted.<sup>79</sup>

In the north of *Western Europe* in 989, there was a drought during the spring, which did not allow the planting of first seeds. Abundant snows immediately followed this excessive drought. Then heavy rainfalls completely prevented the planting of the seeds in the fall.<sup>79</sup>

The snowfalls and the spring drought of 989 in the north of *Western Europe* were followed by continuous rains that prevented the sowing of autumn [fall crops].<sup>79</sup>

In 989 A.D., a drought struck several regions of *China* including:<sup>153</sup>

— During the period between 6 June and 5 July, a drought struck Honan (now Henan province) in central *China* at Kaifeng.

— During the period between 4 August and 30 December, a drought struck Honan (now Henan province) in central *China* at Loyang. The drought resulted in a famine and as a consequence the granaries were opened.

— During the period between 4 August and 30 December, a drought struck Shantung (now Shandong province) on the east coast of *China* at Yeh and P'êng-lai. The drought resulted in a famine and as a consequence the granaries were opened.

— During the period between 4 August and 30 December, a drought struck Hopei (now Hebei province) in northern *China* at Shen and Chi [located at 115.34° East longitude and 37.34° North latitude]. The drought resulted in a famine and as a consequence the granaries were opened.

In 989 A.D. during the summer, autumn and winter, there was a great drought in Chihli, Honan and Shantung provinces in *China*. The granaries were opened.<sup>165</sup>

**990 A.D.** In 990 A.D., a terrible famine struck *Europe*.<sup>155</sup>

The weather during the summer of 990 A.D. was very favorable [in *France*].<sup>171</sup>

In 990 A.D. during the period between 5 February and 8 November, a severe drought struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Kaifeng, Hsü-ch'ang, Lin-ju, Chêng, and I-yang.

— Hopei (now Hebei province) in northern *China* at Ta-ming and Ts'ang.

— Shantung (now Shandong province) on the east coast of *China* at Shan.

— Shensi (now Shaanxi province) in central *China* at Ch'ien, Sian, and Fêng-hsiang.

In 990 A.D. during the spring, summer and autumn, there was a drought in Chihli, Honan and Shensi

provinces in *China*.<sup>165</sup>

In 990 A.D., floods struck several regions of *China* including:<sup>153</sup>

- Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang. Dikes were damaged and over 2,000 families were flooded.
- Honan (now Henan province) in central *China* at Mêng.
- During the period between 25 June and 24 July, floods struck Hupeh (now Hubei province) in central *China* at Huang-mei. Houses and fields were damaged by the floodwaters.
- During the period between 25 July and 22 August, floods struck Kiangsi province at Nan-ch'ang, Kiukiang, Chi-an, and Ch'i-ch'un.
- During the period between 25 July and 22 August, floods struck Honan province at Mêng.
- During the period between 25 July and 22 August, floods struck Kansu (now Gansu province) in northwest *China* at Ch'in-an.

---

**Winter of 990 / 991 A.D.** In 991, the vine and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

In the year 991 [in *Western Europe*], the vines were suffering much from the severity of the cold, the animal died from lack of food in the stalls, and there was a famine.<sup>62</sup>

The winter of 991 A.D. [in *France*] was very long and hard. The [grape] vines were decimated. The herds of domestic animals were depleted. Wheat crop was destroyed. Then came famine and pestilence.<sup>171</sup>

In 991 A.D., there was an extremely severe and long lasting frost [in *England*]. Crops failed, and famine and pestilence ended the year.<sup>212</sup>

---

**991 A.D.** The weather during the summer of 991 A.D. was very favorable [in *France*].<sup>171</sup>

In 991 A.D., a drought accompanied by a plague of locust struck many regions of *China* including:<sup>153</sup>

- Hopei (now Hebei province) in northern *China* at Ta-ming and Tz'ü, Ch'ing-ho, and Pa.
- Shansi (now Shanxi province) in northern *China* at Yung-chi, Hsin-chiang, Lin-fên, and Fên-shan.
- Shantung (now Shandong province) on the east coast of *China* at Hui-min, Lin-i, I-tu, Ts'ao, Chü-yeh, Shan, Ling, Liao-ch'êng, Tzū-yang, Tsinan, Tzū-ch'uan, and Pin. [Lin-i is located at 118.24° East longitude and 35.07° North latitude.]
- Honan (now Henan province) in central *China* at Shan, Lin-ju, Ling-pao, Chêng, Hsü-ch'ang, and Chi.
- Shensi (now Shaanxi province) in central *China* at Ta-li.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.
- Anhwei (now Anhui province) in eastern *China* at Po.
- Kansu (now Gansu province) in northwest *China* at Ch'ing-yang.
- During the period between 5 February and 6 May, a severe drought struck Honan province at Kaifeng.

In [991 A.D.], floods struck many regions of *China* including:<sup>153</sup>

- Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng. Houses were damaged.
- Anhwei (now Anhui province) in eastern *China* at Po. Houses and fields were damaged by the floodwaters. Also in Anhwei province, Hsu-i experienced flooding caused by heavy rains. Houses and fields were damaged and 21 persons drowned.
- Hupeh (now Hubei province) in central *China* at Chiang-ling. Fields were damaged.
- During the period between 17 May and 14 June, floods struck Honan (now Henan province) in central *China* at Kaifeng and Shan.
- During the period between 14 July and 12 August, floods struck Honan province at Kaifeng where fields and dikes were damaged and at Shang-ch'iu.

- During the period between 13 August and 10 September, floods struck Honan province at Hsü-ch'ang.
- During the period between 13 August and 10 September, floods struck Szechwan (now Sichuan province) in southwest *China* at Yüeh-shan.
- During the period between 13 August and 10 September, floods struck Hopei (now Hebei province) in northern *China* at Hsiung.
- During the period between 13 August and 10 September, floods struck Shantung province at Tsinan. The city walls were damaged by the floodwaters.
- During the period between 11 September and 10 October, floods struck Kiangsi (now Jiangxi province) in southern *China* at T'êng. Houses and fields were damaged by the floodwaters.
- During the period between 11 October and 8 November, floods struck Szechwan (now Sichuan province) in southwest *China* at Ch'üung-lai and P'u-chiang. Houses were damaged and 79 persons drowned.

In 991 A.D. during the spring, there was a great drought in Chihli, Honan, Shantung, Shansi and Shensi provinces in *China*. The drought was accompanied by a plague of locusts.<sup>165</sup>

**Winter of 991 / 992 A.D.** The winter of 992 A.D. was hard [in *France*].<sup>171</sup>

The year 992 was a troubled year producing many dreadful fire signs in the sky [in *Germany*]. The winter was long and hard, such that it was still frozen very hard shortly before Pentecost [late May]. One observed northern lights at the beginning of the year.<sup>172</sup>

**992 A.D.** In 992 A.D., a drought struck many regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Loyang and Kaifeng.
- Hopei (now Hebei province) in northern *China* at Ta-ming.
- Shansi (now Shanxi province) in northern *China* at Yang-ch'ü.
- Shensi (now Shaanxi province) in central *China* at Sian.
- Anhwei (now Anhui province) in eastern *China* at Po and Shou.
- Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou.
- Kiangsu (now Jiangsu province) on the east coast of *China*.
- During the period between 5 February and 6 May, a severe drought struck Honan province at Kaifeng.

In 992 A.D. during 1-30 August, floods struck Honan (now Henan province) in central *China* at Loyang. Houses were damaged and 240 persons damaged [drowned?].<sup>153</sup>

In 992 A.D. during the spring, summer and winter, there was a drought in Chihli, Honan, Kiangsu and Shensi provinces in *China*. In Honan, this was a great drought.<sup>165</sup>

**Winter of 992 / 993 A.D.** During the period between 8 November 992 and 5 February 993, a severe drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

**993 A.D.** [In *Germany*] from the Feast of St. John [24 June] to 9 November, throughout the summer and the fall, the drought and the heat were extraordinary. Many of the fruits [of the earth] did not come to maturity and were burned by the sun's heat. This was followed by great disease and mortality among humans and domestic animals.<sup>62</sup>

During the summer of 993 A.D., there was a drought from 24 June to 9 November [in *France*]. Then came epidemics. The crops were burned from the great heat and destroyed.<sup>171</sup>

The summer of 993 A.D. [in *England*] was so hot that the corn [grain] and fruit dried up.<sup>212</sup>

In 993 A.D. during the period between 6 February and 8 August, a drought struck several regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Loyang, Kaifeng, Hsü-ch'ang, Lin-ju and Hua.
- Anhwei (now Anhui province) in eastern *China* at Po.
- Shensi (now Shaanxi province) in central *China* at Shang.

In 993 A.D. during the summer, there was a drought in Honan and Shensi provinces in *China*.<sup>165</sup>

In 993 A.D., floods struck many regions of *China* including:<sup>153</sup>

- During the period between 23 June and 21 July, floods struck Kansu (now Gansu province) in northwest *China* at Ch'in-an. Houses were damaged and people drowned.
- During the period between 22 July and 19 August, floods struck Hopei (now Hebei province) in northern *China* at Ch'ang-p'ing where crops were damaged and at Peiping where houses were damaged.
- During the period between 22 July and 19 August, floods struck Chahar province (now eastern *Inner Mongolia*) at Cho-lu. Houses were damaged by the floodwaters.
- During the period between 19 September and 17 October, floods struck Hopei province at P'u-yang. Houses were damaged and people drowned.
- During the period between 19 September and 17 October, floods struck Szechwan (now Sichuan province) in southwest *China* at Fou-ling. Houses were damaged and people drowned.
- During the period between 18 October and 16 November, floods struck Hopei province at P'u-yang.

---

**Winter of 993 / 994 A.D.** [Two great volcanic eruptions occurred in the past 2,000 years. Both were rated with a “7” on the Volcanic Explosivity Index (VEI).<sup>20</sup> One eruption was the Tambora eruption of 19 April 1815 and the other was the Changbaishan eruption around the year 1,000 A.D. The volcanic eruptions of this size are very rare events typically occurring on a millennium scale. Changbaishan is located in the border between *North Korea* and *China*. Corrected radiocarbon dating of the Changbaishan eruption places it at 1,000 A.D. ± 40 years. But there appears to be a wide divergence of opinions about this event's timing. If the Changbaishan eruption occurred in the year 992 or 993, then it would be consistent with another “year without summer” type event.]

In *Germany*, the winter was very harsh and the freeze lasted almost without interruption from 12 November to mid-May. The spring and summer brought the plagues of every kind and a violent epidemic raged among men, and among cattle, sheep and pigs. In *Italy*, the rivers were covered with ice and the plants froze.<sup>62</sup>

The year 994 was a very hard winter [in *Germany*] with heavy frost, from the beginning of the winter months, until May. At the end of the month of July, the water in the lakes froze so hard that fish died. The trees, fruits and grazing livestock were destroyed. Then came famine and plague, which emptied the houses. The winter was full of rough weather, pestilence, storms, severe cold and unusually dryness.<sup>172</sup>

In 994 there was frost from 14 October until the middle of April. In the following summer, dryness made streams dry up [in *Germany*].<sup>172</sup>

During the winter of 994 A.D., there was a very cold winter of unusual length [in *France*]. It lasted from 15 November to 15 May.<sup>171</sup>

During the summer of 994 A.D., there were frosts in July [in *France*]. There were droughts and famines.<sup>171</sup>

The rigor of the winter of 994 in *Western Europe* ran from 15 November to 15 May. Then, there were very dangerous cold winds. And, still later, severe frosts lasted until 12 July.<sup>79</sup>

The summer was very cold throughout *Europe*. Severe frost and ice in July 995 A.D.<sup>28</sup>

[In *England*] in the year 994, the frost was strong and hard.<sup>72</sup>

From November 1<sup>st</sup> to May was a most severe winter. Cold pestiferous winds blew at the same time. About the end of July, from the severity of the frost, ice was frozen so hard on ponds and rivers, that most fish died, and the water was unfit for human use. Trees, corn and pastures were burnt up as though there had been a fire under the earth's surface. Finally famine and dire pestilence made most terrible havoc of man and beast. So great was the deaths that many houses were left desolate without inhabitants.<sup>72</sup>

In 994, there was the severest plague on man and beast from severe frost and famines.<sup>72</sup>

---

**994 A.D.** A destructive storm struck London, *England*, blowing down fifteen hundred buildings and killing several hundred persons.<sup>1, 90</sup>

In 994 A.D., Hopei (now Hebei province) in northern *China* at Ta-ming during the period of 13 February - 14 March experienced flooding. Three thousand villages flooded.<sup>153</sup>

In 994 A.D. during the period between 12 July and 9 August, a drought struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 994 A.D. during the summer, there was a drought in Honan province in *China*.<sup>165</sup>

The summers in the years 994 and 995 in *Europe* produced very high temperatures and a very persistent heat wave. Historians reported that the drought was so terrible that the fish died in the ponds, the trees caught fire, and the fruit and the flax harvest were destroyed. In 995 the greater part of *Europe's* rivers were so shallow that you could wade through them.<sup>62</sup>

The summer of 994 A.D. [in *England*] was so hot that the corn [grain] and fruit dried up.<sup>212</sup>

In 994 in *Western Europe*, the dearth of rain caused the rivers to dry up. It killed the fish in most lakes. It dried up thousands of trees and burned grassland and crops.<sup>79</sup>

In 994, a summer drought dried up many streams [in *Germany*].<sup>172</sup>

---

**995 A.D.** In 995 A.D. during the period between 4 March and 2 April, a drought struck Honan (now Henan province) in central *China* at Kaifeng. There had been no snowfall during the winter.<sup>153</sup>

In 995 A.D. during the spring, there was a drought in Honan province in *China*. No snowfall during the winter.<sup>165</sup>

In 995 A.D. during the period 3-31 May, floods caused by heavy rains struck Honan (now Henan province) in central *China* at Kaifeng. Then during the period 1-30 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Kan where the city walls were damaged.<sup>153</sup>

In 995, a terrible hurricane struck the town of Chichester in West Sussex, *England*.<sup>72</sup>

---

**996 A.D.** A storm struck Colchester, *England*.<sup>40, 41</sup>

In 996 A.D. during the period between 5 February and 8 August, a drought struck Honan (now Henan province) in central *China* at Kaifeng. There had been no snowfall during the winter.<sup>153</sup>

In 996 A.D. during the spring and summer, there was a drought in Honan province in *China*.<sup>165</sup>

In 996 A.D., floods struck several regions of *China* including:<sup>153</sup>

— During the period between 19 June and 17 July, floods struck Honan (now Henan province) in central *China* at Kaifeng.

— During the period between 18 July and 16 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou. Granaries and houses were damaged by the floodwaters.

— During the period between 18 July and 16 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing. The dikes were damaged.

— During the period between 18 July and 16 August, floods struck Honan province at Shang-ch'iu.

— During the period between 17 August and 15 September, floods struck Honan province at Shan.

— During the period between 17 August and 15 September, heavy and protracted rains caused floods in Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton.

**998 A.D.** The River Thames in *England* was frozen five weeks.<sup>2, 28, 40, 41, 42, 43, 47, 72, 93</sup>

In 998 A.D., the frost in London, *England*, caused the River Thames to be frozen over for 5 weeks.<sup>212</sup>

In 998 A.D. during the period between 5 February and 8 August, a drought struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Kaifeng. The land tax was remitted.

— Chekiang (now Zhejiang province) on the east coast of *China*.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.

— Hupeh (now Hubei province) in central *China* at Chiang-ling.

— Hunan province in south-central *China* at Changsha.

In 998 A.D. during the spring and summer, there was a drought in Chêhkiang, Honan, Hunan, Hupeh, Kiangsu and Kiangsi provinces in *China*.<sup>165</sup>

In 998 A.D. during the period between 6 May and 8 August, floods struck *China*. During the period between 26 July and 24 August, floods struck Shensi (now Shaanxi province) in central *China* at Fêng-hsiang. People drowned. Floods also struck Shantung (now Shandong province) on the east coast of *China* at Tsinan where houses and fields were damaged by the floodwaters.<sup>153</sup>

In 998 A.D. in the vicinity of Shanghai, *China*, a flood caused a scarcity of food.<sup>166</sup>

**999 A.D.** The cold weather in Baghdad, *Iraq* around the year 999 killed palm trees.<sup>28</sup>

In the years 999 and 1000 [in *Germany*], there were two hot and dry summers that caused all the streams and rivers to shrink [dry up].<sup>172</sup>

In 999 A.D. during the period between 19 April and 17 May, a drought struck many regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Kaifeng.

— Hupeh (now Hubei province) in central *China* at Chiang-ling.

— Hunan province in south-central *China* at Changsha.

— Chekiang (now Zhejiang province) on the east coast of *China*.

- Kiangsu (now Jiangsu province) on the east coast of *China* at P'ei [located at 118.03° East longitude and 34.30° North latitude].
- Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Kuei-lin.
- Shantung (now Shandong province) on the east coast of *China* at Ts'ao and Shan.
- Shansi (now Shanxi province) in northern *China* at Lan.

In 999 A.D. during the period between 11 November and 10 December, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Lung-ch'i. Houses were damaged.<sup>153</sup>

In 999 A.D. during the spring, there was a great drought in Chêhkiang, Honan, Hunan, Hupeh, Kiangsi, Kiangsu, Kwangsi, Shansi and Shantung provinces in *China*.<sup>165</sup>

**1000 A.D.** [*France* experienced a famine in the year 1000. The cause was rather unusual. The year 1000 was a time of extraordinary suffering, for the whole country was seized with a panic, fearing that the world would come to an end during this the millennial year. Thousands went on pilgrimages, deserting their homes and their fields and obstructing the whole normal course of their existence.<sup>84</sup> Since the fields were left unplowed and unplanted and since the world did not come to an end, starvation set in.]

In the years 999 and 1000 [in *Germany*], there were two hot and dry summers that caused all the streams and rivers to shrink [dry up].<sup>172</sup>

In 1000, a drought struck several regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.
- Hupeh (now Hubei province) in central *China* at Chiang-ling.
- Hunan province in south-central *China* at Changsha.
- During the period between 9 March and 6 April, a drought struck Honan (now Henan province) in central *China* at Kaifeng.

In the year 1000 during the spring, there was a drought in Anhwei, Honan, Hunan, Hupeh, Kiangsu and Kiangsi provinces in *China*.<sup>165</sup>

In 1000, floods struck Szechwan (now Sichuan province) in southwest *China* at Lang-chung. During the period between 7 April and 6 May, flood struck Szechwan province at San-t'ai. Fields were flooded. During the period between 5 June and 3 July, floods struck Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing. During the period 3-31 August, floods struck Shensi (now Shaanxi province) in central *China* at Yang where people drowned.<sup>153</sup>

**1001 A.D.** In 1001 during the period between 28 January and 25 May, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1001 during the spring and summer, there was a drought in Honan province in *China*.<sup>165</sup>

In 1001, floods struck Szechwan (now Sichuan province) in southwest *China* at San-t'ai. During the period between 23 July and 21 August, floods struck Shensi (now Shaanxi province) in central *China* at Ho-yang where people drowned.<sup>153</sup>

**1002 A.D.** In 1002 [in *France*], the summer was unfavorable.<sup>173</sup>

In 1002, several regions of *China* experienced flooding.<sup>153</sup>

- During the period between 17 March and 15 April, floods struck Hopei (now Hebei province) in northern *China* at Hsiung, Pa, Ho-chien, Jên-ch'iu, Shen and Ts'ang. Fields were damaged.

— During the period between 17 March and 15 April, floods struck Shensi (now Shaanxi province) in central *China* at Ch'ien. Fields were damaged.

— During the period between 13 July and 10 August, floods from heavy rains struck Honan (now Henan province) in central *China* at Kaifeng. Houses were damaged.

**1003 A.D.** The year 1003 produced excessive rains and overflowing rivers in several places. The Loire River in *France* rose to a prodigious height, and it ravaged the coast and there was fear of another deluge.<sup>79</sup> [The Loire River is located in south-central and west-central France and drains into the Atlantic Ocean in the Bay of Biscay.]

In 1003 [in *France*], the summer was unfavorable.<sup>173</sup>

The winter in *France* was harder than usual, and disastrous flooding occurred in the aftermath.<sup>62</sup>

In 1003, the winter in southern *France* was longer than usual.<sup>79</sup>

In 1003 during the period between 4 February and 5 March, floods struck in Honan (now Henan province) in central *China* at Kaifeng and Loyang and in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.<sup>153</sup>

#### **1004 A.D. – 1016 A.D. England. Famine**

In 1004 in *England* “such a famine prevailed as no man could remember.”<sup>57, 91</sup>

A famine struck *England* from 1005 to 1016 during the reign of Aethelred the Unready. “Such a famine prevailed as no man can remember.” Chroniclers say that half the population of the larger island perished, although many of the dead were caused by the wars between Aethelred and Sweyn the Dane, the latter being forced by the famine to retire from England for a time.<sup>84</sup>

In 1005 in *England*, “This year was the great famine in England.” Sweyn the Dane quits in consequence.<sup>91</sup>

In 1006, a great famine in *England* and over all *Europe*, such as the living never saw before. They scarce sufficed to bury the dead.<sup>72</sup>

In 1008, there was a famine attended with a plague in *Wales*.<sup>72</sup>

In 1012, there was a terrible famine.<sup>72</sup>

In 1016, there was a famine from great hailstorms, thunder and lightning.<sup>72</sup>

**1004 A.D.** In 1004, there was a drought in Honan (now Henan province) in central *China* at Kaifeng during the period of 21 June - 19 July. Many people died from sunstroke. In 1004 during the period between 17 September and 16 October, floods struck in Honan (now Henan province) in central *China* at Shang-ch'iu and in Hopei (now Hebei province) in northern *China* at P'u-yang. During the period between 17 October and 14 November, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

In 1004 during the summer, there was a drought in Anhwei, Honan, Kiangsi and Kiangsu provinces in *China*. Many people died from sunstroke in Honan.<sup>165</sup>

Also refer to the section **1004 A.D. – 1016 A.D.** for information on the famine in England during that timeframe.

---

**1005 A.D.** In 1005 during the period between 9 July and 7 August, floods struck Kansu (now Gansu province) in northwest *China* at Ning. Houses were damaged by the floodwaters and many people drowned. Then during the period between 11 October and 4 November, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.<sup>153</sup>

In 1005 during the autumn, there was a drought in Kiangsu province in *China*.<sup>165</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1006 A.D.** In 1006 during the period between 30 May and 27 July, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 28 July and 26 August, floods struck Honan province at Shang-ch'iu. During the period between 27 August and 24 September, floods struck Shantung (now Shandong province) on the east coast of *China* at I-tu.<sup>153</sup>

In 1006 during the summer, there was a drought in Honan province in *China*.<sup>165</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1007 A.D.** In 1007, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 17 July and 15 August, floods struck Honan (now Henan province) in central *China* at Jung-tsê. Forty-two families were flooded and people drowned.

— During the period between 17 July and 15 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Nan-p'ing. People drowned.

— During the period between 16 August and 13 September, floods struck Hopei (now Hebei province) in northern *China* at P'u-yang.

— During the period between 14 September and 13 October, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Hêng. The army camps were damaged by the floodwaters.

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1008 A.D.** In *Wales*, there was a famine followed by a plague.<sup>57, 91</sup>

In 1008 during the period between 10 February and 9 March, a drought engulfed Hopei (now Hebei province) in northern *China* at Ta-hsing. Then during the period between 6 July and 3 August, floods struck Honan (now Henan province) in central *China* at Yü-shih.<sup>153</sup>

In 1008 during the spring, there was a drought in Chihli province in *China*.<sup>165</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1009 A.D.** In one part of *Italy*, the rivers were frozen.<sup>62</sup>

In the year 1009 in *Italy*, the troops marched over the frozen rivers.<sup>62</sup>

[In *England*], it was very rainy.<sup>72</sup>

In 1009 [in *France*], the weather was unfavorable.<sup>173</sup>

A hurricane in the Irish Sea did incredible damage.<sup>72</sup>

In 1009 during the period between 5 February and 8 August, several regions of *China* experienced droughts including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Kaifeng and Loyang.
- Hunan province in south-central *China* at Changsha.
- Hopei (now Hebei province) in northern *China* at Hsing-t'ai.
- Shensi (now Shaanxi province) in central *China* at Sian.

In 1009 during the spring and summer, there was a drought in Honan and Shensi provinces in *China*.<sup>165</sup>

In 1009, several regions of *China* experienced flooding.<sup>153</sup>

- During the period between 25 July and 22 August, floods damaged houses.
- During the period between 25 July and 22 August, floods struck Honan (now Henan province) in central *China* at Kaifeng. As a result, the land tax was remitted.
- During the period between 25 July and 22 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. As a result, the land tax was remitted.
- During the period between 25 July and 22 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Chi-ning, I-tu, and Tzū-ch'uan. As a result, the land tax was remitted.
- During the period between 23 August and 20 September, floods struck Honan province at Kaifeng.
- During the period between 21 September and 20 October, floods struck Kansu (now Gansu province) in northwest *China* at T'ien-shui.
- During the period between 21 September and 20 October, floods struck Shensi (now Shaanxi province) in central *China* at Fêng.

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

**1010 A.D.** The year 1010 produced extraordinary rainfall in southern *France*.<sup>79</sup>

The year 1010, northern *France* suffered from alternating periods of droughts and harmful overabundant rains.<sup>79</sup>

In 1010 during the period between 6 May and 8 August, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 14 July and 12 August, floods struck Kiangsi (now Jiangxi province) in southern *China* at Chi-an and Ch'ing-chiang. Fields were damaged. Then during the period between 11 September and 9 October, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Chinkiang and Anhwei (now Anhui province) in eastern *China* at Su. Then during the period between 10 October and 8 November, floods struck Shansi (now Shanxi province) in northern *China* at Yung-chi.<sup>153</sup>

In 1010 during the summer and autumn, there was a drought in Anhwei, Honan, Kiangsi and Kiangsu provinces in *China*.<sup>165</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

**1011 A.D.** *Europe* and *Egypt* experienced a cold severe winter. There was ice on the Nile River.<sup>28</sup>

During the winter of 1011, [*France*] experienced a cold winter.<sup>173</sup>

In 1011 during the period between 5 June and 3 July, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1011 during the summer, there was a drought in Honan province in *China*.<sup>165</sup>

In 1011, several regions of *China* experienced flooding.<sup>153</sup>

— Floods struck Kiangsi (now Jiangxi province) in southern *China* at Chi-an and Ch'ing-chiang. Houses and fields were damaged by the floodwaters.

— During the period between 4 July and 1 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.

— During the period 2-31 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Pin and Hui-min.

— During the period 2-31 August, floods struck Kiangsi province at Kiukiang, Nan-ch'ang, Kao-an and I-ch'un. Fields were damaged.

— During the period 1-29 September, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming. Farm fields were damaged and people drowned.

— During the period between 30 September and 28 October, floods struck Honan (now Henan province) in central *China* at Mêng and Wên. Houses were damaged by the floodwaters.

— During the period between 30 September and 28 October, floods struck Kiangsu province at Soochow.

— During the period between 28 December 1011 and 25 January 1012, floods struck Kiangsu province at Huai-an and T'ai. Crops were damaged.

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1012 A.D.** In *England* and *Germany*, there was a great inundation from the sea.<sup>47, 72, 92</sup>

In *England* and *Germany*, endless multitudes died of famine.<sup>57, 91</sup>

An inundation from the sea overwhelmed many towns in *England*, *Germany*, etc. And much people, endless multitudes, died of famine and plague. There were great rains.<sup>72</sup>

In 1012, a storm surge caused floods. As a result, dikes were built along the river Weser [in northeast *Germany*]. “At that time, the Danube River in Bavaria overflowed its banks, the Rhine and its banks as well. An innumerable amount of people and livestock died and many buildings and forest were destroyed by the forces of the tide.”<sup>172</sup>

In 1012 in the north of *Western Europe*, there were heavy rainfalls that produced floods. The waters of the Danube and Rhine Rivers caused immense damage.<sup>79</sup>

In 1012, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 26 January and 24 February, floods struck Shantung (now Shandong province) on the east coast of *China* at Hui-min.

— During the period between 25 February and 24 March, floods struck Shantung province in *China* at Pin and Hui-min.

— During the period between 22 June and 21 July, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Shao-wu.

— During the period between 22 July and 19 August, floods struck Kansu (now Gansu province) in northwest *China* at Ch'ing-yang. People drowned.

In 1012 during the period between 24 May and 21 June, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China*; Anhwei (now Anhui province) in eastern *China*; and Chekiang (now Zhejiang province) on the east coast of *China*. Then during the period between 12 August and 18 September, a drought engulfed Kiangsu province at Yangchow.<sup>153</sup>

In 1012 during the summer, there was a drought in Chêhkiang and Kiangsu provinces in *China*.<sup>165</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1013 A.D.** In *England*, there was an earthquake, rains, floods, thunder, lightning and a hurricane.<sup>47, 72, 92</sup>

[In *England*] in 1013, there was a great earthquake, and whirlwind or hurricane from the west, throwing down houses and tearing up trees by the roots. Thunder and lightning in May.<sup>72</sup>

In 1013 during the period 11 July and 9 August, floods struck Shensi (now Shaanxi province) in central *China* at Pao-an. Houses were damaged by the floodwaters and 650 persons drowned.<sup>153</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1014 A.D.** Many *English seaports* destroyed by the sea.<sup>46</sup>

In 1014, there were great inundations of the *English coasts* and a number of seaport towns were demolished.<sup>47, 92</sup>

In 1014, there was an inundation on the *English coasts*, which demolished a number of seaport towns.<sup>90</sup>

In 1014, on the 3<sup>rd</sup> of October, the sea overflowed, drowned many villages and an innumerable multitude of people.<sup>72</sup>

In 1014 [in *France*], the winter was mild.<sup>173</sup>

In 1014, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 30 June and 29 July, floods struck Anhwei (now Anhui province) in eastern *China* at Hsü-i. Fields were damaged.

— During the period between 30 June and 29 July, floods struck Honan (now Henan province) in central *China* at Loyang.

— During the period between 30 June and 29 July, floods struck Kansu (now Gansu province) in northwest *China* at T'ien-shui. People drowned.

— During the period between 28 July and 26 September, floods struck Hopei (now Hebei province) in northern *China* at P'u-yang.

— During the period between 25 November and 24 December, floods struck Hopei province at Pin.

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1015 A.D.** In 1015 during the period between 22 February and 22 March, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 17 August and 15 September, a flood struck Shensi (now Shaanxi province) in central *China* at Chung-pu. People drowned.<sup>153</sup>

In 1015 during the spring, there was a drought in Honan province in *China*.<sup>165</sup>

[In *England*], there was a fatal inundation of the Sea.<sup>72</sup>

In 1015, there was a great inundation of the sea along the *English coasts*. A number of seaport towns and their inhabitants were destroyed.<sup>212</sup>

In 1015 [in *France*], the winter was mild.<sup>173</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1016 A.D.** In 1016 [in *France*], the winter was mild.<sup>173</sup>

In *Ireland*, there were excessive rains and floods – producing cattle mortality.<sup>47, 92</sup>

There was an awful famine throughout *Europe* – “Hail, thunder and lightning.”<sup>57, 91</sup>

There was an awful famine throughout *Europe*.<sup>90, 212</sup>

In July, hail and thunder killed many people. Trees and corn suffered much. A grievous famine followed.<sup>72</sup>

There was a terrible tempest of much hail, rain, thunder and lightning [in *England*], which was fatal to people, corn [grain], cattle and trees.<sup>72</sup>

In 1016, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 7 July and 5 August, floods struck Kansu (now Gansu province) in northwest *China* at T'ien-shui. Houses were damaged by the floodwaters and 67 persons drowned.

— During the period between 6 August and 3 September, a flood struck Shensi (now Shaanxi province) in central *China* at Fu-shih. Dikes and the city walls were damaged by the floodwaters.

— During the period between 4 October and 2 November, a flood struck Hopei (now Hebei province) in northern *China* at Hsiung and Pa.

— During the period between 4 October and 2 November, a flood struck Szechwan (now Sichuan province) in southwest *China* at Kuang-yüan.

In 1016 during the period between 4 September and 2 November, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng and An-Yang, and Hopei (now Hebei province) in northern *China* at Ta-ming and P'u-yang. The drought was accompanied by a plague of locust.<sup>153</sup>

In 1016 during the autumn, there was a drought in Chihli and Honan provinces in *China*. The drought was accompanied by a plague of locusts.<sup>165</sup>

*Also refer to the section 1004 A.D. – 1016 A.D. for information on the famine in England during that timeframe.*

---

**1017 A.D.** In 1017 [in *France*], the winter was mild.<sup>173</sup>

In 1017 during the period between 31 March and 28 April, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 6 May and 8 August, a drought struck Shensi (now Shaanxi province) in central *China* at Sian. Then during the period between 8 August and 8 November, a drought again struck Honan province at Kaifeng.<sup>153</sup>

In 1017 during the spring, summer and autumn, there was a drought in Honan and Shensi provinces in *China*. [The source text cited the year 1107 but was out of chronological order and the error was the result of a transposed number.]<sup>165</sup>

On 7 July 1017, there was a severe thunderstorm over Magdeburg, *Germany*.<sup>172</sup>

---

**1018 A.D.** The summer of 1018 [in *France*] was hot and dry.<sup>173</sup>

In 1018 a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 1018, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**1019 A.D.** In 1019, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 5 July and 3 August, floods struck Honan (now Henan province) in central *China* at Hua.

— During the period between 5 July and 3 August, floods struck Hopei (now Hebei province) in northern *China* at P'u-yang.

— During the period between 5 July and 3 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.

— During the period between 5 July and 3 August, floods struck Shantung (now Shandong province) on the east coast of *China* at P'u, Tung-p'ing, Tsinan, Chi-ning and Shan.

— During the period 2-30 September, floods struck Honan province at Hua, Kaifeng and Loyang.

— During the period 2-30 September, floods struck Hopei province at Ta-ming.

---

**Winter of 1019 / 1020 A.D.** Many people succumbed to the very harsh winter of 1019-1020 [in *Germany*]. The year 1020 was remembered as a hard and cold winter with much snow. This year, the Sea poured over North Friesland so much so, that many towns and villages were entirely ruined. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In the year 1020, the winter was very harsh and persistent. As a result, there was a huge mortality rate spread over the whole continent [of *Europe*].<sup>62</sup>

---

**1020 A.D.** In *England*, the frost was very severe.<sup>47, 72, 93</sup>

In *England*, there were great floods followed by plague.<sup>47, 72, 92</sup>

In 1020 many people were killed by the severe cold winter. The Albis (now called Elbe) and Visurgis (now called Weser) Rivers in *Germany* rose high drowning many of their coasters [coastal trading vessels - shallow-hulled ships used for trade between locations on the same island or continent].<sup>72</sup>

In July 1020, there were 3 days of very heavy floods along the Weser and Elbe rivers [in *Germany*]. Also this year, a strong storm surge struck along the North Sea.<sup>172</sup>

In 1020 during the period between 5 February and 6 May, a drought engulfed Shensi (now Shaanxi province) in central *China* at Nan-chêng. Then during the period between 6 May and 8 August, a drought struck Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 24 June and 22 July, a flood struck Honan province at Hua.<sup>153</sup>

In 1020 during the spring and summer, there was a drought in Honan province in *China*.<sup>165</sup>

---

**1021 A.D.** In 1021, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 15 February and 15 March, floods struck Honan (now Henan province) in central *China* at Kaifeng.

— During the period between 15 April and 14 May, floods struck Honan province at Kaifeng and Loyang. Fifty percent of the land tax was remitted.

— During the period between 8 November and 6 December, floods struck in Honan province at Kaifeng and Loyang; in Anhwei (now Anhui province) in eastern *China*; and in Chekiang (now Zhejiang province) on the east coast of *China*. The land tax was remitted.

---

**Winter of 1021 / 1022 A.D.** During the period between 8 November 1021 and 5 February 1022, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1021 during the winter, there was a drought in Honan province in *China*.<sup>165</sup>

---

**1022 A.D.** In 1021 or 1022 in *England*, there was excessive heat, “yet marbles sweat profusely.”<sup>47, 72</sup>

In 1022 [in *England*], there was a strong heat wave in the summer. Men and animals died.<sup>212</sup>

In 1021 there was an excessive hot droughty summer in *England*. The *French* and *Germans* place this heat wave in 1022 and say that so great a drought and heat arose that many people and cattle died of it. In this heat, marble pillars sent forth so profuse a sweat.<sup>72</sup>

The summer of 1022 [in *France*] was superb.<sup>173</sup>

In 1022 in *Ireland*, there was a great shower of hail, the hailstones as big as crab apples. There was also great thunder and lightning which killed an infinite number of cattle.<sup>93</sup>

In the year 1022, during the synod and royal assembly at Aachen in west-central *Germany*, such a strong heat occurred that many people suffocated and died a sudden death. Many animals also died. The plaster and the marble columns of the temple were sweating as if there was considerable moisture. In *England*, this summer was extremely hot and dry. In a great part of *Germany* heat that accompanied terrible storms proved fatal for humans and cattle.<sup>62</sup>

In Hindustan (*India*) in 1022, during the reign of Masood I, the area experienced a great drought followed by a famine. The whole country was entirely depopulated.<sup>57</sup> [Hindustan is the land between the Himalayas and the Indian Ocean.]

About 1022 A.D., there was a great famine in *India*.<sup>179</sup>

There are records that indicate whole provinces in *India* were depopulated by famine in 1022 A.D.<sup>84</sup>

This year was remarkable for drought and famines in many parts of the world.<sup>57</sup>

In 1022, several regions of *China* experienced flooding.<sup>153</sup>

— Flood struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Yangchow; in Hopei (now Hebei province) in northern *China* at Ts’ang; and in Honan (now Henan province) in central *China* at Kaifeng.

— During the period between 4 February and 4 March, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing. The land tax was remitted.

— During the period 2-31 July, floods struck Hopei province at Peiping.

— During the period between 28 October and 26 November, floods struck in Hopei province at Yen-shan and in Shantung (now Shandong province) on the east coast of *China* at Wu-ti. Houses were damaged by the floodwaters and many people drowned.

---

#### **Within 1023 A.D. – 1064 A.D. China. Famine**

During the reign of Emperor Jin-Tsong [1023-1064], a long drought caused a famine in *China*. The emperor saved 500,000 of his subjects from perishing by the timely supplies he sent them of corn [grain] and rice.<sup>186</sup>

---

**1023 A.D.** In 1023, several regions of *China* experienced flooding.<sup>153</sup>

— Flood struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow.

— During the period between 25 January and 22 February, floods struck in Honan (now Henan province) in central *China* at Kaifeng and in Kiangsu province at Yangchow.

— During the period between 22 May and 20 June, floods struck Honan province at Hua.

---

**1024 A.D.** In *Russia*, there was a major famine. There were 38 major famines in *Russia* between 1024 and 1936. Many of these famines were accompanied by such horrors as eating tree bark, grass, and dung, and cannibalism.<sup>96</sup>

In 1024 during the period between 5 February and 6 May, a severe drought engulfed *China*.<sup>153</sup>

In 1024 during the spring, there was a great drought in Honan province in *China*.<sup>165</sup>

---

### **1025 A.D. – 1027 A.D. Egypt. Famine**

A famine took place in *Egypt* in 1025, during the rule of Caliphate of Zahir. The suffering was widespread. It became necessary to prohibit the slaughter of cattle and there was no meat to be had anywhere, as fowls, the common meat of *Egypt*, had quickly disappeared. The stronger among the population turned brigand and began to prey upon the weaker members of society. Caravans and pilgrims were attacked by Syrians bands, which began to invade border towns. People flocked to the palace in masses crying piteously for relief at the hands of the Commander of the Faithful. But no help was to be had at that quarter because the palace was very short of provisions. When the banquet for the Feast of the Sacrifice was spread, the slaves of the royal household broke in and swept the food from the tables. Slaves began to rise in revolt in all parts of the country and it became necessary for citizens to organize committees of safety for self-protection, the government granting permits to kill the bondmen. With an ample rise of the Nile River in 1027, however, the period of suffering came to an end.<sup>84</sup>

---

**1025 A.D.** In *England*, there was a famine and plague from the greatest rains.<sup>57, 72, 91</sup>

In Flanders [now *Belgium*], it rained constantly from 15 October to April. This was followed by a plague, which swept away the greatest part of men. Afterwards there was a great famine.<sup>72</sup>

In 1025 during the period between 26 August and 24 September, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian. As a result due to the hardship, the land tax was remitted. Then during the period between 23 November and 22 December, floods struck Hupeh (now Hubei province) in central *China* at Hsiang-yang. Fields were damaged and the land tax was remitted.<sup>153</sup>

In 1025 during the autumn, there was a drought in Shensi province in *China*. The land tax was remitted.<sup>165</sup>

*Also refer to the section 1025 A.D. – 1027 A.D. for information on the drought and famine in Egypt during that timeframe.*

---

**1026 A.D.** In 1026 in *Italy*, there was such a strong heat wave that many animals and people suffered greatly.<sup>62</sup>

In 1026, several regions of *China* experienced flooding.<sup>153</sup>

— Flood struck Honan (now Henan province) in central *China* at Chêng.

— During the period between 17 July and 14 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou, Nan-p'ing, and Shao-wu. Houses and fields were damaged by the floodwaters and many people drowned.

— During the period between 17 July and 14 August, floods struck in Honan province at Kaifeng and Loyang; in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow; and in Hopei (now Hebei province) in northern *China* at Ta-ming. The land tax was remitted.

— During the period between 12 November and 11 December, floods struck Hupeh (now Hubei province) in central *China* at Ching-shan. Many people drowned.

*Also refer to the section 1025 A.D. – 1027 A.D. for information on the drought and famine in Egypt during that timeframe.*

**1027 A.D.** In 1027, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 10 April and 8 May, floods struck in Hupeh (now Hubei province) in central *China* at Hsiang-yang; in Anhwei (now Anhui province) in eastern *China* at Fou-yang; and in Honan (now Henan province) in central *China* at Hsü-ch'ang and Lin-ju.

— During the period between 5 August and 2 September, floods struck in Kansu (now Gansu province) in northwest *China* at T'ien-shui and in Kiangsu (now Jiangsu province) on the east coast of *China* at T'ai where many people drowned.

In 1027 during the period between 7 June and 4 August, a drought engulfed central *China* at Honan (now Henan province) at Kaifeng and Shensi (now Shaanxi province) at Sian. Then during the period 1-30 December, a drought struck Shensi province at Hua. The drought was accompanied by a plague of locust. As a result of the hardship, the land tax was remitted.<sup>153</sup>

In 1027 during the summer and autumn, there was a great drought in Honan and Shensi provinces in *China*. As a result, the land tax was remitted. The drought was accompanied by a plague of locusts.<sup>165</sup>

**1028 A.D.** In 1028 during the period between 28 April and 26 May, a drought engulfed *China*.<sup>153</sup>

In 1028 during the summer, there was a drought in *China*.<sup>165</sup>

In 1028, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 25 July and 22 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, I-chêng, and Chinkiang. Houses were damaged by the floodwaters.

— During the period between 25 July and 22 August, floods struck Hopei (now Hebei province) in northern *China* at Hsiung and Pa.

— During the period between 23 August and 20 September, floods struck Hopei province at Ta-ming where the autumn land tax was remitted and at P'u-yang.

— During the period between 23 August and 20 September, floods struck Shensi (now Shaanxi province) in central *China* at Lin-t'ung. Many people drowned.

**1029 A.D.** In 1029 during the period between 16 February and 17 March, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

### **1030 A.D. – 1032 A.D. France. Famine**

In *France* from 1030-32, the whole course of nature seemed to be upset, and there were intense cold in the summer and oppressive heat during the winter. Rains and frost came out of season and for three years there were neither a period for planting seeds or for harvesting. The miseries of mankind in *France* at that time were incredible. Also there was a fear of the coming of the end of the world coinciding with the 1,000<sup>th</sup> anniversary of the Crucifixion. Thousands upon thousands died of starvation, and the living were too weak to bury the dead. There were many horrible instances of cannibalism and human flesh was said to have been exposed for sale in the market at Tournus. In their maddened condition, the peasants exhumed human bodies from graves and gnawed the bones.<sup>84</sup>

One of the harrowing incidents of the time, which will give some idea of the insanity which suffering induced, occurred in the wood of Chatânay, near the town of Macon. A traveler and his wife stopped at a hut supposedly occupied by a holy hermit. Scarcely had they entered the adobe, however, when the woman discovered a pile of skulls in the corner. She and her husband fled to the town and when an investigation followed, it was found that the hermit had murdered and partly devoured 48 men, women and children.<sup>84</sup> [Chatânay is located in Burgundy in east-central *France*.]

Grass, roots, and white clay were the ordinary articles of food for the poorer classes during these terrible years. And as a result, the sufferers almost ceased to resemble human beings. Their stomachs became greatly distended, while almost all the bones of their bodies were visible beneath their leathery skin. Their very voices became thin and piping.<sup>84</sup>

Packs of raging wolves came out of the forests and fell upon the defenseless peasants. It seemed as if mankind in *France* could never recover.<sup>84</sup>

Raoul Glaber (from Medieval *France*) tells us that in the years 1030-32, the whole earth was so inundated with “continuous rain for three years” that there could not be found a furrow in the field for sowing. It followed that these floods caused an awful famine.<sup>61</sup>

Excessive rainfall and humidity was the main cause of the terrible famine of 1030 to 1033 in *France*. The ground was incessantly drenched by rainfall. Farmers waited in vain for a favorable time for sowing their crops. The soil remained so soaked for three years, that it didn’t offer a single furrow to receive grain. These floods offered a sad triumph over the weeds in the fields. Bushel of seed brought only a pint in the best land and the pint itself only a few grains.<sup>79</sup>

---

**1031 A.D.** In *England*, there were extended general floods from rains.<sup>47, 72, 92</sup>

In *England*, there was a famine from great rains and locust.<sup>57, 72, 91</sup>

There were terrible tempests and great rains. This caused such inundations in rivers near the sea as overflowed the lands. Famine and plague followed. At the same time, famine and plague grievously oppressed Cappadocia (*Turkey*), *Armenia*, Paphlagonia (*Turkey*), and almost all *the East*. Many were forced to leave their country.<sup>72</sup>

In 1031 during the period between 23 June and 21 July, floods struck *China*.<sup>153</sup>

*Also refer to the section 1030 A.D. – 1032 A.D. for information on the famine in France during that timeframe.*

---

**Winter of 1031 / 1032 A.D.** During the period between 17 December 1031 and 15 January 1032, there was a drought in *China*. There had been no snowfall during the winter.<sup>153</sup>

In 1031 during the winter, there was a drought in *China*.<sup>165</sup>

---

**1032 A.D.** During 1032-1033, there was a great famine [in *France*].<sup>173</sup>

In 1032 during the period between 13 April and 11 May, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* and Anhwei (now Anhui province) in eastern *China*. Then during the period between 12 May and 10 June, floods struck Shantung (now Shandong province) on the east coast of *China* at Kuan. Farm fields were damaged by the floodwaters. Then during the period between

11 June and 9 July, a drought of long duration struck Honan (now Henan province) in central *China* at Kaifeng. Crops were damaged.<sup>153</sup>

In 1032 during the spring and summer, there was a drought of long duration in Honan and Kiangsu provinces in *China*.<sup>165</sup>

*Also refer to the section 1030 A.D. – 1032 A.D. for information on the famine in France during that timeframe.*

---

**1033 A.D.** In Gaul [*Western Europe*] the winter was severe. In *Switzerland*, the Imperial Army of Emperor Conrad II suffered much from the cold.<sup>62</sup>

In 1033, there was a severe drought in Southern China during the period of 29 July - 27 August. Because of the severe drought, the locust, the famine and the plague, 20% to 30% of the people died.<sup>153</sup>

In 1033 during the autumn, there was a great drought in *China*. Typhus fever raged. The drought was accompanied by a plague of locusts. Because of the hardship, soup kitchens were opened.<sup>165</sup>

The weather in 1033 was ominous. The temperature in Gaul [*Western Europe*] was so unfavorable that farmers could not sow or harvest because the fields were constantly flooded. Because of the incessant rains, it was believed that it would take 3 years for the soil to become suitable for sowing furrows. A bushel of grain was sown in the fertile land. When harvested the grain yielded only a sixth of a bushel, hardly a handful. A plague started in the *East*. After ravaging *Greece*, the plague came to *Italy* and spread to Gaul [*Western Europe*], and did not even spare *England*. Individuals were forced to eat grass, and animals that had fallen [dead animals]. The people killed themselves in order to consume themselves. Some children were tempted with an egg or an apple in order to lure them away. These children were then kill for food to satisfy their hunger. This madness, the frenzy grew so that the animals were safe to escape death; when the people nourished themselves on human flesh, even though this crime was punishable with the stake [burning at the stake]. Some people who starved so long that when someone arrived to nurse them back to health, they ate a full meal and fell over dead [refeeding syndrome]. It was generally believed; the order of the seasons and the elements had ceased.<sup>62</sup>

On 9 July 1033, a bolt of lightning set the Church of Saint Michael's on fire in Hildesheim, *Germany*. [This would place the event on the year the church construction was completed and the church was consecrated.]<sup>172</sup>

The year 1033 in *France* was noted for its rain. But it was also distinguished for its great calamities. All the elements were engaged in a war for three years running. The seasons were contrary to sowing crops.<sup>79</sup>

---

**1034 A.D.** In 1034 [in *France*], the weather was warm and produced an abundant harvest equivalent to five years of normal harvest. The harvest was rich in cereals, wine and fruits of all kinds.<sup>62</sup>

In 1034, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 18 July and 16 August, floods struck Anhwei (now Anhui province) in eastern *China* at Hsü-i.

— During the period between 17 August and 15 September, floods struck Hopei (now Hebei province) in northern *China* at P'u-yang.

— During the period between 16 September and 14 October, floods struck Kiangsi (now Jiangxi province) in southern *China* at Hsiu-shui. Two hundred families were flooded and over 370 persons drowned.

---

**1035 A.D.** A frost on Midsummer Day, so vehement, that the grain and fruits were destroyed.<sup>2, 40, 41, 42, 43</sup>

A frost on Midsummer Day (21 June) struck *England* killing crops.<sup>28</sup> - destroyed the fruits of the earth.<sup>90</sup>

In 1035 [in *England*], there was a killer frost on Midsummer's day (June 24<sup>th</sup>) that destroyed the corn [grain] and fruit.<sup>212</sup>

In *England* in the year 1035, the frost on June 24 was still severe. All the grass and grain was lost. This produced a dearth.<sup>72</sup>

A frost in *England* on Midsummer Day; all grass, grain and fruit destroyed; a dearth.<sup>47, 93</sup>

---

**1036 A.D.** In 1036 during the period between 27 June and 25 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at Kan and Chi-an. Houses were damaged by the floodwaters. During the same period of time a drought of long duration struck Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

In 1036 during the summer, there was a drought of long duration in Chihli province in *China*.<sup>165</sup>

---

**1037 A.D.** In 1037 during the period between 16 June and 15 July, a drought engulfed *China*. Then during the period between 16 July and 13 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. Dikes were damaged. Then during the period between 12 September and 11 October, floods struck Chekiang province at Shao-hsing. People drowned.<sup>153</sup>

In 1037 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1038 A.D.** In 1038, a terrible famine in Constantinople (now Istanbul, *Turkey*).<sup>72</sup>

[Another source places this event in 1035.] The *Byzantine Empire* was visited by a famine.<sup>57, 91</sup>

In 1038 [in *England*], there was a famine with a plague.<sup>72</sup>

In 1038, floods struck Szechwan (now Sichuan province) in southwest *China* at Ta. During the period between 5 July and 3 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou where houses were damaged by the floodwaters and many people drowned.<sup>153</sup>

---

**1040 A.D.** In *Germany*, there were great floods.<sup>47, 72, 92</sup>

There were great inundations in *Germany*.<sup>72</sup>

In 1040, there was a famine [in *England*], more severe than any other.<sup>212</sup>

In 1040 during the period between 9 October and 7 November, floods struck Honan (now Henan province) in central *China* at Hua.<sup>153</sup>

---

**1041 A.D.** On 11 January 1041, there was a strong storm surge along the *North Sea* coast.<sup>172</sup>

The whole year, 1041 was frightful in *England*, in both temperature and great excessive rains. This damaged corn [grains] and caused a great death of cattle. This destruction was far greater than anyone living ever remembered. Then began a famine that lasted seven years. On 3 November, there was a fearful tempest and great rain. In Flanders [now *Belgium*], the sea broke down its banks, and carried off all, far and near, with it into the ocean.<sup>72</sup>

[Another account places this event in 1042] In *England* in 1042, about this time came such a famine that a sextarius of wheat, which usually is a load for one horse, sold for 5 solidi and more. This lasted seven years.<sup>57, 91</sup>

In 1041 during the period between 28 September and 27 October, a drought engulfed *China*.<sup>153</sup>

In 1041 during the autumn, there was a drought in *China*.<sup>165</sup>

---

**1042 A.D.** The summer of 1042 in northern *France* was very wet.<sup>79</sup>

In 1042 during the period between 20 June and 19 July, a drought engulfed *China*.<sup>153</sup>

In 1042 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1043 A.D.** In 1043, tempest and profound summer rains, harvest snow, scarcity of wine and corn [grain] prevailed in *France* and *Germany*.<sup>72</sup>

The year 1043 in northern *France* produced great rains. The summer was rainy and wintery.<sup>79</sup>

There were tempests all summer.<sup>72</sup>

The rains and storms in the summer of 1043 in *France* made the year similar to the winter. There was very little fruit and poor harvests.<sup>79</sup>

In 1043, there was a grievous famine over all *England*. Corn (grain) was the dearest ever known by anyone living.<sup>72</sup>

In 1043 during the period between 5 February and 8 August, a drought engulfed *China*.<sup>153</sup>

In 1043 during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**Winter of 1043 / 1044 A.D.** In 1043, a great snow fell in harvest.<sup>72</sup>

The winter of 1043 was very cold. There was frost from 1 December to 1 March in Normandy, *France*.<sup>173</sup>

In 1044, the vine and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

In 1043 in northern *France*, heavy frosts lasted from early December until early March.<sup>79</sup>

During the winter of 1043-44, the winter was very harsh in *Germany* and *France*, and accompanied by frequent snow. The frost lasted from 1 December to early March. The vines were so damaged that the wine was extremely rare. The loss of the harvest produced a famine so great that many people were forced to eat unclean animals. The mortality was considerable.<sup>62</sup>

---

**1044 A.D.** [In *Western Europe*] in 1044, the year was remarkable for the great abundance of rain showers and the unusual lack of fruits of the earth.<sup>62</sup>

In 1044 during the period 1-29 April, a drought engulfed the east coast of *China* in Chekiang (now Zhejiang province) and Kiangsu (now Jiangsu province) at Yangchow and Nanking.<sup>153</sup>

In 1044 during the spring, there was a drought in Chêhkiang, Kiangsu and Kiangsi provinces in *China*.<sup>165</sup>

[In *England*], there were tempest in November that produced floods.<sup>72</sup>

In 1044, there was “hunger all over *England*. Corn [grain] dearer than ever known.”<sup>212</sup>

The winter of 1044 [in *France*] was cold.<sup>173</sup>

---

**1045 A.D.** In Flanders [now *Belgium*], there was an inundation from the sea.<sup>47, 72, 92</sup>

In 1045 during the period between 20 February and 20 March, a drought of long duration engulfed *China*.<sup>153</sup>

In 1045 during the spring, there was a drought of long duration in *China*.<sup>165</sup>

[In *England*] in 1045, it rained all November, summer rains, harvest snows, tempests with scarcity after.<sup>72</sup>

---

**1046 A.D.** In *England*, there was a great rain flood causing a loss of cattle.<sup>47</sup>

In 1046, there was a flood of the Severn Valley in *England* from great rain floods; loss of cattle.<sup>72, 92</sup>

In *England*, an inundation of the River Severn, drowned an abundance of cattle.<sup>40, 41, 43</sup>

In 1046, there was a drought of long duration in Honan (now Henan province) in central *China* at Kaifeng. During the period of 7 July - 4 August, many people died from sun-stroke.<sup>153</sup>

In 1046 during the summer, there was a drought of long duration in *China*. Many died from sunstroke.<sup>165</sup>

---

**1047 A.D.** The winter of 1047 [in *France*] was cold.<sup>173</sup>

There was such a large amount of snow in the West [*Western Europe*], that the forests were inaccessible.<sup>62</sup>

On 1 January 1047, snow fell to a great depth in the west of *England*.<sup>72</sup>

In 1047 in *Ireland*, there was a great famine and snow. In *England*, there was a famine from snow and frost.<sup>57, 91</sup>

In 1047, there was a famine [in *England*] that was caused by great snow and frost.<sup>72</sup>

In 1047, there was great snow. All summer there were tempests with rain, thunder and lightning, dearth and death.<sup>72</sup>

On 1 January, there fell in the west of *England*, a very great and deep snow, which broke down most woods. The snow laid on the ground until 1 March. The summer after had such tempests of thunder and lightning, that the growing of corn (grain) was burnt and blasted. Several towns were struck by lightning and reduced to ashes. There followed a great dearth [famine], and the death of people and cattle.<sup>72</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1047-48, famine in *Scotland* extended over two years.<sup>57</sup>

In 1047 during the period between 29 January and 27 April, a severe drought engulfed *China*.<sup>153</sup>

In 1047 during the spring, there was a great drought in Honan province in *China*.<sup>165</sup>

**1048 A.D.** In 1048 [?], there was a great flood in *China*. The Yellow River cut a new course to the sea.<sup>142</sup>

In 1048, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 14 July and 11 August, floods struck Hopei (now Hebei province) in northern *China* at P'u-yang.

— During the period between 12 August and 10 September, floods struck in Hopei province at Ta-ming and in Honan (now Henan province) in central *China* at Chi, Kaifeng, and Loyang.

**1049 A.D.** The winter of 1049 [in *France*] was cold.<sup>173</sup>

In 1049 during the period between 5 February and 4 April, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming. Then during the period between 3 June and 2 July, a drought struck *China*.<sup>153</sup>

In 1049 during the summer, there was a drought in *China*.<sup>165</sup>

**1050 A.D.** In 1050 during the period between 26 March and 23 April, a drought engulfed *China*.<sup>153</sup>

In 1050, floods struck Hopei (now Hebei province) in northern *China* at Chêng-ting and Ting. During the period between 17 November and 16 December, floods struck Hopei province at Ta-ming.<sup>153</sup>

In 1050 during the spring, there was a drought in *China*.<sup>165</sup>

**1051 A.D.** There was a great barrenness of the land in *England*, and dearth, famine, want of bread and great mortality.<sup>72</sup>

[Another source places this event in 1050] In 1050 in *England*, there was a great famine and mortality; from barrenness of the land.<sup>57, 91</sup>

In 1051, there was a dreadful famine in Lincolnshire, *England*.<sup>212</sup>

The entire year of 1051 in northern *France* was very wet.<sup>79</sup>

The summer of 1051 [in *France*] was very poor.<sup>173</sup>

In 1051 there was a famine in *Mexico* that caused the Toltecs to migrate.<sup>57, 91</sup>

In 1051 during the period between 26 March and 10 June, a drought engulfed Hopei (now Hebei province) in northern *China* at Ch'ing-ho and Chi [located at longitude 115.34° East and latitude 37.34° North]. Then during the period between 9 August and 7 September, floods struck in Hopei province at Ta-ming and in Shantung (now Shandong province) on the east coast of *China* at Kuan-t'ao.<sup>153</sup>

In 1051 during the spring and summer, there was a drought in Chihli province in *China*.<sup>165</sup>

**1052 A.D. – 1060 A.D. India and Afghanistan. Famine**

In Hindustan, from 1052-60, there was seven years of drought in Ghor [province in central *Afghanistan*] so that the earth was burned up, and thousands of men and animals perished with heat and famine.<sup>57</sup>

In 1055 A.D., there was a famine in Ghor [a ruined city, in the Maldah district of West Bengal, *India*].<sup>179</sup>

There are records that indicate whole provinces in *India* were depopulated by famine in 1052 A.D. The famine of such severity swept over Hindustan that the Mongol emperor himself was unable to obtain the necessities [food] for his household.<sup>84</sup> [Hindustan is the land between the Himalayas and the Indian Ocean.]

---

**1052 A.D.** On St. Thomas's Eve [December 20] was such a hurricane in *England* as demolished many churches, blew down innumerable houses and broke down and rooted up trees.<sup>72</sup>

In 1052 during the period between 27 August and 25 September, floods struck in Hopei (now Hebei province) in northern *China* at Ta-ming and in Shensi (now Shaanxi province) in central *China* at Fu. Houses were damaged by the floodwaters.<sup>153</sup>

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**Winter of 1052 / 1053 A.D.** During the period between 24 December 1052 and 22 January 1053, there was a drought in *China*. There had been no snowfall during the winter.<sup>153</sup>

In 1052 during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

---

**1053 A.D.** A year of heat and drought, which extended to the north of *France*.<sup>62</sup>

The summer of 1053 [in *France*] was a great [excessively hot] summer.<sup>173</sup>

In 1053, a persistent drought burned lands in the country of Caux [*Switzerland*].<sup>79</sup>

There was a famine in *England* after a comet.<sup>72</sup> The famine lasted two years.<sup>57, 91</sup>

In 1053 during the period between 13 November and 12 December, a drought engulfed *China*. The drought was accompanied by a plague of locusts.<sup>153</sup>

In 1053, there was a drought in *China*. The drought was accompanied by a plague of locusts.<sup>165</sup>

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**1055 A.D.** In London, *England*, nearly 400 houses were blown down by a storm.<sup>40, 41, 43, 56</sup>

A hurricane at Coventry, *England* blew down 400 houses.<sup>72</sup>

In 1055, there was a great famine.<sup>72</sup>

In 1055 during the period between 30 April and 28 May, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1055 during the spring, there was a drought in Honan province in *China*.<sup>165</sup>

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**1056 A.D.** The winter of 1056 [in *France*] was mild.<sup>173</sup>

In 1056 during the period between 17 May and 15 June, floods struck in Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**1057 A.D.** The winter of 1057 [in *France*] was cold.<sup>173</sup>

In 1057 in northern *France*, there was a large amount of snow and rain.<sup>79</sup>

There was a great snowfall [in *England*].<sup>72</sup>

In 1057, several regions of *China* experienced flooding.<sup>153</sup>

— Floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.

— During the period between 5 February and 8 November, floods struck Anhwei (now Anhui province) in eastern *China* at Hsü-i.

— During the period between 5 July and 2 August, floods struck in Honan (now Henan province) in central *China* at Kaifeng and Loyang and in Hopei province at Ta-ming. Farm fields were damaged by the floodwaters.

— During the period between 3 August and 1 September, floods struck in Honan (now Henan province) in central *China* at Kaifeng and Loyang and in Hupeh (now Hubei province) in central *China* at Chiang-ling.

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**1058 A.D.** In 1058 during the period between 23 July and 21 August, floods struck in Honan (now Henan province) in central *China* at Yüan-wu. Fields were damaged. During the same period of time, a drought struck Szechwan (now Sichuan province) in southwest *China* at Fêng-chieh.<sup>153</sup>

In 1058 during the autumn, there was a drought in Sze-ch'wan province in *China*.<sup>165</sup>

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**1059 A.D.** In 1059, there was a great comet seen in *Poland*, followed by a severe famine.<sup>72</sup>

[Another account places the event in the year 1058] In 1058 in *Poland* there was a grievous famine.<sup>57, 72, 91</sup>

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**Winter of 1059 / 1060 A.D.** In 1059 in *England*, there was a severe winter with a great frost. This produced a severe plague and famine in 1060.<sup>47, 72, 93</sup>

The winter in *England* in 1059 was cold and long, very injurious to corn [grain], hence followed a famine and plague in 1060.<sup>72</sup>

The winter of 1060 was unusually hard and strong. It caused a very significant loss in the wheat and grape harvest. A terrible famine, affected many people there.<sup>62</sup>

---

**1060 A.D.** The winter of 1060 [in *France*] was cold.<sup>173</sup>

In 1060 during the period between 6 May and 8 August, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at San-t'ai. Then during the period between 30 July and 28 August, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow and in Chekiang (now Zhejiang province) at Hu-chou.<sup>153</sup>

In 1060 during the summer and autumn, there was a drought in Sze-ch'wan province in *China*.<sup>165</sup>

*Also refer to the section 1052 A.D. – 1060 A.D. for information on the drought and famine in India and Afghanistan during that timeframe.*

---

**1061 A.D.** The winter of 1061 [in *France*] was cold.<sup>173</sup>

In *England*, the River Thames frozen seven weeks.<sup>47, 72, 93</sup>

In 1061, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) and in Chekiang (now Zhejiang province). As a result, the land tax was remitted.<sup>153</sup>

---

**1062 A.D.** In 1062 during the period between 12 April and 11 May, a drought engulfed *China*. Then during the period between 9 July and 7 August, floods struck Shansi (now Shanxi province) in northern *China* at Tai. During the period between 8 August and 5 September, floods struck in Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsin-i and in Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

In 1062 during the spring, there was a drought in *China*.<sup>165</sup>

In 1062 [in *England*], there was a terrible thunder and lightning storm with subterranean motions.<sup>72</sup>

---

**1063 A.D.** The winter in *Europe* was long and intensely cold and many people perished by cold and hunger.<sup>1</sup>

The winter of 1063 [in *France*] was very cold.<sup>173</sup>

The River Thames in *England* was frozen 14 weeks.<sup>2, 40, 41, 42, 43, 47, 72, 90, 93</sup>

In 1063, there was a great frost in *England*. The River Thames in London was frozen over for 13 or 14 weeks.<sup>212</sup>

In 1063, the River Thames in *England* was frozen over for thirteen weeks. All the rivers of the continent were frozen, and even south of the Alps, the Po River in northern *Italy* and many other streams were blocked by ice.<sup>63</sup>

In April of 1063 in [*Western Europe*], there was a tempest for four days together of cold, wind and deep snow which killed all fowls and cattle and damaged trees and vines.<sup>72</sup>

In the middle of April 1063 in *France*, there came four days of winter so harsh with winds and snow, as most trees and [grape] vines were killed, and the birds and livestock died from exposure to the cold.<sup>79</sup>

### 1064 A.D. – 1071 A.D. Egypt. Famine

A terrible 7-year famine struck *Egypt* beginning in 1064. To the hardships of starvation were added the miseries of civil warfare. Nasir-ed-dawla, commander-in-chief of the Fatamid army, upon being deposed by the Caliph Mustansir, quickly gained the support of bands of Arabs and Berbers. Black regiments were soon in control of all *Upper Egypt*. Forty thousand horsemen of the Lewata Berbers descended upon the delta of the Nile River and swept all before them, cutting dikes and destroying canals with the malign purpose of spreading starvation. Both Al-Fustat and Cairo in northern *Egypt* were cut off from supplies, and to add to these tribulations, the Nile failed to come to a flood in 1065.<sup>84</sup>

The peasantry, not daring to venture into the fields for fear of the armed bands of brigands, were unable to carry on any agricultural pursuits; so that the dearth of one year's harvest was prolonged into seven. Prices soared to heights never before reached in the near East. A single cake of bread sold for 15 dinars. Five bushels of grain sold for 100 dinars. Eggs were scarce at a dinar each. Cats and dogs brought fabulous prices, and women, unable to purchase food with their pearls and emeralds, flung their useless jewels into the streets. One woman according to a historian gave a necklace worth 1,000 dinars for a mere handful of flour. The caliph's stable, which had numbered 10,000 horses and mules, was reduced down to three scrawny nags.<sup>84</sup>

Rich and poor suffered on equal terms. Finally the desperate people resorted to revolting cannibalism. Human flesh, which was sold in the open market, was obtained in the most horrible manner. Butchers concealed themselves behind latticed windows in the upper stories of houses, which looked out upon busy thoroughfares. Letting down ropes to which were attached great meat hooks, these anglers for human flesh snared the unwary pedestrians, drew their shrieking victims through the air, and then prepared and cooked the food before presenting it for sale in the stalls on the street level.<sup>84</sup>

In *Egypt*, there was a drought, which caused the failure of the rising of the Nile River for seven year. This great drought produced a seven-year famine in the area.<sup>47</sup>

In 1064 in *Egypt*, there was a terrible famine, which lasted 7 years. The people driven to terrible expedients.<sup>91</sup>

Beginning in 1064 in *Egypt* and lasting for seven successive years, the overflow of the Nile River failed and with it almost the entire subsistence of the country. While the rebels interrupted supplies of grain from the north. Two provinces were entirely depopulated. In another, half of the inhabitants perished. While in Cairo, the people were reduced to the direst straits. Bread sold for 14 dirhems to the loaf. All provisions were exhausted. The worst horrors of famine followed. The wretched resorted to cannibalism. Organized bands kidnapped the unwary passenger in the desolate streets, principally by means of ropes furnished with hooks and let down from the latticed windows. In the year 1072, the famine reached its height. It was followed by a pestilence and this again was succeeded by an invading army.<sup>57</sup>

**1064 A.D.** A storm struck Edinburgh, *Scotland*.<sup>40, 41, 43</sup>

In 1064 during the period between 20 April and 18 May, many regions of *China* experienced a drought including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Kaifeng, Chêng, Hua, Ju-nan and Lin-ju.
- Shansi (now Shanxi province) in northern *China* at Lin-fên, Yung-chi, and Jung-ho.
- Shensi (now Shaanxi province) in central *China* at Yao.

- Anhwei (now Anhui province) in eastern *China* at Fou-yang.
- Shantung (now Shandong province) on the east coast of *China* at Ts'ao and P'u.
- Hopei (now Hebei province) in northern *China* at Yung-nien and Tz'ü.

In 1064 during the spring and summer, there was a drought in Chihli, Honan and Shantung provinces in *China*.<sup>165</sup>

In 1064, many regions of *China* experienced flooding.<sup>153</sup>

- Floods struck Honan (now Henan province) in central *China* at Shang-ch'iu, Huai-yang, Hsü-ch'ang, Lin-ju, Kaifeng, Ju-nan and Pi-yüan. As a result the land tax was remitted.
- Floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang, Fêng-yang, Hsü-i, Ho-fei, Fêng-t'ai, Po and Hsüan-ch'êng. As a result the land tax was remitted.
- Floods struck Shantung (now Shandong province) on the east coast of *China* at Ts'ao, P'u, Chi-ning, and Shan. As a result the land tax was remitted.
- Floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Kao-yu. As a result the land tax was remitted.
- Floods struck Hupeh (now Hubei province) in central *China* at Wuchang, Ên-shih, and Kuang-hua. As a result the land tax was remitted.
- Floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. As a result the land tax was remitted.
- Floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang. As a result the land tax was remitted.
- Floods struck Szechwan (now Sichuan province) in southwest *China* at Chungking. As a result the land tax was remitted.
- During the period between 14 September and 12 October, floods struck Anhwei province as Su and Po.

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

**1065 A.D.** In 1065 during the period between 5 February and 6 May, a drought engulfed *China*. Then during the period between 31 August and 28 September, floods struck Honan (now Henan province) in central *China* at Kaifeng. Houses were damaged by the floodwaters and 1,580 persons drowned.<sup>153</sup>

In 1065 during the spring, there was a drought in *China*.<sup>165</sup>

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

**1066 A.D.** In *England*, there was a great frost.<sup>47, 72, 93</sup>

During the years 1066 to 1074, there was a famine in *Britain* due to wars, barbarities and hard frost.<sup>72</sup>

In 1066, there was a tremendous storm surge that destroyed the castle “Mellum” [east *Frisian* island].<sup>172</sup>

In 1066 during the period between 25 July and 23 August, a drought engulfed *China*.<sup>153</sup>

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

**Winter of 1066 / 1067 A.D.** During the winter, there was no snowfall in *China*.<sup>153</sup>

---

**1067 A.D.** In 1067 there was a drought in Hopei (now Hebei province) in northern *China* at Peiping. During the period between 15 June and 13 July, there was a drought of long duration that struck *China*.<sup>153</sup>

In 1067 during the summer and autumn, there was a drought of long duration in *China*.<sup>165</sup>

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

---

**Winter of 1067 / 1068 A.D.** The winter in *Europe* in the year 1067 was long and intensely cold and many people perished by cold and hunger.<sup>1</sup>

The winter of 1067 [in *France*] was cold. There was 6 consecutive weeks of frost.<sup>173</sup>

In 1067, the vine and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

During 1067-68, in *France*, the winter between St. Brice to St. Gregory (from 13 November 1067 until 12 March 1068) was extremely severe. The vineyards and forest trees bore no fruit. The mishap brought forth by this and the previous years infertility produced in *England* such a famine, that the unfortunates were forced to eat dog and horse meat, yes, even to eat human flesh.<sup>62</sup>

In *France*, a terrible winter began on 13 November 1067 and lasted until 12 March 1068.<sup>79</sup>

During the winter, there was no snowfall in *China*.<sup>153</sup>

---

**1068 A.D.** Flood reigned in 1068 in northern *France*.<sup>79</sup>

In *England* in 1068, there was famine and plague after a severe winter.<sup>57, 91</sup>

The winter of 1068 [in *France*] was cold.<sup>173</sup>

The summer of 1068 was very poor [in *France*].<sup>173</sup>

In 1068 during the period between 6 February and 2 June, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1068 during the summer and winter, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

In 1068, some regions of *China* experienced flooding.<sup>153</sup>

— Floods struck Shensi (now Shaanxi province) in central *China* at Pao-an. Crops and houses were damaged by the floodwaters. People drowned.

— During the period between 8 August and 8 November, floods struck Hopei (now Hebei province) in northern *China* at Pa.

— During the period 1-30 August, floods struck Hopei province at Ch'ing-ho and Chi [located at longitude 115.34° East and latitude 37.34° North]. People drowned.

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

---

**1069 A.D.** The rivers froze in the north of *Germany*.<sup>62</sup>

In the year 1069 in *Germany*, the winter was harsh and long. There was a shortage of wine and fruit because of the extreme cold. The rivers were frozen over. King Henry IV came to the countries of the Saxons and caused such carnage that the area was depopulated.<sup>62</sup>

[A great famine affected *England* for several years. This was not the result of weather but rather by war and the invasion of the Normans.<sup>72</sup>]

[In *England* in 1069, there was a great dearth. The peasants of the north, unable any longer to secure dogs and horses to appease their hunger, sold themselves into slavery in order to be fed by their masters. All the land between Durham and York in northeastern *England* were laid waste, without inhabitants or people to till the soil for nine years. Some of the destitute resorted to cannibalism. A factor that contributed to this hardship was the taxes exacted by the conquerors. Peasants became discouraged, realizing that the fruits of their labor were taken from them as fast as they were earned.]<sup>84</sup>

[In 1069, the Normans desolated *England*, and in the following year famine spread all over *England*, “so that man, driven by hunger, ate human, dog and horse flesh;” some to sustain a miserable life sold themselves for slaves.]<sup>91</sup>

In 1069, there were plenty of good grapes [in *England*], but all wild fruit trees were barren.<sup>72</sup>

The winter of 1069 [in *France*] was cold.<sup>173</sup>

In 1069 during the period between 26 March and 22 May, a severe drought engulfed *China*.<sup>153</sup>

In 1069, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chin-chiang. Crops, fields and houses were damaged by the floodwaters. During the period between 20 August and 17 September, floods struck Hopei (now Hebei province) in northern *China* at Ts’ang and Yen-shan where people drowned.<sup>153</sup>

In 1069 during the spring, there was a great drought in *China*.<sup>165</sup>

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

---

**1070 A.D.** In *England*, the frost was severe.<sup>47, 72, 93</sup>

In *England* the winter was a most rigorous frost, all rivers were frozen up.<sup>72</sup>

The winter of 1070 [in *France*] was mild.<sup>173</sup>

The summer of 1070 [in *France*] was unfavorable.<sup>173</sup>

In 1070 during the period between 11 July and 6 October a drought engulfed Honan (now Henan province) in central *China* at Chi and Kaifeng; Hopei (now Hebei province) in northern *China* at Ta-ming; and Shensi (now Shaanxi province) in central *China* at Sian. The drought produced a famine. As a result of the hardship, the land tax was remitted.<sup>153</sup>

In 1070 during the summer and autumn, there was a drought in Chihli, Honan and Shensi provinces in *China*. The land tax was remitted.<sup>165</sup>

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

---

**1071 A.D.** In 1071 during the period between 5 March and 2 April, a drought engulfed *China*. Then during the period between 31 July and 27 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Shao-hsing. During the period between 28 August and 25 September, floods struck Shensi (now Shaanxi province) in central *China* at An-k'ang where houses were damaged by the floodwaters.<sup>153</sup>

In 1071 during the spring, there was a drought in *China*.<sup>165</sup>

*Also refer to the section 1064 A.D. – 1071 A.D. for information on the drought and famine in Egypt during that timeframe.*

---

**1072 A.D.** In 1072 during the period between 22 February and 22 March, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Shao-hsing. During the period between 5 February and 18 June, a drought struck Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

In 1072 during the summer, there was a drought in Honan province in *China*.<sup>165</sup>

---

**1073 A.D.** In *England*, famine followed by mort [death], so fierce that the living could take no care of the sick, nor bury the dead.<sup>91</sup>

In 1073 during the period between 8 June and 1 November, a drought engulfed *China*.<sup>153</sup>

In 1073 during the summer and autumn, there was a drought in *China*.<sup>165</sup>

---

**1074 A.D.** The cold was very lively in *France* and most of the rivers froze.<sup>61</sup>

The winter was so severe, that all the rivers in Flanders [now *Belgium*] and *Germany* were completely frozen.<sup>62</sup>

In *France* in 1074, there were great frosts from 1<sup>st</sup> November to mid-April.<sup>79</sup>

The winter of 1074 [in *France*] produced a frost that began in November and lasted until April. There was a cold dry violent north wind. The mills were paralyzed by the cold. The army of Henry IV sorely lacked bread.<sup>173</sup>

In the year 1074, a very severe frost [in *Western Europe*] lasted from early November until mid-April. The cold, dry and cutting sharp wind was so intense that the rivers not only froze on the surface; but the rivers turned into solid blocks of ice. The army of King Henry IV suffered terribly from a lack of bread. The little grain that was available could not be ground into flour because the extreme cold caused a shutdown of the mills.<sup>62</sup>

In 1074 during the period between 5 February and 23 October, a drought of long duration engulfed several regions of *China* including:

- Hopei (now Hebei province) in northern *China* at Ta-ming.
- Shensi (now Shaanxi province) in central *China* at Sian.
- Shansi (now Shanxi province) in northern *China* at Yang-ch'ü.
- Honan (now Henan province) in central *China* at Loyang and Kaifeng.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.

During the period between 29 April and 28 May, the drought struck many regions.<sup>153</sup>

In 1074 during the spring, summer and autumn, there was a drought of long duration in Chihli, Honan, Kiangsu, Shantung and Shensi provinces in *China*.<sup>165</sup>

In 1074 during the period between 29 May and 26 June, floods struck in Honan (now Henan province) in central *China* at Shan and in Shansi (now Shanxi province) in northern *China* at P'ing-lu. [P'ing-lu is located at longitude 111.00° East and latitude 34.51° North]. During the period between 27 June and 26 July, floods struck in Kansu (now Gansu province) in northwest *China* at Lin-t'ao.<sup>153</sup>

In 1074 in the vicinity of Shanghai, *China*, it rained continuously from the 1<sup>st</sup> to the 6<sup>th</sup> month. The lakes overflowed. The land could not be cultivated. Houses were destroyed. The inhabitants discarded their lands and went away to beg.<sup>166</sup>

**1075 A.D.** In 1075, several regions of *China* experienced flooding.<sup>153</sup>

— During the period between 18 April and 17 May, floods struck Hunan province in south-central *China* at Changsha, Hêng-yang, Shao-yang and Tao. Houses were damaged by the floodwaters.

— During the period between 15 August and 12 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui.

In 1075, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 18 April and 17 May, a severe drought struck Hopei (now Hebei province) in northern *China* at Chêng-ting.

— During the period between 13 September and 12 October, a drought struck on the east coast of *China* in Kiangsu (now Jiangsu province) and Chekiang (now Zhejiang province).

— During the period between 13 September and 12 October, a drought struck in Kiangsu province at Yangchow and Nanking; in Hupeh (now Hubei province) in central *China* at Chiang-ling; and in Hunan province in south-central *China* at Changsha.

In 1075 during the summer and autumn, there was a great drought in Anhwei, Chêhkiang, Chihli, Hunan, Hupeh, Kiangsi and Kiangsu provinces in *China*.<sup>165</sup>

**1076 A.D.** In *Iraq*, the Tigris River overflowed and inundated Bagdad.<sup>47, 92</sup>

In 1076 during the period 3-31 August, floods struck Shansi (now Shanxi province) in northern *China* at Taiyuan. During the period between 31 October and 28 November, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ao-an and Ch'ao-yang. Houses were damaged by the floodwaters and people drowned.<sup>153</sup>

In 1076 during the period 1-30 September, a drought engulfed many regions of *China* including:<sup>153</sup>

— Hopei (now Hebei province) in northern *China* at Ta-ming.

— Honan (now Henan province) in central *China* at Loyang and Kaifeng.

— Shansi (now Shanxi province) in northern *China* at Yang-ch'ü.

— Shensi (now Shaanxi province) in central *China* at Sian.

In 1076 during the autumn, there was a drought in Chihli, Shansi, Shantung and Shensi provinces in *China*.<sup>165</sup>

**Winter of 1076 / 1077 A.D.** The winter in *Europe* was long and intensely cold and many people perished by cold and hunger.<sup>1</sup>

The winter of 1077 was an extremely severe winter (the Canossian winter) throughout *Europe* that lasted from late October to 15 April. The rivers were frozen from 26 November until mid-March. [This winter was one of the coldest and longest winters within the memory of man – The Rhine River was frozen into a solid mass from November till April.]<sup>172</sup>

The winter of 1077 was extremely cold in *Europe*. Lake Constance [situated in *Germany*, *Switzerland* and *Austria* near the Alps] froze. The trees and vines were destroyed. The winter was so cold that the land remained barren for several years afterwards. The Rhone, Danube, Po, Tiber, Elbe, Vistula and Loire rivers froze. The Rhine River froze from 17 November to 7 April. The first frost struck Augsburg, *Germany* on 1 November; Lagny, *France* on 17 November; and Saint-Amand, [*France*] on 19 November. The frost ended on 18 March at Saint-Amand; 1 April at Augsburg; and 22 April at Lagny.<sup>173</sup>

*Europe* experienced cold weather from November to April. The Rhine River was frozen. *France* experienced 4 ½ months of frost.<sup>28</sup>

The year 1076 was another very cold winter in *France*, which destroyed many trees and vines.<sup>61</sup>

The Rhine River in *Germany* by the Feast of St. Martins was frozen from 11 November 1076 until early April 1077. People crossed the river on the ice.<sup>62</sup>

The winter of 1076-77 in *France*, *England* and *Germany* was so severe, that the oldest people could not remember experiencing a similar cold winter; nor had anyone heard speak of it. The snow lasted from 1 November to 26 March. One could travel on the ice on the Rhine River from the Feast of St. Martins (11 November) until the end of March. The frost lasted 4½ months in the interior of *France*. The ground was frozen down to the roots of the [grape] vines in several areas. The shortage of grain was so great that few people had wheat from this year's harvest.<sup>62</sup>

Great winter in 1076-77 in northern *France* was accompanied by snow. The snow began to fall at the end of October 1076 and did not stop until 27 March 1077.<sup>79</sup>

In *France*, abundant snow fell at the end of October 1076 and continued with extreme cold until March 27, 1077.<sup>79</sup>

In *England*, there was frost from 1<sup>st</sup> November to 15<sup>th</sup> April. "In the tenth year of his [William the Conqueror] reign [which began on Christmas 1066 A.D.], the cold of winter was exceedingly memorable, both for sharpness and for continuance; for the earth remained hard frozen from the beginning of November until the midst of April then ensuing."<sup>47, 93</sup>

A frost in *England* from November to April (Some of these accounts show the frost occurred in the winter of 1075/76, but the tenth year of William the Conqueror's reign would begin in Christmas 1076).<sup>2, 40, 41, 42, 43</sup>

In 1075, there was a very severe frost [in *England*] that lasted from November until April.<sup>212</sup>

In 1076, there was a very severe frost in *England* that lasted from November until April.<sup>212</sup>

In *England* from 1 November 1076 to 15 April 1077 was one continuous hard frost.<sup>72</sup>

In 1076, there was dreadful frost in *England* from November to April.<sup>90</sup>

In 1076 or 1077, there was a frost in *England* from 1 November to 15 April.<sup>72</sup>

The River Thames in *England* was again frozen over.<sup>29</sup>

---

**1077 A.D.** The summer of 1077 [in *France*] was favorable.<sup>173</sup>

In 1077 during the period between 25 April and 20 August, a severe drought engulfed Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1077, several regions of *China* experienced flooding.<sup>153</sup>

— Floods struck Szechwan (now Sichuan province) in southwest *China* at Lu. The land tax was remitted.

— Floods struck Honan (now Henan province) in central *China* at Mêng. Granaries were damaged by the floodwaters. People drowned. The land tax was remitted.

— Floods struck in Hopei (now Hebei province) in northern *China* at Ts'ang and in Honan province at Chi. Houses and fields were damaged by the floodwaters. The land tax was remitted.

— During the period between 23 July and 20 August, floods struck Hopei province at P'u-yang. The land tax was remitted.

In 1077 during the spring, summer and autumn, there was a great drought in *China*.<sup>165</sup>

---

**Winter of 1077 / 1078 A.D.** During the winter of 1077-78 in southern *France*, lightning and thunder storms broke out during the months of January and February 1078. These storms announced early dry hot weather.<sup>79</sup>

---

**1078 A.D.** [In *France*] in 1078, the year was marked by drought and heat. As a result, the grass withered. But nevertheless the year produced a good harvest with fruit in June and the wine was very abundant.<sup>62</sup>

The summer of 1078 in *France* was very hot and very dry. The farmers harvested in August. The wine was plentiful and very good.<sup>79</sup>

The summer of 1078 [in *France*] was very hot. The harvest was a month early.<sup>173</sup>

[A famine occurred in *Constantinople* in 1078 which was caused not by weather but by mass migration. Many Asians for fear of the barbarians laying waste in the East fled to Constantinople but were pursued by famine and a grievous plague. So the living were too few to bury the dead.<sup>72</sup> In 1078 in Constantinople, there was a famine “from the multitudes of strangers” that fled to Constantinople.<sup>72, 91</sup>]

In 1078, several regions of *China* experienced flooding.<sup>153</sup>

— Floods struck Shantung (now Shandong province) on the east coast of *China* at Chang-ch'iu. Houses were damaged by the floodwaters and people drowned.

— Floods struck Anhwei (now Anhui province) in eastern *China* at Ch'ien-shan. Houses were damaged by the floodwaters and people drowned.

— During the period between 9 September and 8 October, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming. The land tax was remitted.

— During the period between 9 September and 8 October, floods struck Shantung province at Pin and Hui-min.

— During the period between 9 September and 8 October, floods struck Hopei province at Ts'ang.

---

**1079 A.D.** In southwestern *Italy*, the Calore Beneventano River (also called the Calore Irpino River) was so frozen that you could cross it safely on foot.<sup>62</sup>

During the winter of 1079, the cold was very sharp in *Italy*.<sup>62</sup>

The weather in 1079 [in *France*] was unfavorable.<sup>173</sup>

In 1079 during the period between 5 February and 6 May, a drought of long duration engulfed Hopei (now Hebei province) in northern *China* at Ta-ming; Shensi (now Shaanxi province) in central *China* at Sian; and Honan (now Henan province) in central *China* at Kaifeng and Loyang.<sup>153</sup>

In 1079 during the spring and summer, there was a drought in Chihli, Shansi, Shantung and Shensi provinces in *China*.<sup>165</sup>

**1080 A.D.** There was a great famine in *Denmark*.<sup>57, 72, 91</sup>

The winter of 1080 [in *France*] was cold.<sup>173</sup>

In 1080 during the period between 5 February and 6 May, a drought engulfed the “north and west marches” in *China*. Then during the period between 22 May and 19 June, a drought engulfed *China*. [The north and west marches may refer to the boundary provinces of western *China* of Kansu, Sauchuan and Yunnan. Between these three provinces lie the vast area of *Southern Mongolia* and *Tibet*.]<sup>153</sup>

In 1080 during the spring, there was a drought in Chihli and Shansi provinces in *China*.<sup>165</sup>

In 1080 during the period between 20 July and 17 August, floods struck Hopei (now Hebei province) in northern *China* at P’u-yang.<sup>153</sup>

**1081 A.D.** The winter of 1081 [in *France*] was mild.<sup>173</sup>

In 1081 during the period between 12 May and 9 June, floods struck Hopei (now Hebei province) in northern *China* at P’u-yang. People drowned.<sup>153</sup>

**1082 A.D.** In *England*, there was a great famine.<sup>72</sup>

In 1082, a drought engulfed *China*.<sup>153, 165</sup>

In 1082, several regions of *China* experienced flooding.<sup>153</sup>

— Floods struck Hopei (now Hebei province) in northern *China* at Yung-ch’ing, Hsin-ch’êng, An-chih, Wu-ch’ing, and Hsiang-ho. Crops were damaged.

— Floods struck Liaoning province located in the southern part of *China*’s northeast at Pei-chên. Crops were damaged.

— During the period between 28 July and 26 August, floods struck Hopei province at Peiping.

— During the period between 8 August and 8 November, floods struck Honan (now Henan province) in central *China* at Yang-wu and Yüan-wu. Houses and fields were damaged by the floodwaters.

— During the period between 27 August and 24 September, floods struck Honan province at Yüan-wu.

— During the period between 25 September and 23 October, floods struck Honan province at Kaifeng and Hua.

— During the period between 24 October and 22 November, floods struck Shansi (now Shanxi province) in northern *China* at Kuo.

In 1082 during the 6<sup>th</sup> moon, there were excessive rains and [flood] calamities over Kiangsu and Chehkiang provinces in *China*.<sup>166</sup>

**Winter of 1082 / 1083 A.D.** The Po River in *Italy* in December froze.<sup>62</sup>

The winter in the year 1082 was severe in *Italy*. In the month of December, King Henry IV marched with his soldiers and a great number of citizens on the completely frozen Po River.<sup>62</sup>

**1083 A.D.** [In *Germany*] during the summer of 1083, the heat from the sun's glow was so strong that not only did men die, but also the heat brought about the demise of the fish in the ponds.<sup>62</sup>

In 1083, *China* experienced flooding. During the period between 20 May and 17 June, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1083 during the summer, there was a drought in Honan province in *China*.<sup>165</sup>

**1084 A.D.** In 1084, several regions of *China* experienced flooding.<sup>153</sup>

— Floods struck Honan (now Henan province) in central *China* at Lin-chang. People drowned.

— Floods struck Honan province at Ch'in-yang. Houses were damaged by the floodwaters.

— Floods struck Hopei (now Hebei province) in northern *China* at Yung-nien. Houses were damaged by the floodwaters. The land tax was remitted.

— During the period between 6 May and 8 November, floods struck Hopei province at Tz'ü. Houses and crops were damaged by the floodwaters. People drowned.

— During the period between 6 July and 3 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ing-t'ien. Crops were damaged.

— During the period between 4 August and 2 September, floods struck Hopei province at Ta-ming. Houses were damaged and people drowned. Floods also struck Hopei province at Chêng-ting.

— During the period between 3 September and 2 October, floods struck Hopei province at Hsing-t'ai, Yung-nien, Chao and Tz'ü and in Honan province at An-yang. The city walls and army camps were damaged by the floodwaters.

**1085 A.D.** This was a sorrowful year in *England*, full of miseries for the great death of cattle, late ripening of corn [grains], and all fruits, abnormal temperatures, terrible thunder and lightning which was fatal to many.<sup>72</sup>

In 1085, there was an earthquake in *England*, followed by great cold.<sup>212</sup>

In 1085 during the period between 22 October and 19 November, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

**Winter of 1085 / 1086 A.D.** In *England* in 1086, "The weather was so inclement that in the unusual efforts made to warm the houses [caused many accidental fires], nearly all the chief cities in the Kingdom were destroyed, including a great part of London and St. Paul's."<sup>47</sup>

From the 11<sup>th</sup> of November [1085] to the 1<sup>st</sup> of April 1086, there was so great a frost, the frozen Rhine River was passable on foot. There were excessive rains and great water floods in *Italy*, Flanders [now *Belgium*], and *England*. These floods softened the hills and overwhelming villages, carrying along with them much people. There was a great death of cattle this year and a sore distemperature of the air. Hence a great death of people both from fevers and famine. In many places, but chiefly in *Italy*, so prodigious were the inundations, that rocks by their fall demolished many towns [landslides]. The same year in *England*, peacocks and other tame fowl, left the houses and fled to the woods. Fishes were dead in the waters. There was terrible thunder and lightning, fatal to many people and much cattle; thence the scarcity of corn [grain] and death of cattle.<sup>72</sup>

During the winter, there was no snowfall in *China*.<sup>153</sup>

---

**1086 A.D.** In *England*, there were heavy floods from rain.<sup>72, 92</sup> “In the twentieth year [of William the Conqueror], there fell such abundance of rain that the rivers did greatly overflow in all parts of the Realm. The springs also rising plentifully in divers [numerous] hills, so softened and decayed the foundations of them, that they fell down, whereby some villages were overthrown [landslides]. By this distemperature of weather many cattle perished, much grain upon the ground was either destroyed, or greatly impaired. Thereupon ensued first a famine, and afterwards a miserable mortality of men.”<sup>47</sup>

In 1086 in *England*, there was a great murrain of animals, and such intemperate weather that many people died of fever and famine. The famine was caused by excessive rains.<sup>91</sup> [A murrain is a highly infectious disease of cattle and sheep. It literally means "death" and was used in medieval times to represent just that.]

In 1086 in *England*, there was a famine from excessive rains, thunder, lightning, which caused great floods and death of cattle.<sup>72</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1086 during the period between 18 January and 13 June, a drought of long duration engulfed *China*. Due to the hardship, the land tax was remitted.<sup>153</sup>

In 1086, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Tung-hai. During the period between 17 February and 17 March, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming where fields were damaged.<sup>153</sup>

In 1086 during the spring, summer and winter in *China*, there was a universal drought of long duration.<sup>165</sup>

---

**1087 A.D.** In *England* there was great thunder and lightning. One half of all the people of *England* were seized with a violent burning fever, which began in 1086 and proved very fatal to multitudes. There was a general famine.<sup>72</sup>

There was a great thunder and lightning storm [in *England*].<sup>72</sup>

In 1087 in *England*, pestilence followed by famine, which caused great suffering.<sup>91</sup>

In the 21<sup>st</sup> year of William I in 1087, there was a famine in *England*.<sup>90</sup>

In 1087, there was a famine [in *England*].<sup>212</sup>

In 1087 in *Denmark*, King Olaf I inherited the surname the ‘Hungry’ in consequence of the famine in his reign.<sup>57, 91</sup>

In 1087 during the period between 5 May and 3 June, a drought engulfed *China*.<sup>153</sup>

In 1087 during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**1088 A.D.** In Bagdad *Iraq*, the Tigris River overflowed and did much damage.<sup>47, 92</sup>

In 1088, there was a famine [in *England*] from bad air, thunder and lightning.<sup>72</sup>

In 1088 [in *England*], there was a great scarcity of corn [grain]. Some crops not ripe until the end of November.<sup>212</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1088 during the period between 8 August and 8 November, a drought engulfed in central *China* in Honan (now Henan province) at Loyang and in Shensi (now Shaanxi province) at Sian.<sup>153</sup>

In 1088 during the autumn, there was a drought in Honan, Shansi and Shensi provinces in *China*.<sup>165</sup>

In 1088, a sea wind destroyed fields in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1089 A.D.** In 1089 during the period between 14 April and 10 June, a drought of long duration engulfed Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 6 May and 8 November, floods due to heavy rain struck *China*.<sup>153</sup>

In 1089 during the spring, there was a drought in Chihli, Honan and Shantung provinces in *China*.<sup>165</sup>

The summer of 1089 [in *France*] was favorable.<sup>173</sup>

In 1089, there was a dearth [in *England*]. In the summer there was a great scarcity of fruits, and the harvest [of grains] was not complete until 30 November.<sup>212</sup>

There was a great hurricane with terrible thunder and lightning [in *England*].<sup>72</sup>

---

**1090 A.D.** In Constantinople (Istanbul, *Turkey*), there were great floods.<sup>47, 72, 92</sup>

In October 1090, there were thunder and lightning storms in *England*. There were great floods at Constantinople.<sup>72</sup>

In 1090 during the period between 4 March and 29 June, a drought engulfed northeast *China*. Also in 1090, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at T'ai-t's'ang, Soochow and Sung-chiang; and in Chekiang (now Zhejiang province) at Hangchow, Chia-hsing and Hu-chou.<sup>153</sup>

In 1090 during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**1091 A.D.** In *England* on the 5<sup>th</sup> of October, a great hurricane came from the southwest and struck several parts of the country. In London about 500 houses destroyed.<sup>57</sup>

A mighty storm struck on 5 October 1091 in several parts of *England*. The sky went very dark; the winds came from the southwest. Many churches were destroyed; and in London 500 houses fell.<sup>90</sup>

A storm struck in several parts of *England* on October 5<sup>th</sup>, especially at Winchelscomb (Winchcomb), in Gloucestershire, when the steeple of the church was thrown down.<sup>40, 41, 43</sup>

On 5 October 1091, there was a great southwest gale over most of *England*. In London, 500 houses were destroyed. Many churches were destroyed. It took off the roof of St. Mary-le-bow Church, and carried it a good ways. There were 4 beams in the church that were 26 feet [8 meters] long. These beams fell with such great force that they were driven into the streets (which were not then paved, but of Moorish ground) that they sunk down 20 feet [6 meters] in the street. As they could not be pulled up again, people were forced to saw them even with the [level] ground.<sup>212</sup>

A storm in London, *England* on October 17<sup>th</sup>, threw down 500 houses, unroofed Bow church and at Old Sarum (Salisbury), threw down the steeple along with many houses.<sup>40, 41, 43</sup>

In 1091 A.D., London, *England* was struck by a hurricane, which destroyed 500 houses and caused the death of 200 to 400 persons.<sup>197</sup>

[Another account places this event in the year 1090.] In 1090, there was a strong gale in *England*. In London, 600 houses were blown down.<sup>212</sup>

The roof and tower of Salisbury Church [in southwestern *England*] was broken down by thunder.<sup>72</sup> [This account places this event in 1092]

On 1 October in 1090 or 1091, there was a tempest of thunder and lightning in *England*; hurricanes and floods constantly.<sup>72</sup>

On 1 October, a terrible tempest of thunder and lightning struck several parts of *England*, but especially at Winchcomb in southwestern *England*, where it did great damage to a church, and left a most intolerable stench behind. On 17 October there was a most dreadful hurricane, which rent, blew down and scattered many thousands of houses in London, Salisbury, etc. At Constantinople (Istanbul, *Turkey*) there were great clouds, which demolished houses, filled valleys with water like a sea, drowned many people and cattle. It was a great hurricane.<sup>72</sup>

On 5 November 1091 at Coutances in northwestern *France*, a violent storm accompanied by lightning, thunder and earthquake occurred.<sup>79</sup>

On 6 November 1091, on the Feast of St. Edmund, there was a great flood in *England*. London Bridge was swept away by the force of the water.<sup>212</sup>

In 1091 during the period between 19 July and 17 August, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow, Sung-chiang, and T'ai-ts'ang and in Chekiang (now Zhejiang province) at Hangchow, Chia-hsing, Hu-chou, Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'ü, Chien-tê, Wên-chou and Li-shui.<sup>153</sup>

**1092 A.D.** The winter in *England* was severe. The great rivers were frozen.<sup>28</sup>

"The great streams [of *England*] were congealed in such a manner that they could draw two hundred horsemen and carriages over them; whilst at their thawing, many bridges, both of wood and stone, were borne down, and divers [numerous] water-mills were broken up, and carried away.<sup>29</sup>

In 1092 in *England*, there was a terrible flood, followed by a great frost, followed by a second flood "as the like was remembered by none." Many bridges were destroyed.<sup>212</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1092 during the period 2-30 December, floods struck Hopei (now Hebei province) in northern *China* at T'ung. Crops were damaged by the floodwaters.<sup>153</sup>

**1093 A.D.** In *England*, there were great floods, and afterwards severe frost.<sup>47, 72, 92</sup>

[In *England*] in 1092 or 1093, there were great rains, then a sudden frost and a ruinous flood after.<sup>72</sup>

In 1093, there was a great frost in *England*. The River Thames and all the English rivers were so heavily locked in with ice that when the thaw came, bridges and mills were carried away.<sup>212</sup>

In *England* fell excessive rains, which raised such floods in 1093 as had not been known long before. All low grounds were flooded. After that came a sudden frost. The ice of the thaw carried down most of the stone and wooden bridges and water mills. Plagues and famine prevailed in *France* and *Germany* wherewith the poor being afflicted, vexed the rich with thefts and fires.<sup>72</sup>

In *Ireland*, “Great rains and inundations in summer and autumn.”<sup>47, 92</sup>

In *England*, great famine and mortality [death].<sup>57, 91</sup>

In 1093, floods struck in Hopei (now Hebei province) in northern *China* at Ch’ing-fêng and Ta-ming; in Honan (now Henan province) in central *China* at Kaifeng and Loyang; and in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow. During the period between 8 August and 8 November, a drought engulfed *China*.<sup>153</sup>

In 1093 during the autumn, there was a drought in *China*.<sup>165</sup>

**Winter of 1093 / 1094 A.D.** During the winter, there was no snowfall in *China*.<sup>153</sup>

**1094 A.D.** There were great inundations throughout *Ireland*.<sup>47, 92</sup>

The year 1094 was called the rainy year. From October to April, the rain never ceased. This caused a plague and famine over *England*, *France* and *Germany*. In *England*, the famine was made significantly worse by King William Rufus’s strangling taxes. As a result, there was so great a mortality that scarce did the living suffice to bury the dead.<sup>72</sup>

In 1094, there was great mortality in London, *England*.<sup>212</sup>

In 1094, there was the heaviest rains, famines and a desolating plague.<sup>72</sup>

In 1094, there was a sea flood in North *Frisian* countries. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

The drought in 1094 in *France* was extraordinary.<sup>79</sup>

The summer of 1094 [in *France*] produced an extraordinary drought.<sup>173</sup>

The winter of 1094 in northern *France* was harsher than usual. The cruel winter raged for eight straight weeks. The severity of the cold froze animals and men.<sup>79</sup>

In 1094 during the period between 5 February and 6 May, a drought engulfed *China*.<sup>153</sup>

In 1094 during the spring, summer and winter, there was a drought in Honan province in *China*. There was no snowfall during winter.<sup>165</sup>

In 1094, floods struck in Shantung (now Shandong province) on the east coast of *China* at Ts’ao and P’u and in Honan (now Henan province) in central *China* at Huai-yang and Ju-nan. Crops were damaged by the floodwaters. During the period between 14 August and 12 September, floods caused by protracted

rains struck Honan province at Kaifeng. During the period between 12 October and 10 November, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

---

**1095 A.D.** A great snowstorm struck *Ireland* on January 3. Multitudes were killed.<sup>28</sup>

In 1095, there was great mortality in *Ireland*.<sup>212</sup>

In *England*, the winter was very severe.<sup>47, 72, 93</sup>

In *England*, there were terrible tempests in 1095 and excessive summer rains. Therefore the corn [grain] and fruits in many places were not good. It was a late harvest. Most of the corn [grain] was not harvested before November the 10<sup>th</sup>. After the rains, there was a great intemperature of the air and a most severe winter. All the rivers were so frozen that horses and loaded wagons went over them.<sup>72</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

[In *England*], there was a famine from summer rains, tempests and bad air.<sup>72</sup>

In 1095 during the period between 9 January and 7 February, floods struck Hopei (now Hebei province) in northern *China* at Yung-nien and Tz'ü.<sup>153</sup>

---

**1096 A.D.** In *England*, the winter was very severe.<sup>47, 72, 93</sup>

The rains took up in harvest, then came most pernicious frosts which caused dearth and famine in *England*.<sup>72</sup>

[In *England*], there was a famine from rains in the summer.<sup>72</sup>

In *England*, there was a famine "Heavy-timed hunger that severely oppressed the earth." The famine was caused by "summer rains, tempests and bad air."<sup>57, 91</sup>

In 1096, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, and Kuang-tê. Rivers and creeks dried up.<sup>153</sup>

In 1096, there was a great drought in Kiangsu province in *China*. The rivers dried up.<sup>165</sup>

---

**1097 A.D.** In *England*, the winter was very severe.<sup>47, 93</sup>

[In *Europe*], the winter was very mild and produced many diseases. The large amount of rain that fell caused the rivers to overflow their banks.<sup>62</sup>

The winter of 1097 [in *France*] was very mild, the sweetest in many years.<sup>173</sup>

The great flood of 1097 in northern *France* did not permit the fall planting.<sup>79</sup>

In 1097 during the period between 13 June and 11 July, a drought engulfed the east coast of *China* in Kiangsu (now Jiangsu province) and Chekiang (now Zhejiang province). This caused a famine.<sup>153</sup>

In 1097 during the summer, there was a drought in Chêhkiang and Kiangsi provinces in *China*.<sup>165</sup>

---

**1098 A.D.** In *England*, the winter was very severe.<sup>47, 93</sup>

[In *England*] another oppressive year for endless taxes and gels, and great rains, which scarce ever ceased; all low marshy grounds perished with floods and water.<sup>72</sup>

[In *England*], there was a famine from rains.<sup>72</sup>

[In *England*] in 1098, there were tempestuous seasons, rains, corn rotten, low grounds perished.<sup>72</sup>

In 1098, a drought engulfed southeast *China*. During the same year, floods struck in Hopei (now Hebei province) in northern *China* at P'u-yang and Ta-ming and in Honan (now Henan province) in central *China* at Kaifeng. During the period between 27 October and 25 November, floods struck in Hopei province in Ta-ming and in Honan province at Kaifeng.<sup>153</sup>

In 1098, there was a drought in Kiangsu and Shantung provinces in *China*.<sup>165</sup>

**1099 A.D.** In *England*, there were rains and sea floods, "fatal to much people and cattle."<sup>72</sup> Thames much flooded on the festival of St. Martin (November 11).<sup>47, 92</sup>

On 11 November 1099, there was a great inundation of the sea in *England*. "On the third day of the nones of November, the sea came out upon the shore, and buried towns and men very many, and oxen and sheep innumerable." "On St. Martin's mass-day, the 11<sup>th</sup> of Novembre, sprung up so much of the sea flood, and so myckle harm did, as no man minded that it ever afore did."<sup>212</sup>

In *England*, the winter was very severe.<sup>47, 72, 93</sup>

There were great inundations both by sea and rivers, drowning many cattle, people and towns in *England*. There was a severe winter and a great dearth of grain.<sup>72</sup>

In *England*, there was famine from excessive, heavy, long rain and floods.<sup>57, 72, 91</sup>

In 1099, during the period between 5 February and 6 May, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng. During the same year, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow and in Chekiang (now Zhejiang province) at Hu-chou and Chia-hsing. During the period between 21 June and 20 July, floods struck in Shensi (now Shaanxi province) in central *China* at Sian; in Honan province at Loyang; and in Hopei province at Ta-ming. Houses were damaged by the floodwaters and people drowned. During the period between 21 July and 18 August, floods struck Hopei province at Ta-ming. Fields were damaged by the floodwaters.<sup>153</sup>

In 1099 during the spring, there was a drought in Honan province in *China*.<sup>165</sup>

**1100 A.D.** The sea overflowed 4,000 acres of Earl Godwin's land, in Kent, *England* since called Godwin sands.<sup>40, 41, 43</sup>

East of Kent, *England* inundated. Goodwin Sands formed.<sup>46</sup>

In the *English Channel*, Earl Godwin's lands, exceeding 4,000 acres, overflowed by the sea, and an immense sandbank formed on the coast of Kent, now known as the Godwin Sands.<sup>47, 92</sup>

In 1100, Earl Godwin's lands in *England*, exceeding 4,000 acres, was overflowed by the sea, and an immense sandbank formed on the coast of Kent, now known by the name of the Godwin sands.<sup>90</sup>

In the year 1100, there was an inundation of the sea in *England*. Earl Godwin's lands, exceeding 4,000 acres, overflowed by the sea, and an immense sandbank, known as the Godwin Sands, formed on the coast of Kent, over which the tide has ever since flowed. (Some sources give the year as 1099.)<sup>212</sup>

In 1100 in *England*, there was a surprising great tide.<sup>72</sup>

[Some accounts place this event in the year 1098 or 1099] On the 3<sup>rd</sup> of November in 1099, "as well in *Scotland* as in *England*, the sea broke in over the banks of many rivers, drowning divers [diverse] towns, and much people, with an innumerable number of oxen and sheep, when Earl Godwin's lands in Kent were covered with sands."<sup>69</sup> In 1098 the land of Goodwyn Sands was swallowed up by the sea.<sup>72</sup>

In *England* in the year 1100, there was a long and severe winter frost. In the spring, the River Thames rose up with such high tides that many towns were drowned. It did great damage to London and other places.<sup>72</sup>

The winter in 1100 in northern *France* was excessive.<sup>79</sup>

In 1100, a terrible famine struck *Europe*.<sup>155</sup>

[There was a famine in *Antioch* in 1100.<sup>72, 91</sup> But this famine was not caused by weather but by a long siege of the city and by warfare – the Crusades. Antioch is an ancient city on the eastern side of the Orontes River. It is near the modern city of Antakya in southern Turkey.]

**1101 A.D.** In 1101, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China*; Anhwei (now Anhui province) in eastern *China*; Chekiang (now Zhejiang province) on the east coast of *China*; Fukien (now Fujian province) on the southeast coast of *China*; Hunan province in south-central *China* at Changsha; Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü; and Kiangsi (now Jiangxi province) in southern *China* at Shang-jao. During the period between 30 April and 29 May, a drought engulfed *China*.<sup>153</sup>

In 1101 during the summer, there was a drought in Chêhkiang, Fuhkien, Hunan, Kiangsi and Kiangsu provinces in *China*.<sup>165</sup>

In 1101, there was a frost in *England*.<sup>72</sup>

**1102 A.D.** In *England*, there was a drought with excessive heat.<sup>47, 72</sup>

[In *England*] the summer was extremely hot.<sup>62</sup>

[In *England*] was an excessively hot summer.<sup>72</sup>

In 1102 and 1116, high flood waters swept over a good portion of the land of the island of Helgeland which fell down and was thrown over [washed away].<sup>172</sup>

In 1102, a drought engulfed many regions of *China* including: Kiangsu (now Jiangsu province) on the east coast of *China*; Chekiang (now Zhejiang province) on the east coast of *China*; Kansu (now Gansu province) in northwest *China* at Lin-t'ao and Lin-hsia; Fukien (now Fujian province) on the southeast coast of *China* at Lung-ch'i, Chin-chiang and P'u-t'ien; and Hunan province in south-central *China* at Changsha, Hêng-yang and Pin.<sup>153</sup>

In 1102, there was a drought in Chêhkiang, Fuhkien, Hunan and Kiangsu provinces in *China*.<sup>165</sup>

In 1102 during the period between 16 August and 13 September, a flood struck *China*. Houses were damaged by the floodwaters.<sup>153</sup>

**1103 A.D.** [In *England*] on the Feast of Saint Lawrence [10 August] in the morning, there was a hurricane with terrible wind, which did great damage ever was known to all sorts of fruits.<sup>72</sup>

In 1103, floods struck Hopei (now Hebei province) in northern *China* at Wu-ch'ing.<sup>153</sup>

**1104 A.D.** There was a very great snow in February and great floods on the land. There was a mighty scarcity of corn [grain] and dearth from endless taxes and wars in *England*.<sup>72</sup>

At the summer solstice there was a storm at Herbipolis [Würzburg, *Germany*], wherein such a prodigious piece of ice fell out of the air, that when broken into four quarters, four men could not carry it.<sup>72</sup>

**1105 A.D.** [In *England*] in February, there was a great snowfall.<sup>72</sup>

In *England*, there were great floods, followed by famine.<sup>47, 92</sup>

[In *England*] in February 1105, there were great floods, dearth, and want of corn [grains].<sup>72</sup>

In 1105, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow and in Chekiang (now Zhejiang province) at Hu-chou and Chia-hsing.<sup>153</sup>

**1106 A.D.** In *England*, there was an inundation from the sea.<sup>47, 72, 92</sup>

On the first of the Ides of June [in *England*], there was a great earthquake and several inundations of the sea.<sup>72</sup> [This event may have been a tsunami caused by a massive earthquake/landslide]

Men, cattle, grain, lands and buildings suffered much from thunder, lightning, rain, hail, high winds and tempest. Grains and fruits were beat down and broken. Barrenness of land from inundations, dearth from scarcity, plague from famine, all prevailed.<sup>72</sup>

In *England*, there was famine from barren lands and then plague.<sup>57, 72, 91</sup>

In 1106 during the period between 5 May and 3 June, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow, Sung-chiang, and T'ai-ts'ang and in Chekiang (now Zhejiang province) at Hangchow, Chia-hsing, Hu-chou, Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'ü, Chien-tê, Wên-chou, and Li-shui. Due to the hardship, the summer land tax was remitted.<sup>153</sup>

**1107 A.D.** In 1107, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming and Honan (now Henan province) in central *China* at Loyang. People drowned. During the period between 6 May and 8 August, floods struck Honan province at Kaifeng. During the period between 18 October and 16 November, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow and in Chekiang (now Zhejiang province) at Hu-chou.<sup>153</sup>

In 1107, a drought engulfed Kansu (now Gansu province) in northwest *China* at T'ien-shui.<sup>153</sup>

In 1107, there was a drought in Shensi province in *China*.<sup>165</sup>

**1108 A.D.** A great part of Flanders [now *Belgium*] was overflowed by the sea.<sup>40, 41, 43</sup>

Most of *Flanders* drowned by the Sea.<sup>72</sup>

*Flanders* inundated.<sup>46</sup>

In 1108, *Flanders* was inundated by the sea, and the town and harbor of Ostend totally immersed.<sup>90</sup>

In *Flanders*, a terrible inundation forced many of the inhabitants to leave the country. Some settled in *England*. Nearly the whole of this country is believed to have been covered by the sea in early times. On this occasion the town of Ostend was immersed.<sup>47, 92</sup> [Ostend is now located in northern *Belgium*.]

In 1108 during the period between 8 August and 8 November, floods struck Hopei (now Hebei province) in northern *China* at Chü-lu. Then during the period between 7 September and 6 October, floods struck in Hopei province at Hsing-t'ai causing damage to houses.<sup>153</sup>

In 1108 during the period between 11 July and 4 December, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Nanking; Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, and Kuang-tê; and Kiangsi (now Jiangxi province) in southern *China*.<sup>153</sup>

In 1108 during the summer, autumn and winter, there was a great drought in Chêhkiang and Kiangsu provinces in *China*.<sup>165</sup>

---

**1109 A.D.** [In *England*], the year 1109 was remarkable for thunder and lightning.<sup>72</sup>

In 1109 in *France*, particularly in Orleans and the province of Chartres, fever and sickness struck causing some deaths. Excessive rainfall drowned the crops. The grape harvest was almost a total failure. In areas where both the grain and grape harvest were affected, terrible famines decimated the population everywhere.<sup>170</sup>

For three consecutive years from 1109 to 1111, there was a terrible famine in *France*.<sup>170</sup>

In *Russia*, the water was high in the Dnieper, the Desna and the Pripet rivers.<sup>76</sup> [The Dnieper River runs through Belarus, southern Russia and Ukraine. The Desna River is a tributary of the Dnieper River. The Pripet River runs through the Ukraine and Belarus, and is a tributary of the Dnieper River.]

In 1109 during the period between 30 June and 29 July, floods struck Hopei (now Hebei province) in northern *China* at Chi. [Chi is located at longitude 115.34° East and latitude 37.34° North.] During the period between 30 July and 27 August, floods struck Kansu (now Gansu province) in northwest *China* at Wu-tu.<sup>153</sup>

In 1109, a drought engulfed several regions of *China*. Due to the hardship, the land tax was remitted. The regions affected were: Kiangsu (now Jiangsu province) on the east coast of *China*; Anhwei (now Anhui province) in eastern *China*; Chekiang (now Zhejiang province) on the east coast of *China*; Fukien (now Fujian province) on the southeast coast of *China*; and Hupeh (now Hubei province) in central *China* at Chiang-ling.<sup>153</sup>

In 1109, there was a drought in Chêhkiang, Fuhkien, Hupeh and Kiangsu provinces in *China*. The land tax was remitted.<sup>165</sup>

---

**1110 A.D.** In *England* on 5 May, there was a great frost, which killed the blossoms of the trees. The River Trent was dry at Nottingham for 24 hours. Tempest pernicious to corn [grain] and destruction of all fruits. The people over all *England* were afflicted with sore diseases, especially an epidemic Erysipelas [a type of skin infection] wherein many died, the parts being black and shriveled up.<sup>72</sup> [Nottingham is located in Nottinghamshire in the east Midlands of England.]

In 1110, the River Trent at Nottingham, *England* was dry from morning until 3 p.m., for a mile [1.6 kilometers] in length, so that it could be passed with dry feet.<sup>212</sup>

In *England*, there were many tempests in the year 1110.<sup>72</sup>

In 1110, floods struck Szechwan (now Sichuan province) in southwest *China* at Fêng-chieh. During the period between 6 May and 8 August, floods struck Honan (now Henan province) in central *China* at Têng and Hsi-ch'uan.<sup>153</sup>

---

**1111 A.D.** In *England* the winter long and very severe; great scarcity followed.<sup>57, 91</sup>

In *England* in 1111, there was a frost.<sup>72</sup>

In *England* in 1111, there was a long and severe frosty winter, very harmful to corn [grain]. Barrenness of land. There were great dearth, mortality of people, a grievous murrain [death caused by highly infectious disease] of cattle, and death of fowls. All tame fowls fled to the woods and fishes died in the water. A great tempest at Gloffaria with thunder and lightning.<sup>72</sup>

[In *England*], there was a famine from frost and barren land.<sup>72</sup>

In 1111, there was a great mortality of people in London, *England* that extended to cattle and fowls.<sup>212</sup>

In 1111 during the period between 10 May and 7 June, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.<sup>153</sup>

In 1111 during the summer, there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**1112 A.D.** [In *England*], this was a most fruitful and plentiful year.<sup>72</sup>

In 1112, there was a plague in *England*.<sup>212</sup>

The summer of 1112 was very dry in southern *France*.<sup>79</sup>

---

**1113 A.D.** In the year 1113, there was a frost in *England*.<sup>72</sup>

[In *England*], there was a great snowfall.<sup>72</sup>

In *England*, there was a drought and it was "so hot that grain, and some forests of wood, took fire."<sup>47, 72</sup>

[In *England*], the heat was in June 1113, so strong that the crops and even forests fell into fire.<sup>62</sup>

At Parma in northwestern *Italy* and Ravenna in northeastern *Italy*, it rained blood both in the towns and fields. It was the same in Emylia [Emilia] in northern *Italy*: so excessive was the heat of this month; that corn and some woods took fire and burnt. After this the people were afflicted with grievous and long diseases, especially dysentery, and a most destructive plague. By the breaking in of the sea, a great part

of Flanders [now *Belgium*] was drowned; whereupon a great number of Flemings fled to and became subjects of King Henry the 1<sup>st</sup> of England for some place to inhabit. And he gave them Pembrokeshire in southwestern Wales, where their posterity remains to this day.<sup>72</sup>

[In *England*] on 11 November 1113 or 1115, there was a tempest and hurricane.<sup>72</sup>

In 1113, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, and Kuang-tê.<sup>153</sup>

In 1113, there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**1114 A.D.** On 23 April 1114, there was so great a snowfall in Flanders [now *Belgium*] that it broke down the trees in many places.<sup>72</sup>

In May of 1114 in *England*, there was a great drought and want of water. In October, a terrible hurricane struck destroying houses, villages and woods. The sea shrunk in from its old boundaries, seamarks, and ordinary heights that a man might have walked on foot on the dry sands a whole day. Great rivers which used to ebb and flow twice in 24 hours became shallow, that in many places people might safely walk over. The River Thames was so low, that horses, men and children passed over it between London Bridge and the Tower. And under the bridge, the water scarcely reached the knee, the whole day and night of October 15. The water level in the River Medway at Kent was so low that the smallest vessels could not pass in the midst of the channel.<sup>72</sup>

On 4 April 1114, the River Thames in London, *England* was so dry that children waded over the river between the bridges and the town. Under London Bridge, the water was only knee deep. The river was dry for two days.<sup>212</sup>

On 6 October 1114, the River Medway, in Kent, *England* was almost dry. (The Saxon Annals give these two dates [April 4 and October 6] as both occurring on October 10.)<sup>212</sup>

In 1114 in *England*, the tides went out instead of coming; hence the rivers dried.<sup>72</sup>

In 1114 in *England*, the drought that began in 1113 continued and there was a great want of water.<sup>72</sup>

On 10 October 1114 in *England*, the rivers Thames and Medway dried up so that men could wade across on foot.<sup>170</sup>

In 1114 in *Germany*, the Hever Strom rose so high that the built up "Capell" by the [grandstand] was washed away by the water.<sup>172</sup>

In 1114, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Ling.<sup>153</sup>

In 1114, there was a drought in Shantung province in *China*.<sup>165</sup>

---

**Winter of 1114 / 1115 A.D.** The River Thames in *England* was frozen for 4 weeks.<sup>29</sup>

Several bridges in *England*, being made of timber, were broken down by the severe frost.<sup>40, 41, 42, 43, 212</sup>

During the winter of 1115 [in *England*], the frost was very severe, and many bridges were broken by the ice.<sup>212</sup>

In *England* there was a great frost; timber bridges broken down by weight of ice. This year was the winter so severe with snow and frost, “that no man who was living ever remembered one more severe; in consequence of which there was great destruction of cattle”.<sup>47, 93</sup>

In 1115, there was a frost in *England*.<sup>72</sup>

The winter was most severely cold, with great frost and snows. At the thaw, most of the bridges in *England* were broken and carried down. On 11 November, there was a most destructive hurricane. There were many storms and a great death of cattle this year.<sup>72</sup>

The winter was most rigorous with frost and snow and the destruction of cattle, that the oldest alive had never witnessed it in *England*.<sup>72</sup>

The frosts of 1115 in northern *France* began on December 22 and lasted until 25 February.<sup>79</sup>

The winter of 1115 [in *England*] was very cold. The English Channel froze. Stones were split in two from the cold.<sup>173</sup>

**1115 A.D.** In 1115 during the period between 24 June and 22 July, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and in Anhwei (now Anhui province) in eastern *China* at Tang-tu and Hsüan-ch'êng. Then during the period between 22 August and 19 September, floods struck in Kiangsu province at Soochow and Wu-chin and in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Chia-hsing.<sup>153</sup>

**1116 A.D.** A storm struck *England*.<sup>40, 41</sup>

In *England*, this was a sad rainy year. The summer began with terrible thunder and lightning, which did great damage. The rains began on 1 August and continued until the Feast of Candlemas [2 February]. There was great destruction of corn [grain] and all fruits.<sup>72</sup>

The winter of 1116 was very mild. There were strawberries at Christmas in Liège, *Belgium*.<sup>173</sup>

In *Ireland*, there was a great famine, “during which the people even ate each other.”<sup>57, 91</sup>

In 1102 and 1116, high flood waters swept over a good portion of the land of the island of Helgeland which fell down and was thrown over [washed away].<sup>172</sup>

In December 1116, there was a terrible thunder and lightning storm with hail [in *England*].<sup>72</sup>

**1117 A.D.** In *England*, there was a famine from tempest, hail, and a year's incessant rains.<sup>57, 72, 91</sup>

In 1117 in *England*, there was a scarcity of corn [grain] from great hail and tempest and incessant rains which lasted almost the entire year. Most bridges in *England* were broken down by floods and rains. On 1 November, there was a great tempest of thunder, lightning, clouds and hail. There were several other terrible and fatal tempests in December in many places at different times, as at Leodium [Liège, *Belgium*].<sup>72</sup>

The town of Wells in Somerset, *England* was partly burned down by lightning.<sup>72</sup>

In 1117, Hopei (now Hebei province) in northern *China* at Ho-chien and Ts'ang experienced extreme flooding with over a million people drowned.<sup>153</sup>

In 1117, torrential flooding along the River Arno in *Italy* swept away the original Roman-era wooden bridge Ponte Vecchio, which straddled the river in Florence.

On May 14, there was a sign by thunder at ten o'clock during evening service in St. Sophia in Novgorod [*Russia*]; one of the chanters, a clerk, was struck by the thunder, and the whole choir with the people fell prone [knocked unconscious], but the people remaining alive.<sup>76</sup>

In *Jerusalem* in 1117, there was famine. In May was a great plague of locust at *Jerusalem*, which ate up the herbs, trees, vines and sown corns.<sup>72</sup> [Plagues of locust can be triggered by weather conditions.]

**1118 A.D.** During Epiphany Week [Epiphany celebrated on January 6], there was great thunder and lightning, which killed many. In February, there was tempest, thunder, lightning with great hail and rain. On the Feast of Saint Thomas [December 21], there was a great hurricane in *England*.<sup>72</sup>

On May 7, 1118, a severe frost destroyed the [grape] vines in most areas but especially in Auxerre located in the Bourgogne region of northern *France*.<sup>79</sup>

On 21 December 1118, one of the strongest gales in living memory, struck [in Normandy, *France*] causing terrible havoc.<sup>170</sup>

In 1118, floods struck Anhwei (now Anhui province) in eastern *China* at Hsü-i damaging houses. During the period between 6 May and 8 August, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China*; in Anhwei province; in Hupeh (now Hubei province) in central *China* at Chiang-ling; in Chekiang (now Zhejiang province) on the east coast of *China*; and in Szechwan (now Sichuan province) in southwest *China* at San-t'ai. During the period between 20 July and 18 August, floods swept through much of *China*.<sup>153</sup>

In 1118 during the 8<sup>th</sup> moon, there were freshets [floods] in the vicinity of Shanghai, *China* and four adjacent fus [prefectures].<sup>166</sup>

**1119 A.D.** There were constant inundations for so long that corn [grain] could neither be sown, nor reaped, not only in *Poland* but also in its neighboring countries.<sup>72</sup>

[In *England*], there was a violent tempest the whole day of Christmas.<sup>72</sup>

In 1119 during the previous winter, torrential rains fell in *France*. High floodwaters swept through homes in Rouen and Paris. Crops were damaged by the raging torrent of the overflowing Seine River. Then during Lent, a very strong wind blew over the Seine River and dried it up. One could cross from bank to bank on foot if he had the courage.<sup>170</sup>

The winter of 1119 was extremely wet in *France*. The Seine River overflowed in Paris. The floodwaters swallowed up homes.<sup>173</sup>

In 1119 during the period between 13 March and 11 April, a drought engulfed Honan (now Henan province) in central *China* at Lin-ju, Huai-yang and Ju-nan; and Anhwei (now Anhui province) in eastern *China* at Fou-yang. The drought led to a famine. Then during the period between 10 June and 9 July, floods struck Honan province at Kaifeng. Then during the period between 8 August and 8 November, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow. Then during the period 4-31 December, floods struck *China*.<sup>153</sup>

In 1119 during the spring and autumn, there was a drought in Honan and Kiangsu provinces in *China*.<sup>165</sup>

---

**1120 A.D.** [There was a famine in Jerusalem, *Israel* not caused by weather. In Jerusalem in 1120, a famine caused by a “plague of mice and locusts.”<sup>57, 72, 91</sup>]

In July, there was a horrible tempest of hail at Treves [*Prussia*, now west-central *Germany*]. It overthrew many buildings. It did much damage at Halberstadt in central *Germany*, so that the ground in nine miles radius bore no corn. It killed most small birds and oxen. In *Germany*, the wolves tore and destroyed many people.<sup>72</sup>

In 1120, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.<sup>153</sup>

In 1120, there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**1121 A.D.** In *England*, all three spring months dry with excessive heat.<sup>47</sup>

In *England* in 1121 or 1122, there was a drought and all three spring months were dry and had excessive heat.<sup>72</sup>

In *England* in 1121 or 1122, there was a “great famine from long and cruel frost.”<sup>57, 72, 91</sup>

[In *England*], after the Nones of April [the rains ceased] and a dearth ensued, the corn being parched in the ground from the excessive heat and drought of three spring months.<sup>72</sup>

In 1121 during the period between 16 July and 14 August, floods struck Hopei (now Hebei province) in northern *China* at Ch’ing-ho.<sup>153</sup>

In 1121, there were freshets [floods] in the vicinity of Shanghai, *China* and four adjacent fus [prefectures].<sup>166</sup>

---

**Winter of 1121 / 1122 A.D.** During the winter of 1121-22 in *England*, the frost killed the grain crops, “and much people and cattle;” famine followed.<sup>47, 93</sup>

In 1121 or 1122, the frost in *England* killed cows and many people. Famine followed.<sup>72</sup>

[In *England*], on December 25<sup>th</sup> there was a terrible and general hurricane. Soon after there was a severe winter which not only killed the sown corn [grain] but people and cattle; hence a famine.<sup>72</sup>

---

**1122 A.D.** In England on 11 April, there was a hurricane. On 26 August, there was a great hurricane.<sup>72</sup>

In 1122, *England* experienced the greatest dearth.<sup>72</sup> [This famine was made worst by “taxes, and Dane-gelt, endless.”]

Around the year 1122 there was a drought in Qercy [*Quercy, France*]. As a result there was a procession to pray for rain.<sup>173</sup>

In 1122, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tung-p’ing.<sup>153</sup>

In 1122 during the spring, there was a drought in Shantung provinces in *China*.<sup>165</sup>

---

**1123 A.D.** In 1123, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping. During the period between 6 May and 8 August, a drought engulfed several regions that led to a famine. The regions affected were: Kansu (now Gansu province) in northwest *China* at T'ien-shui, Hopei province at Ta-ming, Honan (now Henan province) in central *China* at Kaifeng, and Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.<sup>153</sup>

In 1123 during the summer, there was a drought in Chihli, Kiangsu, Shantung and Shensi provinces in *China*.<sup>165</sup>

### **1123 A.D. – 1125 A.D. England, France and Germany. Famine**

In 1123 or 1124 in *England, France* and *Germany*, there were famines from terrible weather and the greatest plague.<sup>57, 72</sup>

In 1123 or 1124, there was a plague from great snows and frost, intemperate air, to March. Then changes to hailstorms, snow, rain and frosts.<sup>72</sup>

In 1124, a terrible plague and so great a famine afflicted *Germany*, that the third part of the people died; and scarce were there survivors to bury the dead.<sup>72</sup>

In the famine of 1125 in *Germany*, one half of the population died of hunger. During the Middle Ages it was the custom of the city authorities to drive the poor of the cities outside of the city walls in time of famine, where they were “left to die and devour one another”.<sup>155</sup>

In 1125, one-half the population of *Germany* died from starvation.<sup>96</sup>

In 1125 [in *England*], there was a famine from excessive rains that were incessant all summer.<sup>72</sup>

**Winter of 1123 / 1124 A.D.** [In *England*] in 1123, there was a very great and destructive snowfall.<sup>72</sup>

The vine and fruit trees in *France* were killed by the cold.<sup>58</sup>

In 1124, a very hard winter occurred [in *Germany*] and many people and especially poor people froze to death. The birds in the air and the fish in the ponds were cold. Even the winter wheat in the field was completely frozen out.<sup>172</sup>

After Whitsuntide [White Sunday - Pentecost], a sharp frost killed the trees.<sup>72</sup>

At Pentecost was a hard frost, which did harm to fruit trees and [grape] vines.<sup>72</sup>

*Also refer to the section 1123 A.D. – 1125 A.D. for information on the famine in France, Germany and England during that timeframe.*

**1124 A.D.** The many tempest in *England* were pernicious to corn [grain] and all fruits, so that at Candlemas [2 February], they were sold at a great price.<sup>72</sup> [The famine was made worst because of the “scandalous adulteration of money and grievous taxes”.]

In 1124 in *England*, “Such a famine prevailed that everywhere in cities, villages and crossroads lifeless bodies lie unburied.”<sup>91</sup> “By means of changing the coine all things became very deere, whereof an extreme famine did arise and afflict the multitudes of people, even to death.”<sup>57</sup>

In 1123 or 1125, terrible was the famine in *England* so as in towns, villages and highways, dead bodies lay unburied, dissolving into stinking slime. In May trees scarce budded, the ground was so chilled.<sup>72</sup>

In 1124, there was so great a dearth in *England* that a horse load of wheat sold for six shillings.<sup>212</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

There were great inundations at Rome, *Italy*. Famine so great that multitudes of both sexes died of hunger.<sup>72</sup>

In 1124, floods struck several regions of *China* including:<sup>153</sup>

— Hopei (now Hebei province) in northern *China* at Ta-ming.

— Honan (now Henan province) in central *China* at Kaifeng and Loyang.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, and T'ai-ts'ang.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, and Hu-chou.

— During the period between 8 November and 7 December, floods struck Hopei province at Pao-ting. Crops were damaged.

*Also refer to the section 1123 A.D. – 1125 A.D. for information on the famine in France, Germany and England during that timeframe.*

**Winter of 1124 / 1125 A.D.** In 1124, the frozen Rhine River in *Germany* was crossed by pedestrians.<sup>62</sup>

This winter of 1124-25 was harsher than usual, because of the accumulation of snow that fell incessantly. A significant number of children and even women died from the extreme cold. In ponds, the fish were trapped under the ice. The ice was so thick and firm that loaded wagons and the horses traveled on the Rhine River as on the mainland [in *Germany*]. A strange incident occurred Brabant: Countless numbers of eels were driven by the cold from the swamps and found refuge in barns, where they sought to hide; but the cold was so great that they died from lack of food and rotted. The cattle died in many areas. The bad weather was prolonged so that only in May did trees begin to bud and the grain and other cultivated plants begin to grow.<sup>62</sup>

The year 1125 was a very hard winter and snow [in *Germany*]. Many poor people traveling, the birds in the air, the grape vines, and the trees froze. The fish in the ponds died because of the thick ice. The choughs [bird - member of the crow family] crawled into the haystacks and froze. In June, the Wednesday after Pentecost, there was a big snowstorm especially in the Bohemian Mountains. Then the following Sunday came a big frost that froze all streams so hard that they could be crossed on foot. Then throughout the whole country, this was followed by a cruel famine, and death.<sup>172</sup>

The winter of 1125 was cold and very long. There was extraordinary cold in *Germany, France* and *Italy*. Frozen rivers were passable on horseback. The leaves appeared on trees in May.<sup>173</sup>

The [grape] vine and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

In 1125 in *France*, the winter had cold more severe than usual, and was accompanied by a large amount of snow. Alternating snows, rains and frozen juice [freezing rain/sleet] continued until March. Then continual rains destroyed all the seeds.<sup>79</sup>

During the winter, far greater and more frequent snows than ordinary fell whereby many poor people's children were killed, as were the fishes in ponds, even eels themselves. After this followed a great plague on man and beast, and great intemperature of air, even till March. From the variety of weather, snow,

rain, hail, frost, etc. came great damage. The spring came on slowly from cold nights, and daily heavy stormy showers. All seeds were drowned. Hence a plague in *France*.<sup>72</sup>

During the winter of 1124-25 in *France*, the thick ice on the rivers could carry loaded wagons. Many children and women died from the cold. Alternating thaws, rains and snows gave way to very severe cold that lasted until the middle of March. The trees did not begin blooming and the earth was not covered with greenery until the month of May.<sup>79</sup>

During the winter of 1125 [in *England*], the frost was “so intense that the eels were forced to leave the water, and were frozen to death in the meadows.” The dearest [scarcest] year known for wheat.<sup>212</sup>

*Also refer to the section 1123 A.D. – 1125 A.D. for information on the famine in France, Germany and England during that timeframe.*

---

**1125 A.D.** In the Novgorod Republic [now part of *Russia*], there was a great storm with thunder and hail; it damaged houses and tore tiles off shrines; it drowned droves of cattle in the Volkhov River, while others hardly saved their lives.<sup>76</sup>

In *England*, there was a great flood on St. Lawrence’s Day (August 10).<sup>47, 72, 92</sup>

In 1125 in *England*, great flood on St. Lawrence’s Day; famine in consequence of destruction of crops.<sup>57, 91</sup>

In 1125, excessive constant daily rains the whole summer in *England*. Hence the most terrible famine through the whole nation on man and beast. On St. Lawrence’s Day was such a flood, as drowned many towns and much people. It carried down bridges, destroyed corn [grain] and meadows. A plague accompanied the famine, and the weather was so bad that it destroyed the corn and all fruits, as none living ever saw before. In *Germany* and *Italy* raged famine and pestilence.<sup>72</sup>

[Another source places this event in 1126] In 1126 in *England*, there were incessant rains during the summer, “when followed in all *England* a most unheard of scarcity. A sextarius of wheat sold for 20s [shillings].”<sup>57, 91</sup>

The summer of 1125 was rainy and damp [in *France*]. This led to poor harvests and cruel distress [famine].<sup>173</sup>

In 1125 in *France*, continuous rain took away almost all the seeds after the month of May.<sup>79</sup>

*Also refer to the section 1123 A.D. – 1125 A.D. for information on the famine in France, Germany and England during that timeframe.*

---

**Winter of 1125 / 1126 A.D.** In the year 1125 the winter was again severe and the spring unhealthy. In *France* there was a great famine. In *Bohemia* [now western *Czech Republic*], the trees burst from the extreme cold and the rivers were frozen over.<sup>62</sup>

The harsh winter of 1126 in northern *France* lasted six weeks.<sup>79</sup>

The [grape] vine and fruit trees in *France* were killed by the cold.<sup>58</sup>

---

**1127 A.D.** In the Novgorod Republic [now part of *Russia*], a blizzard fell thick over land, water and houses during two nights and four days. The water was high in the Volkhov River and snow lay on the

ground until James's day [May 1]. In the autumn the frost killed all the corn and the winter crop; and there was famine throughout the winter; an osminka [about 11½ pecks] of rye cost half a grivna [a circular ingot of silver].<sup>76</sup>

---

**1128 A.D.** The famine that began in 1127 carried over and intensified in 1128 and becoming very cruel in the Novgorod Republic [now part of *Russia*]. One osminka [about 11½ pecks] of rye cost a grivna [a circular ingot of silver]. The people ate lime tree leaves, birch bark, pounded wood pulp mixed with husks and straw; some ate buttercups, moss, horseflesh. Many people dropped dead from hunger, their corpses lay in the streets, in the market place, and on the roads, and everywhere. They hired hirelings to carry the dead out of the town; the serfs could not go out; woe and misery on all! Fathers and mothers would put their children into boats in gift to merchants, [as slaves to the overseas merchants, who came up the river Volkhov from the Baltic to Novgorod in boats] or else put their children to death. Others were dispersed over foreign lands. Thus did our country perished. This year, the water was high in the Volkhov River, and carried away many houses.<sup>76</sup>

The frost in *England* was very severe.<sup>47, 93</sup> Severest.<sup>72</sup>

The year 1128 had the most terrible hard winter [in *England*]. In Easter fell much snow.<sup>72</sup>

In 1128 during the period between 5 February and 6 May, floods struck southeast *China*. Then during the period of 6 May and 8 August, a drought engulfed many regions of *China*. The drought was accompanied by a plague of locust. As a result of the hardship, the land tax was remitted.<sup>153</sup>

In 1128 during the autumn, there was a drought in *China*. The drought was accompanied by a plague of locusts.<sup>165</sup>

---

**1130 A.D.** In *England*, there was the greatest drought and hottest years.<sup>47, 72</sup>

In 1130, there was a great famine in Rome, *Italy*.<sup>72</sup>

In Rome, *Italy* in 1130-31 there was a great famine.<sup>57, 91</sup>

In the famine in *France* during 1130-32, one man butchered and ate 48 people.<sup>155</sup>

---

**1131 A.D.** In *England*, there was the greatest drought and hottest years.<sup>47, 72</sup>

In 1131, there was a great famine in Rome, *Italy*.<sup>72</sup>

In 1131, there was so great a drought in *France* that all the lakes, rivers, springs and wells dried up. This year and some after, was so great a dearth of domestic animals, as few survived. Oxen died so fast that out of 10 yoke, not one was left; and of every 200 or 300 swine, scarce one remained alive. Fowls also died; hence a great dearth of flesh [animal & fowl], butter, cheese and eggs.<sup>72</sup>

In the famine in *France* during 1130-32, one man butchered and ate 48 people.<sup>155</sup>

---

**1132 A.D.** In *England*, there was a great dearth.<sup>72</sup>

In the famine in *France* during 1130-32, one man butchered and ate 48 people.<sup>155</sup>

In 1132 during the period between 17 May and 14 June, floods struck in Anhwei (now Anhui province) in eastern *China* at Hsi and in Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê. Crops were damaged by the floodwaters.<sup>153</sup>

In 1132, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin.<sup>153</sup>

In 1132, there was a great drought in Kiangsu province in *China*.<sup>165</sup>

In 1132 during the 11<sup>th</sup> moon, in the vicinity of Shanghai, *China*, at night there was a fierce wind, with lightning and solid hail of the size of lichis [lychee fruit], which destroyed dwellings and boats.<sup>166</sup>

---

**Winter of 1132 / 1133 A.D.** During the winter the cold was so intense in *Italy*, that the Po River was frozen from Cremona (in northern *Italy*) to the *Adriatic Sea*. The wine froze and burst the casks, and the trees split with a great noise.<sup>1</sup>

In 1133, the Po River in *Italy* froze.<sup>58, 80</sup>

The Po River in *Italy* was frozen from Cremona to the sea.<sup>38</sup>

In 1133, the Rhône River in *France* froze.<sup>58, 80</sup>

During the winter of 1133 the Rhône River in southern *France* froze as well as the wine cellars froze.<sup>79</sup>

Since the water in tree sap acquires greater volume when it freezes in extreme cold, trees burst apart with a loud noise. In Strasbourg in northeastern *France* more fruit trees burst when the cold reaches -16° Reaumur (-20° C, -4° F). A great number of trees in *France* burst in the winter of 1133.<sup>58, 80</sup>

Heavily loaded carts passed along the frozen Rhône River in *France* on the 5<sup>th</sup> of January 1133; as they would on the mainland.<sup>61</sup>

In 1133, the Po River in *Italy* was frozen from Cremona to the *Adriatic Sea*. The Rhône River in *France* was frozen and people crossed it on the ice. Wine froze in the cellars.<sup>60, 62</sup>

In the year 1133 in *Italy*, there was a very severe winter. The Po River was frozen from Cremona to the [*Adriatic*] sea. A tremendous amount of snow covered the roads, rivers and streams were all frozen, everything, even the wine was frozen, and the oak and walnut trees were split, with a crash and were torn, and the olive trees and vines withered. This produced a very terrible shortage [of food], which forced, the following year, the inhabitants of the area of Padua, to feed on grass.<sup>62</sup>

---

**1133 A.D.** In *France*, there were great floods from rain.<sup>47, 72, 92</sup>

In 1133, there were severe rains in *France* and a great intemperature of air.<sup>72</sup>

On 2 August 1133 [in *Germany*], there was an eclipse [darkness of the sun] of the type that the sun was completely covered. Following this for an entire month was unusual and unstable weather. The effects only began over a half a year and lasted two whole years. Without a doubt a part of the effects was the powerful hot summer of 1135. Due to great heat much water, lakes and ponds almost dried up and many forests caught fire because of the great heat and there was much loss of timber.<sup>172</sup>

In 1133 during the period between 7 May and 31 August, there was a drought of long duration that engulfed *China*. Then during the period 3-31 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chin-chiang. The city walls were damaged by the floodwaters.<sup>153</sup>

In 1133 during the summer and autumn, there was a drought of long duration in *China*.<sup>165</sup>

---

**Winter of 1133 / 1134 A.D.** On 28 December 1133, a blizzard struck Normandy [*France*]. “On Innocents’ day very heavy snow fell, which covered all the face of the earth and blocked the doors of houses with its drifts so that next day men and beasts could scarcely leave their shelters or find any means of providing for their needs. Many of the faithful never entered a church on that feast day, and the priests themselves in many places were totally unable to cross the thresholds of the churches because their way was blocked with snow-drifts. After six days the wind veered to the west and the snow melted, suddenly causing great floods. The rivers, swollen by the snow water, burst their banks and caused widespread loss to some people and gain to others. In villages and towns near by the floods rose to the roofs and drove people from their homes. Large stacks of hay were swept from the meadows, and barrels full of wine and other container vessels were carried away with all kinds of precious belongings.”<sup>170</sup>

---

**1134 A.D.** In 1134 at Cashel in south-central *Ireland*, there was a great hail shower.<sup>93</sup>

The extreme drought of 1134 in northern *France* caused the failure of oats, barley and vegetables.<sup>79</sup>

In June 1134 in Normandy [*France*], blazing heat scorched the earth for fifteen days. Streams and pools of water dried up and flocks and herds suffered terribly from thirst. “Then one Saturday a great number of thirsty people plunged into the waters to cool themselves, and many in different places were drowned in the space of a single hour. In the region around us of which we were well informed thirty-seven men were drowned in the waters of pools and rivers.”<sup>170</sup>

In the first week of September 1134, many cities and villages in Normandy [*France*] were burnt to the ground including Le Mans, Chartres, Alençon, Nogent in Perche and Verneuil. The cause of the fires were undetermined and attributed to the flames of God’s wrath.<sup>170</sup>

In September or October 1134 in Flanders [now *Belgium*], “one night the sea poured over the land and, spreading rapidly for seven miles, overwhelmed churches and castles and cottages alike, and involved countless thousands of men and women of every order and rank in a common catastrophe.” “the flood swept away all, fair and ugly, men and women, alike and, choking them with water, quickly dragged them down to death.”<sup>170</sup>

— “One poor woman, who had recently given birth to a child, heard the roar of the raging water and leapt from her bed terrified, but she kept her head, snatched up the baby and a hen with its chickens, and quickly climbed on top of a haystack that was outside her cottage. The force of the rushing water, which was submerging everything, lifted up the hay and carried the stack for a long distance, eddying to and fro. So, by the pity of merciful God, the woman was saved from imminent death and snatched to safety by heaven, with the few poor possessions she had with her.”

— “A twelve-year-old boy told me that on that occasion he climbed quickly on to the gable of the roof and there escaped death; his father and mother, however, who were lower down, perished.”

— [These accounts appear to match that of a tsunami rather than a storm.]

In *Flanders*, there was an inundation from the sea.<sup>47, 72, 92</sup>

The sea broke in on the land and overflowed a great part of *Flanders* and the neighboring countries, killing many people and cattle. This was a rainy year.<sup>72</sup>

[Another account places this event in 1135] In 1135, an irruption of the ocean engulfed a large part of Flanders [now *Belgium*], Holland [now *the Netherlands*] and *Friesland*.<sup>79</sup> [Friesland is now north Netherlands and north Germany.]

[Another account places this event in 1136] The waters of the [English] Channel overflowed and swallowed part of Flanders with its inhabitants.<sup>79</sup>

---

**Winter of 1134 / 1135 A.D.** On December 31 [in the Novgorod Republic which is now part of *Russia*], bad weather set in; frost and blizzard, very terrible!<sup>76</sup>

[In the area around Prague, *Czech Republic*], during the weekend of Pentecost (around the 20th of May) in 1135, a thick snow fell in some wooded areas. The next day there was a very lively cold. The frost damaged the crops of every kind. The weather especially damaged the autumn planted crops and the grape vines. The cold also destroyed a large number of trees, as well as bushes, which were frozen down to the roots. The cold froze gently running water [streams]. In *France*, the winter was rough and long. For the fruits of the soil, this year was very unfavorable. As a result of these unfortunate events, a terrible famine gripped the land.<sup>62</sup>

---

**1135 A.D.** In *France* and *England*, there was a great drought.<sup>47, 72</sup>

In 1135 [in *Europe*], the heat and drought were extremely high. The pastures and the crops were scorched, and it was followed by a great dearth and famine. The rivers and springs dried up. The heaths of the mountains [small shrub with tiny evergreen leaves and pink or purple flowers] and the dry forests caught fire, allegedly from the glow of the sun's rays. The Rhine River [in *Germany*] was almost completely dry and could be crossed on foot in several places.<sup>62</sup>

In 1135, so great a drought and heat, that all grass and corn [grain] were burnt up. Dearth and a great famine followed. Rivers and springs were dried up. Mountains and woods were burnt up. And many places were said to be set on fire by the sun. The Rhine River was so dried up, that one might safely ford it in any place.<sup>72</sup>

In the year 1135, there was a mighty fierce summer [in *Germany*]. The water in large lakes, streams and ponds dried up. Many forest were burned up with great heat.<sup>172</sup>

The summer of 1135 was hot and dry. "Burnt earth" was everywhere in *France*.<sup>173</sup>

On 28 October 1135, a violent wind sprang up during the night [in Normandy, *France*]. The howling was dreadful. It carried away the roofs from countless homes along with churches and high towers. It cleared woods by tearing down a great number of trees.<sup>170</sup>

On 1 December, there was such dreadful thunder and lightning, which was very uncommon in *England* in the winter. Then came a tempest or hurricane.<sup>72</sup>

From 1135-37 in *England*, there was a great drought and famine.<sup>57, 72, 91</sup>

In 1135, many areas of *China* were engulfed by a drought including:<sup>153</sup>

— During the period between 14 June and 10 August, a drought of long duration engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Taichow, Ch'ü, Chien-tê, Wên-chou, Ningpo, Li-shui, Hangchow, Chia-hsing, Hu-chou and Chin-hua.

— During the period between 14 June and 10 August, a drought of long duration engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang and Nanking.

- During the period between 14 June and 10 August, a drought of long duration engulfed Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng, Tang-t'u and Kuang-tê.
- During the period between 14 June and 10 August, a drought of long duration engulfed Hunan province in south-central *China* at Changsha.
- During the period between 8 August and 8 November, a very severe drought engulfed Szechwan (now Sichuan province) in southwest *China*.

In 1135 during the summer and autumn, there was a drought of long duration in Chêhkiang, Hunan, Kiangsu and Sze-ch'wan provinces in *China*.<sup>165</sup>

In 1135 during the period between 8 August and 8 November, floods struck Szechwan (now Sichuan province) in southwest *China* at Chengtu.<sup>153</sup>

**1136 A.D.** At the summer solstice in 1136 in *France*, the weather was unusual due to the intense heat. This heat had a disastrous effect on people, the flocks and the fruits of the soil.<sup>62</sup>

On 27 October 1136 in *France*, there was a wind so violent that it knocked down a many buildings. The waters of the [English] Channel overflowed and swallowed part of Flanders [now *Belgium*] with its inhabitants.<sup>79</sup>

[In *England*] there was a frightful tempest with thunder, lightning and hail.<sup>72</sup>

In 1136 during the period 1-30 July, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Fêng-chieh, Mien-yang and Chengtu, and Hunan province in south-central *China* at Hêng-yang.<sup>153</sup>

In 1136 during the spring, there was a drought in Hunan and Sze-ch'wan provinces in *China*. The land tax was remitted.<sup>165</sup>

**Winter of 1136 / 1137 A.D.** During the period between 8 November 1136 and 5 February 1137, floods struck Kiangsi (now Jiangxi province) in southern *China* at P'o-yang. The city walls were damaged.<sup>153</sup>

**1137 A.D.** In *England*, there was a general drought, with great heat: hence famine."<sup>47, 72</sup>

[In *Europe*], the summer of 1137 was very hot and dry. The navigable rivers were so dry that they were crossed on foot in some places. In *France*, the springs and wells gave no more water, and many villagers were dying of thirst. In the midst of this consuming heat, several towns were burned on the same day, among others the cities of Mainz (Mayence) and Speyer in *Germany*. Underground fire appeared in *Italy* for three years and it was this year that Vesuvius erupted. The ordinary state of the waters was finally restored in the year 1139.<sup>62</sup>

The drought of 1137 in *France* broke out in March and lasted until September. The drought caused well, springs and rivers to dry up.<sup>79</sup>

In 1137 in northern *France*, the summer heat was stifling. It burned and overwhelmed.<sup>79</sup>

The summer of 1137 was dry from March to September [in *France*]. Tree ring data shows that there also was a drought in *Algeria* during this time.<sup>173</sup>

The summer of 1137 in *England* was exceedingly hot and droughty. Navigable rivers were so dried up in many places that they might be walked over on foot. Fountains and wells in *France* were so dried up that

many laborers died of thirst. From excessive heat, many towns took fire and were totally burned down as Moguntia (Mainz, *Germany*), Spira (Speyer in southeastern *Germany*), Gloffaria, all on the same day.<sup>72</sup>

In 1137, the whole world [likely *Europe*] suffered a severe drought. Brooks ran dry. Pools and water tanks [cisterns] dried up, and some rivers ceased to flow. Men and beasts suffered terribly from thirst. In some districts, men traveled seven leagues [21 miles, 34 kilometers] in search of water. Some died of excessive heat while carrying water on their backs for themselves and their households. In July and August [in *France*], the burning summer heat scorched mortal men. This heat wave ended on 13 September. Many kinds of pestilence struck people down.<sup>170</sup>

From this drought, and the inexpressible cruelties and barbarities of King Stephen's reign, arose a great dearth and famine in *England*.<sup>72</sup>

In 1137 during the period between 22 February and 18 August, a drought of long duration engulfed Kiangsu (now Jiangsu province) on the east coast of *China* and Anhwei (now Anhui province) in eastern *China*. As a result, the land tax was remitted.<sup>153</sup>

In 1137 during the spring and summer, there was a very severe drought in Anhwei, Kiangsi and Kiangsu provinces in *China*.<sup>165</sup>

---

**1138 A.D.** On 9 March on the feast of the Forty Saints in Novgorod [*Russia*], there was great thunder, so that sitting in doors we heard it clearly.<sup>76</sup>

In 1138 during the period between 8 August and 5 September, floods struck *China*. Houses were damaged by the floodwaters and many people drowned.<sup>153</sup>

---

**Winter of 1138 / 1139 A.D.** During the period between 8 November 1138 and 5 February 1139, a drought engulfed *China*.<sup>153</sup>

In 1138 during the winter, there was a drought in *China*.<sup>165</sup>

---

**1139 A.D.** In 1139 during the period between 28 June and 26 August, a drought engulfed *China*.<sup>153</sup>

In 1139 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1141 A.D.** In 1141 a famine began in *England*, which lasted twelve years.<sup>57, 72, 91</sup>

In 1141 began in *England* a most dreadful and desolating famine, which continued 12 years. There was a long, rigorous, tempestuous frosty and snowy winter. At a place called Welsburn (now Wellesbourne, Warwickshire in the West Midlands of *England*), rose from the earth to the sky, a tempest of whirlwind and thick darkness [tornado]. It threw down 51 houses, carried off the roof of a church, and with it hailstones as big a pigeon's eggs. One killed a woman dead. It did great damage to shipping in Flanders [now *Belgium*].<sup>72</sup>

In 1141, a fearful storm of hail and rain broke out in Gaul [*France*] and Brittany [possibly *Great Britain*]. Terrible thunderclaps were heard accompanied by great flashes of lightning.<sup>170</sup>

In 1141 during the period between 4 August and 2 September, a drought engulfed *China*.<sup>153</sup>

In 1141 during the autumn, there was a drought in *China*.<sup>165</sup>

---

**Winter of 1141 / 1142 A.D.** The winter of 1141-42 in northern *France* was very harsh.<sup>79</sup>

---

**1142 A.D.** In 1142 during the period between 29 March and 5 June, a drought engulfed *China*. During the period between 8 August and 8 November, a drought struck in Honan (now Henan province) in central *China* at Loyang and in Kiangsu (now Jiangsu province) on the east coast of *China* east of the Huai River. During the period between 19 December 1142 and 17 January 1143, a drought struck in Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 1142 during the spring and autumn, there was a drought in Kiangsu, Shansi and Shensi provinces in *China*.<sup>165</sup>

---

**Winter of 1142 / 1143 A.D.** The River Thames in *England* was frozen and crossed on foot.<sup>62</sup>

During the winter of 1142-43 in *England*, after the rains was a very hard winter. The River Thames and other rivers were frozen; so as men, horses and burdens [loaded wagons] might safely pass and repasts on the ice. The earth was covered with thick deep snow.<sup>72</sup>

In 1142, there was a frost in *England*.<sup>72</sup>

In the year 1143, in *France* and *Germany* there was a severe winter, and very thick snow covered the earth from the beginning of December to February. A terrible storm tore down houses and churches. When the thaw came, the melting snow brought floods. In *Germany*, the trees burst from the extreme cold and the [grape] vines froze. The famine continued to decimate the people.<sup>62</sup>

In *France* in 1142, the ground remained buried under a deep layer of snow from December 6 to February 2.<sup>79</sup>

In *France*, violent winds in January 1143 overturned many buildings and tore up the trees.<sup>79</sup>

---

**1143 A.D.** In the Novgorod Republic [now part of *Russia*], all the autumn was rainy, from Our Lady's Birthday [September 25] to Korochun [the Winter Solstice – 21 or 22 December] & warm, wet; and the water was very high in the Volkhov River and everywhere, flooding carried away hay and wood. Lake Ilmen [at the north end lies Novgorod] froze in the night, and the wind broke up [the ice] and carried it into the Volkhov River, where it broke the bridge, it carried away four piles [bridge supports], never heard of more.<sup>76</sup>

In 1143, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 1143, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**1144 A.D.** In *England*, there was a drought that lasted during all the harvest months and long after.<sup>47, 72</sup>

In *England*, there was a terrible famine.<sup>72</sup>

On 14 February 1144, there was a dreadful hurricane. *England* was almost consumed by a general sore famine and civil wars. There was a most droughty harvest. There was neither rain nor dew until the Feast of Saint John the Baptist [June 24] and then no more for a long time afterwards.<sup>72</sup>

In 1144, several regions of *China* experienced flooding.<sup>153</sup>

During the period of 3 June - 2 July, the following areas were affected:

— Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua, Ch'ü, Lan-ch'i and

Chien-tê experienced flooding. At Lan-ch'i over 10,000 people were drowned.

— Kiangsi (now Jiangxi province) in southern *China* at Shang-jao experience flooding.

— Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou experience flooding.

During the period of 3 July - 31 July, the following areas were affected:

— Kiangsu (now Jiangsu province) on the east coast of *China* experienced flooding.

— Chekiang (now Zhejiang province) on the east coast of *China* experienced flooding.

— Fukien (now Fujian province) on the southeast coast of *China* experienced flooding.

Excessive rains delayed the [grain] harvest of 1144 in northern *France* until 25 August.<sup>79</sup>

**1145 A.D.** In the Novgorod Republic [now part of *Russia*], there were two whole weeks of great heat, like burning sparks, before harvest; then came rain, so that we saw not a clear day until winter; and a great quantity of corn and hay were unable to be harvested; and that autumn the water was higher than three years before; and in the winter there was not much snow, and no clear day, not until March.<sup>76</sup>

**1146 A.D.** In *France* there was a famine.<sup>57, 72, 91</sup>

The year 1146 was wet. This caused a calamity in wheat production, which led to famines. There were poor harvests in Reims, *France* and Aachen, *Germany*. The Rhine River flooded.<sup>173</sup>

In 1146, floods struck Szechwan (now Sichuan province) in southwest *China* at San-t'ai. Houses were damaged by the floodwaters.<sup>153</sup>

**1147 A.D.** [In *England*], there was a tempest with violent torrents [of rain].<sup>72</sup>

In 1147 during the 10<sup>th</sup> moon [in early winter], in the vicinity of Shanghai, *China*, there was wind, thunder, and hail like a shower of arrows, which destroyed houses and boats.<sup>166</sup>

**1148 A.D.** In *England* in April, there was great thunder and a hurricane for four days.<sup>72</sup>

In the Novgorod Republic [now part of *Russia*], there was rain with hail on June 27, a Sunday; and thunder set fire to the Church of the Holy Mother of God in the monastery of Zverinet.<sup>76</sup>

In 1148 during the period between 6 May and 8 August, a severe drought engulfed several regions of *China*. Due to the hardship, the land tax was remitted. The area affected included:

— Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Ningpo, Taichow, Ch'ü, Chien-tê, Wên-chou, Li-shui, Hangchow, Chia-hsing, Hu-chou and Chin-hua.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang, Yangchow and Nanking.

— Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng, Tang-t'u and Kuang-tê.

Then during the period between 16 August and 14 September, floods struck Chekiang province at Shao-hsing, Ningpo, and Chin-hua.<sup>153</sup>

In 1148 during the summer, there was a great drought in Chêhkiang, Kiangsi and Kiangsu provinces in *China*. As a result, the land tax was remitted.<sup>165</sup>

**Winter of 1148 / 1149 A.D.** In *England*, the winter was dry and warmest to 1<sup>st</sup> April, then coldest to 15<sup>th</sup> May.<sup>47, 72</sup>

**1149 A.D.** In *England*, the year was full of tempests of thunder and lightning, hail, rain, etc., which did inestimable, harm. The summer and harvest were excessively rainy. These rains did great damage to standing corn [grain] so that a dearth [famine] followed.<sup>72</sup>

[In *England*], there were five tempests of whirlwind, thunder, lightning and hail.<sup>72</sup>

In 1149, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin and Chinkiang.<sup>153</sup>

In 1149, there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**Winter of 1149 / 1150 A.D.** The winter was severe in December 1149. The River Thames in *England* froze.<sup>28</sup>

In *England*, the winter of 1150 was remarkable for a severe frost, which commenced on the ninth of December, and continued till the beginning of March, during a great part of which time, the River Thames was frozen so hard as to allow carts and other carriages to pass over the ice.<sup>29</sup>

The frost in *England* continued from the 10<sup>th</sup> of December to the 19<sup>th</sup> of February.<sup>47, 72, 93</sup>

From 10 December 1149 to 19 February 1150, there was a very hard frost in *England*. The River Thames was so frozen that men went over [the ice] on foot and horseback. A terrible whirlwind, which broke down many houses, tore up trees by the root [tornado]. The earth was very barren.<sup>72</sup>

In 1149, the sea was frozen off the coast of Holland [now *the Netherlands*].<sup>62</sup>

In the year 1149, the winter was more severe in Flanders [now *Belgium*] than usual and lasted from early December to March. The sea was completely frozen and passable from a distance of more than three miles from the coast. The frozen waves appeared in the distance like towers. In Tournai, *Belgium*, there was great shortage of food.<sup>62</sup>

During the winter of 1150 [near *France*], the sea was frozen 3 miles [from shore] from December to February.<sup>173</sup>

The winter of 1150 in northern *France* was no less rigorous and continued for three months. Several people had their limbs frozen. This winter did not allow the spring farm work.<sup>79</sup>

---

**1150 A.D.** [In *England*], there was a famine from rains, tempest, snow, frost and barren land.<sup>72</sup>

In 1150 and 1151, there was a great famine [in *England*].<sup>212</sup>

---

**1151 A.D.** In *England*, the summer was dry and hot, but the harvest was early and good.<sup>47, 72</sup>

In 1150 and 1151, there was a great famine [in *England*].<sup>212</sup>

[In the area around *Belgium / Northern France*] the year 1151 promised abundant harvests, but the rain which fell beginning on the Feast of St. John [June 24] and continuing without interruption until mid-August, destroyed the goods of the earth. Very little fruit came to maturity. The wine was missing, because of the small quantity of grapes collected. And the wine produced turned into vinegar.<sup>62</sup>

The summer of 1151 [in *France*] was rotten. There were continual rains from 24 June to mid-August.

There were frequent storms, gales and fogs. A promising crop was destroyed.<sup>173</sup>

Excessive rainfall on [the Feast of] Saint John to mid-August in the year 1151 in northern *France* stemmed the crops from maturing, and caused enormous devastation.<sup>79</sup>

In 1151 or 1152, there were great and excessive rains, which fell this summer, hindered the growth of corn [grain]; hence a famine, together with a great mortality of people.<sup>72</sup>

In 1151-52, there was a famine in *Europe* and *Palestine*.<sup>57, 72, 91</sup> [Palestine is the region between the Mediterranean Sea and the Jordan River.]

**1152 A.D.** In *England* there was a drought from “13<sup>th</sup> March to harvest, neither rain nor dew. First, cold nights: frost, northerly winds; then greatest heat and dry, flies, gnats.”<sup>47, 72</sup>

In *Germany*, there were great floods on the Rhine River from excessive rains.<sup>47, 72, 92</sup>

In 1152 [in *France*] there was a grain famine.<sup>173</sup>

**1153 A.D.** In *Ireland*, a great famine raged in Munster, and spread all over *Ireland*.<sup>57, 91</sup>

In 1153, floods struck several regions of *China* including:<sup>153</sup>

— Szechwan (now Sichuan province) in southwest *China* at Chin-t’ang; Anhwei (now Anhui province) in eastern *China* at Hsüan-ch’êng; and Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang.

— During the period between 24 June and 22 July, floods struck Szechwan (now Sichuan province) in southwest *China* at San-t’ai. Due to the hardship, the land tax was remitted.

— During the period between 23 July and 21 August, floods struck on the east coast of *China* in Kiangsu province at Soochow and in Chekiang (now Zhejiang province) at Hu-chou, and Chia-hsing. As a result, the summer land tax was remitted.

— During the period between 23 July and 21 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Kuang-tsê. People drowned.

**1154 A.D.** There was a great frost in *England*.<sup>47, 72, 93</sup>

There was a general famine over all *Europe* and a great frost in *England*, thunder, lightning, rains, and a horrible tempest. Famines in *Scotland* with the plague.<sup>72</sup>

In *England*, there was a famine from rains, frost, tempest, thunder and lightning.<sup>57, 72, 91</sup>

In 1154 during the period between 7 November and 6 December, a drought engulfed several regions of *China*. Due to the hardship, the land tax was remitted. The area affected included:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Ningpo, Taichow, Ch’ü, Chien-tê, Wên-chou, Li-shui, Hangchow, Chia-hsing, Hu-chou and Chin-hua.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, and T’ai-ts’ang.

In 1154 during the summer, there was a drought in Chêhkiang and Kiangsi provinces in *China*. The land tax was remitted.<sup>165</sup>

**1155 A.D.** In July 1155, Mortain in Normandy in northwestern *France* was struck by thunder and storms with heavy rain.<sup>79</sup>

**1156 A.D.** In *England*, there were rain and floods, lasting all the harvest.<sup>47, 72, 92</sup>

In 1156 in *England*, thunder and tempests were very frequent in July. An abundance of rain followed, which began on 11 August. The rain hindered the reaping and sowing of corn [grains]; hence many great and long floods, which carried down houses, churches, etc. Then came the frost.<sup>72</sup>

In 1156 [in *England*], all harvest from August 11 there was no reaping or sowing but floods like seas.<sup>72</sup>

In 1156 in southern *France*, excessive drought brought about winter.<sup>79</sup>

---

**1157 A.D.** There was a great frost in *Italy*.<sup>47, 72, 93</sup>

During the winter of 1157, there was an enormous amount of snow and the violence of the frost destroyed a large portion of the [grape] vines.<sup>62</sup>

In 1157, there was a terrible thunder and lightning storm in *Normandy* that was fatal to people and cattle.<sup>72</sup>

There was very much snow and frost in *Italy*. In summer afterwards was excessive heat and drought, followed by the plague. In June there was a great tempest, which did much damage to corn, trees, and buildings.<sup>72</sup>

In *Italy*, there was a famine after great snow and frost.<sup>57, 72, 91</sup>

In 1157, the summer was extremely hot and dry in *Italy*.<sup>62</sup>

In 1157, the summer was abnormally very hot [in *Germany*].<sup>172</sup>

In the Novgorod Republic [now part of Russia], in autumn there was very terrible thunder and lightning, and hail the size was larger than apples. This hailstorm occurred on 7 November at 5 o'clock at night.<sup>76</sup>

In 1157, floods struck several regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang, Nanking and I-chêng.
- Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.
- Anhwei (now Anhui province) in eastern *China* at Kuei-ch'ih.
- Kiangsi (now Jiangxi province) in southern *China* at Kiukiang and Nan-ch'ang.
- Hupeh (now Hubei province) in central *China* at Wuchang and Hanyang.

In 1157 during the period between 4 November and 3 December, a drought engulfed Szechwan (now Sichuan province) in southwest *China*. This drought caused a famine. Due to the hardship, the land tax was remitted.<sup>153</sup>

In 1157 during the autumn, there was a drought in Sze-ch'wan province in *China*. The land tax was remitted.<sup>165</sup>

---

**1158 A.D.** In 1157 or 1158 in *Italy*, there was a great overflow of the Tiber River. In *Normandy*, there were great floods.<sup>47, 72, 92</sup>

In 1158, a large flood tore down many churches and houses and drowned many people and livestock [in *Germany*]. [This entry was listed under the category "storm surge", which might include an inundation of the sea.]<sup>172</sup>

In July 1157 or 1158, there were several lightnings and tempests in *Normandy*. In several places, many people were killed from lightning. A great inundation followed which hindered the reaping, fetching home and sowing of corn [grain]. There was a great inundation of the Tiber River in *Italy*. The River Thames in *England* dried up.<sup>72</sup>

In 1157 or 1158, from tempests, floods, corn [grain] was neither ripened, reaped, got, nor new sown [fall planting].<sup>72</sup>

In the Novgorod Republic [now part of *Russia*], there was great mortality in the people and a large number of horses also died; so that it was not possible to walk to the market place through the town, nor along the dike, nor out to the fields, because of the stench. Horned cattle also died.<sup>76</sup>

In 1158, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 28 June and 26 July, floods struck in Shensi (now Shaanxi province) in central *China* at Liao-yang and Ning-ch'iang and in Szechwan (now Sichuan province) in southwest *China* at Kuang-yüan. Houses and bridges were damaged by the floodwaters and many people drowned.

— During the period between 24 September and 23 October, floods struck on the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow and in Chekiang (now Zhejiang province) at Shao-hsing and Hu-chou. As a result, the unpaid land taxes were remitted.

— During the period between 24 September and 23 October, floods struck Chekiang province at Hangchow, Chia-hsing, Hu-chou, Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'ü, Chien-tê, Wên-chou, and Li-shui.

— During the period between 24 September and 23 October, floods struck Kiangsi (now Jiangxi province) in southern *China* at Kiukiang.

— During the period between 24 September and 23 October, floods struck Kiangsu province at Nanking, Chinkiang, Yangchow, Tung-hai, Wu-chin, Soochow, Sung-chiang and T'ai-ts'ang.

— During the period between 24 September and 23 October, floods struck Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng.

**1159 A.D.** In 1159 during the period between 20 February and 19 April, a drought engulfed *China*. During the period between 8 August and 8 November, a drought struck on the east coast of *China* in Kiangsu (now Jiangsu province) and in Chekiang (now Zhejiang province).<sup>153</sup>

In 1159 during the spring and autumn, there was a drought in Chêhkiang and Kiangsi provinces in *China*.<sup>165</sup>

In 1159, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Foochow. Houses were damaged by the floodwaters. During the period between 15 August and 13 September, floods struck Fukien province at Foochow.<sup>153</sup>

**1160 A.D.** In 1160 during the period between 5 February and 6 May, a drought engulfed Kansu (now Gansu province) in northwest *China* at Wu-tu, Ch'êng, and Hsi-ho, and Shensi (now Shaanxi province) in central *China* at Fêng. Then during the period between 6 June and 5 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Yü-ch'ien and An-chi. Then during the period between 8 August and 8 November, a drought engulfed the east coast of *China* in Kiangsu (now Jiangsu province) and Chekiang province.<sup>153</sup>

In 1160 during the spring and autumn, there was a very severe drought in Chêhkiang, Kiangsi, Shensi and Sze-ch'wan provinces in *China*.<sup>165</sup>

**1161 A.D.** In Sicily *Italy*, there was an inundation of the sea; drowned 5,000 persons; “floods in many rivers, multitudes of people lost.”<sup>47, 72, 92</sup>

In *Italy*, there was a tempest with hail the size of goose eggs.<sup>72</sup>

There was a great thunder and lightning storm [in *England*] that was fatal.<sup>72</sup>

At the village Landaaren [now Landavran in Brittany in northwestern *France*] at noon rose out of the earth a terrible whirlwind [tornado] and floods on high. The noise of spears and lances were heard in it, but no hand was seen. On the top were seen fowls flying in and about it [debris]. Soon after a grievous plague raged both there and in several places in *Normandy* and the neighborhood. There was a great famine and earthquake in several places including Antioch (*Turkey*), Tripoli (*Libya*), Damascus (*Syria*), etc. wherein 20,000 men were killed. In *Sicily*, the sea overflowed and drowned 5,000 people. In May fell great hailstones, the stones as large as geese eggs. There were also several tempests, inundations of rivers, and loss of much people.<sup>72</sup>

In the Novgorod Republic [now part of *Russia*], the sky stood clear all summer and all the corn was scorched, and in the autumn frost killed all the spring corn. During the winter the whole season stood with heat and rain, and there was thunder. We bought a little barrel [1 1½ pecks] for seven kunas [martenskins used as money]. Oh, there was great distress in the people and want!<sup>76</sup>

In 1161, there was a hurricane with a very strange whirlwind at Scandaroon [possibly in *Turkey*].<sup>72</sup>

In 1161 during the period between 23 August and 20 September, floods struck Hupeh (now Hubei province) in central *China* at Chien-shih. Many people drowned.<sup>153</sup>

---

**1162 A.D.** In Holland [now *the Netherlands*], there was an inundation from the sea; many people and cattle lost.<sup>47, 72, 92</sup>

In *Holland*, there was a tempest of hail, and the sea overflowed.<sup>72</sup>

In 1162, there was said to have been a great famine all over the world.<sup>57, 91</sup>

In 1162, there were several large snowfalls [in *Germany*]. It covered tall houses and trees. One could not travel by horseback or on foot.<sup>172</sup>

On 10 February 1162, there was a great flood, and many thousands of people drowned in the Elbe and Weser rivers, along with countless cattles. One called this flood “the human trough” because people drowned one by one. The district of Dithmarschen in northern *Germany*, a collapse of the water pond released so much water that in the whole parish of Brunsbüttel only 30 people survived. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In Lübeck [*Germany*], there was a tempest of wind, thunder and lightning.<sup>72</sup>

In 1162, there was a general famine [in *Europe*] that was still terrible. But in *Poland*, it was a great famine.<sup>72</sup>

On 14 March 1162, there was a great tempest of wind, thunder and lightning at Lübeck in northern *Germany*, which burnt and overthrew many houses. The sea overflowed farther in *Friesland* than ever was known. Even Hadelen, and all the low country of Albia and Wirra were flooded and many thousands of people and cattle drowned. At the same time hail made fearful havoc of men, beasts, trees, and horses.

In *Poland* there was a famine. In *Mediolana* [*Mediolanum* or *Milan, Italy*] fell twelve great snows, which greatly afflicted both animals and vegetables. A great famine still reigned over most parts of the world. Famine, plague and war sorely afflicted the people of *Mediolana*.<sup>72</sup> [Much of *Friesland* is currently under the *Zuider Zee*. The remaining *Friesland* (*Frisian*) territories consisted of: West Friesland, which remained a part of *Holland* and became a part of *North Holland* around 1800. The current region of *West Friesland* is smaller than historical *West Friesland*. *Friesland* is now a Dutch province. East Frisia became a part of the Kingdom of *Prussia* and was formerly a district of the federal state of *Lower Saxony* in the Federal Republic of Germany. North Frisia was a part of the Danish duchy of *Schleswig* and is now part of the German state of *Schleswig-Holstein*. The Frisian Islands off the coast of the Netherlands and Germany are the leftover dunes of flooded lands.]

In 1162 during the period between 16 May and 14 June, floods struck *China*. Houses were damaged by the floodwaters and people and cattle drowned. During the period between 14 July and 12 August floods struck on the east coast of *China* in *Kiangsu* (now *Jiangsu* province) at *Sung-chiang* *Soochow*, and *T'ai-ts'ang*; and in *Chekiang* (now *Zhejiang* province) at *Hangchow*, *Chia-hsing* and *Hu-chou*. Houses and fields were damaged by the floodwaters and ships were wrecked.<sup>153</sup>

---

**1163 A.D.** There were famine and plague in *Aquitania*.<sup>72</sup> [*Aquitania* or the Duchy of *Aquitaine*, currently is a region of southwestern *France* between *Bordeaux* and the *Pyrenees*.]

In 1163, floods struck many regions of *China* including:<sup>153</sup>

— *Anhwei* (now *Anhui* province) in eastern *China* at *Hsüan-ch'êng* and *Kuang-tê*. As a result, the land tax was remitted.

— *Kiangsu* (now *Jiangsu* province) on the east coast of *China* at *Nanking*, *Chinkiang*, *Sung-chiang*, *Soochow* and *T'ai-ts'ang*. As a result, the land tax was remitted.

— *Chekiang* (now *Zhejiang* province) on the east coast of *China* at *Hangchow*, *Chia-hsing*, *Hu-chou*, *Ningpo*, *Shao-hsing*, *Taichow*, *Chin-hua*, *Ch-ü*, *Chien-tê*, *Wên-chou*, and *Li-shui*. As a result, the land tax was remitted.

— During the period between 31 August and 29 September, floods struck *Kiangsu* province at *Soochow*, *Sung-chiang*, and *T'ai-ts'ang*. The floods were caused by a typhoon and heavy rains.

— During the period between 31 August and 29 September, floods struck *Chekiang* province at *Hangchow*, *Chia-hsing*, *Hu-chou*, *Ningpo*, *Shao-hsing*, *Taichow*, *Chin-hua*, *Ch-ü*, *Chien-tê*, *Wên-chou*, and *Li-shui*. The floods were caused by a typhoon and heavy rains.

In 1163 during the period 2-30 August, a drought engulfed *Kiangsu* (now *Jiangsu* province) on the east coast of *China*, *Chekiang* (now *Zhejiang* province) on the east coast of *China*, and *Honan* (now *Henan* province) in central *China* at *Loyang*. In *Loyang*, the drought was a great drought. The land tax was remitted.<sup>153</sup>

In 1163 during the autumn, there was a great drought in *Chêhkiang* and *Kiangsi* provinces in *China*. As a result, the land tax was remitted.<sup>165</sup>

---

**1164 A.D.** In 1164, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 21 June and 20 July, floods struck in *Kiangsu* (now *Jiangsu* province) on the east coast of *China* at *Nanking* and *Chinkiang* and in *Anhwei* (now *Anhui* province) in eastern *China* at *Hsüan-ch'êng* and *Kuang-tê*.

— During the period between 21 July and 19 August, floods struck in *Kiangsu* province at *Nanking*, *Chinkiang*, *Soochow*, *Wu-chin*, *Chiang-yin* and *Yangchow*. Houses were damaged by the floodwaters and many people drowned.

— During the period between 21 July and 19 August, floods struck in Anhwei province at Hsüan-ch'êng, Kuei-ch'ih, Ho-fei, Ho, Kuang-tê, Shou, and Wu-wei. Houses were damaged by the floodwaters and many people drowned.

— During the period between 21 July and 19 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Chia-hsing. Houses were damaged by the floodwaters and many people drowned.

— During the period between 21 July and 19 August, floods struck in Honan (now Henan province) in central *China* at Huang-ch'uan.

— During the period between 20 August and 17 September, floods struck in Kiangsu province at Yangchow.

In 1164, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping. During the period between 5 February and 6 May, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Fukien (now Fujian province) on the southeast coast of *China* at P'u-t'ien, Lung-ch'i and Foochow.<sup>153</sup>

In 1164 during the spring, summer and autumn, there was a drought in Chêhkiang and Fuhkien provinces in *China*.<sup>165</sup>

In Senon, in northeastern *France*, there was darkness and then a tempest of thunder.<sup>72</sup>

In 1164 there was a strong storm in *Germany*. The strong wind threw down many houses, trees and churches.<sup>172</sup>

On 17 February 1164, a storm surge caused a flood. The southern North Sea coast was probably more severely affected than the west coast of Schleswig-Holstein. It affected mainly East Friesland and the Weser-Elbe region, said there were initial dips of the Jade Bay in northwestern *Germany*. The flood affected 20,000 people between the Rhine and the Elbe rivers. The first break of the Jade Bay was directed to the southwest. Along the Weser [river], salt water covered the country up to 12 miles inland.<sup>172</sup>

**1165 A.D.** In *Sicily*, there was an irruption of the sea; 12,000 people drowned.<sup>47, 72, 92</sup>

On Sexagesima Sunday (second Sunday before Lent), the sea swelled and rose three days together, and in *Sicily* it drowned 12,000 people.<sup>72</sup>

In *Italy* [during the summer], red-hot winds dried up all the plants.<sup>62</sup>

In 1165 during the period between 13 February and 13 March, a drought engulfed *China*. Then during the period between 10 July and 8 August, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin and in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou. Fields were damaged.<sup>153</sup>

In 1165 there were droughts and floods in China. These were accompanied by a plague of locusts. The land tax was remitted.<sup>165</sup>

In 1165, in the vicinity of Shanghai, *China*, people were forced by hunger to eat bran [the hard outer layer of grain].<sup>166</sup>

**Winter of 1165 / 1166 A.D.** In the Novgorod Republic [now part of *Russia*], during the winter, there was severe frost.<sup>76</sup>

---

**1166 A.D.** In 1166, a typhoon struck Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou during the period 27 August - 25 September. Houses were damaged and over 20,000 people were drowned.<sup>153</sup>

---

**1167 A.D.** In 1167 during the period between 5 February and 14 September, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Mien-yang, Chien-ko, Kuang-han and Pei-ch'uan.<sup>153</sup>

In 1167 during the autumn, there was a very severe drought in Sze-ch'wan province in *China*.<sup>165</sup>

In 1167, floods struck many regions of *China* including:<sup>153</sup>

— Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Kuang-tê.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking, and Chinkiang.

— Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang.

— During the period between 19 June and 17 July, floods struck in Anhwei province at Ho-fei and Ch'ien-shan and in Hupeh (now Hubei province) in central *China* at Ch'i-ch'un. Crops were damaged by the floodwaters and people and cattle drowned.

— During the period between 19 June and 17 July, floods struck in Fukien (now Fujian province) on the southeast coast of *China* at Chin-chiang and in Kiangsu province at Sung-chiang, T'ai-ts'ang and Soochow.

— During the period between 19 June and 17 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, Hu-chou, Ningpo, Shao-hsing, Taichow, Chin-hua, Ch-ü, Chien-tê, Wên-chou, and Li-shui.

— During the period between 18 July and 16 August, floods struck Chekiang province at Hangchow. Two hundred eighty families were flooded and many people drowned.

— During the period between 15 September and 14 October, floods struck Chekiang province at Hu-chou, Chia-hsing, and Shang-yü.

---

**1168 A.D.** In 1168 during the period between 7 July and 4 August, a drought that led to a famine struck the following regions of *China*:<sup>153</sup>

— Szechwan (now Sichuan province) in southwest *China* at Ch-iung-lai.

— Hunan province in south-central *China* at Hêng-yang.

— Hupeh (now Hubei province) in central *China* at Hsiang-yang.

— Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang.

— Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou.

In 1168 during the summer, there was a drought in Hupeh province in *China*.<sup>165</sup>

In 1168, floods struck several regions of *China* including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.

— Kiangsi (now Jiangxi province) in southern *China* at P'o-yang and Shang-jao.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chu-chi. Crops were damaged by the floodwaters.

— During the period between 7 July and 4 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Ho-tsê.

— During the period between 5 August and 3 September, floods struck Anhwei (now Anhui province) in eastern *China* at Hsi.

— During the period between 5 August and 3 September, floods struck Chekiang province at Ch'ü. Houses and crops were damaged by the floodwaters. The city walls were damaged. Cattle drowned.

The summer of 1168 was hot and dry. In June, the Sarthe River in *France* dried up.<sup>173</sup>

---

**1169 A.D.** In 1169 during the period between 6 May and 8 August, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* east of the Huai River. During the period between 27 June and 25 July, a drought engulfed *China*. Then during the period between 26 July and 23 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou. Houses were damaged by the floodwaters and many people drowned. Then between 22 October and 20 November, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou and Taichow. Houses and fields were damaged. People and cattle drowned.<sup>153</sup>

In 1169 during the summer, there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**1170 A.D.** In *Holland, Friesland, and Utrecht*, there was a terrible flood. In the latter province the water rose to so great a height that the people were able to catch fish with nets within the walls of the town.<sup>47, 92</sup> [Utrecht is now located in the northern Netherlands.]

In 1170, sea water was driven up very high by the great storm winds [in *Germany*].<sup>172</sup>

The months of January and February 1170 produced violent lightning and thunder storms in *France*.<sup>79</sup>

In 1170 during the period between 6 May and 8 August, a drought engulfed many regions of *China* including: Kiangsu (now Jiangsu province) on the east coast of *China*; Chekiang (now Zhejiang province) on the east coast of *China*; Fukien (now Fujian province) on the southeast coast of *China*; Kiangsi (now Jiangxi province) in southern *China*; Kiangsu province at Nanking; and Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, and Kuang-tê.<sup>153</sup>

In 1170 during the summer, there was a drought in Chêhkiang and Fuhkien provinces in *China*.<sup>165</sup>

In 1170 during the period between 18 May and 15 June, floods struck several regions of *China* including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Nanking, and Chinkiang. Houses and fields were damaged by the floodwaters.

— Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Kuang-tê. Houses and fields were damaged by the floodwaters.

— Kiangsi (now Jiangxi province) in southern *China* at Kiukiang and [Unknown – Chiang-hsi-chün]. Houses and fields were damaged by the floodwaters.

— Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou, Hu-chou, and Chia-hsing. Houses and fields were damaged by the floodwaters.

---

**Winter of 1170 / 1171 A.D.** During the winter of 1170-71 in southern *France*, a horrific lightning and thunder storm broke out on 30 December 1170. Another horrific storm took place on 30 January 1171.<sup>79</sup>

---

**1171 A.D.** In *England*, there was an inundation of the sea; harvest destroyed in many places.<sup>47, 72, 92</sup>

On Quadragesima [Sunday occurring after Ash Wednesday], there was a great inundation of the sea. The harvest in many places was lost and carried off by the waves. A plague on man and beasts. On 25 December 1171, there was terrible thunder and hail in *England*, which killed birds, beasts and people. The storm struck *England, Ireland, France* and *Scotland*. At night fell a most terrible tempest. The lightning did great damage.<sup>72</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1171 during the period between 7 February and 8 March, floods struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

During the winter of 1171-1172, a storm [with the intensity of a major hurricane] slammed into the shores of South Wales and other western seaports. “At the time when Henry II, King of the English, was wintering in Ireland, a curious phenomenon occurred here [Newgale Sands, *Wales*]. The wind blew with such unprecedented violence that the shores of South Wales were completely denuded of sand, and the subsoil, which had been buried deep for so many centuries, was once more revealed. Tree-trunks became visible, standing in the sea, with the tops lopped off, and with the cuts made by the axes as clear as if they had been felled only yesterday. The soil was pitch-black, and the wood of the tree-trunks shone like ebony. By this strange convulsion of nature, the element through which ships were wont to move so freely became impassible to them, and the sea-shore took on the appearance of a forest grove, cut down at the time of the [Great] Flood, or perhaps a little later, but certainly very long ago, and then by slow degrees engulfed and swallowed up by the waves, which encroach relentlessly upon the land and never cease to wash it away. The tempest raged so fiercely that conger-eels and many other sea-fish were driven up on the high rocks and into the bushes by the force of the wind, and there men came to gather them.”<sup>169</sup>

In 1171 during the period between 5 February and 6 May, a drought engulfed many regions of *China* including:

- Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Nanking.
- Anhwei (now Anhui province) in eastern *China* at Tang-t’u, Hsüan-ch’êng, and Kuang-tê.
- Kiangsi (now Jiangxi province) in southern *China*.
- Hunan province in south-central *China* at Changsha.
- Hupeh (now Hubei province) in central *China* at Chiang-ling.
- Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua and Chia-hsing.
- Hopei (now Hebei province) in northern *China* at Peiping and Ta-ming.
- Shansi (now Shanxi province) in northern *China* at Tatung and Yang-ch’ü.
- Honan (now Henan province) in central *China* at Kaifeng.
- Shensi (now Shaanxi province) in central *China* at Sian.

Then during the period between 6 May and 8 November, a drought engulfed Kiangsi province at Kiukiang, Nan-ch’ang, Kao-an, P’o-yang, Hsing-tzū, and Ch’ing-chiang; Hunan province at Changsha; and Hupeh province at Yang-hsin.<sup>153</sup>

In 1171 during the spring and winter, there was a drought in Chêhkiang, Hunan, Hupeh, Kiangsi and Kiangsu provinces in *China*. The land tax was remitted.<sup>165</sup>

**1172 A.D.** In *Ireland*, “great floods destroyed numbers of men.”<sup>47, 92</sup>

There was a terrible tempest of thunder and lightning with a hurricane in *Britain* and *France*.<sup>72</sup>

After Christmas in the year 1172, there was a great mortality in *Ireland*. As a result, King Henry II was forced to quit the country.<sup>212</sup>

In *Germany*, great floods on the Rhine River.<sup>47, 72, 92</sup>

In 1172, there was a great inundation on the Rhine River.<sup>72</sup>

[In *Europe*], the winter was so mild that the trees remained covered with green foliage. Towards the end of January, the birds were nesting and in February, they were having their young. There were also large

storms and much rain. In January, there was often thunder, and the fire from heaven damaged many houses and churches.<sup>62</sup>

The winter of 1172 was an extremely mild winter [in *France*]. In late January in *Belgium*, there were leaves on the trees. By mid-February, the birds had built their nest and their eggs hatched.<sup>173</sup>

In 1172, a severe drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang, Kiukiang, Kao-an, and Ch'ing-chiang and Hupeh (now Hubei province) in central *China* at Yang-hsin.<sup>153</sup>

In 1172 during the summer, there was a drought of long duration in Chêhkiang, Chihli, Fuhkien, Kiangsu, Shansi, Shantung and Shensi provinces in *China*.<sup>165</sup>

In 1172, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 25 May and 22 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Kan, Ta-yü, Nan-ch'ang, Chi-an, Kao-an, and Ch'ing-chiang. Houses, city walls and crops were damaged by the floodwaters.

— During the period between 23 June and 22 July, floods struck Szechwan (now Sichuan province) in southwest *China* at Yüeh-shan, Mei-shan, Ch'iung-lai, Kuan, and Chin-t'ang.

---

**1173 A.D.** In Holland [now *the Netherlands*], a great flood considerably extended the limits of the Zuyder-zee.<sup>47, 92</sup> [Zuyder-zee or Zuiderzee at the time was a shallow bay of the North Sea in the northwest region of the Netherlands. Today the Zuyder/Zuiderzee as such no longer exists. It is now two Lakes. After centuries of North Sea storm surges that breached barrier dunes and dikes, it is now enclosed by a 32 kilometer dam wall, the Afsluitdijk. This was constructed in the aftermath of the flood of January 1916. At its completion in 1932, the Zuiderzee became the IJsselmeer Lake, enabling large areas of water to be reclaimed for farming and housing. Then in 1975, the IJsselmeer Lake was split in two by the completion of the Houtribdijk, now called Markerwaarddijk, 28 kilometers long creating the Markermeer Lake and making it hydrologically separate from the IJsselmeer Lake. The province of Flevoland was created in 1986 from the polders reclaimed from the IJsselmeer. Polders are low-lying tracts of land enclosed by embankments (barriers) known as dikes.]

In January 1173, there were frequent thunder and lightning, which damaged houses and churches.<sup>72</sup>

There was a terrible thunder and lightning storm [in *England*] that was fatal.<sup>72</sup>

In 1173 during the period between 6 March and 13 April, a drought of long duration engulfed several areas of *China*. The drought caused crop damage. The region affected included:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Ningpo, Taichow, Ch'ü, Chien-tê, Wên-chou, Li-shui, and Chin-hua.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.

— Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng and Kuang-tê.

— Kiangsi (now Jiangxi province) in southern *China*.

— Hupeh (now Hubei province) in central *China* at Chiang-ling.

In 1173 during the spring, there was a drought of long duration in Chêhkiang, Fuhkien, Hupeh and Kiangsi provinces in *China*.<sup>165</sup>

In 1173, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 12 June and 11 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. Houses and fields were damaged by the floodwaters.

— During the period between 12 June and 11 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang, Chi-an, P'o-yang, Shang-jao, and Kiukiang. Houses and fields were damaged by the floodwaters.

— During the period between 12 June and 11 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê. Houses and fields were damaged by the floodwaters.

— During the period between 12 June and 11 July, floods struck Anhwei (now Anhui province) in eastern *China* at Kuei-ch'ih and Kuang-tê. Houses and fields were damaged by the floodwaters.

— During the period between 12 July and 10 August, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling.

**1174 A.D.** [In *France*] in the year 1174, the rain lasted from the Feast of St. John's [June 24] to the end of the year. There was a lack of wine and all fruits. The area around Metz in the Lorraine region of northeastern *France* experienced a flood.<sup>62</sup>

The year 1174 was a year of universal rains.<sup>72</sup>

In 1174, a drought engulfed several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Ningpo, Taichow, Ch'ü, Chien-tê, Wên-chou, Li-shui, and Chin-hua.

— Hunan province in south-central *China* at Changsha.

In 1174, there was a drought in Chêhkiang, Hunan and Sze-ch'wan provinces in *China*.<sup>165</sup>

In 1174 during the period between 31 July and 28 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. Dikes and fields were damaged. Over 630 families were flooded.<sup>153</sup>

**1175 A.D.** In 1174 the whole world was afflicted with cloudy corrupt air, which occasioned a most universal cough and catarrh [a disorder of inflammation of the mucous membranes], which was fatal to many. As a result in 1175, both *England* and the neighboring countries groaned under a grievous mortality of people, soon followed by a great dearth and famine.<sup>72</sup>

In 1175 in *England*, pestilence, followed by a great dearth.<sup>57, 91</sup>

In 1175 in *France*, there was a very great flood in November. The flood destroyed the farms and the seed.<sup>79</sup>

In 1175, the Seine River in *France* flooded several times.<sup>173</sup>

The summer rains in 1175 in northern *France* prevented the grain harvest of August and the grape harvest in autumn. There was disastrous overflow of several rivers, particularly the Seine River, around Christmas.<sup>79</sup>

In 1175 during the period between 17 September and 16 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow. During the same period of time, a drought engulfed Kiangsu province, Anhwei (now Anhui province) in eastern *China*, and Chekiang (now Zhejiang province) on the east coast of *China*.<sup>153</sup>

In 1175 during the autumn, there was a drought in Chêhkiang and Kiangsu provinces in *China*.<sup>165</sup>

**1176 A.D.** In Lincolnshire *England*, there was an inundation of the sea. This also struck Holland [now *the Netherlands*].<sup>47, 72, 92</sup>

In *England*, there was frost from Christmas to Candlemas.<sup>47, 72, 93</sup>

In *Wales*, a great famine and mortality [death].<sup>57, 91</sup>

In 1176, there was a great inundation of the sea in Holland and other marshes in Lincolnshire, *England*, which swallowed up much cattle and people. It took two days for the waters to return to their normal boundaries. It was constant hard frost and much snow from Christmas to Candlemas. At Easter, there was a terrible hurricane.<sup>72</sup>

[In *England*] there were many and great hurricanes during the year and a most temperate winter.<sup>72</sup>

In 1176 in northern *France*, a large frost stretched from December 13 to March 15.<sup>79</sup>

In the Novgorod Republic [now part of *Russia*] in the springtime, the Volkhov River flooded for five days.<sup>76</sup>

In 1176, a drought accompanied by a plague of locust engulfed several regions of *China* including:<sup>153</sup>

- Hopei (now Hebei province) in northern *China* at Ta-ming.
- Honan (now Henan province) in central *China* at Kaifeng.
- Shensi (now Shaanxi province) in central *China* at Sian.
- Shansi (now Shanxi province) in northern *China* at Tatung and Yang-ch'ü.
- Liaoning province located in the southern part of *China*'s northeast.

During the period between 5 February and 8 August, a drought engulfed the following regions of *China*:

- Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin.
- Honan (now Henan province) in central *China* at Loyang.
- Hupeh (now Hubei province) in central *China* at Chiang-ling.
- Kansu (now Gansu province) in northwest *China* at Chin-yang [uncertain name].
- Shensi (now Shaanxi province) in central *China* at Nan-chêng.

In 1176 during the spring, there was a drought in Chihli, Honan, Hupeh, Kiangsu, Shantung and Shensi provinces in *China*.<sup>165</sup>

In 1176, floods struck several regions of *China* including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao and Hangchow where fields were damaged by the floodwaters; at Hu-chou and Chia-hsing where crops were damaged; and at Ch'êng.
- Anhwei (now Anhui province) in eastern *China* at Kuang-tê.
- During the period between 5 September and 4 October, floods struck Chekiang province at Taichow, Shao-hsing and Chin-hua.

**1177 A.D.** In 1177 [in *Western Europe*], the summer was very dry and very hot and the drought was so strong that the seeds were lost, and there were no grain or hay. The harvest began in August, and the wine was excellent.<sup>62</sup>

In 1177, the summer and harvest was so great a drought that the seed sown was lost. During the harvest, there were great rains, floods and shipwrecks. On the Feast of Saint Mary Magdalen [July 22], there was thunder and a storm, which laid [flattened] corn and killed birds. No corn [grain] or hay was harvested. On 3 December at night rose a most violent tempest. Their came a terrible hurricane with south-west winds which overthrew churches, houses, trees, etc. It was a most tempestuous stormy winter.<sup>72</sup>

[In *England*], all harvest sore rains.<sup>72</sup>

In 1177, a drought engulfed Hupeh (now Hubei province) in central *China* at Hsiang-yang.<sup>153</sup>

In 1177, there was a drought in Hupeh province in *China*.<sup>165</sup>

In 1177, floods struck several regions of *China* including:<sup>153</sup>

— Floods damaged dikes in Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chên-hai, Ningpo and Shang-yü. Also in Chekiang province, floods struck Yü-yao damaging dikes and drowning over 40 persons.

— During the period between 30 May and 27 June, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou and Nan-p'ing. Several thousand families were flooded.

— During the period between 27 July and 25 August, floods struck Honan (now Henan province) in central *China* at Fêng-ch'iu.

— During the period between 24 September and 23 October, floods damaged dikes in Chekiang province at Hangchow.

**1178 A.D.** There was a shower of great hail that killed men, sheep and goats. Later there was a tempest of thunder and lightning at York, *England*. On the Ides of January, the sea broke in on the marshes and drowned people, villages and cattle innumerable.<sup>72</sup>

In 1178, there was a drought in Quercy, *France* and a famine.<sup>173</sup>

In 1178, a drought engulfed several regions of *China* including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, Wu-chin, Chinkiang and Nanking.

— Szechwan (now Sichuan province) in southwest *China* at Mien-yang.

— Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, and Kuang-tê.

— Kiangsi (now Jiangxi province) in southern *China*.

In 1178, there was a drought in Kiangsu province in *China*.<sup>165</sup>

In 1178, floods struck several regions of *China*. As a result of the hardship, the land tax was remitted. The regions affected include:<sup>153</sup>

— Fukien (now Fujian province) on the southeast coast of *China* at P'u-t'ien and Fu-ch'ing. Houses and granaries were damaged by the floodwaters and many people drowned.

— During the period between 18 June and 16 July, floods struck Fukien province at Ku-t'ien. Houses and fields were damaged.

— During the period between 17 July and 14 August, floods struck Kansu (now Gansu province) in northwest *China* at Wu-tu. The city walls were damaged by the floodwaters.

**Winter of 1178 / 1179 A.D.** In 1179 [in *Europe*] in the second week of January, the snow fell in abundance, a very strong and unpleasant frost ensued and lasted until mid-February, during the remaining part of this month and also in March and April a continuously blowing cold east wind was still palpable. Very large mortality among the cattle and sheep resulted from this cold.<sup>62</sup>

The year 1179 produced [in *Germany*] a cold winter and much snow that began on New Years day and lasted until Candlemas [2 February]. As the winter progressed, there were great floods that filled all the cellars in Wroclaw [now a city in *Poland*], such that one could go to many places [in the city] by boat. The flooding did great damage to bridges and mills. Due to this cold winter and large floods over 2,000

people perished.<sup>172</sup>

In 1179 in *England*, “Many floods from a most severe winter.”<sup>47, 72, 92</sup>

The *French* historians cite great mortality of animals due to cold during 1179.<sup>58, 80</sup>

There was a severe winter. There were several great inundations carrying down bridges, houses and people. On 5 January, there was terrible thunder and lightning with a hurricane and hail in Kent, *England*.<sup>72</sup>

**1179 A.D.** In *England* on the 5<sup>th</sup> of June, a hurricane struck *England* producing hail, thunder and lightning.<sup>57, 72, 93</sup>

In 1179, floods struck several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou and Taichow. And at Yüen-ch’ing over 100 persons drowned.

— During the period between 6 May and 8 August, floods struck Chekiang province at Ch’ü.

— During the period between 8 August and 8 November, floods struck in Anhwei (now Anhui province) in eastern *China* at Hsüan-ch’êng; in Kiangsi (now Jiangxi province) in southern *China* at Kiukiang; and in Chekiang province at Wên-chou, Taichow, Hu-chou and Chia-hsing. Fields were damaged by the floodwaters.

**1180 A.D.** In 1180, floods struck Honan (now Henan province) in central *China* at Chi. During the period between 26 May and 24 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at I-ch’un and Fên-i. In Kiangsi province, the land tax was remitted.<sup>153</sup>

In 1180 during the period between 5 February and 6 May, a drought engulfed Hunan province in south-central *China* at Changsha. Then during the period between 27 April and 20 October, a severe drought engulfed many regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua and Shao-hsing.

— Kiangsi (now Jiangxi province) in southern *China* at Nan-ch’ang, Chi-an, P’o-yang, Shang-jao, Kiukiang, Kao-an, Lin-ch’uan, Ch’ing-chiang and Hsing-tzū.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking, Wu-chin and Chinkiang.

— Hupeh (now Hubei province) in central *China* at Chiang-ling, Ch’i-ch’un, Huang-kang, Hêng-yang and Yang-hsin.

— Anhwei (now Anhui province) in eastern *China* at Hsi, Kuei-ch’i, Ch’ien-shan, Ho and Wu-wei.

— Hunan province in south-central *China* at Ling-ling.

— Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Kuei-p’ing.

In 1180 during the spring, summer and autumn, there was a great drought in Anhwei, Chêhkiang, Hunan and Kiangsi provinces in *China*.<sup>165</sup>

In 1180, the winter [in *Germany*] was very mild, and as a result the grains and fruits ripened very early.<sup>172</sup>

**1181 A.D.** On 3 June in Novgorod [*Russia*], the Varangian church in the marketplace was set on fire by thunder at 10 o’clock in the evening, and the church of St. Ioan in Ishkovo was burnt. The same year a fire broke out in Slavno, from Kosnyatin’s, and two churches were burnt: that of St. Mikhail and that of the Holy Fathers, and many houses along the bank, even as far as the Stream.<sup>76</sup>

There was a general and great famine over *England* and *Wales*. There was terrible thunder and lightning on 16 August.<sup>72</sup>

In 1181, Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing experienced great flooding. Over 13,000 families flooded. Crops and dikes were damaged. Anhwei (now Anhui province) in eastern *China* at Hsi experienced flooding. Kiangsi (now Jiangxi province) in southern *China* at Kiukiang experienced flooding. During the period 12 August - 10 September, Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê experienced great flooding. Houses were damaged and 19,540 families flooded.<sup>153</sup>

During the period between 12 August 1181 and 6 January 1182, a drought engulfed many regions of *China*. As a result the land tax was remitted. These areas were also affected by floods. The regions affected by drought included:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China*.
- Chekiang (now Zhejiang province) on the east coast of *China*.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-yin and Yangchow.
- Honan (now Henan province) in central *China* at Loyang.
- Hupeh (now Hubei province) in central *China* at Chiang-ling.
- Szechwan (now Sichuan province) in southwest *China* at San-t'ai and Fêng-chieh.

In 1181 during the autumn, there was a drought in Chêhkiang, Hupeh, Kiangsi, Kiangsu and Sze-ch'wan provinces in *China*. This year also brought floods. The land tax was remitted.<sup>165</sup>

---

**1182 A.D.** In 1182 during the period between 3 June and 30 August, a drought engulfed many regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Chiang-ling, An-lu, Hsiang-yang, Wuchang, Mien-yang, Hanyang and Ching-mên.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang.
- Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou, Li-shui, Chin-hua, Chiang-shan, Chên-hai, Hsiang-shan, Shang-yü and Chêng.
- Kiangsi (now Jiangxi province) in southern *China* at Chi-an, Ch'ing-chiang, Nan-ch'êng, Nan-ch'ang, Lin-ch'uan, Kao-an and I-ch'un.
- Hunan province in south-central *China* at Changsha.
- Szechwan (now Sichuan province) in southwest *China* at Chungking, Kuang-yüan, Lang-chung, Chung, Fou-ling, Ho-ch'uan, An-yüeh, Tzû-chung, Ch'ü, Wan, Nan-ch'uan, Kuang-an, and Liang-an.
- Honan (now Henan province) in central *China* at Pi-yüan and Hsin-yang.

In 1182 during the summer and autumn, there was a drought in Chêhkiang, Hupeh, Kiangsi and Sze-ch'wan provinces in *China*.<sup>165</sup>

---

**1183 A.D.** In 1183 in *France*, an unusual drought was accompanied by great heat. It withered away in many places the rivers, springs and wells.<sup>79</sup>

During the summer of 1183 [in *France*], the weather was extraordinarily hot and dry.<sup>173</sup>

In 1183, there was a great famine severely afflicting both *England* and *Wales*.<sup>57, 91</sup>

In 1183 during the period between 5 February and 8 August, a drought engulfed many regions of *China* including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Loyang.
- Shensi (now Shaanxi province) in central *China* at An-k'ang.
- Hunan province in south-central *China* at Li.
- Szechwan (now Sichuan province) in southwest *China* at Nan-ch'uan.

- Hupeh (now Hubei province) in central *China* at Chiang-ling, Yang-hsin and Ching-mên.
- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng, and Kuang-tê.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Chinkiang.
- Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.

In 1183 during the spring and autumn, there was a drought in Chêhkiang, Fuhkien, Hupeh, Hunan, Kiangsu and Sze-ch'wan provinces in *China*.<sup>165</sup>

In 1183, floods struck many regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Hsiang-yang. Houses were flooded.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Chinkiang.
- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Kuang-tê.
- Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Shao-hsing, Taichow, Ch-ü, Chin-hua, Chien-tê, Wên-chou, and Li-shui.
- Kiangsi (now Jiangxi province) in southern *China* at Chi-an and Sui-ch'uan. Houses were damaged by the floodwater. Many people drowned.
- During the period between 23 May and 21 June, floods struck Kiangsi province at Shang-jao. Houses and the marketplaces were damaged by the floodwaters.
- During the period between 20 August and 18 September, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hai-k'ang. Many people drowned.
- During the period between 19 September and 17 October, floods struck in Fukien (now Fujian province) on the southeast coast of *China* at Foochow and in Honan (now Henan province) in central *China* at Changsha. Over 890 families flooded.

---

**1184 A.D.** On 7 June 1184 in northern *France*, frost burnt the [grape] vines and [grain] harvest.<sup>79</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1184, floods struck many regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Kiangsi (now Jiangxi province) in southern *China* at Kiukiang.
- During the period between 12 May and 9 June, floods struck Anhwei (now Anhui province) in eastern *China* at Ho. Houses and fields were damaged by the floodwaters.
- During the period between 10 June and 9 July, floods struck Kansu (now Gansu province) in northwest *China* at Wu-tu. Houses were damaged.
- During the period between 10 July and 7 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. Houses and crops were damaged by the floodwaters.
- During the period between 8 August and 6 September, floods struck in Anhwei province at Kuang-tê and Hsüan-ch'êng; in Kiangsu province at Nanking, Chinkiang, Soochow, Sung-chiang, and T'ai-ts'ang; and in Chekiang province at Hangchow, Chia-hsing, and Hu-chou.

During the period between 12 May 1184 and 1 April 1185, a drought of long duration engulfed several regions of *China* including:<sup>153</sup>

- Fukien (now Fujian province) on the southeast coast of *China*.
- Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea in the area south of Yang-ch'un.
- Kiangsi (now Jiangxi province) in southern *China* at Chi-an, Kan and Nan-ch'êng.
- Shensi (now Shaanxi province) in central *China* at Nan-chêng.
- Kansu (now Gansu province) in northwest *China* at Chin-yang [uncertain location] and Hsi-ho.

In 1184 during the summer and autumn, there was a drought in Fuhkien and Kiangsi provinces in

*China*.<sup>165</sup>

---

**Winter of 1184 / 1185 A.D.** In 1184-1185 in *Germany*, there was a very severe winter. But the following year [1186] in January the weather was like the month of April. In February, there were beautiful spring days. At the end of May began the grain harvest. In August, there was the grape harvest.<sup>172</sup>

---

**1185 A.D.** During the period between 12 May 1184 and 1 April 1185, a drought of long duration engulfed several regions of *China* including:<sup>153</sup>

- Fukien (now Fujian province) on the southeast coast of *China*.
- Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea in the area south of Yang-ch'un.
- Kiangsi (now Jiangxi province) in southern *China* at Chi-an, Kan and Nan-ch'êng.
- Shensi (now Shaanxi province) in central *China* at Nan-chêng.
- Kansu (now Gansu province) in northwest *China* at Chin-yang [uncertain location] and Hsi-ho.

In 1185, floods struck several regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Wuchang. Houses were damaged by the floodwaters.
- During the period between 29 June and 28 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua and Fu-yang. Houses and crops were damaged by the floodwaters.
- During the period between 27 August and 25 September, floods struck Chekiang province at An-chi. Houses and crops were damaged by the floodwaters and 1,000 persons drowned.
- During the period between 26 September and 24 October, floods struck Chekiang province at Hu-chou and Taichow.

In 1185, the winter [in *Northwestern Europe*] was severe.<sup>62</sup>

In December 1185, there was a hurricane with thunder and lightning.<sup>72</sup>

---

**1186 A.D.** This year in *Germany* the winter was warmer than had known for a long time. The vegetation was very advanced. The harvest took place in May and the grape harvest in August. In *France*, the trees were blooming in the middle of winter.<sup>62</sup>

In 1184-1185 in *Germany*, there was a very severe winter. But the following year [1186] in January the weather was like the month of April. In February, there were beautiful spring days. At the end of May began the grain harvest. In August, there was the grape harvest.<sup>172</sup>

The year 1186 was "a strange year," in *Germany*. First there was a very mild winter in 1185-1186. Then in January 1186, the trees began to bloom. The chicken and forest birds laid eggs and hatched off in February. In May, the grains were harvested. In early August, the grapes in the vineyards were ripe, so they began to harvest grapes. There is much goods and [food] grown.<sup>172</sup>

In 1186 [in *France*], the harvest took place in May and the grape harvest for the wine in August.<sup>62</sup>

In 1186, there was an eclipse of the sun in *Poland* and *Russia* and the hottest winter that ever was felt in these parts. The harvest was in May and the vintage in August [the earliest harvest]. Then came a sweeping plague. In Corinthia, great swarms of locusts, with prodigious large bodies eat up all sorts of green vegetables, hence a barrenness of land, dearth, famine and pestilence.<sup>72</sup> [Corinthia may refer to the Duchy of Carinthia, which is today part of southern *Austria*, north *Slovenia* and northeast *Italy*]

In 1186, a drought engulfed Kiangsi (now Jiangxi province) in southern *China*. Then during the period between 15 September and 13 October, floods struck Honan (now Henan province) in central *China* at Chi.<sup>153</sup>

In 1186, there was a drought in Kiangsi province in *China*.<sup>165</sup>

**1187 A.D.** In *England*, there were great floods.<sup>47, 72, 92</sup>

There was a grievous and pestilent mortality of men and cattle in *England*. There were great floods and inundations.<sup>72</sup>

In 1187, a terrible famine struck *Europe*.<sup>155</sup>

The summer of 1187 was excessively hot causing a drought [in *France*]. The city of Chartres in northern France caught fire.<sup>173</sup>

In 1187 [in *Germany*], the winter lasted so long that spring planting was delayed until the end of May.<sup>172</sup>

In Novgorod [*Russia*], there was very terrible thunder and lightning. [The people] having come with crosses from St. Sophia to St. Michael's and singing nine hymns, the thunder and lightning struck and all the people fell, and the church caught fire, but by the mercy of God and by the prayers of St. Michael, there was no harm done to the church; but two men were dead.<sup>76</sup>

In 1187, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 11 April and 9 May, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Ch'ang-t'ing. Over 100 families flooded.

— During the period between 2 November and 1 December, floods struck Honan (now Henan province) in central *China* at Chi, Ch'in-yang, Mêng, and Chêng. The corvée was remitted. [Corvée, under the feudal system, is compulsory, unpaid labor demanded by a lord or king.]

In 1187 during the period between 9 June and 1 November, a drought of long duration engulfed several regions of *China* including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* in the area south of Chin-kiang.

— Chekiang (now Zhejiang province) on the east coast of *China*.

— Kiangsi (now Jiangxi province) in southern *China*.

— Fukien (now Fujian province) on the southeast coast of *China*.

— Anhwei (now Anhui province) in eastern *China* at Fêng-yang.

In 1187 during the summer and autumn, there was a very severe drought in Chêhkiang, Kiangsu and Kiangsi provinces in *China*.<sup>165</sup>

**1188 A.D.** In *England*, there were inundations of the sea that “killed very much people and cattle.”<sup>47, 72, 92</sup>

On Sunday 6 July 1188, rose a tempest of wind, rain, thunder, lightning, and hail the size of pigeon's eggs. The sea overflowed its banks a great height and killed many people and cattle in *England*.<sup>72</sup>

[The summer of] 1188 produced extraordinary heat and droughts. In many places, rivers, springs and wells dried up. *France* also suffered another misfortune because of the multiple fires [that were spawned].<sup>62</sup>

The drought of 1188 in *France* produced similar effects as the weather of 1183. [It withered away in many places the rivers, springs and wells.]<sup>79</sup>

The heat and drought of 1188 in *France* completely dried up rivers, springs and wells. The dryness also led to a large number of fires at Tours, Chartres, Beauvais, Auxerre, Troyes, etc.<sup>79</sup> [Tours is located in central *France*. Chartres, Beauvais, Auxerre, Troyes are located in northern *France*.]

The summer of 1188 [in *France*] was extremely hot and dry. There were numerous fires.<sup>173</sup>

In 1188, there was a great scarcity of food in north of *Ireland*.<sup>57, 91</sup>

In 1188, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Ch'ien-shan.<sup>153</sup>

In 1188, there was a drought in Anhwei province in *China*.<sup>165</sup>

In 1188, floods struck many regions of *China* including:<sup>153</sup>

— Anhwei (now Anhui province) in eastern *China* at Ho-fei. The city walls were damaged by the floodwaters.

— Hupeh (now Hubei province) in central *China* at Wuchang. Three thousand houses were damaged by the floodwaters.

— Hupeh province at Chiang-ling, An-lu, Mien-yang, and Hanyang.

— Hunan province in south-central *China* at Ch'ang-tê, Yüeh-yang, and Li.

— During the period between 28 May and 26 June, floods struck Anhwei province at Ch'i-mên. Houses and crops were damaged and many people drowned. During the same period, floods struck other regions of Anhwei province at Fêng-yang, Wu-wei, Shou and Hsü-i. Houses and crops were damaged by the floodwaters.

— During the period between 28 May and 26 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Kao-yu. Houses and crops were damaged.

— During the period between 26 July and 23 August, floods struck in Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou; in Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang, I-ch'un, Lin-ch'uan and Ch'ing-chiang; and in Chekiang (now Zhejiang province) on the east coast of *China* at Huang-yen where fields were damaged.

**1189 A.D.** A sore famine, and a very great mortality continued.<sup>72</sup>

In 1189 [in *England*], there was a great hurricane with thunder and lightning.<sup>72</sup>

In 1189, floods struck many regions of *China* including:<sup>153</sup>

— Fukien (now Fujian province) on the southeast coast of *China* at Ch'ang-t'ing. Fifteen hundred families were flooded and 3,000 persons drowned.

— Kiangsi (now Jiangxi province) in southern *China* at Fên-i.

— During the period between 18 April and 16 May, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hsin-ch'ang. Houses, fields and crops were damaged by the floodwaters.

— During the period between 17 May and 15 June, floods struck Hunan province in south-central *China* at Ch'ang-tê, Yüan-ling, Chih-chiang, and Ching.

— During the period between 16 June and 14 July, floods struck Kansu (now Gansu province) in northwest *China* at Wu-tu.

— During the period between 15 July and 13 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang.

— During the period between 15 July and 13 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Ho-tsê.

In 1189 at Tien Lake in *China*, there was a great wind, when two dragons were seen fighting, and the decorations of a neighboring temple were blown away; in an instant the dragons whirled over the top of the temple, and were visible far and near. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

---

**1190 A.D.** In *England*, hail with thunder and lightning.<sup>57, 72, 93</sup>

There was a hurricane at Laudun in southern *France*.<sup>72</sup>

In December at Messina in Sicily, *Italy*, there was terrible thunder and lightning.<sup>72</sup>

In 1190, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Chungking; Hupeh (now Hubei province) in central *China* at Ch'i-ch'un; and Anhwei (now Anhui province) in eastern *China* at Kuei-ch'ih. During the period between 5 February and 8 August, a drought engulfed several regions of *China*.<sup>153</sup>

In 1190 during the summer, there was a drought in Sze-ch'wan province in *China*.<sup>165</sup>

---

**1191 A.D.** The year 1191 was a damp year. There were heavy rains in Savoy, *France* near the western Alps. A landslide blocked the Romanche River in southeastern *France*.<sup>173</sup>

In 1191, there was a famine in East Riding of Yorkshire in *England*.<sup>212</sup>

In 1191, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 25 May and 23 June, a drought struck Chahar province (now eastern *Inner Mongolia*) at Dolonor and Chang-pei.

— During the period between 8 August and 8 November, a drought struck Honan (now Henan province) in central *China* at Kaifeng and Hopei (now Hebei province) in northern *China* at Ta-ming. This drought caused a famine.

— During the period between 18 December 1191 and 16 January 1192, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Tzū-chung, Chien-yang, An-yüeh, Jung and Fu-shun; Kansu (now Gansu province) in northwest *China* at Wu-tu, Ch'êng and Hsi-ho; Shensi (now Shaanxi province) in central *China* at Fêng; and Kiangsu (now Jiangsu province) on the east coast of *China* in the area east of the Huai River.

In 1191 during the summer and autumn, there was a drought in Anhwei, Chihli, Hunan, Kiangsu, Shantung and Sze-ch'wan provinces in *China*.<sup>165</sup>

In 1191, floods struck many regions of *China* including:<sup>153</sup>

— Fukien (now Fujian province) on the southeast coast of *China* at Ch'ang-t'ing. And at Ku-t'ien and Foochow houses and fields were damaged by the floodwaters.

— During the period between 27 March and 24 April, floods struck Fukien province at Ning-hua. Houses and fields were damaged and over 20 persons drowned.

— During the period between 25 May and 23 June, floods struck in Fukien province at Foochow and Chien-ou; in Szechwan (now Sichuan province) in southwest *China* at Ch'ung-ch'ing, Pei-ch'uan, Kuang-yüan, San-t'ai, Nan-ch'ung, Mien-yang, and Kuang-han; in Shensi (now Shaanxi province) in central *China* at Ning-ch'iang and Liao-yang; in Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an; and in Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hai-k'ang.

— During the period between 23 July and 21 August, floods struck in Shensi province at Liao-yang. Several thousand families were flooded.

**1192 A.D.** In the Novgorod [*Russia*], the church of the Holy Apostles in Kholm was burned down; set afire by thunder.<sup>76</sup>

In 1192 during the period between 12 June and 10 July, a severe drought engulfed Szechwan (now Sichuan province) in southwest *China*. As a result, the land tax was remitted.<sup>153</sup>

In 1192, floods struck many regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and Chinkiang.
- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng, Kuang-tê, and Kuei-ch'ih.
- Honan (now Henan province) in central *China* at Loyang.
- Hupeh (now Hubei province) in central *China* at Chiang-ling.
- Kansu (now Gansu province) in northwest *China* at Ching-ch'uan.
- Anhwei province at Ch'ing-yang. Houses and fields were damaged by the floodwaters and many people drowned.
- During the period between 12 June and 10 July, floods struck Hunan province in south-central *China* at Ch'ang-tê. Houses and fields were damaged.
- During the period between 12 June and 10 July, floods struck Szechwan (now Sichuan province) in southwest *China* at San-t'ai. Houses were damaged by the floodwaters. The land tax was remitted.
- During the period between 10 August and 8 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.
- During the period between 7 December 1192 and 4 November 1193, floods struck Hupeh province at Hsiang-yang.

In 1192 during the spring, summer and autumn, there was a great drought in Sze-ch'wan provinces in *China*. As a result, the land tax was remitted.<sup>165</sup>

**1193 A.D.** In 1193 in *England* and *France*, there was a famine that brought on a pestilential fever.<sup>212</sup>

In 1193, floods struck many regions of *China* including:<sup>153</sup>

- During the period between 7 December 1192 and 4 November 1193, floods struck Hupeh (now Hubei province) in central *China* at Hsiang-yang.
- During the period 3-31 May, floods struck Kiangsi (now Jiangxi province) in southern *China* at Shang-kao. Over 200 families flooded.
- During the period between 6 May and 8 August, floods struck in Kiangsi province at Kiukiang and Kan and in Hupeh province at Chiang-ling.
- During the period 1-30 June, floods struck in Kiangsi province at Kao-an. Houses and fields were damaged by the floodwaters. And at Chin-hsien where over 120 families were flooded.
- During the period 1-30 June, floods struck in Anhwei (now Anhui province) in eastern *China* at Fêng-yang. And at Shou, houses and fields were damaged. And at Kuang-tê and Hsüan-ch'êng, crops were damaged by the floodwaters.
- During the period 1-30 June, floods struck in Chekiang (now Zhejiang province) on the east coast of *China* at Chu-chi and Hsiao-shan where crops were damaged. Floods also struck Shao-hsing.
- During the period 1-30 June, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang.
- During the period 1-29 July, floods struck in Honan (now Henan province) in central *China* at Chi; in Hopei (now Hebei province) in northern *China* at Ta-ming, Ch'ing and Ts'ang; in Hupeh province at Yang-hsin where houses were damaged; and in Kiangsi province at Ching-an where over 320 families were flooded.

— During the period between 30 July and 28 August, floods struck Kiangsi province at Fêng-ch'êng, Ch'ing-chiang and Chi-an. At Ch'ing-chiang over 2,300 families drowned.

— During the period between 29 August and 26 September, floods struck Kiangsi province at Nan-ch'ang. Over 1,270 families drowned.

In 1193, a severe drought engulfed several regions of *China* including:<sup>153</sup>

— Szechwan (now Sichuan province) in southwest *China* at Kuang-an, Tzū-chung, Chien-yang, An-yüeh, Ch'ü and Ho-ch'uan.

— During the period between 29 August and 26 September, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking, Soochow, Sung-chiang and T'ai-ts'ang; Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, Fêng-yang and Kuang-tê; and Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou.

In 1193 during the summer and autumn, there was a drought in Chêhkiang, Kiangsu and Sze-ch'wan provinces in *China*. In Sze-ch'wan, this was a great drought.<sup>165</sup>

### **1193 A.D. – 1196 A.D. France, Belgium and England. Famine**

In *England* and *France* there was a famine that led to pestilential fever. This lasted from 1193 to 1195.<sup>90</sup>

From great rains in *England*, most of the corn [grain] perished and was lost.<sup>72</sup>

From 1193 to 1196 in *England* and *France*, there was a famine occasioned by incessant rains. “The common people perished everywhere for lack of food; and on the footsteps of famine, the fiercest pestilence followed, in the form of an acute fever.”<sup>57, 91</sup>

In 1194, there was a famine in *France*.<sup>72</sup>

In 1195 and 1196, there was a famine for 4 years, from rain and floods; years together.<sup>72</sup>

In March 1196, there was a sudden and great inundation, which carried away many places, towns, villages and inhabitants. This year there was a terrible dearth in *France*, Flanders [now *Belgium*], and *England* from excessive and unseasonable rains from some years past. Hence an epidemic and acute fever. Most of the vulgar died of the famine; then came the plague. This dearth began some years before, and continued four years together. Quickly after the Octaves of Pentecost, began this great mortality, which was ushered in by long wars and famine. This fever of burning ague raged six months and vanished this winter. There was so great a mortality, that there not being living healthy persons enough to bury the dead. Funerals were neglected. The dead were thrown on heaps into pits made on purpose.<sup>72</sup>

**1194 A.D.** A violent storm almost desolated a great part of *Denmark* and *Norway*.<sup>40, 41, 43</sup>

There was great thunder, lightning, hail and rain at Beluata, which broke down all fruit-trees, vines and corn [grain]. Many villages were burnt down [from the lightning]. Another tempest struck at Laudun in southern *France*. So great a heat and drought at Thuringii, that in many places of their river, people walked over dry footed. There was a famine in *France*.<sup>72</sup> [Thuringii possibly the Medieval Duchy of Thuringia located now in central *Germany*.]

The year 1194 was remembered as a very warm and dry summer [in *Germany*]. The mills would not work because of a lack of water.<sup>172</sup>

The year 1194 was the driest year “without history” [in *France*].<sup>173</sup>

In 1194, there was a great flood in *China*. The Yellow River cut a new course to the sea.<sup>142</sup>

In 1194, floods struck many regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at An-chi, Taichow, Wên-chou, and Chien-tê.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Chinkiang, Wu-chin, and Chiang-yin.

— Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng.

— Hunan province in south-central *China* at Ch'ang-tê. Houses and fields were damaged by the floodwaters.

— During the period between 22 May and 19 June, floods struck in Kiangsu province at T'ai; in Anhwei province at Shih-tai and Kuei-ch'ih where houses were damaged and many people drowned; and in Kansu (now Gansu province) in northwest *China* at Ching-ch'uan where houses were damaged and many people drowned.

— During the period between 20 July and 17 August, floods struck Chekiang province at Tz'ü-ch'i. Houses and crops were damaged by the floodwaters. Many people drowned.

— During the period between 20 July and 17 August, floods struck Chekiang province at Shao-hsing, Hsiao-shan, Yü-yao and Shang-yü. Dikes and crops were damaged.

— During the period between 18 August and 15 September, floods due to heavy and protracted rains struck Chekiang province at Hangchow, Hsin-têng, Yü-chien, Fu-yang, and Yü-hang. Houses and fields were damaged by the floodwaters and innumerable people drowned.

— During the period between 18 August and 15 September, floods struck Honan (now Henan province) in central *China* at Yang-wu and Fêng-ch'iu. The autumn land tax was remitted.

In 1194 during the period between 5 February and 8 November, a severe drought engulfed several areas of *China*. As a result the land tax was remitted. The areas affected included Kiangsu (now Jiangsu province) on the east coast of *China*; Chekiang (now Zhejiang province) on the east coast of *China*; Kiangsi (now Jiangxi province) in southern *China*; Kiangsu province at Yangchow and Nanking; Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng and Kuang-tê.<sup>153</sup>

In 1194 during the spring, summer and autumn, there was a very severe drought in Anhwei, Chêhkiang, Kiangsi and Kiangsu provinces in *China*.<sup>165</sup>

*Also refer to the section 1193 A.D. – 1196 A.D. for information on the famine in France, Belgium and England during that timeframe.*

**1195 A.D.** The heavy rains in the month of February 1195 in *France* made the rivers overflow and occasioned much damage.<sup>79</sup>

The summer of 1195 was very wet [in *France*]. This was the first year of three rotten years [1195-1197].<sup>173</sup>

During the fall of 1195, a plague of locust struck *Europe*, [from *France*] to *Hungary*.<sup>173</sup>

In June, there was a hurricane [in *England*].<sup>72</sup>

[In *England*] there was excessive rains and most corn [grain] was lost.<sup>72</sup>

In 1195 during the period between 9 July and 7 August, floods due to a typhoon and heavy rains struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. Houses and fields were

damaged and many people drowned. Then during the period between 8 August and 5 September floods struck at Huang-yen and Hangchow.<sup>153</sup>

In 1195 during the 7<sup>th</sup> moon, in the vicinity of Shanghai, *China*, there was great wind. The tide seaward destroyed the crops.<sup>166</sup>

*Also refer to the section 1193 A.D. – 1196 A.D. for information on the famine in France, Belgium and England during that timeframe.*

---

**1196 A.D.** In *England*, there were great floods in March from rains.<sup>47, 72, 92</sup>

In 1196 and from some years past [in *England*], there was constant rain, dearth and death.<sup>72</sup>

On the 3<sup>rd</sup> of the Nones of November there was a hurricane.<sup>72</sup>

There was almost incessant rain for two months in 1196. This produced a terrible flood of the Rhône and Saône rivers in *France*.<sup>79</sup>

The waters of the Rhône River in *France* overflowed its banks and spread into the coastal plains, flooding everything in their paths. Several towns and villages sitting on the banks of the river were partially submerged and destroyed.<sup>61</sup>

In March 1196, the Seine River in Paris, *France* flooded for 16 days. The summer was very wet and this caused a scarcity [famine].<sup>173</sup>

In 1196 during the period 1-29 April, a drought engulfed *China*. During the period between 31 May and 27 June, a drought struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. Then during the period between 8 August and 8 November, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Shao-hsing, Taichow, Chin-hua, Chien-tê, Wên-chou, Ch'ü and Li-shui.<sup>153</sup>

In 1196 during the spring and summer, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

*Also refer to the section 1193 A.D. – 1196 A.D. for information on the famine in France, Belgium and England during that timeframe.*

---

**1197 A.D.** In 1197, the famine [in *England* and *France*] was still calamitous.<sup>72</sup>

The summer of 1197 [in *France*] was very wet and this caused a scarcity [famine].<sup>173</sup>

[In *England*], it rained three days together without ceasing.<sup>72</sup>

In 1197 during the period between 19 April and 18 May, a drought engulfed *China*. Then during the period between 19 April and 10 November, a severe drought engulfed Szechwan (now Sichuan province) in southwest *China*. As a result of the hardship, the land tax was remitted. Then during the period between 13 October and 10 November, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-shing and Chin-hua. Crops were damaged.<sup>153</sup>

In 1197 during the spring, summer and autumn, there was a great drought in Sze-ch'wan province in *China*. As a result, the land tax was remitted.<sup>165</sup>

---

**1198 A.D.** About the Feast of John the Baptist [June 24], dew fell in *France*, as sweet as honey. In July, there was a grievous tempest and great hailstones, which broke down houses, woods, [grape] vines and corn [grain]. [In *England*] on 13 August, there was a tempest.<sup>72</sup>

In 1198 a cruel storm with high winds and water caused great damage to the marshlands in *Germany*.<sup>172</sup>

At the beginning of October 1198, Philip of Swabia, [from Bavarian *Germany*] in his disputes with Otho, arriving on the banks of the Moselle River, and found the waters lower than they had been for centuries.<sup>79</sup>

---

### **1199 A.D. – 1202 A.D. Egypt. Famine**

In 1200 in *Egypt*, there was a famine of great severity for deficient rise of the Nile River.<sup>57, 91</sup>

There was a great dearth in *Egypt* from 1199-1202.<sup>83</sup>

In 1201 and 1202, there was a great famine in *Egypt*.<sup>173</sup>

[The flooding of the Nile River was the life-giving inundation which yearly fertilized the crops in *Egypt*. This annual flood generally peaked in September near Cairo. During the growing season (after the inundation had receded) the Egyptians planted their crops - around October and November - and tended to the fields. The Egyptians watered their crops using an irrigation system of canals or by bringing water to the fields in basins or by using the shaduf, to raise water from the river to the bank of the Nile. By the time the Nile reached its lowest level, some time around March or April, the crops would be ready for the harvest.]

The highest point reached by the annual inundation, and very rarely reached, is a little above nineteen cubits. In this case, much cultivable land remains so long submerged that the sowing cannot take place; and it is as barren as a desert for that year, while in some spots which are ordinarily dry, yielded a rare harvest. But at this level, the inundation is accompanied by a great destruction of dwellings and of livestock. When the rise reaches eighteen cubits, there is great rejoicing, for the produce is then sufficient for two years' consumption, after the government dues are paid. When it reaches sixteen cubits, there is enough produce for the wants of the year; and this was called, "the Sultan's flood," because then the Sultan claimed his taxes. Below sixteen cubits, there is more or less scarcity. In these cases the south wind has prevailed, whereas during the good years, the north winds prevailed. The cubit at the Nilometer [A Nilometer was an ancient structure used to measure the level of the Nile river during floods] at Elephantine Island was equivalent to 19½ inches. There were 28 digits in a cubit.<sup>83</sup>

The Nile River inundation peaked on 9 September 1199. It stood no higher than twelve cubits, twenty-one digits; and it then began to decline. [The lowest Nile peak ever known seems to have been that of 966, when the waters rose only to twelve cubits, seventeen digits; and the next lowest was in 1199, when it rose only four digits higher.] At this point it became obvious that *Egypt* was at the verge of a great famine; a wrath that could annihilate all the resources of life and all the means of subsistence. The price of provisions began to rise. The inhabitants of the villages and country estates began to relocate to the great provincial towns. Many Egyptians in large numbers began to flee to Syria, to Maghreb [North Africa], to Hedjaz [coastal region of the western Arabian Peninsula bordering on the Red Sea], to Yemen, to Mosul and Baghdad [Iraq], to the countries of Greater Khorasan [Iran, Afghanistan, Turkmenistan, Uzbekistan and Tajikistan], to the Greek empire, and to other parts of Africa.<sup>83</sup>

During the next flood season, on 4 September 1200, the peak reached fifteen cubits, sixteen digits. But the floodwaters began to drop almost immediately. This flood was referred to as a phantom inundation, a ghost that would appear as if in a dream and then immediately vanish. Only the level lands profited by this inundation. Only the lower provinces were sufficiently watered. But the famine had already taken a

vicious toll and the villages by this time were entirely emptied of cultivators and laborers. In many cases these watered lands remained untilled because the proprietors could neither provide the seed nor pay the expenses of cultivation. Of the fields, which were sown, many were laid waste by vermin, which devoured the seeds.<sup>83</sup>

During January 1201, the waters of the Nile River sank considerably and continued to fall until men and horses could ford the river in several places. On 20 May 1201, a powerful earthquake struck *Egypt* adding to the devastation. [The epicenter of the earthquake was in Syria and caused approximately 30,000 deaths throughout very wide area, from Sicily to Iraq and Anatolia to *Upper Egypt*. It is believed this earthquake actually took place on 20 May 1202. Thus this entire stream of famine events in this account may be offset by a year.] During the next flood season, the peak occurred on 1 September 1201 reaching a height of one digit under sixteen cubits. After two days at this height, the waters began to decline slowly, and to flow away very gradually.<sup>83</sup>

As the famine first took hold in 1199, the infinite number of people who fled to Cairo and Al-Fustat, *Egypt* experienced a frightful famine and mortality. They ate carrion, corpses, dogs and the dung of animals. As the famine grew very severe, they went even further; devouring little children. The commandant of the city tried to halt the practice by sentencing all who committed this crime [cannibalism] as well as anyone who ate the meat to be burned alive. [But the hunger drove the people.] In the space of a few days, as many as thirty women were burned alive, every one of whom had confessed that they had eaten several children. [But shortly after their execution their bodies disappeared, because the bodies of these “already cooked” criminals were in turn stolen and eaten. Therefore the authorities found it very difficult to stamp out the practice. Instead cannibalism] extended over all *Egypt*. The horror that was first associated with this crime ceased to be felt and people became indifferent and viewed it as an ordinary thing. There was not a single inhabited spot where the practice of eating human flesh did not become extremely common. Syene [Aswan], Kous, the Faioum [Faiyum], Mahalleh [Mahalla], Alexandria, Damietta, and all other parts of *Egypt*, witnessed these scenes of horror.<sup>83</sup>

At Cairo and Al-Fustat, and in the neighboring places; wherever one went, there was not a spot in which one's feet or one's eyes did not encounter a corpse, or a man in the agonies of death. Day by day, from one hundred to five hundred dead bodies were taken from Cairo, to be carried to the place where they might have funeral rites. At Al-Fustat the number of dead was incalculable. They were not buried, but merely cast out of the town. At last, there were not enough living left to carry away the dead, and they remained in the open air, among the houses and shops, or even in the interior of dwellings. You might see a corpse falling to pieces in the very place where a cook or a baker, or other tradesman, was carrying on his business.<sup>83</sup>

A traveler often passed through a large village without seeing a single living inhabitant. He saw the houses standing open, and the corpses of those who had lived there stretched out opposite one another — some decayed, and some recently dead. Very often, there was a house full of furniture, without any one to take possession of it. One could travel for several days together, and in all directions, without meeting a single living creature, nothing but corpse. A great mortality and pestilence happened in Faioum [Faiyum], in the province of Garbiyyeh [Gharbiyah], and at Damietta and Alexandria.<sup>83</sup>

Nor in many cases, did those that fled *Egypt* fair better. According to the testimony of a great number of witnesses, the road between Egypt and Syria was like a vast field sown with human bodies. It had become as a banquet-hall for the birds and wild beasts, which gorged themselves on their flesh; and the very dogs that these refugees had taken with them, to share their exile, were the first to devour their bodies. The inhabitants of the Hauf, (a district to the east of the Nile, below Cairo,) when they fled to Syria to find pasturage, were the first who perished upon this road; long as it is, it was strewn with their corpses, like locusts which have been broiled.<sup>83</sup>

[The death toll in the end was horrendous.] At Al-Fustat of the nine hundred machines for weaving mats; now only fifteen remained [A loss of 98%]. We have only to apply the same proportion to the other trades, which are carried on in that town; to the shopkeepers, bakers, grocers, shoemakers, tailors and other artisans. The numbers employed in each of these were reduced in the same proportion or greater than the mat weavers.<sup>83</sup>

At Maks [Izab al Maksa?] there was a hill on which human remains had accumulated in great quantity. Abdallatif [or Abd-ul-Latif was a celebrated ancient physician and traveler] estimated that there were twenty thousand corpses. When from the height he looked down, upon the place called the Basin, and which is a considerable hollow, we saw skulls, some white, some black, and others of a deep brown: they were in layers, and heaped up in such a quantity that they covered up the other bones: one would have said that there were only heads without bodies: and one might suppose that one saw melons which had been gathered, and which were thrown into a pile, as we heap sheaves upon a granary floor. Days later he returned to the same spot. The sun had dried the flesh: the skulls had become white, and they appeared like ostriches' eggs piled together.<sup>83</sup>

---

**1199 A.D.** In *England*, there were serious floods from rain.<sup>47, 72, 92</sup>

[In *England*], the rains were often, great and heavy and produced great floods.<sup>72</sup>

In 1199 at the rise of the Teutonic Order, strong North Winds blew in *Prussia* for 12 years together, which was the cause of very great tempests. There were several heavy rains and great floods in many parts of *England*, which carried down Berwick Bridge, etc. with many houses and much people. On October last, there was frightful thunder. On 4 November, there was terrible thunder.<sup>72</sup> [Old *Prussia* during this time period consisted of *Poland*, east of the Vistula and southwest *Lithuania*, and the historical ethnographic region of *Lithuania Minor*. The Berwick Bridge spans over the River Tweed in Northumberland, northeast *England*]

In 1199 during the period between 27 May and 24 June, a drought engulfed *China*.<sup>153</sup>

In 1199 during the summer, there was a drought in *China*.<sup>165</sup>

In 1199, floods struck many regions of *China* including:<sup>153</sup>

— Kiangsi (now Jiangxi province) in southern *China* at P'o-yang, Shang-jao, Kiukiang, Lin-ch'uan, and Yung-hsiu.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê, Ch'ü, and Taichow.

— Hupeh (now Hubei province) in central *China* at Yang-hsin.

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton.

— During the period between 8 August and 8 November, floods struck Chekiang province at Wên-chou, Chin-hua, Ch'ü, and Taichow. Houses were damaged by the floodwaters and many people drowned.

*Also refer to the section 1199 A.D. – 1202 A.D. for information on the drought and famine in Egypt during that timeframe.*

---

**1200 A.D.** [In *England*], the winter was excessively cold.<sup>72</sup>

In 1200, *Ireland* was struck by a famine. In *Ireland*, “a cold foodless year”.<sup>57, 91</sup>

In the year 1200, there was a vague mention of a famine in *India*. But little is known of this event.<sup>156</sup>

In 1200, floods struck many regions of *China* damaging houses and crops. Areas affected were: <sup>153</sup>  
 — Anhwei (now Anhui province) in eastern *China* at Hsi.  
 — Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou and Nan-p'ing.  
 — Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü, Chien-tê and Chin-hua.  
 — Kiangsi (now Jiangxi province) in southern *China* at P'o-yang and Shang-jao.

In 1200, during the period between 15 April and 14 May, a drought engulfed *China*. During the period between 15 May and 12 July, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow; Kiangsu (now Jiangsu province) on the east coast of *China* at Chiang-yin, Nanking, Wu-chin, Chinking, Yangchow, Huai-an, T'ung and T'ai; and Anhwei (now Anhui province) in eastern *China* at Ho. <sup>153</sup>

In 1200 during the spring and summer, there was a drought in Chêhkiang, Hunan, Hupeh and Kiangsu provinces in *China*. In Chêhkiang, this was a great drought. <sup>165</sup>

*Also refer to the section 1199 A.D. – 1202 A.D. for information on the drought and famine in Egypt during that timeframe.*

**1201 A.D.** On April 15, the church of St. Nikola in Gorodishche, *Russia* [near Novgorod] was burnt down by thunder; and the whole summer stood with rain. <sup>76</sup>

[In *England*], the spring had glutting and continual rains and very great floods. On 25 June and 10 July, there were great tempests of thunder, lightning, hail as big as eggs, and prodigious rains. This destroyed the corn [grain], cattle, people, meadows etc. and burning towns [from lightning strikes]. The rains continued from the Feast of Pentecost to the Feast of the Nativity of the Blessed Virgin [September 8], which not only hindered corn and fruits from ripening, but also rendered them mostly useless and unprofitable. A great dearth of animals followed, but chiefly of sheep. <sup>72</sup>

[In *England*] during the years 1201-1204, the long rains caused famine, dearth and great mortality. <sup>72</sup>

In 1201 during the period 2-31 July, a drought engulfed *China*. Then during the period 1-29 August, a severe drought struck many regions of *China* and as a result the land tax was remitted. The regions affected included: <sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow along with other parts of the province.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking, Huai-yin and Yanchow along with other parts of the province.
- Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng and Kuang-tê.
- Hupeh (now Hubei province) in central *China* at I-ch'ang and Ch'ang-yang.

In 1201 during the summer, there was a great drought in Chêhkiang, Kiangsu and Sze-ch'wan provinces in *China*. <sup>165</sup>

*Also refer to the section 1199 A.D. – 1202 A.D. for information on the drought and famine in Egypt during that timeframe.*

**Winter of 1201 / 1202 A.D.** [In *England*], this winter was severe beyond any in the memory of man for extreme cold, and long continuance. Frozen ale was sold by weight. It snowed for many days and was very deep. <sup>72</sup>

**1202 A.D.** [In *England*], after the frosts followed the like of tempests of thunder, lightning, rain, and hail as big as hen's eggs. This destroyed corn [grain], fruits, young cattle and horses, etc. As a result of the rains of 1201, a bad crop, and the corn for seed marred, there came a dearth.<sup>72</sup>

In 1202 in London, *England*, there was a great storm of hail and rain. In 1202 there “fallen grete reynes, and hailstones as gret as an eg, medlyd with reyn; where thorough trees, vines, cornes, all manner frutes, were moche destroid: and the people were sore abaysshed, for there were seyn foules fleyng in the eyre berynge in their bills brennyng coles, which brenden many houses.” [Translation: In 1202 there fell great rains, and hailstones the size of an egg, mixed with rain; where all the trees, vines, grains and all manner of fruits, were much destroyed: and the people were mortified, for there were seen fowls flying in the air bearing in their bills burning coals, which burned down many houses.] Another account gave this event as occurring in the year 1203. In London “there fel [fell] great raines [rains], thundrings [thunder], and hailes [hail] (stones as big as eggs), whereby many trees and corne [grain] were destroyed; and birds were seen flying in the ayre [air] with fyre [fire] in their mouthes [mouths], and to set fyre [fire] in houses and burn them.<sup>212</sup> [possible description of a tornado and damage from lightning storms]

[In *England*] during the years 1201-1204, the long rains caused famine, dearth and great mortality.<sup>72</sup>

All summer 1202 was troubled by storms, which delayed many fleets leaving from the Flemish ports of *the Netherlands* bound for the Third Crusade.<sup>79</sup>

In 1202 during the period between 5 February and 18 August, several regions of *China* were engulfed by a drought including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang and Nanking.
- Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng and Kuang-tê.
- Hunan province in south-central *China* at Changsha.

In 1202 during the spring, summer, autumn and winter, there was a very severe drought in Chêhkiang, Hunan and Kiangsu provinces in *China*. There was no snowfall during the winter.<sup>165</sup>

In 1202, floods struck several regions of *China* including:<sup>153</sup>

- Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou, Foochow, Ch'ang-t'ing, Hsia-p'u, Ku-t'ien and Nan-p'ing. At Chie-ou houses were damaged and over 60 persons drowned. At Hsia-p'u over 280 families were flooded. At Ku-t'ien houses were damaged by the floodwaters and over 270 persons drowned. At Nan-p'ing over 250 families were flooded and many people drowned.
- Szechwan (now Sichuan province) in southwest *China* at Lu.
- During the period between 21 July and 18 August, floods struck Fukien province at Shang-hang. Houses, fields and crops were damaged by the floodwaters and many people drowned.

*Also refer to the section 1199 A.D. – 1202 A.D. for information on the drought and famine in Egypt during that timeframe.*

**Winter of 1202 / 1203 A.D.** During the period between 8 November 1202 and 5 February 1203, a drought engulfed *China*.<sup>153</sup>

**1203 A.D.** [In *England*], there was a very sore famine. Multitudes of poor died. There were bad seasons.<sup>72</sup>

In *England* in 1203, there was a great mort [death] and famine from long rains.<sup>57,91</sup>

[In *England*] during the years 1201-1204, the long rains caused famine, dearth and great mortality.<sup>72</sup>

In *Ireland* in 1203, there was a great famine “so that the priests ate flesh meat in Lent”. [Christians during this time era abstained from eating meat during the Lenten period as a sacred obligation.]<sup>57,91</sup>

In 1203 during the period between 14 April and 10 July, a drought of long duration engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. During the period between 13 May and 10 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. Crops were damaged.<sup>153</sup>

In 1203 during the spring and summer, there was a drought in *China*.<sup>165</sup>

---

**Winter of 1203 / 1204 A.D.** From late January to May in 1204, there was a continuous drought and a burning heat in summer. This season was very destructive to the fruits of the earth, and as a result a very large famine and mortality occurred in *England, France, Spain and Italy*.<sup>62</sup>

In April 1204, a famine still prevailed in *the North and the East*.<sup>72</sup>

---

**1204 A.D.** In 1204, there was mortality [death]. In *Ireland*, a prodigious number [of people] perished. There was a general plague throughout *Europe*. In London, *England* alone, 200 were buried daily in the Charterhouse yard.<sup>212</sup>

In 1204 in *Italy*, the summer was extremely dry and hot.<sup>62</sup>

From late January to May 1204 in *France*, the heat and drought were unusual.<sup>79</sup>

In 1204 from February to April [in *France*], it was very dry.<sup>173</sup>

It did not rain or rained very little during the months of February, March and April 1204 in *France*. Hot weather followed three months of drought.<sup>79</sup>

In 1204, Auge and the neighborhood of Caen in northern *France* were almost submerged [by floodwaters].<sup>79</sup>

[In *England*] during the years 1201-1204, the long rains caused famine, dearth and great mortality.<sup>72</sup>

In 1204, there was a terrible great flood of water [in *Germany*]; the greatest since the birth of Christ. All marshlands were inundated and many people and livestock drowned. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In 1204 during the period 2-30 May, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng and Hopei (now Hebei province) in northern *China* at Ta-ming. During the same time period, floods struck Kiangsi (now Jiangxi province) in southern *China*. During the period between 31 May and 26 August, a drought struck Kiangsi and Chekiang provinces and Kiangsu province south of Chinkiang. As a result, the land tax was remitted.<sup>153</sup>

In 1204 during the summer and autumn, there was a drought in Chêhkiang, Chihli, Kiangsi and Shantung provinces in *China*.<sup>165</sup>

---

**Winter of 1204 / 1205 A.D.** A cold spell hit *England* on 14 January 1205. The River Thames froze. There was frost until March 22.<sup>28, 40, 41, 42, 43</sup>

During the winter of 1205, there was a severe frost [in *England*]. It began on 14 January and lasted until 22 March. “Wheate was sold for a marke [mark was currency equivalent to 160 pence] the quarter [quarter ton], which before was at 12 pence.”<sup>212</sup>

In *England* in 1205, there was frost from the 14<sup>th</sup> of January to 22<sup>nd</sup> March. “Frozen ale and wine sold by weight.” “In the seventh year of King John began a great frost, which continued till the 22<sup>nd</sup> March, so that the ground could not be tilled, whereof it came to passe, that in the summer following a quarter of [a ton of] wheat was sold in many places in *England* for a mark, which for the more part of the days of Henry II, was sold for 12*d.*, and a quarter of [a ton of] beans and peas for a noble, and a quarter of [a ton of] oats for 3*s.* 4*d.*, which were wont to be sold for 4*d.*”<sup>47, 93</sup>  
[*d.* = pennies; *s.* = a shilling worth 12*d.*; a mark worth 20*s.*; a noble was a gold coin worth 6*s.* 8*d.*]

In 1205, there was the greatest frost in *England* from January 14 to March 22 with deep snows. Frozen ale and wine were sold by weight.<sup>72</sup>

In 1204 or 1205 on the Nones of December began a most violent rigorous frost, which continued to 12 April. So the ground could neither be plowed nor sown. Hence there came a dearth. But there was the fertility and plenty from the little corn that was sown with difficulty. The frost killed much sheep and cattle with their young.<sup>72</sup>

The winter of 1204-05 was very harsh in *France*, Flanders [now *Belgium*] and *England*. In *England*, the cold of Christmas lasted until the vernal equinox [around March 20 or 21]. On the Continent (*Europe*) a great mortality of the animals, especially sheep and birds occurred. A famine followed this severe weather.<sup>62</sup>

The cold of 1204 in northern *France* surpassed everything we had seen in living memory.<sup>79</sup>

The winter of 1205 was very cold in Brittany and Normandy, *France* during mid-January to mid-March.<sup>173</sup>

---

**1205 A.D.** In *England*, hail the size of ducks' eggs with thunder and lightning.<sup>72</sup> Much of the grain in the fields were destroyed.<sup>57, 93</sup>

In *England*, there were many lives lost, houses overthrown, and the grain in the fields destroyed, by hail as large as hens' eggs.<sup>40, 41, 43, 56</sup>

In 1205, there was a year of terrible thunder and lightning storm [in *England*] and a hurricane.<sup>72</sup>

The summer of 1205 was very hot [in *France*].<sup>173</sup>

In 1205 during the period between 6 May and 8 August, a drought engulfed *China*. Then during the period between 18 July and 11 December, a drought struck Kiangsu (now Jiangsu province) on the east coast of *China*; Chekiang (now Zhejiang province) on the east coast of *China*; Fukien (now Fujian province) on the southeast coast of *China* at Foochow; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Kuei-lin.<sup>153</sup>

In 1205 during the period between 14 October and 13 November, floods struck several regions of *China* damaging houses and crops. The areas affected were:<sup>153</sup>

— Hupeh (now Hubei province) in central *China* at Chiang-ling and Hsiang-yang.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and the area east of the Huai River.

— Anhwei (now Anhui province) in eastern *China* at Hsü-i.

In 1205 during the summer, there was a great drought in Chêhkiang, Fuhkien, Kiangsi, Kwangsi, Kwangtung and Sze-ch'wan provinces in *China*.<sup>165</sup>

---

**1206 A.D.** The summer of 1206 was very hot [in *France*]. Many individuals suffered heat stroke during the first week of August. The harvest crops were good and beautiful.<sup>173</sup>

In 1206 there was a great flood of water in *Germany*. The Main River rose to 32 Ellen [74 feet, 22 meters]. The Rhine River destroyed certain protective dams and drowned several thousand men, women and children.<sup>172</sup>

In 1206 during the period between 8 June and 7 July, a flood struck Chekiang (now Zhejiang province) on the east coast of *China* at Tung-yang. Fields were damaged and many people drowned. Then during the period between 6 August and 4 September, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Hsing-tzū; Hunan province in south-central *China* at Changsha; and Hupeh (now Hubei province) in central *China* at Chiang-ling. As a result, the land tax was remitted.<sup>153</sup>

In 1206 during the autumn, there was a drought in Chêhkiang, Hunan, Hupeh and Kiangsi provinces in *China*. The land tax was remitted.<sup>165</sup>

---

**Winter of 1206 / 1207 A.D.** A terrible flood succeeded by lightning and thunder in December 1206, brought a tremendous disaster. We do not recall ever having seen a similar flood. The Seine River in Paris, *France* broke three arches of the bridge “Petit Pont”. And all the streets of Paris were so flooded that they could only be accessed by boat.<sup>79</sup>

On 5 December 1206 in *France*, lightning and thunder accompanied abundant rainfall. These rains brought excessive floods.<sup>79</sup>

In December 1206, the greatest flood ever seen took place in *France*.<sup>72</sup> [Various accounts of this greatest ever seen St. Nicolas flood in *France* are also described in years 1207, 1208 and the Winter of 1209/1210.]

In *France* in December 1206 on the eve of the Feast of St. Nicolas [December 6], there were violent burst of lightning and thunder. Winds and a raging storm accompanied the rains of spring and summer and the cold winter.<sup>79</sup>

During the winter of 1206, there was a major flood in Paris, *France*. People travelled throughout the city by boat.<sup>173</sup>

A blizzard struck *England* on 27 January 1207. Many houses fell in. The storm left deep snowdrifts. In *Germany*, many travelers froze to death on the roads.<sup>28</sup>

On January 17<sup>th</sup> 1206 or 1207, about the middle of the night, there suddenly rose such a tempest of wind, as blew down many houses. The area was buried in snow and drifts. Many flocks of sheep and cattle were destroyed.<sup>72</sup>

In 1207, the River Thames in *England* was frozen for eleven weeks.<sup>29</sup>

In 1207, the frost in *Britain* lasted fifteen weeks.<sup>41, 42, 43, 47, 93</sup>

**1207 A.D.** In 1207 during the period between 1 March and 26 June, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou; and Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang and T'ai-ts'ang.<sup>153</sup>

In 1207 during the summer, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

In 1207, floods struck several regions of *China* including Kiangsu (now Jiangsu province) on the east coast of *China*; Chekiang (now Zhejiang province) on the east coast of *China*; Anhwei (now Anhui province) in eastern *China*; and Hupeh (now Hubei province) in central *China* at Wuchang and Hanyang.<sup>153</sup>

In 1207 during the reign of King John, a storm struck [*England*] with hailstones as big as hens' eggs.<sup>194</sup>

In 1207 or 1209 on St. Nicolas's Eve, there was a tempest of thunder and lightning and a great flood.<sup>72</sup>

**1208 A.D.** The summer of 1208 [in *France*] was hot. The [grape] vines flowered in May.<sup>173</sup>

In December 1208 in *France*, there were terrible rains and great floods, destroying bridges, houses etc. "Greatest ever seen in *France*."<sup>47, 92</sup>

In 1208 there were such terrible rains, thunder and hail, which killed men, destroyed [grape] vines, trees and corn [grain]. In December was the greatest inundation in *France* that the oldest of that age had seen, overthrowing bridges and buildings.<sup>72</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1208 during the period between 6 May and 14 June, a drought engulfed the east coast of *China* at Kiangsu (now Jiangsu province) in the area south of Chinkiang and at Chekiang (now Zhejiang province). As a result, the land tax was remitted.<sup>153</sup>

In 1208 during the summer, there was a drought in Chêhkiang province in *China*. The land tax was remitted.<sup>165</sup>

**1209 A.D.** In 1209 during the period between 6 May and 31 August, a drought engulfed several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou. The drought was severe.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang and Nanking.

— Anhwei (now Anhui province) in eastern *China* at Fêng-yang, Tang-t'u, Hsüan-ch'êng and Kuang-tê.

— Hupeh (now Hubei province) in central *China* at Chiang-ling.

In 1209, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 4 June and 3 July, floods struck Szechwan (now Sichuan province) in southwest *China* at Lien-chou [uncertain name Yün-lien]. The city walls, houses and fields were damaged by the floodwaters.

- During the period between 4 July and 1 August, floods struck Szechwan province at Sui-ning, Lang-chung and Chao-hua. Houses were damaged by the floodwaters at Chao-hua.
- During the period between 4 July and 1 August, floods struck Liaoning province located in the southern part of *China's* northeast at I.
- During the period between 4 July and 1 August, floods struck Kansu (now Gansu province) in northwest *China* at Hsi-ho, Ch'êng and Li. Granaries were damaged at Li.
- During the period 2-31 August, floods caused by a typhoon and heavy rain struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. Over 2,280 families were flooded and many people drowned.

In 1209 during the summer, there was a drought in Chêhkiang, Hupeh and Kiangsu provinces in *China*. In Chêhkiang, this was a great drought.<sup>165</sup>

In 1209 or 1211 [in *England*] there was a terrible summer of thunder, heavy rains, severe winter and after it a dearth.<sup>72</sup>

**Winter of 1209 / 1210 A.D.** In *England*, there were great floods on St. Nicholas Eve (December 5), “after a tempest of thunder and lightning.”<sup>47, 92</sup>

On Saint Nicholas Eve [5 December] 1209, thunder and lightning causing many houses to be burnt, followed by very high floods, which caused great damage. Wind blew down houses and trees.<sup>72</sup>

In *England*, in the year 1209, the winter was long and severe and followed by a dearth.<sup>47, 93</sup>

In the year 1209 or 1211, there was a severe long winter in *England* followed by a dearth.<sup>72</sup>

In 1210, the frost was the hardest in *England* from 1 January to 1 March and a dearth followed.<sup>72</sup>

In *England* in 1209, there was a famine from a rainy summer and severe winter.<sup>57, 91</sup>

In 1209 or 1211, there were terrible thunders this summer, severe heavy rains, a stormy and cold winter, hence a scarcity and famine.<sup>72</sup>

A severe winter struck *England* in January 1210 and lasted into February. There were great deposits of snow.<sup>28</sup>

In the year 1210 in the beginning of January, a very severe frost began in *France*, which lasted about two months and the winter crop was spoiled for the most part, and the little that they reaped in some places in wheat, barely gave back as much as they had sown. This winter was very disastrous for the cattle.<sup>62</sup>

In 1210 in northern *France*, we experienced a very sharp frost at the beginning of January, which continued nearly two months. It prevented the sowing of the winter crops and destroyed many seeds sown.<sup>79</sup>

The *French* historians cite great mortality of animals due to cold during 1210.<sup>58</sup>

**1210 A.D.** In 1210 or 1212, in Perth, *Scotland*, there was a great flood from an overflow of Tay and Anan rivers: many houses washed down and people drowned. The king lost his youngest son and nurse in it; and twelve of the court ladies were drowned. The king and his brother with great difficulty escaped in a boat.<sup>47, 92</sup>

In 1210 or 1212, there were great floods in the Rivers Tay and Anan in *Scotland*. The city of Perth was overflowed [flooded] and most houses broke down and many people were drowned. The King lost his youngest son and nurse in it and twelve more of the court ladies. The King and his brother with great difficulty escaped in a boat. There was a strong frost from January to March whereby the grain sown was killed and it yielded not as much a crop as sown. People were afflicted with sundry diseases and many died. This was a sickly time.<sup>72</sup>

In 1210, there was an inundation in *Scotland*. At Perth, about the time of the feast of St. Michael, the flood carried off much of the harvest crops from the field. The water of the River Tay and the River Almond so swelled that the large bridge of St. John was overthrown. “William the King, David Earl of Huntingdon, the King’s brother, Alexander, the King’s son, with some of the principal nobility, went into a boat, and sailed quickly out of the town, otherwise possibly they might have perished.”<sup>212</sup>

In 1210 or 2012 [in *England*], there was a famine caused by last summer’s rain and winter’s frost.<sup>72</sup>

In 1210, floods struck a several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Shao-hsing, Chien-tê, and Ch’ü. As a result, the land tax was remitted.

— During the period between 25 May and 22 June, floods struck Chekiang province at Chin-hua, Fu-yang, Yü-hang, Hai-ning, Chu-chi, Ch’un-an, and Hsin-têng. Houses and fields were damaged by the floodwaters and many people drowned.

— During the period between 25 May and 22 June, floods struck Anhwei (now Anhui province) in eastern *China* at Hsi. Houses and fields were damaged by the floodwaters and many people drowned.

In 1210 during the period between 23 June and 22 July, a severe drought engulfed Honan (now Henan province) in central *China* at Kaifeng and Hopei (now Hebei province) in northern *China* at Ta-ming.<sup>153</sup>

In 1210 during the summer, there was a great drought in Chihli and Shantung provinces in *China*.<sup>165</sup>

**1211 A.D.** In 1211, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Tzū-chung, An-yüeh and Ho-ch’uan; Honan (now Henan province) in central *China* at Pi-yüan; Hopei (now Hebei province) in northern *China* at Ta-ming; and Shansi (now Shanxi province) in northern *China* at Yang-ch’ü. The drought was severe in Hopei and Shansi provinces.<sup>153</sup>

In 1211 during the summer, there was a drought in Chihli, Shantung and Sze-ch’wan provinces in *China*.<sup>165</sup>

In 1211 during the period between 10 August and 8 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Tz’ü-ch’i. Houses and fields were damaged by the floodwaters and many people drowned. During the period between 9 September and 8 October, floods struck Chekiang province at Shao-hsing. Dikes and fields were damaged.<sup>153</sup>

[In *England*], there was a tempest and hurricane.<sup>72</sup>

**1212 A.D.** Early frost destroyed the harvest in Novgorod, *Russia* in 1212 A.D. Children were sold as slaves for bread.<sup>28</sup>

In Sicily *Italy*, there was an inundation from the sea, “thousands of people swept away by it.”<sup>47, 72, 92</sup>

In 1212 in Cathinna in *Sicily*, some thousands of people were swept away by an inundation of the sea. In *Italy* fell a shower of hail, each stone as large as a goose egg.<sup>72</sup> [Another account places the hailstorm in the year 1213.] In 1213 in *Italy*, hail like goose eggs.<sup>57</sup>

The year 1212 was very dry in *France*.<sup>79</sup>

The summer of 1212 [in *France*] was very dry. Throughout the rest of the year, the weather was dry.<sup>173</sup>

In 1212 during the period between 4 April and 2 May, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Yang-ch'ü and Tatung; Shensi (now Shaanxi province) in central *China* at Sian; and Honan (now Henan province) in central *China* at Kaifeng. Then during the period between 1-29 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê, Taichow, Chu-chi and Shao-hsing. Houses and fields were damaged by the floodwaters.<sup>153</sup>

In 1212 during the spring, there was a great drought in Shansi, Shantung and Shensi provinces in *China*.<sup>165</sup>

**1213 A.D.** The winter of 1213 was so long and hard before and after Christmas, that in Vienna, *Austria*, the river froze three times and could be crossed on the ice.<sup>79</sup>

In 1213 during the period between 22 May and 19 June, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Yang-ch'ü and Shensi (now Shaanxi province) in central *China* at Sian. During the period between 22 May and 17 August, a drought engulfed Hupeh (now Hubei province) in central *China* at Chiang-ling, Hanyang and An-lu.<sup>153</sup>

In 1213 during the summer and autumn, there was a drought in Hupeh and Shensi provinces in *China*.<sup>165</sup>

In 1213, floods struck *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Yü-hang, Yü-chien and An-chi.

— During the period between 20 June and 19 July, floods struck Chekiang province at Ch'un-an. Houses and fields were damaged by the floodwaters. 180 li (60 miles) were flooded. Innumerable people drowned.

— During the period between 20 June and 19 July, floods struck Chekiang province at Chu-chi. Houses and fields were damaged by the floodwaters. Many people drowned.

**1214 A.D.** [In Novgorod, *Russia*] on 1 February, on Quinquagesima Sunday, there was thunder after morning service, and all heard it; and then at the same time they saw a flying snake [or dragon].<sup>76</sup>

The River Thames in *England* was so low between the tower and the bridges; that men, women and children waded over it. The water was only four inches (10 centimeters) deep.<sup>1</sup>

The River Thames in *England* was so low between the Tower and the bridge that women and children waded over it; owing to so great an ebb in the ocean that laid the sands bare several miles from the shore, which continued a whole day.<sup>5, 40</sup>

In London, *England*, the level of the water was so low in the River Thames that individuals waded through it at the Tower. The sea withdrew for several miles.<sup>28</sup>

In 1214 during the period between 9 July and 7 August, a drought engulfed many regions of *China*. During the same time period, floods struck Hopei (now Hebei province) in northern *China* at Mi-yün.<sup>153</sup>

In 1214 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1215 A.D.** In the English Channel there was a great hurricane off the coast of Calais, *France*. A number of the Norman nobility on their way to assist King John against the barons were wrecked.<sup>57</sup>

A powerful storm struck in 1215 on the coast of Calais, *France*. Hugh de Beauvais and several thousand foreigners, on their voyage to assist King John against the barons perished.<sup>90</sup>

In the Novgorod Republic [now part of *Russia*] during autumn, much harm was done; frost killed the corn [grain] crops throughout the district, but at Torzhok all remained whole. The Knyaz [prince] seized all the corn in Torzhok and would not let one cartload into the city [Novgorod]. And in Novgorod it was very bad. They bought one barrel [11½ pecks] of rye for ten grivnas [grivna is a circular ingot of silver], one of oats for three grivnas, a load of turnips for two grivnas. People ate pine bark and lime tree leaves and moss. Oh brothers, then was the trouble; they gave their children into slavery. They dug a public grave and filled it full. Oh, there was trouble! Corpses in the marketplace, corpses in the street, corpses in the fields; the dogs could not eat up the men!<sup>76</sup>

In 1215 during the period between 5 February and 24 September, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China*, Chekiang (now Zhejiang province) on the east coast of *China*, Anhwei (now Anhui province) in eastern *China*, and Fukien (now Fujian province) on the southeast coast of *China*. The drought was accompanied by a plague of locust. The drought was so severe that many springs dried up.<sup>153</sup>

In 1215 during the spring and summer, there was a drought in Anhwei, Chêhkiang, Fuhkien, Kiangsi and Kiangsu provinces in *China*.<sup>165</sup>

---

**1216 A.D.** The winter in *Italy* was similar to the year 1133 A.D.<sup>1</sup>

The River Po in *Italy* was frozen to the depth of sixteen feet (4.9 meters).<sup>30</sup>

In 1216, the Po River in *Italy* froze.<sup>58, 80</sup>

In 1216, the Rhône River in *France* froze.<sup>58, 80</sup> - froze to a great depth.<sup>61</sup>

The Rhône River in southern *France* froze in 1216.<sup>79</sup>

In 1216, the Po River in *Italy* and the Rhône River in *France* froze to a great depth.<sup>60, 62</sup>

In the year 1216, the winter was very severe in *Italy*. The Po River froze to a depth of 15 Ellen (~ 34.5 feet or 10.5 meters). The wine in barrels in the cellars burst from freezing.<sup>62</sup> [The Elle is an old unit of German measurement. It is based on the length of the arm bone, which is generally 60-80 centimeters long. The length varied. In the North, the Elle was generally around 2 feet. In Prussia, it was generally 2 1/8 feet. In the South, it was 2 ½ feet.]

In 1216, there was a great flood that collapsed countries, swallowed up 10,000 people along with livestock and buildings. Prior to the flood of 1030, Helgeland, *Norway* had 9 parishes, but now only 2 remained.<sup>172</sup>

The great flood of February 1216 began the separation of the islands that exists today from the mainland. Even as early as the year 1000, there were on the *North Frisian* coast no islands. Only with recurrent

massive storm surges the islands were created. In 1216 Sylt and Fohr were separated. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In 1216 during the period between 18 May and 16 June, floods struck several areas of *China*. Houses, fields and crops were damaged by the floodwaters. As a result, the land tax was remitted. The following regions were affected:

- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Shao-hsing, Chien-tê, Chin-hua, Taichow, and Ch’ü.
- Kiangsi (now Jiangxi province) in southern *China* at Shang-jao and P’o-yang.
- Fukien (now Fujian province) on the southeast coast of *China* at Foochow, Lung-ch’i, Chin-chiang, and P’u-t’ien.

Then during the period between 17 July and 14 August, a drought engulfed *China*.<sup>153</sup>

In 1216 during the autumn, there was a drought in *China*.<sup>165</sup>

**1217 A.D.** The summer of 1217 [in *France*] was very hot.<sup>173</sup>

In 1217, floods struck Szechwan (now Sichuan province) in southwest *China* at Kuang-han and Ch’ung-ch’ing. During the period between 6 July and 3 August, floods struck Yunnan province in southwest *China* at Hui-tsê. During the period between 4 August and 2 September, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. Then during the period 1-30 November, floods struck Chekiang province where houses were damaged by the floodwaters and many people drowned.<sup>153</sup>

In 1217 during the autumn, there was a drought in *China*.<sup>165</sup>

**1218 A.D.** In *England*, there was a great flood in the night in winter.<sup>47, 72, 92</sup>

On 17 November 1218 there was a terrible abnormal flood that inundated *North Friesland* houses and villages. One surmises that at that time the north shore at Lundenberger Harder [Lundenbergsand] was separated. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In 1218, floods struck in Chekiang (now Zhejiang province) on the east coast of *China* at Wu-k’ang and in Kiangsi (now Jiangxi province) in southern *China* at Chi-an. Houses and crops were damaged by the floodwaters. People and cattle drowned. During the period between 25 June and 23 July, floods struck Chekiang province at Hu-chou. During the same time period, a drought engulfed many regions of *China*. During the period between 8 August 1218 and 5 February 1219, a drought engulfed Anhwei (now Anhui province) in eastern *China*; Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin, Chinkiang and Chiang-yin; Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou; and Anhwei province at Kuang-tê.<sup>153</sup>

In 1218 during the summer and autumn, there was a drought in Kiangsu province in *China*.<sup>165</sup>

**Winter of 1218 / 1219 A.D.** In the year 1218, a very severe frost began on 27 September 1218, which was very destructive. Seven days later another frost took the grapes, which had been harvested for the most part. On 27 October, it began to freeze, and the cold lasted, with intermittent snowfalls up to St. Nicholas (December 6). It continued so violent, that everything was frozen, the earth, the lakes, the rivers, and especially the Seine and Loire rivers in *France*. After a decline caused by the west wind brought us the cold north wind then suddenly there was very rough weather including snow and frost, which lasted until mid-March. Icy winds blew even after the thaw. Therefore, the fields in May, one

could only see an isolated grain on the stalks or weak shoots on the vines. In many places the land was worked over again and replanted.<sup>62</sup>

On 29 September 1218 in *France*, a heavy frost accompanied by snow, reigned for seven days and destroyed, at the time of harvest, most of the grapes. New snow and cruel freezing temperatures struck after the 30<sup>th</sup> of October, and persisted relentlessly until 6 December. People crossed the ice on our larger lakes and the largest rivers, including the Loire and the Seine rivers. The cold dampened somewhat with the arrival of winds from the south, but this did not last long with the sudden return of northerly winds. Then the frost and snow was continuous until the middle of March. Unbearable cold winds finally followed the killing frost, so that in the middle of May, the bare fields had barely a few ears, and the vines a few buds. In many places, the frost was so fatal that it forced them to plow and sow the fields twice.<sup>79</sup>

In 1218, large rivers in *France*, particularly the Seine and Loire Rivers were frozen and were crossed on the ice.<sup>62</sup>

During the winter of 1219, the Loire, Seine and Vienne rivers in *France* froze three times. Then the Seine River in Paris flooded. "The water was up to the second floor."<sup>173</sup>

In 1218 at the siege of Damyata [now Dumyat] in *Egypt* in winter, the east wind blowing, the Nile River swelled and did great damage to the besiegers.<sup>72</sup>

---

**1219 A.D.** In October 1219 in Nordland, "The St. Lawrence Lake broke out and drowned 36,000 people besides cattle."<sup>47, 72, 92</sup> [Nordland likely refers to Noord-Holland, a province situated on the North Sea in the northwest part of the *Netherlands*. St. Lawrence Lake might refer to Lauwerszee.]

On St. Luke's [October 18], there was a tempest and hurricane out of the northwest that struck [*England*].<sup>72</sup>

[In *England*], the winter was terrible with thunder and continual rains and hurricanes.<sup>72</sup>

In 1219 in Nordland, 36,000 men perished by a sudden flood. St. Laurence's Lake surprisingly broke out emptying itself into the Ilora and Rhodon, through Gratianople, destroying many thousands of people, and marring much land. In *England* all winter there were frequent thunders, continual rains, violent hurricanes.<sup>72</sup> [Nordland likely refers to Noord-Holland, a province situated on the North Sea in the northwest part of the *Netherlands*. St. Lawrence Lake might refer to Lauwerszee.]

A storm on 16 January 1219 produced a large drowning primarily to the Dutch coast (*Friesland*), but also on the west coast of Schleswig-Holstein where some 10,000 people were drowned. The Saxon Chronicle speaks of a total of 36,000 deaths from this storm. The storm increased the depth of Jade Bay. Hail and storm surge accompanied the full moon, when there was virtually no tide. There was enormous damage to the existing dikes (at the time, there was still not a closed dam line of the coast).<sup>172</sup>

In 1219 in *France*, an impetuous west wind blew hard during the first months of March and April. In April, although it did not rain, the [river] waters swelled beyond measure, and ravaged for a month and half the surrounding countryside. In Paris, the Seine River invades a great number of houses where it was impossible to enter without boats. The unexpected flood even covered the Petit-Pont Bridge. It was still impassable during the first fortnight of May. Soon the rainy season began. The rains began on June 24 and continued without interruption until the following August. This unusual weather therefore delayed the grain harvest and the grape harvest. Then early frosts accompanied by large snowstorms brought about the ruin of the harvest of wine. Then the rains resumed again and continued, still tirelessly, along

with terrible floods, until February 1220. The floods submerged almost the entire city of Grenoble in southeastern *France*.<sup>79</sup>

In 1219 in *France*, westerly winds blew incessantly during the months of March and April. These were succeeded by long rains that lasted until the Feast of Saint John's. In mid-August, the weather produced extraordinary burst of lightning and thunder. During the last Monday of August, a hard frost withered [grape] vines. At the end of September, the weather produced cruel frosts, which lasted three weeks along with copious amounts of snow that stayed on the ground for several days. Sustained rainfall ended this year.<sup>79</sup>

In the year 1219, the wine had to endure the harshest adversity. When the grapes were flowering, it rained constantly. In the last days of August to the end of September, the usual harvest time came a frost that destroyed the grapevines. It was very cold for three weeks and the grapes could not ripen. A thick snow covered the ground for several days. As a result, almost all the wine was lost in the Kingdom of *France*.<sup>62</sup>

In 1219, floods struck in Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning and in Anhwei (now Anhui province) in eastern *China* at Ho-fei. Fields were damaged by the floodwaters.<sup>153</sup>

In 1219 during the period between 6 May and 8 August, a drought engulfed *China*.<sup>153</sup>

In 1219 during the summer, there was a drought in *China*.<sup>165</sup>

**1220 A.D.** In *Poland*, there were floods caused by constant rains.<sup>92</sup> In Friesland *the Netherlands*, there was an inundation in October.<sup>47</sup>

In 1220, there was a considerable inundation in Friesland.<sup>43</sup>

In 1220 or 1221 there were continual great rains all the summer in *Poland*. Hence there were so great floods. Many villages were swept away. The winter corn [grain] was lost and there was no sowing in the spring. A sharp horrid cold winter followed. Then came three years of famine and plague wherein myriads of people and cattle died. There was so great a mortality in foreign countries. The number of individuals that were well were not enough to take care of the sick and bury the dead. In cities, towns and villages the mortality was so great that sometime only three or four survived, yet these had multitudes of dead to bury.<sup>72</sup>

In 1220 during the period 2-30 July, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping. During the period between 30 August and 27 September, floods struck Honan (now Henan province) in central *China* at Pi-yüan and Têng. As a result, the land tax was remitted. Then during the period between 27 November and 26 December, floods struck Honan province at Loyang.<sup>153</sup>

In 1220 during the summer, there was a drought in Chihli province in *China*.<sup>165</sup>

**1221 A.D.** In *England*, the frost was severe.<sup>47, 93</sup>

In 1221, *England* experienced a rainy summer and a severe winter.<sup>72</sup>

In 1221 [in *England*], "during a violent tempest fiery dragons and flying spirits were seen careering through the air." [possible description of a tornado]

Beginning in 1221 and lasting 3 years until 1224 [in *England*], there was the sorest famine after incessant summer rains of 1221 and the severe frost.<sup>72</sup>

In 1221, a drought engulfed several regions of *China* including Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'u, Chien-tê, Wên-chou and Li-shui; Kiangsi (now Jiangxi province) in southern *China*; and Fukien (now Fujian province) on the southeast coast of *China*. During the period between 26 March and 23 April, a drought engulfed *China*.<sup>153</sup>

In 1221 during the spring, there was a very severe drought in Chêhkiang, Fuhkien, Kiangsi and Kwangtung provinces in *China*.<sup>165</sup>

In 1221, floods struck in Shensi (now Shaanxi province) in central *China* at Liao-yang; in Kansu (now Gansu province) in northwest *China* at Ch'êng and Wu-tu; in Szechwan (now Sichuan province) in southwest *China* at Kuang-yüan; and in Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

**1222 A.D.** In *England* and *Wales*, the land was so inundated with continuous rains that scarcely an article of food was raised.<sup>1</sup>

Violent rain occurred in London, *England*. The storm threw down several churches.<sup>2</sup>

From 14 September to 10 February, there were terrible tempests of thunder, lightning, rain and dearth [in *England*].<sup>72</sup>

Lightning and thunder, so dreadful, as to throw down several churches in February 1222.<sup>43, 56</sup>

A violent rain occurred in London, *England*.<sup>40, 41 56</sup>

In *England* in the year 1222, high tides and continuous rainstorms did great damage.<sup>72, 92</sup> In the “seventh yeare of Henry III, on Holy Rood Day [September 14], was a great thunder and lightning tempest throughout all *England*, and such great floods of water followed with great winds and tempests, which continued till Candlemas [February 2], that the year following wheat was sold for 12 shillings, the quarter.”<sup>47</sup>

[In *England*] in April 1222, there was a prodigious snow, which broke down many trees. The frost that followed killed far more, so that in many places no leaves appeared on them that summer. There were no apples in most places. After this there was so great a drought that most late sown seeds died. On Holy Rood Day [September 14], there was a terrible and destructive thunder and lightning with profound rains, long and deluging floods. On November 30<sup>th</sup>, there was a tempest of thunder and lightning producing great damage to *England*. At the same time a great hurricane overthrew houses, trees. This storminess continued until Candlemas [February 2]. On 8 February at Grantham in Lincolnshire there was such thunder and lightning, as filled the church with a most offensive smell, that the people fled out of it. On the Day of the Exaltation of the Cross [September 14], there was thunder throughout all of *England*. There was a most shocking winter for thunder, lightning and hurricanes, which demolished many buildings as houses, churches, steeples, etc. These misfortunes caused a dearth of corn [grain] in 1223. On Saint Lucia Eve [12 December], there was a most destructive tempest of wind. The sea also rose with higher tides and springs than ordinary. Thunder killed many people chiefly in Warwickshire.<sup>72</sup>

The summer of 1222 was very hot [in *France*].<sup>173</sup>

In 1222 during the period between 11 June and 10 July, a drought engulfed Hunan province in south-central *China* at Yüeh-yang and Kiangsi (now Jiangxi province) in southern *China*. During the period between 9 August and 6 September, floods struck a couple regions of *China*. Houses, fields and crops were damaged by the floodwaters. The regions affected were: Chekiang (now Zhejiang province) on the east coast of *China* at Hsiao-shan, Ch'ü, Chin-hua, and Chien-tê and Anhwei (now Anhui province) in eastern *China* at Hsi. During the period between 7 September and 6 October, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1222 during the summer and autumn, there was a drought in Chihli and Hunan provinces in *China*.<sup>165</sup>

---

**1223 A.D.** There was a succession of thunderstorms in *England*, which continued fifteen days with violent winds and terrific lightning; which did great damage.<sup>1</sup>

When a cloud burst at Islebia [now Eisleben in central *Germany*], the falling rain was so thick that many people were choked with its water.<sup>72</sup>

In 1223, a violent cattle plague struck *England, Austria, Italy* and *Germany*.

In 1223 during 1-29 June, floods struck several regions of *China*. Houses and crops were damaged by the floodwaters and many people drowned. The regions affected were:

- Hupeh (now Hubei province) in central *China* at Chiang-ling and Wuchang.
- Szechwan (now Sichuan province) in southwest *China* at Ch'ung-ch'ing.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Huai-an and Wu-chin.
- Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Chia-hsing.
- Anhwei (now Anhui province) in eastern *China* at Kuei-ch'ih, Tang-t'u and Kuang-tê.

Then during the period between 8 August and 8 November, floods struck Chekiang province at Yü-hang and Hangchow and Fukien (now Fujian province) on the southeast coast of *China* at Foochow, Lung-ch'i, Chin-chiang and P'u-t'ien. Crops were damaged.<sup>153</sup>

---

**1224 A.D.** In the Novgorod Republic [now part of *Russia*], there was terrible thunder on May 20, the Day of St. Falalei; the Church of the Holy Trinity was burnt down, and two men fell dead.<sup>76</sup>

The rains that fell in April, May, June and July 1224, completely destroyed the nuts and grains in *France*.<sup>79</sup>

In 1224 in *France*, there was so much rain mixed with winds and clouds, from April to August, that the wheat and nuts died penniless. The harvest in turn was reduced to almost nothing by the frosts of autumn. Then came a winter with so rough and violent a wind that it threw down the towers of churches in many locations.<sup>79</sup>

[In *Western Europe*] in 1224, the heat of the summer was so strong that the grain dried up. Violent winds prevailed during the entire month of August, completed the devastation of the fields.<sup>62</sup>

In *England* in 1224, there was a very dry winter and bad time for seeds; whence followed a great famine.<sup>57, 91</sup>

In *England*, there was a great drought.<sup>47</sup>

On 18 October 1224 in London, *England*, there was a great windstorm (hurricane/tornado) that caused significant damage. In "1224, in this yere, upon Seynt Luke's day [October 18] there blew a gret wynd out of the north, whiche caste downe manye houses, steples, and torrettes of chirches, and turned up so

downe trees in wodes and in orchardes; at which tyme fyry dragons, and wykkes spirytes, grete noumbre, were seyn openly fleying in the eyre.” [In 1224 in this year, upon Saint Luke’s day [October 18], there blew a great wind out of the north, which cast down many houses, steeples, and turrets of churches, and turned upside down trees in the woods and in orchards; at which time fiery dragons, and (weak?) spirits, in great number, were seen openly flying in the air.]<sup>212</sup> [In early times, when events happened that defied logical explanation, they were sometimes attributed to mythical creatures. It was common in China to describe tornadoes as dragons. The roar of a tornado became the roar of a great dragon. The debris picked up through the tornado’s funnel cloud and thrown miles away became spirits flying through the air. Only a great dragon could swoop down from the top of a cloud and instantly cause great devastation by uprooting or breaking massive oak trees in two or utterly destroying homes and buildings and then as quickly as they appeared, they disappear.]

In November 1224, there was a terrible thunder and lightning storm [in *England*] that lasted for 15 straight days.<sup>72</sup>

There were several great rains and thunders, hailstones as big as eggs. These destroyed trees, [grape] vines, corn [grain] etc. In *England*, there were terrible hurricanes. There were great tempest, destruction of corns, trees and buildings and shipping. Yet there was so great a drought in winter, as hindered sowing of corn; hence a scarcity.<sup>72</sup>

In 1224 during the period between 20 May and 18 June, floods struck a couple regions of *China* including:<sup>153</sup>

— Fukien (now Fujian province) on the southeast coast of *China* at Foochow. Several hundred families were flooded and many people drowned. It also struck Chien-ou and Nan-p’ing.

— Szechwan (now Sichuan province) in southwest *China* at Hsi-ch’ang. Houses and crops were damaged.

**Winter of 1224 / 1225 A.D.** The winter stretched from St. Denis (9 October) until the feast of St. Mark’s (25 April) and was very severe. "A violent wind struck down the harvest and also tore down church steeples in several places in *France* and *Normandy*. A very strong famine prevailed in the whole continent (*Europe*) but particularly in Flanders [now *Belgium*], but we have, thank God, not heard that any man had died because of it."<sup>62</sup>

At the extreme of coldness of 1224 in northern *France*, joined a violent wind, which uprooted the crops in several places and overthrew the towers of churches.<sup>79</sup>

The winter of 1225 was very cold and unusually long [in *France*]. The frost lasted from 9 October until 25 April. The storms in *Normandy* were so fierce that church towers fell.<sup>173</sup>

There was a long and severe winter in 1225, followed by an unparalleled famine, fatal to many. A great death of sheep in *England*.<sup>72</sup>

In 1223 or 1225 [in *England*], there was a great and deep snow. It snowed many days and began on 14 January.<sup>72</sup>

**1225 A.D.** In 1225 [in *England*], there was a famine and dearth from last year’s summer rain and winter drought, that prevented sowing.<sup>72</sup>

In 1225 during the period between 8 June and 6 July, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping. During the period between 6 August and 3 September, floods struck Anhwei (now Anhui province) in eastern *China* at Ch’u.<sup>153</sup>

In 1225 during the summer, there was a drought in Chihli province in *China*.<sup>165</sup>

---

**1226 A.D.** The Rhône River in *France* overflowed its banks and combined with the effects of war caused great destruction to the fortified city and the people of Avignon in southeastern *France*. This unfortunate city had, like the Count of Toulouse embraced the cause of the Albigenses. Louis VIII came with a considerable army to besiege Avignon in the beginning of the year 1226. This siege lasted three months until the city capitulated. Louis VIII forced the Avignonais to raze the walls that protected their city against foreign enemies. The flooding began a few months after this siege. The Rhône River overflowed its banks on September 17<sup>th</sup>. The floodwaters found no obstacle (city walls) to block it from entering the city, spread with strength to the lower parts of the city. It caused great damage and added to the misery of the people.<sup>61</sup>

The extreme drought in the year 1226 brought about the ruin of almost all the summer crops. The fall of 1226 also proved hot and dry. Across *France*, this dry heat produced a prodigious quantity of wine.<sup>79</sup>

The summer of 1226 [in *France*] was hot and dry causing a drought. The wines were wonderful. The autumn was also dry.<sup>173</sup>

In 1226, snow fell in *Syria*. In *England*, there was a terrible hurricane with a north wind.<sup>72</sup>

In 1226 during the period between 28 April and 27 May, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 1226 during the spring, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**Winter of 1226 / 1227 A.D.** The frost in *England* in 1226 was severe and snow.<sup>47, 93</sup> Severest frost and snow.<sup>72</sup>

In January 1227, thick sea ice on the *Baltic Sea* allowed a German Army of Monks (Livonian Brothers of the Sword) to march from the mainland of *Estonia* to the islands of Muhu and Saaremaa and to capture these islands.<sup>34</sup>

In *France*, a very heavy frost and dry clear weather, preceded by a warm, dry autumn reigned continuously from 1 November 1226 to 5 February 1227 and killed the olive trees.<sup>79</sup>

The winter of 1227 was very dry and cold and lasted till February [in *France*].<sup>173</sup>

The winter of 1226-27 was dry and very cold in *France*. The drought lasted until February 1227.<sup>79</sup>

The frost lasted from 1226 in northern *France*, in clear weather and dry, since the first days of November until 5 or 6 February.<sup>79</sup>

---

**1227 A.D.** In *Ireland* in 1227, there was a great famine throughout the country.<sup>57, 91</sup>

---

**1228 A.D.** In Friesland [*the Netherland*], an irruption of the sea caused 100,000 people to drown.<sup>47, 92</sup>

In 1228 in Friesland [*the Netherlands*], the sea overflowed its banks, demolished towns, churches, castles innumerable, and drowned over 100,000 people. In *England* there were terrible thunder and lightning all summer, ruining houses, killing man and beast. The summer was so hot that the harvest was fully ended by midsummer. During the harvest there were excessive rains.<sup>72</sup>

[In *Europe*], the summer of 1228 was very hot. The harvest was all finished by the Feast of Saint John (24 June). In *England*, lightning killed many people and animals.<sup>62</sup>

The summer of 1228 was hot [in *France*].<sup>173</sup>

In 1228, there was a very mild winter and spring [in *Germany*]. In April the grape vines bloomed. The grape harvest was over before the feast of John [the Baptist]. In late July, the grapes were ripe.<sup>172</sup>

There was a terrible thunder and lightning storms along with meteors all summer [in *England*].<sup>72</sup>

In 1228 [in *England*] after a rainy harvest followed by a frost, the heavens had fiery flames all winter.<sup>72</sup>

In 1228 [in *England*], all summer was terrible with thunder and lightning, killing man and beast; in harvest there was incessant rains; and in winter a hard frost.<sup>72</sup>

In 1228 [in *England*], there was great and deep snowfalls that lay on the ground for a long time.<sup>72</sup>

In the Novgorod Republic [now part of *Russia*] during autumn, great rains came down day and night. From our Lady's Day [the Assumption – 15 August] until St. Nicholas Day [19 December] we saw not the light of day. People could not get the hay nor do the fields. Also there was great flood in the Volkhov. Around the lake and along the Volkhov River, [the flood waters] carried away the hay. Then the lake froze and the ice stood for three days, a south wind drove it up and having broken [the ice] carried it into the Volkhov River, tore away nine stays of the great bridge, and carried down eight by night to the Pitba stream on St. Nicholas Day, and the ninth [stay] was carried away on 8 December, St. Potapi Day.<sup>76</sup>

In 1228 during the period between 31 August and 29 September, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1228 during the summer, there was a drought in Chihli province in *China*.<sup>165</sup>

**1229 A.D.** In 1229 the winter was severe. The frost was so severe and hard, that horses, draughts and carriages went on the ice. After that there was a great snow, which covered the ground many days.<sup>72</sup>

In 1229 during the period between 19 September and 18 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.<sup>153</sup>

**1230 A.D.** A great famine consumed *Russia*. For what is there to say, or what to speak of the punishment that came to us from God? Of the bitter and sad memory of that spring! How that some of the common people killed the living and ate them; others cutting up dead flesh and corpses ate them; others ate horseflesh, dogs and cats. Those found who committed such acts were punished — some they burned with fire, others they cut to pieces, and others they hanged. Some fed on moss, snails, pine-bark, lime-bark, lime and elm-tree leaves, and whatever each could think of. And again other wicked men began to burn the good people's houses, where they suspected that there was rye; and so they plundered their property. Instead of repentance for our wickedness, we became more prone to wickedness than before, though seeing before our eyes the wrath of God: the dead in the streets and in the market-place, and on the great bridge, being devoured by dogs, so that they could not bury them. They put another pit outside at the end of Chudinets Street, and that became full, and there is no counting [the number of bodies in it]. And they put a third at Koleno beyond the Church of the Holy Nativity, and that likewise became full, there was no counting the bodies. And seeing all this before our eyes we should have

become better; but we became worse. Brother had no sympathy with brother, nor father with son, nor mother with daughter, nor would neighbour break bread with neighbour. There was no kindness among us, but misery and unhappiness; in the streets unkindness one to another, at home anguish, seeing children crying for bread and others dying. And we were buying a loaf for a grivna [a circular ingot of silver] and more, and a fourth of a barrel of rye for one silver grivna. Fathers and mothers gave away their children into servitude to merchants for bread. This distress was not in our land alone, but over the whole *Russia* province except Kiev alone. And so has God rewarded us according to our deeds.<sup>76</sup>

In the Novgorod Republic [now part of *Russia*], on the Day of the Exaltation of the Honourable Cross (September 26), a frost killed the crops throughout our district and from that there arose great misery. We began to buy bread at eight kunas, a barrel of rye at twenty grivnas [a grivna is a circular ingot of silver], or at twenty-five in the courts, wheat at forty grivnas, millet at eight, and oats at thirteen grivnas; our town and our country went asunder and other towns and countries became full of our own brothers and sisters; and the rest began to die. And who would not weep at this, seeing the dead lying in the streets, and the little ones devoured by dogs? Vladyka Spiridon put a common grave by the Church of the Holy Apostles in Prussian Street and engaged a good and gentle man by name Stanila to carry the dead on horses wherever he went about the town and so continuously he dragged them every day; and filled it up to the top; there were 3,030 corpses in it.<sup>76</sup>

In 1230 (the 2<sup>nd</sup> year of Kwanki) there were universally poor crops in the country of *Japan*. Starved corpses lay uncared for along the roads. Poor people, hard pressed for a living, sold their wives and children. In extreme instances, not a few men sold themselves as slaves. Whereupon, with the idea of meeting the extraordinary situation with an extraordinary method, the sale of the human body was publicly permitted. That it was permitted to those who saved starving men and women to make them their slaves was noted in the order of the Shogunate Government, dated April 17<sup>th</sup>, 1228 (1<sup>st</sup> year of Sho-o) as recorded in a compilation of Government orders.<sup>85</sup>

On 25 June 1230 after dark, there was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In *Italy*, there was a great overflow of the Tiber River, which overflowed the low city; and floods in *France*.<sup>47, 72, 92</sup>

In 1230 in Rome, *Italy*, there was a famine after a deluge of the Tiber River.<sup>57, 72, 91</sup>

In *Italy* in 1230, the Tiber River overflowed, so that it reached to the stairs of Saint Peter's Church. The lower city was drowned. Then followed such a famine that scarce one in sixteen persons survived. In July and August it was so burning hot that men roasted eggs in the sand.<sup>72</sup>

**1231 A.D.** On 25 January 1231, suddenly there fell a very great darkness over London, *England* and with it came a tempest of thunder and lightning that filled St. Paul's [Church] with a stink [offensive odor].<sup>72</sup>

In 1231, floods struck *China*.<sup>153</sup>

**1232 A.D.** The summer of 1232 was hot. In the east of *France* during July and August, one could "cook eggs in the sand".<sup>173</sup>

In *Austria*, there was a general overflow of the Danube River.<sup>47, 92</sup>

In 1232, the Danube overflowed its banks, did much damage. It drowned people, cattle, towns, corn and woods. Hence there was scarcity and famine.<sup>72</sup>

**1233 A.D.** In *England* and *Wales*, the land was so inundated with continuous rains that scarcely an article of food was raised.<sup>1</sup>

The rain was violent in London, *England*. It thundered 15 days together, with rain and floods that destroyed the fruits of the earth.<sup>2, 43, 56</sup>

In 1233, it thundered for fifteen days together in *England*. The next year began with terrible tempest of thunder, rain and floods, which spoiled the fruits of the earth.<sup>39</sup>

In 1233 in *England*, there was a great tempest of wind, with rain and it thundered for fifteen consecutive days.<sup>57, 90</sup>

In 1233 in *England*, there were thunderstorms for fifteen consecutive days, with great rains and gales.<sup>212</sup>

[Some accounts place this event in 1231 or 1232.] In 1231, there was a great thunderstorm in *England* that lasted 15 days. It began the day after the feast of St. Martin. “Which lasted 15 daies, beginning th’ morrow after St. Martin’s day.”<sup>212</sup> In *England*, there was a rainy spring with many floods. But on the morrow of Saint Martin’s Day in 1232 was great thunder and lightning, which continued 19 days together.<sup>72</sup>

In November 1233, there was a tempest with terrible thunder and lightning [in *England*].<sup>72</sup>

In *England*, it thundered for 15 days together, with terrible tempest of thunder and rain.<sup>40</sup>

In *England* in March 1233, there was thunder, lightning and rain for 15 days together. It was rainy all summer. A flood in July did significant damage.<sup>72</sup>

In 1233, a drought engulfed *China*.<sup>153</sup>

In 1233 during the summer, there was a great drought in *China*.<sup>165</sup>

---

**Winter of 1233 / 1234 A.D.** In the winter, the sea between *Norway* and *Denmark*, and from *Sweden* to [the island of] *Gothland*, and the Rhine River and *Baltic Sea* were all frozen and snow fell to a frightful depth. The winter in *Italy* was similar to the year 1133 A.D.<sup>1</sup>

It was so cold in Venice, *Italy*, that the *Adriatic Sea* froze in 1235. [Misprint for year 1234 A.D.] The ice was so thick that it bore the weight of wagons.<sup>28</sup>

In 1234, loaded carts and wagons crossed the ice on the frozen *Adriatic Sea* in front of Venice, *Italy*.<sup>38, 58, 80</sup>

In 1234, the Po River in *Italy* froze.<sup>58, 80</sup>

In 1234, the Rhône River in *France* froze.<sup>58, 80</sup>

During the winter of 1234, Lake Zurich, the Rhône River and the Bay of Venice were made of ice.<sup>173</sup>

The winter of 1233-34 in *France* was as long as rigorous. The cold froze the Rhône River and all plants of the South to the roots.<sup>79</sup>

The *Mediterranean Sea* was frozen over and the merchants passed with their merchandise in

carts.<sup>2, 41, 42, 43, 47, 93</sup>

The *Mediterranean* was again frozen over in 1234 A.D.; and a whole pine forest was killed by the cold.<sup>30</sup>

In 1234, the Po River in *Italy* and the Rhône River in *France* froze again; loaded carts crossed the *Adriatic Sea* on the ice in front of the city of Venice.<sup>60, 62</sup>

So great a frost in 1233 in Gallia Cisalpina, *Italy* that the Venetians walked on the ice of the Po River and travelled with coaches and wagons over it as in a land journey. Wine was frozen in bottles and was thawed to melt it. Vines and other trees died. Many people froze to death in bed.<sup>72</sup>

In 1233, in *England*, the frost “lasted till Candlemas.”<sup>47, 72, 93</sup>

During the 18<sup>th</sup> year of Henry III reign (1234) in *England*, “was a great frost at Christmas, which destroyed the corne in the ground, and the roots and hearbs in the gardens, continuing till Candlemasse without any snow, so that no man could plough the ground; and all the yeare after was unseasonable weather, so that barrenesse of all things ensued, and many poor folkes died for the want of victualls, the rich being so bewitched with avarice that they could yield them no reliefe.”<sup>47, 93</sup>

In the year 1234, a remarkable winter raged throughout *France, England* and *Italy*. On the night of Feast of the Circumcision of Christ (1 January) joined a very severe and persistent frost. The extreme cold froze the seeds for the most part with the root. In this sad time for the unfortunate people, except the pain of the cold, weighed the torments of hunger. In *Germany*, the ice of the rivers destroyed bridges, houses, walls and trees.<sup>62</sup>

[In *England*], the frost continued till Candlemas. There was no snow. Corn [grain] was lost. Herbs and roots of trees died.<sup>72</sup>

In 1234 in *England*, the frost was the hardest and strongest but there was no snow.<sup>72</sup>

**1234 A.D.** Famine and plague followed. So great was the famine in *France*, that men ate grass like oxen, especially in Aquitania. The plague was so terrible in Pictavia, *Scotland* that Saint Maxentius’s Church was filled with dead corpse.<sup>72</sup>

In 1234 [in *England*], there was the greatest famine when people ate horseflesh, bark of trees, grass. A plague followed.<sup>72</sup>

In Novgorod [*Russia*], the Church of St. Luke in the Lyudin quarter was burned down from thunder in the evening of June 10.<sup>76</sup>

**1235 A.D.** The water rose so high in the River Thames in *England* as to extend round Westminster Hall, to such a depth, that the judges and lawyers were taken from the Hall in boats.<sup>1, 40, 212</sup>

[Another account places this event in 1236.] In *England* in 1236, there were great tempest of rain, which soaked the earth with water and caused monstrous floods. This rain continued all January, February, and part of March. On 10 February, the River Thames rose with such a high tide, as filled Westminster Hall. On 25 December, there was great thunder and lightning.<sup>72</sup>

The rest of 1234 had exceedingly bad weather, wholly unseasonable. Hence [in 1235] came barrenness, scarcity, dearth and pestilence. Many people died. The famine was so great that people were forced to eat grass, horseflesh, and bark of trees in *France* and *England*. In London alone, 20,000 people

starved.<sup>57, 72</sup>

In 1235 in *England*, famine and plague; 20,000 persons died in London; people ate horseflesh, bark of trees, grass, etc.<sup>91</sup>

While backward weather seasons were contributing factors of the great famine of 1235 in *England* during Henry III's reign, much of the responsibility is laid at the door of the government itself. Twenty thousand people are said to have died in London alone from the famine.<sup>84</sup>

The summer of 1235 was hot [in *France*].<sup>173</sup>

In 1235, there was flooding in Paris, *France*.<sup>173</sup>

---

**1236 A.D.** The Danube River is frozen in its full depth for a considerable time.<sup>60</sup>

The Loire River in *France* was frozen solid. The Danube was frozen over across its entire width and remained frozen for a considerable time.<sup>62</sup>

During the winter of 1236 in northern *France*, the rivers froze.<sup>79</sup>

The winter of 1236 was cold in Winchester, *England*. Rivers froze. [The ice] collapsed and destroyed bridges in Tours and Saumur, *France*.<sup>173</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In the year 1236, in *France* and to the banks of the Danube River, the winter was very hard. The Loire River was first struck with disastrous flooding, and the severe cold and frost came later. The Bridges at Saumur and Tours, *France* were destroyed by the ice conditions. As a result of these scourges, a famine spread throughout *Europe*.<sup>62</sup>

The summer of 1236 was very hot. Crops failed in Normandy, *France* because of the drought.<sup>173</sup>

In 1236, floods struck several regions of *China* including:<sup>153</sup>

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ying-tê and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh.

— During the period between 8 April and 6 May, floods due to heavy and protracted rain struck Hupeh (now Hubei province) in central *China* at Ch'i-ch'un. Houses were flooded.

---

**1237 A.D.** [In *England*] in December 1236 and January, February and March of 1237, it was all rainy and great floods.<sup>72</sup>

The summer was an excessive drought for five months. However the earlier rains brought on an epidemic of Ague. This was a rainy, stormy, troublesome and sickly year. Agues were epidemic beyond compare. Wines this year were 16 times as dear as last year.<sup>72</sup>

The summer of 1237 was very hot [in *France*].<sup>173</sup>

In 1237, floods struck Kiangsi (now Jiangxi province) in southern *China* at P'o-yang and Shang-jao. During the period between 24 June and 23 July, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

In 1237 during the summer, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

---

**1238 A.D.** The summer of 1238 was hot [in *France*].<sup>173</sup>

In 1238, floods struck Chekiang (now Zhejiang province) on the east coast of *China*.<sup>153</sup>

---

**1239 A.D.** In 1239 in *England*, there was the greatest famine “people eat their children.”<sup>57, 72, 91</sup>

A plague and such a famine that delicate mothers ate their tender children.<sup>72</sup>

In 1239 during the period between 5 May and 3 June, a drought engulfed *China*.<sup>153</sup>

In 1239 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1240 A.D.** In *England*, the River Thames greatly flooded from rain.<sup>72, 92</sup> Extended above 6 miles at Lambeth.<sup>47</sup>

[In *France*] the summer of 1240 was dry and burning hot. The wines produced this year were so strong that they could not be drunk without drinking water.<sup>62</sup>

In 1240, there was flooding in Paris, *France*.<sup>173</sup>

[In *England*], in the year 1240 or 1241 for about four months together, it scarcely ever ceased raining. But about Easter, it began to turn clear and fair. Then there was three months of drought. Great famine followed. Wheat rose to 40 shillings. On 7 May, there was a dreadful hurricane.<sup>72</sup>

In 1240 during the period between 22 June and 20 July, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China*; Chekiang (now Zhejiang province) on the east coast of *China*; and Fukien (now Fujian province) on the southeast coast of *China* at Foochow. The drought was accompanied by a plague of locust.<sup>153</sup>

In 1240 during the summer, there was a great drought in Chêhkiang, Fuhkien and Kiangsi provinces in *China*. The drought was accompanied by a plague of locusts.<sup>165</sup>

---

**1241 A.D.** In *England*, there was deep snow with great frost after. On St. Mark’s night (April 25) there was frost and snow fatal to fruit trees.<sup>47, 93</sup>

[In *England*] on Saint Lucius’s Day fell a prodigious snow with great winds, deep drifts. Many people and cattle were lost. A long and severe frost followed.<sup>72</sup>

In 1241 in *England*, there was a deep snow followed by a great frost.<sup>72</sup>

The summer of 1241 was very hot [in *France*]. There was a drought from 6 January to 20 September. The wine was famous but there was a poor harvest [of grain] crops due to the drought.<sup>173</sup>

In 1241 during the period between 9 August and 6 September, a drought engulfed *China*.<sup>153</sup>

In 1241 during the autumn, there was a drought in *China*.<sup>165</sup>

---

**1242 A.D.** [In *England*] on the Feast of Saint Edmund in 1242, there was a great terrible tempest of thunder and lightning followed by such excessive rains for many days together. The rivers swelled to prodigious heights. The River Thames by land floods overflowed all its banks, drowned the country for six miles about Lambeth. None could go into Westminster Hall but on horseback.<sup>72</sup>

In 1242, there was an inundation of the Thames for above six miles at Lambeth.<sup>43</sup>

In 1242, the Seine River in Paris, *France* flooded.<sup>173</sup>

In 1242 during the period between 30 June and 28 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Li-shui and Chin-hua. Then during the period between 29 July and 27 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin, Chinkiang and Nanking.<sup>153</sup>

---

**1243 A.D.** [In *England*] in 1243 and 1244, there were great droughts followed by a most fatal plague.<sup>72</sup>

[In *Hungary*, there was a famine not caused by abnormal weather. A most direful famine in *Hungary*, the Tartars having ravaged the country for three years, that there was neither sowing nor reaping.<sup>72</sup> In 1243 in *Hungary*, there was a great famine from Tartar invasion.<sup>91</sup>]

---

**1244 A.D.** In the middle of November 1244, there was great thunder and lightning with a very intemperate season for 15 days together in *England*.<sup>72</sup>

The summer of 1244 [in *France*] was hot.<sup>173</sup>

In 1244 during the period between 9 May and 6 June, a drought engulfed *China*.<sup>153</sup>

In 1244 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1245 A.D.** A drought that began in 1242 [in *England*] finally came to an end in 1245 after the rains took up.<sup>72</sup>

A winter storm on 6 December 1245 was so cold in *Ireland* that many people lost toes due to frostbite. The snow was referred to as “poisonous snow”.<sup>28</sup>

In 1245 during the period between 26 June and 23 August, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang and Wu-chin.<sup>153</sup>

In 1245 during the summer and autumn, there was a very severe drought in Kiangsu province in *China*.<sup>165</sup>

---

**1246 A.D.** [This entry shows a date out of chronological order and is most likely 1246] In 1249 [in *England*] on Feast of Saint Marks [25 April] was a great frost and snow, so hurtful to birds and blossoms of trees and herbs, that most of them died.<sup>72</sup>

In 1246 in *England*, there was frost on Saint Mark’s Night and snow fatal to fruit and trees.<sup>72</sup>

In 1246 during the period between 16 July and 12 August, a drought engulfed *China*.<sup>153</sup>

In 1246 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1247 A.D.** In *England*, from 1247 to 1250, there were several inundations of the sea: great losses.<sup>47, 92</sup>

In 1247 in *England*, there were no tides for three months together.<sup>72</sup>

[In *England*], from St. Valentine's Day to St. Bennet's, not one fair day, then came the plague.<sup>72</sup>

In *England*, there was such rainy weather that scarce there was one day without rain until the Feast of Saint Bennet. Over the past few years, the great drought brought great and fatal epidemic diseases on all of *England*. But this year in September, the plague raged sore. Thunder and lightning killed several people and broke down trees. The sea overflowed its banks.<sup>72</sup>

In 1247 during the period between 7 April and 2 August, a drought engulfed *China*.<sup>153</sup>

In 1247 during the spring and summer, there was a drought in *China*.<sup>165</sup>

In 1247, flood struck Fukien (now Fujian province) on the southeast coast of *China* at Foochow.<sup>153</sup>

**1248 A.D.** In *Germany*, there was a famine.<sup>57, 72, 91</sup>

There was a great famine in *Germany*. There was an eclipse of the sun and an inundation of the sea.<sup>72</sup>

The winter of 1248 was cold in Winchester, *England*.<sup>173</sup>

The summer of 1248 [in *France*] was hot.<sup>173</sup>

On 1 November 1248, a storm with a huge high storm surge struck *Friesland*.<sup>172</sup>

In *England*, from 1247 to 1250, there were several inundations of the sea: great losses.<sup>47</sup>

**1249 A.D.** Last winter [in *England*] there was so pleasant, sweet and warm, that people fancied the season was changed. There was no frost or snow the whole winter. Folks threw off their cloaks and went in the thinnest lightest summer dress. But from the end of March to the middle of May came as great a cold. In June fell abundance of rain about Abington, *England* that the willow trees, mills and houses near the waterside were borne down and overturned. Corn in the fields was beaten down, and bread made from it when ripe was like bran. In July, Posson [today Poznań located in west-central *Poland*] was burnt by lightning and 300 men who came to the horse races were killed on the course. In Friffingen [Frisingen or Frisange is a commune and town in southern *Luxembourg*] was such a plague of mice, which ate up corn, hay and all greens. The year 1249 was a rainy year.<sup>72</sup>

In *England*, from 1247 to 1250, there were several inundations of the sea: great losses.<sup>47</sup>

In 1249, a sea flood struck with such voracity that it caused great damage [in *Germany*]. [This entry was listed under the category "storm surge", which might include an inundation of the sea.]<sup>172</sup>

**1250 A.D.** In *England*, the frost was very severe.<sup>47, 93</sup> Very great.<sup>72</sup>

In *England*, from 1247 to 1250, there were several inundations of the sea: great losses.<sup>47</sup>

[In *England*] on 1 October 1250, there was so great and mighty a hurricane both by sea and land that the likes of it had not been known nor heard of. The sea, contrary to its natural course flowed twice without ebbing, sending into the midland to a great distance a frightful hideous noise. In the night it seemed all in a flame; and the waves to fight one against another. Mariners could not save their vessels. Around

Winchelsea in east Sussex on the coast, 300 houses and some churches were carried down by the flood. Besides damage done to churches, steeples, mills, etc. In other parts, inestimable damage was done in Holland, the Lincolnshire Fens, and other low places. There was a most rigorous and long winter, very great snows. At the thaw was a prodigious flood, which did much harm.<sup>72</sup> [Holland may refer to an area of southeastern Lincolnshire, *England*. The Lincolnshire Fens are a vast, extremely flat plain between Cambridge and Lincoln in east *England*.]

On 1 October 1250, a most dreadful inundation of the sea did great damage to Holland beyond sea [*the Netherlands*], Holland in Lincolnshire [in *England*], and the marsh-ground in Flanders [now *Belgium*], and drowned Winchelsea [in *England*]. The inundation was accompanied by an unheard of tempest of wind.<sup>225</sup>

[In *England*], there was an irregular tide when the sea flowed twice without an ebb. It swelled, roared, slammed, etc.<sup>72</sup>

In 1250 during the period between 29 August and 27 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. Then during the period between 28 September and 26 October, floods struck Chekiang province at Chien-tê where the land tax was remitted.<sup>153</sup>

---

**1251 A.D.** In *England*, tides rise 6 feet higher than usual.<sup>47, 72, 92</sup>

In *Ireland* on the 29<sup>th</sup> of June, there was a great inundation of the River Shannon.<sup>47, 92</sup>

There was a famine in *England* in 1251.<sup>90, 212</sup>

In *England*, a storm caused the chimney of the chamber where the queen of King Henry III, and her children lay, to be blown down, and their whole apartments at Windsor Castle shaken, many oaks in the park were rent asunder, and turned up by the roots, accompanied with such thunder and lightning as had not been known in the memory of man.<sup>40, 41, 56</sup> [Windsor Castle is located in Berkshire in southern *England*. Norwich is located in Norfolk in eastern *England*.]

On Christmas Day at night there was great thunder and lightning in the diocese of Norwich, *England*. On the Feast of Saint Dunstan [19 May] the air being darkened from all corners, happened such a terrible tempest of thunder and lightning, as none living had ever seen. It began first at a great distance, but soon burst out in most terrible shocking claps, shaking and demolishing houses, rendering oaks, etc. At the same time, the sea on the coasts of *England* rose with higher tides than ordinary, by 6 feet. The summer was excessive and intolerably hot. So great mortality followed that in many parishes, a hundred died in a month. The harvest was very early and good.<sup>72</sup>

On December 25 at Norrage [Norwich, *England*], there was a tempest of thunder and lightning.<sup>72</sup>

In 1251 in the Ardèche region of southern *France*, a great flood of the Doux River destroys and carried away the superb masonry bridge called the "Great Bridge" between Tournon and Saint-Jean-de-Muzols. The bridge was not rebuilt until 1382.<sup>61</sup>

[In *Germany*], the summer of 1251 was exceptionally and intolerably hot. As a result there was so great a mortality that they buried in some parishes a hundred people in one month. There was a wine shortage in *France*.<sup>62</sup>

In the Novgorod Republic [now part of *Russia*], heavy rains came and took away all the ploughed fields and crops and hay; and the flood carried away the large bridge over the Volkhov River, and in the autumn a frost struck the crops, but a remnant was preserved.<sup>76</sup>

In 1251, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China* at Foochow; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Nan-hai; and Kiangsi (now Jiangxi province) in southern *China* at P'o-yang.<sup>153</sup>

In 1251, there was a drought in Fuhkien and Kwangtung provinces in *China*.<sup>165</sup>

In 1251, floods struck Kiangsi (now Jiangxi province) in southern *China* at P'o-yang; Chekiang (now Zhejiang province) on the east coast of *China*; and Kiangsu (now Jiangsu province) on the east coast of *China*. During the period between 19 August and 16 September, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Ch'ang-t'ing. During the period between 17 September and 16 October, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling.<sup>153</sup>

---

**1252 A.D.** In *England* in 1252, no rain from Whitsuntide [the week following Pentecost] to Autumn. No grass; hence arose a severe famine. There was great mortality of man and cattle; dearth of grain and scarcity of fruit.<sup>57, 91</sup>

[In *England*] in 1252, there was a long drought from Easter to the harvest. There was no rain or dew. This condition combined with the morning frosts and northerly winds did great harm both to the fruits and corn [grain]. As the season wore on and the heat and drought increased, the remainder of the fruit withered away so that only a tenth part [10%] was scarce left. The grass was so burnt up that one might rub it to powder between their hands. Cattle were ready to starve. The exceedingly hot nights brought a vermin of fleas and gnats that were very troublesome. Many diseases followed, such as agues, sweats, etc. At harvest time there was a great death of cattle, especially in the Fens, Norfolk and the south. The infection was such that dogs and ravens feeding on the carrion, swelled and died, so that people did not dare eat the dead cattle. Heifers and bullocks followed the milk cows and sucked on them as if they had been calves. All apple trees and pear trees after they yielded their first ripe fruits blossomed again as when they did in April. The death of cattle came about in this way. After so great a drought that lasted until the end of July, there came a period of rainfall which produced an abundance of greenery. The starved cattle feed so greedily on this new grass, that they quickly became bloated. This condition led to their death. At Michaelmas [29 September], the plague began in London and spread over the whole nation and reigned till August 1253.<sup>72</sup>

In 1252, there was a gale [in *England*]. There was a great tempest upon the sea, and fearful.<sup>212</sup>

In 1252, there was an inundation of the sea in *England*. "An inundation of the [River] Humber at Cottyngam [Cottingham] destroyed both man [around 35 people perished] and beast, especially at Owythfleet, Saltage Myrton, Tharlesthorpe, Sutton, and Drypool, where nearly all the buildings were lost. After which Owythfleet, Tharlesthorpe, and Saltage were gradually but totally swallowed up by the Humber."<sup>212</sup>

The summer of 1252 [in *France*] was very hot. "The eggs were cooked in the sand."<sup>173</sup>

In 1252 during the period between 8 July and 6 August, floods struck several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua, Taichow, Li-shui, Chien-tê, and Ch'ü.

— Kiangsi (now Jiangxi province) in southern *China* at Shang-jao.

— Fukien (now Fujian province) on the southeast coast of *China* at Chien-ou, Nan-p'ing and Shao-wu.

---

**1253 A.D.** [In *England*], a great drought occurred during the spring and summer. At harvest there fell such great rains, which caused deluging floods. The rivers broke down and overflowed their banks, drowning an abundance of land, destroying many people, many villages and houses in sundry places, such as Holderness and other low countries. After Michaelmas [29 September], returned such a drought that people could have no corn ground [who lived] within a day's journey of a [grain] mill. On Saint Lucius' Day, there fell a great snow. There was significant thunder during winter and a great hurricane.<sup>72</sup> [Holderness is located in Yorkshire, on the east coast of *England*.]

In *England*, there was the greatest drought all spring and summer. In harvest time there were great rains. Then in October and long afterwards drought reappeared.<sup>72</sup> [Another account places this event in 1252.<sup>47</sup>]

In 1253 during the period between 28 June and 26 July, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Kiukiang; Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou; Fukien (now Fujian province) on the southeast coast of *China* at Foochow; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Nan-hai. Then during the period between 27 July and 25 August, floods struck in Chekiang province at Wên-chou, Taichow and Li-shui and in Kiangsi province at Shang-jao and P'o-yang.<sup>153</sup>

In 1253 during the summer, there was a drought in Fuhkien, Hunan, Hupeh, Kiangsi, Kwangsi and Kwangtung provinces in *China*.<sup>165</sup>

---

**1254 A.D.** In *England*, the frost was severe between the 1<sup>st</sup> of January to the 14<sup>th</sup> of March.<sup>47, 93</sup> Severe cold.<sup>72</sup>

In *England*, there was a severe cold winter until the Feast of Saint Gregory in March. There was so great a murrain and death of sheep, that in many places above half had died. The winds came from the north for about three months continuous. They did great harm to the flowers and fruits. On 1 July, there fell such a storm of hail and rain as had not been known in *England*. The force of the rain and hailstones broke tiles covering the houses, and the boughs of the trees. This storm was incessant downpour for an hour. In *England* and *France*, there was a great plague on horses called "the evil of the tongue".<sup>72</sup>

In 1254 during the period between 13 October and 1 November, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Hsiao-shan and Chu-chi. As a result, the land tax was remitted.<sup>153</sup>

---

**1255 A.D.** [In *England*], the rivers were in vast floods from the severe and long rains; many high buildings were destroyed by the force of the tempest.<sup>72</sup>

In 1255 during the period between 6 June and 5 July, floods struck on the east coast of *China* in Chekiang (now Zhejiang province) at Hangchow, Chia-hsing and Hu-chou and in Kiangsu (now Jiangsu province) at Soochow, Sung-chiang and T'ai-ts'ang.<sup>153</sup>

---

**1256 A.D.** [In *England*] on 7 November and 17 December, there were terrible tempest of wind, rain, hail and thunder, which did great damage to water-mill wheels, arches of bridges, stacks of hay and corn, houses, children in cradles. These were borne down in torrents of water.<sup>72</sup>

In 1256, there was a great thunder and lightning storms that occurred often during the year [in *England*]. There were several great rains, thunder, lightning, winds and tempests.<sup>72</sup>

---

**1257 A.D. – 1259 A.D. England. Famine**

While backward weather seasons were contributing factors of the great famine of 1257-59 in *England* during Henry III's reign, much of the responsibility is laid at the door of the government itself. The whole kingdom had been drained of its coinage by the taxes, which the king had levied to pay German troops and to buy electoral votes for his brother, the Earl of Cornwall, who was a candidate for the imperial crown of the Holy Roman Empire.<sup>84</sup>

It was during this famine that *England* for the first time imported from Germany and Holland grain to alleviate the suffering of her poorer classes. The Earl of Cornwall himself sent sixty shiploads of food, which was sold for his account to the starving. In the following year, 1258, there was a bountiful harvest but destructive rains caused the heavy crops to rot in the fields, and even the grain, which was gathered, became mouldy.<sup>84</sup>

In *England* in July 1257, there were great floods from rains.<sup>47, 72, 92</sup>

In July 1257, there were excessive rains and floods. Low lands drowned. All the marshes were like a flooded desert. There was great scarcity of horses and cattle in *England*.<sup>72</sup>

In *England* in 1257, the inundations of autumn destroyed the grain and fruits and pestilence followed.<sup>57, 91</sup>

In 1258 in *England*, north winds in spring destroyed vegetation and food failed. The preceding harvest was small and innumerable multitudes of poor people died. Fifty shiploads of wheat, barley, and bread were procured from Germany; but citizens of London were forbidden by proclamation against dealing in same.<sup>91</sup> "A great dearth followed this wet year pest, for a quarter of [a ton of] wheat was sold for 15 to 20 shillings. But the worst was in the end; there could be none found for money when – though many poor people were constrained to eat barks of trees and horseflesh; but many starved for want of food – 20,000 in London."<sup>57</sup>

In 1258, all summer and harvest there were the greatest floods. Corn [grain] all rotten. Famine.<sup>72</sup>

The previous year's excessive and long rains caused a dearth in 1258 over all of *England* because of a scarcity of corn [grain]. A Quarter of wheat [1/4 ton], which previously sold for 2 shillings now sold for 24 shillings. Wheat had become very scarce. Great stores of grain were shipped in from *Alamain*. The crop also failed in *France* and *Normandy* as well as *England*. The King of *Alamain* procured 50 great ships laden from *Dutch lands* with wheat, barley, meal and bread, which greatly relieved the poor. But the Londoners bought it up, either to hoard it, or to sell it for a marked up price, or to send it off to other ports. Many lived on herbs and roots and not a few of the poor were starved to death. Because the winds were keeping north several months; the fruits, flowers and produce from the earth were so hindered that they served no purpose until June was nearly over. There was all summer and during the harvest excessive rains and inundations. Yet a double crop of corn [grain] and grass was on the ground but unfortunately, it was all rotten. Thus were the expectations of the farmers lost. Famine and death went hand-in-hand triumphantly together. People died so fast, they dug great pits in churchyards and filled them with heaps of dead carcasses. But towards the end of the harvest, the weather picked up and so much of this rotten crop was harvested very late. This did much good and lowered the price of corn [grain] half and half. On 1 December at night a terrible tempest of thunder, lightning, wind and rain. This year horseflesh was a delicate dish. There was great mortality.<sup>72</sup>

In 1258, terrible winter of thunder, lightning and rain.<sup>72</sup>

In 1259 in *England*, a great mortality reigned till summer then there was drought and plenty.<sup>72</sup>

**1257 A.D.** In the year 1257, the winter in Holland [now *the Netherlands*] was severe. The French chronicles recorded “In the Kingdom of *France*, the winter was too hard.”<sup>62</sup>

[In *Europe*] in the summer of 1257, it was excessively hot and the heat did not let up until Candlemas (2 February).<sup>62</sup>

In 1257 during the period between 16 May and 9 September, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui.<sup>153</sup>

In 1257 during the summer and autumn, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

*Also refer to the section 1257 A.D. – 1259 A.D. for information on the famine in England during that timeframe.*

---

**1258 A.D.** [In *Europe*], this winter the weather was so mild and pleasant, that it only froze on two days. In January, violets and flowering plants of strawberry, and apple trees were all white with blossoms. It was warm weather until the Feast of Candlemas [2 February].<sup>62</sup>

The large amount of rainfall in 1258 in *France* made the wheat in the fields and barns sprout. It also prevented the grapes from reaching full maturity.<sup>79</sup>

The summer of 1258 was humid [in *France*].<sup>173</sup>

In 1258 during the period between 6 April and 3 June, a drought of long duration engulfed *China*.<sup>153</sup>

In 1258 during the spring and summer, there was a drought of long duration in *China*.<sup>165</sup>

On 1 December 1258, there was a terrible tempest of thunder, lightning, wind and rain [in *England*].<sup>72</sup>

*Also refer to the section 1257 A.D. – 1259 A.D. for information on the famine in England during that timeframe.*

---

**1259 A.D.** In *England*, there was a drought in summer, and great plenty.<sup>72</sup>

In *England*, a great mortality reigned till summer then there was drought and plenty. A hurricane struck on 28 December.<sup>72</sup>

In 1259, floods struck Anhwei (now Anhui province) in eastern *China* at Ch’u and Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê. During the period between 24 May and 21 June, floods struck in Chekiang province at Chin-hua. Houses were flooded.<sup>153</sup>

*Also refer to the section 1257 A.D. – 1259 A.D. for information on the famine in England during that timeframe.*

---

**1260 A.D.** In *England*, there was “no rain all the year to August; then moderate showers only; oats and barley lost.”<sup>47, 72</sup>

In *England*, there was drought during the summer that was so long, great and severe; that oats and barley sown in due time came not up till near harvest. Then moderate rains fell, they sprang up, grew and shot up. But now it was Michaelmas [29 September] and without any sun to ripen them, they were cut down and dried for cattle fodder. There was a shocking inundation on the Rhine River [in *Germany*], fatal to many people and cattle.<sup>72</sup>

In *Germany*, there were great floods on the Rhine River.<sup>47, 72, 92</sup>

In 1260, a drought engulfed Shansi (now Shanxi province) in northern *China* at Chin-ch'êng and Ch'ang-chih. During the period between 11 June and 9 July, a drought engulfed *China*.<sup>153</sup>

In 1260, there was a drought in Shansi province in *China*.<sup>165</sup>

**1261 A.D.** It was a sore rainy year in *England*. But a great plenty of corn and wine abroad.<sup>72</sup>

In 1261, there was a great plenty of all grains and grapes. Well got.<sup>72</sup>

[In *England*] in harvest rains began.<sup>72</sup>

In 1261, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Taichow, Shao-hsing, Chin-hua, Ch'ü, Chien-tê, Wên-chou and Li-shui. During the period between 29 June and 28 July, floods struck Chekiang province at Hangchow and An-chi.<sup>153</sup>

**1262 A.D.** In *Ireland*, there was a great destruction of people from plague and hunger.<sup>57, 91</sup>

There was a great scarcity and famine in *Scotland* and *England* from last year's rainy harvest.<sup>72</sup>

[In *England*] it was rainy.<sup>72</sup>

The summer of 1262 [in *France*] was hot.<sup>173</sup>

In 1262 during the period between 20 February and 21 March, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, An-chi and Chia-hsing. Many people drowned. Then during the period between 20 May and 17 June, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Pin and Hui-min.<sup>153</sup>

In 1262 during the summer, there was a drought in *China*.<sup>165</sup>

**1263 A.D.** In *England*, "on St. Nicholas we began a month's hard frost."<sup>47, 72, 93</sup>

In *England*, on St. Nicholas' Eve began a very severe frost, which lasted over a month. Horses and people went over the River Thames on ice.<sup>72</sup>

On 1 December and 13 December, there were terrible thunder and lightning storms [in *England*].<sup>72</sup>

The summer of 1263 produced a drought in Holland [now *the Netherlands*].<sup>173</sup>

In 1263 during the period between 7 July and 5 August, a drought engulfed *China*. During the period between 4 September and 3 October, a drought engulfed Honan (now Henan province) in central *China* at An-yang and Hopei (now Hebei province) in northern *China* at Yung-nien, Tz'ü, and Chêng-ting.<sup>153</sup>

In 1263 during the summer and autumn, there was a drought in Chihli and Honan provinces in *China*.<sup>165</sup>

**1264 A.D.** [In *England* in 1264, there were shortages that were more related to pirates than to the weather.] In *England* on 16 June there were terrible thunder and lightning, and another on the 8<sup>th</sup> of the Ides of September. There was a great plague of cattle and sheep. Pirates continually coasting all the shores of *England*; seized all shipping coming in or going out and murdering whole crews. Merchants were robbed and spoiled of their goods and many of them were necessitated to beg for their bread. So

great was the scarcity of everything, that wine rose from 40*s.* to 10 Merk or 7*l.* Wax rose to 8 or 9 Merks. Pepper from 6*d.* rose to 3*s.* Salt, iron, steel, cloth and all merchant goods were drained away and lost.<sup>72</sup>

On 16 June and in September, there were terrible thunder and lightning storms [in *England*].<sup>72</sup>

A severe famine struck *Egypt* in 1264. But much of the hardship was averted by the strong leadership of Bibars. Bibars was a native of Kipchak [Gypjak], located between the Ural Mountains and the Caspian Sea. Years before he was sold into slavery and fetched very little on the auction block because of a cataract in one of his eyes. Later he founded the Mameluke Empire. He met the famine promptly and vigorously by regulating the sale of grain wisely and compelling his officers and emirs to support the destitute for three months.<sup>84</sup>

In 1264, floods struck two provinces of *China*:<sup>153</sup>

— Hopei (now Hebei province) in northern *China* at Chêng-ting, Peiping, Yung-nien, Tz'ü, Hsing-t'ai, Ta-ming, and Ho-chien.

— Shantung (now Shandong province) on the east coast of *China* at Ho-tsê, P'u, T'ai-an, Kao-t'ang, Pin, Chi-ning, Liao-ch'êng, Tê, Tsinan, Hui-min, Tz'ü-ch'uan, Yeh, and Tung-p'ing.

In 1264 during the period between 28 April and 26 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing and Shansi (now Shanxi province) in northern *China* at Taiyuan and Lin-fên. During the period between 26 June and 24 July, a drought engulfed *China*.<sup>153</sup>

In 1264 during the summer, there was a drought in Shansi and Shantung provinces in *China*.<sup>165</sup>

**1265 A.D.** In 1265, a drought engulfed many regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Loyang.

— Jehol (formally Rehe province) at Lin-hsi. Rehe is located north of the Great Wall, west of *Manchuria*, and east of *Mongolia*. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*.

— Shantung (now Shandong province) on the east coast of *China* at I-tu and Tung-p'ing.

— Hopei (now Hebei province) in northern *China* at Chêng-ting, Hsing-t'ai, and Ho-chien.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and P'ei. [P'ei is located at longitude 118.03° East and latitude 34.30° North].

— Anhwei (now Anhui province) in eastern *China* at Su.

In 1265 during the summer, there was a drought in Chihli, Kiangsu, Shansi and Shantung provinces in *China*.<sup>165</sup>

**Winter of 1265 / 1266 A.D.** On the night after St. Marcellus feast [one of which was December 29<sup>th</sup>], a storm struck *Friesland* and flooded far and wide and did great damage. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

**1266 A.D.** In *Scotland*, there were great inundations of the River Tay and the River Forth from the sea.<sup>47, 92</sup> These were most fatal.<sup>72</sup>

Swarms of palmer-worms [caterpillars] ate up all fruits, herbs, grass and greens in *Scotland*. There were very great floods from the sea and the River Tay and the River Forth, which destroyed many villages, people and cattle.<sup>72</sup>

The summer of 1266 [in *France*] was hot.<sup>173</sup>

In 1266, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping and Shensi (now Shaanxi province) in central *China* at Fêng-hsiang. During the period 3-31 August, a drought engulfed *China*.<sup>153</sup>

In 1266, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**1267 A.D.** On 14 February 1267, a flood took *Friesland*. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

The summer of 1267 [in *France*] was hot.<sup>173</sup>

In 1267, floods struck Shansi (now Shanxi province) in northern *China* at Ying and a drought engulfed Hopei (now Hebei province) in northern *China* at Shu-lu. During the period between 8 August and 19 September, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China* at Shao-wu. As a result the land tax was remitted.<sup>153</sup>

In 1267 during the autumn, there was a great drought in Chihli and Fuhkien provinces in *China*. As a result, the land tax was remitted.<sup>165</sup>

---

**1268 A.D.** In *England* in April for fifteen days, there was a very great tempest of thunder, rain and floods. Another occurred on the day before the Ides of January. On 19 February, there was a hurricane. There was a famine in Vienna, *Austria*. There was barrenness and scarcity in *Sicily* and the Apulia region of southern *Italy*.<sup>72</sup>

In 1268, there was a terrible famine in *Sicily, Italy* and Vienna, *Austria*.<sup>57, 72, 91</sup>

The summer of 1268 was hot. In Colmar in northeastern *France*, the temperatures were very high. For 12 weeks beginning on 14 May there was no rain. There was so much fruit on the trees that the branches broke.<sup>173</sup>

In 1268, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping and Chêng-ting.<sup>153</sup>

In 1268, there was a drought in Chihli province in *China*.<sup>165</sup>

In 1268 during the period between 9 September and 7 October, floods struck Anhwei (now Anhui province) in eastern *China* at Po. During the period between 8 October and 5 November, floods struck Hopei (now Hebei province) in northern *China* at Peiping where the land tax was remitted.<sup>153</sup>

---

**Winter of 1268 / 1269 A.D.** A severe winter struck *Europe* beginning on 30 November 1268. The winter lasted until 25 May 1269. The *Baltic Sea* froze.<sup>28</sup>

In the year 1269, the winter was severe in *Northern Europe*.<sup>62</sup>

During the winter of 1269 the rivers in northern *France* froze.<sup>79</sup>

In 1269, the Kattegat was frozen between *Sweden* and Jutland, *Denmark*.<sup>62</sup>

During the winter of 1269, the frost was so intense in *Scotland* that the ground bound up.<sup>212</sup>

In *England*, the frost lasted from 30<sup>th</sup> of November to 2<sup>nd</sup> of February.<sup>47, 93</sup> Hardest frost.<sup>72</sup>

In *England* in February of 1269, there were great floods from the winter thaw.<sup>47, 72, 92</sup>

In *England*, there was a continuous frost from the Feast of Saint Andrew [30 November] to Candlemas [2 February]. The River Thames was frozen over. Horses, draughts and people passed over [the river on the ice]. Merchant goods came to London by land. Ships could not come up the river. On 6 February, there fell such a profound rain, as raised the greatest flood in the memory of man. The River Thames filled the cellars and vaults in London with water, to a great loss of merchandise.<sup>72</sup>

---

**1269 A.D.** In 1269 during the period between 4 January and 2 February, floods struck several regions of *China*. As a result the land tax was remitted. The regions affected included:

- Hopei (now Hebei province) in northern *China* at Chêng-ting, Peiping, Hsing-t'ai, and Ho-chien.
- Shantung (now Shandong province) on the east coast of *China* at Kao-t'ang, Chi-ning, Tzū-ch'uan, Yeh, Tsinan, I-tu, Ên, and Tung-p'ing.
- Honan (now Henan province) in central *China* at Kaifeng.
- Chahar province (now eastern *Inner Mongolia*) at Lin-hsi.

During the period between 3 February and 4 March, floods struck Shantung province at I-tu, Tzū-ch'uan and Yeh.

Then during the period between 6 May and 8 November, a drought engulfed Hopei province at Chêng-ting and Yung-nien and also Suiyuan province (now part of *Inner Mongolia*) at Tokto, the Mongolian Urad Banner and the Mongolian Mowmingan Banner.

Then during the period between 25 December 1269 and 22 January 1270, floods struck in Hopei province at Hsien, Jên-ch'iu, Ch'ing and Ts'ang; Shansi (now Shanxi province) in northern *China* at Hun-yüan; and Suiyuan province at Tokto.<sup>153</sup>

In 1269 during the summer, there was a drought in Chihli province in *China*. The land tax was remitted.<sup>165</sup>

[In *England*] it was rainy the whole summer.<sup>72</sup>

---

**1270 A.D.** In 1270 it rained every day for so hard during harvest time that the grain rotted in the fields [in *Germany*]. As a result a famine emerged. The conditions lasted 5 years.<sup>172</sup>

The summer of 1270 was very poor and very wet in *Austria*, *Switzerland*, Bohemia [now western *Czech Republic*], *Netherlands*, *Germany* (Lower Saxony), and *France* (Carcassonne). This produced poor harvests.<sup>173</sup>

In 1270, a drought engulfed several regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. This drought was severe.
- During the period between 23 March and 21 April, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at I-tu, P'êng-lai and Yeh. As a result, the land tax was remitted.
- During the period between 20 July and 17 August, a drought engulfed Shantung province.
- During the period between 17 October and 14 November, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng and Loyang.

In 1270 during the period between 17 September and 16 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at An-chi. During the period between 14 December 1270 and 12 January 1271, floods struck Chekiang province at Chia-hsing and Kiangsu (now Jiangsu province) on the east coast of *China* at Sung-chiang.<sup>153</sup>

In 1270 during the spring and summer, there was a great drought in Anhwei, Honan, Kiangsi, Kiangsu

and Shantung provinces in *China*. As a result, the land tax was remitted in Kiangsu, Honan and Shantung.<sup>165</sup>

---

**1271 A.D.** In *England*, on the 4<sup>th</sup> of the Nones of July, there was a terrible wind and rain rotting and breaking trees, overthrowing houses etc. A great famine over all *England* followed. On 14 October, there was a great inundation of rain at Canterbury with thunder, lightning and tempests, as their forefathers never saw nor heard. During the whole day and night, thunder never ceased, but roared continually, like one single clap. A very great flood followed, which overthrew trees, vines etc. Men could neither go nor ride. Many were in eminent danger from the force of the water in the streets and houses of the city. The flood carried down many people and buildings.<sup>72</sup>

In *England* in 1271, there was a violent tempest and inundation; followed by a severe famine in the entire district of Canterbury.<sup>57, 91</sup>

In October, there was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1271 in *England*, there was a famine from rotting rains.<sup>72</sup>

In 1271, there was pestilence and famine in the whole of *Ireland*.<sup>57, 91</sup>

In 1271 during the period between 11 February and 12 March, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing and Chu-chi. The fields were damaged. Then during the period between 9 June and 8 July, flood struck Chekiang province at Chu-chi. The houses were damaged by the floodwaters. Then during the period between 7 August and 5 September, floods struck Szechwan (now Sichuan province) in southwest *China* at Yüeh-shan and Chungking. The city walls were damaged by the floodwaters.<sup>153</sup>

In 1271 during the period between 11 May and 8 June, a drought engulfed Chahar province (now eastern *Inner Mongolia*) at Yü and Shansi (now Shanxi province) in northern *China* at Kuang-ling.<sup>153</sup>

In 1271 during the summer, there was a drought in Chihli province in *China*.<sup>165</sup>

---

**Winter of 1271 / 1272 A.D.** The Friday, which preceded Christmas, brought great cold, few people remembered experiencing such extreme cold [in *Western Europe*].<sup>62</sup>

---

**1272 A.D.** In *England*, from the Feast of Saint Egidius [23 April] to the Feast of Saint Cicilius [Saint Cecilia – 22 November] were terrible rains, and great floods. There was the most dreadful tempest of hurricanes, hail and fire [caused by lightning] in *Scotland* that is on record; the whole kingdom was almost ruined by them.<sup>72</sup>

The winter of 1272 was very wet and there were floods [in *France*].<sup>173</sup>

The summer of 1272 [in *France*] was hot.<sup>173</sup>

In 1272 during the period between 27 June and 26 July, a drought engulfed *Korea*.<sup>153</sup>

In 1272 during the summer, there was a famine in *Corea* [*Korea*].<sup>165</sup>

In 1272 during the period between 25 August and 23 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing, Yü-yao, Shang-yü, Chu-chi, Hsiao-shan and Hangchow. The land tax was remitted at Hangchow. Then during the period between 24 September and

23 October, floods struck several regions of *China*. Houses fields and crops were damaged by the floodwaters. The regions affected included:<sup>153</sup>

- Honan (now Henan province) in central *China* at Nan-yang, Ch'in-yang, Mêng and Chi.
- Hopei (now Hebei province) in northern *China* at Peiping, Yung-nien and Tz'ü.
- Shantung (now Shandong province) on the east coast of *China* at T'ai-an.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Nan-t'ung.

**1273 A.D.** In *England*, there were terrible rains and floods all March, then prodigious winds both day and night, doing inexpressible damage. In March, there was also a hard and long frost. In Tuscany, *Italy*, this was a year of great plenty (14 eggs sold for 1d., a hen for 2d., 8 herrings for 1d.)<sup>72</sup>

In 1273, floods struck Honan (now Henan province) in central *China* at Loyang. As a result, the land tax was remitted. During the period between 6 May and 8 November, a drought engulfed *China*.<sup>153</sup>

In 1273 during the summer and autumn, there was a drought in *China*.<sup>165</sup>

**1274 A.D.** In 1274 during the period between 9 April and 7 May, floods struck Anhwei (now Anhui province) in eastern *China* at Ho-fei. During the period between 8 May and 5 June, floods caused by heavy and protracted rains struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. Innumerable people drowned. Then during the period between 2 September and 1 October, floods struck Chekiang province at An-chi, Yü-hang, Hangchow and Wu-k'ang.<sup>153</sup>

In 1274, a severe drought engulfed Anhwei (now Anhui province) in eastern *China* at Ho-fei; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Wu-hua; and Fukien (now Fujian province) on the southeast coast of *China* at Fu-ch'ing.<sup>153</sup>

In 1274, there was a great drought in Anhwei province in *China*.<sup>165</sup>

[In *England*] there was thunder lightning and rains.<sup>72</sup>

**1275 A.D.** In 1275, a drought engulfed Honan (now Henan province) in central *China* at Chi and Shansi (now Shanxi province) in northern *China* at Taiyuan.<sup>153</sup>

In 1275, there was a drought in *China* along with great floods in Chihli, Honan and Shansi provinces.<sup>165</sup>

**Winter of 1275 / 1276 A.D.** The winter of 1275-76 in *Italy* was very long and harsh. Heavy snow fell and covered the earth near Parma in northern *Italy* on 29 November and the snow cover remained until early April. You could sow this year no vegetables and cereal grain that were planted almost entirely failed. The herds in the Diocese of Parma died out almost completely.<sup>62</sup>

During the winter of 1276 in Parma in northern *Italy*, there was snow on the ground from December to April.<sup>173</sup>

**1276 A.D.** In *England*, there were great floods from the sea and from the rains.<sup>47, 72, 92</sup>

In *England* from long and excessive rains came desolating inundations in many places, so that corn [grains] and grass came not to maturity. There was a great inundation from the sea at Venice, *Italy* followed by a great earthquake [tsunami].<sup>72</sup>

In 1276 and 1277, there was a drought in *England*. It was so hot and dry in the summer that scarcely any fodder [dried hay or feed for cattle] was available.<sup>212</sup>

In Bagdad, *Iraq*, the city was inundated after the appearance of red flame.<sup>47, 92</sup>

In 1276, floods struck Shantung (now Shandong province) on the east coast of *China* at Chü-yeh; *Korea*; and Liaoning province located in the southern part of *China*'s northeast at Mukden. As a result, the land tax was remitted. During the same year, a drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên.<sup>153</sup>

In 1276, there was a drought in Shansi province in *China*. The land tax was remitted.<sup>165</sup>

**1277 A.D.** In Holland [now *the Netherlands*], there were great inundations at Friesland, forming the Dollert Sea.<sup>47</sup> [The Zuyder-zee is a great gulf, which penetrates far inland between North Holland, and Friesland, Overyssel and Gelderland on the east. The southern portion was originally a large lake, the barrier between which and the sea was broken through by an inundation in 1225. It is much encumbered with sand banks, and subject to violent storms. The Dollert, a similar inlet between Groningen and Hanover, was formed likewise by an irruption of the sea in 1277.]

In 1277, there was an inundation at *Friesland*, since named the Dollet [Dollert] Sea.<sup>43</sup>

[In *Western Europe*] the summer of 1277 was hot. There was an exceptional drought. The largest rivers, the fountains, the sources of water were completely dry. As a consequence, there was a large loss of life. The lightning struck during the months of August and September, in many places.<sup>62</sup>

In 1276 and 1277, there was a drought in *England*. It was so hot and dry in the summer that scarcely any fodder [dried hay or feed for cattle] was available.<sup>212</sup>

The summer of 1277 [in *France*] was hot.<sup>173</sup>

In 1277, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 3 June and 2 July, floods struck Honan (now Henan province) in central *China* at Loyang and Shantung (now Shandong province) on the east coast of *China*. [There appears to be a conflict here because another account reads: In 1277 during the period between 3 June and 5 July, a drought engulfed Honan (now Henan province) in central *China* at Loyang and Shantung (now Shandong province) on the east coast of *China*.]

— During the period 3-31 July, floods struck Shantung province at Chü-yeh, Ho-tsê, Ting-t'ao, P'u, and T'ang-i. Crops were damaged.

— During the period 3-31 July, floods struck Hopei (now Hebei province) in northern *China* at Wu-ch'ing. Crops were damaged.

— During the period between 26 December 1277 and 24 January 1278, floods struck Shantung province at Kuan and Hopei province at Yung-nien. As a result, the land tax was remitted.

In 1277 during the summer, there was a drought in Honan and Shantung provinces in *China*.<sup>165</sup>

**1278 A.D.** In *Italy*, there was a great overflowing of the Tiber River.<sup>47, 72, 92</sup>

There was a great inundation of the Tiber River [in *Italy*], four feet above the altar of Maria Rotunda [the Pantheon in Rome has been used as a Roman Catholic church dedicated to "St. Mary and the Martyrs" but informally known as "Santa Maria Rotonda."].<sup>72</sup>

In 1278, there was a drought in *England* and *France*.<sup>212</sup>

In 1278, floods struck Honan (now Henan province) in central *China* at An-yang and Loyang and in Chahar province (now eastern *Inner Mongolia*) at Cho-lu. The floods led to a famine.<sup>153</sup>

In 1278 during the period between 24 April and 22 May, a drought engulfed *China*.<sup>153</sup>

In 1278 during the summer, there was a drought in Honan and Shansi provinces in *China*.<sup>165</sup>

**1279 A.D.** In *England* in May, there was a terrible thunderstorm. Trees were plucked up by the roots in many places by a tempest, and removed to others, men were wrapped up in the air, lakes were dried [tornado].<sup>72</sup>

In the year 1279, wares became very inexpensive in *Germany*. A bushel [of grain] cost 22 Pf [Pfennig – an old German coin, penny]. A hen cost 2 Pf. A number of eggs cost 1 Pf. Eight pieces of herrings cost 1 Pf.<sup>172</sup>

In 1279, floods struck Hopei (now Hebei province) in northern *China* at Pao-ting. During the period between 9 August and 7 September, floods struck Hopei province at Chao. As a result the land tax was remitted. [There appears to be a conflict here because another account reads: In 1279, a drought engulfed Hopei province at Pao-ting. During the period between 9 August and 7 September, a drought engulfed Hopei province at Chao.]<sup>153</sup>

In 1279 during the autumn, there was a drought in Chihli province in *China*.<sup>165</sup>

**1280 A.D.** In *England*, there were great floods all the summer; especially on 2 August.<sup>47, 72, 92</sup>

In *England* on 2 August, there was a prodigious inundation, which carried off many people, cattle, mills, bridges, houses, trees, hay, grass, etc. On 11 November, there was a terrible thunderstorm, which broke down houses and trees. So great a flood was there in the Sequan that it broke down the bridges at Lyons in east-central *France*.<sup>72</sup>

In 1280, more than 300 houses overwhelmed at Winchelsea in *England* by an inundation of the sea.<sup>90, 212</sup>

At Winchelsea, *England*, above 300 houses were overthrown by the sea.<sup>40, 41, 43</sup>

During the famine in *Bohemia* [now western *Czech Republic*] in 1280-82, individuals resorted to cannibalism.<sup>155</sup>

In 1280 during the period between 2 February and 2 March, floods struck Hopei (now Hebei province) in northern *China* at Tz'ü and Lu-lung. Then during the period between 27 August and 25 September, floods struck several regions of *China* including:<sup>153</sup>

- Shantung (now Shandong province) on the east coast of *China* at P'u, Chü-yeh and Tung-p'ing.
- Hopei province at Tz'ü, Peiping and Pao-ting.
- Honan (now Henan province) in central *China* at Ch'in-yang and Mêng.
- Chahar province (now eastern *Inner Mongolia*) at Lin-hsi.

In 1280 during the period between 27 August and 25 September, a drought engulfed several regions of *China* including:<sup>153</sup>

- Hopei (now Hebei province) in northern *China* at Peiping and Pao-ting
- Honan (now Henan province) in central *China* at Ch'in-yang, Mêng, Kaifeng and Hsü-ch'ang.
- Shansi (now Shanxi province) in northern *China* at Lin-fên.

— Jehol (formally Rehe province) at Lin-hsi. Rehe is located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*.

In 1280 during the autumn, there was a drought in Chihli and Shansi provinces in *China*.<sup>165</sup>

**Winter of 1280 / 1281 A.D.** In *England* on 22 January began a very severe 50-day frost.<sup>72</sup>

In *England* in 1280, the frost began on St. Vincent's Day (27 September) and lasted fifty days and was severe.<sup>47, 72, 93</sup>

**1281 A.D.** There was a grievous famine in *Poland*, great multitudes moved to *Russia* and *Hungary*.<sup>72</sup>

There was a famine in *Poland*.<sup>57, 72, 91</sup>

During the famine in *Bohemia* [now western *Czech Republic*] in 1280-82, individuals resorted to cannibalism.<sup>155</sup>

In 1281 in *Bavaria*, there was a snowfall in mid-June. Crop failure caused great famines.<sup>172</sup>

In 1281, there were very great floods in Paris, *France*.<sup>173</sup>

In 1281, there was a drought in *England*. The drought was so great that men passed over the River Thames dry-shod [without wetting the feet] between Westminster and Lambeth, and over the River Medway between Stroud and Rochester.<sup>212</sup>

In 1281, a powerful cyclone struck Hakata Bay, *Japan* causing 65,000 deaths.<sup>98</sup> [Hakata Bay is located in northwestern Fukuoka city, on the island of Kyūshū, *Japan*]

In 1281 during the period between 20 February and 20 March, floods struck Liaoning province located in the southern part of *China's* northeast at Liao-yang, Hei-shan and Ka-p'ing.<sup>153</sup>

In 1281, a drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên and Jehol (formally Rehe province) at P'ing-ch'üan. Rehe is located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*. During the period between 20 February and 20 March, a drought engulfed Liaoning province located in the southern part of *China's* northeast at Pei-chên and Jehol province at Lin-hsi and Karach'in (Right Wing). As a result, the land tax was remitted.<sup>153</sup>

In 1281 during the spring, there was a drought in Chihli and Shansi provinces in *China*. The land tax was remitted.<sup>165</sup>

In 1281, there was a widespread famine in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1281 / 1282 A.D.** In the winter, the houses in *Austria* were completely buried in snow, and many people perished due to the cold and hunger.<sup>1</sup>

In 1281, the snow fell in great abundance in *Austria* and many houses were entirely buried in the open countryside.<sup>58, 80</sup>

A great snowstorm struck *Austria* in December 1281. *Europe* experienced a cold winter. London Bridge in *England* wrecked by ice. The spring thaw flooded Paris, *France*.<sup>28</sup>

During this winter of 1281-82, the heavy snowfall in *Austria* was in such abundance that a large number of houses in the country were completely buried. In Bohemia [now western *Czech Republic*], the freeze lasted until 25 March and then the thaw and melting of the snow produced a terrible inundation and great need. The melting snow and ice in the Seine River in Paris, *France* also produced a very severe inundation.<sup>62</sup>

In *England* from Christmas [25 December] to Lady Day [perhaps the Annunciation on 25 March], such a frost and snow as none then living had seen the like. Fish in ponds and wildfowl died for lack of food. The thaw carried down many bridges.<sup>72</sup>

In 1282 there was a most terrible frost, the like of which had never been known. The pressure of ice heaped up against [London] Bridge in *England*, and unable to pass through from the narrowness of the arches of the bridge, carried away five arches of it, and rendered it, of course, impassable for the time until they were rebuilt.<sup>29</sup>

During the winter of 1281-82, there was great snowstorm at Christmas in *England*. The River Thames was frozen over. The London Bridge was partially destroyed; five arches were carried away. Rochester and other bridges were wholly destroyed.<sup>212</sup>

---

**1282 A.D.** During the famine in *Bohemia* [now western *Czech Republic*] in 1280-82, individuals resorted to cannibalism.<sup>155</sup>

In 1282, there was a great flood and gale at Boston, *England*. “The Monasterie [Monastery] of Spalding and many churches destroyed. At Yarmouth [Great Yarmouth], Donwich [the coastal town of Dunwich], and Ipswich [Ipswich], an intolerable multitude of men, women, and children overwhelmed by the water [and drowned], especially at Bostone [Boston].<sup>212</sup>

On 29 December 1282, there was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

The summer of 1282 [in *France*] was hot.<sup>173</sup>

In 1282 during the period between 11 January and 9 February, floods struck Hopei (now Hebei province) in northern *China* at Pao-ting. As a result, the land tax was remitted. Then during the period between 3 September and 2 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China*, Anhwei (now Anhui province) in eastern *China*, and Kiangsi (now Jiangxi province) in southern *China*. These later floods led to famine.<sup>153</sup>

In 1282, a drought engulfed Shantung (now Shandong province) on the east coast of *China*, Hopei (now Hebei province) in northern *China*, and an unknown location called Yen-nan [possibly located 230 kilometers north of Xian]. During the period between 3 September and 2 October, a drought engulfed Hopei province at Chêng-ting.<sup>153</sup>

In 1282 during the autumn, there was a drought in Chihli and Shantung provinces in *China*.<sup>165</sup>

---

**1283 A.D.** In 1283, floods struck several regions of *China* including:<sup>153</sup>  
— Honan (now Henan province) in central *China* at Nan-yang, Pi-yüan, Têng, Fang-ch'êng, Sung and Chi. Crops were damaged.

— During the period between 26 June and 25 July, floods struck Shansi (now Shanxi province) in northern *China* at Taiyuan and Honan province at Ch'in-yang, Mêng and Loyang. Fields were damaged.  
 — During the period between 22 October and 20 November, floods struck Hopei (now Hebei province) in northern *China* at Cho.

In 1283, there was a drought in Chihli and Shantung provinces in *China*.<sup>165</sup>

---

**1284 A.D.** In *England* on 26 December, there was great thunder and lightning. On 9 April about sunrise, the sky darkened as though it was night, suddenly followed a terrible tempest, first of hail and rain, then much snow covering all the earth to a considerable depth, lastly there was fearful thunder and lightning. This was the warmest winter known.<sup>72</sup>

The summer of 1284 [in *France*] was so hot that it felt like being in a boiler.<sup>173</sup>

In northern *France*, fierce winds tore up the walnut [trees] and destroyed [church] steeples on November 24, 1284.<sup>79</sup>

In 1284 during the period between 14 July and 12 August, floods struck in Hopei (now Hebei province) in northern *China* at Pao-ting and Ho-chien, and in Shantung (now Shandong province) on the east coast of *China* at Pin and Hui-min.<sup>153</sup>

---

**1285 A.D.** In *England*, there was a great storm, “with violent lightning.”<sup>57</sup>

In 1285, there was a great thunderstorm in London, *England*.<sup>212</sup>

In *England*, as King Edward I and his queen were talking together in their bedchamber, a flash of lightning struck in at the window, passed by them, killed two of their servants who waited upon them, but did their majesties no hurt.<sup>40, 41, 43, 56, 90</sup>

In *England*, there was a sudden great darkness, and then such drought and heat as killed most grain.<sup>47, 72</sup>

In *England*, there was a sudden great darkness of the sky followed by a most parching drought and heat. Almost all greens died. Then came great and long rains; hence began a famine in *England*, which continued twenty-three years.<sup>72</sup>

The summer of 1285 [in *France*] was hot.<sup>173</sup>

The winter was very mild and rainy in *Italy*.<sup>62</sup>

In 1285, a drought engulfed several regions of *China*. As a result of the hardship, the land tax was remitted. These regions included:<sup>153</sup>

- Honan (now Henan province) in central *China* at Ch'in-yang, Mêng, Kaifeng, Lin-ju, An-yang and Chi.
- Shantung (now Shandong province) on the east coast of *China* at P'u and Liao-ch'êng.
- Hopei (now Hebei province) in northern *China* at Yung-nien.
- Shansi (now Shanxi province) in northern *China* at Lin-fên.

In 1285 during the summer, there was a drought in Chihli, Honan, Shansi and Shantung provinces in *China*.<sup>165</sup>

In 1285, floods struck several regions of *China* including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu and Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo. Houses were damaged by the floodwaters and 795 families were flooded.

— During the period between 8 August and 8 November, floods struck Honan (now Henan province) in central *China* at Kaifeng and An-yang. Fields were damaged.

— During the period between 8 August and 8 November, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming, Ho-chien and Hsing-t'ai. Fields were damaged.

— During the period between 8 August and 8 November, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan. Fields were damaged.

**1286 A.D.** In 1286 in *England*, during the night of the Feast of Saint Margaret [Saint Margaret of Scotland – 10 June] fell a great tempest of rain, thunder, and lightning, so great that it drowned all the sown corn [grains]. All grains had been cheap. Wheat was 18 shillings a Quarter [quarter ton], but now began a dearth, which continued more or less for 40 years. On 6 July, a dismal tempest of hail, thunder and lightning at Magdeburg in central *Germany*.<sup>72</sup>

[In *England*] the rains which came too late in 1285 lasted too long in 1286, hence a dearth.<sup>72</sup>

There was a 23-year long famine in *England* that began in 1286.<sup>91</sup>

Beginning in 1286, there was a famine in *England* caused by excessive rains that lasted 23 years, or 40 by times.<sup>72</sup>

In 1286, floods struck many regions of *China* including:<sup>153</sup>

— Shensi (now Shaanxi province) in central *China* at Sian, Hua and Hua-yin.

— Hopei (now Hebei province) in northern *China* at Peiping, Cho, Mi-yün, Shun-i, T'ung and Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]

— Honan (now Henan province) in central *China* at Kaifeng, Nan-yang and Shang-ch'iu.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. Fields were damaged.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow. Fields were damaged.

— During the period between 26 March and 24 April, floods struck Hopei province at Hsiung, Pa and Pao-ting.

— During the period between 19 October and 16 November, floods struck Honan province at Kaifeng, Ch'i, T'ai-k'ang, Hsü-ch'ang, Yen-ling, Fu-kou, Yü-shih, Yen-ching, Chung-mou and Yüan-wu.

— During the period between 19 October and 16 November, floods struck Hopei province at T'ung.

— During the period between 19 October and 16 November, floods struck Chekiang province at Chien-tê.

In 1286 during the period between 25 May and 22 June, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng and Lin-ju, and Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1286 during the summer, there was a drought in Chihli, Honan and Shansi provinces in *China*. The land tax was remitted.<sup>165</sup>

**1287 A.D.** In Winchelsea, *England* in 1287, there was a great inundation of the sea; more than 300 houses swept away. "Charter granted for erection of new port."<sup>47, 92</sup>

In *England*, the winter was excessively rainy producing great floods. 1<sup>st</sup> June. Sea broke in from the Humber to Yarmouth, forced by the winds. In December on Suffolk and Norfolk coasts. Plague all the year.<sup>47, 92</sup> [The Humber is a large tidal estuary on the east coast of northern *England*. Yarmouth or Great Yarmouth is a coastal town in Norfolk in eastern *England*.]

In *Selandria*, fifteen islands submerged by the sea, 15,000 people drowned.<sup>47, 92</sup> [Selandia may be a variant of Zeeland in *the Netherlands*. 'Selandia' is the Latin name for the Danish island of Sjælland.]

Fifteen islands in *Selandia* were drowned by an inundation of the sea and with them 15,000 people. From the excessive rains that fell this winter in *England*; there were very great floods. On 1 January, the sea from the Humber to Yarmouth broke into the land, overflowing for three or four leagues [9-12 miles, 14.5-19.3 kilometers] in breadth, overthrowing buildings, drowning people and cattle. It came so suddenly that there was no avoiding it. It laid the whole Fens of Lincolnshire, *England* under water. In December, it broke out likewise in Norfolk and Suffolk, and did great damage.<sup>72</sup>

“15 Iflands [Islands] in Zealand, 10 drowned by the Sea, and 15000 people; all Winter [in *England*] exceffive [excessive] rainy, great Floods. June 1. the Sea was forced in by Winds from Humber to Yarmouth, and in Dec. from Norfolk to Suffolk; yet a plentiful Year.”<sup>72</sup>

In Holland [now *the Netherlands*], there was a dreadful storm, laid the whole country on both sides of the Zuyderzee under water. To such a height did the water rise that Count Florence took advantage of the circumstance to subdue the inland towns by armed vessels called “cogs”.<sup>47, 92</sup>

On 14 December 1287, a great storm struck. The chronicle of the monastery Rastede speaks of flooded dikes in *Friesland* and *Stedingen* [now tidal marsh of Lower Saxony, *Germany*] and thousands of deaths. The water rose "five feet higher" than ever before causing whole villages to be destroyed. People fled before the advancing North Sea, and thereby establish new villages as Osteel, Marienhaf or Upgant-Schott. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

It did not rain all summer in 1287 in *France*. Wells and springs dried up.<sup>79</sup>

The summer of 1287 [in *France*] produced a drought. It was a summer “without any rain”.<sup>173</sup>

In 1287, floods struck many regions of *China* including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang and T'ai-ts'ang. As a result, 20% of the land tax was remitted.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou. As a result, 20% of the land tax was remitted.

— During the period between 14 April and 13 May, floods struck Honan (now Henan province) in central *China* at Kaifeng and Nan-yang.

— During the period between 12 July and 10 August, floods struck Hopei (now Hebei province) in northern *China* at Pa.

— During the period between 9 October and 6 November, floods struck Liaoning province located in the southern part of *China*'s northeast at Liao-yang and Fêng-ch'êng. Fields were damaged.

— During the period between 9 October and 6 November, floods struck Yunnan province in southwest *China* at Chên-yüan. Fields were damaged.

In 1287 during the period between 5 February and 6 May, a drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên.<sup>153</sup>

In 1287 during the spring, there was a drought in Shansi province in *China*.<sup>165</sup>

---

**1288 A.D.** In *England* during the winter, there was great frost and snow.<sup>47, 72, 93</sup>

In the month of March, the Rhine River froze below Basel (city situated at the border between *Switzerland, France and Germany*).<sup>62</sup>

The frosts of 1288 in northern *France* killed the buds of the vines, all woods and orchards.<sup>79</sup>

The summer of 1288 [in *France*] was hot.<sup>173</sup>

In *England* during the summer, there was heat and drought so intense as killed many. There were great deaths. There was plenty.<sup>47, 72</sup>

In *England* during the summer of 1288, it was so exceedingly hot, that in some places men died of the heat. This year and last brought such a plentiful increase that wheat sold for 16*d.* to 20*d.* per Quarter [quarter ton]. All provisions were very good and cheap. This drought was followed by a great mortality of people because of a severe cold frosty winter and much snow.<sup>72</sup>

In *England* in 1288, it was a good year for great wine, hay and acorns. But in August, there was such great heat that the birds died in the fields. In some places people died of suffocation from the heat.<sup>62</sup>

In 1288, floods struck many regions of *China* including:<sup>153</sup>

— During the period 2-31 May, floods struck on the east coast of *China* in Chekiang (now Zhejiang province) at Hangchow, Chia-hsing and Hu-chou, and in Kiangsu (now Jiangsu province) at Soochow.

— During the period 1-29 June, floods struck Honan (now Henan province) in central *China* at Nan-yang, Kaifeng, T'ai-k'ang, Hsü-ch'ang, Ch'i, and Huai-yang. During the same time period, floods also struck Hopei (now Hebei province) in northern *China* at T'ung and Anhwei (now Anhui province) in eastern *China* at Fou-yang.

— During the period between 30 June and 29 July, floods struck Honan province at Shang-ch'iu. Crops were damaged by the floodwaters and the land tax was remitted. During the same time period, floods also struck Honan province at K'ao-ch'êng, Kaifeng, Hsü-ch'ang, Ch'i, T'ai-k'ang. Fields were damaged by the floodwaters and the land tax was remitted. During the same time period, floods also struck Hopei province at T'ung. Fields were damaged by the floodwaters and the land tax was remitted.

— During the period between 30 July and 27 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Chiao. The floods led to a famine.

— During the period between 25 December 1288 and 22 January 1289, floods struck Shansi (now Shanxi province) in northern *China* at Taiyuan and Honan province at Kaifeng and Nan-yang. The crops were damaged.

In 1288, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing and Shensi (now Shaanxi province) in central *China* at Shang, Yao, Ch'ien and Hua.<sup>153</sup>

In 1288 during the spring, summer and autumn, there was a drought in Shantung and Shensi provinces in *China*.<sup>165</sup>

**1289 A.D.** In *England*, there was a great hailstorm, followed by heavy rains, greatly affecting the next year's harvest.<sup>47</sup>

In 1289 in *England*, during the 17<sup>th</sup> year of King Edward I reign, there was a great hailstorm, followed by heavy rains. As a result, the next year there was a great scarcity of grain.<sup>93</sup>

In 1289 in *England*, there was a famine caused by great rains.<sup>72</sup>

On 9 July 1289, there fell the greatest tempest of hail in *England* than could ever be remembered. This hailstorm was followed by continual rains. So that all corn [grain] turned very dear [scarce]. This dearth continued and increased even to the death of King Richard II.<sup>72</sup>

In *England* in 1289, a tempest destroyed the seed, and corn [grain] rose to a great price.<sup>57, 91</sup>

During the winter the temperature was so mild that in Cologne, *Germany*, the young girls wore wreaths of violets, cornflowers and primroses on Christmas [25 December] and the Epiphany [6 January].<sup>62</sup>

In 1289, there was a great flood in *China*. The Yellow River cut a new course to the sea.<sup>142</sup>

In 1289 during the period between 22 February and 22 March, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. As a result, the land tax was remitted. During the period between 21 May and 18 June, floods struck Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng. Houses were damaged by the floodwaters. During the period between 19 July and 16 August, floods struck Hopei (now Hebei province) in northern *China* at Ho-chien. Crops were damaged by the floodwaters. During the period between 17 August and 15 September, floods struck Hopei province at Pa resulting in a famine.<sup>153</sup>

In 1289, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Hsin-chiang.<sup>153</sup>

In 1289 during the summer, there was a great drought in Shansi province in *China*. This led to an insurrection in Hunan.<sup>165</sup>

**1290 A.D.** [In *England*], there was a great dearth. Wheat sold for 12s. to 13s. 8d. per Quarter [quarter ton]. In winter, there was much snow but little frost.<sup>72</sup>

[In *England*] in 1290, there was a very severe famine.<sup>72</sup>

In 1290, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 13 January and 10 February, floods struck Hopei (now Hebei province) in northern *China* at Lu-lung and Luan. Crops were damaged by the floodwaters and the land tax was remitted.

— During the period between 11 February and 12 March, floods struck Anhwei (now Anhui province) in eastern *China* at Wu-wei. As a result, the land tax was remitted. During the same period of time, floods also struck Kansu (now Gansu province) in northwest *China* at Chang-yeh.

— During the period between 9 June and 7 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Chiang-yin. As a result, the land tax was remitted.

— During the period between 8 July and 6 August, floods struck Honan (now Henan province) in central *China* at T'ai-k'ang, Ch'in-yang, Mêng, Wu-chin, Kaifeng and Nan-yang. The land tax was remitted. Also during the same time period, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chin-chiang. The land tax was remitted.

— During the period between 7 August and 4 September, floods struck Hupeh (now Hubei province) in central *China* at Wuchang and Hopei province at Ta-ming. Crops were damaged by the floodwaters and the land tax was remitted.

— During the period between 5 September and 4 October, floods struck Shantung (now Shandong province) on the east coast of *China* at Kao-t'ang. The fields were damaged. During the same time period, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton and Ch'ing-yüan. The land tax was remitted.

— During the period between 4 November and 2 December, floods struck Kiangsu province at Chiang-yin and Anhwei province at Hsüan-ch'êng. These floods led to a famine.

— During the period between 3 December 1290 and 1 January 1291, floods struck in Honan province at Kaifeng, T'ai-k'ang, Hsü-ch'ang and Huai-yang; in Anhwei province at Fou-yang; in Hopei province at T'ung. During the same time period, floods struck in Honan province at Hsin-an and in Hopei province at Hsiung and Jên-ch'iu where the floodwaters damaged the fields and houses.

In 1290 during the period between 10 May and 8 September, a drought engulfed Hopei (now Hebei province) in northern *China* at P'ing-shan, Chêng-ting and Tsao-ch'iang. As a result, the land tax was remitted. During the period between 7 August and 4 September, a drought engulfed Hopei province at Ts'ang and Shantung (now Shandong province) on the east coast of *China* at Yüeh-ling.<sup>153</sup>

In 1290 during the summer and autumn, there was a drought in Chihli province in *China*. The land tax was remitted.<sup>165</sup>

**1291 A.D.** In the spring, the Volkhov River flooded. The horses all died in Novgorod [*Russia*], and but few were left. The same year a frost attacked the crops throughout the whole of the Novgorod district.<sup>76</sup>

In *England*, there was a drought all summer.<sup>47, 72</sup>

[In *England*], there was a great famine.<sup>72</sup>

In *England* in 1291, there was a most droughty summer, an excessively rainy harvest and a frosty winter. This resulted in an extraordinary scarcity of hay, grass and corn [grains].<sup>72</sup>

In *India*, there was a great drought.<sup>47</sup>

In *India* in 1291, no rain fell in the provinces about Delhi and there was in consequence a most terrible famine.<sup>57</sup>

In 1291 A.D., during the reign of Firok Shah, there was a famine in Delhi and its neighborhood in *India*.<sup>179</sup> “The Hindus of that country, came into Delhi with their families, twenty of thirty of them together, and in the extremity of hunger drowned themselves in the Jumna [river].”<sup>181</sup>

In 1291 in Damascus, *Syria*, there was inundated caused by overflowing of streams.<sup>47, 92</sup>

In 1291 during the period 1-29 April, floods struck Hunan province in south-central *China* at Ch'ang-tê. During the period between 24 August and 23 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua. During the period between 24 September and 23 October, floods struck Hopei (now Hebei province) in northern *China* at Pao-ting, Ho-chien, Lu-lung and Luan.<sup>153</sup>

**Winter of 1291 / 1292 A.D.** In 1291 in *England*, the frost was severe all winter.<sup>47, 72, 93</sup>

In 1292, “the Rhine was frozen over,” and the snow is represented as being of an “enormous depth”.<sup>30</sup>

The winter of 1292 in *England* was very harsh. In February, one would walk across the [frozen] Rhine River in Western *Europe* with dry feet.<sup>173</sup>

In 1292, loaded carts crossed the Rhine River at Breisach in southwestern *Germany*, on the ice. The Caltégat Sea (Kattegat Sea) was frozen over completely with ice.<sup>60, 62</sup> [The Kattegat Sea is the strait between north *Denmark* and *Sweden*.]

In 1292, the winter in *Germany* and *Northern Europe* was very severe.<sup>62</sup>

The winter of 1292 in northern *France* was very severe.<sup>79</sup>

---

**1292 A.D.** In 1292 during the period between 5 February and 19 March, a drought engulfed Honan (now Henan province) in central *China* at Hsin-yang and Shantung (now Shandong province) on the east coast of *China* at Hui-min. Then during the period between 16 June and 15 July, a drought engulfed Hopei (now Hebei province) in northern *China* at Ch'ien-an.<sup>153</sup>

In 1292 during the spring and summer, there was a drought in Kwangtung and Shantung provinces in *China*. There were also floods.<sup>165</sup>

In 1292, floods struck many regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Wu-chin, Chinkiang and Sung-chiang.
- Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou, Chia-hsing and Shao-hsing.
- During the period between 18 May and 15 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang, Hsin-chien and Chin-hsien.
- During the period between 16 June and 15 July, floods struck in Chekiang province at Hu-chou and Chia-hsing; in Kiangsu at Soochow, Chinkiang and Yangchow; and in Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Tang-t'u.
- During the period between 16 July and 13 August, floods struck in Hunan province in south-central *China* at Hua-jung and in Hopei (now Hebei province) in northern *China* at Wu-ch'ing.
- During the period between 12 October and 9 November, floods struck Hopei province at Lu-lung and Luan.
- During the period between 10 December 1292 and 8 January 1293, floods struck Hunan province at Yüeh-yang and Hua-jung.

---

**1293 A.D.** On 14 May 1293 fell a great snow and with it a terrible wind. The storm did great damage in *England*.<sup>72</sup>

In the Novgorod Republic [now part of *Russia*], in the sixth week of Lent, a thaw set in; water covered all the land; round the town was flooded, and there was no fodder for the horses.<sup>76</sup>

The summer of 1293 [in *France*] was hot.<sup>173</sup>

In 1293 & 1294, there was a drought [in *England*]. The summers were excessively hot.<sup>212</sup>

In 1293, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Chêng-ting and Chin, and Kansu (now Gansu province) in northwest *China* at Ning [some uncertainty exist in location].<sup>153</sup>

In 1293, there was a very severe drought in Chihli province in *China*.<sup>165</sup>

In 1293, floods struck many regions of *China* including:<sup>153</sup>

- Hopei (now Hebei province) in northern *China* at Chêng-ting and Chin, and in Honan (now Henan province) in central *China* at Ning.
- During the period between 6 June and 4 July, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang and T'ai-ts'ang; in Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou; and in Hopei province at Chêng-ting and Shen.

— During the period 1-30 October, floods struck Shantung (now Shandong province) on the east coast of *China* at P'êng-lai.

— During the period between 31 October and 28 November, floods struck Hopei province at Lu-lung and Luan.

**1294 A.D.** In the winter, the sea between *Norway* and *Denmark*, and from *Sweden* to *Gothland*, and the Rhine River and *Baltic Sea* were all frozen and snow fell to a frightful depth.<sup>1</sup>

In 1294, the Cattegat, or sea between *Norway* and *Denmark*, was frozen, and that from Oslo in *Norway*, traders travelled on the ice to Jutland.<sup>2, 41, 42, 43, 47, 93</sup>

In 1294, the Cattegat was covered with ice seven feet thick. Batteries of artillery were moved to and from the strait.<sup>63</sup>

In 1294, The Cattegat entirely frozen.<sup>90</sup>

The drought of 1294 dried up all the wells and all sources [of water – springs, creeks, small rivers and lakes] in Provence, *France*. The Huveaune River dried up completely. The water on the Rhône River declined to such an extent that it was no longer navigable, even at its mouth. It was impossible to grind wheat with windmills.<sup>79</sup>

In *England*, there was a very great drought.<sup>47, 72</sup>

In *England*, there was a grievous famine. Wheat sold from 16s. to 20s. per Quarter (quarter ton). As a result, thousands of poor died. There was so great a drought that springs and rivers were dry. Grass was burnt up. Cattle were kept alive on straw. Corn [grain] was harvest before Saint John's Mass [23 June] and grapes at the Nativity of the Virgin [8 September].<sup>72</sup>

In *England* in 1294, there was a severe famine. Many of thousands of the poor died.<sup>57, 91</sup>

In *England*, there was a very sore famine with a desolating mortality.<sup>72</sup>

In 1293 & 1294, there was a drought [in *England*]. The summers were excessively hot.<sup>212</sup>

In 1294, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 26 May and 24 June, floods struck Hupeh (now Hubei province) in central *China* at I-ch'ang.

— During the period between 23 August and 20 September, floods struck Hopei (now Hebei province) in northern *China* at Lu-lung, Luan and Ch'ien-an.

— During the period between 21 September and 19 October, floods struck in Hopei province at Chao and Chin and in Kansu (now Gansu province) in northwest *China* at Ning [some uncertainty exist in location].

— During the period between 20 October and 18 November, floods struck Liaoning province located in the southern part of *China's* northeast at Liao-yang.

**1295 A.D.** On 19 and 20 January, day and night, a hurricane with violent showers and storms consumed the winter seeds in marshy places. There were great floods in *England*. There was a great intemperature of the elements this year. On the 3<sup>rd</sup> of the Nones of April, there was a deep snow. Hail spoiled the corn [grain]. Famine oppressed those of Bourbon [*France*].<sup>72</sup>

[In *England*] on 19 and 20 January, there was a hurricane, rain, storm, floods all winter and as a result seeds lost; hence dearth.<sup>72</sup>

In 1295 in *England*, there were no grain or fruits, “so the poor died of hunger.”<sup>57, 91</sup>

In *England*, there was a famine from hailstorms and a great concussion of the elements.<sup>57, 72, 91</sup>

In *Ireland*, there was a great dearth from 1294-96.<sup>57, 91</sup>

In 1295, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 14 June and 13 July, floods struck in Kiangsi (now Jiangxi province) in southern *China* at P’o-yang; in Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang, Wu-chin, Soochow and Nanking; in Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou; in Anhwei (now Anhui province) in eastern *China* at Tang-t’u; and in Hunan province in south-central *China* at Ch’ang-tê and Li.

— During the period between 14 July and 11 August, floods struck Shantung (now Shandong province) on the east coast of *China* at T’ai-an, Ho-tsê, Chü-yeh and Tsinan.

— During the period between 12 August and 10 September, floods struck Kiangsi province damaging crops. During the same time period, floods struck in Chekiang province at Hu-chou; in Liaoning province located in the southern part of *China*’s northeast at Liao-yang; in Shantung province at Tung-p’ing; and in Hunan province at Ch’ang-tê.

— During the period between 11 September and 9 October, floods struck in Kiangsu province at Soochow; in Anhwei province at Ho-fei and Shou; and in Chahar province (now eastern *Inner Mongolia*) at Hsüan-hua.

In 1295 during the 6<sup>th</sup> moon, there was an extensive "water calamity" [flood damage] in the vicinity of Shanghai, *China*.<sup>166</sup>

In 1295, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 14 July and 11 August, a drought engulfed Kansu (now Gansu province) in northwest *China* at Lung-hsi, Huan and Ch’ing-yang; Shensi (now Shaanxi province) in central *China* at Fu-shih; and Liaoning province located in the southern part of *China*’s northeast at Chin-chou.

— During the period between 12 August and 10 September, a drought engulfed Shansi (now Shanxi province) in northern *China* at Taiyuan and Lin-fên; Anhwei (now Anhui province) in eastern *China* at Shou; and Hopei (now Hebei province) in northern *China* at Ho-chien.

— During the period between 11 September and 10 October, a drought engulfed Honan (now Henan province) in central *China* at Kaifeng and Lin-ju; Shantung (now Shandong province) on the east coast of *China* at Tung-p’ing; and Hopei province at Chêng-ting.

— During the period between 10 October and 7 November, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu; Anhwei province at Ssü; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ho.

In 1295 during the summer and autumn, there was a drought in Chihli, Kansuh, Shansi and Shensi provinces in *China*.<sup>165</sup>

**1296 A.D.** In the winter, the sea between *Norway* and *Denmark*, and from *Sweden* to *Gothland*, and the Rhine River and *Baltic Sea* were all frozen and snow fell to a frightful depth.<sup>1</sup>

The sea between *Norway* and the promontory of Scagernit frozen over and from *Sweden* to *Gothland*.<sup>2, 40, 41, 42, 43</sup> [Scagernit or the Skagerrak is a strait running between *Norway* and the southwestern coast of Sweden and the Jutland peninsula of *Denmark*, connecting the North Sea and the Kattegat sea area, which leads to the Baltic Sea. Gothland is the Gotland Island, *Sweden* in the Baltic Sea.]

The *Baltic Sea* was covered with ice from *Sweden* to *Gothland*.<sup>47, 93</sup>

Never in living memory, has anyone seen a winter so cruel in *France* as that of 1296.<sup>79</sup>

The summer of 1296 [in *France*] was hot.<sup>173</sup>

In 1296, droughts engulfed several regions of *China* including:<sup>153</sup>

— During the period between 5 March and 3 April, a drought engulfed Hopei (now Hebei province) in northern *China* at Ta-ming, P'u-yang [some uncertainty on location K'ai-chou], Ho-chien, and Su-ning; and Honan (now Henan province) in central *China* at Ch'in-yang, Mêng and Wu-chih. As a result, the land tax was remitted.

— During the period between 29 September and 27 October, a drought engulfed Hopei province at Hsien and Jên-ch'iu.

— During the period between 28 October and 26 November, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hua.

In 1296 during the autumn, there was a drought in Chihli, Honan and Shansi provinces in *China*. There was a drought in the city of Moukden [now Shenyang]. The land tax was remitted.<sup>165</sup>

In 1296, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 2 June and 1 July, floods struck in Shansi (now Shanxi province) in northern *China* at Taiyuan; in Hopei (now Hebei province) in northern *China* at Chiao-ho, Jên-ch'iu and Hsien; and in Hunan province in south-central *China* at Li-ling.

— During the period 2-31 July, floods struck in Hopei province at Peiping, Pa and Pao-ting where crops were damaged. During the same time period, floods struck in Hopei province at Chêng-ting, Fou-ch'êng, Huo-lu, Kao-ch'êng, Pao-ting, An-hsin, Hsiung and Shu-lu; in Honan (now Henan province) in central *China* at Ju-nan; in Anhwei (now Anhui province) in eastern *China* at Fou-yang, Ho-fei and Tang-t'u, in Shantung (now Shandong province) on the east coast of *China* at Chü-yeh; in Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, Nanking, Chinkiang, Wu-chin and P'ei [P'ei is located at longitude 117.00° East and latitude 34.47° North.]; in Hupeh (now Hubei province) in central *China* at Yüeh-yang; in Hunan province at Li; and in Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.

— During the period 1-29 August, floods struck in Honan province at An-yang; in Hopei province at Chêng-ting; and in Shantung province at Ho-tsê and Pin.

— During the period between 30 August and 28 September, floods struck in Shantung province at Hui-min and Ho-tsê; and in Hopei province at Ta-ming

— During the period between 29 September and 27 October, floods struck in Hunan province at Yüan-chiang; and in Honan province at Ch'i, Fêng-ch'iu, Kaifeng, Ning-ling and Sui.

— During the period between 28 October and 26 November, floods struck in Shantung province at Wên-têng, and in Honan province at Kaifeng.

**Winter of 1296 / 1297 A.D.** The Seine River in Paris, *France* flooded from 20 December 1296 to 1 January 1297. There was water in all the streets of Paris.<sup>173</sup>

During the period between 26 December 1296 and 23 January 1297, floods struck several regions of *China* including:

— Hupeh (now Hubei province) in central *China* at Chiang-ling, Ch'ien-chiang and Mien-yang.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an, Tung-hai and Yen-ch'êng.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning.

— Hopei (now Hebei province) in northern *China* at Peiping and Pao-ting.

— Honan (now Henan province) in central *China* at Kaifeng and Nan-yang.

During the same period of time, a drought engulfed Liaoning province located in the southern part of *China's* northeast at Liao-yang and K'ai-yüan [some uncertainty on location].<sup>153</sup>

**1297 A.D.** In *Scotland*, there was a sore affliction of famine and plague.<sup>72</sup>

In *Scotland* in 1297, calamitous famine and pestilence.<sup>57, 72, 91</sup>

The summer of 1297 [in *France*] was hot.<sup>173</sup>

In 1297, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 24 January and 22 February, floods struck Honan (now Henan province) in central *China* at Kaifeng, Shang-ch'iu and Nan-yang.

— During the period between 24 March and 22 April, floods struck Honan province at Lu-i, Kaifeng, Shang-ch'iu, Loyang, Hsü-ch'ang, Lin-ying, Yan-ch'êng, Sui, T'ai-k'ang, Fu-kou, Ch'i, and Nan-yang. Houses and fields were damaged by the floodwaters. During the same period of time, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow, P'ei, Sui-ning and Su-ch'ien. [P'ei is located at longitude 118.03° East and latitude 34.30° North.] Houses and fields were damaged.

— During the period between 22 May and 20 June, floods struck in Honan province at Nan-yang and Kaifeng; in Kiangsi (now Jiangxi province) in southern *China* at P'o-yang, Nan-ch'ang and Hsing-tzũ; in Shansi (now Shanxi province) in northern *China* at Hsi-yang; in Hunan province in south-central *China* at Li; and in Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Nan-hsiung.

— During the period between 21 June and 20 July, floods struck Anhwei (now Anhui province) in eastern *China* at Ho. Houses were damaged by the floodwaters.

— During the period between 21 July and 18 August, floods struck in Honan at Ch'i; in Hopei (now Hebei province) in northern *China* at Tientsin; in Shantung (now Shandong province) on the east coast of *China* at Lai-yang; and in Hunan province at Ling. Over 300 persons drowned at these locations. During the same time period, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou; and in Shansi province at Lin-fên. Over 6,800 persons drowned at these locations.

— During the period between 19 August and 16 September, floods struck in Anhwei province at Kuei-ch'ih, Hsüan-ch'êng and Tang-t'u; and in Kiangsi province at Hsing-tzũ.

— During the period between 18 September and 16 October, floods struck in Hunan province at Li and Ch'ang-tê; in Kiangsi province at P'o-yang and Ch'ing-chiang; in Shansi province at Lin-fên; and in Chekiang province at Wên-chou.

— During the period between 17 October and 15 November, floods struck in Anhwei province at Ho-fei and Wu-wei. Houses were damaged by the floodwaters. During the same time period, floods struck in Chekiang province at Chien-tê and Wên-chou; and in Kwangtung province at Nan-hsiung.

— During the period between 16 November and 15 December, floods struck Hunan province at Ch'ang-tê.

In 1297, a severe drought engulfed many regions of *China* including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Tsinan; Shensi (now Shaanxi province) in central *China* at An-k'ang; Hopei (now Hebei province) in northern *China* at Hsing-t'ai, Ho-chien and Ta-ming; and Shansi (now Shanxi province) in northern *China* at Lin-fên.

— During the period between 24 March and 22 April, a severe drought engulfed Hunan province in south-central *China* at Tao.

— During the period between 21 June and 20 July, a severe drought engulfed Hopei province at Ho-chien and Ta-ming.

— During the period between 21 July and 18 August, a severe drought engulfed Honan (now Henan province) in central *China* at Ch'in-yang and Wu-chih.

— During the period between 19 August and 17 September, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Huai-an; Chekiang (now Zhejiang province) on the east coast of *China* at Ning-hai; and Hopei province at Chêng-ting, Hsing-t'ai and Ho-chien.

— During the period between 18 September and 16 October, a severe drought engulfed Honan province at Chi and Kiangsu province at Tan-yang and Chin-t'an.

— During the period between 17 October and 15 November, a severe drought engulfed Anhwei (now Anhui province) in eastern *China* at Ho, Ho-fei, Mêng-ch'êng and Huo-ch'iu.

— During the period between 16 November and 15 December, a severe drought engulfed Kiangsu province at Wu-chin and I-hsing.

In 1297 during the spring, summer and autumn, there was a great drought in Chihli, Honan, Hunan, Kiangsu and Shansi provinces in *China*.<sup>165</sup>

**1298 A.D.** In 1298 during the 26<sup>th</sup> year of King Edward I reign, “A great famine in *England*, chiefly want of wine, so that the same could scarcely be had to minister the communion in the churches.”<sup>57</sup> [King Edward I reigned from 16 November 1272 – 7 July 1307]

[Another account places this event in 1296] In 1296 [in *England*], there was a famine and great scarcity of wine, even for sacred uses.<sup>72</sup>

In 1298, floods struck many regions of *China* including:<sup>153</sup>

— Kiangsi (now Jiangxi province) in southern *China*, Kiangsu (now Jiangsu province) on the east coast of *China* and Chekiang (now Zhejiang province) on the east coast of *China*.

— During the period between 14 January and 11 February, floods struck in Hopei (now Hebei province) in northern *China* at Mi-yün and Shun-i; and in Liaoning province located in the southern part of *China*'s northeast at Liao-yang and Pei-chên.

— During the period between 14 March and 11 April, floods struck Hupeh (now Hubei province) in central *China* at Hanyang and Han-ch'uan.

— During the period between 10 July and 7 August, floods struck in Hopei province at Tientsin, Lu-lung, Luan and Ta-ming; in Honan (now Henan province) in central *China* at Nan-yang, Shang-ch'iu and Kaifeng; and in Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng.

— During the period between 8 August and 6 September, floods struck Honan province at Kaifeng and Nan-yang. The dikes were damaged. Also during the same time period, floods struck Honan province at Shang-ch'iu. Crops and houses were damaged by the floodwaters.

In 1298 during the period between 14 March and 11 April, drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing; Kiangsu (now Jiangsu province) on the east coast of *China* at Chiang-yin, Nanking and Li-yang; and Anhwei (now Anhui province) in eastern *China* at Kuei-ch'ih. In Kiangsu, a plague of locust accompanied the drought. Then during the period between 10 June and 9 July, drought engulfed Hopei (now Hebei province) in northern *China* at Lu-lung, Luan and Hsing-t'ai; and Honan (now Henan province) in central *China* at Chi.<sup>153</sup>

In 1298 during the spring and summer, there was a drought in Chêhkiang, Chihli, Honan and Kiangsu provinces in *China*. There was a plague of locusts at Kiangsu.<sup>165</sup>

**1299 A.D.** In *England* in November, there was an inundation from the sea in the River Thames. “In December, great calm, heat, and clearness.”<sup>47, 72</sup>

In December [in *England*], there was a hurricane. Then great calm, clear and hot. After that great floods.<sup>72</sup>

In *Persia*, they were ravaged by famine and pestilence.<sup>57,91</sup>

In 1299, drought engulfed many regions of *China*. Due to the hardship, the land tax was remitted in these regions. The regions affected included:<sup>153</sup>

— During the period between 4 January and 1 February, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Huai-an.

— During the period between 31 May and 28 June, a drought engulfed Hupeh (now Hubei province) in central *China* at Wuchang, Hanyang, Chiang-ling and Yang-hsin.

— During the period between 31 May and 28 June, a drought engulfed Kiangsu province at Wu-chin

— During the period between 31 May and 28 June, a drought engulfed Hunan province in south-central *China* at Changsha, Yüan-ling, Shao-yang, Kuei-yang, Yüeh-yang, Hêng-yang, Chih-chiang, Ch'ang-tê, Li and Ch'a-ling.

— During the period between 26 September and 24 October, a drought engulfed Kiangsu province at Yangchow and Huai-an.

— During the period between 25 October and 23 November, a drought engulfed Kiangsu province at Yangchow and Huai-an; Anhwei (now Anhui province) in eastern *China* at Ho-fei; and Hupeh province at Chiang-ling, Mien-yang, Sui and Huang-kang.

In 1299 during the summer, there was a drought in Hunan, Hupeh, Kansuh and Kiangsu provinces in *China*. The land tax was remitted.<sup>165</sup>

In 1299 during the period between 27 August and 25 September, floods struck in Honan (now Henan province) in central *China* at Kaifeng and Nan-yang; and in Hopei (now Hebei province) in northern *China* at Peiping and Ho-chien.<sup>153</sup>

---

**Winter of 1299 / 1300 A.D.** During the period between 24 December 1299 and 22 January 1300, a drought engulfed Ningsia (now Ningxia province) in northwest *China* on the Loess Plateau at Etzina, the former Torgut Banner. As a result, the land tax was remitted.<sup>153</sup>

---

**1300 A.D.** On 6 January 1300, the lakes collected such an unusual amount of water from streams so that they were 4 Ellen [9 feet, 3 meters] [above normal] on the highest lakes. This flood devoured towns and villages with people and livestock. At Rungholt [a city in Nordfriesland, northern *Germany*], the water devoured 7 parish churches along with 7,600 people and innumerable amount of livestock. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In 1300, drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 22 March and 19 April, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Tang-t'u.

— During the period between 19 May and 17 June, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Fêng-yang and Shou; Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and Suchow; Honan (now Henan province) in central *China* at Nan-yang and Shang-ch'iu; Hopei (now Hebei province) in northern *China* at Hsing-t'ai; and Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng and Chü-yeh.

— During the period between 15 August and 13 September, a drought engulfed Honan province at Hua.

In 1300 during the spring, summer and autumn, there was a drought in Anhwei, Chihli, Honan, Kiangsu and Shantung provinces in *China*.<sup>165</sup>

In 1300 during the period between 19 May and 17 June, floods struck Hopei (now Hebei province) in northern *China* at Chêng-ting, Pao-ting, Peiping, T'ung and Chi. [Chi is located at longitude 117.24° East

and latitude 40.03° North]. During the period between 18 June and 16 July, floods struck Honan (now Henan province) in central *China* at Shang-ch'iu and Sui.<sup>153</sup>

---

**Winter of 1300 / 1301 A.D.** During the period between 12 December 1300 and 10 January 1301, a drought engulfed Hopei (now Hebei province) in northern *China* at Chao.<sup>153</sup>

---

**1301 A.D.** This winter was warm in *Italy*. In early December, a hurricane destroyed homes and other buildings in *Germany*; it calmed down and the air cleared, and there was such unusual warmth; that in January young branches sprouted on the trees. Later the rivers overflowed their banks.<sup>62</sup>

In 1301 was a pitiful time, a time when nothing but hunger and grief could be found. Hunger was so great that in Erfurt, *Germany* alone 8,000 people perished.<sup>172</sup>

In 1301, a drought engulfed several regions of *China*. As a result, the land tax was remitted. The regions affected included:<sup>153</sup>

— Honan (now Henan province) in central *China* at Fêng-ch'iu, Lan-fêng, Chung-mou, Yen-ching, Loyang and Mien-ch'ih.

— Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Jung. [Jung is located at longitude 109.10° East and latitude 25.02° North.]

— Hupeh (now Hubei province) in central *China* at Ch'i-ch'un, Kuang-chi and Ch'i-shui.

— During the period between 7 July and 4 August, a drought engulfed Honan province at Kaifeng, Chi and Lin-ju; Hopei (now Hebei province) in northern *China* at Ta-ming; and Shantung (now Shandong province) on the east coast of *China* at P'u.

— During the period 3-31 October, a drought engulfed Hupeh province at Chiang-ling and Hunan province in south-central *China* at Ch'ang-tê and Li.

In 1301 during the summer and autumn, there was a drought in Chihli, Honan, Hunan and Kiangsu provinces in *China*. There were also floods. The land tax was remitted.<sup>165</sup>

In 1301 during the period between 7 June and 6 July, floods struck *China* at:<sup>153</sup>

— Hopei (now Hebei province) in northern *China* at Ta-ming, Pao-ting, Ho-chien and Chêng-ting.

— Chahar province (now eastern *Inner Mongolia*) at Hsüan-hua and Cho-lu.

— Honan (now Henan province) in central *China* at Shang-ch'iu.

— Shantung (now Shandong province) on the east coast of *China* at Mou-p'ing, Chü-yeh, Lin-ch'ü, P'êng-lai, Yeh, I-tu, Wei, Po-hsing, Tung-p'ing, Tsinan, and Pin.

— Szechwan (now Sichuan province) in southwest *China* at Wu-ch'i [uncertain name].

In 1301 during the period between 5 August and 2 September, floods struck *China* at:

— Hopei province at Peiping, Pao-ting, Ho-chien and Ta-ming.

— Shantung province at Chü-yeh.

---

**1302 A.D.** There was a famine in *England, Scotland and Ireland*.<sup>57, 91</sup>

In 1302 during the period between 30 January and 27 February, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian. As a result, the land tax was remitted. During the period between 30 March and 28 April, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping, Lu-lung and Luan. As a result, the land tax was remitted.<sup>153</sup>

In 1302 during the spring, there was a drought in Kiangsu and Shensi provinces in *China*. The land tax was remitted.<sup>165</sup>

In 1302, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 29 April and 27 May, floods struck Chahar province (now eastern *Inner Mongolia*) at Dolonor.

— During the period between 28 May and 25 June, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan; Honan (now Henan province) in central *China* at Shang-ch'iu; Hopei (now Hebei province) in northern *China* at An-tz'ü; and Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow, P'ei and Sui-ning. [P'ei is located at longitude 118.03° East and latitude 34.30° North.]

— During the period between 26 June and 25 July, floods struck Hopei province at Yung-nien.

— During the period between 26 July and 23 August, floods struck Hopei province at Hsing-t'ai.

**Winter of 1302 / 1303 A.D.** In 1302, the Rhône River in *France* froze.<sup>58, 60, 62, 80</sup>

During the winter of 1302-03, the Rhône River in *France* was frozen over completely.<sup>61</sup>

The winter of 1302 in *France* was bitterly cold. The Rhône River froze and the olive trees died.<sup>79</sup>

In 1302 in *Provence*, the year produced a severe winter.<sup>62</sup>

**1303 A.D.** In 1303, floods struck many regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Hsiu-wu, Mêng, Hsin-yeh, and Lan-fêng.

— Chekiang (now Zhejiang province) on the east coast of *China* at Taichow, Ning-hai and Taichow. At Ning-hai and Taichow, 550 persons drowned.

— During the period between 17 May and 15 June, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan and Hopei (now Hebei province) in northern *China* at Ho-chien.

— During the period between 15 July and 13 August, floods struck Liaoning province located in the southern part of *China*'s northeast at Liao-yang and K'ai-yüan; Szechwan (now Sichuan province) in southwest *China* at Wu-ch'i [uncertain location]; Hopei province at Lu-lung and Luan; and Chekiang province at Ting-hai. Houses and fields were damaged by the floodwaters and 119 persons drowned.

**Winter of 1303 / 1304 A.D.** In the Novgorod Republic [now part of *Russia*], the winter was a warm; there was no snow all through the winter. The people could not get corn [grain], and prices were very high. This resulted in great hardship and distress for the people.<sup>76</sup>

**1304 A.D.** In Damascus, *Syria*, there was an inundation.<sup>47, 92</sup>

In 1304 raged a mighty storm in *Germany* from the northeast along the shores from Rügen and Pomerania. [Rügen is Germany's largest island. It is located off the Pomeranian coast in the Baltic Sea.] The storm threw down many houses and church steeples. At that time the land that stretched from Mönchgut peninsula, south almost to the island of Ruden, between the two was such a small stream, that a man was able to leap across it. The terrible power of the northeast sea, caused the creation of a new sea route across the entire strip from Mönchgut to the promontory Thiessow. The newly formed route was called the "new low." Larger ships that only came from the north in their harbor were now also able to take the newly created passage from the southeast, right from Stralsund.<sup>172</sup>

In 1304, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 4 June and 3 July, floods struck Honan (now Henan province) in central *China* at Kaifeng, T'ai-k'ang, Yang-wu, Hua, and Chün. At Hua and Chün, the floodwaters damaged the fields. During the same period of time, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.

— During the period 1-29 September, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ao-yang. Houses and fields were damaged by the floodwaters.

In 1304 during the period between 4 July and 1 August, a drought engulfed Shensi (now Shaanxi province) in central *China* at Fu-fêng, Ch'i-shan and Pao-chi.<sup>153</sup>

In 1304 during the summer, there was a drought in Shensi province in *China*.<sup>165</sup>

---

**1305 A.D.** In the summers of 1305 and 1306 in *France*, the weather was very dry and hot. As a result the fruits of the earth suffered much.<sup>62</sup>

In 1305 in *France*, there was a severe drought during the summer.<sup>79</sup>

In 1305, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 24 May and 22 June, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping and Hunan province in south-central *China* at Tao.

— During the period between 23 June and 21 July, a drought engulfed Shensi (now Shaanxi province) in central *China* at Fu-fêng and Fêng-hsiang.

— During the period between 22 July and 20 August, a drought engulfed Hopei province at Jao-yang and Chin; and Hupeh (now Hubei province) in central *China* at Han-ch'uan.

— During the period between 21 August and 18 September, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Hsiang, Ma-p'ing and Jung. [Jung is located at longitude 109.10° East and latitude 25.02° North.]

In 1305 during the summer, there was a drought in Chihli, Hupeh, Kwangsi, Shansi and Shensi provinces in *China*.<sup>165</sup>

In 1305, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 23 June and 21 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang, Lin-ch'uan, and Ch'ing-chiang.

— During the period between 22 July and 20 August, floods struck Hupeh (now Hubei province) in central *China* at Mien-yang; Honan (now Henan province) in central *China* at Huai-yang; Shansi (now Shanxi province) in northern *China* at Chin-ch'êng; and Kiangsu (now Jiangsu province) on the east coast of *China* at T'ai-hsing, Yangchow and Huai-an.

— During the period between 21 August and 18 September, floods struck Honan province at Shang-ch'iu and Huai-yang; and Hopei (now Hebei province) in northern *China* at Ta-ming.

In 1305, there was a famine in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**Winter of 1305 / 1306 A.D.** In 1305, the Rhône River in *France* froze.<sup>58, 80</sup>

In 1305, the Rhône River and all the rivers of *France* froze.<sup>60, 62</sup>

In 1305, all rivers in *France* froze.<sup>79</sup>

In 1306, the *Baltic Sea* was passable by foot passengers and horsemen for six weeks.<sup>2</sup>

In 1306, the *Baltic Sea* was covered with ice for 14 weeks, between the *Danish* and *Swedish* islands.<sup>41, 42, 43, 47, 93</sup>

In the year 1305, the winter in *France* was very strong. The sea on the coasts of Flanders [now *Belgium*] and Holland [now *the Netherlands*], was frozen to a width of one and a half miles.<sup>62</sup>

During the winter of 1305-06 there was excessive flooding in *France* [spring thaw].<sup>79</sup>

---

**1306 A.D.** In the summers of 1305 and 1306 in *France*, the weather was very dry and hot. As a result the fruits of the earth suffered much.<sup>62</sup>

In 1306 in *France*, an extreme drought ruled the spring and summer. The cold froze strongly the waters before they had diminished.<sup>79</sup>

An extraordinary drought fills the spring and summer of 1306 in *France*, and major flooding in the following winter. Intense cold froze the rivers quickly before they were able to decrease in river height. This ensured that the spring thaw produced many disasters.<sup>79</sup>

In 1306, there was a great flood at Würzburg and Frankfurt, *Germany*. The Rhine, Main, Werra, Weser and Saale rivers flooded. The Stone Bridge at Würzburg was damaged. There were 500 people on the bridge when it collapsed, of which ten died.<sup>172</sup>

In 1306 during the period between 5 February and 8 November, a severe drought engulfed Shensi (now Shaanxi province) in central *China* at Sian. Then during the period between 12 June and 10 July, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1306, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 12 June and 10 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow; Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing; Hopei (now Hebei province) in northern *China* at Hsiung and T'ung.

— During the period between 11 July and 9 August, floods struck Hopei province at Ta-ming, I, Pao-ting, Man-ch'êng, and Ting-hsing; and Shantung (now Shandong province) on the east coast of *China* at I-tu.

— During the period between 10 August and 8 September, a typhoon caused floods in Kiangsu province at Soochow.

— During the period between 7 November and 6 December, floods struck Kiangsu province at Wu-chiang.

In 1306 during the summer, there was a great drought in Chihli province in *China*.<sup>165</sup>

---

**Winter of 1306 / 1307 A.D.** In 1307, the rivers of *France*, among others the Seine River, were frozen. Many rivers in Flanders [now *Belgium*] were also frozen solid enough that carriages could ride across them.<sup>62</sup>

In the year 1307 the winter in Flanders [now *Belgium*] was very severe. The rivers of *France* froze before the waters, which had risen due to great flooding, could substantially recede. As a result of these the ice conditions, the force of the ice was so great that the bridge, the mills along the rivers and standing houses collapsed. In Paris, at the Port of Grève, a large number of loaded barges sank on the Seine River with people and cargo onboard.<sup>62</sup>

---

**1307 A.D.** In 1307, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 30 June and 29 July, floods struck Honan (now Henan province) in central *China* at Kaifeng, Nan-yang, and Shang-ch'iu; Kiangsi (now Jiangxi province) in southern *China*; Hupeh (now Hubei province) in central *China* at Wuchang; and Hopei (now Hebei province) in northern *China* at Lung-p'ing and Hsin-ch'êng.

— During the period between 30 July and 28 August, floods struck Hopei province at Pao-ting, Ho-chien and Chin; Shansi (now Shanxi province) in northern *China* at Yang-ch'ü and Wên-shui; and Kansu (now Gansu province) in northwest *China* at Ning [uncertain name].

— During the period between 29 August and 26 September, floods struck Hopei province at Lung-p'ing, An-kuo, Ching-hai, Jung-ch'êng, and Shu-lu; and Shansi province at Wên-shui, Huo, and P'ing-yao.

— During the period between 26 November and 25 December, floods struck Hopei province at Lu-lung, Ch'ien-an, Ch'ang-li and Fu-ning.

**1308 A.D.** In 1308 in *France*, just days after the Feast of the Ascension [40 days after Easter], there was a great violent storm producing severe cold, a lot of snow, great masses of hail and terrible winds. It destroyed the crops and [grape] vines, overthrew many buildings and uprooted several trees.<sup>79</sup>

In 1308 during the period between 23 February and 22 March, a drought engulfed Honan (now Henan province) in central *China* at Ju-nan and Shang-ch'iu. Then during the period between 21 May and 18 June, a drought engulfed Kansu (now Gansu province) in northwest *China* at Wei-yüan.<sup>153</sup>

In 1308 during the spring, there was a drought in Honan and Shensi provinces in *China*.<sup>165</sup>

In 1308 during the period between 18 July and 16 August, floods struck many regions of *China* including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Chü-yeh. Houses were damaged by the floodwaters and 18 persons drowned.

— Hopei (now Hebei province) in northern *China* at Chêng-ting. One hundred seventy persons drowned.

— Honan (now Henan province) in central *China* at An-yang and Chi. Crops were damaged by the floodwaters.

**1309 A.D.** In 1309, there were terrible winds, which toppled many trees and buildings in *France*.<sup>79</sup>

In 1309 during the period between 6 August and 4 September, floods struck Honan (now Henan province) in central *China* at Shang-ch'iu and Fêng-ch'iu.<sup>153</sup>

### **1310 A.D. – 1319 A.D. Germany. Famine**

From 1310 to 1319, the weather conditions were very unfavorable. Crops failed causing famines. A third of the population of *Germany* starved to death.<sup>172</sup>

**1310 A.D.** In 1310, several regions of *China* were affected by drought including:<sup>153</sup>

— During the period between 6 May and 8 August, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Yung-nien. The drought was also accompanied by a plague of locusts.

— During the period between 28 June and 26 July, a drought engulfed Hopei province at Wei, Fei-hsiang and Chi-tsê. The drought was accompanied by a plague of locusts.

— During the period between 27 July and 24 August, a drought engulfed Hopei province at Wei and Tz'ü. The drought was accompanied by a plague of locusts.

— During the period between 23 October and 21 November, a drought engulfed the east coast of *China* at Shantung (now Shandong province) and Kiangsu (now Jiangsu province) at Suchow and P'ei. [P'ei is located at longitude 118.03° East and latitude 34.30° North.] The drought was accompanied by a plague of locusts. The area was also affected by floods.

In 1310 during the spring and summer, there was a drought in Chihli, Kiangsu and Shantung provinces in *China*. The drought was accompanied by a plague of locusts. There were also floods.<sup>165</sup>

In 1310, floods struck several regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at I-ch'ang. This was caused by heavy and protracted rains. Approximately ten thousand people drowned.
- During the period between 28 June and 26 July, floods struck Honan (now Henan province) in central *China* at Wei-ch'uan; and Shantung (now Shandong province) on the east coast of *China* at Wên-shang and P'u.
- During the period between 27 July and 24 August, floods struck Honan province at Fan-shui; Hupeh province at Ching-mên, Tang-yang, I-ch'ang, I-ch'êng, and Yüan-an; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lung-ch'uan and Hui-yang. Houses were damaged by the floodwaters in Kwangtung province.

In 1310, there was a great wind in the vicinity of Shanghai, *China*. As a result, the sea flowed over the fields.<sup>166</sup>

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1311 A.D.** In 1311 during the period between 17 June and 16 July, a drought engulfed Hopei (now Hebei province) in northern *China* at Ho-chien and Shensi (now Shaanxi province) in central *China* at Sian. This area was also affected by floods.<sup>153</sup>

In 1311 during the summer, there was a drought in Chihli and Shensi provinces in *China*. There were also floods. The land tax was remitted.<sup>165</sup>

In 1311 during the period between 17 June and 16 July, floods struck *China* at:<sup>153</sup>

- Hopei (now Hebei province) in northern *China* at Ho-chien, Peiping, San-ho, T'ung and Lu-lung. Crops were damaged by the floodwaters.
- Shensi (now Shaanxi province) in central *China* at Sian. Crops were damaged by the floodwaters.
- Shansi (now Shanxi province) in northern *China* at Yung-chi, Ch'i and Huai-jên. Crops were damaged by the floodwaters.
- Shantung (now Shandong province) on the east coast of *China* at Chü-yeh, Tung-p'ing, and Kao-t'ang.
- Honan (now Henan province) in central *China* at Shang-ch'iu.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and P'ei. [P'ei is located at longitude 118.03° East and latitude 34.30° North].

In 1311 during the period between 17 July and 14 August, floods struck *China* at:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Chiang-ling and Sung-tzü. At Chiang-ling many people drowned.
- Shantung province at Tung-p'ing, Chü-yeh and Lin-ch'ü.
- Hopei province at Pao-ting.
- Hunan province in south-central *China* at Kuei-yang and Lin-wu.

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1312 A.D.** A three-year famine struck Bohemia [now western *Czech Republic*] and *Poland*. This famine was so great and severe that children devoured their parents and parents ate their children. Some fed on the dead bodies of malefactors hung up on gibbets [gallows-type structure from which the dead bodies of executed criminals were hung on public display]. Wolves also were so famished, that they devoured all they met and fed on them.<sup>72</sup>

An old chronicle Würzburg reported: "the year 1312 brought an unusual amount of rain and storm [in *Germany*]. Everywhere the streams and creeks came out from their banks and flooded the fields. As a consequence of this, there was a great famine and the most terrible plague, which raged for a long time.

In some places there was no one who could bury the dead. Inflation of the following year [1313] was even greater and those spared by pestilence were now wiped out by hunger. This period of great misery lasted for a long time." Muellner wrote in his Nuremberg Chronicle: " the year 1312 caused the greatest mortality everywhere. One third of the population died. Parents were so hungry that they slaughtered and ate their children. The corpse of criminals were pulled down from the gallows and eaten." Afterwards there were deserted villages.<sup>172</sup>

In 1312, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 9 March and 7 April, floods struck Hopei (now Hebei province) in northern *China* at Pa and Wên-an.

— During the period between 6 June and 4 July, floods struck Honan (now Henan province) in central *China* at Shang-ch'iu.

— During the period between 5 July and 3 August, floods struck in Kirin (now Jilin province) in northeast *China* at Ninguta and in Szechwan (now Sichuan province) in southwest *China* at Wu-ch'i [uncertain name].

— During the period 2-30 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Sung-chiang.

In 1312 during the period 2-30 September, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Pin, Hui-min, Tê, P'u-t'ai and Yang-hsin.<sup>153</sup>

In 1312 during the autumn, there was a drought in Shantung province in *China*.<sup>165</sup>

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1313 A.D.** In the year 1313 in March, April, and half of May had a summer-like warmth. On Pentecost Eve, a sudden sharp cold struck Pohlen, *Germany*. Snow two elbows deep [2 Ellen, 4 ½ feet or 1.5 meters] fell. It was feared that it would destroy all the fruits of the field. But on the 6<sup>th</sup> day, this snow melted by a warm rain. The ground was watered like by a sweet dew and made fruitful. There was no harm done to the seeds.<sup>172</sup>

On 1 May 1313, there was a high flood [in *Germany*], which did great damage.<sup>172</sup>

The entire empire of *China* was devastated by a massive drought.<sup>28</sup>

In 1313, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 26 May and 23 June, floods struck Hunan province in south-central *China* at Yüan-ling.

— During the period between 24 June and 23 July, floods struck in Honan (now Henan province) in central *China* at Huai-yang, Sui and Kaifeng, and in Anhwei (now Anhui province) in eastern *China* at Po. The floodwaters damaged houses and fields.

— During the period between 24 June and 23 July, floods struck in Hopei (now Hebei province) in northern *China* at Cho, An-tz'ü, Wan-p'ing, Ku-an, Pa, Yung-ch'ing and Wên-an, and in Honan province at Mêng-ching. Crops were damaged by the floodwaters.

— During the period between 22 August and 20 September, floods caused by a typhoon struck Kiangsu (now Jiangsu province) on the east coast of *China* at Chia-ting, Yangchow and Ch'ung-ming. At Yangchow and Ch'ung-ming houses were damaged.

In 1313 during the period between 21 September and 19 October, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1313 during the autumn, there was a great drought in Chihli province in *China*. Typhus fever raged.<sup>165</sup>

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1314 A.D.** In 1314 [in *England*], it rained almost ten months continually, but during July and August, the rains were incessant. The husbandmen [farmers] could not get in the small crop they had on the ground, and what they got in, the yield from it was very small. Hence there was a grievous famine in 1315 that lasted two years and from it most mortal dysentery. So that it was drudgery on the surviving to bury the dead. Cattle and beasts being corrupted by the grass whereon they fed and then died; hence people dreaded eating their flesh. Only horseflesh was a delicate dish. The poor stole fat cats to eat. Criminals in gaols [jails] quickly pulled to pieces fresh malefactors and ate them. [Malefactors are evil doers or criminals.] Or the last imprisoned tore in pieces and devoured the old Goal Birds [jailbirds]. Hunger compelled some to eat their own children, and some stole other people to eat.<sup>72</sup>

Few English kings have lived through a greater period of distress than Edward II, who was scarcely able to secure food for his own immediate household when the heavy rains of 1314 spoiled the harvests. Misery in *England* was widespread and intense: the dead lined the roadsides; everything imaginable was eaten – dogs, horses, cats, even babies. The jails were crowded with felons, and when a new criminal was thrown into a cell, he was seized upon by the starving inmates and literally thorn to pieces for food.<sup>84</sup>

In *England* in 1314, grains spoiled by the rains. Famine so dreadful that the people devoured the flesh of horses, dogs, cats and vermin. Parliament passed a measure limiting the price of provisions.<sup>57</sup>

[In *England*] in 1314, there was a very grievous famine.<sup>72</sup>

In *Ireland* in 1314, famine and various distempers.<sup>57</sup>

In 1314 during the period between 5 February and 6 May, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping, Mi-yün and Chi. During the winter, there was no snowfall. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

In 1314 during the winter, there was a drought in *China*. No snowfall.<sup>165</sup>

In 1314, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 14 June and 12 July, floods struck Hunan province in south-central *China* at Ch'ang-tê. Houses were damaged by the floodwaters and 500 persons drowned.

— During the period between 13 July and 11 August, floods struck Hopei (now Hebei province) in northern *China* at Cho and Fang-shan. Fields were damaged by the floodwaters.

— During the period between 12 August and 9 September, floods struck Hopei province at Wu-ch'ing. Fields were damaged by the floodwaters. During the same period of time, floods struck Hunan province at Yüan-ling and Lu-ch'i.

— During the period between 10 September and 9 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Hunan province at Yüeh-yang, Wu-kang, Ch'ang-tê and Tao.

— During the period between 10 October and 7 November, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Kao-yao; Chekiang province at Chien-tê and Hangchow; Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking; Kiangsi (now Jiangxi province) in southern *China* at Hsing-tzū, Kiukiang, I-ch'un, Nan-ch'êng, Lin-ch'uan and Kan; and Anhwei (now Anhui province) in eastern *China* at Shou.

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1315 A.D.** *Europe* hit by incessant rains. These were followed by a famine so severe that Polish poor ate hanged bodies.<sup>28</sup>

In 1315 in *France*, from the middle of April until late July, there was almost continual rainfall combined with an especially cold summer. The grains and the grapes did not ripen.<sup>79</sup>

So [terrible] was this famine in Thuringia [part of *Germany*]. . . the walls of Exford [Oxford], several people were starved and died. So great was it in *Poland* and *Silesia*, that parents abstained not from devouring their own children and the filthiest creatures. It continued for three years in *Lithuania*.<sup>72</sup> [The Kingdom of Lithuania during this period of time extended west into the Kievan Rus territory of *Russia*. *Silesia* is a historical region of Central Europe located mostly in *Poland*, with smaller parts also in the *Czech Republic*, and *Germany*]

In 1315 there was a famine that was worst in *England*, *Thuringia*, *Poland*, and *Silesia*. This famine lasted years in *Lithuania*.<sup>91</sup>

Crop failures and starvation in Northern *Estonia*.<sup>34</sup>

In *England*, there were great rains and floods during harvest; much grain spoiled.<sup>47</sup>

In 1315 in *England*, the grain was spoiled by the rain. Famine “so dreadful that people devoured the flesh of horses, dogs, cats, and vermin.” Parliament attempted to fix prices; and failed.<sup>91</sup>

In 1315, there was a dreadful famine in *England*. The poor ate horses, dogs, and cats. In King Henry III’s reign, in a dreadful famine, the people ate the bark of trees, and 20,000 persons starved to death in London alone.<sup>212</sup>

There was a famine in *England* in 1315 that was so dreadful that the people devoured the flesh of horses, dogs, cats and vermin.<sup>90</sup>

In 1315 in *Ireland*, there was famine and various distempers.<sup>91</sup>

In *Europe* from mid-April to late July 1315, it rained incessantly, and there was unusually cold weather. The cereals and the grapes did not come to fruition.<sup>62</sup>

In 1315, the Po River in *Italy* froze.<sup>58, 80</sup>

In 1315, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 6 January and 4 February, floods struck Honan (now Henan province) in central *China* at Kaifeng, Nan-yang, Shang-ch’iu and Ju-nan; and Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an.

— During the period 2-31 July, floods struck Honan province at Fan-shui and Chêng.

— During the period 1-30 August, floods struck Hopei (now Hebei province) in northern *China* at T’ung, Ch’ang-p’ing, Hsiang-ho, and Pao-ti. Houses and fields were damaged by the floodwaters. During the same time period, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ch’üan and Nan-tan. Crops were damaged by the floodwaters.

In 1315 during the period between 5 February and 6 May, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Fêng-yang; and Hopei (now Hebei province) in northern *China* at Mi-yün and Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.] Then during the period

between 6 May and 8 August, a drought engulfed Kansu (now Gansu province) in northwest *China* at Lung-hsi and Lanchow.<sup>153</sup>

In 1315 during the spring and summer, there was a drought in Chihli, Kansuh and Shantung provinces in *China*.<sup>165</sup>

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1316 A.D.** *England* struck by 2 years of rains and floods. Famine killed thousands.<sup>28</sup>

In *England* in 1316, there was a universal dearth and a great mortality [death of large number of people], particularly among the poor. As a result the living could scarcely bury the dead. There was a royal proclamation – no more beer to be made.<sup>57, 91</sup>

As of March 1316, there was a great famine in *England*. At Nottingham, the season for the past 3 years was so adverse that almost all the grains were destroyed and the people were driven to eat horses, dogs, cats, and vermin, etc. Even children were stolen and eaten. And prisoners were eaten by other prisoners. This was one of the most grievous famines that ever visited *Great Britain*. The famine was followed by a pestilence scarcely less destructive to life, so that the living scarce sufficed to bury the dead. This famine resulted from two or three years of continued rain, which destroyed the corn [grain] and caused a frightful mortality amongst the sheep and cattle. Corn [grain] was four to five times its ordinary price, (i.e. 60 to 90 shillings); oxen 48 to 70 shillings; fat hog 10 shillings; fat wedder 5 shillings; goose 7½ pence; fat hen 3 pence; two chickens 3 pence; 2 dozen eggs 3 pence. These articles were 6 to 8 times their average price. The famine lasted several years.<sup>212</sup>

In *Ireland* in 1316, there was a great dearth. Eight captured Scots were eaten at the siege of Carrickfergus in northern *Ireland*.<sup>57, 91</sup>

In *England* in 1316, wheat was sold at 40s. and 44s. per Quarter [quarter ton]. By reason of the murrain among cattle, beef and mutton were exceeding dear [scarce]. After this, both famine and mortality increased greatly, together with a general failure of all Fruits of the Earth. This was due to excessive rains and unseasonable weather. Provisions could not be obtained for the King's household; nor other great men to keep up their tables; as a result they were obligated to discharge their servants in great numbers. These servants having lived so delicately and not able to perform other work; felt scorn to take up begging. As a result these servants fell to stealing and robbing, which caused fresh misery to the Nation. So terrible was the famine two years before [in 1314] that not only horses and dogs; but also men and children were stolen for food. All malting throughout the Kingdom was forbidden, even for the King's family. [Malting is the process of converting barley into malt, for use in brewing or distilling.] When wheat was sold at 10d a bushel, it was so very cheap; but at 10s., it was monstrously dear.<sup>72</sup>

In the year 1316 in *France*, at St. Andrew's day (November 30) began a very hard winter, and this continued until Easter. In *Germany*, the harvests failed entirely because the cold had destroyed all of the seeds entrusted to the earth. A famine took hold, caused by a lack of food; poor nutrition produced many deadly diseases.<sup>62</sup>

The pretty rough winter of 1316 in northern *France* lasted without interruption from late November to Easter.<sup>79</sup>

In 1316, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 23 April and 21 May, floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang and T'ai-ho.

— During the period between 20 June and 19 July, floods struck Honan (now Henan province) in central *China* at Kaifeng and Nan-yang. Houses were damaged by the floodwaters.

— During the period between 20 July and 18 August, floods caused by heavy rains struck Anhwei province at Wu-yüan. Five thousand three hundred people drowned.

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1317 A.D.** [There was a famine in *Ireland* whose cause was not necessarily weather related. In 1317 in *Ireland*, there was a great famine throughout the country in consequence of Bruce's invasion.<sup>57, 91</sup>]

In *England*, there was a very good summer, and early and plentiful harvest. Wheat, which sold for 10s. per bushel, now sold for 10d. On Saturday, it was 44s. per Quarter [quarter ton]; next Wednesday it was sold at 10s. in Leicester Market. At the same time, many who had been rich and had an abundance of all good things, came to want and were forced to beg. In the south [southern *England*], there was a murrain of cattle. This year and also in 1319, were both very fatal to people and several other animals, over the whole Kingdom. So that the survivors were not sufficient to plow and sow on the ground. Besides, many were still buried daily in every churchyard. This plague was two years in its perambulation over *England*. Hence there was great desolation from bad food in the famine.<sup>72</sup>

In 1317 during the period between 14 January and 12 February, floods struck Shansi (now Shanxi province) in northern *China* at Chieh. Then during the period between 12 May and 9 June, a drought engulfed Hopei (now Hebei province) in northern *China* at An-lu.<sup>153</sup>

In 1317 during the summer, there was a drought in Hupeh province in *China*.<sup>165</sup>

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1318 A.D.** *China* experienced massive floods in which multitudes drowned.<sup>28</sup>

In *England* in 1318, there was a murrain of kine [cattle], that dogs or ravens, which ate their flesh were poisoned swelled and died. Therefore people dare not touch them.<sup>72</sup>

In 1318, the winter was severe in *France*, *Germany* and *Italy*. Wagons crossed on the ice on the Po River in *Italy*.<sup>62</sup>

In 1318 there was a great earthquake at Limburg ad der Lahn, *Germany*. This was followed by a severe famine. Farmers killed travelers and ate them.<sup>172</sup>

In 1318 during the period between 28 July and 26 August, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Chêng-ting, Ho-chien, Yung-nien and Ting.<sup>153</sup>

In 1318 during the autumn, there was a great drought in Chihli province in *China*.<sup>165</sup>

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1319 A.D.** The murrain which last year was in the south of *England*, now reached the north and overspread the whole realm. The carrion still poisonous.<sup>72</sup>

In 1319, floods struck many regions of *China* including:<sup>153</sup>

— Hopei (now Hebei province) in northern *China* at Ta-ming. Houses were damaged by the floodwaters.

— Hopei province at Chêng-ting and Pao-ting. Floods were caused by heavy and protracted rains.

— Honan (now Henan province) in central *China* at Kaifeng, Nan-yang, Shang-ch'iu, Ju-nan, An-yang and Chi. Floods were caused by heavy and protracted rains.

— During the period between 18 June and 17 July, floods struck Shantung (now Shandong province) on the east coast of *China* at I-tu, Lin-ch'ü, Tsinan, Liao-ch'êng, Tung-p'ing, Chü-yeh, T'ai-an, Kao-t'ang, and P'u; Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an; Liaoning province located in the southern part of *China's* northeast at Liao-yang and Pei-chê; and Hopei province at Lu-lung and Ho-chien. Fields were damaged by the floodwaters at Ho-chien.

In 1319, there was a great drought in the vicinity of Shanghai, *China*.<sup>166</sup>

*Also refer to the section 1310 A.D. – 1319 A.D. for information on the famine in Germany during that timeframe.*

---

**1320 A.D.** In 1320, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 9 May and 6 June, floods struck Anhwei (now Anhui province) in eastern *China* at Po, Shou and Ho-fei. At Shou and Ho-fei, crops were damaged by the floodwaters.

— During the period between 7 June and 6 July, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling.

— During the period between 7 July and 4 August, floods struck Hupeh province at Chiang-ling and Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu. During the same time period, floods from heavy and protracted rains struck Shantung (now Shandong province) on the east coast of *China* at Hui-min and Tê and as a result, the fields were damaged.

— During the period between 5 August and 2 September, floods struck Anhwei province at Fou-yang, and Honan (now Henan province) in central *China* at Hsi and Shang-ts'ai.

— During the period between 3 September and 2 October, floods struck Hopei (now Hebei province) in northern *China* at Ho-chien, Pa and Wên-an. At Pa and Wên-an, crops were damaged by the floodwaters. During the same time period, floods struck Shansi (now Shanxi province) in northern *China* at Fên-yang and P'ing-yao. Also during this time period, floods struck Suiyuan province (now part of *Inner Mongolia*) at Ordos (Right Wing Vanguard).

— During the period 3-31 October, floods struck Liaoning province located in the southern part of *China's* northeast at Liao-yang. Crops were damaged by the floodwaters.

In 1320 during the period between 7 July and 4 August, a drought engulfed Hupeh (now Hubei province) in central *China* at Ching-mên, Huang-kang and Ch'i-ch'un. Then during the period 3-31 October, a drought engulfed Liaoning province located in the southern part of *China's* northeast at Mukden.<sup>153</sup>

In 1320 during the summer and autumn, there was a drought in Hupeh province in *China*. There were floods in the city of Moukden [now Shenyang].<sup>165</sup>

In 1320, there was a famine in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**Winter of 1320 / 1321 A.D.** During the period between 30 December 1320 and 28 January 1321, floods struck several regions of *China* including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Kaifeng, Nan-yang and Yüan-wu.

— Hopei (now Hebei province) in northern *China* at Wên-an. Houses and fields were damaged by the floodwaters.

— Suiyuan province (now part of *Inner Mongolia*) at Ordos (Right Wing Vanguard). Houses and fields were damaged by the floodwaters.

---

**1321 A.D.** Ho-nan *China* [now Hénán Province, in northeastern, central *China*] experienced a severe drought that produced famine.<sup>28</sup>

In 1321, droughts affected many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 9 November, a drought engulfed Yunnan province in southwest *China* at Ho-hsi.

— During the period between 28 April and 27 May, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at I-ch'un; Szechwan (now Sichuan province) in southwest *China* at Hsi-ch'ang; and Anhwei (now Anhui province) in eastern *China* at Kuang-tê. As a result, the land tax was remitted.

— During the period between 28 May and 25 June, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu.

— During the period between 26 June and 24 July, a drought engulfed Kiangsi province at Ch'ing-chiang; and Shansi (now Shanxi province) in northern *China* at Tatung. Twenty percent of the land tax was remitted.

In 1321 during the summer, there was a drought in Chihli, Kiangsi, Kiangsu and Shansi provinces in *China*. The land tax was remitted.<sup>165</sup>

In 1321 during the period between 26 June and 24 July, floods struck Hopei (now Hebei province) in northern *China* at Pa. Then during the period between 25 July and 23 August, floods struck many regions of *China* including:<sup>153</sup>

— Liaoning province located in the southern part of *China's* northeast at Liao-yang and K'ai-yüan.

— Hopei province at Shun-i, Hsing-t'ai, T'ung, Cho, An-kuo, P'ing-ku, Peiping, Chêng-ting, Ta-ming, Lu-lung, Sha-ho, Ku-an, Yüan-shih, Pao-ti, Ch'ing-ho, An-tz'ü, and Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]

— Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an.

— Shantung (now Shandong province) on the east coast of *China* at Hui-min, Chü-yeh, Tung-p'ing, Liao-ch'êng, Kao-t'ang, Ho-tsê, and P'u.

— Jehol (formally Rehe province) at Karach'in (Left Wing). Rehe is located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*.

— *Outer Mongolia*.

— Honan (now Henan province) in central *China* at An-yang and Lin-chang.

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien-chiang.

Then during the period between 24 August and 21 September, floods struck many regions of *China* including:

— Hupeh (now Hubei province) in central *China* at Chung-hsiang. Houses were damaged by the floodwaters.

— Kwangtung province at Kao-yao.

— Kiangsu province at Kao-yu, Hsing-hua, Huai-an and Yen-ch'êng. Fields were damaged by the floodwaters.

— Kwangtung province at Hai-k'ang and Sui-ch'i. Fields were damaged by the floodwaters.

— Hupeh province at Chung-hsiang. Fields were damaged by the floodwaters.

In *England*, there was the greatest drought, with heat.<sup>47, 72</sup>

The summer of 1321 [in *England*] was extremely hot and dry. The springs and the rivers were dried up. The domestic animals and the cattle suffered greatly. Many unfortunates died from lack of water to quench their thirst.<sup>62, 72</sup>

In *England*, there was famine again.<sup>57, 91</sup>

**1322 A.D.** In 1322, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 20 December 1321 and 17 January 1322, floods struck Hopei (now Hebei province) in northern *China* at Chêng-ting, Pao-ting, Ta-ming, Hsing-t'ai, and T'ung; Honan (now Henan province) in central *China* at Shang-ch'iu; and Liaoning province located in the southern part of *China's* northeast at Liao-yang.

— During the period between 18 January and 16 February, floods struck Honan province at Lan-fêng. Crops were damaged by the floodwaters.

— During the period between 17 February and 17 March, floods struck Hopei province at Hsing-t'ai.

— During the period between 18 March and 16 April, floods struck Shantung (now Shandong province) on the east coast of *China* at P'u.

— During the period between 17 May and 14 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Sung-chiang and Shanghai.

— During the period between 15 June and 14 July, floods struck Honan province at Shang-ch'iu.

— During the period between 15 July and 12 August, floods struck Hunan province in south-central *China* at Yüan-ling. Houses were damaged by the floodwaters. During the same time period, floods struck Shensi (now Shaanxi province) in central *China* at Pin, Sian and Mei; Honan province at Shang-ch'iu; and Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê.

— During the period between 13 August and 11 September, floods struck Kiangsu province at Huai-an.

— During the period between 12 September and 10 October, floods struck Anhwei (now Anhui province) in eastern *China* at Ho-fei, Liu-an and Shu-ch'êng.

— During the period between 11 October and 9 November, floods struck Szechwan (now Sichuan province) in southwest *China* at Wu-ch'i [uncertain name]; and Kirin (now Jilin province) in northeast *China* at Ninguta. At Ninguta, crops were damaged by the floodwaters.

— During the period between 9 December 1322 and 7 January 1323, floods struck Kiangsu province at Soochow. Fields were damaged by the floodwaters.

In 1322, droughts affected several regions of *China* including:<sup>153</sup>

— During the period between 17 February and 17 March, a drought engulfed Hopei (now Hebei province) in northern *China* at Hsing-t'ai.

— During the period between 18 March and 16 April, a drought engulfed Hopei province at Ho-chien, Loyang and Sian.

— During the period between 17 April and 16 May, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Shanghai.

— During the period between 15 June and 14 July, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Hsing-tzũ.

— During the period between 15 July and 12 August, a drought engulfed Kiangsu province at Yangchow and Huai-an.

— During the period between 9 December 1322 and 7 January 1323, a drought engulfed Kansu (now Gansu province) in northwest *China* at Min.

In 1322 during the spring, summer and winter, there was a drought in Chihli, Honan, Kiangsu, Shensi Sze-ch'wan and Yünnan provinces in *China*. Half of the land tax was remitted in Chihli, Honan and Shensi.<sup>165</sup>

---

**1323 A.D.** In 1323, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 8 January and 5 February, floods struck Anhwei (now Anhui province) in eastern *China* at Hsi, Ho-fei and Shou; Shantung (now Shandong province) on the east coast of *China* at Tsinan; Hopei (now Hebei province) in northern *China* at Chêng-ting, Ho-chien and Ta-ming; Honan (now Henan province) in central *China* at Shang-ch'iu, Ju-nan and Loyang; and Kansu (now Gansu province) in northwest *China* at Lung-hsi.

— During the period between 4 June and 3 July, floods struck Hopei province at An-tz'ü, Yung-ch'ing, Chêng-ting and Wu-i. At An-tz'ü, the fields were damaged by the floodwaters. At Chêng-ting and Wu-i, the floods were caused by heavy rains and the crops were damaged by the floodwaters.

— During the period between 4 July and 2 August, floods struck Hopei province at I, An-hsin, Ts'ang, Jên-ch'iu, Pa and An-kuo. The fields were damaged by the floodwaters.

— During the period 3-31 August, floods caused by heavy rains struck Hopei province at T'ung. Crops were damaged by the floodwaters.

— During the period 1-29 October, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Lung-ch'i and Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'êng and Hsing-tzû.

In 1323, droughts affected several regions of *China* including: <sup>153</sup>

— During the period between 8 January and 5 February, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Loyang. During the same time a drought engulfed Yunnan province in southwest *China* at Chao-tung.

— During the period between 6 April and 5 May, a drought engulfed *China*.

— During the period between 6 May and 8 August, a severe drought engulfed Hopei province at Hsing-t'ai and Chêng-ting. During the same time, a drought engulfed Shansi (now Shanxi province) in northern *China* at Yang-ch'ü.

— During the period between 17 May and 14 June, a drought engulfed Shansi province at Tatung and Tai.

— During December, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Shou.

[Source gives time period as 12/29-12/27. As a result, timeframe is unclear.]

In 1323 during the summer, there was a drought in Chihli and Shansi provinces in *China*. In Chihli, this was a great drought. <sup>165</sup>

**Winter of 1323 A.D. / 1324 A.D.** The winter in 1323 was intensely cold and the *Baltic Sea* was so firmly covered with ice, from Mecklenburg, *Germany* to *Denmark*, that merchandise was conveyed over the *Baltic Sea* with horses and wagons. <sup>1</sup> [Mecklenburg was a historical region in northern *Germany*. The largest port cities of the region at this time were Rostock and Schwerin.]

In 1323, the *Baltic Sea* was frozen over, and during three months travelers passed from the continent to *Sweden* on the ice. Heavy wagon trains were substituted for the traveling vessels. <sup>63</sup>

In 1323, the *Baltic Sea* was frozen and passable to travelers for six weeks. <sup>90, 93</sup>

In 1323, a severe winter struck *Denmark*. The *Baltic Sea* was frozen. <sup>28</sup>

The winter of 1323 was a severe winter in the Baltic. The Sea between *Denmark* and Rügen, *Germany* was covered with thick ice. People would walk the distance of 8 miles between these two points. Huts were erected on the ice, where one could buy food and drink. This frozen passage was used for 10 weeks. <sup>172</sup>

The winter of 1323 was a very cold winter. At the end of February, the Elbe River stood hard like a rock. People traveled all over the ice from Teutschland [*Germany*] and the [frozen] *Baltic Sea*. <sup>172</sup>

In 1323, the *Baltic Sea* was frozen over and passable for foot passengers and horsemen for six weeks. <sup>30, 41, 42, 43, 47</sup>

In 1323, the Rhône River in *France* froze. <sup>58, 80</sup>

In 1323, the Po River in *Italy* froze.<sup>58, 80</sup>

In 1323, the Rhône River in *France* froze. In the *Baltic Sea*, travelers pass on foot and on horseback on the ice between *Denmark* and Lübeck in northern *Germany* and Danzig (now Gdańsk, *Poland*).<sup>60, 62</sup>

The Rhône River in southern *France* froze in 1323.<sup>79</sup>

In 1324, it was possible to travel from *Denmark*, Lübeck and Danzig on the ice.<sup>38</sup>

In the year 1323 the winter was very hard in *France* and *Germany*. In February, a lot of snow fell.<sup>62</sup>

**1324 A.D.** In 1324, there was a great flood in *China*. The Yellow River cut a new course to the sea.<sup>142</sup>

In 1324, droughts affected several regions of *China* including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking and in an area south of Chin-kiang.

— Chekiang (now Zhejiang province) on the east coast of *China*. The drought was severe.

— Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng and Kuang-tê.

— During the period between 26 March and 23 April, a drought engulfed Kansu (now Gansu province) in northwest *China* at Lanchow and Lin-t'ao; and Shansi (now Shanxi province) in northern *China* at Yang-ch'ü, Li-shih and Chung-yang.

— During the period between 22 June and 21 July, a drought engulfed Hopei (now Hebei province) in northern *China* at Ho-chien and Chin; Kansu province at Ning and Ching-ch'uan; Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow; Anhwei (now Anhui province) in eastern *China* at Shou; Hupeh (now Hubei province) in central *China* at Wuchang; and Honan (now Henan province) in central *China* at Loyang. The drought was severe in Chekiang and Hopei.

— During the period between 19 September and 18 October, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Hsi-ch'ang.

In 1324, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 24 April and 22 May, floods struck Suiyuan province (now part of *Inner Mongolia*) at Mongolian Urad Banner; and Yunnan province in southwest *China* at K'un-ming.

— During the period between 23 May and 21 June, floods due to heavy and protracted rains struck Kansu (now Gansu province) in northwest *China* at Lung-hsi. Over 500 families were flooded. During the same time period, floods struck Chahar province (now eastern *Inner Mongolia*) at Yen-ch'ing. Crops were damaged by floodwaters. Also during this time period, floods struck Hopei (now Hebei province) in northern *China* at T'ung and Ku-an.

Also in 1324 during the period between 22 June and 21 July, floods struck many regions of *China* including:<sup>153</sup>

— Shansi (now Shanxi province) in northern *China* at Tatung.

— Hopei province at Chêng-ting.

— Shensi (now Shaanxi province) in central *China* at Sian.

— Szechwan (now Sichuan province) in southwest *China* at Ch'ü.

— Shantung (now Shandong province) on the east coast of *China* at I-tu, Tsinan, Lin-ch'ü, Liao-ch'êng, Tung-p'ing, Chü-yeh, Ho-tsê, P'u, Kao-t'ang and Tê. Houses and fields were damaged by the floodwaters.

— Honan (now Henan province) in central *China* at Huai-yang. Crops were damaged by the floodwaters.

— Shansi province at Fên-yang. Crops were damaged by the floodwaters.

— Hopei province at Shun-i, Chin and Shen. Crops were damaged by the floodwaters.

— Shantung province at Ên. Crops were damaged by the floodwaters.

Then during the period between 22 July and 19 August, floods struck the following regions of *China*:

- Shensi province at Ch'ao-i.
- Shantung province at Ts'ao.
- Hopei province at P'u-yang, Ku-an, Jên, Ting, Ta-ming.
- In Hopei province floods due to heavy and protracted rains struck Chêng-ting, Ho-chien, Pao-ting and Yung-nien. The crops were damaged by the floodwaters.

Then during the period between 19 September and 18 October, floods struck in several regions of *China* including:

- Shensi province at Sian.
- Fukien (now Fujian province) on the southeast coast of *China* at Nan-p'ing.
- Shantung province at P'u and Kuan-t'ao.

In 1324 during the spring and summer, there was a drought in Anhwei, Chêhkiang, Chihli, Honan, Hunan, Hupeh, Kansuh, Kiangsu, Kiangsi and Shensi provinces in *China*. There were great floods in Chêhkiang and Chihli.<sup>165</sup>

**Winter of 1324 A.D. / 1325 A.D.** During the period between 17 December 1324 and 14 January 1325, floods struck several regions of *China* including:<sup>153</sup>

- Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng and Kuang-tê. Fields were damaged by the floodwaters.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang, Soochow, Sung-chiang, Nanking and T'ai-ts'ang. Fields were damaged by the floodwaters.
- Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, Hu-chou, Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'ü, Chien-tê, Wên-chou, Li-chui and Yüeh-ch'ing. Fields were damaged by the floodwaters.
- Chekiang province at Hai-ning. The dikes were damaged by the flood.

**1325 A.D.** The Seine River in *France* froze twice at short intervals. The river was crossed with sleds with heavy loads.<sup>62</sup>

The cold winter of 1325 in *France* was so severe that the Seine River froze twice in a short time. The ice on the river was thick enough to support the weight of men and full barrels.<sup>79</sup>

During this winter of 1325, the cold was very great. It was even mentioned in the minutes of the Parliament of Dijon, *France*. In Paris, the ice conditions of the Seine River were so violent that the two wooden bridges were carried away.<sup>62</sup>

The extreme cold during the winter of 1325 quickly froze the Seine River twice. We crossed the frozen river at Paris, *France* with a burden [carrying weight]. The strength at its surface was strong enough to support rolling barrels full of wine over the ice. Large snow accompanied the frost. The ice melted completely at Easter.<sup>79</sup>

[In *Western Europe*] the summer of 1325 was extremely hot.<sup>62</sup>

The drought was so great in the year 1325 in *France* that there was barely two days worth of rain in the course of four moons [4 months].<sup>79</sup>

In 1325 in *France*, there was excessive heat with a severe drought, but no lightning or thunderstorms. The year produced little fruit. Only the wines were better than usual.<sup>79</sup>

In *England*, the earth was very fruitful. Air temperature and sea calm.<sup>72</sup>

In 1325, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 15 January and 13 February, floods struck Szechwan (now Sichuan province) in southwest *China* at Fêng-tu; Shantung (now Shandong province) on the east coast of *China* at Hui-min; Hopei (now Hebei province) in northern *China* at Peiping and Pao-ti; Kansu (now Gansu province) in northwest *China* at Lung-hsi; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Kao-yao.

— During the period between 14 February and 14 March, floods struck Hopei province at Hsiung.

— During the period between 15 March and 13 April, floods struck Kansu province at Chang-yeh. Cattle drowned.

— During the period between 14 April and 12 May, floods struck Liaoning province located in the southern part of *China's* northeast at K'ai-yüan.

— During the period between 13 May and 10 June, floods struck Hopei province at Fang-shan and Cho; Kansu province at Min, Lin-t'an and Wu-tu; and Szechwan province at Mao.

— During the period between 11 June and 10 July, floods struck Hopei province at Peiping and Mi-yün; Honan (now Henan province) in central *China* at Kaifeng; Hupeh (now Hubei province) in central *China* at Chiang-ling and Kung-an; Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu, Hsing-hua, Soochow, Sung-chiang and T'ai-ts'ang; and Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou.

— During the period between 11 July and 8 August, floods struck Sinkiang (now Xinjiang province) in far northwestern *China* at Chen-hsi; Liaoning province at Liao-yang; Hopei province at San-ho, Szechwan province at San-t'ai; Shansi (now Shanxi province) in northern *China* at Yang-ch'ü; Honan province at Shang-ch'iu and Yü-ch'êng; Anhwei (now Anhui province) in eastern *China* at Su; Shantung province at Chü-yeh and Shan; Suiyuan province (now part of *Inner Mongolia*) at Tokto; and Kiangsu province at Tang-shan and P'ei. [P'ei is located at longitude 117.00° East and latitude 34.47° North.]

— During the period between 9 August and 7 September, floods struck Honan province at Sui.

— During the period between 8 September and 7 October, floods struck Honan province at Chi; and Hopei province at Pa, Cho, Yung-ch'ing and Hsiang-ho. In Hopei province, crops were damaged by floodwaters.

— During the period between 8 October and 6 November, floods struck Liaoning province at K'ai-yüan.

— During the period between 7 November and 5 December, heavy and protracted rains caused floods in Ningsia (now Ningxia province) in northwest *China* on the Loess Plateau at Chung-wei.

— During the period between 6 December 1325 and 4 January 1326, floods struck Hunan province in south-central *China* at Ch'ang-tê.

In 1325, droughts affected several regions of *China* including:<sup>153</sup>

— During the period between 14 April and 12 May, a drought engulfed Hupeh (now Hubei province) in central *China* at Ching-mên.

— During the period between 11 June and 10 July, a drought engulfed Hupeh province at Yang-hsin; and Hunan province in south-central *China* at Changsha and Ch'a-ling. As a result, the land tax was remitted.

— During the period between 11 July and 8 August, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsin-hsing. As a result, the land tax was remitted.

— During the period between 11 July and 8 August, a drought engulfed Hopei (now Hebei province) in northern *China* at Hsing-t'ai; Honan (now Henan province) in central *China* at Lin-ju, Ju-nan and Kaifeng; Hupeh province at An-lu and Sui; and Shantung (now Shandong province) on the east coast of *China* at Ên. As a result, the land tax was remitted.

In 1325 during the spring and summer, there was a drought in Chihli, Honan and Hupeh provinces in *China*. The land tax was remitted.<sup>165</sup>

**1326 A.D.** On 30 January 1326, there was a great earthquake in southern *Germany*. There were very cold temperatures and the Lake Constance froze over. This was followed by a hot summer and a poor harvest.<sup>172</sup>

In 1326, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 3 February and 4 March, floods struck Shantung (now Shandong province) on the east coast of *China* at Ên.

— During the period between 5 March and 2 April, floods struck Honan (now Henan province) in central *China* at Shang-ch'iu.

— During the period 1-29 June, floods struck Anhwei (now Anhui province) in eastern *China* at Tang-t'u; and Kiangsu (now Jiangsu province) on the east coast of *China* at Hsing-hua and Yangchow.

— During the period between 30 June and 29 July, floods struck Honan province at Shang-ch'iu, Ju-nan and Huang-ch'uan; and Shansi (now Shanxi province) in northern *China* at Tatung.

— During the period between 30 July and 27 August, floods struck Honan province at Yang-wu and Chêng. Over 16,500 families were flooded. During the same time period, floods struck Shensi (now Shaanxi province) in central *China* at Fu-shih. Ninety families were flooded. During this same time, floods struck Hopei (now Hebei province) in northern *China* at Lu-lung and Peiping; Shansi province at Tatung; and Honan province at Kaifeng. Also during this time, floods struck several regions causing crop damage. These regions included Honan province at An-tz'ü and Hopei province at Mi-yün, Shun-i and T'ung.

— During the period between 28 August and 26 September, floods struck Kiangsu province at Yangchow and Ch'ung-ming. At Yangchow, the floods were caused by a typhoon and many people drowned.

Floods also caused by a typhoon struck Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning. This flood damaged the dikes. During the same time period, floods struck Anhwei province at Wu-wei, Ho and Han-shan; Hopei province at Chêng-ting and Li; and Shensi province at P'u-ch'êng and Sian.

— During the period between 27 September and 25 October, floods struck Kiangsu province at Yangchow; Anhwei province at Hsüan-ch'êng; Shansi province at Fên-yang and P'ing-yao.

During the period between 25 November and 24 December, floods struck several regions of *China* including:<sup>153</sup>

— Anhwei province at Po. Fields were damaged by the floodwaters and 800 odd families were flooded.

— Kiangsu province at Ch'ung-ming. Five hundred families were flooded.

— Jehol (formally Rehe province) at P'ing-ch'üan. Rehe is located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*. At P'ing-ch'üan, houses and fields were damaged by the floodwaters and many people drowned.

— Liaoning province located in the southern part of *China's* northeast at Chin-chou. The fields were damaged by the floodwaters and 100 people drowned.

— Liaoning province at Liao-yang. The flood produced a famine.

— Shensi province at An-k'ang. The flood produced a famine.

— Hopei at Lu-lung.

In 1326, droughts affected several regions of *China*. As a result of the hardship, the land tax was remitted. The regions affected include:<sup>153</sup>

— During the period between 6 May and 8 August, a drought engulfed Hopei (now Hebei province) in northern *China*; and Honan (now Henan province) in central *China* at Loyang.

— During the period 1-29 June, a drought engulfed Anhwei (now Anhui province) in eastern *China*; Kiangsu (now Jiangsu province) on the east coast of *China*; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Yü-lin. Ho-fei in Anhwei province was affected by the drought.

— During the period 30 June and 29 July, a drought engulfed Hupeh (now Hubei province) in central *China* at I-ch'ang and An-lu; Anhwei province at Ho-fei; Kwangsi province at Ts'ang-wu; and Yunnan province in southwest *China* at K'un-ming.

— During the period 30 July and 27 August, a drought engulfed Hopei province at Ta-ming and Lu-lung; and Shensi (now Shaanxi province) in central *China* at Sian and the central part of the province.

— During the period 27 September and 25 October, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yang-chiang.

— During the period 25 November and 24 December, a drought engulfed Honan province at Hsiu-wu and Hupeh province at Mien-yang.

In 1326 during the summer, there was a drought in Anhwei, Chihli, Honan, Sze-ch'wan, Kwangsi and Shensi provinces in *China*. The drought was accompanied by a plague of locusts. The land tax was remitted.<sup>165</sup>

**Winter of 1326 A.D. / 1327 A.D.** During the period between 25 December 1326 and 23 January 1327, floods struck several regions of *China* including:<sup>153</sup>

— Liaoning province at Liao-yang.

— Jehol province at P'ing-ch'üan and Kiangsi province at Kao-an. Fields and houses were damaged by the floodwaters and 150 people drowned.

**1327 A.D.** In 1327, there was a famine in *Great Britain*. Owing to a succession of cold rainy harvests, the whole kingdom experienced a most grievous famine.<sup>212</sup>

In 1327, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 24 January and 21 February, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning. The flood damaged the dikes. Also during this time frame, floods struck Jehol (formally Rehe province) at P'ing-ch'üan. Rehe is located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*.

— During the period between 22 April and 21 May, floods struck Chekiang at Hai-ning. The flood damaged the dikes.

— During the period between 20 June and 18 July, floods struck Honan (now Henan province) in central *China* at Kaifeng and An-tz'ü; and Hopei (now Hebei province) in northern *China* at Peiping, Ku-an, T'ung, Shun-i, Mi-yün, Yung-ch'ing, Liang-hsiang and Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]

— During the period between 19 July and 17 August, floods struck Chahar province (now eastern *Inner Mongolia*) at Ch'ih-ch'êng; Chekiang province at Ch'ü; Liaoning province located in the southern part of *China's* northeast at Liao-yang; and Szechwan (now Sichuan province) in southwest *China* at Yün-yang.

— During the period between 18 August and 15 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, Ch-ung-ming and Hai-mên; and Chekiang province at Chien-tê, Hangchow and Ch'ü. During the same time period, floods struck Shantung (now Shandong province) on the east coast of *China* at Chü-yeh and Honan province at Yü-ch'êng damaging crops. Also during this same time, floods struck Honan province at Kaifeng, Fu-kou and Lan-fêng where houses and fields were damaged by the floodwaters.

In 1327, droughts affected many regions of *China*. As a result the land tax was remitted. The regions affected include:<sup>153</sup>

— Honan (now Henan province) in central *China* at Kaifeng, Nan-yang and Ju-nan.

— Shensi (now Shaanxi province) in central *China* at Fu-shih.

— Hupeh (now Hubei province) in central *China* at I-ch'ang.

- During the period between 22 February and 23 March, a drought engulfed Shensi province at Sian, Pin, Li-ch'üan and Ch'un-hua; and Hopei province at Hsing-t'ai and T'ang-shan.
- During the period between 22 May and 19 June, a drought engulfed Hopei province at Peiping; Honan province at Nan-yang and Ju-nan; and Anhwei (now Anhui province) in eastern *China* at Ho-fei.
- During the period between 20 June and 18 July, a drought engulfed Honan province at Ju-nan; Shansi (now Shanxi province) in northern *China* at Ch'ang-chih and Huo; and Shensi province at Sui-tê.
- During the period between 19 July and 17 August, a drought engulfed Shensi province at Fu-shih.
- During the period between 18 August and 15 September, a drought engulfed Hopei province at Chin and Chêng-ting; Kansu (now Gansu province) in northwest *China* at Ning; Shensi province at Fu-shih; Honan province at Loyang; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at T'êng.
- During the period between 14 November and 13 December, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang.
- During the period between 14 December 1327 and 12 January 1328, a drought engulfed Hopei province at Lu-lung.

In 1327 during the summer, autumn and winter, there was a drought in Anhwei, Chihli, Honan, Shansi, Sze-ch'wan, Shantung and Shensi provinces in *China*. The land tax was remitted.<sup>165</sup>

In 1327 A.D., there was a famine in Delhi and its neighborhood in *India*. During this famine, women ate the skin of horses that had been dead for several months. The skins were cooked and sold in the marketplace. Crowds fought over the blood at the slaughterhouse.<sup>179, 181</sup>

---

**1328 A.D.** In 1328, floods struck many regions of *China* including:<sup>153</sup>

- During the period between 13 January and 11 February, floods struck Honan (now Henan province) in central *China* at Chung-mou, Kaifeng and Shang-ch'iu; Anhwei (now Anhui province) in eastern *China* at Su; and Kiangsu (now Jiangsu province) on the east coast of *China* at P'ei. [P'ei is located at longitude 118.03° East and latitude 34.30° North.]
- During the period between 11 April and 9 May, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning. The dikes were damaged by the floodwaters. During this same time period, floods struck Kiangsu province at Tang-shan and Honan province at Yü-ch'êng.
- During the period between 10 May and 8 June, floods struck Chekiang province at Hai-ning. Then during the period between 8 July and 5 August, heavy rains caused floods in many areas of *China* including:
  - Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Nanning.
  - Southern *Indo-China*.
  - Liaoning province located in the southern part of *China's* northeast at K'ai-yüan.
  - Hopei (now Hebei province) in northern *China* at Lu-lung and Ho-chien.
  - Shantung (now Shandong province) on the east coast of *China* at Tsinan, Lin-ch'ü, Chü-yeh, P'u, Tung-p'ing, Tê, and T'ai-an. Crops were damaged by the floodwaters.
- Then during the period between 6 August and 4 September, floods struck Yunnan province in southwest *China* at Lu-hsi; Kiangsu province; Anhwei province; and Kiangsi province.

In 1328, severe droughts affected many regions of *China* including:<sup>153</sup>

- During the period between 13 January and 11 February, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping, Pao-ting and Chêng-ting; Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing and Tsinan; and Honan (now Henan province) in central *China* at Ch'in-yang.
- During the period between 12 March and 10 April, a severe drought engulfed Hopei province at Yung-nien; and Honan province at An-yang.

— During the period between 9 June and 7 July, a severe drought engulfed Kansu (now Gansu province) in northwest *China* at Ling-t'ai.

— During the period between 8 July and 5 August, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Chiang-ling.

— During the period between 5 September and 3 October, a severe drought engulfed Shensi (now Shaanxi province) in central *China* at Sian. The drought was so severe that cannibalism was practiced.

In 1328 during the summer in Honan, Kiangsu and Shensi provinces in *China*, there was a great drought. The resulting famine was so severe that it led to cannibalism in Shensi.<sup>165</sup>

At the beginning of October 1328, the eve of Saint-Denis and during the octave of the feast, strong winds toppled many buildings in *France*.<sup>79</sup>

In 1328, it was so cold that the Danube River in *Europe* was frozen over for 17 weeks. It was a fruitful year, but again and again earthquakes.<sup>172</sup>

**1329 A.D.** In 1329, floods struck many regions of *China* including:<sup>153</sup>

— During the period 1-30 January, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, Hu-chou and Chien-tê; Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Chinkiang; and Anhwei (now Anhui province) in eastern *China* at Kuei-ch'ih, Tang-t'u and Kuang-tê. Fields were damaged by the floodwaters.

— During the period 28 June and 26 July, floods struck Honan (now Henan province) in central *China* at Shang-ch'iu; Hopei (now Hebei province) in northern *China* at Lu-lung; and Kiangsu province at Yangchow, Suchow and P'ei. [P'ei is located at longitude 118.03° East and latitude 34.30° North.] During the same time period, heavy rains caused crop damage at Honan province at An-tz'ü and Hopei province at Peiping, T'ung, Pa, Ching-hai, Ho-chien, and Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]

In 1329, droughts affected many regions of *China* including:<sup>153</sup>

— During the period between 30 April and 28 May, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian; and Honan (now Henan province) in central *China* at Loyang.

— During the period between 6 May and 8 August, a drought engulfed Hopei (now Hebei province) in northern *China* at Chêng-ting, Ho-chien, Ta-ming, Yung-nien and I-ch'ang.

— During the period between 6 May and 8 November, a drought engulfed Hupeh (now Hubei province) in central *China* at Ch'i-ch'un.

— During the period between 25 August and 23 September, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou; Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, T'ai-ts'ang and Nanking; Anhwei (now Anhui province) in eastern *China* at Tang-t'u, Hsüan-ch'êng, Kuang-tê and Kuei-ch'ih; and Kiangsi (now Jiangxi province) in southern *China* at P'o-yang.

— During the period between 23 October and 20 November, a drought engulfed Hunan province in south-central *China* at Ch'ang-tê and Li; Hupeh province at Wuchang; and Kiangsi province at Kao-an, Nan-ch'ang, Hsing-tz'ü, Lin-ch'uan, I-ch'un, and Chi-an.

— During the period between 21 December 1329 and 19 January 1330, a drought engulfed Shansi (now Shanxi province) in northern *China* at Yang-ch'ü; Hupeh (now Hubei province) in central *China* at Huang-kang; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yang-chiang.

**1330 A.D.** In *England* and *Wales*, the land was so inundated with continuous rains that scarcely an article of food was raised.<sup>1</sup>

The rain was so violent; the harvest did not begin till Michaelmas (29 September).<sup>2, 39, 40, 41, 56</sup>

In *England*, heavy rains; grain did not ripen; harvest not commenced till Michaelmas.<sup>47, 92</sup>

In *England*, exceedingly great rains fell from May to October. The corn [grains] could not ripen. In most places, harvest did not begin until 29 September. Wheat was not harvested before 21 November. Nor pease [pea] before 30 November. On 24 December at the break of day, a terrible hurricane came from the west, which demolished houses, trees, etc.<sup>72</sup>

*China* experienced floods that ruined harvest and produced famine.<sup>28</sup>

In 1330, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 18 May and 16 June, floods struck Hopei (now Hebei province) in northern *China* at Peiping. Crops were damaged by the floodwaters.

— During the period between 17 June and 15 July, floods struck Hopei province at Ta-ming. Fields were damaged by the floodwaters. During the same time period, floods struck Hopei province at Peiping and Shantung (now Shandong province) on the east coast of *China* at Kao-t'ang and Ho-tsê.

— During the period between 16 July and 14 August, floods struck Hopei province at Ho-chien.

Then during the period between 15 August and 12 September, floods damaged fields at:

— Hopei province at Peiping and Pao-ting.

— Jehol (formally Rehe province) at P'ing-ch'üan. Rehe is located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*.

— Shantung at I-tu.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Ningpo and Shao-hsing. Also at Chia-hsing and Hu-chou both houses and fields were damaged by the floodwaters.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin and Chinkiang. Also at Sung-chiang and Soochow both houses and fields were damaged by the floodwaters.

— Anhwei (now Anhui province) in eastern *China* at Hsüan-ch'êng, An-ch'ing and Kuei-ch'ih.

— Hunan province in south-central *China* at Ch'ang-tê.

— Hupeh (now Hubei province) in central *China* at Ching-mên.

Then during the period between 13 October and 10 November, floods struck Liaoning province located in the southern part of *China's* northeast at Liao-yang and Kirin (now Jilin province) in northeast *China* at Ninguta.

In 1330 during the 7<sup>th</sup> moon, there was destruction [by flooding] of 36,600 chin = 61,000 acres in the vicinity of Shanghai, *China*. Over 45,000 families suffered in this and adjoining regions.<sup>166</sup>

In 1330, several regions of *China* experienced drought. As a result the land tax was remitted. The drought was accompanied by a plague of locusts. The following areas were affected:<sup>153</sup>

— During the period between 16 July and 14 August, a drought engulfed Liaoning province located in the southern part of *China's* northeast at K'ai-yüan; Shansi (now Shanxi province) in northern *China* at Tatung, Yang-ch'ü and Yü-tz'ü; Hopei (now Hebei province) in northern *China* at Chêng-ting, Yung-nien and Tz'ü; Kirin (now Jilin province) in northeast *China* at Fu-yü; Jehol (formally Rehe province) at Luan-p'ing; and Suiyuan province (now part of *Inner Mongolia*) at Tokto and Mongolian Mow-Mingan Banner.

— During the period between 13 October and 11 November, a drought engulfed Mongolia [uncertain name – T'ieh-li-kan-mu].

In 1330 during the summer and autumn, there was a drought in Anhwei, Chêhkiang, Chihli, Honan, Hunan, Hupeh, Kiangsi, Shantung, Shensi and Sze-ch'wan provinces in *China*. The land tax was

remitted. The drought was accompanied by a plague of locusts. There was a great drought in *Mongolia*. The resulting famine was so severe that it led to cannibalism in Honan.<sup>165</sup>

**Winter of 1330 / 1331 A.D.** The winter of 1330-31 in *France* produced long rains, which had lasted from the beginning of November 1330 until the beginning of 1331.<sup>79</sup>

During the winter of 1330-31 in *France*, the weather produced heavy rains and strong winds, which resulted in floods. These rains began in November 1330 and continued until March.<sup>79</sup>

There was early in October 1330 in *France*, a very heavy frost. Then since the beginning of November, there were almost constant high winds with heavy rains and floods. The rains lasted until the end of March.<sup>79</sup>

**1331 A.D.** *Ireland* in 1331 was grievously distressed by a famine. But in Dublin, *Ireland*, they were seasonably relieved by a shoal of fishes, called thurlheds, washed ashore. This had not been witnessed there for many ages before.<sup>72</sup>

In 1331 in *France*, a drought followed the wet winter.<sup>79</sup>

In France the rains lasted until the end of March. They were followed by an extraordinary drought in 1331. The grapes harvested in 1331 were in small quantities and the wine was detestable.<sup>79</sup>

Following the long rains that lasted until the beginning of 1331 was a severe drought in *France*. Farmers could not plow the land because of its hardness.<sup>79</sup>

There were very large floods in September 1331, in Aragon [now in Spain] and Provence [now *France*]. The rest of *France* felt no such thing, although the winter was very mild and rainy.<sup>79</sup>

In 1331, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 8 May and 5 June, floods struck Hopei (now Hebei province) in northern *China* at T'ung and Shansi (now Shanxi province) in northern *China* at Lu-ch'êng.

— During the period between 6 June and 5 July, floods struck Ningsia (now Ningxia province) in northwest *China* on the Loess Plateau at Ning-hsia; Szechwan (now Sichuan province) in southwest *China* at P'êng-shui; Hopei province at Pao-ting and Ho-chien; and Hupeh (now Hubei province) in central *China* at An-lu.

— During the period between 6 July and 3 August, floods struck Hopei province at Peiping, Pao-ting, Chêng-ting and Ho-chien; Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng; Honan (now Henan province) in central *China* at An-yang and Lin-chang.

— During the period between 4 August and 3 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou. One hundred ninety persons drowned. During the same time period, floods struck Hupeh province at Hanyang and Hopei province at Peiping and Ho-chien.

— During the period between 3 September and 1 October, floods struck Chekiang province at Hangchow. Fields and crops were damaged by the floodwaters.

— During the period 1-29 November, floods struck Chekiang province at Hangchow and Hu-chou and Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow. Crops were damaged by the floodwaters. Also during this same time period, a typhoon struck Kiangsu province at Wu-chiang. 1,970 families were flooded.

— During the period between 30 December 1331 and 27 January 1332, floods struck Hopei province at Shen and Chin.

In 1331 during the 7<sup>th</sup> moon, in the vicinity of Shanghai, *China*, there was a famine, with water calamity

[flood damage].<sup>166</sup>

In 1331, droughts engulfed many regions of *China* including:<sup>153</sup>

- Shensi (now Shaanxi province) in central *China* at An-k'ang.
- Kansu (now Gansu province) in northwest *China* at Hsi-ho.
- Shansi (now Shanxi province) in northern *China* at Yang-ch'ü, Huo, Hsi and Li-shih.
- Honan (now Henan province) in central *China* at Loyang.
- Anhwei (now Anhui province) in eastern *China* at Fou-yang
- Suiyuan province (now part of *Inner Mongolia*) at Liang-ch'êng.
- During the period between 8 May and 5 June, a drought engulfed Hopei (now Hebei province) in northern *China* at Chin and Ho-chien; Kansu province at Ning; and Shansi province at Yang-ch'ü and Tatung.
- During the period between 6 July and 3 August, a drought engulfed Hopei province at Chin; Kansu province at Ning; and Ningsia (now Ningxia province) in northwest *China* on the Loess Plateau at Etzina, the former Torgut Banner.
- During the period between 3 September and 1 October, a drought engulfed Hopei province at Ching.

In 1331 during the summer and autumn, there was a drought in Chihli, Honan and Shansi provinces in *China*.<sup>165</sup>

**Winter of 1331 / 1332 A.D.** The winter of 1331-32 in *France* was rainy but produced very little cold. There were almost no frosts.<sup>79</sup>

**1332 A.D.** *China* experienced heavy rains and floods killing 7 million.<sup>28</sup>

In 1332, floods struck many regions of *China* including:<sup>153</sup>

- During the period between 25 May and 23 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow and T'ai-hsing; Hupeh (now Hubei province) in central *China* at Yün-mêng and Ying-ch'êng; Honan (now Henan province) in central *China* at Sui, Huai-yang, Lan-fêng and Fêng-ch'iu; Hopei (now Hebei province) in northern *China* at Ho-chien; and Shantung (now Shandong province) on the east coast of *China* at I-tu.
- During the period between 24 June and 22 July, floods struck Anhwei (now Anhui province) in eastern *China* at Wu-wei and Ho; and Shansi (now Shanxi province) in northern *China* at Fên-yang.
- During the period between 22 August and 20 September, floods struck Kiangsu province at Pao-ying and Hsing-hua; and Hupeh province at Yün-mêng and Ying-ch'êng.
- During the period between 21 September and 19 October, floods struck Kiangsu province at Fêng, Soochow, Wu-chin, Chinkiang, Sung-chiang and Chiang-yin; Hupeh province at Chiang-ling; and Shantung province at Chü, T'ai-an, Yü-t'ai, Ts'ao and Lin-i. [Lin-i is located at longitude 118.24° East and latitude 35.07° North.]
- During the period between 20 October and 18 November, floods struck Shantung province at Ts'ao. The dikes were damaged.

In 1332, droughts engulfed many regions of *China* including:<sup>153</sup>

- During the period between 6 May and 9 September, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.
- During the period between 12 July and 10 August, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-yin and Yangchow.
- During the period between 22 August and 20 September, a drought engulfed Shansi (now Shanxi province) in northern *China* at Yang-ch'ü and Ho-ch'ü; and in Hupeh (now Hubei province) in central *China* at Ching-mên.

— During the period between 21 September and 19 October, a drought engulfed Honan (now Henan province) in central *China* at Loyang.

— During the period between 8 December 1332 and 5 January 1333, a drought engulfed Kiangsu and Chekiang provinces.

In 1332 during the autumn, there was a drought in Chihli, Honan, Hupeh and Shansi provinces in *China*.<sup>165</sup>

The Rhône River in *France* overflowed its banks and the floodwaters reached the territory of Donzère.<sup>61</sup> [Other sources place this event at 1350 A.D.]

In *Ireland*, a peck of wheat sold for 22s.<sup>57, 91</sup>

### **1333 A.D. – 1337 A.D. China. Famine**

In 1333, in the vicinity of Shanghai, *China*, there was a famine.<sup>166</sup>

The four years between 1333 and 1337 were a period of unimagined suffering throughout *China*. Famine and pestilence laid the whole country waste. Excessive rains caused destructive flooding, and according to Chinese records 4,000,000 people perished from starvation in the neighborhood of Kiang alone.<sup>84</sup> [Kiang likely refers to the province of Jiangsu, located along the east coast of *China*. It is the province with the highest population density in *China*.]

*China* experienced droughts and floods and famine. Four million people killed in floods.<sup>28</sup>

In 1334 A.D. *China* experienced droughts and floods. Thirteen million were killed in the famines and floods in the Southern Provinces.<sup>28</sup>

During 1336 and the two years that followed, there were no harvests in the vicinity of Shanghai, *China*. People boiled and ate their sons and daughters.<sup>166</sup>

In *China* in 1337, a famine occasioned a pestilential epidemic.<sup>57</sup>

**Winter of 1332 / 1333 A.D.** In 1333, once again the winter produced a hard winter [in *Germany*] but not as hard as previous winters.<sup>172</sup>

**1333 A.D.** In Florence in Tuscany in central *Italy* in November, there was a great overflow of the Arno River.<sup>47, 92</sup>

In 1333, torrential flooding along the River Arno in *Italy* swept away the stone bridge Ponte Vecchio, which straddled the river in Florence.

In 1333, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 13 June and 11 July, floods struck Honan (now Henan province) in central *China* at Kiafeng and Yang-wu. Crops were damaged by the floodwaters.

— During the period between 12 July and 10 August, floods struck Shensi (now Shaanxi province) in central *China*; and Honan province at Loyang. During the same time period, floods caused by heavy and protracted rains struck Hopei (now Hebei province) in northern *China* at Peiping. Also during this time, floods caused by heavy rains struck Fukien (now Fujian province) on the southeast coast of *China* at Chin-chiang. As a result several hundred families were flooded at Chin-chiang.

— During the period between 11 August and 9 September, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Kuei-p'ing.

In 1333 during the summer, there was a drought in Chêhkiang and Kiangsu provinces in *China*.<sup>165</sup>

*Also refer to the section 1333 A.D. – 1337 A.D. for information on the famine in China during that timeframe.*

**Winter of 1333 / 1334 A.D.** In 1333-34 the winter was very severe in *Italy* and *Provence*. There was snow in Padua, *Italy* from November to March.<sup>62</sup>

In the year 1334, all the rivers in *Provence* and *Italy* were frozen.<sup>60, 62</sup> At Paris, *France*, the frost lasted two months and twenty days.<sup>38</sup>

The frost of 1334 stopped all the rivers of Italy and Provence, *France*.<sup>79</sup>

The winter of 1334 in *France* was very wet.<sup>79</sup>

In December 1333 and January 1334 in Paris, *France* and the surrounding country great thunder and lightning storms with wind and hail. Storms that were normally found in the month of July.<sup>79</sup>

In 1334, the Po River in *Italy* and the Rhône River in *France* froze.<sup>58, 80</sup>

**1334 A.D.** The summer of 1334 in *France* produced a drought. But the heat was less intense than the previous summer. The year produced many wines.<sup>79</sup>

In *England* on 23 November 1334, there was a prodigious inundation of the sea along the coast, especially about the River Thames. The violence of the water broke down the banks and drowned infinite number of beast and cattle and turned the pasture ground into salt marshes.<sup>72</sup>

In 1334, several earthquakes shook *France*. It was a rainy autumn [in *Germany*] and a hard winter.<sup>172</sup>

In 1334, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 5 March, floods struck Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing, Chi-ning and Ho-tsê.

— During the period between 6 March and 4 April, floods struck Hopei (now Hebei province) in northern *China* at Ch'ien-an and Lu-lung; Jehol (formally Rehe province) at Karach'in (Left Wing); and Kiangsi (now Jiangxi province) in southern *China* at Kao-an.

— During the period between 5 April and 3 May, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Chia-hsing; and Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang, Wu-chin, Sung-chiang and Chiang-yin. The floods were accompanied by a plague. Also during this time, floods caused by heavy rains struck Shantung province.

— During the period between 5 April and 3 May, floods struck Shantung province at I-tu and Tung-p'ing

— During the period between 2 June and 1 July, floods struck Kiangsu province at Chinkiang; and Chahar province (now eastern *Inner Mongolia*) at Hsüan-hua.

— During the period 2-30 July, floods struck Kiangsu at Huai-an. People and cattle were drowned and houses damaged by the floodwaters. During the same time period, floods struck Liaoning province located in the southern part of *China's* northeast at Pei-chên, Liao-yang, K'ai-yüan; and Hei-shan; and Szechwan (now Sichuan province) in southwest *China* at Wu-ch'i [uncertain name]. The floods were accompanied by a plague of locust.

— During the period between 29 September and 27 October, floods struck Kiangsi (now Jiangxi province) in southern *China* at Chi-an.

In 1334, droughts engulfed many regions of *China*. The drought was accompanied by a plague of locusts. The regions affected included:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Wuchang.
- Honan (now Henan province) in central *China* at Loyang.
- Kiangsi (now Jiangxi province) in southern *China* at Hsing-tzū.
- During the period between 6 March and 4 April, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Shou.
- During the period between 5 April and 3 May, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Chia-hsing; and Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang, Wu-chin, Sung-chiang and Chiang-yin. These regions were also affected by floods.
- During the period between 4 May and 1 June, a drought engulfed Kansu (now Gansu province) in northwest *China* at Ch'êng. The drought produced a famine.
- During the period 2-30 July, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Wu-ch'i; and Liaoning province located in the southern part of *China's* northeast at Pei-chên, Liao-yang, K'ai-yüan, Mukden and Hei-shan.

In 1334 during the spring, there was a drought in Chêhkiang, Honan, Hunan, Hupeh and Kiangsu provinces in *China*. The drought was accompanied by a plague of locusts. There was a drought in the city of Moukden [now Shenyang].<sup>165</sup>

*Also refer to the section 1333 A.D. – 1337 A.D. for information on the famine in China during that timeframe.*

**1335 A.D.** It rained so heavy in *England* that the grain was spoiled.<sup>40, 41, 56</sup>

In *England*, continued rainstorms; grain spoiled.<sup>47, 92</sup>

In *England*, famine occasioned by long rains.<sup>57, 90, 91, 212</sup>

[In *England*], there was floods, storms, tempests and meteors.<sup>72</sup>

In *England* after an abundance of rain came a murrain of cattle and dearth of corn [grain]. Wheat sold for 40s. a Quarter [quarter ton]. So great a death in *England*, that scarce could the living bury the dead.<sup>72</sup>

In the Novgorod [*Russia*], autumn ice and snow drifted into the Volkhov River, carrying away fifteen stays of the great bridge.<sup>76</sup>

In 1335, severe droughts engulfed many regions of *China* including:<sup>153</sup>

- During the period between 25 March and 23 April, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at I-shui, Jih-chao, Mêng-yin and Chü. The drought caused a famine.
- During the period between 24 April and 22 May, a severe drought engulfed Honan (now Henan province) in central *China* at Loyang.
- During the period between 6 May and 8 August, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China* at Shao-wu.

In 1335, floods struck Honan (now Henan province) in central *China* at Fêng-ch'iu.<sup>153</sup>

In 1335 during the spring and summer, there was a great drought in Honan and Shantung provinces in *China*.<sup>165</sup>

In 1335 during the 5<sup>th</sup> moon, in the vicinity of Shanghai, *China*, there was a hailstorm. The hailstones varied in size, from water lily seeds to hen's eggs.<sup>166</sup>

*Also refer to the section 1333 A.D. – 1337 A.D. for information on the famine in China during that timeframe.*

---

**1336 A.D.** *Scotland* was desolated by a famine.<sup>57, 91</sup>

In *England* in 1336, there was so great a scarcity of money and plenty of corn that wheat was sold at 2s. a Quarter [quarter ton] and a fat ox at half a Mark.<sup>72</sup>

[In *England*] in 1336, there was an extraordinary plenty [plentiful harvest].<sup>72</sup>

On August 4, 1336, a terrible storm broke out in Paris, *France* and its countryside. This storm toppled tents erected at Vincennes [now an eastern suburb of Paris] and uprooted thousands of trees in this woods.<sup>79</sup>

In 1336, severe droughts engulfed several regions of *China* including:<sup>153</sup>

— During the period between 12 April and 11 June, a severe drought engulfed Shensi (now Shaanxi province) in central *China* at Sian.

— During the period between 10 June and 8 July, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua.

— During the period between 6 September and 4 October, a severe drought engulfed Chekiang province and Kiangsu (now Jiangsu province) on the east coast of *China*.

In 1336, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 10 June and 8 July, floods struck Honan (now Henan province) in central *China* at Têng.

— During the period between 9 July and 6 August, the Ching River flooded in Kansu (now Gansu province) in northwest *China* and Shensi (now Shaanxi province) in central *China*.

— During the period between 6 September and 4 October, floods due to heavy rains struck Hopei (now Hebei province) in northern *China* at Peiping and T'ung.

In 1336 during the spring, there was a drought that caused great distress in Chêhkiang, Hupeh, Kiangsi, Kiangsu and Shensi provinces in *China*.<sup>165</sup>

*Also refer to the section 1333 A.D. – 1337 A.D. for information on the famine in China during that timeframe.*

---

**1337 A.D.** In *England*, there was a severe frost without snow.<sup>47, 72, 93</sup>

In *England*, there was a severe frosty winter without snow. Wheat was very dear.<sup>72</sup>

In 1337, there was a major earthquake in Wuerttemberg, *Germany*. Then came a severe drought, poor grain and grape harvests, followed by a famine.<sup>172</sup>

In 1337 the whole of Moscow, *Russia* was burnt down and then came heavy rains, which flooded everything. The rains flooded both in the cellars and in the squares wherever anything had been carried out [from the fires]. In the same year Toropets in east-central *Russia* was burnt down and flooded.<sup>76</sup>

In 1337 in *China*, there was a famine, which occasioned a pestilential epidemic.<sup>91</sup>

In 1337, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 3 March and 1 April, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing.

— During the period between 31 May and 28 June, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ho. Crops were damaged by the floodwaters.

— During the period between 29 June and 27 July, floods due to heavy and protracted rains struck Hopei (now Hebei province) in northern *China* at Peiping and Honan (now Henan province) in central *China* at Loyang and Chi. People and cattle were drowned and houses were damaged by the floodwaters. During the same period, floods struck Honan province at An-yang.

— During the period between 28 July and 25 August, floods struck Honan province at Chi. People were drowned and houses, fields and crops were damaged by the floodwaters. During the same time period, floods struck Honan province at Ch'in-yang, Lan-fêng, Yü-shih and Shang-ch'iu; Hopei province at Ch'ing-ho; Hupeh (now Hubei province) in central *China* at Huang-kang; and Chekiang province at Ch'ü and Ch'ang-shan.

*Also refer to the section 1333 A.D. – 1337 A.D. for information on the famine in China during that timeframe.*

**1338 A.D.** In the Novgorod Republic [now part of *Russia*], the water was big in the Volkhov River as it never had been before [a great flood], three weeks after Easter Day on Wednesday, and it carried away ten stays of the great bridge; at the same time it carried away the bridge over the stream Zhilotug, and much harm was done.<sup>76</sup>

In *England* and *Wales*, the land was so inundated with continuous rains that scarcely an article of food was raised.<sup>1</sup>

In *England*, it rained from the beginning of October to December.<sup>2, 40, 41, 56</sup>

In *England*, there was continuous rain from beginning of October to December.<sup>47, 92</sup>

In *England*, there was a severe frost for twelve weeks, after rain.<sup>47, 72, 93</sup>

[In *England*], there was heavy rains from 1 October to 1 December and then frost.<sup>72</sup>

In *England*, there was a very rainy harvest, which hindered sowing of winter corn [grain]. From 1 December to 1 March there was a most rigorous frost, which killed the little sown seed. Yet such a scarcity of money, that grain was not dear. Wheat 2s. a fat ox 6s., a sheep 6d.<sup>72</sup>

The *Western Europe*, the Meuse River froze.<sup>62</sup>

In 1338, by a great flood of water, strong currents cut violently Eydersted and completely demolished Dithmarschen, *Germany*. Great quantities of rain fell which caused a dearth and then a great famine. Many people died of hunger.<sup>172</sup>

In 1338, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 20 May and 18 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Chi-an; and Shantung (now Shandong province) on the east coast of *China* at Fei and Lin-i. [Lin-i is located at longitude 118.24° East and latitude 35.07° North.]

— During the period between 19 June and 17 July, floods due to heavy and protracted rains struck Fukien (now Fujian province) on the southeast coast of *China* at Shao-wu.

**1339 A.D.** In northeastern *England* on 22<sup>nd</sup> March, there was a great flood of the River Tyne; many lives lost.<sup>47, 72, 92</sup>

In northeastern *England*, 120 laymen, and several priest, besides women, were drowned by an inundation at Newcastle upon Tyne.<sup>41, 43</sup>

In *England*, on 22 March 1339, in the night there was a great flood in the River Tyne, which broke and carried down six perches of the wall of Newcastle wherein 120 men, several priest, and many women were drowned. This year a Quarter of wheat cost 40*d.* and sometimes less; barley 10*d.*; peas and beans 12*d.*; oats 10*d.*<sup>72</sup>

In *Ireland* in 1339, there was a general famine.<sup>57, 91</sup>

In 1339, there was a famine in *Scotland*. The crops failed and such a famine ensued that the poor were reduced to feeding on grass. Yet at the same time, wheat in *England* was only 3 shillings 4 pence per quarter [quarter ton].<sup>212</sup>

In 1339, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 7 July and 5 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Ch'ang-t'ing. Over 800 families were flooded. Fields were damaged by floodwater.

— During the period between 6 August and 3 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-shan and Kiangsu (now Jiangsu province) on the east coast of *China* at I-hsing. Houses were damaged by the floodwaters. During the same time period, floods struck Shantung (now Shandong province) on the east coast of *China* where fields and crops were damaged by floodwaters. Also during this time, floods struck Fukien province at Shao-wu.

**1340 A.D.** In 1340, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 28 February and 28 March, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Hsia-p'u and Hopei (now Hebei province) in northern *China* at Peiping. In Hsia-p'u people drowned.

— During the period between 27 May and 25 June, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Fêng-hua. Many people drowned.

— During the period between 26 June and 24 July, floods struck Chekiang province at Ch'ü, Lung-yu, Sung-yang, Lung-ch'uan and Sui-ch'ang. In Sung-yang, Lung-ch'uan and Sui-ch'ang, over 500 people drowned.

— During the period between 25 July and 23 August, floods struck Fukien province at Nan-p'ing. Over 100 people drowned and over 500 families were flooded. Fields were damaged by the floodwaters. During the same time, floods struck Shensi (now Shaanxi province) in central *China* at Chou-chih, where people drowned.

— During the period between 22 October and 19 November, floods struck Honan (now Henan province) in central *China* at I-yang and Yü. Houses were damaged by the floodwater and many people drowned.

In 1340 during the period between 27 May and 25 June, a drought struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Nan-hsiung.<sup>153</sup>

In 1340 during the summer, there was a drought in Kwangtung province in *China*.<sup>165</sup>

**1341 A.D.** The cold of this winter in *Livonia* (currently comprising present day Estonia and parts of Latvia) was so great that many soldiers of the army of the Crusades froze to death or sustained frozen noses, fingers and limbs.<sup>62</sup>

In *England* and *Scotland* in 1341, there was a great dearth in this year and the next. People ate horses, dogs, cats, etc. to sustain life.<sup>57, 91</sup>

In 1341, there was a great flood [in *Germany*] that drowned many people. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In 1341 during the period between 14 July and 12 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Ch’ung-ming, Nan-t’ung and T’ai. Over 1,600 persons drowned.<sup>153</sup>

In 1341 during the 4<sup>th</sup> moon, a water calamity [flood] occurred in the vicinity of Shanghai, *China*.<sup>166</sup>

**1342 A.D.** In *India* in 1342, there was a very severe famine in Delhi. Few of the inhabitants could obtain the necessities of life.<sup>57</sup>

In 1342 A.D., during the reign of Sultan Muhammad Tughlaq, there was a famine in Delhi and its neighborhood in *India*.<sup>179</sup>

On 9 July 1342, a great flood struck Hannoversch Münden, *Germany*. The floodwater went through the upper gate and stood for several days in the city. The flood swept away numerous bridges and caused many houses to collapse. The water was 8.91 meters [29.2 feet] high.<sup>172</sup>

The flood of 21 July 1342 was one of *Central Europe’s* largest floods during the millennium. There was a long drought followed by two days of sustained extraordinary downpours. At Würzburg, *Germany*, the River Main was very close to the cathedral. In the Rhine region, at the Mainz Cathedral, the water was up to a man’s waist. In Cologne, boat could travel over the city walls on the floodwaters. In the chronicles of Regensburg [in Bavaria, *Germany*], Passau [in Bavaria, *Germany*] and Vienna [*Austria*], the St. Magdalen day flood was described as a catastrophic Danube River flood. It was the same in Moselle, Vitava, Elbe, Werra, Unstrut and Weser. Even Carinthia and Lombardy were ravaged by floods.<sup>172</sup>

“This summer [July 1342], there was such a great flood of waters by the whole world, that there was a flood not created by rain but it seemed as though water was gushing from everywhere, even from the tops of mountains. It flowed over the walls of the city of Cologne and boats went over the walls. The Danube, Rhine and Main rivers destroyed towers, very strong city walls, bridges, houses and the bulwarks of cities. It was as if the floodgates of heaven were opened and the rain fell to the Earth as it did in the 600<sup>th</sup> year of Noah’s life. At Würzburg, *Germany* the River Main smashed the bridge and forced many people to leave their homes.”<sup>172</sup>

On the Feast of Mary Magdalene [22 July] 1342, poured a great flood and put many places underwater [in *Central Europe*].<sup>172</sup>

In 1342, there was a severe drought in several regions of *China*. [The resulting famine was so severe that] cannibalism was practiced throughout these regions.<sup>153</sup>

During the period of 5 February - 8 November, the following regions were affected by the drought:

- Honan (now Henan province) in central *China* at An-yang.
- Shansi (now Shanxi province) in northern *China* at Tatung, Yang-ch’ü, Taiyuan, Yü-tz’ü, Hsü-kou, Fên-yang and Hsiao-i.
- Shantung (now Shandong province) on the east coast of *China* at Lin-i. [Lin-i is located at 118.24 E. longitude and 35.07 N. latitude.]

During the period of 8 August - 8 November, the following region was affected by the drought:

- Honan (now Henan province) in central *China* at Chi.

In 1342 during the spring, summer and autumn, there was a great drought in Chihli, Honan and Shansi provinces in *China*. The resulting famine was so severe that it led to cannibalism.<sup>165</sup>

In 1342, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 5 May and 3 June, floods struck Honan (now Henan province) in central *China* at Sui and Lan-fêng.

— During the period between 3 July and 1 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan. Over 1,000 families were flooded and innumerable people drowned. Also during this time, floods struck Shansi (now Shanxi province) in northern *China*, where crops were damaged.

**1343 A.D.** In 1343, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 25 February and 26 March, floods struck Kansu (now Gansu province) in northwest *China* at Kan-ku, Wu-shan and T'ien-shui. Innumerable people drowned.

— During the period between 24 May and 22 June, floods struck Hopei (now Hebei province) in northern *China* at Ch'ang-yüan [uncertain location].

— During the period between 22 July and 20 August, floods struck Honan (now Henan province) in central *China* at Chung-mou, Fu-kou, Yü-shih, Wei-ch'uan, Chêng, Jung-yang, Fan-shui, and Ho-yin.

In 1343 during the period between 22 July and 20 August, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Yang-hsin.<sup>153</sup>

In 1343 during the autumn, there was a drought in Hupeh province in *China*.<sup>165</sup>

**1344 A.D.** All the rivers in *Italy* were frozen over.<sup>30</sup>

In *India* in 1344-45, there was a famine that extended over the whole of Hindustan. It was very severe in Deccan. The Emperor Mohommed, it is said, was unable to procure the necessities for his household.<sup>57</sup>

In 1344 A.D., there was a famine in Deccan in southern *India*.<sup>179</sup>

In 1344, several regions of *China* experienced flooding.<sup>153</sup>

During the period of 16 January – 14 February, the following areas were affected:

— Shantung (now Shandong province) on the east coast of *China* at Ho-tsê experienced flooding.

— Honan (now Henan province) in central *China* at Kaifeng experienced flooding.

During the period of 11 June – 9 July, the following areas were affected:

— Shantung (now Shandong province) on the east coast of *China* at Ho-tsê, P'u, Chi-ning, and Tzū-yang experienced flooding.

— Hopei (now Hebei province) in northern *China* at Pa experienced flooding.

During the period of 10 July – 8 August, the following areas were affected:

— Honan (now Henan province) in central *China* at Kung experienced flooding. Several hundred families flooded. Flooding at Yen-ling, Hsü-ch'ang, Kaifeng and Lin-ying damaged crops. [The resulting famine was so severe that] cannibalism was practiced.

— Shantung (now Shandong province) on the east coast of *China* at Tzū-yang experienced flooding. Crops were damaged. [The resulting famine was so severe that] cannibalism was practiced.

— Hopei (now Hebei province) in northern *China* at T'ung experienced flooding. Crops were damaged. [The resulting famine was so severe that] cannibalism was practiced.

During the period of 9 August – 6 September, the following areas were affected:

— Hopei (now Hebei province) in northern *China* at Ch'ien-an and Lu-lung experienced flooding. Crops and housing were damaged.

— Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou and Ch'ü experienced flooding. The typhoon and earthquake damaged houses.

— Shantung (now Shandong province) on the east coast of *China* at Tung-a, Yang-ku, Wên-shang, and P'ing-yin experienced flooding.

In 1344 during the period between 7 September and 8 October, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China* at Foochow, P'u-t'ien and Shao-wu; Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang; and Hunan province in south-central *China* at Kuei-yang.<sup>153</sup>

In 1344 during the spring, summer and autumn, there was a drought in Fuhkien, Hunan and Kiangsu provinces in *China*. In Fuhkien, this was a great drought.<sup>165</sup>

**1345 A.D.** Rains began in *Italy* in July and lasted 6 months. Famines followed.<sup>28</sup>

[On 21 November] in the Novgorod [*Russia*], a southerly wind arose, with snow, and drove the ice into the Volkhov River, and carried away seven stays [of the great bridge].<sup>76</sup>

In 1345, there was a drought [in *England*]. It was called “the dry summer”. From March to the end of April, there was little to no rain. As a result, grain was very meager the rest of the year.<sup>212</sup>

Around 1345, a famine struck in and around the Delhi district of *India*. The famine was caused by a failure of the rains.<sup>156</sup>

— Ibn Batuta, a native of Tangiers, Africa, was visiting the region at the time and wrote: “Distress was general, and the position of affairs very grave. One day I went out of the city to meet the wazir, and I saw three women who were cutting in pieces and eating the skin of a horse, which had been dead for some months. Skin was cooked and sold in the markets. When bullocks were slaughtered, crowds rushed forward to catch the blood, and consumed it for their sustenance. . . The famine being unendurable, the Sultan ordered provisions for six months to be distributed to all the population of Delhi. The judges, secretaries, and officers inspected all the streets and markets, and supplied to every person provisions for half a year.” Other sources confirmed the relief was real.

In 1345 a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Yü-ch'êng. During the period between 6 May and 8 August, a drought engulfed Shantung province at Kao-mi.<sup>153</sup>

In 1345, there was a great drought in Shantung province in *China*.<sup>165</sup>

In 1345, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 29 July and 27 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Ho-tsê. Houses were damaged by the floodwaters.

— During the period between 26 October and 24 November, the Yellow River flooded.

**1346 A.D.** In 1346, floods struck *China* and the Yellow River flooded. In the same year a drought engulfed the east coast of *China* in Kiangsu (now Jiangsu province) at Chinkiang and Chekiang (now Zhejiang province) at Fêng-hua.<sup>153</sup>

In 1346, there was a drought in Kiangsu province in *China*.<sup>165</sup>

**1347 A.D.** Droughts struck Ho-tong *China*. Many died.<sup>28</sup> [Ho-tong is possibly Yüenchêng in Shanxi province, inland northeastern *China*.]

In 1347, a severe drought engulfed Honan (now Henan province) in central *China* at Ch'in-yang, Chi, Kaifeng and Mêng-ching; Shansi (now Shanxi province) in northern *China* at Yung-chi; and Shensi (now Shaanxi province) in central *China* at Ch'i-shan. During the period between 9 June and 8 July, floods struck Hupeh (now Hubei province) in central *China* at Huang-kang. Then during the period between 6 September and 4 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Shanghai.<sup>153</sup>

In 1347 during the summer, there was a great drought in Honan and Shensi provinces in *China*.<sup>165</sup>

In *Italy* in 1347, a dreadful famine swept away by absolute starvation vast numbers of the inhabitants. And in the following year a pestilence of a deadly nature swept the peninsula. "Such was the sufferings produced by these visitations that it was calculated that two-thirds of the whole population were destroyed."<sup>57</sup>

[In *England*], there were many tempest and hurricanes. It rained daily from Christmas to Midsummer.<sup>72</sup>

There was a great famine in 1347 [in *Germany*]. The misery in 1347 is described by Müllner in his Nuremberg Chronicle: "it was a very barren year. Everywhere the grapes and fruit froze. So this year started the cruel mortality of almost the whole world was stricken until the fourth year. There was a great mass of locust. Everywhere in the fields there were big piles of dead locusts. In some places, whirlwinds carried the dead locust into the sea, where they washed ashore. The great stench from these rotting locusts poisoned the air. Others blamed the plague on the Jews and accused them of poisoning the wells and they were persecuted in a most violent manner. This mortality [great death] affected not only municipalities [large cities] but also villages and caused many to become deserted. In many cities neither the council nor the court was held. Parents abandoned their children and children their parents."<sup>172</sup>

---

**1348 A.D.** In *England* and *Wales*, the land was so inundated with continuous rains that scarcely an article of food was raised.<sup>1</sup>

It rained from Midsummer to Christmas, so that there was not one day or night dry together.<sup>2, 40, 41, 56</sup>

[One source has the timing reversed.] In *England*, it rained from Christmas 1347 until Midsummer [around 20 June 1348], without one fair day, hence great floods.<sup>72</sup>

In *England*, there were violent rains from Midsummer to Christmas "so that there was not one day and night dry together."<sup>47, 92</sup>

On 2 January, there was a flood of the River Ouse, which overflowed York, *England*, as far up as Micklegate.<sup>72</sup> [Micklegate Bar is the most Westerly and main gate through York's walls. It was and is still used by royalty to enter the city of York. Historically it is where heads of traitors were displayed on spikes.]

It rained from Midsummer to Christmas, so that there was not one day or night dry together. This wet season caused great floods, and a pestilence which raged a whole year. The earth was at the same time barren, and even the sea did not produce such plenty of fish as formerly. The mortality was so great that in the city of London, *England*, two hundred bodies were buried every day in the Charter-house-yard, besides those interred in other common burying places. This loss of life lasted from Candlemas to Easter. Fourteen thousand people were carried off by a remarkable pestilence in Dublin, *Ireland*.<sup>39</sup>

In 1348, there was a dry fog in *England* with earthquakes and volcanic eruptions.<sup>212</sup>

In 1348, the pestilence in London, *England* was terrible, where 50,000 people perished. At Yarmouth 7,000 perished.<sup>212</sup>

The summer of 1348 in southern *France* was remarkably hot producing a drought.<sup>79</sup>

The year 1348 was a year of the plague. On 19 April, it snowed and there was an earthquake. Villach, *Austria* was totally destroyed.<sup>172</sup>

A severe winter struck *Iceland*. The sea was frozen around *Iceland*.<sup>28</sup>

[The Black Death: It began at Cathay [*China*] in Asia, and in the neighborhood near the great sea. But whether it arose in *India*, *Scythia*, *Tartary* or *Arabia*, it went sweeping along through the *Indians*, *Tartareans*, *Saracens*, *Turks*, *Syrians*, *Palestinians*, *Persians*, *Egyptians*, *Ethiopians*, *Africans*, with the parts about *Tunis* or *Trisibon*. Then it went over all the *Levant*, through *Mesopotamia*, *Chaldea*, *Cyprus*, *Gandy*, *Rhodes*, and every island of the archipelago. Then it came to *Greece* and overran *Europe*. About the latter part of 1346 or the beginning of 1347, it reached *Italy*. On 28 September 1347, it landed on the *English coast* in Dorsetshire. In 1350 or 1351, it reached *Scotland* and *Ireland*. In 1350, it reached the *Hungarians*, *Goths*, *Vandals*, and the most northerly people. It had not fully finished its perambulation over the world before 1360 or 1362. If it was so favorable as to leave a third part of men alive in some few places. In others, it took 15 out of every 16 people. In more, it utterly exterminated the human race. It laid waste some places as *Arthemusia*. In the *Eastern parts* died in one year 23,840,000. The Venetians lost 100,000. In Florence, *Italy* died in one year 60,000. In *Germany* died 1,244,434. Out of Yarmouth, *England* died 7052. In Norwich, *England*, 57,000 people died from the first of January to the first of July. In London, *England* from the first of February to the first of May, there were 2,000 deaths per week. From its landing place in Dorsetshire, it spread into Devon, and Somersetshire and Bristol, then to Gloucester, Oxford, and London.<sup>72</sup>]

In 1348, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 31 January and 29 February, the Yellow River flooded.

— During the period between 29 April and 28 May, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang.

— During the period between 29 May and 26 June, floods struck Hunan province in south-central *China* at Shao-yang. During the same time, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*. In Kwangsi, people and cattle were drowned and houses damaged.

— During the period between 27 June and 26 July, floods struck Hupeh (now Hubei province) in central *China* at Sung-tzū. Sixty li [about 21 miles] were flooded and 1,500 persons drowned. During this time, floods also struck Shantung (now Shandong province) on the east coast of *China* at Chiao.

— During the period between 27 July and 24 August, floods struck Shantung province at Kao-mi.

In 1348 during the period between 30 March and 28 April, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at I-tu and Lin-tzū. During the period between 29 March and 26 June, a drought engulfed Szechwan (now Sichuan province) in southwest *China*.<sup>153</sup>

In 1348 during the summer, there was a great drought in Honan, Shantung and Sze-ch'wan provinces in *China*.<sup>165</sup>

**1349 A.D.** The winter was similar to the winter of 1323 A.D.<sup>1</sup>

The *Baltic Sea* was frozen over and passable from Stralsund to *Denmark*.<sup>2, 41, 42, 43, 47, 93</sup> [Stralsund is located on the Baltic sea coast in northern *Germany*.]

The *Baltic Sea* was frozen over.<sup>30</sup>

On 7 March 1349, an earthquake rocked northern *Germany*. There was a cessation of a two-year plague. One-fifth of the people died.<sup>172</sup>

In 1349, the plague was very violent in Waghén [in the East Riding of Yorkshire], *England*. The abbot and six monks died. It was also very violent at Beverley. It was also very violent at St. Alban's where the abbot, sub-prior, and many of the monks died. At Oxford, it was so dreadful that the colleges were closed, and there was scarce enough left in the city to bury the dead. The plague extended into Nottinghamshire and Derbyshire.<sup>212</sup>

In 1349, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 20 March and 17 April, floods struck Honan (now Henan province) in central *China* at Chi.

— During the period between 6 May and 8 November, floods struck Hupeh (now Hubei province) in central *China* at Ch'i-ch'un. Crops were damaged by the floodwaters.

— During the period between 16 July and 14 August, floods struck Hupeh at Kung-an, Shih-shou, Ch'ien-chiang, Chien-li and Mien-yang.

**1350 A.D.** In *England*, there was a drought that came after floods, storms and meteors.<sup>47, 72</sup>

In 1350 in *England*, there were “floods, storms, tempests and fiery meteors in the air.”<sup>72, 92</sup>

There was a terrible thunder and lightning storm [in *England*].<sup>72</sup>

In 1350 in *Barbary*, the grains exported from *England* caused a dearth in *England*.<sup>57, 91</sup> [Barbary is now the region of *Morocco*, *Algeria*, *Tunisia*, and *Libya*.]

In 1350 there was a famine in *Barbary*, then in *England* on exporting corn [grains] thither.<sup>72</sup>

There was a great famine in *Barbary* and *Morocco*. Christian nations came to their relief transporting large quantities of corn [grain]. This made the grain so cheap and plentiful in *Barbary*, but left a famine at home [*England*]. In *England*, this was followed by terrible inundations, storms, and tempests. These were succeeded by excessive drought and want of water. This led to the destruction of most animals and vegetables.<sup>72</sup>

In 1350 the plague returned [to *Germany*]. The winter was cold and dry. A third of humanity died.<sup>172</sup>

In 1350, there was a terrible disease throughout *Europe* called the Black Death. It killed men, horses, cattle, deer, bears, wolves, foxes, sheep, goats, hares, etc.<sup>212</sup>

In 1350, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 5 June and 4 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang and Kao-an.

— During the period between 5 July and 3 August, floods struck Shansi (now Shanxi province) in northern *China* at Huo. Dikes and houses were damaged by the floodwaters.

— During the period between 4 August and 1 September, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Kuei-lin and Li-p'u. Crops were damaged by the floodwaters. During the same time, floods struck Shansi province at Fên-yang and P'ing-yao.

In 1350 during the period between 6 May and 8 November, a drought engulfed Honan (now Henan province) in central *China* at An-yang.<sup>153</sup>

In 1350 during the summer and autumn, there was a drought in Honan province in *China*.<sup>165</sup>

**1351 A.D.** In 1351, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang.<sup>153</sup>

In 1351, there was a drought in Kiangsu province in *China*.<sup>165</sup>

In 1351, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 6 May and 8 August, floods struck Anhwei (now Anhui province) in eastern *China* at T'ung-ch'êng. Over 400 families were flooded. During the same time, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang and Hsin-chien.

— During the period between 24 July and 21 August, floods struck Shansi (now Shanxi province) in northern *China* at Taiyuan and Wên-shui. Fields and crops were damaged by the floodwaters. During the same time period, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Kuei-lin. Dikes were damaged. Also during this time, floods struck Yunnan province in southwest *China* at Lu-hsi and Honan (now Henan province) in central *China* at Yung-ch'êng.

**1352 A.D.** In *England*, there was a drought.<sup>47, 72</sup>

In *England* in 1352, there was a dearth from a drought.<sup>72</sup>

In *England* in the summer was a great drought. The cattle died in the pastures for want of water. The Fens and marshes dried up. There was a way through them where none was before. This was a very dear year in *England* [everything was scare and dear]. About the Feast of All Saints [1 November], came a tempest of wind stripping houses and churches, blowing down mills, rooting up trees.<sup>72</sup>

In 1352, the heat was excessive in Toscana (Tuscany), *Italy*. The drought of the summer was on the Continent [*Europe*] so badly that many cattle perished on the field. The marshes and ponds were completely dry. This year was a very hard in *England*. Also a great flood occurred on the Rhône River.<sup>62</sup>

In 1352, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Ch'i-ch'un and Huang-kang; and Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. During the period between 10 August and 8 September, a drought engulfed Chekiang province at Taichow.<sup>153</sup>

In 1352 during the summer and autumn, there was a drought in Chêhkiang and Hupeh provinces in *China*. In Hupeh, this was a great drought.<sup>165</sup>

In 1352 during the period between 12 July and 9 August, floods struck Hupeh (now Hubei province) in central *China* at Sung-tzū. Over 1,000 families flooded and over 700 people drowned. Then during the period between 10 August and 8 September, floods struck Ch'ü.<sup>153</sup>

**Winter of 1352 / 1353 A.D.** In *England*, the frost was “very cruel” from 6<sup>th</sup> of December to 12<sup>th</sup> of March.<sup>47, 72, 93</sup>

In *England*, there was a terrible hard and long frost from 6 December 1352 to 12 March 1353.<sup>72</sup>

From the commencement of December 1352 to the middle of March 1353, the country [*England*] was visited by an extraordinary hard frost. The bitter cold was ended by a furious hurricane, which did untold

damage to buildings and trees.<sup>177</sup>

---

**1353 A.D.** This year was remarkable for scarcity of grain and provisions in *England* and *France*, occasioned by a great drought. It was called the “Dear Summer”. Rye was brought out of *Zealand* to support the poor, who otherwise must have perished for want of sustenance.<sup>39</sup> [*Zealand* is the largest island of *Denmark*.]

In 1353, there was a great famine in *England* and *France*.<sup>57, 90, 91, 212</sup>

In 1353 in *England*, the famine continued.<sup>72</sup>

From March to July 1353 [in *England*], the country sustained a severe drought. Then famine ruled the land, and the peasantry, irritated by the attempted regulation of wages, in many places broke out in discontent. In Cheshire they rose in open revolt and attacked the servants of the Prince [Edward of Woodstock, Prince of Wales, Duke of Cornwall, and Prince of Aquitaine] who were entrusted with supervising his interest.<sup>177</sup>

In March 1353, there was the severest drought in *Italy*.<sup>72</sup>

In *Italy*, there was drought.<sup>47</sup>

In *England*, in early spring there was a hurricane. From March to July came a scorching drought in *England*. In Rome, *Italy* there was terrible thunder and lightning during the summer. At Cremona, *Italy*, there was a prodigious hailstorm. Each hailstone weighted from one to eight and a quarter pounds. This made a fearful slaughter of people and cattle. This year produced a great dearth in *England*, but plenty of corn [grain] imported from *Ireland* settled it.<sup>72</sup>

[Another account place this event in 1355.] In *England* in 1355, there was great scarcity. Grain was brought from *Ireland*, which afforded much relief.<sup>57</sup>

In the middle of May 1353, a deep snow fell in *Silesia* and *Poland* after Gronau, *Germany*. It did not damage the fields or fruit gardens even though it lay on the ground for six days.<sup>172</sup>

In 1353, a severe drought engulfed many regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Ch’i-ch’un and Huang-kang.
- Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Ch’ü and Chin-hua.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.
- Anhwei (now Anhui province) in eastern *China* at Tang-t’u, Hsüan-ch’êng, and Kuang-tê.
- Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P’o-yang, Nan-ch’ang, Kao-an, Nan-ch’êng, and Chi-an.
- Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Nan-hsiung.
- Hunan province in south-central *China* at Ling-ling and Kuei-yang.

During the period between 29 August and 27 September, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.

In 1353 during the summer, there was a great drought in Chihli, Chêhkiang, Hunan, Hupeh, Kiangsi and Kwangtung provinces in *China*.<sup>165</sup>

In 1353, floods struck Hopei (now Hebei province) in northern *China* at Fêng-jun, Yü-t'ien, Tsun-hua and P'ing-ku. During the time period 1-30 July, floods struck Hopei province at Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

---

**1354 A.D.** In 1354, there was a drought in *England*. At Nottingham, no rain fell from the end of March to the end of July, a period of 4 months. Nottingham suffered very severely from this great drought. A few years previous, there was a severe frost, which began at the end of the harvest and continued to April, with scarcely any break.<sup>212</sup>

In 1354, there was a severe drought in several regions of *China*. [The resulting famine was so severe that cannibalism was practiced throughout these regions.]<sup>153</sup>

— Honan (now Henan province) in central *China* at Ch'in-yang, Mêng and Kaifeng.

— Fukien (now Fujian province) on the southeast coast of *China* at Chin-chiang.

— Hunan province in south-central *China* at Ling-ling and Shao-yang.

— Kiangsi (now Jiangxi province) in southern *China* at Ts'ang-wu.

In 1354, there was a great drought in Fuhkien, Honan, Hunan and Kwangsi provinces in *China*. The resulting famine was so severe that it led to cannibalism.<sup>165</sup>

In 1354 during the period between 21 June and 19 July, floods struck Honan (now Henan province) in central *China* at Kung. Houses were damaged by the floodwaters and over 300 people drowned. During the same time, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling. Then during the period between 8 August and 8 November, floods struck Hopei (now Hebei province) in northern *China* at Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

---

**1355 A.D.** On 31 December 1355, there was a terrible flood [in *Germany*] that smashed dikes and dams and broke into local land drowning 2,000 people. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In 1355, a severe drought engulfed Honan (now Henan province) in central *China* at Chi. During the period between 10 July and 7 August, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling and a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.<sup>153</sup>

In 1355, there was a great drought in Honan province in *China*.<sup>165</sup>

---

**1356 A.D.** In *England*, there was drought and heat.<sup>47</sup>

In *England*, there was no rain in April, May and June.<sup>72</sup>

In *England*, there was a drought in May and June.<sup>72</sup>

[In *England*], there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1356 [in *Germany*], the year began dry without snow. At Easter and Pentecost, there was a great snowfall. The autumn was cold but the winter was warm. At Christmas, the flowers were blooming and the trees gave forth buds. Shortly before the end of the year, there was a major earthquake in *Switzerland*. Twenty-four castles were totally destroyed.<sup>172</sup>

In the Novgorod Republic [now part of *Russia*], in autumn the water was high [flood].<sup>76</sup>

In *France*, the Rhône and the Durance rivers overflowed their banks and ravaged the surrounding countryside. The winter that followed was most severe. The river was filled with ice flows. Famine followed.<sup>61</sup>

In 1356, floods struck Honan (now Henan province) in central *China* at Ho-yin. All the houses were damaged by the floodwaters. Also during the year, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua and Li-shui. During the period between 27 August and 24 September, floods struck Shantung (now Shandong province) on the east coast of *China*.<sup>153</sup>

In 1356, there was a great drought in Chêhkiang province in *China*.<sup>165</sup>

**1357 A.D.** About the year 1357, there were earthquakes in *Germany*, at Mainz, in Hesse and Thuringia. There was major damage everywhere. The plague broke out again.<sup>172</sup>

There was a great thunderstorm; the Igumen [head of the monastery] of St. Nikola in Lyatka [perhaps Vyatka now Kirov, *Russia*] was struck [by lightning], and others; and in the Rogatitsa [Street in Novgorod, *Russia*] one was struck dead, while other individuals by the mercy of God remained alive.<sup>76</sup>

In 1357 during the period between 18 June and 17 July, floods struck Hopei (now Hebei province) in northern *China* at Yung-nien. Then during the period between 16 August and 14 September, floods struck Hopei province at Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

In 1357 during the 6<sup>th</sup> moon on the 23<sup>rd</sup> day in the vicinity of Shanghai, *China*, at the sea side, towards dawn, the tide rose suddenly, causing great alarm, as it was not the time for high-water. At the proper high-water time it rose again, so that it was known that the first rise was not the tide. At places, which are situated quite beyond the reach of tide, in the canal and lakes near Pingkiang and Kiahing, the waters suddenly rose some four or five feet.<sup>166</sup>

**1358 A.D.** In Bologna, *Italy*, the snow was 10 Ellen (approximately 23 feet, 7 meters) deep.<sup>60, 62</sup>

In 1358 in Bologna, *Italy*, the snow was 10 Braccia (approximately 22 feet, 6.7 meters) deep.<sup>80</sup>

In the regions around Metz, *France* in 1358, the great heat caused the vines to dry up and all the grapes to shrivel up. As a result, a glass of wine cost 5 sous [five centimes].<sup>62</sup>

After heavy rains, the Rhône and the Durance Rivers in *France* overflowed their banks in November 1358 and the floodwaters spread far into the countryside.<sup>79</sup>

A prodigious amount of snow fell in Provence, *France* during the winter of 1358. The harsh rains that succeeded the winter produced devastating floods.<sup>79</sup>

In 1358, a drought affected several regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Hopei (now Hebei province) in northern *China* at Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]

— During the period between 5 February and 8 November, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Chü, Pin, Tzū-ch'uan; Shansi (now Shanxi province) in northern *China* at Huo; and Shensi (now Shaanxi province) in central *China* at Fêng-hsiang, Ch'i-shan and Fu.

In 1358 during the spring and summer, there was a great drought in Chihli, Shantung and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shantung and

Shensi.<sup>165</sup>

In 1358 during the period between 8 August and 8 November, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hui-yang; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ho; and Hopei (now Hebei province) in northern *China* at Peiping and Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

---

**1359 A.D.** [The Black Death – revisited *England* in 1358 and other placed in 1359. One hundred thousand people died in Florence, *Italy* between March and July. There were scarce 10 people out of 1000 left alive in *Italy*. In Numidia, *North Africa*, 800,000 people perished. In *Greece*, the living were insufficient to bury the dead.<sup>72</sup> Numidia is the Old Berber Kingdom roughly corresponding to modern *Morocco*, *Algeria*, and *Tunisia*.]

On 20 April 1359, the church of Sienna [*Siena, Italy*] was struck by thunder and lightning. Many people were slain or hurt, being at the sacrament.<sup>72</sup>

In 1359, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên; Shensi (now Shaanxi province) in central *China* at Fêng-hsiang; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu and Hsiang. Also during the period between 28 April and 26 May, floods struck Shansi province at Fên-yang. During the period between 23 September and 21 October, floods struck Shantung (now Shandong province) on the east coast of *China* at Chi-ning.<sup>153</sup>

In 1359, there was a great drought in Kwangsi and Shensi provinces in *China*.<sup>165</sup>

---

**1360 A.D.** King Edward III ambition to conquer *France* during the Hundred Year's War was dealt a devastating blow by a tremendous hailstorm. By the spring of 1360, the English army had pillaged and burnt many of the suburbs around Paris before making camp outside Chartres. But on April 13 dark storm clouds billowed up and a fierce, bitterly cold wind blew. "A foul dark day of mist and hail, and so bitter cold, that sitting on horseback men died," described one chronicle. Thunder and lightning erupted. The storm unleashed a barrage of hailstones described as big as pigeon eggs, and even suits of armor appeared to give little protection. According to one estimate 1,000 men and 6,000 horses were killed in "such a tempest of thunder, lightning and hail that it seemed the world should have ended." This disaster became known as Black Monday.<sup>6</sup>

When Edward III of *England* was on his march, within two leagues of Chartres, *France*; there happened a storm of piercing wind that swelled to a tempest of rain, lightning and hailstones, so prodigious, as to instantly kill 6,000 of his horses and 1,000 of his best troops in 1359 [misprint for 1360].<sup>2, 39, 40, 41, 43, 56, 57</sup>

[Another account places this event in the year 1339.] In 1339, there was a violent storm of hail near Chartres, in *France*, which fell upon the army of Edward III, which was then on its march. The hail was so large that the army and horses suffered very much, and Edward was obliged to conclude a peace.<sup>90</sup>

[Another account places this event in the year 1351.] In 6 April 1351 in *France*. On Easter Monday hailstones fell so large as to have killed both men and horses forming part of the army of the English King Edward, then invading *France*. This is asserted by Bailey, and repeated by Stow, who however implies that the men died of the intense cold, which accompanied the mist and hail. This day is called in early history Black Monday.<sup>93</sup>

In 1360, at the end of April, while the King Edward of England was encamped around Ruel, [*France*] there was a storm so terrible that the tents were torn and men and horses were swept away by water. He lost over a thousand archers and six thousand horses.<sup>79</sup>

In *England* in 1360, there was a great dearth this year and mortality of people. This was called the second plague because it was the second in the reign of King Edward III. There was a very great death of cattle and horses. 6,000 horses died in the army. Many houses were burnt by thunder and lightning. On 16 February there was a hurricane, the greatest. It did more damage than any within the memory of *England*. On 14 April there was a very bitter cold combined with mist and hail, which killed many people.<sup>72</sup>

In 1360, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nan-t'ung. During the period between 8 August and 8 November, a drought engulfed Shansi (now Shanxi province) in northern *China* at Fên-yang and Chieh-hsiu. During the period between 12 August and 10 September, floods struck Kiangsu province at Nan-t'ung. During the period between 11 September and 10 October, a severe drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Pin-yang.<sup>153</sup>

In 1360 during the summer and autumn, there was a great drought in Chihli, Kwangsi and Shansi provinces in *China*.<sup>165</sup>

In 1360, there was a great drought in the vicinity of Shanghai, *China*.<sup>166</sup>

**1361 A.D.** In *England*, there was a drought, “very grievous in summer.”<sup>47, 72</sup>

In *England* after the beginning of May, there was a great drought, scarcity of corn [grain] and hay. There was a famine in *Poland*.<sup>72</sup>

In 1361, there was a great thunderstorm [in *England*]. “Men and beasts perished in divers [diverse] places with thunder and lightning.”<sup>212</sup>

The summer of 1361 in southern *France* was remarkably hot.<sup>79</sup>

Wine, fruit and wheat were plentiful in 1361.<sup>79</sup>

The winter of 1361 in *France* was much wetter and warmer than usual: lots of trees flowered before Christmas.<sup>79</sup>

In *Poland* in 1361, there was a famine.<sup>57, 91</sup>

**1362 A.D.** In the evening of 15 January 1362 in *England*, there began a very strong wind from the Southwest. It blew with such force so as to overthrow many strong and mighty buildings, towers, steeples, houses, and chimneys. This wind continued for six or seven days. Many edifices standing after the storm was over had been so shaken that they required restoration to prevent them from collapsing. This was followed by a very wet season; chiefly summer and harvest. Much corn [grain] and hay was lost or spoiled by the unseasonableness of the weather. There was great sickness in *Britain* for a year.<sup>72</sup>

On 15 January 1362, a particularly dramatic first Mandränke [large drowning] occurred, in consequence large parts of the outer *North Frisian* country perished. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.] According to a Russian church clerk, the flood began on 15 January 1362, reached a climax on 16 January and ended a day after that. The chronicler Anton Heimreich reported that the western sea went 4 Ellen [9 feet, 3 meters] above the highest levees. A

total of 21 levees were breached. Rungholt along with seven other parishes in the Edomsharde were destroyed and 7,600 people perished. The chronicles speak of a total of 100,000 deaths, a number that is certainly exaggerated. In some coastal sections of *North Friesland* before the tide came in, were part of the edge of the geest. Tidal currents caused large bays to extend into wide estuaries. The present course of the *German North Sea* coast has been largely mapped out by the storm surge.<sup>172</sup>

Between 8 and 9 September 1362 a sea storm struck [*Germany*]. Many who had survived the plague drowned. The waters of western sea swept away 30 localities. The islands of Föhr and Sild [Sylt] were completely demolished. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In 1362, during the week of Easter, on April 17, a very severe frost killed the [grape] vines completely, along with walnut and other fruit trees in *France* at Tours, Angers, even in the Lorraine and beyond. These frosts, the humidity from the winter and almost continual rains combined to completely destroy the grapes, nuts and other fruits almost everywhere.<sup>79</sup>

In 1362, there was a fearful mortality in London, *England* and Paris, *France*.<sup>212</sup>

In October, the Rhône River in *France*, flooded with such violence that the ramparts of Avignon, which had been raised shortly after the flood of 1226, were overthrown.<sup>61</sup>

The winter of 1362 was very wet in *France*.<sup>79</sup>

In 1362, a severe drought engulfed Honan (now Henan province) in central *China* at Loyang, Mêng-ching and Yen-shih. During the period between 27 March and 24 April, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Kuang-tê. Then during the time period between 22 July and 19 August, floods struck Hopei (now Hebei province) in northern *China* at Cho. Houses were flooded.<sup>153</sup>

In 1362, there was a great drought in Honan province in *China*. The resulting famine was so severe that it led to cannibalism.<sup>165</sup>

**1363 A.D.** In 1363 in Mainz, *Germany*, there was a great plague that also killed the horses. The winter was so cold that even the birds froze.<sup>172</sup>

In 1363, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsinan; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ho.<sup>153</sup>

In 1363, there was a great drought in Kwangsi and Shantung provinces in *China*.<sup>165</sup>

**Winter of 1363 / 1364 A.D.** A severe winter struck *Europe* beginning in September 16. The winter produced frost from September to April. The Rhine River was frozen.<sup>28</sup>

In 1364, the Rhône River in *France* froze.<sup>58, 80</sup>

In 1364, the Rhône River at Arles, *France* froze to a considerable depth; loaded carts traveled on the ice.<sup>60, 62</sup> [At Arles, the Rhône River divides in two major arms, forming the Camargue delta.]

This winter in 1364 was very severe, particularly in the north and the south of *France* where all the fruit trees tended to die. In Paris, the frost began on 6 December, and lasted 14 weeks. The snow was lying on the ground the whole time. As a result of this extreme cold, an extraordinary lack of meat soon followed. In *England*, the frost lasted from mid-September until April.<sup>62</sup>

In *France*, all the rivers froze in 1364. The frost accompanied by snow lasted until the end of March. The vines froze in several places into the roots. Very deep caves although they were protected by straw were not immune to the frost. Loaded carts crossed the Rhône River and the ice was in some places fifteen-feet thick.<sup>79</sup>

In *England*, the frost was “very terrible” between the 16<sup>th</sup> of September to the 6<sup>th</sup> of April.<sup>47, 72, 93</sup>

In *England*, a hard frost struck between 16 or 28 September and continued until 6 April. The ground lay unplowed to the great loss of corn and fruit.<sup>72</sup>

**1364 A.D.** The summer of 1364 in southern *France* was remarkable due to excessive heat and extreme cold.<sup>79</sup>

In 1364, the tide of the River Humber in *England* rose to such an extraordinary height, that it overflowed its banks and inundated the adjacent countryside, destroying a once noted seaport called Ravenspur.<sup>212</sup>

**1365 A.D.** In *England* and *Wales*, the land was so inundated with continuous rains that scarcely an article of food was raised.<sup>1</sup>

It rained violently in *England*.<sup>40, 41, 47, 92</sup>

In June 1365 for several days both night-and-day, there were great thunders with lightning storms in *France* and Burgundy. The torrents of rain that fell during the storms knocked down the newly repaired walls of Dijon in east-central *France*, and overran a neighboring village with its inhabitants.<sup>79</sup>

In 1365 during the period between 19 July and 17 August, floods struck Hopei (now Hebei province) in northern *China* at Peiping. Then during the period between 8 August and 8 November, floods struck Shantung (now Shandong province) on the east coast of *China* at Tung-p’ing, Tung-a and P’ing-yin. Houses and crops were damaged by the floodwaters. During the same time, floods struck Hopei province at Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

**1366 A.D.** [In *England*] it rained all harvest.<sup>72</sup>

In *England* in 1365 or 1366, there fell an abundance of rain in the time of hay harvest, whereby much hay and corn [grain] were lost. A great mortality of people followed. So many who went to bed well at night were found dead the next morning. Many of all ages and sexes died of smallpox.<sup>72</sup>

The year 1366 was a cold and wet year. The grain was expensive due to grasshoppers and mice feeding upon it. In Brunswick, *Germany*, a great mortality as the plague begins.<sup>172</sup>

In 1366, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 12 March and 10 April, floods struck Hopei (now Hebei province) in northern *China* at Tung-ming and Shantung (now Shandong province) on the east coast of *China* at P’u, Ho-tsê and Chü-yeh.

— During the period between 9 July and 6 August, floods from heavy and protracted rains struck Honan (now Henan province) in central *China* at Loyang. Several hundred families were flooded.

— During the period between 7 August and 4 September, floods struck Honan province at Chi, Kaifeng and Yü and Hopei province at Chi [located at longitude 117.24° East and latitude 40.03° North]. Crops were damaged by the floodwaters. During the same time, floods struck Shansi (now Shanxi province) in northern *China* at Chieh-hsiu.

— During the period between 5 September and 4 October, floods struck Shantung province at Hui-min, Pin, Chü-yeh and Ch'i-ho. At Chü-yeh and Ch'i-ho, crops were damaged by the floodwaters.

---

**1367 A.D.** In 1367, there was a “morbida pestis”, a new type of plague in Mainz, *Germany* which struck people with a bloody cough followed by death in 3 days. The year was barren and everything was expensive. In the fall the plague struck Lübeck.<sup>172</sup>

In 1367, there was a fearful mortality in London, *England* and Paris, *France*.<sup>212</sup>

Violent winds struck in December 1367, during the night of the Feast of Saint Lucia [13 December] in Flanders [now *Belgium*] and Brabant in Picardy in northern *France*, which had never seen the like. The winds came from the northwest. The ocean overflowed during the storm and swallowed several homes and villages on the banks of the sea.<sup>79</sup>

---

**1368 A.D.** [In *England*], there was a dearth from scarcity.<sup>72</sup>

In 1368, floods struck Shantung (now Shandong province) on the east coast of *China* at Ho-tsê.<sup>153</sup>

In 1368 during the spring and summer, there was a drought in Chêhkiang province in *China*. The land tax was remitted.<sup>165</sup>

---

**1369 A.D.** In *England*, there was a dearth. Wheat sold for 20s. per Quarter [quarter ton]. This year began the next great plague called the third mortality. This was very great both for people and cattle, the like seldom heard of. The west country, as Oxford, was most afflicted by it.<sup>72</sup>

In 1369 in *England*, there was great pestilence among men and large animals. This was followed by inundations and extensive destruction of grain. Grain was very dear.<sup>57,91</sup>

In 1369 during the period between 5 February and 6 May, a drought engulfed many regions of *China*.<sup>153</sup>

In 1369 during the spring, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

In 1369, floods struck Shantung (now Shandong province) on the east coast of *China* at Ts'ao. During the period between 7 April and 6 May floods struck Kiangsi (now Jiangxi province) in southern *China* where the city walls largely collapsed.<sup>153</sup>

---

**1370 A.D.** In 1370, there was a dreadful mortality in *Ireland*.<sup>212</sup>

In 1370 during the period between 24 June and 22 July, a drought engulfed many regions of *China*.<sup>153</sup>

In 1370 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1371 A.D.** In 1371 during the 7<sup>th</sup> moon on the 16<sup>th</sup> day, in the vicinity of Shanghai, *China*, there was a great wind, which rose from the sea. Dust and sand filled the sky. Objects like hawks and [roof] tiles were observed in the air. A flagstaff was broken and carried to a distant place where the wind ceased, leaving bank notes or sacrificial paper scattered about a villager's house.<sup>166</sup>

---

**1372 A.D.** The year 1372 was a hard winter. In *Prussia* and Thorn [now Torun, *Poland*], many people died from the cold. From 6 January, there was a lot of snow. This was followed by a dry autumn and a plentiful harvest.<sup>172</sup>

In 1372 during the period between 6 May and 30 June, a drought engulfed many regions of *China*. During the period between 31 July and 28 August, floods caused by a typhoon struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-hang. Houses were damaged.<sup>153</sup>

In 1372 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1373 A.D.** In the Novgorod Republic [now part of *Russia*], the Volkhov River flowed backwards for seven days [owing to floods downriver].<sup>76</sup>

The flood of 9 October 1373 [second Marcellus flood] affected mainly *East Friesland*. The storm surge was higher than the previous floods but the damage was not as great. This is because many people permanently abandoned the harbor towns and villages moving miles inland from the sea. For example Westeel along Leybucht bay was abandoned. Many dikes failed. Norden and Marienhafé [today kilometers from the sea coast] became port towns.<sup>172</sup>

In 1373 during the period between 19 August and 16 September, floods struck Shantung (now Shandong province) on the east coast of *China* at Ch'i-ho, Hui-min and Shang-ho. Over 70 li [about 24.5 miles] were flooded.<sup>153</sup>

---

**1374 A.D.** In *Italy* in 1374 and 1375, there was a famine.<sup>57, 72, 91</sup>

The summer of 1374 in southern *France* was remarkably hot.<sup>79</sup>

The year 1374 produced heavy rains in southern *France*.<sup>79</sup>

In October 1374, flooding from the sea amid storms swamped several cities in Holland [now *the Netherlands*].<sup>79</sup>

In 1374, floods struck Shantung (now Shandong province) on the east coast of *China* at Chü-yeh. Houses and fields were damaged by the floodwaters. Also floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou.<sup>153</sup>

---

**1375 A.D.** In *England*, there was an excessive drought with heat.<sup>47, 72</sup>

In *Italy* in 1374 and 1375, there was a famine.<sup>57, 72, 91</sup>

On 10 February 1375, the Weser River flooded. The water was in the cathedral in Minden, *Germany*.<sup>172</sup>

On 13 November 1375, a storm damaged the steeple of the church of Saint Jakobi in Lübeck, *Germany*.<sup>172</sup>

The winter of 1375 was extremely cold in *Germany*. The Rhine River was frozen over for a quarter of the year. A four week market [fair] was held on the ice.<sup>172</sup>

In 1375 during the period between 1 February and 2 March, floods struck Honan (now Henan province) in central *China* at Kaifeng. During the period between 27 August and 25 September, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping [source cited province at Honan which appears to be in error].<sup>153</sup>

In 1375 during the autumn, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

---

**1376 A.D.** In the Novgorod Republic [now part of *Russia*], for the second time in three years the Volkhov River flowed backwards seven days [into lake Ilmen, owing to floods downstream].<sup>76</sup>

In 1376, floods struck Fukien (now Fujian province) on the southeast coast of *China*. Innumerable houses damaged by the floodwaters. During the period between 19 May and 17 June, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Yü-hang.<sup>153</sup>

In 1376 during the 12<sup>th</sup> moon [winter], there was a freshet [flood] in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1377 A.D.** In spring there was a fire in Novgorod [*Russia*], it broke out in Lyudgoshcha Street and extended to Yakov Street, and seven wooden and three stone churches were burnt. In the same year the Church of the Holy Mother of God in the Mikhalitsa [Street] was struck by lightning and burnt.<sup>76</sup>

In 1377 during the period between 7 June and 5 July, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling and Ch'i-ch'un.<sup>153</sup>

---

**1378 A.D.** In 1378, floods caused by a typhoon struck Kiangsu (now Jiangsu province) on the east coast of *China* at T'ai-ts'ang. Floods also struck in Hunan province in south-central *China* at Yüeh-yang. Also during the year, a severe drought engulfed Szechwan (now Sichuan province) in southwest *China* at Jung-ch'ang.<sup>153</sup>

In 1378, there was a great drought in Sze-ch'wan province in *China*. The drought produced a great mortality.<sup>165</sup>

---

**1379 A.D.** On 26 May 1379, a big storm destroyed all the vineyards in the Minden region of *Germany*.<sup>172</sup>

The year 1379 was a year of plenty [in *England*]. Wheat was so plentiful that a bushel of wheat sold for sixpence.<sup>212</sup>

---

**1380 A.D.** In 1380, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling. During the period 3-31 July, floods struck Honan (now Henan province) in central *China* at Loyang and Shantung (now Shandong province) on the east coast of *China* at Ts'ao and Shan.<sup>153</sup>

In the year 1380, a strong thunderstorm took place near Aschersleben, *Germany* causing such a strong downpour that locally the fields were flooded.<sup>172</sup>

---

**1381 A.D.** In December of 1381 or 1382 in *England*, there were excessive long rains, great floods and losses.<sup>72</sup>

In 1381, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. During the period between 20 August and 17 September, floods struck Honan (now Henan province) in central *China* at Yüan-wu, Kaifeng and Chung-mou.<sup>153</sup>

In 1381, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

---

**1382 A.D.** In the *English Channel* in January, there was a great storm, which destroyed the ships from which Richard II's queen had just landed (from Bohemia) and many others.<sup>57</sup>

When Richard II's first wife came to *England* in 1382 from Bohemia, she had no sooner set foot on shore, but such a storm immediately arose as has not been seen for many years, when several ships were dashed to pieces in the harbor, and the ship in which the Queen came over was shattered and broken.<sup>40, 41, 56</sup>

An awful storm arose on January 1382, when Richard II's queen arrived from Bohemia, on her setting foot on the *English* shore. Her ship and a number of others were dashed to pieces in the harbor.<sup>90</sup>

In January 1382, there was a great gale on the south coast [of *England*].<sup>212</sup>

In different parts of *England*, many houses were thrown down by a storm, cattle destroyed and trees uprooted.<sup>41, 43</sup>

In 1382 as of 24 May, there was great disease in *England* and *Germany*. In *Germany* there was a complete absence of winds.<sup>212</sup>

In the beginning of May, flooding occurred on the River Sweet in *France*, which destroyed the work undertaken to rebuild the "Big Bridge" between Tournon and Saint-Jean-de-Muzols.<sup>61</sup>

[In *England*] in December, the rains produced great floods and losses. But there was no wind this year in *Germany*.<sup>72</sup>

There was no wind in *Germany* in 1382; yet it was a time of great plenty.<sup>72</sup>

In 1382 during the period between 10 August and 7 September, floods struck Honan (now Henan province) in central *China* at Jung-yang and Yang-wu.<sup>153</sup>

---

**1383 A.D.** In 1383, there was a great pestilence in *Ireland* that destroyed many people.<sup>212</sup>

During the night of 25 March 1383 in *England*, there was thunder, lightning and a great tempest. During Lent, the Duke of Lancaster and the English Army, lying on a marshy ground in *Scotland*, sustained great loss of men and horses, from the extreme cold and wetness.<sup>72</sup>

Severe storms reigned over the *English Channel* in 1383.<sup>79</sup>

---

**1384 A.D.** In 1384, an unbearable dry heat reigned throughout *France* from the spring until the middle of August.<sup>79</sup>

The sources of water dried up during the summer of 1384 in *France* by the lack of rainfall and prolonged drought.<sup>79</sup>

In *France*, after a long drought and heat unbearable that extended until the middle of August 1384, there came heavy rains that lasted until March 1385. This caused the grapes to rot.<sup>79</sup>

On 23 April 1384, rye already had ears and was harvested in June. Towards the end of August, a severe frost began that lasted until the end of the year. On 20 December, there was a great earthquake throughout Teutschland [*Germany*].<sup>172</sup>

In 1384, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 19 June and 18 July, floods struck Honan (now Henan province) in central *China* at Sui.

— During the period between 19 July and 16 August, floods struck Honan province at Loyang.

— During the period between 17 August and 15 September, floods caused by a typhoon and heavy storm struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. The occupants were drowned. Also during this time, floods struck Chekiang province at Li-shui.

---

**Winter of 1384 / 1385 A.D.** In 1384, during the winter the Rhine River, the Scheldt River and the Sea of Venice were frozen.<sup>1</sup> [The Scheldt River is a long river in northern *France*, western *Belgium* and the southwestern part of *the Netherlands*.]

In 1384, the Rhine and the Gulf of Venice were frozen over.<sup>30</sup>

During the year 1385, the winter was very cold in *Northern Europe*.<sup>62</sup>

---

**1386 A.D.** In *England*, there was such plenty, that 100 Quarters [quarter ton] of Barley cost 100 shillings and wine 13 shillings per ton.<sup>72</sup>

In 1386 [in *England*], there was a surprising great plenty [plentiful harvest].<sup>72</sup>

In September 1386, a terrible wind with lightning and thunder reigned throughout the kingdom of *France*.<sup>79</sup>

In 1386, floods struck several regions of *China* including:<sup>153</sup>

— Fukien (now Fujian province) on the southeast coast of *China*. Many people drowned and the fields were damaged by the floodwaters.

— During the period between 29 April and 27 May, floods caused by a typhoon and heavy storm struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. Forty to fifty of the occupants were drowned. During the same time period, floods struck Honan (now Henan province) in central *China* at Loyang and Kaifeng. At Kaifeng, houses were damaged by the floodwaters.

In 1386, in the vicinity of Shanghai, *China*, there was a famine.<sup>166</sup>

---

**1387 A.D.** In 1387, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1387, there was a great drought in Fuhkien province in *China*.<sup>165</sup>

On 1 May 1387, there was a great flood [in *Germany*].<sup>172</sup>

---

**1388 A.D.** In the Novgorod Republic [now part of *Russia*], in autumn at midnight on October 26, a southerly wind arose and drove the ice from the lake into the Volkhov River, which broke away nine stays of the great bridge.<sup>76</sup>

In 1388, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chang-yüeh.<sup>153</sup>

---

**1389 A.D.** In *England*, on 5 March, there rose a sore and terrible wind which overthrew houses, broke and rent trees, destroyed much cattle. Later there was a great dearth of corn [grain].<sup>72</sup>

In 1389, there was a great gale on the south coast [of *England*].<sup>212</sup>

[In *England*] in 1389, there was scarcity and dearth.<sup>72</sup>

In the year 1389, wares [in *Germany*] were inexpensive. A cow cost 3 Thaler. A sheep cost one Thaler [a silver coin used throughout Europe]. A bushel [of grain] cost 11 Pf [Pfennig – an old German coin, penny]. A pound of butter cost 2 Pf. A number (15-16) of eggs cost 1 Pf.<sup>172</sup>

---

**1390 A.D.** In *England*, there was a great famine arising from the scarcity of money to buy food.<sup>57, 91</sup>

[In *England*] during the years 1390 to 1392, there was a great dearth from hoarding up corn [grains].<sup>72</sup>

In 1390, there was a dreadful pestilence at York, *England*.<sup>212</sup>

The summer of 1390 in southern *France* was remarkably hot.<sup>79</sup>

The year 1390 produced heavy rains in southern *France*.<sup>79</sup>

A strong wind blew across the world on Christmas Eve 1390. The sea flooded beaches in *France*.<sup>79</sup>

In 1390 during the period between 11 August and 8 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China*; Kiangsi (now Jiangxi province) in southern *China*; Anhwei (now Anhui province) in eastern *China*; and Honan (now Henan province) in central *China* at Loyang.<sup>153</sup>

---

**1391 A.D.** Beginning on July 9, the sun appeared to be obscured by certain thick and dreary clouds between that and the earth. The clouds rose daily for almost six weeks together. The north and east part of *England* were, at the same time, sorely afflicted with a pestilence. In a few weeks there died eleven thousand persons in the city of York.<sup>39</sup>

For 6 weeks after 9 July 1391 in *England*, great, thick, dark clouds. At the same time there was a great mortality over all of *England*, especially in Norfolk. In York, 11,000 people died. During both this and last year was great scarcity and dearth. The mortality was from an epidemic bloody flux, from eating large quantities of green fruits during harvest time.<sup>72</sup>

In 1391, there was a plague all over *England*, when 11,000 people died in York.<sup>212</sup>

[In *England*] during the years 1390 to 1392, there was a great dearth from hoarding up corn [grains].<sup>72</sup>

In 1391, there was a high water flood [in *Germany*]. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

In September 1391 in Lombardy (*Italy*) ruled a huge hiss. During the siege of Alexandria, *Italy*, the young count d'Armagnac died following a stroke, because he had drunk cold water.<sup>62</sup> [During the attack on Alexandria, it was so very hot that those that bore arms thought they were in an oven, for there was not any wind, and the young men-at-arms were overpowered by the heat and unable to exert themselves. This was an unfortunate day for the count, who towards the end of the battle was so overcome by the heat, and near fainting, that he withdrew from the battle, without friend or foe knowing whither he was gone. He had retreated to a small grove of alders, through which ran a little brook; and he no sooner felt his feet in the water, than he thought he was in paradise, and seated himself by the side of the stream. He, with some difficulty, took off his helmet, and remained covered only by the linen scull-cap, and then plunged his face in the water, at the same time, unfortunately, drinking large draughts; for he was thirsty from the heat, and could not quench it. He drank so much water, that his blood was chilled, and a numbness of limbs seized him, with a strong inclination to faint. He could not move, and lost the use of speech.]

In 1391 during the period 2-31 July, floods struck Honan (now Henan province) in central *China* at Yüan-wu.<sup>153</sup>

In 1391 in the vicinity of Shanghai, *China*, the sea suddenly overflowed and drowned 20,000 persons.<sup>166</sup>

---

**1392 A.D.** Since the water in tree sap acquires greater volume when it freezes, in extreme cold, trees burst apart with a loud noise. In Strasbourg, *France* more fruit trees burst when the cold reaches  $-16^{\circ}$  Reaumur ( $-20^{\circ}$  C,  $-4^{\circ}$  F). A great number of trees in *France* burst in the winter of 1392.<sup>58, 80</sup>

In the year 1392 in *France*, the winter was severe. The trees were shattered due to the extreme cold.<sup>62</sup>

The winter of 1392 in *France* and in the North produced a very great cold.<sup>79</sup>

In 1392, during the marriage of Isabel [of France who was 6 years old at the time], daughter of Charles VI, to King Richard II of England, there were wondrous winds that lasted for three months. [The marriage ceremony took place at Calais, *France*.]<sup>79</sup>

The persistent drought in the summer of 1392 dried up water sources and prevented the largest rivers in *France* from being navigable.<sup>79</sup>

[There was a famine in *England* that does not appear to be weather related.] In *England* in 1392, there was a great scarcity for two years. People ate unripe fruit and suffered greatly from "Flux". The Corporation of London advanced money and corn [grain] to the poor at easy rates. One researcher attributes the cause of this famine to the hoarding of corn.<sup>57, 91</sup>

[In *England*] during the years 1390 to 1392, there was a great dearth from hoarding up corn [grains]. In 1392 there was a very bountiful good harvest.<sup>72</sup>

In *England* during 1392 and the previous two years, wheat sold from 16 shillings to 26 shillings per Quarter [quarter ton]. After a long period of plenty came this dearth, chiefly in the center of *England*. This dearth came about not from want of corn [grain] but partly because the corn was hoarded and partly due to transportation. *England* had sufficient corn to serve its needs for five years. All the wool in *England* had been laid up for three years unsold. The parliament having prohibited its transportation and merchants would not buy it but at a very low price. For it was sold from 22*d.* to 3*s.* per stone. But in 1392 came both money and a plentiful harvest. The poor were relieved and the Nation was well stored. During the dearth, the poor suffered much in the bloody flux. In September, there were great and terrible thunder and lightning. In October, there were very great and long rains.<sup>72</sup>

In 1392 [in *Germany*], there was a late harvest, which came with an abundance not seen since in human history. The summer was hot. Beginning on 25 November, there were great snowfalls and many people met with an accident.<sup>172</sup>

In 1392 during the period 25 January and 22 February, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Jung. [Jung is located at longitude  $109.10^{\circ}$  East and latitude  $25.02^{\circ}$  North.]<sup>153</sup>

---

**1393 A.D.** In *France*, the heat is so strong that the earth is burned and the rivers are dry.<sup>61</sup>

In 1393 and 1394, the summers were dry and excessively hot [in *England*].<sup>212</sup>

In 1393, floods caused by a typhoon struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. Houses and fields were damaged by the floodwaters. During the period between 11 May and 9 June, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1393 during the summer, there was a great drought in Chêhkiang province in *China*.<sup>165</sup>

---

**1394 A.D.** In 1393 and 1394, the summers were dry and excessively hot [in *England*].<sup>212</sup>

In *England* in September 1394, great damage was done by thunder, lightning and tempest, especially in Cambridgeshire, where many houses and much corn were burnt up [by lightning strikes]. This was followed by great rains and floods in October, which did great damage.<sup>72</sup>

In 1394, there was a drought during the summer [in *Germany*].<sup>172</sup>

---

**Winter of 1394 / 1395 A.D.** During the months of December, January and February during the winter of 1394-95, the weather was extremely wet. Because of the rains, all the rivers of the kingdom [of *France*] overflowed their banks three times.<sup>79</sup>

---

**1395 A.D.** In 1395, there was a high water flood [in *Germany*]. [This entry was listed under the category “storm surge”, which might include an inundation of the sea.]<sup>172</sup>

---

**1396 A.D.** In 1396 in Holland [now *the Netherlands*], there was “another deluge,” which formed the Marsdiep, separated the islands of Texel, Vlielandt, and Wieringen from the mainland, and submerged other districts. “This first raised the commerce of Amsterdam.”<sup>47, 92</sup> [The Marsdiep is the gap between Den Helder (on the mainland of Holland) and Texel (the largest Dutch Wadden Island). The Marsdiep connects the Northsea with the Waddensea. Texel is the large island in the Waddensea. Vlielandt or Vlieland is one of the West Frisian Islands, lying in the Wadden Sea. It is the second island from the west in the chain, lying between Texel and Terschelling. Wieringen at that time was an island. Today, a large dike links Wieringen with Friesland.]

[Other sources places this flood in the year 1400.] In 1400, there was an inundation at Texel in *the Netherlands*, which first raised the commerce of Amsterdam.<sup>90</sup> In 1400 at the Taxel, there was an inundation, which first raised the commerce at Amsterdam.<sup>43</sup>

In the *English Channel*, there was another great storm, on the occasion of the second Queen of Richard II landing.<sup>57</sup>

The second wife of Richard II brought a storm with her to the *English Coast* in which the King’s baggage was lost, and many ships of the Fleet cast away.<sup>40, 41, 56</sup> [One source shows the date of this event as 1381, another as 1389 but the most likely date is 1396.]

In 1396, Richard's second queen also brought a storm with her to the *English* coasts. In this storm the king's baggage was lost, and many ships cast away.<sup>90</sup>

In *England* in 1396, in July and August, but especially in September, there were terrible hurricanes. These did great damage to churches and houses in many parts of the country.<sup>72</sup>

There was in Paris, *France* at the end of October 1396, a terrible storm of wind, rain and thunder, which was felt throughout the north. The storm was so violent that it knocked down the tents of the royal camp.<sup>79</sup>

In Ardres, *France* at the end of October 1396, there came a terrible storm, mingled with torrents of rain. Then a north wind blew across continually with great fury for three months. This year was called “the year of the high wind”. These winds intensified the night of November 17 for three hours. The Sea [*English Channel*] overflowed this year.<sup>79</sup>

Beginning in 1396, there was an extreme famine in the Deccan region of *India*.<sup>156</sup>

— “In 1396, the dreadful famine, distinguished from all others by the name of the ‘Durga Dewee’, commenced in Maharashtra. It lasted, according to the Hindoo [Hindu] legends, for twelve years. At the end of that time, the periodical rains returned, but whole districts were entirely depopulated, and a very scanty [tax] revenue was obtained from the territory between the Godavery and Kistna [now Godaverri and Krishna Rivers] for upwards of thirty years afterwards.”

---

**1397 A.D.** In 1397 during the period between 23 August and 21 September, floods struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

---

**1398 A.D.** In 1398, floods struck Fukien (now Fujian province) on the southeast coast of *China*. Houses were damaged by the floodwaters.<sup>153</sup>

---

**1399 A.D.** In 1399, the winter was remarkable in *the Netherlands* and particularly in *Northern Europe*. In Paris, *France* the spring thaw produced a great flood.<sup>62</sup>

Excessive rains of 1399 brought the overflow of several rivers in the kingdom [of *France*], particularly the Seine River, from late March to mid-April.<sup>79</sup>

---

**Winter of 1399 / 1400 A.D.** The winter of 1399 was a very hard winter in *Germany*. The earth and sea froze hard in a short period of time. Not only did people use the Elbe River as a bridge to travel over the ice, but also went across the ice to *Denmark*.<sup>172</sup>

In 1400, the winter was very severe in *Northern Europe* and the frozen seas offered several armies an alternate route on the ice.<sup>62</sup>

“In 1400, the seas froze in *Northern Europe*”.<sup>62</sup>

---

**1400 A.D.** In 1400, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hsiao-shan.<sup>153</sup>

In 1400, a large storm surge called “the Frisian Flood” raged on the *Frisian coast* [coastal region along the southeastern corner of the North Sea that extends from Netherlands to Denmark].<sup>172</sup>

---

**1401 A.D.** In May 1401, a terrible storm burst upon the Beauvoisis [Beauvoisin in the Picardy region north of Paris, *France*]. Hailstones the size of goose eggs were driven by a strong wind. During the second week of June, Paris, *France* was struck by a terrible thunderstorm. Again on the last days of June, a terrible storm broke out in Paris. The violent winds uprooted and scattered over a thousand fruit trees at Mesnil-Aubry near Paris.<sup>79</sup>

In 1401 during the period between 11 July and 9 August, a flood struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua.<sup>153</sup>

In 1401 [in *Germany*], it began to rain on the [feast of Saint] Gregory [March 12] until the feast of St. Lambert [September 17]. For almost a half year there was not a day that it did not rain. The winter grain was spoiled by the cold rain. The summer grain produced long stalks but little grain. Then came a famine and a miserable time.<sup>172</sup>

---

**1402 A.D.** In *England*, on the Feast of Corpus Christi [generally occurs in May or June] in the evening, there fell a tempest of wind, thunder and lightning, that the highest part of Danbury Church in Essex was blown down and the chancel [sanctuary] was all shaken, rent and torn in pieces.<sup>72</sup>

---

**Winter of 1402 / 1403 A.D.** The winter of 1402 was similar to the winter of 1323 A.D.<sup>1</sup>

In 1402 the *Baltic Sea* was quite frozen over from Pomerania to *Denmark*.<sup>2, 40, 41, 42, 43, 47, 90, 93</sup> [Pomerania was a historical region on the southern shore of the Baltic Sea between *Germany* and *Poland*.]

In the Novgorod Republic [now part of *Russia*], during the winter of 1402/03 from St. Georgi's Day up to March, horses could travel over the Volkhov [River on the ice].<sup>76</sup>

**1403 A.D.** In 1403 during the period between 21 April and 20 May, a flood struck the east coast of *China* in Chekiang (now Zhejiang province) at Chia-hsing; and in Kiangsu (now Jiangsu province) at Soochow and Sung-chiang. During the period between 18 August and 16 September, a flood struck Chekiang province at Hai-ning and the fields were damaged by the floodwaters.<sup>153</sup>

In 1403, a severe drought engulfed Hunan province in south-central *China* at An-hsing and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh.<sup>153</sup>

In 1403, there was a great drought in Hunan and Kwangsi provinces in *China*.<sup>165</sup>

In 1403, there was a famine at Shanghai city in *China*.<sup>166</sup>

In 1403, there was a huge snowfall in *Silesia*, particularly at Glatz [now Kłodzko, *Poland*], Patschkau [now Paczków, *Poland*], Reiß and [now Głucholazy, *Poland*] so that high waters and floods destroyed many houses and tore through the city gates and took great multitudes of people away. The floods destroyed the bridge of Troppau [now Opava, *Czech Republic*].<sup>172</sup>

On 25 November 1403, there was a very large storm surge along the *North Sea*.<sup>172</sup>

**1404 A.D.** In *England*, there was an inundation from the sea.<sup>47, 72, 92</sup>

In *France* in June, a strong mist covered the whole country.<sup>61</sup>

In 1404 or 1406, there were great losses in Kent, *England*, in Holland [now *the Netherlands*], in *Zealand*, in Flanders [now *Belgium*], etc. by breaking in of the waters that overflowed the sea banks, to the drowning and loss of much cattle, etc.<sup>72</sup>

In 1404, several regions of *China* experienced flooding including:<sup>153</sup>

— During the period between 10 April and 8 May, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hui-yang.

— During the period between 9 May and 7 June, floods struck Anhwei (now Anhui province) in eastern *China* at Fêng-yang.

— During the period between 7 July and 5 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang; and Chekiang province at Chia-hsing and Hu-chou.

— During the period 3-31 December, floods struck Chekiang province at Hangchow.

In 1404 during the 6<sup>th</sup> moon, in the vicinity of Shanghai, *China*, there was excessive rain for 10 days. High places were covered with water several feet. In low places the water was more than ten feet deep.<sup>166</sup>

**1405 A.D.** In 1405, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Hangchow. During the same year a drought engulfed Chekiang province at Taichow.<sup>153</sup>

In 1405, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

In 1405 during the 7<sup>th</sup> moon on the 2<sup>nd</sup> day, a typhoon struck in the vicinity of Shanghai, *China*. A great wind and rain; sea overflowed, drowning more than 1,000 persons.<sup>166</sup>

In 1405, there was a famine in the vicinity of Shanghai and three neighboring fus [prefectures] in *China*.<sup>166</sup>

---

**1406 A.D.** In Novgorod [*Russia*] on Easter, April 11, heavy ice came from the lake and broke away a stay of the great bridge.<sup>76</sup>

In *England*, there was a warm southerly wind all summer, moist corrupt air; hence a plague.<sup>72</sup>

---

**1407 A.D.** In 1407, there was a dreadful pestilence in London, *England*, where 40,000 people perished.<sup>212</sup>

In 1407 during the period between 6 June and 4 July, a flood struck Kiangsi (now Jiangxi province) in southern *China* at Yang-shuo.<sup>153</sup>

---

**Winter of 1407 / 1408 A.D.** The winter was similar to the winter of 1323 A.D.<sup>1</sup>

The whole sea between Gothland and Geland was frozen, and from Restock to Gezoer.<sup>2, 41, 42, 43</sup>

In *England* the winter was severe. It produced a great frost lasting 25 weeks. In *Europe* the winter was also very severe. Norway wolves reached Jutland across ice rivers and Swiss lakes froze.<sup>28</sup>

In *England*, there was a long and severe winter, frost and snow in December 1407 and January, February and March in 1408. Thrushes, blackbirds and many thousand of smaller birds died of hunger and cold.<sup>72</sup>

In December 1407, began a frost of such violence and continuance, that the like was never heard of in *England*. It lasted fifteen weeks, and being accompanied with abundance of snow, it was greatly destructive to the smaller birds.<sup>39</sup>

During the winter of 1407, there was a great frost in *England*, with deep snow, for 15 weeks, which killed the small birds.<sup>212</sup>

In *England* in 1407, the frost lasted fourteen weeks; small birds perished. In the *Baltic Provinces* in 1408 the frost was very severe.<sup>47, 93</sup> [Baltic Provinces in this time period were the Hanseatic League Baltic provinces of *Estonia* and *Latvia*.]

In *England* in 1408, the frost lasted for 15 weeks. Most small birds died.<sup>72</sup>

In *England* during the winter of 1407-08, all the small birds perished from the frost.<sup>90</sup>

The *Baltic Sea* was frozen over.<sup>30</sup>

In 1408, the vines and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

In 1408, the Danube River freezes over its entire length. The ice stretches uninterrupted from *Norway* into *Denmark*. Carts cross the Seine River in *France* on the ice.<sup>60</sup>

In 1408, carts traveled on the ice across the frozen Seine River in *France*. The Danube River across its entire course was frozen, and the Maas [Meuse] River was frozen. The ice extends without interruptions from *Norway* to *Denmark*, so that the wolves invaded from the north into Jutland.<sup>62</sup>

The winter of 1408 began November 11 and did not end until late January. It froze all the rivers in *France* and destroyed the roots of vines and fruit trees. In Paris, *France*, the wagons rolled down the Seine River.<sup>79</sup>

In the year 1408 "The winter of this year, ruled strictly in *Northern Europe* to the banks of the Danube, and was the cruelest in 500 years. The winter was so long that it stopped by Feast of St. Martins (11 November) by the end of January, and so severe that the roots of the vines and fruit trees froze to death."<sup>62</sup>

"Since last Feast of St. Martins such a cold occurred, that no one could do business, and if I had just asked the clerk for an additional shovel of coal in order to protect the inkwell from freezing. So the ink froze but always after two or three words with the pen so he couldn't keep records."<sup>62</sup>

The acute shortage of wood and bread was painfully felt. The mills were collectively still on the frozen river because of the frost. The thaw in *France* caused terrible devastation because of the flowing pieces of ice and because the rivers overflowing their banks. The first shock of the ice against the arch warned the inhabitants of many houses built along the shoreline to run for their safety. For when the ice flows broke, one could see icebergs 100 meters (330 feet) in length floating. The little known wooden bridge at the Chatelet, and the bridge of St. Michael (then called the New Bridge) collapsed. The foundations of the large bridge mills were swept away. In many places similar misfortunes occurred.<sup>62</sup>

**1408 A.D.** A terrible hailstorm struck in Vexin in northwestern *France* on September 5, 1408. Hailstones, driven by a furious wind, were as big as ostrich eggs.<sup>79</sup>

In *England* on 7 September, there was a great flood.<sup>72</sup>

In 1408, there was a flood in the River Ware [Wear] in *England* that caused great damage.<sup>212</sup>

In 1408, a flood struck Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning.<sup>153</sup>

**1409 A.D.** In 1409, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Yangchow; Anhwei (now Anhui province) in eastern *China* at Fêng-yang; and Honan (now Henan province) in central *China* at Huai-yang. As a result, the land tax was remitted. During the period between 9 September and 8 October, a flood struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui.<sup>153</sup>

**1410 A.D.** In *Ireland*, there was a great famine.<sup>57, 91</sup>

In 1410, several regions of *China* experienced flooding including:<sup>153</sup>

- During the period between 3 June and 1 July, floods struck Shensi (now Shaanxi province) in central *China* at An-k'ang. The city walls and granaries were damaged by the floodwaters and people drowned.
- During the period 2-31 July, floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang and T'ai-ho. As a result, the land tax was remitted.
- During the period 1-29 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at P'ing-yang.

**1411 A.D.** A terrible storm struck around Paris, *France* in 1411, on the Feast of the Conversion of St. Paul [January 25].<sup>79</sup>

In 1411, several regions of *China* experienced flooding including:<sup>153</sup>

— During the period between 26 December 1410 and 23 January 1411, floods struck Honan (now Henan province) in central *China* at Loyang.

— During the period between 24 January and 22 February, floods struck Hopei (now Hebei province) in northern *China* at Peiping and An-kuo. As a result, the land tax was remitted.

— During the period between 23 February and 23 March, floods struck Shantung (now Shandong province) on the east coast of *China* at Lin-i. [Lin-i is located at longitude 118.24° East and latitude 35.07° North.]

— During the period between 21 June and 20 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.

— During the period between 15 December 1411 and 13 January 1412, floods struck Hopei province at Peiping. As a result, the land tax was remitted.

**1412 A.D.** In *India*, there was a great drought on the Ganges-Jumna Delta from 1412-1413.<sup>47</sup>

In 1412-13 in *India*, there was a great drought followed by a famine which occurred in the Ganges-Jumna delta.<sup>57</sup>

In *England* on 12 October 1412, the “sea flooded thrice without ebbing.”<sup>47, 72, 92</sup>

In *England* beginning on October 12, there were three floods in the River Thames, one upon another and no ebbing between. The likes of this event was never known before.<sup>72</sup>

In 1412, several regions of *China* experienced flooding including:<sup>153</sup>

— During the period between 11 April and 10 May, floods struck Hopei (now Hebei province) in northern *China* at Peiping. As a result, the land tax was remitted. During the same time period, floods struck Honan (now Henan province) in central *China* at Sui-p’ing. Dikes and fields were damaged by the floodwaters and 130 families were flooded.

— During the period between 9 June and 8 July, floods caused by heavy and protracted rains struck Kiangsi (now Jiangxi province) in southern *China* at Wu-ning. Houses were damaged by the floodwaters.

— During the period between 9 July and 7 August, floods struck Honan province at Yen-ling and Lin-chang. Fields and crops were damaged by the floodwaters.

— During the period between 8 August and 5 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Wu-chiang, K’un-shan and Ch’ang-shou. As a result, the land tax was remitted. During the same time, floods struck Hopei province at Peiping. Dikes and fields were damaged by the floodwaters and people and cattle drowned. Floods also struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing.

— During the period between 4 December 1412 and 2 January 1413, floods struck Hopei province at Tientsin. Dikes and crops were damaged by the floodwaters. During the same time, floods also struck Hopei province at Jao-yang and Wu-ch’iang. Dikes, fields and houses were damaged by the floodwaters. Also during this time, floods struck Hunan province in south-central *China* at Hsiang-yin; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hai-k’ang and Sui-ch’i. As a result, the land tax was remitted.

**1413 A.D.** In London, *England* on the 25<sup>th</sup> of November, the leads of the Grey-friars church, and the whole side of a street, called the Old Exchange were beat down by a storm.<sup>41, 43, 56</sup>

[In *England*] in April 1413, there was a great snowfall.<sup>72</sup>

In 1413 A.D., there was a famine in the Ganges [the river that separates *India* from *Bangladesh*] and Jumna Doab [the track of land between the Ganges river and the Jumna (now Yamuna) river in northern *India*].<sup>179</sup>

In 1413, flooding affected many regions of *China* including:<sup>153</sup>

— During the period 3-31 January, floods struck Hupeh (now Hubei province) in central *China* at Huang-kang; Hunan province in south-central *China* at Ch'ang-tê; and Honan (now Henan province) in central *China* at Chung-mou and Ch'in-yang. As a result of the hardship, the land tax was remitted. During the same time period, floods struck Hopei (now Hebei province) in northern *China* at An-hsin. Dikes were damaged. During this time, floods also struck Hunan province at Hua-jung. Dikes and crops were damaged by the floodwaters. Floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at P'ei. [P'ei is located at longitude 118.03° East and latitude 34.30° North.]

— During the period between 30 May and 27 June, floods caused by a typhoon struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.

— During the period between 28 June and 27 July, floods struck Hopei province at Yüeh-t'ing. Crops were damaged by the floodwaters and the land tax was remitted. Floods also struck Kiangsu province at Suchow.

**1415 A.D.** In the Novgorod Republic [now part of *Russia*], the water [in the Volkhov River] flowed backwards [into the lake, owing to floods downstream].<sup>76</sup>

In 1415 during the period between 11 January and 9 February, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang; and Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Hu-chou and Hangchow. As a result, the land tax was remitted.<sup>153</sup>

**1416 A.D.** In 1416, flooding affected many regions of *China* including:<sup>153</sup>

— During the period between 30 January and 28 February, floods struck Honan (now Henan province) in central *China* at Ch'in-yang and An-yang. As a result, the land tax was remitted.

— During the period between 27 May and 24 June, floods struck Shansi (now Shanxi province) in northern *China* along the Han River. Houses were damaged by the floodwaters. Floods also struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua.

— During the period between 6 May and 8 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Nan-p'ing, Chiang-yüeh, Sha and Shun-ch'ang.

— During the period between 24 July and 22 August, floods struck Fukien province at Shao-wu and Kuang-tsê. Houses were damaged by the floodwaters and tens of thousands of people drowned. Also during this time, floods struck Kiangsi (now Jiangxi province) in southern *China* at Shang-jao and P'o-yang; and Chekiang province at Ch'ü and Chin-hua. The city walls and houses were damaged by the floodwaters and people and cattle drowned.

— During the period between 21 September and 20 October, floods struck Honan province at Ning-ling and Kiangsu (now Jiangsu province) on the east coast of *China* at Yen-ch'êng. As a result, the land tax was remitted. At Yen-ch'êng, the fields were damaged by the floodwaters.

In 1416 during the period between 6 May and 8 August, a severe drought engulfed several regions of *China*. The drought was accompanied by a plague.<sup>153</sup>

In 1416 during the summer, there was a great drought in Chêhkiang province in *China*. Typhus raged.<sup>165</sup>

**1417 A.D.** On June 10 there was a thunderstorm and in the Church of St. Eupati on Rogatitsa [Street in Novgorod, *Russia*] the images [sacred icons] were burnt.<sup>76</sup>

---

**1418 A.D.** In *England*, there was such a storm and hideous tempest as endangered the loss of the whole English Navy.<sup>72</sup>

---

**1419 A.D.** In the Novgorod [*Russia*], during the evening service on April 9, Sunday, there was a violent storm of wind, and clouds and very thick rain; the water from the springs ran like a strong river; lightning flashed, and there was terrible thunder, and [the lightning] killed the watchman Andrei in the Church of the Holy Mother of God by the town gates. The chain of the candelabra from the ceiling of the cupola was all torn; and the Holy Gates were burnt. [The lightning] caused damage in [the churches of] St. Ioan the Forerunner, of St. Nikola and of St. Vasili, but by God's mercy the churches were spared. But below the churches in the gateway two men were killed [by lightning], others fell down as dead, and others were struck deaf; some lost their legs, and others were struck dumb, but by the mercy of God they were assuaged with water and carried to their homes, where, after having lain down a little on their beds, by the grace of God they got up again; and at that same time the icons in the Church of St. Kostyantyn were scorched.<sup>76</sup>

---

**Winter of 1419 / 1420 A.D.** In 1420, the sea between Constantinople (Istanbul) and Iskodar (Üsküdar) *Turkey* was frozen and passable on ice.<sup>2, 42, 43, 47, 93</sup>

In 1420, the severe winter increased the misery in *France*; a nation tattered by war, with its capital in the hands of the English. The famine was in Paris so great that the unfortunates spent their days searching for food. The wolves advanced to the suburbs of the city that was now like a vast wasteland.<sup>62</sup>

---

**1420 A.D.** The weather in 1420 was exceptionally good for the wine in Dijon, *France*. They drank the new vintage on 25 August, which was about 30 days ahead of the average time. In the first days of April, the farmers came to the door of the cathedral at Metz, *France* to offer lilies of the valley. On 10<sup>th</sup> of April, the strawberries were ripe. On 22 June, the grapes were crushed. On 22 July the harvest was completed. And they drank at the end of the month, the new wine.<sup>62</sup>

On 7 April 1420 [in *Germany*], the roses bloomed and cherries and strawberries were picked. In June grapes and peaches were ripe. On 8 June there was frost and snow but it did little damage. The autumn was beautiful.<sup>172</sup>

---

**Winter of 1420 / 1421 A.D.** [In *Europe*], the winter was so mild that in April 1421 there were cherries and in May grapes.<sup>62</sup>

---

**1421 A.D.** The sea broke in at Dort, and drowned 72 villages, and 100,000 people and formed the Zuyder Sea [*Zuiderzee, the Netherlands*].<sup>40, 41, 43</sup>

On 17 April 1421, the sea broke in at Dort [Dordrecht, in southwestern *Netherlands*], and drowned 72 villages, and 100,000 people.<sup>90</sup>

In 1421 in Holland [now *the Netherlands*], a dreadful and most destructive inundation, overwhelming seventy-two villages, twenty of which were never recovered. The loss of life [nearly 100,000 persons on some authorities] and property was immense; many noble families were reduced almost to beggary. By this inundation the Biesbosch was formed, and the town of Dordrecht separated from the mainland of Holland [now *the Netherlands*].<sup>47, 92</sup> [The Biesbosch is a freshwater tidal area and network of rivers and smaller and larger creeks with islands.]

[Some authorities give the date of this event as 1446.] In 1446, the sea breaks in on Dort and drowns 100,000 persons.<sup>128</sup>

In the Novgorod [*Russia*], the Volkhov River flooded and washed away the great bridge, also the Neredich and the Zhilotug bridges. [The Neredich and Zhilotug bridges were bridges over small tributaries of the Volkhov River in Novgorod.] At Kolomentsa [the city of Kolmovo near Novgorod] it carried away the Church of the Holy Trinity, and in Shchilova, Sokolnitsa, and Radokovitsi [Streets] and in the Resurrection in the Lyudin quarter, service in the churches was performed only on raised platforms, and in the different quarters it washed away dwellings with all their stores; and it was so great that it poured out through the town gates to Rybniki [the Fisheries]. On May 19, during Peter's Fast, there was a great storm by night in the skies; clouds came up from the south, and in the north thunder and fiery lightning came from the skies with frightful noise, and purple rain fell with stones and hail. During these two years [1421 & 1422] there were great famine and plague, and three public graves were filled with the dead, one behind the altar in St. Sophia and two by the Nativity in the field.<sup>76</sup>

In 1421 during the period between 26 October and 24 November, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. As a result, the land tax was remitted.<sup>153</sup>

---

**Winter of 1421 / 1422 A.D.** “This year was the Seine, which was large, becomes quite firm.” [In 1492, the Seine River in *France* was swollen and then froze solid.]<sup>62</sup>

In 1422, wine, verjuice [juice of unripe grapes] and vinegar froze in the basement. The Seine River in Paris, *France*, whose waters were high, froze in less than three days as the cold grew sharply. Frost began on January 12<sup>th</sup> and there was still ice at Notre Dame in March.<sup>79</sup>

On 12 January 1422, there was the most severe cold that had ever been seen by man. It froze so terribly that in less than three days, the vinegar and wine in the cellars solidified into icicles hanging from the vaults of the cellar. The Seine River in *France* was swollen, and froze completely. The wells froze within four days. There was eighteen full days of this harsh cold. About a day or two before the severe cold started, there was a heavy snowfall (similar to the snowstorm that took place 30 years ago in the year 1392). Due to the severity of the frost and snow and because of the extreme cold, no one undertook to their jobs, but rather resorted to jumping, ball and other games to heat up. The cold was so intense that the ice in the courtyards, streets and near the fountain lasted until the Feast of the Annunciation (March 25). It was so cold that the ridges (comb) were frozen on the heads of roosters and hens.<sup>62</sup>

---

**1422 A.D.** The weather was good for the crops in 1422 in Dijon, *France*. They completed the harvest on 28 August.<sup>62</sup>

In 1422, flooding affected several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Hsiang-shan. As a result, the land tax was remitted.

— During the period between 21 May and 18 June, floods due to a heavy storm struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton. Over 360 people drowned and 1,200 houses and granaries were damaged by the floodwaters.

— During the period between 14 December 1422 and 12 January 1423, floods struck Anhwei (now Anhui province) in eastern *China* at Fêng-yang. As a result, the land tax was remitted.

---

**Winter of 1422 / 1423 A.D.** The winter was similar to the winter of 1323 A.D.<sup>1</sup>

In 1423, the ice was thick enough to ride on from Lübeck to *Prussia*, and the *Baltic Sea* was covered with ice from *Mecklenburgh* to *Denmark*.<sup>2, 41, 42, 43</sup>

In 1423, one could travel between Lübeck and *Prussia* on the ice.<sup>30</sup>

In 1423, the travelers went on the ice from Lübeck, *Germany* to Danzig (now Gdańsk, *Poland*).<sup>62</sup>

In the winter of 1423, the shores of the *Baltic Sea* from Lübeck to Danzig were frozen.<sup>62</sup>

---

**1423 A.D.** In *France*, the year followed a very severe winter. During the summer, it rained constantly and as a result, the fruits did not come to maturity. The wine vintage at Dijon, *France* was harvested on 23 September.<sup>62</sup>

In 1423, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou.<sup>153</sup>

In 1423, the drought in Chêhkiang province in *China* caused a great mortality.<sup>165</sup>

---

**1424 A.D.** In 1424, flooding affected several regions of *China* including:<sup>153</sup>

— During the period between 23 September and 21 October, floods struck the east coast of *China* in Kiangsu (now Jiangsu province) at Soochow, Wu-chin and Sung-chiang; and in Chekiang (now Zhejiang province) at Chia-hsing, Hu-chou and Hangchow. Crops were damaged by the floodwaters.

— During the period between 22 October and 20 November, floods struck Hopei (now Hebei province) in northern *China* at Kuang-tsung and Shantung (now Shandong province) on the east coast of *China* at P'êng-lai and Yeh. Crops were damaged by the floodwaters and the land tax was remitted. Also during this time, floods struck Kiangsu province at Soochow and Suchow. Fields were damaged and the land tax was remitted.

— During the period between 21 November and 20 December, floods struck Honan (now Henan province) in central *China* at Yung-ch'êng. Crops were damaged by the floodwaters and the land tax was remitted.

---

**1425 A.D.** In 1425, flooding affected several regions of *China* including:<sup>153</sup>

— During the period between 20 March and 17 April, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Huang-yen. Five hundred families were flooded and over 800 persons drowned.

— During the period between 12 October and 9 November, floods struck Chekiang province at Hu-chou, Chia-hsing and Hangchow; Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang and Wu-chin; and Hopei (now Hebei province) in northern *China* at Kuang-tsung. Crops were damaged by the floodwaters.

In 1425, the summer rains injured the crops in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1426 A.D.** The winter was similar to the winter of 1323 A.D.<sup>1</sup>

The ice was thick enough to ride on from Lübeck to *Prussia*, and the *Baltic Sea* was covered with ice from *Mecklenburgh* (part of Germany) to *Denmark*.<sup>2, 41, 42, 43</sup>

In 1426, the ice bore riding upon it from Lübeck to *Prussia*.<sup>90</sup>

In 1426 in *North of Europe*, the ice carried traffic from Lübeck to *Prussia*.<sup>93</sup>

One could travel between Lübeck and *Prussia* on the ice.<sup>30, 47</sup>

[In *England*] on 30 September, there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1426, floods struck Hupeh (now Hubei province) in central *China* at Huang-mei. During the period between 6 May and 8 August, a severe drought engulfed Hupeh province at Chia-yü.<sup>153</sup>

In 1426 during the summer, there was a great drought in Hupeh province in *China*.<sup>165</sup>

---

**1427 A.D.** [In *England*], it rained almost continually from Easter to Michaelmas [29 September]; hence dearth, famine and sickness. The sickness also came from the winter without cold. At the Feast of Saint Nicholas [6 December], all vegetables flourished. Next summer the plague raged.<sup>72</sup>

In 1427 in *Great Britain*, the “rain began on April 1, and did not cease till Hollontide [Hollantide, today celebrated as Halloween, was in earlier times celebrated on November 11].”<sup>212</sup>

In *England*, famine from great rains.<sup>57, 72, 91</sup>

In 1427, it rained continuously from April to June 9. In Paris, *France*, the Seine River entirely covered the island “Ile de la Cité” of Notre Dame and the island “Île Saint-Louis”, and rose on the embankment Saint-Paul to the height of the first floor of houses. The floods drowned the marshlands. The water level in the marshes rose over two feet.<sup>79</sup>

In 1427 during the period between 6 May and 9 October, a drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên. During the period between 18 December 1427 and 16 January 1428, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 1427 during the summer and autumn, there was a drought in Shansi and Shensi provinces in *China*. As a result, the granaries were opened and the land-tax was remitted.<sup>165</sup>

---

**Winter of 1427 / 1428 A.D.** The winter in 1427, produced no frost and the fruit trees bloomed in *Saxony* to the Feast of Saint Nicholas [6 December]. The same occurred in *Belgium* and *Italy*. But in *Germany*, as a result of this weather a very severe plague materialized.<sup>62</sup>

---

**1428 A.D.** In 1428 in Paris, *France*, the spring was rainy and the summer was cold. As a result of these troubled seasons the [grape] vine had not yet bloomed on June 15.<sup>79</sup>

In 1428, a severe drought engulfed Shensi (now Shaanxi province) in central *China* at Sian. During the period between 13 July and 10 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Taiyuan, Tatung, Ch'in, and Fên-yang. Also during the period between 13 July and 10 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.<sup>153</sup>

In 1428 during the summer, there was a drought in Shansi and Shensi provinces in *China*. In Shensi, this was a great drought.<sup>165</sup>

---

**1429 A.D.** In *Scotland*, there was a dearth.<sup>57, 91</sup>

In 1429 during the period between 28 September and 27 October, a drought engulfed Shansi (now Shanxi province) in northern *China* at Wan-ch'üan. The drought led to a famine.<sup>153</sup>

In 1429 during the summer, there was a drought in Shansi province in *China*. The land tax was remitted.<sup>165</sup>

---

**1430 A.D.** In the Novgorod Republic [now part of *Russia*], there was a great drought. In autumn the water [level in the rivers and lakes] was exceeding low; the soil and the forests burned, and very much

smoke, some times people could not see each other, and fishes and birds died from that smoke; the fish stank of the smoke, for two years.<sup>76</sup>

In 1430, the vine and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

The Danube was frozen for two months; the Seine River in *France* was crossable by pedestrians. Travelers go on the ice between *Denmark* and *Sweden*.<sup>62</sup>

In the year 1430, the winter was very strict in the north and the [grape] vine suffered greatly in *Germany*.<sup>62</sup>

**1431 A.D.** In 1431 during the period between 9 July and 7 August, floods struck Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

**Winter of 1431 / 1432 A.D.** A severe winter began in *Germany* in 20 November 1431 and lasted until 4 March 1432. The rivers were frozen.<sup>28</sup>

[Another source gives this as the winter of 1432-33.] “In 1432-1433, the Seine and all the rivers of *Germany* were frozen.”<sup>62</sup>

During the winter of 1432, the frost was very severe in *England*.<sup>212</sup>

**1432 A.D.** In 1432, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch’ang-hua.<sup>153</sup>

**1433 A.D.** A terrible flood of the Rhône River in *France* ravaged the territory of Arles and destroyed a large number of cattle.<sup>61</sup>

In *Ireland*, there was a famine of great severity.<sup>57, 91</sup>

In 1433, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch’ang, P’o-yang, Kiukiang, Shang-jao, and Nan-k’ang. During the period between 20 April and 18 May, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping; Honan (now Henan province) in central *China* at Loyang; Shantung (now Shandong province) on the east coast of *China* at Tsinan; and Shansi (now Shanxi province) in northern *China* at Taiyuan. This drought led to a famine.<sup>153</sup>

In 1433 during the summer, there was a drought in Honan, Shansi and Shantung provinces in *China*. The land tax was remitted. [The source document cited this as year 1333 but was out of chronological order and appeared to be an obvious mistake.]<sup>165</sup>

**Winter of 1433 / 1434 A.D.** During the winter in 1434, the River Thames was frozen below Gravesend.<sup>1</sup>

In London, *England*, the river was frozen below London Bridge to Gravesend from 24 November 1433 to 10 February 1434. The price of wheat rose to 27 shillings per quarter [quarter ton], but afterwards fell back down to 5 shillings.<sup>212</sup>

In *England* from 24 November to 10 February 1434, the River Thames was frozen below London-bridge to Gravesend because of the severe frost.<sup>2, 39, 40, 41, 43, 90</sup> [Gravesend is a town in northwest Kent, *England*, on the south bank of the Thames, opposite Tilbury in Essex.]

In *England* in 1434, there was one continued severe frost from 25 November to 10 February. Ships lying at the mouth of the River Thames could not come up the river.<sup>72</sup>

In *England*, the frost lasted from 15<sup>th</sup> November to 10<sup>th</sup> February. The River Thames frozen down to Gravesend.<sup>47, 93</sup>

In *England* in the year 1434, a great frost began on the 24<sup>th</sup> of November, and held till the 10<sup>th</sup> of February, following; whereby the River Thames was so strongly frozen, that all sorts of merchandizes and provisions brought into the mouth of the said river were unladen, and brought by land to the city.<sup>29</sup>

In 1433, the River Thames and all other rivers of *England* and *Scotland* froze over; the Seine, Rhine and Danube rivers were closed to navigation early in December. The *Dardanelles* and *Hellespont* froze, as did many bays and inlets of the *Mediterranean*. Ice formed in Algiers, *Algeria* and the *Strait of Gibraltar* was almost impassable from drift ice.<sup>63</sup>

The frost began in Paris, *France* towards the end of December 1433, and continued during 3 months, less nine days. It recommenced towards the end of March, and continued until the 17<sup>th</sup> of April. The same year it snowed in Holland [now *the Netherlands*] forty consecutive days.<sup>38, 60</sup>

During the winter of 1433-34, the frost began on 31 December 1433 and persisted for three months minus nine days. The frost reappeared at the end of March and continued until 17 April. The snow was higher than six-feet in the streets of Carcassonne in the Languedoc region of southern *France*. Winter ruled in the city for three months.<sup>79</sup>

In 1434, it snowed in the *Netherlands* and in Paris, *France* for almost 40 days in a row.<sup>58, 80</sup>

In 1433, the winter was very severe again in *Germany*.<sup>47, 62, 93</sup>

In 1433, there were severe frosts, when the large fowl of the air sought shelter in the towns of *Germany*.<sup>90</sup>

In 1434, all the rivers in *Northern Europe* and *Germany* froze. The River Thames in *England* froze at Gravesend.<sup>62</sup>

During the winter of 1433-34 [in *Western Europe*], "The frost began at the end of December and lasted three months less 9 days, the frost began again at the end of March, and lasted until Easter, which this year fell on the 17<sup>th</sup> of April." In Holland [now *the Netherlands*] it snowed 40 days in succession. On 25 April and the following night, there was such a heavy snowfall accompanied by extreme cold, that the greater part of the [grape] vines in *Austria*, Swabia [region of *Germany*], and *Hungary* were destroyed. This winter has been named in *England*, "the big chill"; the cold lasted from 24 November 1433 until 10 February 1434.<sup>62</sup>

---

**1434 A.D.** The summer weather was good for the wine in 1434. At Dijon, *France*, the vintage was ready on 1 September.<sup>62</sup>

On 7 October 1434, a terrible wind blew for nearly nine hours in Paris, *France* and the countryside. Many houses were toppled, and an infinite number of trees were uprooted. In Vincennes alone lost more than three hundred trees.<sup>79</sup>

In 1434, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Chin-hua; and Hunan province in south-central *China* at An-hsiang and Tz'ü-li. During the period between 7 June and 5 July, a drought engulfed Kwangsi (now Guangxi province) in southern

*China* along the border with *Vietnam* at Nanning. During the period between 3 September and 4 October, a drought engulfed Honan (now Henan province) in central *China* at Loyang; Kiangsi province at Nan-ch'ang; and Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, Chinkiang, Sung-chiang and Wu-chin.<sup>153</sup>

In 1434 during the autumn, there was a drought in Anhwei, Chêhkiang, Honan, Hunan, Hupeh, Kiangsi, Kiangsu and Kwangsi provinces in *China*. As a result, the rivers dried up.<sup>165</sup>

In 1434, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Hupeh (now Hubei province) in central *China* at Wuchang. During the period between 3 September and 2 October, floods struck Hopei (now Hebei province) in northern *China* at Peiping; Shensi (now Shaanxi province) in central *China*; and Szechwan (now Sichuan province) in southwest *China*.<sup>153</sup>

---

**1435 A.D.** The winter of this year was remarkable for the duration and severity of cold. Winter in Flanders [now *Belgium*] lasted from the beginning of December to mid-March, and the thickness of the ice was more than an Elle (~ 2.3 feet, 70 centimeters). In *Germany*, many people died from the cold.<sup>62</sup>

In 1435 during the period between 5 February and 8 August, a severe drought engulfed Hunan province in south-central *China* at Tz'ü-li. The drought was accompanied by a plague.<sup>153</sup>

In 1435 during the summer, there was a great drought in Hunan province in *China*. Typhus raged.<sup>165</sup>

---

**1436 A.D.** In autumn, a frost struck the crops during harvest throughout the entire Novgorod province [now *Russia*]. Also during the autumn there were great floods. On a frosty night the ice carried away seven stays of the great bridge in Novgorod, and the little Zhilotug bridge was carried away.<sup>76</sup>

During the summer of 1436 in southern *France*, humidity and heat competed.<sup>79</sup>

In 1436 during the period between 7 April and 15 May, a drought engulfed *China*.<sup>153</sup>

In 1436 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1437 A.D.** In 1437 in *England*, there was scarcity. A bushel of wheat sold for 7 shillings being very dear [scarce], according to that time, so that the poor in Chester made bread of peas, veitches, and fern root.<sup>212</sup>

In the Novgorod Republic [now part of *Russia*], during the spring, floods washed away the wall of the Detinets [Citadel], and the earth from the wall slipped down and the stonewall fell together with the belfry by the Volkhov River. The Church of St. Nikola collapsed at Vezhishchi.<sup>76</sup>

In 1437 during the period between 30 September and 28 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow. People and cattle drowned and houses were damaged. At Sung-chiang, a typhoon and storm caused the floods. At I-hsing, the typhoon caused the floods and over 1,000 families were flooded.<sup>153</sup>

---

**1438 A.D.** In *England*, there was a great frost that was unusually long.<sup>47, 72, 93</sup>

In *England* in 1438, came a great tempest, terrible winds and rains. As a result came great scarcity of corn [grain], wine and bay salt. But the citizens of London, from their prudent care of their Lord Mayor, had a good supply of rye from Prussia. But the poor starved people in the country made bread of fern roots and the like. Wheat sold for 24s. a Quarter [quarter ton]. In November began a terrible winter of frost and snow.<sup>72</sup>

In *England* in 1438 “In the 17<sup>th</sup> yeere of Henry the Sixt, by meanes of great tempests, immeasurable windes and raines, there arose such a scarcitie that wheat was sold in some places for 2 shillings 6 pence the bushell.”<sup>57</sup>

[Another account places this event in 1439.] In *England* in 1439, during the 18<sup>th</sup> year of King Henry VI reign – “Wheat was sold at London for 3s. the bushell, mault at 13s. the quarter, and oates at 8d. the bushell, which caused men to eat beanes, peas, and barley, more than in an hundred years before: wherefore Stephen Browne, then maior [mayor], sent into Pruse (Prussia), and caused to be brought to London many ships laden with rye, which did much good; for bread-corne was so scarce in *England* that poor people made their breade of ferne rootes.”<sup>57</sup>

In 1438, there was a famine in *England*. The people of *England* obligated to make bread of fern roots.<sup>212</sup>

[In *England*], there were tempestuous winds and rains all summer; hence dearth.<sup>72</sup>

In *England* in 1438, there was a famine so great that bread was made from fern roots.<sup>90</sup>

In *England* from 1437 to 1438, wheat rose from its ordinary price of 4s. - 4s. 6d. per Quarter to 26s. 8d. Bread was made from fern roots. There was rain and tempest.<sup>57, 91</sup>

In 1438, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. During the period between 24 May and 21 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Yangchow.<sup>153</sup>

In 1438, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

**1439 A.D.** [In *England*] in 1439, there was a famine from rains and tempests. Bread was made from roots.<sup>72</sup>

In 1439, there was a great flood in Lincolnshire, *England*.<sup>212</sup>

In 1439 during the period between 12 June and 10 July, floods caused by heavy and protracted rains struck Hopei (now Hebei province) in northern *China* at Peiping. Houses were damaged by the floodwaters and many people drowned. The flooding at Peiping continued into the period between 10 July and 9 August.<sup>153</sup>

**1440 A.D.** In *England*, there was a scarcity and in *Scotland* a famine.<sup>57, 91</sup>

In *England* in 1440, there was a great scarcity.<sup>72</sup>

In *England*, there was a great scarcity and dearth of corn [grain]. People were forced to make bread of beans, peas, barley and fern roots, etc. In *Italy* the weather held a southerly constitution, with great soaking rains that prevailed for a long time. The earth became a marsh and fruits abounded, then depopulating epidemics set in.<sup>72</sup>

The year 1440 produced heavy rains in southern *France*.<sup>79</sup>

In 1440, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hsiang-shan. During the period 2-30 April, a severe drought engulfed Hopei (now Hebei province) in northern *China* at

Peiping. During the period between 23 November and 23 December, floods struck Chekiang province at Hangchow, Chia-hsing and Hu-chou.<sup>153</sup>

In 1440 during the spring, there was a great drought in Chihli province in *China*.<sup>165</sup>

In 1440 during the 7<sup>th</sup> moon, Suchau, Sungkiang and two adjacent fus [prefectures] in *China* visited by a violent wind, which tore up trees and damaged crops.<sup>166</sup>

---

**1442 A.D.** The rivers in the south of *France* froze.<sup>62</sup>

In the year 1442, the king spent the winter in Montauban in southwestern *France*, which was so severe that all flows [rivers, streams] in that region were frozen. The troops held back in their quarters, because they could not move out in the severe weather. In Flanders [now *Belgium*], a lot of the trees and fruits of the earth were frozen.<sup>62</sup>

In the regions around Metz, *France* in 1442, there was great heat from April to June. [The next passage appears to read that it was so hot that several people worked the field without shirts, skirts or pants on.] A portion of the wine was sour in the runners. The harvest began in Dijon, *France* on 13 September.<sup>62</sup>

In *Sweden* there was a famine.<sup>57,91</sup>

In 1442, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing. During the period between 10 May and 7 June, a severe drought engulfed *China*. During the period between 8 July and 5 August, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1442 during the summer, there was a great drought in Chihli province in *China*.<sup>165</sup>

---

**1443 A.D.** In *England*, due to a lightning storm; St. Paul's steeple caught fire from lightning, and the steeple of Waltham-cross was consumed.<sup>40,41,43</sup>

In *England* on 1 February 1443, Saint Paul's church was set on fire by thunder and lightning and a great tempest.<sup>72</sup>

The winter of 1443 was very harsh in *Germany*. The frost began with the Feast of Saints Simon and Jude (28 October) and lasted until the Feast of the Chair of St. Peter (22 February), and then it started back up again, and lasted until the Feast of St. George (April 23). In the past 60 years, no similar winter had been experienced because it was cold to the Feast of St. Urban (25 May).<sup>62</sup>

In 1443, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua. During the period between 31 March and 29 April, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow.<sup>153</sup>

---

**1444 A.D.** In 1444, during a thunderstorm, St. Paul's Cathedral in London, *England* was struck by lightning and the steeple caught fire, on Candlemas Eve.<sup>212</sup>

In 1444 during the period between 17 April and 17 May, a drought engulfed *China*. Then during the period between 15 July and 13 August, floods struck Hopei (now Hebei province) in northern *China* at Peiping; Kiangsu (now Jiangsu province) on the east coast of *China*; and Anhwei (now Anhui province) in eastern *China*. As a result, the land tax was remitted. During the period between 14 August and 11

September, floods struck Kiangsu province at Soochow, Sung-chiang and T'ai-ts'ang; and Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou.<sup>153</sup>

In 1444 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1445 A.D.** In 1445, during a thunderstorm, the steeple of St. Mary Redcliff in Bristol [in southwestern *England*] was thrown down, and the rest of the church was significantly damaged at St. Paul's Tide.<sup>212</sup>

Bread was dear in Novgorod [*Russia*], and not only this year but during ten whole years: one poltina [half a rouble] for two korobyas [baskets]; sometimes a little more, sometimes less; sometimes there was none to be bought anywhere. And amongst the Christians there was great grief and distress; only crying and sobbing were to be heard in the streets and market place, and many people fell down dead from hunger, children before their parents, fathers and mothers before their children; and many dispersed, some to Lithuania, others passed over to Latinism [Roman Rite], and others to the Besermeny [Muslims] and to the Jews, giving themselves to the traders for bread. [The cause of this famine may have been related more to war than to poor weather.]<sup>76</sup>

In 1445 during the period between 6 June and 4 July, floods struck Fukien (now Fujian province) on the southeast coast of *China*. During the period 2-30 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning.<sup>153</sup>

In 1445 during the 7<sup>th</sup> moon on the 17<sup>th</sup> day, a typhoon struck in the vicinity of Shanghai, *China*. Great wind, which tore up trees and leveled houses; rain for a day and night incessant. Lake and sea overflowed. Several places were covered several feet with water; innumerable dwellings floated away.<sup>166</sup>

---

**Winter of 1445 / 1446 A.D.** In 1445 during the 12<sup>th</sup> moon, snow fell seven days and nights in the vicinity of Shanghai, *China*. It was 12 feet deep; people were obliged to remain in their houses until streets were cut out of the snow.<sup>166</sup>

---

**1446 A.D.** [This passage was out of order in the source chronology, and I suspect the actual year was 1446.] In 1466 there was a great pestilence in *Ireland*, super induced by a famine.<sup>212</sup>

In the Novgorod Republic [now part of *Russia*] on January 3, there were heavy clouds with rain and the wheat and rye and corn [the autumn-sown crops] were beaten down altogether, both in the fields, and in the forests, all round the town for five versts [a verst is two-thirds of a mile, or 1,067 metres] from the Volkhovets [river], and as far as the Msta river, for fifteen versts. The people bore into the town whatever they could gather up; and the townspeople collected to see this curious marvel, whence and how it came. [This account might refer to a tornado.]<sup>76</sup>

In 1446, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Huang-mei. During the period between 26 May and 23 June, a drought engulfed Hopei province at Peiping. Also during the period between 26 May and 23 June, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing.<sup>153</sup>

In 1446 during the summer, there was a drought in Chihli and Hupeh provinces in *China*. In Hupeh, this was a great drought.<sup>165</sup>

---

**1447 A.D.** In *Ireland*, there was a great famine in the spring.<sup>57, 91</sup>

---

In 1447, the summer [in *England*] was very hot.<sup>212</sup>

---

**1448 A.D.** In 1448 during the period between 31 July and 28 August, floods struck Honan (now Henan province) in central *China* at Jung-yang, Kaifeng and Ch'ên-liu; Anhwei (now Anhui province) in eastern *China* at Mêng-ch'êng; and Shantung (now Shandong province) on the east coast of *China* at Ts'ao, P'u and Yang-ku.<sup>153</sup>

---

**1449 A.D.** In 1449, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hsin-ch'ang.<sup>153</sup>

---

**Winter of 1449 / 1450 A.D.** The winter of 1449-50 in *France* was very cold, very wet and very snowy. The winter began as early as October. The olive trees died.<sup>79</sup>

---

**1450 A.D.** In 1450 during the period between 11 May and 9 June, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.<sup>153</sup>

In 1450 during the summer, there was a drought in *China*.<sup>165</sup>

---

**1451 A.D.** In 1451 during the period between 5 February and 8 November a severe drought engulfed *China*.<sup>153</sup>

In 1451 during the spring and summer, there was a great drought in Fuhkien province in *China*.<sup>165</sup>

---

**1452 A.D.** In 1452 during the period between 13 October and 10 November, floods struck Kiangsu (now Jiangsu province) on the east coast of *China*; Anhwei (now Anhui province) in eastern *China*; and Shantung (now Shandong province) on the east coast of *China* at Chi-ning and Liao-ch'êng. Crops and houses were damaged by the floodwaters. During the period between 11 November and 10 December, a drought engulfed Anhwei province at Fêng-yang and An-ch'ing; Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow; and Hupeh (now Hubei province) in central *China* at Wuchang.<sup>153</sup>

In 1452 during the autumn, there was a drought in Anhwei, Chêhkiang, Hunan and Hupeh provinces in *China*.<sup>165</sup>

In 1452 during the 6<sup>th</sup> moon in the vicinity of Shanghai, *China*, a dragon was seen at the Tsau stream taking up water, lifted a boat, and transported it to the middle of a field; rain fell to the depth of several feet, soaking plants to death. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

---

**1453 A.D.** In 1453 during the period between 5 August and 2 September, floods struck Honan (now Henan province) in central *China* at Loyang and Anhwei (now Anhui province) in eastern *China* at Fêng-yang. As a result, the land tax was remitted. During the period between 3 September and 1 October, floods struck Honan province at Kaifeng.<sup>153</sup>

In 1453, a severe drought engulfed Yunnan province in southwest *China* at K'un-ming and Yao-an. The drought produced a famine. During the period between 5 August and 2 September, a drought engulfed *China*.<sup>153</sup>

In 1453 during the autumn, there was a great drought and mortality in Yünnan province in *China*.<sup>165</sup>

---

**1454 A.D.** As a result of the severe famine in *Mexico* during 1452-54, the Aztec king Moctezuma ordered his people to leave the city and search for food. Many parents sold their children in Totonacapan [currently Veracruz, *Mexico*] where grain was abundant. Girls fetched 400 ears of maize while boys fetched 500 ears each.<sup>86</sup> [Parents were able to buy back their child's freedom when situations improved.]

In 1454, Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou experienced flooding. [The resulting famine was so severe that] cannibalism was practiced.<sup>153</sup>

In 1454 during the 7<sup>th</sup> moon, there were floods in the vicinity of Shanghai, *China* and six neighboring fus [prefectures].<sup>166</sup>

---

**1455 A.D.** In 1455, floods struck Kiangsi (now Jiangxi province) in southern *China* at Yü-lin. During the period between 16 May and 14 June, a drought engulfed *China*.<sup>153</sup>

In 1455 during the summer, there was a drought in *China*.<sup>165</sup>

In 1455 during the 7<sup>th</sup> moon, there were floods in Shanghai and Suchau fus in *China*.<sup>166</sup>

---

**1456 A.D.** During the summer of 1456 in southern *France*, humidity and heat competed.<sup>79</sup>

The year 1456 produced heavy rains in southern *France*.<sup>79</sup>

In 1456, several regions of *China* were affected by flooding including:<sup>153</sup>

— During the period between 5 April and 4 May, floods struck Shantung (now Shandong province) on the east coast of *China* at Po-p'ing and Shih-p'ing. Many people drowned. Also during this time, floods struck Shantung province at Ch'ing-ch'êng and Tê-p'ing.

— During the period between 3 June and 2 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-hang and Hsiao-shan.

— During the period 3-31 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow and Honan (now Henan province) in central *China* at Loyang and Kaifeng.

In 1456, a severe drought engulfed Hunan province in south-central *China* at An-hsiang. During the period 3-31 July, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Yangchow; and Anhwei (now Anhui province) in eastern *China* at Fêng-yang. During the period between 29 October and 27 November, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.<sup>153</sup>

In 1456 during the summer and autumn, there was a great drought in Anhwei, Kiangsu, Chêhkiang and Hunan provinces in *China*.<sup>165</sup>

---

**1457 A.D.** In 1457, Shantung (now Shandong province) on the east coast of *China* at Tsinan and Tê-p'ing experienced flooding. The resulting famine was so severe that cannibalism was practiced.<sup>153</sup>

In 1457, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Chia-hsing.<sup>153</sup>

In 1457, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

---

**Winter of 1457 / 1458 A.D.** The winter of 1457-58 in Paris, *France* was very severe. In the year 1457, the winter was severe and long lasting from the Feast of St. Martins (11 November) to 18 February. It froze so hard that you could travel on the Oise River and several other rivers on horseback and wagon. Lastly came heavy snowfalls, which came down in such massive quantities that when it thawed, it developed into such a flood as had not been seen in living memory, and caused much damage. In *Germany*, the extreme cold froze the Danube River to a thickness that an army of 40,000 men were able to encamped on the ice.<sup>62</sup>

In 1458, the Danube River froze from shore to shore; an army of 40,000 men struck their camp on the ice.<sup>62</sup>

The winter of 1458 was so severe that an army of forty thousand men camped on the Danube River.<sup>79</sup>

---

**1458 A.D.** In 1458, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Hupeh (now Hubei province) in central *China* at Hanyang and Han-ch'uan. During the same year a drought engulfed Hunan province in south-central *China* at Li-ling producing a famine. During the period between 7 October and 5 November, a severe drought engulfed Hunan province at Tz'ü-li.<sup>153</sup>

In 1458 during the summer and autumn, there was a great drought in Chêhkiang, Hunan and Hupeh provinces in *China*. As a result, the rivers dried up. The resulting famine was so severe that it led to cannibalism in Hu-kwang [Hukwang - the rice bowl of China comprising the provinces of Hunan and Hupeh].<sup>165</sup>

In 1458 during the period between 9 August and 7 September, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan. As a result, the land tax was remitted.<sup>153</sup>

---

**1459 A.D.** In 1459, Chekiang (now Zhejiang province) on the east coast of *China* at Hai-yen experienced flooding. Around 10,000 persons drowned.<sup>153</sup>

In 1459, a severe drought engulfed Hunan province in south-central *China* at Yüeh-yang and Ch'ang-tê. During the period between 25 November and 24 December, a drought engulfed Hunan and Hupeh provinces leading to a famine.<sup>153</sup>

In 1459, there was a great drought in Hunan province in *China*.<sup>165</sup>

---

**Winter of 1459 / 1460 A.D.** The winter of 1459 was intensely cold and similar to the winter of 1323 A.D.<sup>1</sup>

In 1459, the ice bore riding on from Lübeck, *Germany* to *Prussia*, and the *Baltic Sea* was covered with ice from *Mecklenburgh* to *Denmark*.<sup>2, 41, 42, 43</sup>

In 1459, the *Baltic Sea* was frozen. The ice was thick enough that individuals could cross between *Denmark* to Lübeck, *Germany*.<sup>28</sup>

In 1460, the *Baltic Sea* was frozen, and horse passengers crossed from *Denmark* to *Sweden*.<sup>90</sup>

In 1459, one could travel between Lübeck, *Germany* and *Prussia* on the ice.<sup>30</sup>

In *Northern Europe* in 1459, the *Baltic Sea* frozen from *Mecklenburgh* to *Denmark*.<sup>47, 93</sup>

In 1460, the Danube and the Rhine Rivers froze.<sup>38</sup>

In 1460, the Rhône River in *France* froze.<sup>58, 80</sup>

The winter of 1460 froze the Rhône River in southern *France*.<sup>79</sup>

In 1460 the Rhône River in *France* and the Danube River remained frozen for several months.<sup>61</sup>

In 1460, the Danube River is frozen for 2 months. The Rhône River in *France* also freezes.<sup>60</sup>

In 1460 the Danube River is frozen for 2 months, the Rhône River in *France* also freezes solid. Travelers on foot and horseback cross without difficulty between *Denmark* and *Sweden*.<sup>62</sup>

In 1460, the *Baltic Sea* again froze over so as to permit travel on the ice. In *Germany* deer sought the towns for refuge from wolves. Packs of wolves came into the cities and attacked the people on the streets.<sup>63</sup>

During the winter of 1459-60, both in *Northern [Europe]* and in the *Provence* the winter was very cold. The Seine River in Paris, *France* came out of its banks and caused great devastation. The vineyards in *Germany* suffered a lot.<sup>62</sup>

---

**1460 A.D.** In *England*, there was excessive rain during the summer. As a result, neither grass, corn [grain], nor fruit came to maturity or were fit to use. There were also greater inundations than had been for a hundred years before, which rapidly carried down mills and buildings, destroyed meadows and pastures, and made great destruction.<sup>72</sup>

In 1460 during the period between 21 April and 19 May, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hsiao-shan. During the period between 16 August and 14 September, floods struck in Chekiang province at Hu-chou where the fields were damaged; in Kiangsu (now Jiangsu province) on the east coast of *China*; in Anhwei (now Anhui province) in eastern *China*; and in Kiangsi (now Jiangxi province) in southern *China*.<sup>153</sup>

---

**1461 A.D.** In 1461, several regions of *China* experienced flooding including:

— Hupeh (now Hubei province) in central *China* at Sui and Huang-p'o.

— During the period between 8 June and 7 July, floods struck in Kiangsu (now Jiangsu province) on the east coast of *China*; in Anhwei (now Anhui province) in eastern *China*; and in Kiangsi (now Jiangxi province) in southern *China*.

— During the period between 6 August and 3 September, floods struck Honan (now Henan province) in central *China* at Kaifeng. Houses were damaged by the floodwaters and many people drowned. During this time, floods also struck Kiangsu and Anhwei provinces. Houses were damaged by the floodwaters. Fukien (now Fujian province) on the southeast coast of *China* at Fu-an also experienced flooding.

— During the period between 4 October and 1 November, floods struck Kiangsu province at Soochow. Around 10,000 persons drowned.

In 1461, a severe drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsing-ning.<sup>153</sup>

In 1461, there was a great drought in Hunan province in *China*.<sup>165</sup>

---

**1464 A.D.** The winter of 1464 was very severe in the north [*Northern Europe*]. In Flanders [now *Belgium*] since 1408 no one had experienced a similar winter since the year 1408. It was cold from 10 December until 15 February without ceasing. One could travel across the frozen Schelde (Scheldt) River for a whole month.<sup>62</sup>

In 1464, floods struck Shansi (now Shanxi province) in northern *China* at Ching-yüeh. Dikes and fields were damaged.<sup>153</sup>

---

**1465 A.D.** In 1465, flooding affected many regions of *China* including:<sup>153</sup>

— Hunan province in south-central *China* at Ching.  
 — Hopei (now Hebei province) in northern *China* at Peiping.  
 — Kiangsu (now Jiangsu province) on the east coast of *China*.  
 — Anhwei (now Anhui province) in eastern *China*.  
 — Honan (now Henan province) in central *China* at Loyang.  
 — Shansi (now Shanxi province) in northern *China* at Taiyuan.  
 — Hupeh (now Hubei province) in central *China* at Wuchang.  
 — Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang.  
 — Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.  
 — During the period between 27 January and 24 February, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hui-yang.  
 — During the period between 22 July and 21 August, floods struck Kwangtung province at Tê-ch'ing.  
 — During the period between 19 November and 17 December, floods struck Hopei province at Pao-ting and Lu-lung. As a result, the land tax was remitted.

In 1465 during the period between 27 March and 24 April, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian and Fu-shih.<sup>153</sup>

In 1465 during the spring, there was a drought in Shensi province in *China*. The land tax was remitted.<sup>165</sup>

---

**1466 A.D.** The excessive heat of summer of 1466 [in *France*] caused many infectious diseases. The harvest began in Dijon, *France* on 27 September. The price of grain doubled this year. The heat was oppressive in the area of Metz, *France*. But the wine was better than we had produced for thirty years.<sup>62</sup>

Large storms, thunderstorms with lightning, thunder, rain and wind, ruled in 1466 in various locations of *France*, especially in Soissons, where the [grape] vines were damaged.<sup>79</sup> [Soissons is located in the Picardy region of northern *France*.]

In 1466 during the period between 15 February and 15 March, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* and Anhwei (now Anhui province) in eastern *China*. Then during the period between 14 June and 12 July, a severe drought engulfed Kansu (now Gansu province) in northwest *China* at Lin-hsia. [This entry appear to be a typographical error. I suspect the real time interval is 14 June and 12 July.] During the period between 11 August and 9 September, floods struck Hopei (now Hebei province) in northern *China* at Peiping and Pao-ting; Honan (now Henan province) in central *China* at Kaifeng; and Shantung (now Shandong province) on the east coast of *China* at I-tu.<sup>153</sup>

In 1466 during the spring and summer, there was a great drought in Kiangsu and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism.<sup>165</sup>

---

**1467 A.D.** In 1467, there was a great flood that overflowed the entire district of Holland in Lincolnshire, *England*.<sup>212</sup>

In 1467, Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing experienced flooding. Around 10,000 persons drowned.<sup>153</sup>

In 1467 during the period between 6 May and 8 August, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang and Hsin-chien.<sup>153</sup>

In 1467 during the spring, there was a drought in Kiangsi province in *China*.<sup>165</sup>

---

**Winter of 1468 / 1469 A.D.** In 1468, due to the extreme cold, the wine in *France* was reduced to ice, and had to be cut with an axe.<sup>38</sup>

In *France*, the wines of the Duke of Burgundy froze in the casks, in 1468. We distributed them piecemeal to the gentlemen. Many people died of exposure to the cold. Their extremities [hands, feet, etc.] were frozen.<sup>79</sup>

In 1468 in Flanders [now *Belgium*], the frost was very severe; wine cut with hatchets.<sup>47, 90, 93</sup>

In 1468, it took the axe to break apart the [frozen] wine being distributed to troops in *Flanders*.<sup>79</sup>

In 1468, in *Flanders*, rations of frozen wine were cut and distributed to soldiers with a broken axe.<sup>58, 60, 80</sup>

The winter of 1468-69 is described by Philippe de Commines when he traveled to the land of Franchemont (near Liège, *Belgium*). The largest cooling occurred between 14 and 17 November. Because of the great frost and intense cold most of the staff of the Duke (of Burgundy) had to walk to Franchemont. I saw some incredible effects of the cold. I found a gentleman whose foot was frozen, which he later could not move when it thawed. A page who had two fingers of his hand frozen. I saw a woman with her newborn child frozen to death. Three times I saw the wine, which they gave the Duke and his people broken with ax blows because the wine was frozen in the cask. This frozen wine was distributed to the people in a hat or basket. Hunger had us in great haste flee, after we spent eight days there. The severity of the cold stretched up to *Provence*, where the [grape] vines suffered greatly.<sup>62</sup>

---

**1468 A.D.** In 1468, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Hupeh (now Hubei province) in central *China* at An-lu.<sup>153</sup>

In 1468, a drought engulfed Hupeh (now Hubei province) in central *China* at Chung-hsiang. During the period 22 May and 19 June, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping and Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang and Hsin-chien. [A drought during the period between 6 May and 8 November occurred in Fukien (now Fujian province) on the southeast coast of *China*. The date for this entry (1468) was originally recorded as the twelfth year of the T'ien-shun period, but since T'ien-shun lasted only eight years and ended in 1464, there apparently is a mistake. Here, it is entered as if T'ien-shun did last twelve years.]<sup>153</sup>

[There is evidently a mistake in the record. The entry gives the year as 1468. They appeared as the 12<sup>th</sup> year of the reign of T'ien Shun. But, the reign of Ch'êng Hwa commenced in 1465. "In the year 1468 during the summer and autumn, there was a drought in Fuhkien province in *China*."] <sup>165</sup>

In 1468 during the summer, there was a drought in Chihli, Hupeh and Kiangsi provinces in *China*. In Chihli, this was a great drought.<sup>165</sup>

---

**1469 A.D.** In March 1469, there was thunder and heavy rain in northern *France*.<sup>79</sup>

In 1469, floods struck Hunan province in south-central *China* at Yüan-ling and a severe drought engulfed Hunan province at Shih-mên. During the period between 9 July and 6 August, floods struck Honan (now Henan province) in central *China* at Kaifeng.<sup>153</sup>

In 1469, there was a great drought in Hunan province in *China*.<sup>165</sup>

---

**1470 A.D.** In 1470, the plague was fearful in Dublin, *Ireland*.<sup>212</sup>

In 1470, flooding affected many regions of *China* including: <sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing. Crops were damaged by the floodwater. Floods occurred in Taichow causing a famine. Floods also struck Yü-hang.

— Hupeh (now Hubei province) in central *China* at Hanyang.

— During the period 1-29 May, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Li-shui, Li-yang, Chü-jung, Lu-ho and Chiang-p'u; and Anhwei (now Anhui province) in eastern *China* at Tang-t'u and Wuhu. As a result, the land tax was remitted.

— During the period between 6 May and 8 August, floods struck Hopei (now Hebei province) in northern *China* at Peiping, Ho-chien, and Lu-lung.

— During the period between 28 July and 25 August, floods struck Kiangsu province at Nan-t'ung [uncertain name]. Houses were damaged by the floodwaters and 2,660 families were flooded.

— During the period between 25 September and 23 October, floods caused by a typhoon struck Chekiang province at Yü-yao. Over 700 people drowned.

— During the period between 24 October and 22 November, floods struck Hopei province at Pao-ting. As a result, the land tax was remitted.

In 1470 during the period between 6 May and 8 August, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Ying-shan. During the period between 26 August and 24 September, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsinan, Liao-ch'êng, Tzū-yang, I-tu, P'êng-lai, and Yeh. During the period between 24 October and 22 November, a drought engulfed Honan (now Henan province) in central *China* at Loyang. <sup>153</sup>

In 1470 during the summer and autumn, there was a drought in Honan, Hupeh and Shantung provinces in *China*. In Hupeh, this was a great drought. As a result, the land tax was remitted. <sup>165</sup>

---

**1471 A.D.** In 1471, the army of Veliki Knyaz Ioan Vasilievich [Ivan III, also called Ivan the Great] of *Russia* marched against the army of Novgorod and defeated them. [In general Novgorod was sheltered from attack by mounted troops because of its lakes and swamps. They dwelt in security during the summer because of the inundations of the land.] The year 1471 was abnormally dry. Not a drop of rain had fallen during the summer, from the month of May to the month of September, the land was dry and the heat of the sun had dried up all the swamps. The troops of the Veliki Knyaz found no impediments and could ride in every direction over the country, driving the cattle over dried ground. <sup>76</sup>

[After the defeat], a large number of people proceeded to Russa [Staraya Russa, *Russia*] in big vessels, and to the Volkhov River with their wives and children and possessions; their cattle and with their movable houses, going to the places of their residence by the Ilmen lake, or by way of the Russa lake, the breadth from shore to shore on all sides being sixty poprishche [about 40 miles]. When their numerous big vessels reached the middle of the lake, a storm with a hurricane of wind broke suddenly upon them, and tore their sails; there was terrible thunder and heavy rain with hail, and waves of mountain height, and dreadful, broke up their barges and all their big vessels in the middle of that frightful lake. There was in that hour an overwhelming terror and a raging storm, with shrieking and crying, many people clinging to each other, bitterly bewailing their peril, and in their agony tearing their clothes; mothers embracing their infants, fathers their sons, while shedding many tears and praying: "Lord save us, in the hour of our destruction and of our separation from the evils of this world." Sadness and woe to those who take to evil! This was not within sight of their friends, and they got no help from them; unless it came from on high, because of the straits of the great city and the angry spirit pervading it; the while that the big vessels were being shattered and wrecked, and all the men and women with their children were perishing in the deep waters separating from each other and tumbling about at the will of the waves which left nothing living in the waters, but all drowned and put to death. It was heard afterwards that the number of drowned in the lake was 7,000. <sup>76</sup>

In May 1471 in *Ireland*, there was a great shower of hailstones, with thunder and lightning.<sup>93</sup>

On November 30, the Rhône River in *France* flooded. It destroyed two arches of the bridge Pont d'Avignon (Pont Saint-Bénézet) and part of the city walls in Limas in southeastern *France*.<sup>61</sup>

In 1471, there was an awful pestilence in Oxford, *England*.<sup>212</sup>

In *England*, the winter was rigorous and weather stormy.<sup>72</sup>

In the northeast coast of *India*, there was a famine in Orissa.<sup>57</sup>

In 1471 A.D., there was a famine in Orissa [now Odisha on the east coast of *India*].<sup>179</sup>

In 1471 there was a famine in *India*.<sup>156</sup>

In 1471, flooding affected several regions of *China* including:<sup>153</sup>

— During the period between 20 February and 21 March, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Fu-an, Lien-chiang and Lung-yen; Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang, Wu-chin and Chinkiang. As a result, the land tax was remitted.

— During the period between 12 December 1471 and 9 January 1472, floods struck Anhwei (now Anhui province) in eastern *China* at Fêng-yang, Szū, T'ien-ch'ang, Hsü-i and Su; and Kiangsu province at Suchow, Hsiao, P'ei, Tang-shan and Fêng. As a result, the summer land tax was remitted. [P'ei is located at longitude 117.00° East and latitude 34.47° North.]

In 1471, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow. During the period between 20 February and 21 March, a drought engulfed *China*.<sup>153</sup>

In 1471 during the spring, there was a drought in Kiangsu province in *China*. As a result, the Grand Canal dried up.<sup>165</sup>

#### **1472 A.D. – 1475 A.D. Hungary, England and France. Drought**

In 1473, there was a most droughty summer and so hot that woods took fire. All rivers dried up. The Danube River could be walked over in *Hungary*. This drought continued for 3 years.<sup>72</sup>

The summer of 1473 was very hot in *France*. The heat lasted from June until December 1. There was neither cold nor frost before Candlemas [2 February 1474].<sup>79</sup>

The heat and drought in the year 1473 was so intense that the forests caught fire. All the rivers were dry. In *Hungary* one could wade across the Danube River. This drought lasted three years. In Dijon, *France*, the harvest began on 29 August. The heat around Metz, *France*, that year was so strong that on 1 May cherries were sold, and on the Feast of Saint Peters [June 29] ripe grapes were sold. The harvest was over in August. Legumes could not be harvested due to the drought.<sup>62</sup>

In *England*, there was a great drought and heat during 1473-75 after the two comets of 1472.<sup>47, 72</sup>

**1472 A.D.** In 1472, the plague swept away many of the inhabitants of Kingston-upon-Hull [now frequently referred to as Hull], *England*.<sup>212</sup>

In 1472, flooding affected several regions of *China* including:<sup>153</sup>

— Yunnan province in southwest *China* at Yao-an.

— During the period between 5 August and 2 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Shao-hsing. The floods were caused by a typhoon and many people drowned. During the same time, floods caused by heavy and protracted rains struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton.

— During the period between 8 August and 8 November, floods struck Kiangsi (now Jiangxi province) in southern *China* at Kao-an.

— During the period between 3 September and 1 October, floods struck Shensi (now Shaanxi province) in central *China* along the Han River. The city walls and houses were damaged by the floodwaters.

In 1472, a drought engulfed Shansi (now Shanxi province) in northern *China* at Ch'in. During the period between 9 February and 9 March, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton. During the period between 7 June and 5 July, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping. During the period between 30 December 1472 and 27 January 1473, a drought engulfed Hopei province at Hsing-t'ai, Chêng-ting and Ho-chien.<sup>153</sup>

In 1472 during the summer, there was a drought in Chihli, Kwangtung and Shansi provinces in *China*. In Chihli, this was a great drought. The land tax was remitted.<sup>165</sup>

*Also refer to the section 1472 A.D. – 1475 A.D. for information on the drought in Hungary, England and France during that timeframe.*

**1473 A.D.** In 1473 [in *Germany*] the winter was cold. But there was a seasonable spring and a hot summer. There was abundant and excellent wine.<sup>172</sup>

In 1473 and 1474, the summers were very hot [in *England*]. The whole earth seemed on fire.<sup>212</sup>

In 1473, flooding affected several regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü and Li-shui.

— During the period between 27 May and 24 June, floods struck Kweichow (now Guizhou province) in southwestern *China*.

— During the period between 25 June and 24 July, floods due to heavy and protracted rains struck Hopei (now Hebei province) in northern *China* at Kuang-p'ing, Hsing-t'ai, Ta-ming, Chêng-ting, Pao-ting, and Ch'in-yang.

In 1473, a severe drought engulfed Hunan province in south-central *China* at Ching and Hupeh (now Hubei province) in central *China* at Chiang-ling. Also during this year, a drought engulfed Shansi (now Shanxi province) in northern *China* at Chin-ch'êng.<sup>153</sup>

In 1473, there was a drought in Hupeh and Shansi provinces in *China*. In Hupeh, this was a great drought. The land tax was remitted.<sup>165</sup>

*Also refer to the section 1472 A.D. – 1475 A.D. for information on the drought in Hungary, England and France during that timeframe.*

**1474 A.D.** In 1473 and 1474, the summers were very hot [in *England*]. The whole earth seemed on fire.<sup>212</sup>

In 1474 during the period between 18 March and 15 April, floods struck Anhwei (now Anhui province) in eastern *China* at Shou, Ssü, Ho and Huo-ch'iu. As a result, the land tax was remitted. During the period

between 8 August and 8 November, floods struck Anhwei province at Fêng-yang. As a result, the land tax was remitted.<sup>153</sup>

In 1474 during the period between 18 March and 15 April, a drought engulfed the following regions:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Wuchang, Hanyang and Huang-kang.
- Hunan province in south-central *China* at Ch'ang-tê, Yüan-ling, Hêng-yang, Ching, Chih-chiang, Changsha and Ch'a-ling.
- Kweichow (now Guizhou province) in southwestern *China* at Li-p'ing and Chin-p'ing.

In 1474 during the spring, there was a drought in Hunan and Hupeh provinces in *China*.<sup>165</sup>

In 1474 during the 7<sup>th</sup> moon on the 17<sup>th</sup> day, a typhoon struck in the vicinity of Shanghai, *China*. A great wind and rain which tore up trees; sea overflowed, and drowned 10,000 persons.<sup>166</sup>

*Also refer to the section 1472 A.D. – 1475 A.D. for information on the drought in Hungary, England and France during that timeframe.*

**1475 A.D.** The severe cold of 1475 destroyed the olive trees of Languedoc, *France*.<sup>79</sup>

In 1475, there was an inundation in *England*. The land near the mouth of the River Humber was swept away, and several villages were destroyed.<sup>212</sup>

In 1475, floods struck Shansi (now Shanxi province) in northern *China* at Chin-ch'êng. [During the period between 4 June and 2 July 1475, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*. Crops were damaged by the floodwaters and this caused a famine. Also during this timeframe, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Chinkiang and Fukien (now Fujian province) on the southeast coast of *China* at Lung-ch'i, Nan-ching, Chang-p'u, and Ch'ang-t'ai. As a result, the autumn land tax was remitted. The date for this entry (1475) was originally recorded as the nineteenth year of the T'ien-shun period, but since T'ien-shun lasted only eight years, there evidently was a mistake. Here, it is entered as if T'ien-shun did last nineteen years.]<sup>153</sup>

*Also refer to the section 1472 A.D. – 1475 A.D. for information on the drought in Hungary, England and France during that timeframe.*

**1476 A.D.** The Istula (Vistula River in *Poland*) flooded.<sup>47, 72, 92</sup>

Locust and a great inundation of the Istula (Vistula River in *Poland*).<sup>72</sup>

The winter of 1476 became progressively more severe; the ground was covered with snow. The cold was so great on Christmas Eve, more than four hundred men of the army of Charles the Bold, in Nancy in northeastern *France* died or had their feet frozen. The Rhine River froze. The cold continued in January. The snow, which fell in large flakes, obscured the day making it almost impossible for seeing far ahead.<sup>79</sup>

In 1476 [in *Germany*], there was a normal snowfall. It began to snow on Christmas and continued daily until St. Dorothy's [February 6] and was fiercely cold and all the water and ponds froze until St. George's [April 23<sup>rd</sup>]. The fish died. Many people froze. At Breslau [now Wrocław, *Poland*], many good-hearted citizens had baths and other rooms heated and furnished wherein many poor people preserved their lives.<sup>172</sup>

In 1476, the plague raged again in Kingston-upon-Hull, *England*.<sup>212</sup>

In 1476, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China*. During the period between 19 August and 17 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Wu-i and Taichow.<sup>153</sup>

In 1476, there was a great drought in Fuhkien province in *China*.<sup>165</sup>

---

**1477 A.D.** In *England*, there was a drought with great heat; caused the plague.<sup>47, 72</sup>

In 1477, *England* was plagued by excessive heat and very irregular weather. In *Italy*, the sun's glow was unusually large; the rivers were dry and there was a famine. But *France* was a different story. The summer was not so hot because they held the harvest at Dijon, *France* on 11 October. And in the countryside at Metz, *France*, it wasn't until the Feast of Saint Stephen [reference cites this date as August 2 but the Feast of Saint Stephen the Great is celebrated on August 16] that the grapes were crushed to make wine.<sup>62</sup>

In *England*, there was excessive heat and distemperature of the air; hence so fierce and quick a pestilence. During the last fifteen years cruel civil wars did not destroy a third of the people in *England*. This pestilence though it lasted only four months, carried off endless numbers.<sup>72</sup>

In 1477, flooding affected several regions of *China* including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Yü-t'ai. Houses were damaged by the floodwaters.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Shao-hsing. The floods were caused by heavy and protracted rains. Houses were damaged by the floodwaters.

— During the period between 10 July and 8 August, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*.

— During the period between 9 August and 6 September, floods struck Hopei (now Hebei province) in northern *China* at Peiping.

— During the period between 7 September and 6 October, floods struck Shantung province at Tzū-yang; Kiangsu (now Jiangsu province) on the east coast of *China*; and Anhwei (now Anhui province) in eastern *China*.

---

**1478 A.D.** In 1478, the plague again raged in Kingston-upon-Hull [now frequently referred to as Hull], *England*. The plague raged so violently that there died in this town in a very short space of time 1,580 persons. All the churches, monasteries, priories, hospitals, schools, etc., were shut up and forsaken, and the streets were so little frequented that grass grew up in most parts of the town between the seams of the stones. The merchants forsook the port.<sup>212</sup>

In 1478, there was a great plague in *England*, which destroyed more people than the wars waged during the prior 15 years.<sup>212</sup>

In 1478, flooding affected many regions of *China* including:<sup>153</sup>

— Hupeh (now Hubei province) in central *China* at Chiang-ling and Hsiang-yang. As a result, the summer and autumn land tax was remitted.

— Shantung (now Shandong province) on the east coast of *China* at Tê. As a result, the summer and autumn land tax was remitted.

— Honan (now Henan province) in central *China* at Kaifeng

— Chekiang (now Zhejiang province) on the east coast of *China* at Hsiang-shan and Hsin-ch'ang.

— During the period 1-29 June, floods struck Shensi (now Shaanxi province) in central *China* at Shang. Many people drowned.

— During the period between 8 August and 8 November, floods struck Hupeh province at Chia-yü.

— During the period between 28 August and 25 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China*. The city walls and houses were damaged by the floodwaters.  
 — During the period between 24 December 1478 and 22 January 1479, floods struck Hopei (now Hebei province) in northern *China* at Peiping. Crops were damaged by the floodwaters and the land tax was remitted.

In 1478 during the period between 6 May and 8 August, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Chia-yü, T'ung-shan and Hanyang. [During the period between 6 May and 8 August, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*. The date for this entry (1478) was originally recorded as the twenty-second year of the T'ien-shun period, but since T'ien-shun lasted only eight years, there evidently was a mistake. Here, it is entered as if T'ien-shun did last twenty-two years.]<sup>153</sup>

[There is evidently a mistake in the record. The entry gives the year as 1478. They appeared as the 22<sup>nd</sup> year of the reign of T'ien Shun. But, the reign of Ch'êng Hwa commenced in 1465. "In the year 1478 during the summer, there was a drought in Fuhkien province in *China*.]"<sup>165</sup>

In 1478 during the summer, there was a great drought in Hupeh province in *China*.<sup>165</sup>

**1479 A.D.** In St. Neots (Huntingdon in Cambridgeshire in eastern *England*), there was a hailstorm, "when the stones measured 18 inches round."<sup>41, 43, 57</sup>

In *England* in 1479, there were hailstorm in Huntingdonshire; stones 14 inches round.<sup>93</sup>

In 1479, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Sung-yang. During the same year, a severe drought engulfed Chekiang province at Chin-yün. During the period between 8 May and 8 August, a drought engulfed Hupeh (now Hubei province) in central *China* at Chia-yü.<sup>153</sup>

In 1479 during the summer, there was a great drought in Chêhkiang and Hupeh provinces in *China*.<sup>165</sup>

**1480 A.D.** The Seine River in *France* was frozen and the ice carried [the weight of] carts.<sup>62</sup>

The winter of 1480 in *France* did not begin until the day after Christmas. Then it froze very hard until 8 February. The cold was so great that the rivers froze and carts crossed the Seine, the Marne, the Yonne rivers and all their tributaries. The cold continued after the thaw of February 8 until well into the month of May. The roots of trees were killed in several places.<sup>79</sup>

The winter of 1480 was severe and due to a large flood in Paris, *France* noteworthy.<sup>62</sup>

In 1480, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Kao-yao.<sup>153</sup>

**1481 A.D.** In 1481 during the period between 29 May and 26 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Tsêng-ch'êng. During the period between 27 June and 26 July, floods struck Shansi (now Shanxi province) in northern *China* at Hsiao-i. Houses were damaged by the floodwaters. During the period between 8 August and 8 November, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Hu-chou. This flood caused a famine.<sup>153</sup>

**1482 A.D.** This was recorded as one of the coldest winters in Holland [now *the Netherlands*].<sup>62</sup>

In *France* in 1482 the summer weather was ideal. On 17 March strawberries were sold in the market in city of Metz, and grapes were sold outside the cathedral on 24 June. At Dijon, the [grape] harvest began on 16 September.<sup>62</sup>

In 1482, flooding affected many regions of *China* including:<sup>153</sup>

— Shansi (now Shanxi province) in northern *China* at Kao-p'ing.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Yü-yao.

— Hunan province in south-central *China* at Hêng-yang and Shao-yang.

— Fukien (now Fujian province) on the southeast coast of *China* at Lien-chiang. Houses and granaries were damaged by the floodwaters and innumerable people and cattle drowned.

— During the period between 5 February and 6 May, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Yang-shuo. The city walls and houses were damaged by the floodwaters.

— During the period between 16 June and 15 July, floods struck Honan (now Henan province) in central *China* at Loyang and Hopei (now Hebei province) in northern *China* at Peiping.

— During the period between 16 July and 13 August, floods struck Hunan province at I-yang and Li-ling. Houses were damaged by the floodwaters.

— During the period between 14 August and 12 September, floods struck Shansi province at Chung-yang.

**1483 A.D.** There happened such a flood in Gloucestershire, *England* that all the country was overflowed by the River Severn; several persons were drowned in their beds.<sup>39</sup>

In October 1483, there was a great flood in *England*. The River Severn overflowed for 10 days, and carried away men, women, and children in their beds; and covered the tops of many mountains. The waters settled on the lands, and the event was called the “Great Waters” for a hundred years thereafter.<sup>212</sup>

In 1483, an epidemic first appeared in *England* called the “sweating sickness”. This disease was particularly violent and in 24 hours the fate of the sufferer was decided for life or death. It chiefly attacked males, in the prime of life, and more especially the higher classes.<sup>212</sup>

In 1483, the River Severn in *England* overflowed during ten days, and carried away men, women, and children, in their beds, and covered the tops of many hills; the waters settled upon the lands, and were called “the Great Waters” for 100 years after. This event occurred during the first year of King Richard III's reign.<sup>47, 90, 92</sup>

[Another account places this event in 1485] In 1485 in *England*, for a long time there were continual rains and great moisture, swelled rivers. Especially the River Severn, which was so high for 14 days that it overflowed the whole country. It drowned many people in their beds, overturned houses, carried about children swimming in their cradles, drowned beasts grazing on the hills.<sup>72</sup>

On 7 June 1483, a great storm struck Paris, *France*.<sup>79</sup>

In *France* in 1483, the summer weather was ideal because grapes were sold in the market on 13 June.<sup>62</sup>

In 1483, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Sui-ch'ang, Hsüan-p'ing and Ching-ning. During the period between 5 June and 4 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Chung-shan.<sup>153</sup>

In 1483 during the period between 5 July and 2 August, a severe drought engulfed Yunnan province in southwest *China* at Wu-ting. During the same time a drought struck Shantung (now Shandong province) on the east coast of *China* at Kuan. This led to a famine. Also during this same time, other areas of *China* experienced a drought.<sup>153</sup>

In 1483 during the summer, there was a great drought in Shantung and Yunnan provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shantung.<sup>165</sup>

In 1483 during the 11<sup>th</sup> moon, at the winter solstice, there was great thunder and lightning and snow in the vicinity of Shanghai, *China*. [An early account of thunder-snow] The following year [1484], there was a famine.<sup>166</sup>

**1484 A.D.** In *France* in 1484, the summer and fall weather was ideal. In the countryside around Metz, *France* the great heat after the grape harvest drove new shoots on the vines. And as a result a second grape harvest took place on 8 October. In this region, the grapes produced two harvests in one year.<sup>62</sup>

In 1484, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Chung-hsiang. During the period between 25 May and 22 June, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping; Shensi (now Shaanxi province) in central *China* at Sian; Honan (now Henan province) in central *China* at Loyang; Shantung (now Shandong province) on the east coast of *China* at Tsinan; and Shansi (now Shanxi province) in northern *China* at Taiyuan.<sup>153</sup>

In 1484 during the summer and autumn, there was a great drought in Chihli, Honan, Hupeh, Shansi, Shantung and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shansi.<sup>165</sup>

**1485 A.D.** In 1485, the disease “sweating sickness” returned to *England*. Many thousands of people died. In London, in one week, 2 mayors and 6 aldermen died.<sup>212</sup>

In 1485, flooding affected several regions of *China* including:<sup>153</sup>

— Kiangsi (now Jiangxi province) in southern *China* at Nan-ch’ang. Houses were damaged by the floodwaters. People and cattle drowned.

— Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts’ang-wu.

— During the period between 5 February and 6 May, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ho-yüan.

— During the period between 14 May and 11 June, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Foochow, Ku-t’ien, Min-ch’ing, Lien-chiang, Lo-yüan, and Yung-t’ai. Many people drowned.

— During the period between 12 June and 11 July, floods struck Kwangtung province at Kao-yao.

In 1485, a severe drought engulfed Shensi (now Shaanxi province) in central *China*. During the period between 5 February and 6 May, a drought engulfed Hupeh (now Hubei province) in central *China* at Chün. During the period between 12 July and 9 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Taiyuan. The drought caused a famine that was so severe that cannibalism was practiced. During the period between 8 August and 8 November, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Hsin.<sup>153</sup>

In 1485 during the spring, summer and autumn, there was a great drought in Hupeh, Kiangsu, Shantung and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shantung and Shansi.<sup>165</sup>

**1486 A.D.** In *England*, there was a sore famine.<sup>57, 72, 91</sup>

In 1486, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Fêng-hua and Chien-tê.<sup>153</sup>

In 1486, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Ch'ang-chih and Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Fêng-hua. During the same year, a drought engulfed Shensi (now Shaanxi province) in central *China* at Sian, which resulted in a famine. During the period between 6 January and 4 February, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin. During the period between 5 February and 8 November, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*. During the period between 26 December 1486 and 24 January 1487, a drought struck *China*.<sup>153</sup>

In 1486 during the spring, summer and autumn, there was a great drought in Chêhkiang, Fuhkien, Shansi, and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shansi.<sup>165</sup>

**1487 A.D.** In 1487 during the period between 23 May and 20 June, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chiang-yüeh. During the period between 20 July and 18 August, floods struck Hunan province in south-central *China* at Ching. The city walls and army camp was damaged by the floodwaters. During the period between 8 August and 8 November, floods struck Hopei (now Hebei province) in northern *China* at Pao-ting. Crops were damaged by the floodwaters.<sup>153</sup>

In 1487 a severe drought engulfed several regions of *China* including:<sup>153</sup>  
 — Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Chu-chi.  
 — Hupeh (now Hubei province) in central *China* at Wuchang.  
 — Hunan province in south-central *China* at Ch'i-yang and Ch'ang-tê.  
 — During the period between 5 February and 8 November, a severe drought engulfed *China*.  
 — During the period between 23 May and 20 June, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.

In 1487 during the spring and summer, there was a great drought in Chihli, Fuhkien, Hunan and Hupeh provinces in *China*. The resulting famine was so severe that it led to cannibalism in Hupeh.<sup>165</sup>

In 1487 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a storm of great wind and rain.<sup>166</sup>

**1488 A.D.** In [*England*] in 1488, there was a great snowfall and frost.<sup>72</sup>

In 1488, a severe drought engulfed several regions of *China* including:<sup>153</sup>  
 — Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua.  
 — Hupeh (now Hubei province) in central *China* at Chiang-ling.  
 — Hunan province in south-central *China* at Tz'ü-li, Hua-jung and An-hsiang.

In 1488, a drought engulfed several regions of *China* including:

— Hunan province at Yüan-ling and Ch'ang-tê.  
 — Hupeh province at Wuchang, Hanyang, Huang-p'o and An-lu.

During the period between 6 May 1488 and 5 February 1489, a severe drought engulfed Shensi (now Shaanxi province) in central *China* at Liao-yang.

In 1488 during the summer, there was a great drought in Chêhkiang, Hupeh and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism.<sup>165</sup>

In 1488, floods due to heavy and protracted rains struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.<sup>153</sup>

---

**1489 A.D.** In 1489 during the period between 30 May and 28 June, floods struck Honan (now Henan province) in central *China* at Kaifeng and Shantung (now Shandong province) on the east coast of *China* at Ts'ao. Then during the period between 29 June and 27 July, floods due to heavy and protracted rains struck Hopei (now Hebei province) in northern *China* at Peiping and T'ung. Houses were damaged by the floodwaters. People and cattle drowned.<sup>153</sup>

In 1489, a severe drought engulfed Szechwan (now Sichuan province) in southwest *China* at Mien-chu. During the period between 6 May and 8 August, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Mien-yang.<sup>153</sup>

In 1489 during the summer, there was a great drought in Hupeh and Sze-ch'wan provinces in *China*.<sup>165</sup>

---

**1490 A.D.** In 1490 during the period 20 April and 18 May, floods struck several regions. Crops were damaged by the floodwaters. Many people drowned. The regions affected were:<sup>153</sup>

— Honan (now Henan province) in central *China* at Yüan-wu, Fêng-ch'iu, Kaifeng, Chung-mou, Yü-shih, Lan-fêng, K'ao-ch'êng, and Shang-ch'iu.

— Hopei (now Hebei province) in northern *China* at Ch'ang-yüan.

— Shantung (now Shandong province) on the east coast of *China* at Ts'ao, P'u and Tung-a.

— Anhwei (now Anhui province) in eastern *China* at Su.

---

**Winter of 1490 / 1491 A.D.** A cold winter struck Florence, *Italy* on 10 January. The River Amo froze. Then on 17 January freezing rain broke trees.<sup>28</sup>

On 5 January 1491, the Paglia River as well as the Tiber River froze, so that people could cross it on foot for several days. Many keepers of cattle perished because they were victims of the weather.<sup>82</sup>

In the year 1490, it was bitterly cold in *Burgundy* and the winter lasted 6 months. The winter was followed by a very great heatwave.<sup>62</sup>

The winter of 1490 was one of the harshest of which we had heard. The winter produced such a furious storm that the inhabitants of Marseille in southern *France* could not leave their houses for two months.<sup>79</sup>

---

**1491 A.D.** A great fall of rain in *Ireland* all summer.<sup>39</sup>

In *Ireland*, there were great rain and floods all the summer; called the "Dismal Year."<sup>47, 57, 92</sup>

In *Ireland* in 1491, there was such a famine that it was called "The Dismal Year."<sup>91</sup>

In *England*, there was considerable scarcity.<sup>57</sup>

In *Poland*, there was a great dearth of cattle.<sup>72</sup>

In 1491, floods struck Shansi (now Shanxi province) in northern *China* at Wên-shui. Crops and houses were damaged by the floodwaters. During the same year, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Hu-chou. During the period between 7 June and 6 July, floods struck Hupeh (now Hubei province) in central *China* at Ying-shan and many people drowned.<sup>153</sup>

In 1491, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Wu-i. During the period between 7 June and 6 July, a drought engulfed Hunan province in south-central *China* at Ch'i-yang.<sup>153</sup>

In 1491 during the summer, there was a drought in Chêhkiang and Hunan provinces in *China*. In Chêhkiang, this was a great drought.<sup>165</sup>

**1492 A.D.** In 1492, flooding affected many regions of *China* including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Hsiang-shan.
- Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton and Ch'ao-an. The floods were caused by heavy and protracted rains.
- Hopei (now Hebei province) in northern *China* at Peiping. Houses were damaged by the floodwaters. Floods also struck T'ung, where houses were damaged by the floodwaters and people and cattle drowned.
- During the period between 28 March and 26 April, floods struck Shantung (now Shandong province) on the east coast of *China* at Ts'ao. Fields were damaged.
- During the period between 26 May and 24 June, floods struck Yunnan province in southwest *China* at Ta-li; Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Hu-chou and Hangchow; and Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang.
- During the period between 24 July and 22 August, floods struck Shantung province at Tung-a.

In 1492 during the period between 29 January and 27 February, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng. The drought led to a famine.<sup>153</sup>

In 1492 during the spring, there was a great drought in Shantung province in *China*.<sup>165</sup>

In 1492 in the vicinity of Shanghai, *China*, crops were damaged by rain.<sup>166</sup>

**1493 A.D.** The summer in *Belgium* was very warm. Grain and wines were sold at low prices in the area around Liège.<sup>62</sup>

On 12 February 1493, Columbus on his return voyage from discovering the *New World of the Americas*, encountered a very violent storm, which lasted three days. [He was approximately 660 leagues or 2,000 miles in his return voyage to Spain.] Columbus expected both caravels to founder in the severe storm. The ships separated. On the night of the 15<sup>th</sup>, the gale increased in strength and Columbus thought that Providence had decreed to put an end to his mortal existence and to bury his deeds to oblivion. But the storm passed. On the 17<sup>th</sup>, they anchored at the Island of Santa Maria, one of the *Azores*.<sup>145</sup>

In 1493, floods struck Kweichow (now Guizhou province) in southwestern *China* at Lu-shan. During the period between 13 July and 11 August, floods struck Hunan province in south-central *China* at P'ing-chiang.<sup>153</sup>

In 1493 during the period between 18 March and 15 April, a drought engulfed *China*. During the period between 6 May and 8 August, this drought grew into a severe drought.<sup>153</sup>

In 1493 during the summer, there was a great drought in *China*.<sup>165</sup>

In 1493 in the vicinity of Shanghai, *China*, crops were damaged by rain.<sup>166</sup>

**Winter of 1493 / 1494 A.D.** In the year 1493, the port of Genoa in northwestern *Italy* was frozen.<sup>38</sup> - on December 25 and 26.<sup>60, 62</sup>

The winter of 1493-94 was remarkable for the severity of the cold, which was very severe in the south [*Southern Europe*]. The lagoon and all the canals of Venice, *Italy* were frozen; so that pedestrians, wagons and horses could travel over the ice.<sup>62</sup>

The Rhône River froze in 1493 in southern *France*.<sup>79</sup>

**1494 A.D.** In *England*, great scarcity and high prices.<sup>57</sup>

In Milan, *Italy*, lightning set fire to their magazines of powder, which they had taken out to send to other places. This demolished the gates over it and the castle. The whole city shook. Many people were slain by the fall of stones and the ruin of the walls. Five hundred men were slain at their recreation on the castle green.<sup>72</sup>

During the second voyage of Christopher Columbus, on 16 July 1494, he encountered a violent hurricane at Cape Santa Cruz. Admiral Columbus remarked “that nothing but the service of God and the extension of the monarchy should induce him to expose himself to such danger”.<sup>145</sup>

On 24 August in 1494 or 1495, a hail tempest struck St. Nead’s. The hailstones were 18 inches about [circumference].<sup>72</sup>

In 1494, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing and Yü-yao. During the period between 7 March and 5 April, floods struck Shantung (now Shandong province) on the east coast of *China* at Tung-a.<sup>153</sup>

**Winter of 1494 / 1495 A.D.** During the winter of 1494-95 in southern *France* there were many storms and heavy rains. In 1495, barley got on the cob in January, and winter was as mild as spring.<sup>79</sup>

In 1494 during the winter, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

**1495 A.D.** In *India*, there was a great dearth that occurred about this date in Hindustan.<sup>57</sup>

In 1495, an Atlantic hurricane struck the *West Indies* causing a loss of life. “When the hurricane reached the harbor, it whirled the ships round as they lay at anchor, snapped their cables, and sank three of them with all who were on board.”<sup>141</sup>

Before 10 March 1496, a hurricane wrecked the four ships of Juan Aguado as he was readying to return to Spain, along with two others in the harbor of La Isabela in the *Dominican Republic*.<sup>145</sup>

The winter of 1495 produced a lot of rain, and the following summer produced many storms in southern *France*.<sup>79</sup>

In 1495, floods struck Shantung (now Shandong province) on the east coast of *China* at Tê-p’ing. The city moat overflowed.<sup>153</sup>

In 1495, many regions of *China* experienced drought.<sup>153</sup>

— During the period between 5 February and 6 May, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Chung-yang.

— During the period between 5 February and 8 August, a drought engulfed Shansi province at Ch’ang-chih.

— During the period between 26 March and 24 April, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing and Yü-yao.

— During the period between 21 July and 19 August, a severe drought engulfed Shansi province; Kansu (now Gansu province) in northwest *China*; and Shensi (now Shaanxi province) in central *China*.

In 1495 during the spring and autumn, there was a great drought in Shansi province in *China*.<sup>165</sup>

**1496 A.D.** In 1496, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Lan-ch'i.<sup>153</sup>

In 1496, there was a famine throughout the four neighboring fus [prefectures] adjacent to Shanghai, *China*.<sup>166</sup>

[In 1496], in the 8<sup>th</sup> year of the reign of Emperor Hyau-Tsong, a famine raged through several of the western provinces of *China* to such an extent, that parents were known to eat their own children. While at the same time a grievous pestilence, a calamity scarcely known in *China*, raged and laid waste to the eastern provinces.<sup>186</sup>

**1497 A.D.** There was an “intolerable famine throughout all *Ireland* – many perished.”<sup>57, 91</sup>

In 1497, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling. The city walls and fields were damaged by the floodwaters. The floods caused a famine. During the same year, floods struck Yunnan province in southwest *China* at Yung-p'ing. Several hundred families were flooded. Also during the year, a drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-chin.<sup>153</sup>

In 1497, there was a drought in Shansi province in *China*.<sup>165</sup>

**1498 A.D.** In *England*, there was a very great drought.<sup>47, 72</sup>

In *England*, this was a very droughty year and hay was very dear.<sup>72</sup>

In 1498 in *England*, the summer was hot, very dry and the food was very expensive. In *France*, it was so hot that the peasants had to douse their fields [with water]. The pressing of the grapes was finished in mid-September and the wine fell out very well. The harvest of Dijon, *France* did not take place until 26 September. The price of grain was high in *France*.<sup>62</sup>

In 1498, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao. These floods produced a famine. During the same year, floods struck Shansi (now Shanxi province) in northern *China* at Chin-ch'êng.<sup>153</sup>

In 1498, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Ch'ü; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsing-ning. Also during the year, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at I-ch'un and Ch'ing-chiang. During the period between 17 August and 15 September, a severe drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*. This drought produced a famine.<sup>153</sup>

In 1498 during the summer and autumn, there was a great drought in Chêhkiang, Kiangsi, Kwangsi and Kwangtung provinces in *China*.<sup>165</sup>

**Winter of 1498 / 1499 A.D.** The frosts of the winter appeared in Hainaut in western *Belgium* in a very unusual form. On Christmas night there was a very heavy rain mixed with hail, the cold immediately formed a smooth ice flow [freezing rain]. This was followed by so much snow, "that all, as the chronicler

says, flowed together and with each other a mixed ice, hard as stone, formed." As the trees could not bear such a burden, "the branches broke with a crash." The branches that resisted caused by the wind a noise "like the rattle of a harness." This strange frost lasted twelve days, and when the thaw came, enormous pieces of ice fell from the church towers and damaged the ship and the chapels of the churches. The harvest of the apple and pear trees in the following autumn was very abundant, but there was a lack of food altogether, so that horses and cattle died of starvation. The farmers who had filled their barns with straw the previous year, had to remove it to give it to the animals to eat.<sup>62</sup>

---

**1499 A.D.** In 1499, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü; Hupeh (now Hubei province) in central *China* at Hsien-ning; Honan (now Henan province) in central *China* at Loyang; and Shantung (now Shandong province) on the east coast of *China* at Ts'ao and Shan. During the period between 6 May 1499 and 5 February 1500, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1499 during the summer, autumn and winter, there was a drought in Fuhkien province in *China*. The land tax was remitted.<sup>165</sup>

---

**1500 A.D.** [As a result of the warm summer], the harvest at Dijon, *France* occurred [early] on 14 September. On 19 August, they drank more wine at Liège in east-central *Belgium*.<sup>62</sup>

In 1500, there was a great tempest in Rome, *Italy*, which did much damage to buildings.<sup>72</sup>

In 1500, there was a dreadful plague in London, *England*, which obligated King Henry VII and his Court to remove to Calais.<sup>212</sup>

In July 1500, an Atlantic hurricane struck the *Bahamas* causing a loss of life. Two caravels with all their crew were swallowed up by the storm.<sup>141</sup>

In 1500, a drought engulfed Yunnan province in southwest *China* at Mêng-tzū. During the period between 28 May and 25 June, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao.<sup>153</sup>

In 1500 during the spring and summer, there was a drought in Chêhkiang and Yünnan provinces in *China*. In Yünnan, this was a great drought.<sup>165</sup>

---

**1501 A.D.** In *Germany* on 14 August, the Albis (Elbe) River overflowed.<sup>47, 72, 92</sup>

In 1501, several regions of *China* experienced flooding including:<sup>153</sup>

— During the period between 6 May and 8 August, floods struck Hopei (now Hebei province) in northern *China* at Lu-lung; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton and Ch'ung-shan.

— During the period between 15 July and 13 August, floods struck Shansi (now Shanxi province) in northern *China* at Taiyuan. Houses and crops were damaged by the floodwaters.

— During the period between 8 August and 8 November, floods struck Yunnan province in southwest *China* at Pao-shan and T'êng-ch'ung. Houses were damaged by the floodwaters. People and cattle drowned.

In 1501, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China* and Yunnan province in southwest *China* at Mêng-tzū.<sup>153</sup>

In 1501, there was a great drought in Fuhkien province in *China*.<sup>165</sup>

---

**1502 A.D.** In Holland [now *the Netherlands*] the winter was severe and in Paris, *France*, the winter brought on a flood.<sup>62</sup>

The summer of 1502 in southern *France* was hot and dry.<sup>79</sup>

There was a drought in southern *France* in 1502.<sup>79</sup>

A fleet of thirty-two vessels at Santo Domingo, *Dominican Republic* was to sail back to Spain. Christopher Columbus arrived and asked for shelter from the coming hurricane. Ovando denied his request. Columbus asked them to detain the fleet from returning to Spain because of the signs of an impending hurricane. Ovando did not believe him, and the sailors laughed at his prediction. Bovadilla, Roldan, and their party, were embarked; Guarionex was on board the *Capitana*, and 100,000 castellanos for the King, and another 100,000 castellanos belonging to the passengers, and the large lump of gold, which had been Garay's dish. The fleet sailed on 1 July 1502; and within twenty-four hours, twenty sail including the *Capitana*, with all on board, perished!<sup>145</sup> [During the time of Ferdinand and Isabella, the marc was a unit of weight equal to one-half pound. A marc of gold was equal to 50 castellanos. 100,000 castellanos would be equal to 1,000 pounds of gold. Today's spot price of gold is \$1260 per ounce. In present currency, the value of the lost gold in this storm would exceed \$40 million.]

Christopher Columbus arrived at St. Domingo in Hispaniola [now the *Dominican Republic*] towards the end of June 1502. The Admiral had the good fortune to get in a little creek in the island, where he weathered a very terrible storm, in which Bovadilla, his great enemy, and fourteen ships laden [loaded] with treasure, and bound for Spain, perished.<sup>227</sup> [The enemies of Columbus having given the Court of Spain an ill opinion of him, it appears they employed Americus Vesputius, a Florentine, in the year 1497, to enlarge the discoveries of Columbus. The America's were named after this lesser explorer.]

On 11-12 July 1502, a hurricane struck offshore the *Dominican Republic* causing approximately 500 deaths.<sup>141</sup>

On 16 September 1502 at *Honduras*, "a boat sent to the shore was, in returning, swallowed up by a sudden swelling of the sea, with all on board."<sup>141</sup>

In 1502, floods due to heavy and protracted rains struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao. In the same year, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea.<sup>153</sup>

In 1502, there was a drought in Kwangtung province in *China*.<sup>165</sup>

---

**1503 A.D.** In *England*, there was a great drought in summer.<sup>47, 72</sup>

The Po River in *Italy* was frozen and an army crossed the ice.<sup>62</sup>

The winter of 1503 in *Italy* was severe. The Po River froze and carried the weight of the army of Pope Julius II on the ice.<sup>62</sup>

In 1503, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. During the period between 25 May and 23 June, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1503 during the summer, there was a great drought in Chêhkiang and Chihli provinces in *China*.<sup>165</sup>

In 1503, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton. During the period between 20 September and 19 October, floods struck Fukien (now Fujian province) on the southeast coast of *China*. Houses were damaged by the floodwaters.<sup>153</sup>

---

**1504 A.D.** A drought occurred during the spring; the waters dried up in Lyon, *France*. It was followed by a plague. In *Italy* (which apparently also suffered from the drought), they made a religious procession for rain and immediately following the procession the rains came on June 15.<sup>61</sup>

The summer of 1504 in southern *France* was very hot.<sup>79</sup>

In *Italy* in 1504, the winter was mild like springtime.<sup>62</sup>

In 1504, a hurricane struck the north coast of *Colombia* causing 175 deaths.<sup>141</sup>

In *Burgundy* in the year 1504, the summer was full of wonderfully warmth and without rain, disease and fever. At several places the dryness of the weather caused lamentable accidents by fire. A terrible drought raged during the summer in *England*. They began the harvest [early] in Dijon, *France* on 14 September.<sup>62</sup>

In 1504, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Tientsin; the northeast portion of Kiangsu (now Jiangsu province) on the east coast of *China*; the eastern portion of Chekiang (now Zhejiang province) on the east coast of *China*; and Shantung (now Shandong province) on the east coast of *China* at I-tu. During the period between 5 February and 8 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Yü-tz'ü, T'ai-ku and Yung-chi. During the period between 8 October and 6 November, a drought engulfed Yunnan province in southwest *China* at Wu-ting.<sup>153</sup>

In 1504 during the spring, summer and autumn, there was a drought in Chihli, Shansi and Shantung provinces in *China*. The resulting famine was so severe that people in Shansi devoured the bark of trees.<sup>165</sup>

In 1504 during the period between 15 April and 13 May, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hai-fêng, Hui-yang, Chin-hsi [uncertain name] and Yang-an [uncertain name]. Many people drowned. During the period between 12 June and 11 July, floods struck Kwangtung province at Ch'iung-shan. Crops were damaged by the floodwaters and this flood caused a famine.<sup>153</sup>

In 1504 during the 4<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a hailstorm, which killed men, cattle and the wheat crop.<sup>166</sup>

---

**1505 A.D.** In 1505 because of a great famine in *Hungary*, parents killed and ate their own children.<sup>96</sup>

During the famine in *Hungary* in 1505 starving parents who butchered and ate their children were not punished.<sup>155</sup>

In 1505, floods struck Hunan province in south-central *China* at I-yang; and Hupeh (now Hubei province) in central *China* at Ên-shih. Houses were damaged by the floodwaters. During the period between 6 May and 8 August, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ho-yüan. Houses were damaged.<sup>153</sup>

---

**Winter of 1505 / 1506 A.D.** In 1506 in southern *France*, the winter was as mild as spring.<sup>79</sup>

The winter of 1505-06 in southern *France* was very moderate. There were live roses in January, as well as other flowers normally seen in the month of May. Barley got into spikes at the same time and the wheat grew in proportion.<sup>79</sup>

On 15 to 26 January 1506, there were tempests and hurricanes [in *England*]<sup>72</sup>

---

**1506 A.D.** In 1506, a Fleet of 13 vessels were sailing from Lisbon, Portugal to India via the Cape of Good Hope, South Africa. One of the ships commanded by Tristão da Cunha encountered a violent storm that separated his ship from the Fleet and drove it so far south that the crew experienced severely cold weather. They discovered an isolated island that bears his name, *Tristan da Cunha*, located midway between Africa and South America in the south Atlantic Ocean. [This island is now part of the overseas British territories.]<sup>105</sup>

[In *England*], there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1506 in the city of Chester, *England*, in three days, 91 people died of sweating sickness. Only four of who were women.<sup>212</sup>

In 1506, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Huang-kang. During the period between 6 May and 8 August, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao and Shang-yü. Also during the period between 6 May and 8 August, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Kao-an. During the period between 31 July and 28 August, floods struck Liaoning province located in the southern part of *China*'s northeast at Liao-yang; Kiangsu (now Jiangsu province) on the east coast of *China*; and Anhwei (now Anhui province) in eastern *China*.<sup>153</sup>

In 1506 during the summer, there was a drought in Chêhkiang, Hupeh and Kiangsi provinces in *China*. In Chêhkiang and Hupeh, this was a great drought.<sup>165</sup>

In 1506, a typhoon struck in the vicinity of Shanghai, *China*. There was an overflow of the sea, with great wind and rain.<sup>166</sup>

In 1506, in the vicinity of Shanghai, *China*, there was a famine.<sup>166</sup>

---

**Winter of 1506 / 1507 A.D.** This winter was extremely severe in the south [*Southern Europe*]. At Marseille, *France*, three-feet of snow fell on the day of Epiphany (January 6<sup>th</sup>). The fruit trees died off.<sup>62</sup>

During the winter of 1506-07 in southern *France*, there was severe cold, and large snowfalls.<sup>79</sup>

The chill of 1506-07 completely froze the port of Marseilles, *France* and destroyed a large number of men and animals. On the Feast of the Epiphany [January 6<sup>th</sup>], 3.2 feet (974 millimeters) of snow fell on Marseilles. The mass of snow, fortunately protected trees and seeds from the cold.<sup>79</sup>

In 1507 A.D., the port of Marseilles in *France* froze in its full extent. Three feet (0.9 meters) of snow fell at Marseilles on the day of Epiphany (January 6<sup>th</sup>).<sup>38, 60, 62</sup>

In 1506, there was a great frost in *England*. The frozen River Thames at London bore the weight of carriages throughout January.<sup>212</sup>

---

**1507 A.D.** In 1507, there was a plague of sweating sickness in Chester, *England*.<sup>212</sup>

In 1507, Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing experienced flooding. Around 10,000 persons drowned. Hunan province in south-central *China* at I-chang also experienced flooding.<sup>153</sup>

In 1507, a severe drought engulfed Shensi (now Shaanxi province) in central *China*. During the period between 6 May and 8 August, a drought engulfed Hunan province in south-central *China* at Hêng-yang.<sup>153</sup>

In 1507 during the summer, there was a drought in Hunan and Shensi provinces in *China*. In Shensi, this was a great drought.<sup>165</sup>

---

**1508 A.D.** In *France*, there was a great flood called the “Flood of St. Onne”, which affected Vivarais, Velay and others.<sup>61</sup> [Vivarais is located in the Ardèche region of southeast *France*. Velay is located in south-central *France*.]

[In *England*], it was a tempestuous year [a year full of tempests].<sup>72</sup>

In 1508, there was a very plentiful harvest [in *England*].<sup>212</sup>

On 12-14 August 1508, an Atlantic hurricane struck the *Dominican Republic* causing a loss of life. “Many men were lost in this city and in the greater part of this island.” The storm destroyed the entire population of Buenaventura [the date given is 3 August].<sup>141</sup>

On 3 August 1508, all the thatched houses in Santo Domingo, *Dominican Republic*, and several of those built with stone, every house in Bonaventura, and twenty sail of vessels, were destroyed by a hurricane. At first the gale blew from the north, and then shifted suddenly to the south.<sup>145</sup>

In *Germany*, there was terrible hailstorm that destroyed trees, corn [grain], and [grape] vines, chiefly in the Duchies of Württemberg, Hohenberg, and Rottenburg on the Nickar [Neckar River]. The hailstones were so large and tempestuous, that it broke windows and tiles of houses. At Stutgard [Stuttgart, *Germany*], a tempest arose and so great a flood of waters from the clouds that it filled the town. The city was in danger of perishing. Some men and oxen were lost and a part of the wall [of the city] were broken.<sup>72</sup> [Württemberg, Hohenberg, Rottenburg, and Stuttgart are located in southern *Germany*.]

In 1508, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui, Shao-hsing, Chin-hua, Taichow and Hu-chou; Kiangsi (now Jiangxi province) in southern *China* at Tê-an; and Hupeh (now Hubei province) in central *China* at Hanyang, Wuchang, Hsiang-yang and Huang-kang.<sup>153</sup>

In 1508, there was a great drought in Chêhkiang and Hupeh provinces in *China*.<sup>165</sup>

In 1508, several regions of *China* experienced flooding including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Shan. Crops were damaged by the floodwaters. Houses were largely damaged.

— Chekiang (now Zhejiang province) on the east coast of *China* at Yü-hang.

— During the period between 30 May and 27 June, floods struck Hupeh (now Hubei province) in central *China* at P’u-ch’i.

— During the period between 28 June and 27 July, floods struck Shansi (now Shanxi province) in northern *China* at K'o-lan and T'ai-ku. The city walls were damaged by the floodwaters and over 1,000 persons drowned.

---

**1509 A.D.** There was a drought in southern *France* in 1509.<sup>79</sup>

In 1509, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Hu-chou and Yü-yao. During the period between 6 May and 8 August, floods struck Kiangsi (now Jiangxi province) in southern *China*.<sup>153</sup>

In 1509, drought engulfed several regions of *China* including:<sup>153</sup>

- Hunan province in south-central *China* at Yüeh-yang, Hêng-yang, Shao-yang and Lin-hsiang.
- Hupeh (now Hubei province) in central *China* at Wuchang, Hanyang, Chiang-ling and Huang-kang.
- Kiangsi (now Jiangxi province) in southern *China* at Hsing-kuo. This drought was severe.
- Kiangsi province at I-ch'un and Ch'ing-chiang. This drought led to a famine.
- During the period between 19 May and 16 June, a severe drought engulfed Hupeh province at Wuchang.

In 1509 during the summer, there was a drought in Hunan, Hupeh and Kiangsi provinces in *China*. At Hu-Kwang [Hukwang - the rice bowl of China comprising the provinces of Hunan and Hupeh], this was a great drought.<sup>165</sup>

---

**1510 A.D.** In *England*, there was excessive heat.<sup>47, 72</sup>

In *Italy*, there was a hailstorm “which destroyed all the fish, birds, and beasts of the country.”<sup>41, 43, 56, 57, 93</sup> Some of the hailstones weighed one hundred pounds.<sup>40</sup>

The year 1510 in southern *France* was humid and rain.<sup>79</sup>

There was a severe hailstorm in *France* in 1510. A black cloud came over the face of the heavens, and darkened the air like night. In the midst of people's terror and astonishment, the most violent lightning and thunder burst from it, and hail began to fall. This increased in a most dreadful manner, and with a strong and suffocating smell, like burning brimstone. The hailstones were more like pebbles, their color bluish and their hardness like flint, till they softened to the wet. Some of these hailstones weighed a hundred pounds. This storm killed almost all the cattle, fowls and fish in the county and a vast number of the people.<sup>192</sup>

In Gulick and Juliers (now Jülich), there was such an extraordinary thunder and lightning storm. It struck all with a panic. A thunderbolt set fire to a magazine, which did great damage.<sup>72</sup> [The territory of the Duchy of Jülich lies in present-day *Germany* (part of North Rhine-Westphalia) and in the present-day *Netherlands* (part of the Limburg province). Gulick is the Dutch word for Juliers.]

In 1510, several regions of *China* experienced flooding including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow. Houses were damaged by the floodwaters and many people drowned.
- Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui and Hu-chou.
- Hunan province in south-central *China* at Yüan-ling.
- During the period between 6 June and 5 July, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Chiang-yüeh. Occupants drowned. [This date was originally recorded as the twenty-third of the Hung-chih period, but since Hung-chih had only eighteen years and ended in the year 1505, there apparently is a mistake. Here it is recorded as if Hung-chih did last twenty-three years.]

In 1510, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Li-fan. During the period between 6 June and 5 July, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Hêng-shui. During the period between 6 July and 4 August, a drought engulfed Hopei province at Peiping.<sup>153</sup>

In 1510 during the summer, there was a drought in Sze-ch'wan and Chihli provinces in *China*. In Chihli, this was a great drought.<sup>165</sup>

The year 1510 produced an extremely cold winter in the vicinity of Shanghai, *China*. Bamboo, cedar and orange trees were killed. For several years afterwards, there were no oranges in the markets. There was ice several feet thick, for a month in the river.<sup>166</sup>

**Winter of 1510 / 1511 A.D.** In Holland [now *the Netherlands*] this winter was recorded as severe. In *Italy*, the cold was very intense, and the snow was plentiful.<sup>62</sup>

**1511 A.D.** In *Ireland*, there was a great inundation, which produced considerable destruction.<sup>47, 92</sup>

In 1511, a severe drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Hsing-kuo. Also in the same year, floods struck Hupeh (now Hubei province) in central *China* at Ying-shan. During the period between 27 May and 24 June, floods struck Hupeh province at P'u-ch'i. Houses were damaged by the floodwaters. During the period between 25 June and 24 July, floods struck Shansi (now Shanxi province) in northern *China* at Chao-ch'êng.<sup>153</sup>

In 1511, there was a great drought in Hupeh province in *China*.<sup>165</sup>

In 1511 during the summer, wheat had many branches and heads. Then during the 6<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a great wind that damaged the fields; the people were scattered, and there was a famine and pestilence of which countless numbers died.<sup>166</sup>

**1512 A.D.** In Bologna, *Italy* the snow fell so thick one could not see through it. This snow lasted until May.<sup>62</sup>

In 1512, the grapevines froze to death during the summer in the countryside of Metz, *France*. The summer produced sinister cold.<sup>62</sup>

In 1512, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Ch'ang-tzŭ.<sup>153</sup>

In 1512, there was a great drought in Shansi province in *China*.<sup>165</sup>

In 1512, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. Many people drowned.

— Yunnan province in southwest *China* at K'un-yang. Over 100 houses were damaged by the floodwaters and innumerable people drowned.

— During the period between 8 December 1512 and 6 January 1513, the Li River flooded in Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*.

In 1512 during the 6<sup>th</sup> moon, a dragon was seen to the southeast of Whangpu [Huangpu River, *China*]. It scorched the [rice] paddy and destroyed houses in its course. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

**1513 A.D.** A dearth, scarcity of corn [grain], famine, rainy seasons and severe cold winters had afflicted *Italy* for two years and people were forced to eat uncommon and unwholesome food, and then in 1513, a contagious epidemic struck.<sup>72</sup>

In 1513, there was a famine [in *England*].<sup>72</sup>

In 1513 a severe drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang. Also during the year, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*. Then during the period between 6 April and 4 May, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at T'ai-shan. During the period between 30 August and 28 September, floods struck Shansi (now Shanxi province) in northern *China* at Ch'in-yüan. Fields were damaged by the floodwaters.<sup>153</sup>

In 1513, there was a drought in Kiangsi and Fuhkien provinces in *China*. In Kiangsi, this was a great drought.<sup>165</sup>

**Winter of 1513 / 1314 A.D.** In the year 1513, the Meuse River froze over its whole course, carts travel from Liège, *Belgium* to Maastricht in southern *Netherlands* on the ice.<sup>62</sup>

The winter of 1513-14 in Flanders [now *Belgium*] was very severe. The loaded wagons traveled on the frozen rivers from Gorcum in western *Netherlands* to Cologne in west-central *Germany* on the ice.<sup>62</sup>

London, *England* experienced cold weather in January 1314, and the River Thames froze.<sup>28</sup>

**1514 A.D.** On 27 November 1514, there was a great flood at Burton-on-Trent in Staffordshire, *England*.<sup>212</sup>

In 1514, a drought engulfed Hupeh (now Hubei province) in central *China* at Tsao-yang.<sup>153</sup>

In 1514, there was a drought in Hunan province in *China*.<sup>165</sup>

**Winter of 1514 / 1315 A.D.** In 1515, the frost in *England* was so intense that throughout January in London, carriages crossed over the River Thames on the ice from Lambeth to Westminster.<sup>212</sup>

In *England* in 1515, the River Thames was frozen so hard that carriages of all sorts passed between Westminster and Lambeth upon the ice.<sup>29, 47, 90, 93</sup>

**1515 A.D.** On January 1, there was a most frightful and destructive storm in *Denmark*, which rooted up whole forests of trees, destroyed a great many houses, and blew down the steeple of the great church at Copenhagen. Many persons were killed.<sup>1, 40, 41, 43, 56</sup>

“All *Germany* like a sea, and Cracovia [Kraków in southern *Poland*] flooded.”<sup>47, 72, 92</sup>

There was a fearful flood in Cracovia [Kraków in southern *Poland*], which drowned many people. There was such a great flood in *Germany* that the country suffered much loss and looked like an island.<sup>72</sup>

In July 1515, an Atlantic hurricane struck *Puerto Rico* causing the death of many Indians.<sup>141</sup>

In 1515 during the period between 12 June and 10 July, a severe drought engulfed *China*.<sup>153</sup>

In 1515 during the summer, there was a great drought and dust storms in *China*.<sup>165</sup>

In 1515, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow. During the period between 11 July and 9 August, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at T'ai-shan. During the period between 10 August and 7 September, floods caused by heavy and protracted rains struck Kwangtung province at Ch'ao-an. Many people drowned.<sup>153</sup>

---

**1516 A.D.** In *England*, the years 1516 and 1517 were hot and dry.<sup>47, 72</sup>

In 1516, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao.

— During the period 2-30 May, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsin-hui.

— During the period 2-30 May, floods struck Hupeh (now Hubei province) in central *China* at I-ch'êng, Hsiang-yang, and Ên-shih. At Ên-shih, the city walls and houses were damaged.

— During the period between 28 August and 25 September, floods struck Hupeh province at Han-ch'uan, Ying-ch'êng and Chiang-ling; and Hunan province in south-central *China* at Hua-jung.

— During the period between 8 August and 8 November, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu and Po-pai.

In 1516, a severe drought engulfed Hunan province in south-central *China* at Ching. During the period between 31 May and 29 June, a severe drought engulfed several regions of *China*. During the period between 29 July and 27 August, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tê-p'ing.<sup>153</sup>

In 1516 during the summer and autumn, there was a drought in Hunan and Shantung provinces in *China*. In Hunan, this was a great drought.<sup>165</sup>

---

**1517 A.D.** Severe winter struck *England* on January 12. The River Thames froze. Three feet (0.9 meters) of snow fell on the streets of Valence in southeastern *France* on January 15.<sup>28</sup>

In *England* in 1517, there was a great frost.<sup>72</sup>

In *England*, the years 1516 and 1517 were hot and dry.<sup>47, 72</sup>

The summer in 1517 was very hot and produced a very abundant harvest in *England*. In Dijon, *France* the grape harvest began [late] on 26 September. The harvest was plentiful in *France*.<sup>62</sup>

In *England*, it was a very droughty and frosty winter, a very hot summer, and a very early and plentiful harvest. Wheat fell from 10s. a bushel to 10d. There was a great murrain of kine [cattle]. The cattle were so mortally infectious, that dogs and ravens feeding on their flesh were poisoned and swelled to death. None dare eat the beef.<sup>72</sup>

In 1517, the fatal "sweating sickness" was very violent in London, *England*. The disease was mortal in three hours. Oxford was depopulated, and half of the inhabitants died in most of the capital towns of *England*. The sickness was very terrible at Chester.<sup>212</sup>

In 1517, a severe drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Yü-lin and Hsing-yeh. During the same year, floods struck Hupeh (now Hubei province) in central *China* at Wuchang, Hanyang, Chiang-ling and An-lu. At An-lu, fields and houses were damaged by the floodwaters and many people drowned.<sup>153</sup>

In 1517, there was a great drought in Kwangsi province in *China*.<sup>165</sup>

---

**1518 A.D.** [In *England*], the winter was very dry and cold.<sup>62</sup>

[In *England*], on May 10, there was a tempest of wind and weather.<sup>72</sup>

The year 1518 in southern *France* was humid and rain.<sup>79</sup>

In 1518, several regions of *China* experienced flooding including:<sup>153</sup>

— Kiangsi (now Jiangxi province) in southern *China*.

— Shantung (now Shandong province) on the east coast of *China* at Chang-ch'iu.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou, Hsüan-p'ing, Ching-ning, T'ai-shun, Taichow, Yü-yao and Shang-yü.

— Hupeh (now Hubei province) in central *China* at Wuchang, Hanyang and Huang-kang.

— During the period between 5 September and 4 October, floods struck Yunnan province in southwest *China* at Shun-ning.

In 1518 during the period between 8 August and 8 November, a severe drought engulfed Hunan province in south-central *China* at Yüan-ling.<sup>153</sup>

In 1518 during the autumn, there was a great drought in Hupeh province in *China*.<sup>165</sup>

In 1518, six prefectures [in the vicinity of Shanghai, *China*] suffered from a flood.<sup>166</sup>

---

**1519 A.D.** In 1519, an Atlantic hurricane struck near *Jamaica* causing a loss of life. Eighteen men from a caravel survived the hurricane.<sup>141</sup>

In 1519, several regions of *China* experienced flooding including:<sup>153</sup>

— Shensi (now Shaanxi province) in central *China* at Mien.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Hu-chou, Yü-yao and Hsiao-shan.

— During the period between 27 June and 25 July, floods struck Hunan province in south-central *China* at An-jên. Fields were damaged by the floodwaters and 89 people drowned.

In 1519 during the 8<sup>th</sup> moon, there was a great flood at Shanghai, *China* and nine dragons fighting at sea. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

In 1519, there was a great drought over five fus [prefectures] in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1520 A.D.** In *England*, on 18 June, there was a most terrible storm of wind and weather.<sup>72</sup>

In 1520, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü and Szechwan (now Sichuan province) in southwest *China* at Chiang-ching. During the period between 17 April and 16 May, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ing-yüan. During the period between 6 May and 8 August, floods struck Hupeh (now Hubei province) in central *China* at Wuchang.<sup>153</sup>

In 1520, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Yü-hang. This drought led to a famine.<sup>153</sup>

In 1520, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

In 1520 during the 8<sup>th</sup> moon in the vicinity of Shanghai, *China*, a great wind and rain destroyed the crops and led to a dearth.<sup>166</sup>

**1521 A.D.** In Holland [now *the Netherlands*] on the 1<sup>st</sup> of November, there was “a dire inundation of the sea, and 100,000 drowned.”<sup>47, 72, 92</sup>

In 1521, there was an inundation in Holland [now *the Netherlands*].<sup>43</sup>

In 1521, there was a great dearth and mortality in *England*. There was a great inundation of the sea, which drove back the rivers so that they overflowed their banks. This overwhelmed 72 villages and drowned over 100,000 people and very many cattle.<sup>72</sup>

In *England* in 1521, there was famine and mortality.<sup>72, 91</sup> “Wheat sold in London for 20s. a Quarter [quarter ton].<sup>57</sup>

In *India*, there was a very general famine in Sind [Sindh, now southeastern *Pakistan*].<sup>57</sup>

In 1521 A.D., there was a famine in Sindh [now a province in *Pakistan*].<sup>179</sup>

In 1521, there was a famine in the Bombay Presidency in *India*.<sup>156</sup>

In 1521 during the autumn and winter, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

**Winter of 1521 / 1522 A.D.** During the period between 29 December 1521 and 27 January 1522, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.<sup>153</sup>

**1522 A.D.** The winter was severe [in *Europe*].<sup>62</sup>

In *France*, there was a great flood at Vivarais.<sup>61</sup>

In *France* in 1522, they began the harvest at Dijon on 5 September.<sup>62</sup>

In *Ireland* in 1522, there was a great famine.<sup>57, 91</sup>

In 1522 at Limerick, *Ireland*, Many thousands perished from the plague.<sup>212</sup>

In 1522 during the period between 26 April and 24 May, a severe drought engulfed several regions of *China*.<sup>153</sup>

[In 1522], at the beginning of the reign of Emperor Shi-Tsong, the famine and poverty was raging in *China*. Many parents in order to survive forced their daughters into prostitution. Two young maids, to avoid the disgrace, drowned themselves. The emperor erected a fine monument for them giving them the title of “*The two illustrious virgins*”.<sup>186</sup>

In 1522, there was a drought in *China*.<sup>165</sup>

In 1522, several regions of *China* experienced flooding including:<sup>153</sup>  
— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Hu-chou, Chu-chi and Lung-ch’üan.

- Kiangsi (now Jiangxi province) in southern *China* at Yang-shuo. Many people drowned.
- During the period between 25 May and 23 June, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ch'üan. Fields were damaged by the floodwaters. During the same time, floods struck Kiangsi province. This resulted in a famine.
- During the period between 6 May and 8 August, floods struck Hunan province in south-central *China* at Hêng-yang and Changsha.
- During the period between 23 July and 20 August, a typhoon and storm struck *China*. Houses were damaged and people and cattle drowned. During this period of time, floods caused by heavy and protracted rains struck Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking. Several hundred families were flooded. Also during this time, floods struck Kwangsi province at Ts'ang-wu. Over 10,000 houses flooded.

**1523 A.D.** The heat during the month of August in 1523 in *Italy* was excessive. The harvest began in Dijon, *France* on 26 August.<sup>62</sup>

[In *England*], rainy summer and harvest then frost.<sup>72</sup>

In *England* in 1523, there was a severe famine.<sup>57, 91</sup>

In 1523, an Atlantic hurricane struck off the west coast of Florida in the *United States*. Two ships and their crews were lost.<sup>141</sup>

In *Turkey* from 1523-26, the rivers were greatly swollen, and pestilential diseases were prevalent.<sup>47, 92</sup>

In 1523, a drought engulfed many regions of *China* including:<sup>153</sup>

- Hupeh (now Hubei province) in central *China* at Wuchang. This drought was severe.
- During the period between 6 May and 8 August, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*.
- During the period between 13 June and 12 July, a severe drought engulfed several regions of *China*.
- During the period between 8 August and 8 November, a drought engulfed Yunnan province in southwest *China* at T'êng-ch'ung.
- During the period between 9 October and 6 November, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsinan; Honan (now Henan province) in central *China* at Loyang; Hupeh province at Wuchang and Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang.

In 1523 during the summer, there was a great drought in Chihli, Honan, Hunan, Hupeh, Kiangsi, Kwangsi, Shantung and Yünnan provinces in *China*.<sup>165</sup>

In 1523, floods struck Hunan province in south-central *China* at Yüeh-yang. During the period between 9 September and 7 October, floods struck Honan (now Henan province) in central *China* at Loyang. During the period between 8 November 1523 and 5 February 1524, floods struck Hunan province at Hêng-yang.<sup>153</sup>

In 1523, there was a great drought in the vicinity of Shanghai, *China*.<sup>166</sup>

In 1523 during the 6<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a storm with great rain, hail and lightning. Again during the 7<sup>th</sup> moon, there was another destructive storm of wind and rain. Then during the 8<sup>th</sup> moon, there were floods over four fus [prefectures].<sup>166</sup>

**Winter of 1523 / 1524 A.D.** In the year 1523 in *England*, the frost was “most severe”.<sup>47, 72, 93</sup>

In the year 1523 in *France*, the winter produced very severe winter storms.<sup>61</sup>

During the winter of 1523-24, the cold was felt in the autumn. [In *France*], the winter was severe and the snow began to fall on 2 November. Due to the cold; the corn and vegetables froze in the fields. The lack of food continued until the next year's crops. By mid-August 1524, wheat and rye were still blooming and the other cereals were just as advanced. This made the food throughout 1524 very dear." In *England* this winter began with heavy rain and strong winds and then a frost; so many people died from the cold, while others lost their toes.<sup>62</sup>

In *England* after long and great rains and winds, which had happened that season, followed so severe a frost that many died of the cold. Some lost toes or fingers, and many lost their nails.<sup>72</sup>

**1524 A.D.** In Naples, *Italy*, there was a terrible inundation.<sup>47, 72, 92</sup>

In 1524, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ch'êng, Shao-hsing, and Shang-yü; and Yunnan province in southwest *China* at Yüan-chiang and Yüan-mou. Then during the period between 8 August and 8 November, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hui-yang. Houses, fields and crops were damaged by the floodwaters and many people drowned.<sup>153</sup>

In 1524, there was a great drought in Chêhkiang and Yünnan provinces in *China*.<sup>165</sup>

**1525 A.D.** In 1525, there was pestilence in *Ireland*.<sup>212</sup>

Near the end of October 1525, a hurricane struck western *Cuba* causing approximately 72 deaths.<sup>141</sup>

In 1525, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. During the period between 17 September and 15 October, the Yellow River flooded.<sup>153</sup>

**1526 A.D.** In *England*, there was so great a death in London, that the terms were adjourned.<sup>72</sup>

In June 1526, an Atlantic hurricane struck North Carolina in the *United States*. A Spanish brigantine was lost off Wilmington, North Carolina.<sup>141</sup>

In October 1526, a violent hurricane did great damage at Española [Hispaniola now the island of the *Dominican Republic* and *Haiti*]. The rivers overflowed their banks. No such storm had been seen in that island of many years.<sup>145</sup>

In 1526, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü, Wên-chou, Taichow, Chu-chi, Hsin-ch'ang, Chin-yün and Sung-yang; and 13 districts of Kiangsi (now Jiangxi province) in southern *China*. During the period between 6 May and 8 August, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China* at Foochow.<sup>153</sup>

In 1526 during the summer, there was a great drought in Chêhkiang, Fuhkien and Kiangsi provinces in *China*.<sup>165</sup>

In 1526, several regions of *China* experienced flooding including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow.
- Shantung (now Shandong province) on the east coast of *China* at Tzū-yang and Chi-ning.
- The Han River in Hupeh (now Hubei province) in central *China*.
- Shansi (now Shanxi province) in northern *China* at Wan-ch'üan.

- During the period between 13 March and 11 April, floods struck Kiangsi (now Jiangxi province) in southern *China* at Jung. [Jung is located at longitude 110.34° East and latitude 22.54° North.]
- During the period between 8 August and 6 September, floods struck Kiangsu province at Fêng, P'ei and Suchow. [P'ei is located at longitude 117.00° East and latitude 34.47° North.]
- During the period between 8 August and 6 September, floods struck Shantung province at Hui-min. Crops were damaged by the floodwaters.

[In 1526, a meteor falls at Yung-chun in Fuhkien (now Fujian province) on the southeast coast of *China*, where it exploded and killed a number of people.]<sup>165</sup>

**1527 A.D.** In *England*, there was a great flood.<sup>47, 72, 92</sup>

In *England*, during the 18<sup>th</sup> year of Henry VIII, “In November [1526], December, and January [1527] fell such abundance of reine that thereof ensued great flouds, which destroyed corne-fields, pastures and beasts. Then was it drie until the 12<sup>th</sup> April; and from that time, it rained every day and night, till the 3<sup>rd</sup> June: whereby corne failed sore in the yeare falling.”<sup>47</sup>

In 1527 in *England* from 1 November [1526] to 1 February [1527], there were continual rains; fearful floods; terrible destruction of corn [grain], cattle, and pastures. Then there was a drought to 12 April. Then daily rains till 3 June. Hence there was a scarcity of corn [grain] in *England* and a dearth.<sup>72</sup>

In *England* in 1527 during the 19<sup>th</sup> year of King Henry VIII reign – “Such scarcitie of bread was at London and throughout *England* that many dyed for want thereof. The King sent to the citie, of his owne provision, 600 quarters; the bread carts then coming from Stratford [where nearly all the bakings were probably on account proximity to Epping Forest] towards London, were met at the Mile End by a great number of citizens so that the maior and sheriffs were forced to goe and rescue the same, and see them brought to the market appointed, wheat being then at 15s. the quarter [quarter ton]. But shortly after the merchants of the Stiliard [steelyard] brought from Danske [Danzig] such store of wheat and rye, that it was better cheape at London than in any other part of the Realme.”<sup>57</sup> [The merchants of the steelyard were a famous guild of foreign merchants in England, connected with the Hanseatic League.]

In October 1527, a hurricane struck *Cuba* causing between 60 and 70 deaths.<sup>141</sup>

On November 1527, a hurricane struck the upper coast of Texas in the *United States*. [Various accounts give differing fatality figures of 200, 191 and 162. The causalities were caused by the loss of the Spanish fleet.]<sup>141</sup>

In Rome, *Italy* on the 2<sup>nd</sup> of December, there was a great hailstorm.<sup>57, 72, 93</sup>

In 1527, several regions of *China* experienced flooding including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Hsiao-shan and Yü-yao. Crops were damaged by the floodwaters.
- Kiangsi (now Jiangxi province) in southern *China* at Kao-an and Ch'ing-chiang.
- During the period between 30 May and 27 June, floods struck Yunnan province in southwest *China* at Shuang-pai.
- During the period between 8 August and 8 November, floods struck Yunnan province at Ching-tung. Fields and houses were damaged by the floodwaters.

In 1527, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui.<sup>153</sup>

In 1527, there was a great drought in Chêhkiang province in *China*.<sup>165</sup>

---

**1528 A.D.** In *England*, the last winter was wholly rainy and southerly. The spring was the same with very great and destructive inundations. There was a great famine in Venice, *Italy*.<sup>72</sup>

In 1528 at Nottingham, *England*, it rained almost incessantly in deluges during the spring. This prevented the corn [grain] from being sown. As a result there was an extensive crop failure during harvest. Grain was imported largely from *Germany*.<sup>212</sup>

In *England*, there was a drought from the 1<sup>st</sup> February to 12<sup>th</sup> April, and all July and August.<sup>47, 72</sup>

[In *England*], it rained from 12 April to 3 June. Then drought to September.<sup>72</sup>

In 1528 and 1529, “sweating sickness” again plagued *England*.<sup>212</sup>

In 1528 in Paris, *France*, the frost destroyed the wheat and vegetables.<sup>79</sup>

In Augsburg in Bavaria in southwestern *Germany* on 19<sup>th</sup> July, there was a great hailstorm.<sup>57, 72, 93</sup>

In Venice, *Italy* in 1528, there was a famine.<sup>57, 72, 91</sup>

In 1528, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Mien-yang, Hanyang, Pao-k’ang and Hsiang-yang. During the period between 6 May and 16 June, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsinan; Honan (now Henan province) in central *China* at Loyang; Shansi (now Shanxi province) in northern *China* at Taiyuan; and Shensi (now Shaanxi province) in central *China* at Sian. During the period between 6 May and 8 November, a severe drought engulfed Szechwan (now Sichuan province) in southwest *China*.<sup>153</sup>

In 1528 during the summer, there was a great drought in Chihli, Honan, Hunan, Hupeh, Shansi, Shantung, Shensi and Sze-ch’wan provinces in *China*. The resulting famine was so severe that it led to cannibalism in Hupeh and Shensi.<sup>165</sup>

In 1528, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui and Yunnan province in southwest *China* at Lu-fêng. During the period between 18 May and 16 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yang-chiang. During the period between 16 July and 14 August, floods struck Shansi (now Shanxi province) in northern *China* at Yang-kao.<sup>153</sup>

---

**1529 A.D.** In northwestern *Switzerland* on June 13 or 14, there was a great flood of the Rhine River at Basle [Basel]. In *England* on October 2, there was a great flood of the River Thames.<sup>47, 72, 92</sup>

In the year 1529, the winter was one of the most extraordinary that one has ever seen. Not only because there was no frost, but also because in the month of March the weather was as warm as during the Feast of Saint John [24 June]. As a result the greater part of the rye in ears matured and was sold in Paris, *France* even before the new almonds of April. But the weather changed, and on 4 April a very strong cold struck. For a while it was feared that all the fruits of the country would be lost. Fortunately, rains soon came and beat back the effects of the frost so the harvest sustained no damage.<sup>62</sup>

The winter of 1529 had no frost, and heat of March was equalled the temperatures normally observed at the end of June. In March, most of the rye had ears and in Paris, *France* new almonds were sold before

the month of April. But on April 4<sup>th</sup>, there came a very severe frost. So severe it was thought that all the crops were lost. Fortunately the rain came and knocked away the effects of the cold.<sup>79</sup>

The year 1529 in southern *France* was humid and rain.<sup>79</sup>

In 1528 and 1529, “sweating sickness” again plagued *England*.<sup>212</sup>

In 1529, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Wên-chou, Chu-chi, Ch’ü, Hsin-ch’ang, Chin-yün, Sui-ch’ang, Hsüan-p’ing and Hangchow.

— Kiangsi (now Jiangxi province) in southern *China* at P’o-yang and Shang-jao.

— Yunnan province in southwest *China* at Ch’êng-chiang. Houses and crops were damaged by the floodwaters.

— Kweichow (now Guizhou province) in southwestern *China* at P’ing-chou.<sup>153</sup>

In 1529, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. During the period between 10 March and 7 April, a drought engulfed several regions of *China*.<sup>153</sup>

In 1529 during the spring, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

**1530 A.D.** In *France*, the heat was extraordinary during the summer.<sup>61</sup>

On 31 August 1530, an Atlantic hurricane struck *Puerto Rico*. Uncounted number of deaths by drowning occurred.<sup>141</sup>

In 1530, the inhabitants of San Juan [*Puerto Rico* was often called San Juan] were in great distress. The storms which had followed the hurricanes had made the rivers overflow their banks, and crops, trees, and herds had been washed away; so that the works at the gold mines, and other undertakings, were suspended.<sup>145</sup>

A great sea flood (St. Felix's Flood) occurred on November 4 in Holland [now *the Netherlands*]. 400,000 people drowned.<sup>28</sup>

In Holland [now *the Netherlands*], there was a great flood in November.<sup>72, 92</sup>

In 1530, there was a general inundation by the failure of the dikes in Holland [now *the Netherlands*]; the number of drowned said to have been 400,000.<sup>90</sup>

In November 1530, a flood from the sea ravaged Calais (*France*), Antwerp (*Belgium*), Cluse, Gravesend (*England*), Mardyck (*France*), Dunkirk (*France*), Newport (Newport, *England*) and almost all the Zealand (*Denmark*).<sup>79</sup>

In *England*, on November 4<sup>th</sup> and 5<sup>th</sup> there was great wind, which blew down houses and trees, then a high tide, which drowned the marshes of Essex, Kent and Thanet, and drowned much cattle.<sup>72</sup>

In *England*, there was a great flood all the year. In Rome, *Italy* on 8 October, there was a great flood.<sup>47, 72, 92</sup>

The fate of Rome, *Italy* caused by the Tiber River overflowing its banks in 1530 was compared to the carnage cause the inundation of the sea in 1521 that killed 100,000 people.<sup>72</sup>

In 1530, several regions of *China* experienced flooding including: <sup>153</sup>

— During the period between 29 January and 27 February, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu. One hundred families were flooded.

— During the period between 25 June and 23 July, floods struck Shantung (now Shandong province) on the east coast of *China* at Ts'ao.

— During the period between 24 July and 22 August, floods struck Shantung province at Hui-min.

— During the period between 23 August and 20 September, floods struck Hupeh (now Hubei province) in central *China* at Huang-kang.

— During the period between 21 September and 20 October, floods struck Yunnan province in southwest *China*.

**1531 A.D.** In *England* on the 16<sup>th</sup> of December, there was a great hailstorm. <sup>57, 72, 93</sup>

In Lyon, *France* there was drought and famine – 8,000 poor foreigners, besides those of the city, were rescued from May 19 to July 9 because of the unbearable heat that prevented any work. <sup>61</sup>

For the preceding two or three years the weather in *England* has been wholly moist, rainy and southerly. And as a result in 1531 pestilence set in. <sup>72</sup>

In 1531, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao. <sup>153</sup>

In 1531, there was a great drought in the vicinity of Shanghai, *China*, which included Suchau. <sup>166</sup>

**1532 A.D.** In Holland [now *the Netherlands*], there were great floods. <sup>47, 72, 92</sup>

In 1532, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. During the period between 6 May and 8 August, floods struck Shensi (now Shaanxi province) in central *China* at Nan-ch'êng. Fields and houses were damaged by the floodwaters. During the same time period, floods also struck Hupeh (now Hubei province) in central *China* at Chiang-ling and Hunan province in south-central *China* at Yüeh-yang and Yüan-ling. <sup>153</sup>

In 1532, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên and Kansu (now Gansu province) in northwest *China* at Ch'ing-yang. During the period between 3 June and 2 July, a drought engulfed Hupeh (now Hubei province) in central *China* at Chiang-ling. <sup>153</sup>

In 1532 during the spring and summer, there was a great drought in Hupeh, Shansi and Shensi provinces in *China*. <sup>165</sup>

**1533 A.D.** In 1533, several Atlantic hurricanes struck *Puerto Rico*. “So many slaves were killed in the destruction of the twenty-sixth of July, August 23 and August 31”. <sup>141</sup>

In 1533 during the time period between 24 April and 23 May, floods struck Kiangsi (now Jiangxi province) in southern *China*. During the period between 8 August and 8 November, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Hsüan-i [uncertain name]. <sup>153</sup>

In 1533, a severe drought engulfed Shensi (now Shaanxi province) in central *China*; Kansu (now Gansu province) in northwest *China*; and *Mongolia*. During the same year, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Chi-an and Shansi (now Shanxi province) in northern *China* at

I-ch'êng and I-shih. During the period between 24 February and 25 March, a drought engulfed many regions of *China*.<sup>153</sup>

In 1533 during the spring, there was a drought in Shansi province in *China*. At Moukden, this was a great drought.<sup>165</sup>

**1534 A.D.** In *Poland*, there were extensive floods.<sup>47, 72, 92</sup>

In 1534, there was a great flood in *Poland*. The flood began on 26 April. The winter produced very heavy snowfalls. In the spring, this was followed by heavy rainstorms that lasted for days, continuously day and night. On 8 May and three days after, heavy rain began falling in Poland and it seemed like there was so much water that it would cover the earth to the mountains. So the greatest flood in Polish history began. The oldest inhabitants could not remember such a flood. Fields, lakes, gardens, houses and forests were all underwater. In Kraków, Poland, the water moved entire houses to the riverbanks. The great bridge between Kraków and Kazimierz was damaged and broken into three sections and then finally taken away by the waves to the suburb Grzegotki. The waters of the Vistula River finally began to recede and the river was back in its banks on 22 July. In the city of Kazimierz, the water destroyed several houses between the Monastery of Saint Catherine and Skalka. The Dunajec River near the cities Nowy Targ and Sandomierz destroyed all the stonewalls, churches and windmills. In the Village of Szramowice, the water destroyed the church and seven houses. In village of Trzemeśny, a church and many small lakes were destroyed. On 29 June, the San River flooded causing great destruction. Some villages were completely destroyed along with all their cattle, wheat, hay, windmills and wooden houses. On 15 August and the week after, rain again fell in Poland. By 24 August, the flooding was so great that the Vistula River again left its banks.<sup>64</sup> [Kazimierz was a historical district of Kraków. Nowy Targ is located in southern Poland. Sandomierz is located in southeastern Poland. Szramowice is now Sromowce Niżne and is located in southern Poland. Trzemeśny is now Trzemeśnia and is located in southern Poland]

In 1534, there was a great frost in *England*. It lasted from November through February. The River Thames was frozen for some miles below Gravesend. Goods were carried by land across Kent and Essex to London.<sup>212</sup>

In 1534, several regions of *China* experienced flooding including:<sup>153</sup>

— The Yellow River at Shansi (now Shanxi province) in northern *China*. People and cattle drowned and the fields were damaged by the floodwaters.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Hu-chou, Fêng-hua, Chu-chi, Hsin-ch'ang and Ch'un-an.

— Kweichow (now Guizhou province) in southwestern *China* at Huang-p'ing.

— During the period between 12 June and 10 July, floods struck Kansu (now Gansu province) in northwest *China* at Ch'ing-yang and Ning; Shansi province at Fên-yang; and Shensi (now Shaanxi province) in central *China* at Ching-yang. Innumerable people and cattle drowned.

In 1534, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Wuchang.<sup>153</sup>

In 1534, there was a great drought in Hupeh province in *China*.<sup>165</sup>

**1535 A.D.** In Zurich in central *Switzerland* on the 15<sup>th</sup> of July, there was a great hailstorm.<sup>57, 72, 93</sup>

In 1535, it never stopped raining for two months in *France*.<sup>79</sup>

In 1535 during the period 1-29 June, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Nan-p'ing. During the same time period, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Wu-ming and Ts'ang-wu. At Wu-ming, people drowned. At Ts'ang-wu, 1,000 houses flooded and fields damaged.<sup>153</sup>

In 1535, a drought prevailed along the Sui River in Honan (now Henan province) in central *China*; Anhwei (now Anhui province) in eastern *China*; and Kiangsu (now Jiangsu province) on the east coast of *China*. During the same year, a severe drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Ch'ing-chiang; Honan province and Anhwei province.<sup>153</sup>

In 1535, there was a great drought in Anhwei, Hupeh, Kiangsi and Kiangsu provinces in *China*. The rivers dried up.<sup>165</sup>

**1536 A.D.** The year 1536 produced many storms and tempests. Twenty-four ships were destroyed by one of these hurricanes on the coast of Provence, *France*.<sup>79</sup>

The summer drought of 1536 dried up all sources [of water – springs, creeks, small rivers and lakes] in Provence, *France*.<sup>79</sup>

[Due to the warm summer], the harvest began in Dijon, *France* [early] on 8 September.<sup>62</sup>

In 1536, several regions of *China* experienced flooding including:<sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow. Over 29,000 people drowned.

— Hunan province in south-central *China* at Shih-mên.

— During the period between 18 June and 17 July, floods struck Shansi (now Shanxi province) in northern *China* at Lin-chin. Fields were damaged by the floodwaters and people and cattle drowned.

In 1536, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Ch'ing-chiang and Fukien (now Fujian province) on the southeast coast of *China*. This drought led to a famine. During the same year, a severe drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton, Kao-yao, Nan-hsiung and Ch'ü-chiang.<sup>153</sup>

In 1536, there was a drought in Fuhkien and Kwangtung provinces in *China*. In Kwangtung, this was a great drought.<sup>165</sup>

**1537 A.D.** In 1537, an Atlantic hurricane struck *Puerto Rico* and many slaves were drowned.<sup>141</sup>

In 1537, a hurricane struck northwest *Cuba* and 2 ships were lost.<sup>141</sup>

In 1537, several regions of *China* experienced flooding including:<sup>153</sup>

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hai-fêng. Thousands drowned.

— During the period between 9 May and 7 June, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh and Ch'üan. At P'ing-yüeh, houses and fields were damaged by the floodwaters. At Ch'üan, the city walls and crops were damaged.

— During the period between 8 June and 6 July, floods struck Kwangtung province at Kao-yao and Kwangsi province at Kung-ch'êng. At Kung-ch'êng, crops were damaged by the floodwaters.

— During the period between 6 May and 8 August, floods struck Hupeh (now Hubei province) in central *China* at Yang-hsin and Kwangsi province at Ts'ang-wu. At Ts'ang-wu, all the houses were flooded. During the same time period, floods struck Liaoning province located in the southern part of *China*'s

northeast at K'ai-yüan and Hsing-ch'êng. Houses and crops were damaged by the floodwaters and people and cattle drowned.

In 1537, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*. This drought led to a famine.<sup>153</sup>

In 1537, there was a drought in Fuhkien province in *China*.<sup>165</sup>

**Winter of 1537 / 1538 A.D.** In Rome, *Italy* on the 12<sup>th</sup> of December 1537, there was a great hailstorm.<sup>57, 72, 93</sup>

In 1537 in *England*, the frost was very severe during December and January.<sup>47, 72, 93</sup>

In 1538 in *England*, the River Thames froze.<sup>62</sup>

During the winter of 1537-38, in *England* in December and January there was severe cold, and the River Thames froze.<sup>62</sup>

In 1537 in *England*, the summer was exceeding rainy. In December and January a great frost. The River Thames was frozen over.<sup>72</sup>

**1538 A.D.** The summer of 1538 was scorching hot in *Italy*. The rivers dried up, and the air was filled with fiery meteors, so people felt earthquakes. In the Kingdom of Naples, *Italy*, the [Tyrrhenian Sea] floor in a region of about eight miles (13 kilometers) was drained. In Dijon, *France*, the grape harvest took place on 20 September.<sup>62</sup>

In 1538, the sea by the Kingdom of Naples [the southern part of the *Italian* peninsula], was dry for eight miles together.<sup>72</sup>

In 1538 and 1539, there was a drought [in *England*]. It was excessively hot and the rivers dried up in the summer.<sup>212</sup>

In 1538, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Hanyang. During the period 6-27 May, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China*; Shensi (now Shaanxi province) in central *China* at Sian; Fukien (now Fujian province) on the southeast coast of *China* at Foochow; and Hupeh (now Hubei province) in central *China* at Wuchang.<sup>153</sup>

In 1538 during the summer, there was a great drought in Chihli, Fuhkien, Hupeh, Shantung and Shensi provinces in *China*.<sup>165</sup>

In 1538 during the period between 26 June and 25 July, floods struck Kiangsi (now Jiangxi province) in southern *China* and Hupeh (now Hubei province) in central *China* at Lo-t'ien. At Lo-t'ien, people drowned. During the period between 8 August and 8 November, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Wu-ming. Houses were flooded.<sup>153</sup>

**1539 A.D.** [In *Europe*], In December and January, it was so warm that the gardens were covered with flowers.<sup>62</sup>

In 1538 and 1539, there was a drought [in *England*]. It was excessively hot and the rivers dried up in the summer.<sup>212</sup>

In 1539, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü, Chien-tê, Shao-hsing and Chin-hua. During the period between 18 May and 15 June, floods struck Kweichow (now Guizhou province) in southwestern *China* at Szü-nan. Then during the period between 16 June and 14 July, a drought engulfed Chekiang province Hangchow. During the period between 15 July and 13 August, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Hsiang-yang and Ku-ch'êng.<sup>153</sup>

In 1539 during the spring, summer and autumn, there was a great drought in Chêhkiang and Hupeh provinces in *China*. The wells and rivers dried up.<sup>165</sup>

---

**1540 A.D.** [In *England*] on March 2, there was a tempest.<sup>72</sup>

In *England*, there was great heat and drought.<sup>47, 72</sup>

In 1540, there was a drought [in *England*]. After a calamitous year, there was an exceedingly early spring, which produced fine weather. The heat lasted from February through 19 September. During this time it rained only 6 times.<sup>212</sup>

In 1540, there was an early harvest [in *England*]. Cherries were ripe by the end of May. Grapes were ripe in July. The middle of the harvest was on 25 June. This year was remarkable for the abundance of corn [grain] and fruit.<sup>212</sup>

In *England* in the summer of 1540, there was an excessive drought. Wells, brooks and rivers were dried up. The River Thames was so low that the salt water flowed above London Bridge. During the end of summer there came a great mortality over the whole Nation because of an epidemic of pestilential ague and blood flux. But in other places, it was the hottest and healthiest year in the memory of man.<sup>72</sup>

[In *Europe*] in 1540, the summer was much hotter and drier than in a large number of preceding years. In *England*, the drought was also excessive, and the wells, springs, rivers were dried up. The River Thames was so dry that the salty seawater moved upstream above the bridge at London. The drought in summer in *Germany* was so great that they suffered from a lack of the necessaries of life [food, drink]. In *Belgium*, the grain and grape harvest was over at the beginning of August. But in Dijon, *France* the grape harvest did not occur until 4 October. The price of corn [grain] in *France* went down to half. In *Italy*, after a drought of five months, a deadly heat wave occurred and the forests erupted in flames. The glaciers of the Alps melted.<sup>62</sup>

The summer of 1540 was unusually hot in *France*.<sup>79</sup>

In 1540 A.D., the summer in *France* produced fine weather and heat that lasted from the month of February to the 19<sup>th</sup> of September. During all this period, it rained all but 6 times. At the end of May ripe cherries were eaten, and grapes in July; the 25<sup>th</sup> of June was the midst of [grain] harvests; and at the beginning of September, the vintage was at its height.<sup>175</sup>

In 1540, the island of *Sardinia* [in the Mediterranean Sea off the west-central coast of Italy] was desolated by a famine.<sup>57, 91</sup>

From 1540 to 1543, there was a general famine in the Sind [now *Pakistan*].<sup>57</sup>

In 1540, there was a famine in the Bombay Presidency in *India*.<sup>156</sup>

In 1540, several regions of *China* experienced flooding including:<sup>153</sup>

— During the period between 6 May and 4 June, floods due to heavy and protracted rains struck Hunan province in south-central *China* at Ching. During the same period of time, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ma-p'ing and Hupeh (now Hubei province) in central *China* at Huang-p'o.

— During the period between 4 July and 1 August, floods struck Szechwan (now Sichuan province) in southwest *China* at P'êng, Ch'ung-ning, Hsin-fan, K'ai-chiang and Chin-t'ang. Innumerable houses damaged by the floodwaters. Innumerable people and cattle drowned.

— During the period 1-29 September, floods struck Shansi (now Shanxi province) in northern *China* at Lin. Houses and city walls were damaged by the floodwaters.

In 1540, a drought engulfed Kweichow (now Guizhou province) in southwestern *China* at Shih-ch'ien. During the period between 6 May 1540 and 5 February 1541, a drought engulfed many regions of *China*.<sup>153</sup>

In 1540 during the summer and winter, there was a drought in Hupeh and Kweichow provinces in *China*.<sup>165</sup>

In 1540 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a roaring of the sea; a northeast wind; several myriads [a very great number] were drowned; it was a year of dearth; men and crops perished.<sup>166</sup>

**1541 A.D.** In *France*, it was extraordinarily hot.<sup>61</sup>

In 1541, there was a remarkable drought in *England*. At Nottingham, almost all the small rivers dried up, and the River Trent was diminished to a staggering brook. The River Thames was so low that seawater, even at ebb, extended beyond London Bridge. Many cattle died for want of water, especially at Nottinghamshire, and many thousands of people died from grievous diarrhea and dysentery.<sup>212</sup>

In Abassine on 4 and 12 April, there was a tempest of thunder, hail and north wind.<sup>72</sup>

In 1541, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. Innumerable people drowned. In the same year, a drought engulfed Kweichow (now Guizhou province) in southwestern *China* at Shih-ch'ien and Hopei (now Hebei province) in northern *China* at Peiping. At Peiping, the drought was accompanied by a plague of locusts. During the period between 26 April and 24 May, a drought engulfed Hupeh (now Hubei province) in central *China* at An-lu.<sup>153</sup>

In 1541, there was a drought in Chihli and Kweichow provinces in *China*. At Chihli, the drought was accompanied by a plague of locusts.<sup>165</sup>

In 1541 during the 6<sup>th</sup> moon, freshet [floods] drowned several tens of thousands of people in the vicinity of Shanghai, *China*. During the 7<sup>th</sup> moon, in five prefectures the sea overflowed.<sup>166</sup>

**1542 A.D.** In northern *Italy*, many harvests were done at Padua in May [very early because of the warm weather].<sup>62</sup>

On 14 June 1542, there was a terrible tempest at Buda [Budapest, *Hungary*].<sup>72</sup>

In 1542, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. During the same year, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Lo-yüan and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ên-ch'i. During the period between 15 May and 12 June, floods struck Kiangsi (now Jiangxi

province) in southern *China* at Chi-an. The city walls and 50% of the houses were damaged by the floodwaters.<sup>153</sup>

In 1542, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

---

**1543 A.D.** A great flood occurred on the Mississippi River in the *United States* on April 20. The river was 40 leagues (120 miles) wide.<sup>28</sup>

[In *England*], there was a famine.<sup>72</sup>

Explorer Hernando Desoto encountered a flood on the river near Memphis, Tennessee that extended over 40 days and likely extended to the lower reaches of the river. Chronicled by Garcilaso de la Vega.<sup>31</sup>

In *France* on September 6, there was a great flood, greater than any known in the memory of man (except for the Great Flood of Noah). The flood affected towns, cities and countryside and did incalculable damage to Vivarais and Dauphine.<sup>61</sup> [Vivarais now called Ardèche is a department in south-central *France*. Dauphine was a former province in southeastern *France*.]

In 1543, floods struck Shansi (now Shanxi province) in northern *China* at Hsiang-ling. During the period between 4 April and 3 May, floods struck Hunan province in south-central *China* at Lei-yang. During the period between 6 May and 5 August, a drought engulfed Hunan province at Ch'ên. During the period between 8 August and 8 November, floods struck Yunnan province in southwest *China* at T'êng-ch'ung.<sup>153</sup>

In 1543 during the summer and autumn, there was a drought in Hunan and Kwangtung provinces in *China*. In Kwangtung, this was a great drought.<sup>165</sup>

---

**Winter of 1543 / 1544 A.D.** During the winter of 1543-44 in *France*, the cold froze the hogsheads of wine. It had to be cut with an axe.<sup>79</sup> [A hogsheads is a large barrels/casks that hold liquid measures, usually alcoholic, approximately 239 litres (63 gallons).]

In *France*, the weather was so cold that the Provence wines ordained for the Army were frozen and cut with hatchets and carried away by the soldiers in baskets. In *England*, wood, flesh [meat], and fish were very dear this winter. This is because the last summer was intemperate and rainy causing a great death of cattle. This winter the plague was in London, and the Terms were adjourned. A most rigorous frosty winter.<sup>72</sup>

Due to the extreme cold, the wine in barrels in *France* was reduced to ice, and had to be cut with an axe.<sup>38, 60</sup>

In 1544, it was so cold in Paris, *France*, that wine froze, and it was sold in pieces by the pound.<sup>58, 80</sup>

In 1544, the cold was so severe in Holland [now *the Netherlands*] that wine was cut in blocks and sold by weight.<sup>63</sup>

In 1544, "The cold was so extraordinary that the wine froze in the casks. It had to be smashed with axes and was sold in pieces by the pound."<sup>62</sup>

The winter of 1544 was remarkably severe all over *Europe*. In Flanders [now *Belgium*], wine froze in casks, and was sold in blocks by the pound weight.<sup>70</sup>

In *Flanders*, the wine in casks frozen into solid lumps.<sup>47, 90, 93</sup>

In *England*, there was a great frost.<sup>47, 72, 93</sup>

**1544 A.D.** In southern *France* in November, the Rhône River produced flood disasters affecting Avignon, Arles, and Tarascon.<sup>61</sup>

In 1544, the Rhône River in southern *France* overflowed its banks on November 11. The waters knocked down a quarter mile (390 meters) of ramparts [city walls] of Avignon [now part of southeastern *France*] and the floodwaters covered the plain for eight days.<sup>79</sup>

In 1544, there was a plague at Canterbury, *England*.<sup>212</sup>

In 1544, floods struck Ningsia (now Ningxia province) in northwest *China* on the Loess Plateau at Ling-wu; and Shansi (now Shanxi province) in northern *China* at Fên-yang and Hsiao-i. Houses and fields were damaged by the floodwaters. During the period between 20 July and 17 August, floods struck Shansi (now Shanxi province) in northern *China* at Li-ch'êng. Houses were damaged by the floodwaters and people and cattle drowned.<sup>153</sup>

In 1544, a drought engulfed many regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Shao-hsing, and Ch'ü. This drought was severe.

— Fukien (now Fujian province) on the southeast coast of *China*. This drought was severe and led to a famine.

— 13 districts of Kiangsi (now Jiangxi province) in southern *China*. This drought led to a famine.

— During the period between 21 May and 19 June, a severe drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsing-ning.

— During the period between 17 September and 15 October, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Hanyang, Mien-yang, Huang-kang and Huang-mei; and Hunan province in south-central *China* at Li and Shih-mên.

— During the period between 17 September and 15 October, a drought engulfed Hupeh at Chung-hsiang.

In 1544 during the summer and autumn, there was a great drought in Chêhkiang, Kiangsi and Hupeh provinces in *China*.<sup>165</sup>

**1545 A.D.** In *England*, a wonderful dearth and extreme prices.<sup>57, 91</sup>

On 20 August 1545, an Atlantic hurricane struck the *Dominican Republic* killing a large number of people.<sup>141</sup>

On 25 July 1545, a tempest and hurricane struck Derbyshire, *England*.<sup>72</sup>

In 1545, a vessel was wrecked by a “norther” in *Mexico*.<sup>141</sup>

In 1545, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Wuchang. The drought occurred with an earthquake. During the same year, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China*. This drought led to a famine. During the same year, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Taichow, Hu-chou, and Shao-hsing.<sup>153</sup>

In 1545, there was a great drought in Chêhkiang and Hupeh provinces in *China*. This led to a great

mortality in Fuhkien.<sup>165</sup>

In 1545 during the period between 5 February and 6 May, floods struck Kiangsi (now Jiangxi province) in southern *China* at Ch'ing-chiang. Crops were damaged by the floodwaters.<sup>153</sup>

In 1545, there was a great drought in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1546 A.D.** In Mechlin in north-central *Belgium* in August, there was a great hailstorm.<sup>57, 72</sup>

In Malines, Flanders [now *Belgium*] in August, there was a great hailstorm.<sup>93</sup>

In 1546 during the period between 8 August and 8 November, floods struck Yunnan province in southwest *China* at Ching-tung.<sup>153</sup>

In 1546, there was an even greater drought in the vicinity of Shanghai, *China*. Rice was very dear.<sup>166</sup>

---

**1547 A.D.** In 1547, there was an intense frost in *England*, especially London.<sup>212</sup>

In 1547, the city of Mechlin [Mechelen, *Belgium*] was destroyed by lightning, which fell among 800 barrels of gunpowder.<sup>295</sup>

On 12 August in Tuscany, *Italy*, there was a great flood.<sup>47, 72, 92</sup>

[Emperor Maximilian waged war against the Venetians in *Italy*. There was scarcity of corn [grain]. The weather was southerly and tempestuous. A great swarm of locusts ate all up and made the whole country barren. Then an infectious contagion seized man.<sup>72</sup>]

In 1547, a severe drought engulfed Hunan province in south-central *China* at Yüan-ling. Then during the period between 6 May and 8 August, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Kao-yao. During the period between 15 August and 13 September, floods struck Fukien (now Fujian province) on the southeast coast of *China*. Houses were damaged by the floodwaters. During the period between 8 August and 8 November, floods struck Hupeh (now Hubei province) in central *China* at Ku-ch'êng.<sup>153</sup>

In 1547, there was a great drought in Hupeh province in *China*.<sup>165</sup>

---

**1548 A.D.** In *Northern Europe*, oxen drawn sledges traveled on the frozen sea from Rostock, *Germany* to *Denmark*.<sup>47, 90, 93</sup>

In 1548, the winter was so severe that all the rivers in southern *France* froze. On 12, 13 and 14 November, the Rhône River floods again in Avignon and Arles.<sup>61</sup>

The cold reigned from 1548 throughout *Europe*.<sup>79</sup>

On 4 August, there was a great hailstorm at Louvain. There was another hailstorm on 5 September.<sup>72</sup>

In Louvain in central *Belgium* on the 5<sup>th</sup> of September, there was a great hailstorm.<sup>57, 72, 93</sup>

The ice on most rivers in *Europe* is thick enough to bear heavy-laden wagons.<sup>62</sup>

The winter of 1548 was very severe all over *France* and all the rivers were frozen so that they could carry the weight of the heaviest wagon on the ice.<sup>62</sup>

The year 1548 was very rainy and accompanied by great floods in *France*.<sup>79</sup>

[In *England*], it rained all summer.<sup>72</sup>

In 1548, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-yün and Hupeh (now Hubei province) in central *China* at Pao-k'ang. During the period between 5 July 1548 and 3 April 1549, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ch'üan. Houses and fields were damaged by the floodwaters.<sup>153</sup>

**1549 A.D.** In *England* on 13<sup>th</sup> of June, there was a flood from the severest rain.<sup>47, 72, 92</sup>

[There was a non-weather related famine in *England*. Because of the rebellion in *England*, the harvest was neglected. Hay and corn [grain] rotted on the ground unharvested, hence a dearth.<sup>72</sup>]

In 1549 in *England*, there was a famine from neglect of agriculture.<sup>72, 91</sup>

In 1549, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Hu-chou. During the period between 24 July and 22 August, floods struck Kansu (now Gansu province) in northwest *China* at Ch'ing-yang. At Ch'ing-yang, houses were damaged by the floodwaters and over 10,000 persons drowned.<sup>153</sup>

**1550 A.D.** On 18 December in *England*, "The Thames flowed thrice in nine hours."<sup>47, 72, 92</sup>

In 1550, there was a very great dearth in *England*. Wheat was sold for 16s. per bushel, which had sold at 10d. a little before. In *Scotland*, great rivers in the middle of winter were dry, and in the summer so greatly flooded which carried downriver and drowned several villages and many feeding cattle from their pastures into the sea. Several whales came up the River Forth. Many hailstorms with hailstones the size of pigeon eggs. The hailstones destroyed the corn [grain].<sup>72</sup>

In 1550, there was a general [universal] dearth.<sup>72</sup>

In 1550, "sweating sickness" again reappeared in *England*. At Chester and York, it was accompanied by so great a dearth that wheat was 15 shillings per bushel.<sup>212</sup>

In 1550, an Atlantic hurricane struck off the Florida Keys in the *United States*. A Spanish ship *Vitacion*, 200 ton, was lost during a hurricane near Havana, *Cuba*.<sup>141</sup>

In 1550, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. Then during the period between 11 September and 9 October, floods struck Yunnan province in southwest *China* at Pao-shan. Houses were damaged by the floodwaters and hundreds of people and cattle drowned.<sup>153</sup>

In 1550, there was a great drought in Chêhkiang province in *China*.<sup>165</sup>

**1551 A.D.** On 10 January and 20 February at Marpurg [or Marburg in central *Germany*], there were great floods.<sup>47, 72, 92</sup>

In 1551, floody as at Marpurg, February 20 and January 10.<sup>72</sup>

A great multitude of people and cattle were drowned by a terrible tempest. The clouds suddenly dissolving and the waters pouring down with such strange and stupendous violence, that the massive walls of many cities, divers [numerous] vineyards, and fair houses were totally destroyed and ruined.<sup>72</sup>

In 1551, "sweating sickness" again reappeared in *England*. It began at Shrewsbury in April, reaching Nottingham in July, and ending in the north in September.<sup>212</sup>

In 1551, there was a flood in *Wales*. "In the night a mighty great wind, and so high a flood that many cattle were drowned upon Saltney [a small town in Flintshire, *Wales*]"<sup>212</sup>

In 1551, an Atlantic hurricane struck in the *Gulf of Honduras*. A ship with many persons were all drowned.<sup>141</sup>

In 1551, a severe drought engulfed Hunan province in south-central *China* at Yüan-ling. In the same year, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui and Hupeh (now Hubei province) in central *China* at I-ch'êng and Kuang-hua. During the period 2-30 August, floods struck Hupeh province at Chün.<sup>153</sup>

In 1551, there was a drought in Hupeh province in *China*.<sup>165</sup>

**1552 A.D.** [During the winter of] 1551-52 on 13 January, the sea broke in at Sandwich [in Kent, *England*], and overflowed all the marshes thereabout, and drowned much cattle.<sup>225</sup>

On 12 & 13 January, there was a tempest of rain, snow, hail, rain, thunder and lightning. In Holland [now *the Netherlands*] on 12 January there was a great flood.<sup>72</sup>

The winter of 1552 was warm and dry in *Italy*.<sup>62</sup>

In 1552, there was a remarkable fall of red rain [in *England*]. "A heavy fall of rain, which lay on the grass as red as wine."<sup>212</sup>

The dry heat of 1552 in northern *France* consumed all the plants in June.<sup>79</sup>

On Friday 17 May 1552 between four and five o'clock in the afternoon, there was a particularly bad storm in Dordrecht, western *Netherlands*, which made the people flee in terror to their homes. For more than half an hour, giant hailstones fell. All the gardens were destroyed. Some hailstones weighed half a pound. On some stones "horns" and "crowns" were seen.<sup>172</sup>

In Budissina (Bautzen in eastern *Germany*) on 13 August, there was a great flood.<sup>47, 72, 92</sup>

In *Italy*, the summer of 1552 was dry and burning hot. The drought lasted for five consecutive years. In *France*, the harvest began at Dijon on 13 September.<sup>62</sup>

In 1552, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang. This drought led to a famine. Then during the period between 21 July and 19 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Mêng-yin and An-ch'iu. During the period between 20 August and 17 September, floods struck Shantung province at Ts'ao and Shan; and Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow, Huai-an and P'ei. [P'ei is located at longitude 118.03° East and latitude 34.30° North.]<sup>153</sup>

In 1552, there was a drought in Kiangsi province in *China*.<sup>165</sup>

---

**Winter of 1552 / 1553 A.D.** The winter of 1552-53 is recorded as a harsh winter in Holland [now *the Netherlands*].<sup>62</sup>

During this winter, there was extreme cold in the north. For example, Captain Willoughby looked for the way to the Chinese seas through the northern sea. The ice stranded him during the winter near Arzina, a port in *Lapland*. In the following year (1554) the captain and his entire crew were found frozen to death [by Russian fisherman].<sup>62</sup>

This was the winter of the famous siege of the city of Metz by King Charles V of *France* and the retreat of the French Imperial Army after a heroic defense of the inhabitants of the city. The French Imperial soldiers suffered much from extreme winter cold. After the retreat, they were found in large numbers stiff and rigid in the trenches. The soldiers were sitting on large stones, their legs up to the knees stuck in frozen mud. With most you had to remove the legs, for they were dead and frozen.<sup>62</sup>

---

**1553 A.D.** In *Germany* and Holland [now *the Netherlands*] on 19<sup>th</sup> January, there were great floods on the Rhine River.”<sup>47, 72, 92</sup>

In 1553 in *France*, there was burning heat all the month of June.<sup>79</sup>

[In *England*], there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1553, an hurricane struck Texas in the *United States*. Sixteen ships of the New Spanish Fleet were struck by the hurricane and never heard from again.<sup>141</sup>

In 1553, a hurricane struck the west coast of Florida in the *United States* causing approximately 700 deaths.<sup>141</sup>

In 1553, a severe drought engulfed Shensi (now Shaanxi province) in central *China*.<sup>153</sup>

In 1553, there was a great drought in Shensi province in *China*.<sup>165</sup>

In 1553, several regions of *China* experienced flooding including:<sup>153</sup>

— Shansi (now Shanxi province) in northern *China* at Hsing. The city walls were damaged by the floodwaters.

— During the period between 6 May and 8 August, floods struck Hopei (now Hebei province) in northern *China* at Pao-ting. Innumerable people and cattle drowned.

— During the period between 11 June and 10 July, floods due to heavy and protracted rains struck Hupeh (now Hubei province) in central *China* at Ma-ch'êng and Huang-kang. Thousands of people drowned.

---

**Winter of 1553 / 1554 A.D.** At the end of the year in 1553, heavy snowfalls in Velay, Gévaudan and Vivarais, *France*.<sup>61</sup> [Gévaudan is located in south central France.]

---

**1554 A.D.** In *Ireland*, there were perpetual rain all winter; great floods.<sup>47, 92</sup>

In *Ireland*, there were perpetual rain, hail, a tempest.<sup>93</sup>

In November 1554, a hurricane struck *Cuba*. The admiral's ship was sunk. A small caravel was also sunk with all but two people drowning.<sup>141</sup>

In 1554, an Atlantic hurricane struck the *Mona Passage* [a strait that separates the islands of Hispaniola and Puerto Rico]. A Spanish ship was wrecked by this hurricane.<sup>141</sup>

In 1554, a hurricane struck offshore the southern coast of Texas in the *United States*. “Three ships from the New Spain fleet, the *Santa Maria de Yciar*, *Espiritu Santo*, and the *San Esteban*, were lost in a storm off what would later become Padre Island, Texas. A few survivors managed to escape in a small boat.”<sup>141</sup>

Around 1554, an Atlantic hurricane struck *Bermuda*. Of the other ships that had sailed with them (the *San Miguel*), weeks before, the leading ship from Veracruz sank in that hurricane that caught up with them in *Bermuda*. Twenty-five survived.”<sup>141</sup>

In 1554, a severe drought engulfed Hunan province in south-central *China* at P’ing-chiang and Hupeh (now Hubei province) in central *China* at Huang-p’o and Ch’i-shui.<sup>153</sup>

In 1554, there was a great drought in Hupeh province in *China*.<sup>165</sup>

In 1554, several regions of *China* experienced flooding including:<sup>153</sup>

— Shansi (now Shanxi province) in northern *China* at Ching-yüeh. The city walls and houses were damaged by the floodwaters.

— Chekiang (now Zhejiang province) on the east coast of *China* at Wên-chou.

— Hupeh (now Hubei province) in central *China* at Wuchang, Mien-yang and Kung-an.

— During the period between 5 February and 8 August, floods struck Hopei (now Hebei province) in northern *China* at Ta-ming.

---

**1555 A.D.** In London, *England* on the 1<sup>st</sup> of September, there was a great hailstorm.<sup>57, 72, 93</sup>

In *England* on 21 September, there were great floods on the River Thames.<sup>47, 72, 92</sup>

On 30 September 1555, there was a notable inundation of the River Thames [in London, *England*]. It was caused by a great wind and rain.<sup>225</sup>

In *England*, the year 1555 was a very wet, rainy, floody year. There was great scarcity. A fatal hot burning fever took hold in *England*. On the bare rocks on the seaside of Suffolk, grew of their own accord, a plentiful crop of peasons [type of bean]. These were ripe in August. They grew where grass never grew before. These greatly relieved the poor, who carried them away in great quantities. As they gathered them, still more were coming on and others in blossom. From the wetness and coldness of the season in 1555, several types of epidemics appeared in Paris, *France*.<sup>72</sup>

A plague infested Loughborough in Leicestershire, *England* beginning in 1555. It infested the city from Midsummer of 1555 to Midsummer of 1559. The plague went by several names including: Swat, New Acquaintance, Stoupe, Knave, and Know thy Master.<sup>212</sup>

[In *Western Europe*] the year 1555 was mostly excessively rainy.<sup>72</sup>

In 1555, an Atlantic hurricane struck the *Bahama Channel*. The ship *Capitana* of the New Spanish Fleet was lost in the storm. [The Old Bahama Channel is a strait off the northern coast of Cuba and the Sabana-Camagüey Archipelago and south of the Great Bahama Bank. It is approximately 100 miles (161 kilometers) long and 15 miles (24 kilometers) wide.]<sup>141</sup>

In 1555, floods struck Shansi (now Shanxi province) in northern *China* at Jung-ho and Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. At Jung-ho, the crops were damaged by the floodwaters.<sup>153</sup>

---

**1556 A.D.** Lyon, *France* experienced a drought. The rain stopped for four and a half months, from March 26 until August 10.<sup>61</sup>

The summer of 1556 was hot in southern *France*.<sup>79</sup>

In 1556 in *Italy*, the heat was excessive. In *France* the sources of water dried up. The grape harvest took place in Dijon, *France* on 5 September. Corn [grain] was in short supply this year.<sup>62</sup>

[In *Western Europe* in 1556, there was a great famine not caused by weather. After a great scarcity of corn [grain], not from famine but because the rich corn-mongers had bought and hoarded it up, until it spoiled. This forced the poor to eat ox and swine dung. In *the Netherlands*, a sudden and terrible plague broke out between Delph [Delft] and The Hague, which spread over the whole country in June.<sup>72</sup>]

In *England* in 1556 and 1557, there was a great scarcity of corn [grain] from the past great rains. All the corn was choked and blasted, the harvest was excessively wet and rainy. Wheat sold for 55s. per Quarter [quarter ton], but a good and plentiful crop at harvest brought it to 4s. or 5s.<sup>72</sup>

In *England* from 1556 to 1558, there was a famine from great rains, bad and inconstant seasons, heat and long south winds.<sup>57, 72, 91</sup>

In 1556, there was a drought [in *England*]. The drought was so great that the springs dried up and wheat rose from 8 shillings to 53 shillings per quarter [quarter ton]. At Chester, *England* the wheat was 16 shillings per bushel and barley was 12 shillings and very dear [scarce].<sup>212</sup>

In 1556 at Nottingham, *England* and throughout *England*, there was a plague and a dreadful famine.<sup>212</sup>

In 1556, there was a famine in the Delhi District in *India*.<sup>156</sup>

— During the first year of the reign of Akbar, there was a great scarcity in Hindustan. “In some districts, and especially in the provinces of Delhi, it reached a most alarming height. Though men could find money, they could not get sight of corn [grain]. People were driven to the extremity of eating one another, and some formed themselves into parties to carry off the corpses for their food.”

In 1556 A.D., during the first year of Akbar’s [Akbar the Great] reign, there was a famine in Delhi and its neighborhood in *India*.<sup>179</sup>

[In *England*] on 29 December, there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1556 during the period between 9 May and 6 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch’ang. Innumerable people drowned. The land tax was remitted. Then during the period between 7 June and 6 July, a drought engulfed Yunnan province in southwest *China* at Shun-ning. During the period between 7 July and 4 August, a drought engulfed Yunnan province at Ching-tung.<sup>153</sup>

In 1556 during the spring and summer, there was a drought in Yunnan province in *China*.<sup>165</sup>

---

**1557 A.D.** In *France* on 10 September, there were floods near the district of Languedoc.<sup>47, 72, 92</sup>

This year in *France*, there was a great flood in the south of Languedoc, with so dreadful a tempest, that people imagined it was the last day. The rapid descent of the waters about Nismes [Nîmes], removed divers [diverse] heaps and mountains of ground, and rent and tore up many other places. By which was discovered much gold and silver coins, plate, and other valuable vessels supposed to be hid in the Gothic Invasion.<sup>72</sup>

[In *England*] in September there were excessive rains, which were fatal to priests.<sup>72</sup>

In 1557, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at P'ing-yao. Also in the same year, floods struck Hopei (now Hebei province) in northern *China* at Lai-yüan and Shansi province at Chin-ch'êng. Houses were damaged by the floodwaters.

In 1557, there was a great drought in Shansi province in *China*.<sup>165</sup>

---

**1558 A.D.** In *England*, there was drought the whole year and hot.<sup>47, 72</sup>

In 1558 in *England*, the River Thames went dry.<sup>72</sup>

Within a mile of Nottingham, *England* was a grievous tempest with thunder, which as it came through two towns, beat down the churches and all the houses, cast the bells to the outside of the churchyard, and twisted the sheets of lead like a pair of gloves and threw them 400 feet into the field. The water and mud of the River Trent between them was taken up, carried a quarter of a mile, and thrown in the trees. Trees were torn up by the roots. Hailstones that were 15 inches about fell down. A child was taken out of a woman's arms and carried up into the air, then let fall, had its arm broken and died. Six men were killed. Yet had neither flesh nor skin hurt. Now another great scarcity of corn [grain] from want of workers to harvest it. Corn sold for 14s. per Quarter [quarter ton]. In *England*, there was a cold winter with a North wind, a southerly rainy spring, and an excessively hot summer. At harvest time, dysenteries broke out in *France* and Paris. In *Europe*, all the spring, summer and at harvest time was hot and dry.<sup>72</sup>

On 7 July 1558, there was a great thunderstorm [and possible tornado] within a mile of Nottingham, *England*. As it passed through two towns, it beat down all the houses and churches. The bells were cast to the outside of the churchyards, and some of the webs of lead were thrown 400 feet [122 meters] into the field like writhen leather. The water with the mud in the bottom was taken from the River Trent and carried a quarter mile [0.4 kilometers] and cast against trees. The trees were torn up by the roots and cast 12 score yards [720 feet, 220 meters] off. A child was taken from a man's hand, and carried 2 spears length high and then let fall 200 feet [61 meters] off. The child died from the fall. Five or six men were slain during the storm during which hailstones fell measuring 15 inches [38 centimeters] in circumference. The hamlets of Sneinton and Gedling had all its houses and both their churches blown down.<sup>212</sup>

In 1558, there were many tempests. On 9 January, a tempest struck Dover, *England*. On 18 June, a tempest struck Calais, *France* and last for 5 days. On July 11, a tempest struck Nottingham, *England* with wind and hail. On 15 July, a tempest struck *France*.<sup>72</sup>

In July 1558, a storm of hail in Northamptonshire, *England*, when the stones measured 15 inches in circumference.<sup>43</sup>

In March 1558, there was a most destructive hurricane in *England*.<sup>72</sup>

In 1558, there was a great mortality in *England*. At Nottingham much corn [grain] was lost in the fields for want of laborers. Many churches were shut up because the clergy were dead. East and West Retford

suffered severely. In the small hamlet of West Retford between July and October, 82 people died.<sup>212</sup>

In 1558, the spring, summer and fall were hot and dry in a large part of *Europe*. The grape harvest in Dijon, *France* began on 30 September.<sup>62</sup>

In 1558, floods struck Yunnan province in southwest *China* at Yung-p'ing and T'êng-ch'ung. Houses and fields were damaged by the floodwaters and several hundred families were flooded. During the period between 16 June and 14 July, floods struck Liaoning province located in the southern part of *China's* northeast at Liao-yang. During the period between 6 May and 8 November, a drought engulfed Shansi (now Shanxi province) in northern *China* at P'ing-lu. [P'ing-lu is located at longitude 111.00° East and latitude 34.51° North.]<sup>153</sup>

In 1558 during the summer and autumn, there was a drought of long duration in Shansi province in *China*.<sup>165</sup>

**1559 A.D.** On 20 August 1559, a hurricane struck offshore western Florida in the *United States* causing greater than 500 fatalities.<sup>141</sup>

The grape harvest in Dijon, *France* took place on 4 September, which is 20 days earlier than average.<sup>62</sup>

In *England* on 5 September 1559, there was a terrible tempest of wind and thunder.<sup>72</sup>

In 1559, a hurricane struck off the northwest Florida coast of the *United States*. Six Spanish ships were lost in the hurricane.<sup>141</sup>

On 19 September 1559, a hurricane struck off the coast of Florida in the *United States*. There was a great loss of life by a tempest from the north. There was a great loss of seamen, and passengers (less than 1,500).<sup>141</sup>

In 1559, a severe drought engulfed Yunnan province in southwest *China* at Hsiang-yün. During the period between 6 May and 8 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at P'ing-lu. [P'ing-lu is located at longitude 111.00° East and latitude 34.51° North.] Then during the period between 6 June and 4 July, floods struck Hupeh (now Hubei province) in central *China* at Hsiang-yang. Hsiang-yang again experienced flooding during 1-29 October.<sup>153</sup>

In 1559, there was a great drought in Yünnan province in *China*. As a result, the land tax was remitted.<sup>165</sup>

In 1559 during the 5<sup>th</sup> moon, there was a flood in the vicinity of Shanghai, *China*.<sup>166</sup>

**1560 A.D.** In *England* on 17 December 1560, there was an irregular tide when the River Thames flowed three times in 9 hours.<sup>72</sup>

[In *England*], there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1560, Lake Constance in *Switzerland* experienced a great flood.<sup>175</sup>

In 1560, many regions of *China* experienced flooding including:<sup>153</sup>

- Honan (now Henan province) in central *China* at Yen-shih. Crops were damaged by the floodwaters.
- Yunnan province in southwest *China* at Yung-pei.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Nanking.

— During the period between 25 April and 24 May, floods struck Hupeh (now Hubei province) in central *China* at Hsiang-yang, I-ch'êng and Ch'i-shui; Hunan province in south-central *China* at Hui-t'ung and Ching; and Kiangsu province at Pao-ying.

— During the period between 23 July and 20 August, floods struck Hupeh province at Chiang-ling and Wuchang; and Hunan province at Yüeh-yang.

— During the period between 21 August and 19 September, floods struck Hunan province at Han-shou.

— During the period between 20 September and 18 October, floods struck Hupeh province at Huang-kang.

In 1560 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, it rained day and night from the 6<sup>th</sup> to the 11<sup>th</sup>. The floods carried away houses.<sup>166</sup>

In 1560 during the period between 8 August and 8 November, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea.<sup>153</sup>

In 1560 during the spring, summer and autumn, there was a great drought in Kwangtung and Shantung provinces in *China*.<sup>165</sup>

**1561 A.D.** In Brussels, *Belgium* on the 21<sup>st</sup> of April, there were great floods.<sup>47, 92</sup> [Another source places this event on 23 April.<sup>72</sup>]

In 1561, there was another great scarcity of corn [grain] in *England*.<sup>72</sup>

In February 1561 on St. Matthias day, there was a great storm of thunder and lightning in London, *England*.<sup>212</sup>

In June 1561, a thunderstorm struck London, *England*. St. Paul's Cathedral was struck by lightning and the steeple burned.<sup>212</sup>

In London, *England* in 1561, "the spire of the Cathedral Church of Saint Paul's being 520 foot from the ground, and 260 from the square steeple, where it was placed, and was made of wooden materials, but covered with lead, was with lightning burnt down, together with the roofs of that large church, and that within the space of five hours; the roofs were afterwards reedified, but not the spire."<sup>92</sup>

The winter of 1561 in northern *France* was one of the toughest.<sup>79</sup>

In 1561, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Hu-chou and Ch'ü. These floods resulted in a famine.

— Yunnan province in southwest *China* at Chan-i.

— During the period between 14 May and 12 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang; and Chekiang province at Hu-chou and Chia-hsing. Crops were damaged by the floodwaters.

In 1561 during the period between 14 February and 15 March, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping.<sup>153</sup>

In 1561 during the spring, there was a drought in Chihli province in *China*.<sup>165</sup>

**1562 A.D.** In 1562 [in *England*], wheat was very dear [scarce]. It sold for 17 shillings a bushel.<sup>212</sup>

Paradin, in *Annales de Bourgogne*, bk. 1, p. 149, speaks of a miraculous ice stone that fell in April 1562 in the Beaujolais region of central *France*.<sup>79</sup>

In 1562, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou. During the period 1-30 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang.<sup>153</sup>

In 1562, a drought engulfed Hupeh (now Hubei province) in central *China* at Chiang-ling. During the period between 5 February and 8 November, a drought engulfed Shansi (now Shanxi province) in northern *China* at P'ing-lu. [P'ing-lu is located at longitude 111.00° East and latitude 34.51° North.] During the period between 6 May and 8 August, a severe drought engulfed Honan (now Henan province) in central *China* at Yen-shih.<sup>153</sup>

In 1562 during the spring and summer, there was a drought in Honan, Hupeh and Shansi provinces in *China*. In Honan, this was a great drought.<sup>165</sup>

---

**Winter of 1562 / 1563 A.D.** In the winter of 1563, the River Scheldt froze near Antwerp, *Belgium* and the River Thames froze in London, *England*.<sup>62</sup>

The winter of 1562-63 was severe in Flanders [now *Belgium*]. In Antwerp, *Belgium* it began to freeze in mid-December. From the Feast of St. Stephen (26 December) to 5 January there was ice [on the River Scheldt]. In London, *England*, it began on 21 December to freeze with such vehemence that by 1 January, people were crossing the River Thames on the ice; and the people amused themselves on the ice as on the mainland; but the frost was short-lived. The thaw began on 2 January, and on the 5<sup>th</sup> there was no ice on the river to be seen.<sup>62</sup>

---

**1563 A.D.** In Leicester in Leicestershire, east Midlands, *England*, there was storm.<sup>40</sup>

During the night of 9 January 1563, a great tempest of wind and thunder at Leicester, *England*, which did great damage.<sup>72</sup>

In 1563, there were several great tempest of wind, thunder and lightning that struck [*England*]. These occurred on 9 January, in July, and on December 1-12.<sup>72</sup>

In 1563, a hurricane struck near Cape Canaveral, Florida in the *United States* causing 284 deaths.<sup>141</sup>

From August to October 1563, five vessels went missing at the latitude of Bermuda in the *Atlantic Ocean*. [This loss was likely attributed to storms/hurricanes.]<sup>141</sup>

In *England*, from the 1<sup>st</sup> to the 12<sup>th</sup> of December, there was greater thunder and lightning than any alive remembered.<sup>72</sup>

In 1563 in London, *England*, famine and pestilence, said to have taken off 20,000 people.<sup>57, 91</sup>

In 1563, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ing-t'ien. During the period between 20 June and 19 July, a drought engulfed *China*. During the period between 8 August and 8 November, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Hsiao-kan.<sup>153</sup>

In 1563 during the summer and autumn, there was a great drought in Hupeh province in *China*.<sup>165</sup>

In 1563, in the vicinity of Shanghai, *China*, there was a famine. As a result [of starvation], the people scattered. Attacks were made on granaries. The leader of the riots was beheaded.<sup>166</sup>

---

**1564 A.D.** In Louvain, *Belgium* on the 24<sup>th</sup> of January, there was a great hailstorm.<sup>57, 72, 93</sup>

In Essex, *England* on the 17<sup>th</sup> of July, there was a great hailstorm.<sup>57, 72, 93</sup>

In Northamptonshire, *England*, there was a hailstorm “when the stones measured 15 inches in circumference.”<sup>57, 93</sup>

A storm of hail in Northamptonshire, *England*, when the stones measured fifteen inches in circumference in July 1558.<sup>40, 41, 56</sup> [This event most likely occurred in 1564.]

In *England* on the 20<sup>th</sup> of September, the River Thames greatly overflowed.<sup>47, 72, 92</sup>

In *England* on the 20<sup>th</sup> of September, was a great flood in the River Thames. Marshes overflowed, and cattle drowned.<sup>72</sup>

In *England* on the 26<sup>th</sup> of December, there was a great hailstorm.<sup>57</sup>

[In *England*], there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1564, the plague was very violent in Leicester, *England*. It was so severe that the assizes [court] had to be held at Loughborough instead. It was also severe in Canterbury.<sup>212</sup>

In 1564, floods struck Chekiang (now Zhejiang province) on the east coast of *China* and Kiangsi (now Jiangxi province) in southern *China* at Nan-ch’ang. During the same year, a drought engulfed Shansi (now Shanxi province) in northern *China* at Jung-ho and Yunnan province in southwest *China* at Ch’u-hsiung. During the period between 10 May and 8 June, a severe drought engulfed *China*.<sup>153</sup>

In 1564 during the spring and summer, there was a drought of long duration in Shansi and Yunnan provinces in *China*.<sup>165</sup>

---

**Winter of 1564 / 1565 A.D.** In *England* on the 21st of December, began a frost, which continued so extremely that on New Year’s Eve people went over and along the Thames on the ice from London Bridge to Westminster. Some played football as boldly there as if it had been on the dry land; diverse of the court shot daily at pricks set up on the Thames; and the people, both men and women, went on the Thames in greater numbers than in any street of the city of London. On the 31st day of January, at night, it began to thaw, and on the fifth day was no ice to be seen between London Bridge and Lambeth, which sudden thaw caused great floods and high waters, that bare down bridges and houses, and drowned many people.<sup>29</sup>

In *England*, on 1 December 1564 began a frost, which froze the River Thames so as people went over on the ice. Boys and men played on it. On 3 January, it thawed and resulted in a very great flood.<sup>72</sup>

In 1564, there was a great frost in London, *England* at Christmas. “Surface of river Thames solid as a rock. The population left the streets to walk the whole distance from Westminster to London Bridge on the ice, the Queen Elizabeth was daily on the river. The frost broke up suddenly into fearful inundations, bearing down houses, bridges, and vessels, to destruction. At Chester the river Dee frozen over, so that people played football thereon.”<sup>212</sup>

In *England*, there was frost from 21 December 1564 to 14 February 1565 with one remission.<sup>72</sup>

In *England* beginning on 21 December 1564, there were diversions on the frozen River Thames.<sup>47, 90</sup>

In *England*, there were fairs on the frozen River Thames in 1564.<sup>90</sup>

In *England* in 1564, there were diversions on the frozen Thames.<sup>93</sup>

In *England*, the frost lasted six weeks.<sup>29</sup>

In 1565, the Rhône River froze across its full width in Arles, *France*.<sup>38, 60</sup>

In 1565, the Rhône River in France froze.<sup>58, 80</sup>

In 1565 in the *Netherlands*, the Scheldt River frozen so as to bear laden wagons.<sup>47, 90, 93</sup>

In 1564 in *France*, the river remained frozen allowing carts to cross over the ice for two whole months. The cold killed the olive trees.<sup>79</sup>

In 1565, the Seine River in *France* froze since the start of January. Loaded carts travel on the ice on the River Meuse. The Scheldt River froze and the Rhône River at Arles, *France* was frozen across its full width. The ice on the River Thames in London, *England* supports pedestrian traffic.<sup>62</sup>

In Paris, *France*, the winter lasted from 20 December 1564 to 24 March 1565. In Liège, *Belgium* the frost lasted from 14 November 1564 to April 1565. On the river goods were sold from small stalls on the ice. In December, the River Thames in *England* was frozen so far that one could walk over it. In *Provence*, the Rhône River at Arles was frozen to its full width and the olive trees were damaged.<sup>62</sup>

---

**1565 A.D.** In Louvain, *France*, there was a great inundation from the sea; wind.<sup>47, 92</sup>

On 2 February, there was a flood at Louvain; wind blew the Sea in.<sup>72</sup>

In *England* on 20 May 1565, there was a hailstorm that extended into several counties including Dorset, Surrey and Monmouth.<sup>93</sup> [Dorset is located in southwest *England* on the English Channel. Surrey is located in southeastern *England*. Monmouth is a town in southeast *Wales* situated close to the border with England.]

On 16 July 1565 from nine at night to three in the morning, there was a great tempest of thunder, lightning and hail, in many place [in *England*]. In the morning of 24 December, there was a hurricane and west winds. The River Thames and the Sea were both blown in. Great damage done by both.<sup>72</sup>

In 1565 throughout the *British Isles*, there was an extended famine.<sup>57, 90, 91</sup> 2,000,000*l.* was said to have been expended in importation of grain.<sup>57</sup>

In 1565, there was a famine in *Britain*.<sup>212</sup>

In 1565 [in *Germany*], there was a severe winter, then a lot of fog, leading to many diseases of the eyes, followed by a poor summer. As a result there were crop failures and famines.<sup>172</sup>

On 22 September 1565, an Atlantic hurricane struck Florida and the eastern coast of the *United States*. Many French vessels were lost at sea during the storm. Of the original 600 soldiers and sailors, 529 survivors could be accounted for.<sup>141</sup>

In 1565, several regions of *China* experienced flooding including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Chu-chi.
- Hupeh (now Hubei province) in central *China* at Chiang-ling.
- Hunan province in south-central *China* at Yüeh-yang, Changsha and Han-shou.
- Kiangsu (now Jiangsu province) on the east coast of *China* at Pao-ying.
- During the period between 27 July and 25 August, floods struck Kiangsu province at Suchow and P'ei. As a result, the canals were damaged. [P'ei is located at longitude 117.00° East and latitude 34.47° North.]

In 1565, a drought engulfed Shansi (now Shanxi province) in northern *China* at Fên-ch'êng and a severe drought engulfed Hupeh (now Hubei province) in central *China* at Tzū-kuei.<sup>153</sup>

In 1565, there was a drought in Hunan and Shansi provinces in *China*.<sup>165</sup>

**1566 A.D.** In *England*, there was a drought all summer and during harvest.<sup>47, 72</sup>

In Chelmsford, (Essex) *England*, there was a hailstorm that destroyed 500 acres of grain.<sup>41, 57, 93</sup> That destroyed 500 acres of corn.<sup>40</sup>

In 1566 in *England*, the spring had great and almost continuous rains, with most frightful floods. The summer and harvest were droughty and clear. There was not one drop of rain the whole harvest. At Commora [Comora or Komárom in northern *Hungary* on the border with Slovakia] broke out the Hungarian Fever [typhus] in the Emperor Maximilian's Army, just before he broke up the Campaign against the Turks. The excessive spring rains had made them two months later in taking the field. It increased at Gewer and when his soldiers were disbanded, they carried the contagion along with them and dispersed it all over *Europe*, especially over *Germany*, *Burgundy*, *Italy*, Bohemia [now western *Czech Republic*], and Flanders [now *Belgium*]; but chiefly in Vienna, *Austria*, through which most of them past in their return home. They infected all houses there where they laid, and died so fast themselves, that the streets were covered with dead bodies. This increased the infection.<sup>72</sup>

The rains of 1566 were stormy in southern *France*.<sup>79</sup>

On 26 December 1566 in *England*, there was a great hailstorm.<sup>72, 93</sup>

In 1566, floods struck Hupeh (now Hubei province) in central *China* at Chün, Kuang-hua, Chiang-ling, Huang-mei and Wuchang; and Shansi (now Shanxi province) in northern *China* at Liao. During the period between 8 August 1566 and 5 February 1567, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1566 during the autumn and winter, there was a great drought in Fuhkien province in *China*.<sup>165</sup>

In 1566 during the 7<sup>th</sup> moon, a typhoon struck in the vicinity of Shanghai, *China*. A great wind and rain leveled houses and one monumental gate.<sup>166</sup>

**1567 A.D.** The arsenal of Venice, *Italy* was struck by lightning, which caused a fire among the pitch, tar, and other combustibles. This produced a terrible explosion. Soon after there was a great dearth.<sup>72</sup>

In 1567, off the coast of *Dominica*, six ships carrying 3 million pesos were wrecked in a storm [hurricane]. The island natives killed all the survivors.<sup>141</sup>

In 1567, a tempest and hurricane struck Paris, France.<sup>72</sup>

In 1567, there was frost in *England*.<sup>72</sup>

In 1567, there was a most severe winter in *England*. There was a great scarcity of hay. It sold for 5*d.* a stone at Peak and Yorkshire. The following summer, there was an excessive drought and a great death of cattle.<sup>72</sup> [The Peak District is located in north-central *England*]

In 1567, a drought engulfed Yunnan province in southwest *China* at Hsiang-yün. During the same year, floods struck Yunnan province at Sung-ming. Houses were damaged by the floodwaters and people and cattle drowned. During the period between 7 June and 5 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien. During the period between 5 August and 2 September, floods struck Hupeh (now Hubei province) in central *China* at Ku-ch'êng.<sup>153</sup>

In 1567, there was a drought in Yünnan province in *China*.<sup>165</sup>

**1568 A.D.** [In *England*] all spring there were continual rains.<sup>72</sup>

In *England*, the summer was excessively hot, with a dearth of cattle.<sup>47</sup>

In *England* in 1568, there was an excessive drought and hot, with death of cattle.<sup>72</sup>

At Rome, *Italy*, this year were such floods of the Tiber River, that they carried off and washed away, even to the foundation, a great part of the city, leaving very little behind. Besides the inestimable loss of the city and its great riches, and of innumerable cattle and 1,500 people drowned in it.<sup>72</sup>

On the 18<sup>th</sup> of March there was a most dismal and destructive hurricane in *England* and Holland [now *the Netherlands*]. On 1 November 1568 the Sea swelled excessively overflowing some banks, and broke down others, by a prodigious and unheard of deluge. It covered some islands of *Zealand*, a great part of the sea coast of *Holland*, and almost all *Friesland*. It was a foot higher than the deluge of 1528 (which swallowed up 72 villages). Here was an incomparable loss of estates, but especially of men. In *Friesland* alone 20,000 people were drowned. Their bodies with the carcasses of cattle, household goods, etc. floated all over the fields, and sea being indistinguishable. People that had climbed to the tops of high hills and trees, when the flood just started were saved by boats. In *Italy*, it was excessively hot and moist with a south wind.<sup>72</sup>

In 1568, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Sui-ch'ang, Taichow and Wên-chou.<sup>153</sup>

In 1568, several regions of *China* experienced a drought including:<sup>153</sup>

— Shansi (now Shanxi province) in northern *China* at Lin-fên, Fên-ch'êng, An-tsê, and Shuo. This drought was severe.

— Shensi (now Shaanxi province) in central *China* at P'u-ch'êng and Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang and Lin-ch'uan. These droughts led to a famine.

— During the period between 25 June and 23 July, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow; Fukien (now Fujian province) on the southeast coast of *China* at Foochow; Szechwan (now Sichuan province) in southwest *China* at Chengtu; Shensi province

at Sian; Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an; and Anhwei (now Anhui province) in eastern *China* at Fêng-yang.

— During the period between 23 August and 19 September, a drought engulfed Chekiang province at Chin-hua.

In 1568 during the summer and autumn, there was a great drought in Anhwei, Chêhkiang, Fuhkien, Kiangsi, Kiangsu, Shansi, Shensi and Sze-ch'wan provinces in *China*.<sup>165</sup>

In 1568, there was a famine over two fus [prefectures] in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1568 / 1569 A.D.** From the 11<sup>th</sup> to the 21<sup>st</sup> of December 1568, the Rhône River in *Western Europe* was passable on the ice. The ice was sufficiently thick to support the weight of carts.<sup>38, 60, 62</sup>

In 1568, the Rhône River in *France* froze.<sup>58, 80</sup>

On 11 December 1568, the carts cross the Rhône River in southern *France* and the ice held until the 21<sup>st</sup>.<sup>79</sup>

It was reported that the winter in 1568 in Châtellerault in western *France*, was remarkable because of the snow and ice. On 19 December 1568, unusually cold weather forced the Duke of Anjou, to break off his siege of Loudon in western *France*.<sup>62</sup>

**1569 A.D.** In *England* and *France*, there were great floods.<sup>47, 92</sup>

On 13 January 1569, there was a great flood at Louvain, *France* with lightning. On June 7, there was a great flood at Tocester [Towcester], *England* with hail and rain.<sup>72</sup>

[In *England*] on 13 July, there was a terrible storm of thunder and lightning with hail.<sup>72</sup>

[In *England*] from 1568-1573, the years were mostly rainy, terrible, and tempestuous bad weather.<sup>72</sup>

On 30 October 1569, a great gale [tornado] struck Ashley in Northamptonshire, *England*. “A great gale, only sixty yards broad, and only lasting seven minutes, but destroying everything in its path.”<sup>212</sup>

On 30 October 1569, a formidable hurricane [tornado] struck Ashley in Northamptonshire, *England*. It was 60 yards in breadth and spent itself in about 7 minutes. It was first observed assaulting a milkmaid, taking her pail and hat from off her head, and carrying her pail many scores of yards from her, where it lay undiscovered some days. Next it struck a yard in Westthorp [Westhorpe?] where it blew a wagon body off its axle, breaking the wheels and axle in pieces and blowing three of the wheels, so shattered, over a wall. Another wagon was driven into the side of a house. It blew the roof off the parsonage house.<sup>233</sup>

In *Italy*, there was a great dearth of corn [grain] from excessive rains and mildew.<sup>72</sup>

In 1569, many regions of *China* experienced flooding including:<sup>153</sup>

— Honan (now Henan province) in central *China* at Chi.

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Li-shui, Taichow and Hsin-ch'ang.

— Hupeh (now Hubei province) in central *China* at Chiang-ling, Hsiang-yang and Chung-hsiang.

— Hunan province in south-central *China* at Yüeh-yang.

- During the period between 16 May and 13 June, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an and Yangchow. The floods resulted in a famine.
- During the period between 14 June and 13 July, floods struck Shantung (now Shandong province) on the east coast of *China* at Kuan-t'ao. Innumerable people and cattle drowned.
- During the period between 12 August and 10 September, floods struck Shantung province. Innumerable people and cattle drowned.

In 1569 during the 10<sup>th</sup> moon, on an early winter night, there was a storm of thunder and lightning in the vicinity of Shanghai, *China*. Pear and peach trees flowered, grain sprung up and maiden-hair [Ginkgo] trees fruited.<sup>166</sup>

---

**1570 A.D.** [During the winter of] 1569-70, on 10 March 1570, a great storm from the North generated high tides [in *England*] and also dropped significant snowfall and cold temperatures. “Septentrionis maxima Sævitia: Nivis flocci magni, ingens frigus. Maxime tumefcebat æstus Maris die & nocte, nam excurrerat in Agros late”. [translation from Latin as written in Middle English: The greatest fury from the North: A great mass of snow and growing coldness. Very greatly swell the tide day and night, for they [tide water] were running widely in the fields.]<sup>225</sup>

The entire year of 1570 in northern *France* produced a suffocating heat.<sup>79</sup>

The rains of 1570 caused the rivers to overflow their banks in several parts of the kingdom of *France*. On the night of December 2, the Rhône River at Lyon suddenly rose and overflowed its banks. No one living remembers such a sudden and substantial flood.<sup>79</sup>

In *England* on the 5<sup>th</sup> of October, there was an inundation from the sea.<sup>47, 72, 92</sup>

On the night of 5 October 1570, a great hurricane struck *England*. Near Rye in East Sussex in southern *England*, the Sea broke in with a great flood, drowned a great marsh with herds of sheep, corn, etc. In Essex, Suffolk, and Norfolk were great losses. One by a tempest, wherein sheep, corn, cattle, houses, bridges, etc. were lost and carried down.<sup>72</sup>

On 5 and 15 October, there were tempest, hurricanes and rain in *England*.<sup>72</sup>

In 1570, there was a flood in *Great Britain*. There was a dreadful hurricane that destroyed the Port in Liverpool, *England*.<sup>212</sup>

[In *England*] from 1568-1573, the years were mostly rainy, terrible, and tempestuous bad weather.<sup>72</sup>

In Holland [now *the Netherlands*] there was an inundation. A strong northwest wind occurring during the high tides drove the sea with such violence against the dikes that several of them were broken down. The waters rushed in on every side, and rolling forward with resistless fury, swept away houses, trees, men and cattle, in one universal ruin. Entire villages were destroyed. The number of lives lost in Friesland alone was estimated at 20,000; and was very extensive in other provinces. “The damage to property incalculable.” The Spaniards (then at war with *the Netherlands*) imputed the flood, which occurred on All Saints’ Day, to a vengeance of God upon the heresy of the land; the Netherlanders looked upon it as an omen portending some violent commotions.<sup>47, 92</sup>

On 1 November, there was a flood of the Sea in *Holland*.<sup>72</sup>

On 1 November 1570, there was a dreadful flood at Antwerp, *Belgium* and on all the coast of Holland [*the Netherlands*] that made infinite spoil.<sup>225</sup>

On 1 November 1570 on All Saints Day, a great storm devastated large parts of the North Sea coast from *France* to *Denmark*. This great flood caused between 100,000-400,000 casualties due to drowning.<sup>7</sup>

In *Holland* 400,000 people drowned in 1570 A.D.<sup>5, 40</sup>

The storm called the All Saints Floods occurred on 11-12 November 1570 [All Saints' Day is celebrated on 1 November in Western Christianity]. This storm affected most of the North Sea between *Britain* and *Denmark*, and adjoining land areas. Presumably *the Netherland* was hit hardest. The cities Amsterdam, Muiden, Rotterdam and Dordrecht were all flooded. Somewhere between 100,000 and 400,000 persons were reported to have drowned. This represents an exceptionally high number of casualties, which should be seen in relation to the much smaller total population at that time.<sup>32</sup>

A terrible storm broke out in Antwerp, *Belgium* in 1570. In the village of Saint-Marceau in the Ardenne region in northern *France*, there were the most impetuous, terrible, horrible winds that were ever heard.<sup>79</sup>

Between September 1570 and January 1571, four ships were lost in a storm [hurricane] between Veracruz, *Mexico* and *Spain*.<sup>141</sup>

In 1570, several regions of *China* experienced flooding including:<sup>153</sup>

— Shansi (now Shanxi province) in northern *China* at Li-ch'êng. Houses were damaged by the floodwaters and people and cattle drowned.

— During the period between 6 May and 8 August, floods struck Shansi province at Chin-ch'êng and Lin-chin. Houses were damaged by the floodwaters.

— During the period between 3 July and 1 August, floods struck Shensi (now Shaanxi province) in central *China* at Ch'ing-chien. Several hundred families were flooded. During the same time, floods also struck Hua-yin in Shensi province, where many people drowned.

— During the period between 8 August and 8 November, floods struck Shansi province at Jung-ho. Crops were damaged by the floodwaters and people and cattle drowned.

— During the period between 30 September and 28 October, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at P'ei. As a result, the canals were damaged. [P'ei is located at longitude 118.03° East and latitude 34.30° North.]

In 1570 during the 6<sup>th</sup> moon, a typhoon struck in the vicinity of Shanghai, *China*. The sea rose with a great southeast wind, occasioning destruction of dwellings and loss of life, inundating the land with salt water. A small species of crab appeared after the inundation of the sea in great numbers devastating the crops.<sup>166</sup>

---

**Winter of 1570 / 1571 A.D.** From the end of November 1570 to the end of February 1571, the winter was so severe, that all the rivers, even those of Languedoc and Provence in *France*, were so completely frozen, that they were passable on the ice with laden carts.<sup>38, 60, 62</sup>

In 1570 to 1571, the Rhône River in *France* froze. The [grape] vines and fruit trees in *France* were killed by the cold.<sup>58, 80</sup>

The winter of 1570-71 froze the rivers in *France* for three months. The fruit trees were destroyed down to the roots.<sup>79</sup>

[In *Western Europe*], the winter lasted from the end of November 1570 to end of February 1571. The winter was so severe that rivers were frozen for three months so that wagons could drive over ice. The cold destroyed the fruit trees, even in the Languedoc, *France*, down to the root. The frost began in

Flanders [now *Belgium*], the eve of the Feast of St. Nicholas (December 5), and lasted until 10 March. Up to the very last days of winters, the Maas (Meuse) River, the Waal River and the Rhine River were still frozen.<sup>62</sup>

---

**1571 A.D.** In Flanders [now *Belgium*], *France* and *Germany* in August, there were great floods.<sup>47, 92</sup>

On 17 and 18 July 1571, a strong storm struck [*Germany*] causing damage to buildings.<sup>172</sup>

From 15 to 23 August 1571, there was a very great flood in Flanders [now *Belgium*]. On 5 February, there was a great flood at Louvain, *France*. On 17 December, there was a flood on the Rhine in *Germany*.<sup>72</sup>

In 1571, the year was extremely intemperate in *England* with south winds, rain and fog. During this year and the several that followed, there was a great scarcity and dearth of salt, so that all fish and flesh [meat] were eaten unseasoned.<sup>72</sup>

In *England*, a southerly, rainy, cloudy, ugly harvest.<sup>72</sup>

[In *England*] from 1568-1573, the years were mostly rainy, terrible, and tempestuous bad weather.<sup>72</sup>

[In *England*], there was a terrible storm of thunder and lightning.<sup>72</sup>

On 5 October 1571, a tremendous gale and flood struck *England*. Between Hummerston [Humberston] and Grimsby in Lincolnshire, twenty thousand cattle and sheep perished. Houses were blown down and bridges were washed away. Many ships were wrecked. The city of Bourne was flooded to the midway of the church's height. Boats rowed over St. Neot's Church walls. In Bedfordshire many trees were blown down. The gale was violent in Staffordshire, Oxfordshire, Buckinghamshire, Kent, Essex, etc., where great damage was done. The tides of the River Humber flooded all the streets at Kingston-on-Hull to such a considerable height that the inhabitants were obligated to take refuge in their upper rooms.<sup>212</sup>

In 1571, the *San Ignacio*, 300 tons, and *Santa Maria de la Limpia Concepcion*, 340 tons were lost off the Florida coast of the *United States* during a storm [hurricane]. There were only a few survivors.<sup>141</sup>

In 1571, floods struck Hunan province in south-central *China* at Yüan-ling, Ch'ang-tê, An-hsiang and Hua-jung. During the period between 24 May and 21 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ü-chiang and Ying-tê.<sup>153</sup>

---

**Winter of 1571 / 1572 A.D.** In *England*, the winter had much moister, with either continual rains, wind or snow, to the middle of February, then came an intense cold with a continual north wind, and thick dark air to the Equinox [around March 20/21].<sup>72</sup>

---

**1572 A.D.** In *England* in 1572, spring, summer and even into harvest were very moist and watery, with a south wind.<sup>72</sup>

[In *England*] from 1568-1573, the years were mostly rainy, terrible, and tempestuous bad weather.<sup>72</sup>

In 1572, many regions of *China* experienced flooding including:<sup>153</sup>

- Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ing-t'ien.
- Kiangsi (now Jiangxi province) in southern *China* at Kiukiang and P'êng-tsê.
- Hupeh (now Hubei province) in central *China* at Chiang-ling and Sung-tzū.

— During the period between 6 May and 8 August, floods struck Honan (now Henan province) in central *China* at Hsin-yeh.

— During the period between 8 August and 6 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow, Tang-shan, Huai-an and Yangchow.

In 1572, a severe drought engulfed Shensi (now Shaanxi province) in central *China* at Fu-shih. This drought led to a famine.<sup>153</sup>

In 1572, there was a great drought in Shensi province in *China*. The resulting famine was so severe that it led to cannibalism.<sup>165</sup>

**Winter of 1572 / 1573 A.D.** In *England*, there was a hard frost from 2<sup>nd</sup> November to 5<sup>th</sup> January and also a late spring.<sup>47, 72, 93</sup>

In *England* the winter was extremely cold. Heavy snowfall fell on the Feast of the Second Epiphany in November.<sup>62</sup>

In *England* from 2 November to the Epiphany [6 January], there was a hard frost, great and deep snow, with several rains which froze as they fell [freezing rain], and therefore broke boughs of trees with the weight of the ice. The winds were north and west until after the Feast of the Ascension [generally in May or June]. There was a very late spring.<sup>72</sup>

During the winter of 1572-73 in *England*, there was excessive rains and south wind. The weather continued daily to get worse and worse to the beginning of January.<sup>72</sup>

On 2 February, *Switzerland* was so cold that Lake Constance froze for 60 days.<sup>28</sup> [Lake Constance is situated in *Germany*, *Switzerland* and *Austria* near the Alps.]

In 1572, the winter was very severe in Flanders [now *Belgium*]. The Maas (Meuse) River flooded and came out of its banks from the melting snows towards the end of February.<sup>62</sup>

**1573 A.D.** On 7 June 1573, there was a tempest and hurricane at Tocester [Towcester, Northamptonshire, *England*].<sup>72</sup>

On 7 June 1573, there was a sudden inundation of the riveret at Towcester, in south Northamptonshire, *England*.<sup>195</sup>

In Holland [now *the Netherlands*] on the 1<sup>st</sup> of September, there was an inundation from the sea.<sup>47, 72, 92</sup>

[In *England*] from 1568-1573, the years were mostly rainy, terrible, and tempestuous bad weather.<sup>72</sup>

In 1573 and 1574 [in *England*], there was a famine.<sup>72</sup>

In 1573, floods struck Shansi (now Shanxi province) in northern *China* at Lin-chin and Yunnan province in southwest *China* at Yüan-chiang and Sung-ming. During the period between 31 May and 28 June, floods struck Hupeh (now Hubei province) in central *China* at Yün and Yün-hsi. The city walls and innumerable houses were damaged by the floodwaters. Also during this time period, floods struck Shensi (now Shaanxi province) in central *China* at Sian.<sup>153</sup>

In 1573, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui and a severe drought engulfed Hupeh (now Hubei province) in central *China* at Hsien-ning and Kuang-chi.

During the period between 29 July and 26 August, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China*.<sup>153</sup>

In 1573 during the summer, there was a drought in Chêhkiang, Hunan and Shantung provinces in *China*. In Shantung and Hunan, this was a great drought.<sup>165</sup>

[In 1573], in the 10<sup>th</sup> year of the reign of Emperor Shin-Tsong, there was a dreadful famine in the province of Shansi, *China*. Many people died of hunger. Sixty great pits were dug in different places, each of which held 1,000 dead bodies. They were called Van-jin-keng.<sup>186</sup>

---

**Winter of 1573 / 1574 A.D.** The winter of 1573 [in *Europe*] was so warm that the trees were covered with leaves in January and in February the birds made nests in the trees.<sup>62</sup>

---

**1574 A.D.** In Leyden in northern *Netherlands*, a violent equinoctial gale broke through the dikes. By this means the city, then besieged by the Spaniards, was saved.<sup>47,92</sup> [An equinoctial gale is a gale or storm happening at or near the time of the equinox.]

In *Ireland* in 1574, there was a shower of hail, which swept away good strong houses, and smothered whole flocks and herds.<sup>93</sup>

In 1574, four ships sank during a bad storm [hurricane] in the *Gulf of Mexico*. Five perished from one vessel. The loss on the other vessels was unknown. These ships were part of New Spanish Fleet that left Spain on 29 June 1574. Other researchers noted there was a violent hurricane on 27 August 1574 between *Jamaica* and *Cuba*.<sup>141</sup>

In 1573 and 1574 [in *England*], there was a famine.<sup>72</sup>

In 1574, there was a great dearth in *England* without scarcity. At 4 o'clock in the afternoon of 4 September, there was a terrible storm of rain in London. In October and November, there was a great dearth there and some small plague. During the night of 18 November, a hurricane came out of the south. After harvest, the price of corn [grain] fell a little, but bay salt was dearer than ever was known. The spring was like summer and the summer was like spring. The whole harvest was like a bad winter, most rainy, cold and southerly. Most of the year, there was neither wind nor thunder.<sup>72</sup>

In 1574, there was a plague at Chester, *England*.<sup>212</sup>

In 1574, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua, Li-shui, Chia-hsing and Wên-chou. Houses were damaged by the floodwaters. During the period between 15 September and 14 October, floods struck Fukien (now Fujian province) on the southeast coast of *China*. Houses were damaged and innumerable people and cattle drowned.<sup>153</sup>

[In 1574], in the 11<sup>th</sup> year of the reign of Emperor Shin-Tsong, there was a grievous frost in *China*, which congealed [froze] the greatest rivers. A famine soon followed.<sup>186</sup>

---

**Winter of 1574 / 1575 A.D.** The winter of 1575 in *France* was one of the most rigorous.<sup>79</sup>

In 1575 in northern *France* the weather was greatly inconsistency and produced an inequality of air.<sup>79</sup>

*Europe* experienced a cold winter beginning in November. The Rhine River froze and there was snow until April.<sup>28</sup>

[Another account places this event in the winter of 1573-74.] During the winter of 1573-74 in northern *France*, excessive cold as we had never seen before, burst at the beginning of November 1573, and continued with the same excess until March.<sup>79</sup>

---

**1575 A.D.** In *England* on 30 July, there was a tempest of thunder, lightning and hail, which killed several people and many cattle. Each hailstone was 6 or 7 inches about. Otherwise, it was a good year.<sup>72</sup>

In 1575, there was pestilence at Dublin, *Ireland* and a plague at Stamford, *England*.<sup>212</sup>

In 1575 in London, *England*, the tide in the River Thames ebbed and flowed twice within an hour.<sup>212</sup>

In 1575 in Oxford, *England*, the “sweating sickness” again struck. In July, it killed 510 men at Oxford, but no women.<sup>212</sup>

In 1575, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Yü-yao and Shang-yü.

— During the period between 8 June and 7 July, floods struck Fukien (now Fujian province) on the southeast coast of *China*.

— During the period between 6 August and 3 September, floods struck Shansi (now Shanxi province) in northern *China* at Shuo.

— During the period between 2 November and 1 December, floods struck Yunnan province in southwest *China* at Ch’ü-ching. Crops were damaged by the floodwaters.

In 1575, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ch’ü, Li-shui, Chin-hua and Hai-yen. During the same year, a severe drought also engulfed Honan (now Henan province) in central *China* at Ch’ing-yang leading to a famine.<sup>153</sup>

In 1575, there was a great drought in Chêhkiang and Kwangsi provinces in *China*.<sup>165</sup>

In 1575, there was in summer a poisonous heat [sunstroke] that killed many ploughmen and oxen in the vicinity of Shanghai, *China*. Then during the 12<sup>th</sup> moon, there was a great northwest wind that leveled houses, tore up trees, and made [clay roof] tiles fly. It lasted a day and a night.<sup>166</sup>

---

**1576 A.D.** There was a great silence of grasshoppers over all *Italy* this moist rainy summer.<sup>72</sup>

In 1576 during the period between 5 February and 8 August, a drought engulfed Yunnan province in southwest *China* at Lu-hsi.<sup>153</sup>

In 1576 during the spring and summer, there was a drought in Yünnan province in *China*.<sup>165</sup>

In 1576 during the 3<sup>rd</sup> moon, a typhoon struck in the vicinity of Shanghai, *China*. A great wind; the sea overflowed the dikes, salting the fields, destroying houses and drowning people.<sup>166</sup>

---

**1577 A.D.** In *England* on 17 March at Richmond in Yorkshire, there was a strange tempest, which overturned trees, cottages, barns, haystacks, and the church, with most frightful sights in the air. Another in Bliburrow [Bilsborrow] in Suffolk on 4 August between 9 and 10 in the forenoon. It rent [destroyed] the church and beat down the people in it. They were almost all smothered.<sup>72</sup>

On 4 August 1577, a violent thunderstorm struck *England*. It struck Bongay [Bungay] in the county of Suffolk with such violent rain, fearful flashes of lightning and terrible cracks of thunder that it struck fear into the hearts of those gathered in a church. A fearful flash of fire passed between two people (John

Fuller and Adam Walker) as they were kneeling upon their knees, wringing the necks of them both at one instant clean backwards killing them. The storm struck a church in Bliborough [Bilborough] where the lightning drave [drove] down about 20 people. A man and a boy died, and the others were scorched.<sup>212</sup>

In 1577, pestilence struck Oxford, *England*. “During the Assizes, while the Court sat on the trial of a Popish bookseller, accused of circulating offensive pamphlets, a sudden sickness seized nearly the whole of the persons present, and within forty hours upwards of 300 died, among whom was the Lord Chief Baron of the Exchequer, the High Sheriff of the county, several justices of the Peace, and the chief of the Jurors.”<sup>212</sup>

On 4 August 1577, pestilence struck Bliborough [Bilborough] in Suffolk, *England*.<sup>212</sup>

In 1577, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. Fields and houses were damaged by the floodwaters. During the period between 5 February and 8 August, a drought engulfed Yunnan province in southwest *China* at Chien-shui.<sup>153</sup>

In 1577 during the spring and summer, there was a drought in Yunnan province in *China* that led to a great mortality.<sup>165</sup>

In 1577 during the 5<sup>th</sup> and 6<sup>th</sup> moons (in the middle of summer) there was a rain as cold as winter in the vicinity of Shanghai, *China*. It damaged the crops.<sup>166</sup>

**1578 A.D.** In Brassil [*Brazil*] on the 7<sup>th</sup> of April, there was a great hailstorm.<sup>57, 72, 93</sup>

In 1578 in *Belgium*, the weather was unusually hot. The drought lasted from May to September. In Dijon, *France*, the grape harvest began on 22 September.<sup>62</sup>

On 17 March 1578, a tempest struck Yorkshire, *England*. On 4 August, a tempest and hurricane struck Suffolk, *England*.<sup>72</sup>

[In *England*], terrible rains, floods and tempests.<sup>72</sup>

The summer of 1578 in northern *France* was very wet and produced a searing heat.<sup>79</sup>

In 1578 during the period between 5 June and 4 July, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Foochow. As a result, 80% of the crops were damaged. During the period between 5 July and 2 August, floods struck Hupeh (now Hubei province) in central *China* at Chung-hsiang and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Wu-ming. Then during the period between 8 August and 8 November, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China* at Foochow.<sup>153</sup>

In 1578 during the autumn, there was a great drought in Fuhkien province in *China*.<sup>165</sup>

**Winter of 1578 / 1579 A.D.** During the winter of 1578-79, the Rhône River in southern *France* overflowed its banks and remained in the fields from October until February.<sup>79</sup>

In *England*, there was a “most hard” frost.<sup>47, 93</sup>

In *England* in 1579, there was a most hard frost from 4-10 February.<sup>72</sup>

In *England* on 4 February, it began to snow and continued to the 8<sup>th</sup> and was very deep. The north wind drove the snow into drifts, in which people and many cattle were lost. There was frost on 10 February, then a thaw with continued rains a long time after. Hence such high waters and great floods as drowned marshes and low grounds. The River Thames so flooded Westminster Hall that fishes were left in it. On 24 April, there was another great and deep snow.<sup>72</sup>

---

**1579 A.D.** In *England*, there was frost on 10 February, then a thaw with continued rains a long time after. Hence such high waters and great floods as drowned marshes and low grounds. The River Thames so flooded Westminster Hall that fishes were left in it. In September and November, great winds and raging floods carried down corn [grain], cottages, drowning pastures and cattle in many places in *England*. Tempest in Hessen [Hesse] and Thuringia in central *Germany* did great damage; for hail as big as hen's eggs broke down the corn [grain] and [grape] vines; and floods did great harm to the grounds, people and cattle.<sup>72</sup>

[In *England*], terrible rains, floods and tempests.<sup>72</sup>

In 1579, plague struck Yarmouth [Great Yarmouth], *England* causing much havoc.<sup>212</sup>

The year 1579 was so poorly regulated, especially on the side of Paris, *France*, that most grapes froze in clusters from excessive cold at the time of harvest.<sup>79</sup>

Between August and November 1579, a storm [hurricane] sunk the Spanish Armada's 600-ton *Almirante*.<sup>141</sup>

In *England* in September and October, there was a great inundation from the Sea by winds.<sup>47, 92</sup> On 10 February there was a great flood on the River Thames. On 27 May, there was a great flood caused by rain. On 14 October there was a great flood caused by the Sea.<sup>72</sup>

In 1579 during the period between 27 January and 24 February, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China*. During the period between 24 June and 23 July, a drought engulfed Shansi (now Shanxi province) in northern *China* at An-tsê.<sup>153</sup>

In 1579 during the spring and summer, there was a drought in Fuhkien and Shansi provinces in *China*. In Fuhkien, this was a great drought.<sup>165</sup>

In 1579, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing. The floods resulted in a famine.

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsin-hui. The floods were caused by heavy and protracted rains.

— Kweichow (now Guizhou province) in southwestern *China* at Wu-ch'uan.

— During the period between 25 May and 23 June, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Pei-liu. The city walls and houses were damaged by the floodwaters and over 20 people drowned.

— During the period between 24 July and 21 August, floods struck Shansi (now Shanxi province) in northern *China* at Chao-ch'êng. The city walls were damaged by the floodwaters.

---

**1580 A.D.** Around 1580, there was an inundation caused by the discharge of a flood of water from Pendle Hill in Lancashire, *England*.<sup>212</sup>

During the winter of 1580, there was a very intense frost [in *England*].<sup>212</sup>

The summer of 1580 was hot in southern *France*.<sup>79</sup>

The years 1580 and 1581 in southern *France* were marked by storms and floods.<sup>79</sup>

Thunderstorms or rainstorms desolated Provence, *France* in 1580.<sup>79</sup>

**1581 A.D.** In 1581, *Persia* was desolated by famine and plague.<sup>72,91</sup> [*Persia* during this period of time, under the Safavid dynasty was at its height, and controlled all of modern *Iran*, *Azerbaijan* and *Armenia*, most of *Iraq*, *Georgia*, *Afghanistan*, and the *Caucasus*, as well as parts of *Pakistan*, *Turkmenistan* and *Turkey*.]

The summer of 1581 was hot in southern *France*.<sup>79</sup>

The years 1580 and 1581 in southern *France* were marked by storms and floods.<sup>79</sup>

Thunderstorms or rainstorms desolated Provence, *France* in 1581.<sup>79</sup>

On 1 November 1581 in Kent, *England*, and the marshes of Essex, there was a sore plague of strange mice, suddenly covering the earth, and gnawing the grass roots. This poisoned all the field herbage for it raised the plague of murrain among cattle grazing on it. No wit, nor art of man could destroy the mice, till another strange flight of owls came and killed them all.<sup>72</sup>

On 21 December 1581, the river went dry at Alrewas, Staffordshire, *England*. The water of the River Trent dried up, and suddenly fallen so ebb, that a vicar went over into the hall meadow in a low pair of shoes, about 4 o'clock in the afternoon; and so it was never in the remembrance of any man then living at that time in the droughtiest year that any man had known, and the same water in the morning before was bankfull [from bank to bank], which was very strange.<sup>212</sup>

In 1581, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. This drought was accompanied by a plague of locust. Also during the same year, floods struck Chekiang province at Chia-hsing and Hu-chou. During the period between 30 July and 28 August, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Fu-an.<sup>153</sup>

In 1581, there was a drought in Chêhkiang province in *China*. The drought was accompanied by a plague of locusts.<sup>165</sup>

### **1582 A.D. – 1589 A.D. Ireland. Famine**

[There was a great famine in *Ireland* that was caused not by the weather but by the actions of man. During the war in Ireland between Earl of Desmond and Queen Elizabeth I, the English used scorched earth warfare on *Ireland* and its people. This resulted in a very great famine. In April 1582, the provost marshal of Munster, Sir Warham St. Leger, estimated that 30,000 people had died of famine in the previous six months. People continued to die of famine and plague long after the war had ended, and it is estimated that by 1589 one third of the province's population had died.

Hollinshed wrote “whosoever did travel from one end of Munster to the other, even from Waterford to the head of Smerwick, which is about six score miles, he should not meet any man, woman or child, nor yet see any beasts; but the very wolves, the foxes, and other like ravening beast.”

The Gaelic Annals of the Four Masters described how “the whole tract of country from Waterford to Lothra, and from Cnamhchoill to the county of Kilkenny, was suffered to remain one surface of weeds and

waste... *At this period it was commonly said, that the lowing of a cow, or the whistle of the ploughboy, could scarcely be heard from Dun-Caoimh to Cashel in Munster.*”

The English poet Edmund Spenser, who was an eyewitness to the distress of the time, says that the famine slew far more than the sword, and that the survivors were unable to walk. They were so weak that they could only crawled out of the woods and glens. He wrote in the *View of the Present State of Ireland*: “*In those late wars in Munster; for notwithstanding that the same was a most rich and plentiful country, full of corn and cattle, that you would have thought they could have been able to stand long, yet ere one year and a half they were brought to such wretchedness, as that any stony heart would have rued the same. Out of every corner of the wood and glens they came creeping forth upon their hands, for their legs could not bear them; they looked Anatomies [of] death, they spoke like ghosts, crying out of their graves; they did eat of the carrions, happy where they could find them, yea, and one another soon after, in so much as the very carcasses they spared not to scrape out of their graves; and if they found a plot of water-cresses or shamrocks, there they flocked as to a feast for the time, yet not able long to continue therewithal; that in a short space there were none almost left, and a most populous and plentiful country suddenly left void of man or beast.*”<sup>84</sup>

There was a famine not necessarily weather related. In *Ireland* in 1586, there was an extreme famine, which was caused by the wars of Desmond. Human flesh said to have been eaten. Also in *England*.<sup>57, 91</sup>

During 1588 and 1589 in *Ireland*, there was a great famine period, “when one did eate another for hunger.”<sup>57, 91</sup>

**1582 A.D.** In *England* on 12 August rose a great tempest in Norfolk of thunder lightning, whirlwind, rain and hailstones like spur rowels, two or three inches about. It laid corn [grain] flat on the ground, tore up and shivered in pieces or twisted like a withy [a long flexible stem used in thatching]. Many trees and houses were blown down. Churches were damaged. This storm did inexpressible damage to shipping.<sup>72</sup>

[In *England*] on 29 December, there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1582, many regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Ch’ü.

— Kiangsi (now Jiangxi province) in southern *China* at Kao-an.

— Hupeh (now Hubei province) in central *China* at Chung-hsiang and Ch’ien-chiang.

— During the period between 22 May and 19 June, floods struck Kweichow (now Guizhou province) in southwestern *China* at P’u-ting.

— During the period between 19 July and 17 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang.

— During the period between 19 July and 17 August, floods also struck Kiangsu province at Wu-chiang, Ch’ang-shou, Ch’ung-ming and Chia-ting. Thousands of houses were damaged by the floodwaters and thousands of people and cattle drowned.

In 1582, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Wên-hsi; Shensi (now Shaanxi province) in central *China* at Sian and Lin-ch’ing [uncertain name]; and Hupeh (now Hubei province) in central *China* at An-lu.<sup>153</sup>

In 1582, there was a great drought in Hupeh, Shansi and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shensi.<sup>165</sup>

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

**1583 A.D.** In *England*, the summer was excessively hot and dry.<sup>47, 72</sup>

The summer of 1583 was hot and dry in *England*. In *Dijon, France*, the grape harvest was early on 13 September.<sup>62</sup>

The summer of 1583 was hot in southern *France*.<sup>79</sup>

In 1583, floodwaters of Rhône River knocked over the ramparts [city walls] of Arles in southern *France* and the Camargue [river delta] flooded.<sup>79</sup>

In *England*, this summer was excessively dry and hot near the end of the season.<sup>72</sup>

In 1583, a drought engulfed Shansi (now Shanxi province) in northern *China*. Then during the period between 20 June and 18 July, floods struck Szechwan (now Sichuan province) in southwest *China* at Hsüan-han. Over 200 families were flooded.<sup>153</sup>

In 1583, there was a drought in Shansi province in *China*. The rivers dried up.<sup>165</sup>

In 1583 during the 7<sup>th</sup> moon on the 13<sup>th</sup> day, a storm struck in the vicinity of Shanghai, *China*. The dikes gave way in a storm of wind and rain of twenty-four hours duration. Innumerable men and animals were destroyed. Also the crops were lost as a consequence. This was followed by famine. During the 10<sup>th</sup> moon on the 13<sup>th</sup> day, there was a storm with a violent northwest wind; vessels capsized in the river.<sup>166</sup>

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

---

**1584 A.D.** In *England*, there was a great hailstorm, “stones 8 or 9 inches about.”<sup>57, 72, 93</sup>

On 24 July 1584, on the Feast day of St. James, in *Chester, England*, there was a storm of thunder, lightning, hail, and rain, which raged from noon till midnight. The streets were flooded and the cellars filled with water. Great harm was done to the mills. Much hay and corn [grain] was destroyed. Many glass windows were broken by the hailstones; being five inches [13 centimeters] in compass [circumference]. “Many men and cattle were slain by the Light’s bolt [lightning bolt] in divers’ [diverse] places.”<sup>212</sup>

The winter of 1584 was severe in *Germany*.<sup>62</sup>

In 1584, a powerful cyclone struck Backerganj, *Bangladesh* causing 200,000 deaths.<sup>98</sup>

In 1584, a severe drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts’ang-wu. Then during the period between 8 June and 7 July, floods struck Kweichow (now Guizhou province) in southwestern *China* at Tu-chün.<sup>153</sup>

In 1584 during the autumn, there was a great drought in Kwangsi province in *China*. As a result, the land tax was remitted.<sup>165</sup>

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

---

**1585 A.D.** In *Europe*, the winter was so mild that the grain remained in the ears all the way to Easter.<sup>62</sup>

In 1585, there was a scarcity of wheat in *England*. On May 6<sup>th</sup> at *Chester, England*, wheat sold for 24 shillings per bushel; barley for 14 shillings. On September 2<sup>nd</sup>, there was a great fall in prices. Wheat fell

to 9 shillings and barley to 4 shillings.<sup>212</sup>

In 1585, a plague struck Boston in Lincolnshire, *England*.<sup>212</sup>

In 1585, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing. During the same time period, floods caused by heavy and protracted rains struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ung-shan and as a result, thousands of people and cattle drowned.<sup>153</sup>

In 1585, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên. During the period between 6 May and 8 August, a drought engulfed Shansi province at Kuang-ling.<sup>153</sup>

In 1585 during the summer, there was a great drought in Shensi province in *China*. As a result, the land tax was remitted.<sup>165</sup>

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

---

**1586 A.D.** In the year 1586 in *England*, in the 26<sup>th</sup> year of Queen Elizabeth about January, Her Majesty observing the general dearth of grain and other food, caused partly through the unseasonableness of the weather during the past year and partly through the uncharitable greediness of the grain masters, but especially through the unlawful transporting grain to foreign lands; by the advice of Her most Honorable Privy Council, published a Proclamation and a Book of Orders to be taken by the Justices for relief of the poor [commencement of the poor law] notwithstanding all which the excessive prices of grain still increased: so that wheat in meal was sold at London for 8s. the bushel, and in some other parts of the Realm above that price.<sup>57</sup>

[In *England*] in 1586, there was a famine until the harvest in 1587. Dearth in *England* and *Hungary*.<sup>72</sup>

On 29 November 1586, a violent gale struck Beecles [Beccles] in Suffolk, *England*. On the same day, there was a severe frost and the river became hard frozen.<sup>212</sup>

In 1586, a plague struck Chesterfield and Derby, *England*.<sup>212</sup>

[It rained locust in Thracia [*Thrace*] and ducks and geese in *Croatia*. The locust fell in such multitudes, that they drowned all grains and greens. But the fowls came seasonably to feed many.]<sup>72</sup>

In 1586, the loss of two 120-ton Spanish ships was attributed to a hurricane in the *Bahama Channel*. Six or seven other ships were lost, including the *San Juan*, 120-ton. [The Old Bahama Channel is a strait off the northern coast of Cuba and the Sabana-Camagüey Archipelago and south of the Great Bahama Bank. It is approximately 100 miles (161 kilometers) long and 15 miles (24 kilometers) wide.]<sup>141</sup>

In the end of September in *England*, there was a great destructive hurricane. This year till the next years harvest, there was a great dearth in *England*. Wheat sold at 2l. 1s. 4d. per Quarter [quarter ton]. Rye at 2l. 2s. 8d. and malt at 1l. 14s. 4d. There was a grievous dearth in *Hungary*.<sup>72</sup>

There was a famine in *Hungary*.<sup>57, 91</sup>

In 1586, several regions of *China* experienced flooding including:<sup>153</sup>

— Hupeh (now Hubei province) in central *China* at Mien-yang.

— During the period between 19 April and 17 May, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Huai-chi.

— During the period between 15 August and 12 September, floods struck Kwangsi province at Po-pai, Ts'ang-wu, T'êng, Yü-lin and Pei-liu. At Ts'ang-wu, houses and crops were damaged by the floodwaters and 816 families were flooded. At T'êng, 240 families were flooded.

In 1586, a severe drought engulfed Shansi (now Shanxi province) in northern *China*; Honan (now Henan province) in central *China* at Chi; and Shensi (now Shaanxi province) in central *China* at Sian. During the same year, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1586, there was a great drought in Fuhkien, Honan, Shansi and Shensi provinces in *China*.<sup>165</sup>

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

---

**1587 A.D.** There was an exceedingly cold and late spring in *England*. Summer and harvest time were very backwards; yet it was a year of plenty. September was intensely cold, white frost, boisterous north winds, hail, snow, and sleet; yet no bad harvest.<sup>72</sup>

During October and November 1587, a plague struck Chesterfield, *England*. It carried off whole households. There was a great scarcity of corn [grain].<sup>212</sup>

In 1587, a great flood at Derby, *England*, broke apart St. Mary's Bridge and several mills.<sup>212</sup>

The *Belgians* groaned under a terrible plague and famine. For the inhabitants of great towns and villages in Flanders [now *Belgium*] were either slain in war, dead of the plague or starved with hunger. All the country was waste, so that wolves and wild beasts stabled in the houses. These animals had become so numerous that they killed and tore in pieces, not only cattle, but also men, women and children. Dogs with hunger and madness ran up and down the country biting and killing cattle and one another. So great the desolation that neither fences nor walls were distinguishable from the rising ground. Nor could land be known by their owners. All were grown over with shrubs and bushes. Inconceivably great was the famine at Antwerp, Brussels, Bruges, etc. Honest, decent people begged from door to door in disguise. The vulgar and poor ate bones, excrements, etc. In Holland [now *the Netherlands*], and the united provinces, their navigation and shipping saved them. Multitudes of people flocked thither.<sup>72</sup>

The summer of 1587 was hot in southern *France*.<sup>79</sup>

In 1587, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing and Ningpo; Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang; and Hupeh (now Hubei province) in central *China* at Wuchang. At Nan-ch'ang, the floods caused a famine. During the same year, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1587, there was a great drought in Fuhkien province in *China*.<sup>165</sup>

In 1587 during the second moon, there was a fall of yellow sand in the vicinity of Shanghai, *China*. All who ate of the vegetables on which it fell, died.<sup>166</sup> [Generally this is a marker for deep magma volcanic event. Hydrogen fluoride is one of the gases released by massive flood volcanic eruptions. Fluorine is a pale yellow gas that in relatively low concentrations is very toxic. Fluorine attached itself to fine volcanic ash particles. This ash flung high into the atmosphere and spread by the prevailing winds eventually fell back to Earth and coated the skin of edible plants. Animals that ate these plants died. Even in areas that received as little as a millimeter of this ash (a fluorine content exceeding 250 parts-per-million (ppm)), poisoning occurred. Fluorine is very reactive and generally forms soluble fluorine salts. Rainfall dissolved and flushed these salts into rivers, streams and lakes, poisoning surface water supplies.]

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

---

**1588 A.D.** On 24 January 1588, a very dense fog rose over the city of Paris, *France* and its neighborhood. The fog lasted from noon until the next day. “It was so black and thick that two persons walking together in the streets could not see each other, and were compelled to provide themselves with torches, in order to recognize one another, when it was not yet three o’clock [in the afternoon]. Very many wild geese, and other flying creatures of the air, were found where they had fallen bewildered in the courtyards of the houses, having dashed themselves against the buildings and chimneys.”<sup>205</sup>

On 30 May 1588, there was a gale on the southern coast of *England*, which disabled many ships of the Spanish Armada.<sup>212</sup>

In 1588, there was a plague at Boston in Lincolnshire, *England*.<sup>212</sup>

In 1588, a hurricane struck Roanoke Island in North Carolina in the *United States* causing less than 116 deaths. [Hunter hypothesizes that most of the settlers of Roanoke Island were killed by a hurricane. He indicates that of 116 people on the island in 1587, some returned to England before the storm and a few of the settlers survived the storm.]<sup>141</sup>

In 1588, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-yün, Chia-hsing and Hsiao-shan. At Hsiao-shan, the floods caused a famine. During the same year, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang; and Hupeh (now Hubei province) in central *China* at Mien-yang, Huang-kang and Hanyang. Also during the year, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Kiukiang and Yunnan province in southwest *China* at Ch’u-hsiung.<sup>153</sup>

In 1588, there was a great drought in Hupeh, Kiangsi, Kiangsu and Yünnan provinces in *China*.<sup>165</sup>

In 1588 during the summer and autumn in the vicinity of Shanghai, *China*, there were storms of strange thunder and typhoon. The rice, wheat, and beans were broken down.<sup>166</sup>

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

---

**1589 A.D.** In London, *England*, on the 18<sup>th</sup> of February and on the 1<sup>st</sup> of August, there were severe hailstorms.<sup>57, 72, 93</sup>

In 1589, an Atlantic hurricane off Florida and the eastern coast of the *United States* caused a ship of the fleet commanded by Perez de Olesbal to be wrecked. Forty of her crew was rescued.<sup>141</sup>

On approximately 9 September 1589, four ships were struck by a hurricane and sunk in the *Bahama Channel*. Two of the ships were the *Santa Catalina* and the *Jesus Maria*, 350 and 400 tons respectively. [The Old Bahama Channel is a strait off the northern coast of Cuba and the Sabana-Camagüey Archipelago and south of the Great Bahama Bank. It is approximately 100 miles (161 kilometers) long and 15 miles (24 kilometers) wide.]<sup>141</sup>

In September 1589, a four-day storm [hurricane] struck the *Bahama Channel*. On the first day alone, the sea swallowed up a total of ten ships.<sup>141</sup>

The cold winter of 1589 was so harsh that it completely froze the Rhône River. Mules, carriages, carts, all crossed in Tarascon in southern *France* like on a highway. Colonel Alfonsey even crossed the ice two

or three times with the guns [cannons]. Marshall Montmorency then crossed with his company of gendarmes.<sup>79</sup>

In 1589, a drought engulfed several regions of *China* including:<sup>153</sup>

- Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Sung-chiang.
- Shansi (now Shanxi province) in northern *China* at An-i. This drought was severe.
- Hupeh (now Hubei province) in central *China* at Huang-kang. This drought was severe.
- Kiangsu province at Hsing-hua. This drought was severe.
- During the period between 5 February and 6 May, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Lin-ch'uan, Yung-hsiu, I-ch'un, C'ing-chiang and Kao-an. These droughts led to a famine.

In 1589 during the spring, there was a great drought in Fuhkien, Hupeh, Kiangsi, Kiangsu and Shansi provinces in *China*.<sup>165</sup>

In 1589 during the spring, there was a drought in the vicinity of Shanghai, *China*. In this year, there was a famine. People ate bran, roots of grass and leaves of trees. Many people drowned themselves.<sup>166</sup>

In 1589 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a storm of great wind; trees were torn up and grain injured.<sup>166</sup>

*Also refer to the section 1582 A.D. – 1589 A.D. for information on the famine in Ireland during that timeframe.*

**1590 A.D.** In *England*, there was a drought all the year, and excessive heat.<sup>47, 72</sup>

A very strong heat and drought prevailed in 1590 in the temperate climate zones of *Europe*. In *Germany*, there was a lack of hay, rowen and vegetables. But wine was available. [The heat wave] caused numerous fires in *Germany*. In Thuringia, *Germany*, many cities and villages were destroyed by fires. In many places the forest fire started and burned, especially in the *Bohemian* mountains [now in the *Czech Republic*]. On 30 July, a fire was ignited in the vicinity of Vienna, *Austria* by the action of sunlight on the hay wagon, which then traveled into a dairy. The grape harvest began in Dijon, *France* on 10 September, i.e. 14 days earlier than the mean. This is the earliest time since year 1556.<sup>62</sup>

In *England*, there was a great drought through the whole year; so that corn was thin; wheat small; hay very little; herbs, peas and beans very few; little wine. [Because of the dryness] there were many fires in the Nation. In the area of Thuringia in *Germany*, towns and villages were burnt up; woods in many places took fire and were consumed; especially on the mountains of Bohemia. On 30 July, carts bringing hay home from the fields in Vienna, *Austria* were set on fire and burnt by the sun.<sup>72</sup>

In *England* in September, there was hail, with thunder and snow.<sup>57, 72, 93</sup>

In 1590 it rained all winter in *Italy*.<sup>72</sup>

In early November 1590, a hurricane struck the *Gulf of Mexico*. More than 1,000 were killed.<sup>141</sup>

In 1590, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Hsing-hua and Chekiang (now Zhejiang province) on the east coast of *China* at Taichow. During the same year, a drought engulfed Yunnan province in southwest *China* at Ch'êng-chiang. During the period between 30 August and 28 September, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1590 during the spring, summer and autumn, there was a drought in Chêhkiang, Fuhkien and Yünnan provinces in *China*. In Chêhkiang, this was a great drought.<sup>165</sup>

In 1590, there was no rain from fifth to seventh month in the vicinity of Shanghai, *China*. The Mau Lake was dry. The drought produced a famine.<sup>166</sup>

In 1590 during the 6<sup>th</sup> moon on the 18<sup>th</sup> day, in the vicinity of Shanghai, *China*, there was an unusual summer snowstorm. During the night, snow fell from midst of the moon, like the fine flowers of the willow, or shreds of silk. Taken in the hand, these snowflakes were all found to be hexagonal. [This may be one of the earliest historical accounts of a diamond dust ice fall]<sup>166</sup>

In 1590 in the vicinity of Shanghai, *China*, there was an overflow of the sea, destroying several thousand houses, drowning innumerable animals and more than 10,000 people. The survivors were attending to the interment of those who perished, when there was a false alarm that the Japanese were invading. This caused a panic and all fled to Shanghai city. In the process, several thousand people were trampled to death.<sup>166</sup>

---

**1591 A.D.** During the winter in the year 1591 in *Provence*, there was an abundance of snow, and the fruit trees were damaged by the cold. When the Leaguers tried to attack the city of St. Denis, *France* [now a suburb of Paris] on January 3<sup>rd</sup> [the city walls protected by a broad moat]; it was very cold and the moat was frozen to the ground. [This allowed the attackers entry into the city.]<sup>162</sup>

In 1591, there was a drought in *England*. In spring, an uncommon drought struck Nottinghamshire. The summer produced strong west winds with little rainfall. The River Trent and other rivers were almost without water. The River Thames was so dried up that a man might ride over it on horseback near London Bridge.<sup>212</sup>

A plague struck Derby, *England*. It began in October 1592 and ended in October 1593. It was dispersed in every corner of the parish and there was not two houses together [next to each other] free of it.<sup>212</sup>

In *Italy* in 1591, there was a famine.<sup>57, 72, 91</sup>

In 1591 a sore famine afflicted all *Italy*, till it was relieved with corn [grain] imported from Denmark, Holface, etc. Then it fell from 34 to 14 per measure. The dearth of *Italy* in 1591 forced multitudes to feed on herbs, roots and bread made of them; as of arum and earth nuts, fern roots; hence came the malignant fever in 1592.<sup>72</sup>

On 17 July 1591, a fleet of seventy-seven sail [sailing ships] left Havannah [Havana, *Cuba*] for *Spain*: the smallest vessel in the fleet was 200 tons burthen, and the largest 1000. About the 10<sup>th</sup> of August, in latitude 35°, in a gale of wind from the north, the general of the fleet, with 500 men on board, foundered; and three or four days afterwards, in another gale, five or six of the largest ships were lost with all their crews and the vice-admiral. About the end of August, in latitude 38°, they experienced another gale, during which twenty-two sail perished. Upon the 6<sup>th</sup> of September, the remaining forty-eight arrived within sight of Flores, where they were separated by another gale: so that of 123 sail [sailing ships] that were expected in *Spain* this year from the *West Indies*, but twenty-five arrived. Seven were taken by the English off the *Azores*, and nineteen, with 2600 men on board, were wrecked on the coast of New Spain, upon their voyage to the Havannah.<sup>145</sup> [The island of Flores is the westernmost point of the *Azores Archipelago* and of the European continent. New Spain is the Spanish colonial empire of North America, whose capital was Mexico City, *Mexico*.] [From this account it appears approximately 91 Spanish ships were lost in storms and hurricanes in the Caribbean, Atlantic Ocean and off the *Azores* during the summer of 1591. The deaths of the crew and passengers might be around 13,000 individuals.]

On 10 August 1591, a hurricane struck the *Atlantic Ocean* causing 501 deaths.<sup>141</sup>

In mid-August 1591 in the *Atlantic Ocean*, five or six of a group's largest ships and all their crews were lost [due to a hurricane].<sup>141</sup>

Near the end of August 1591, twenty-two vessels perished in the *Atlantic Ocean* from a storm [hurricane]. These ships were returning from Bermuda after 24 August.<sup>141</sup>

During the end of August 1591, "over a hundred ships, galleons and merchant ships were wrecked, their crews drowned, their riches lost" from a hurricane off the *Azores*.<sup>141</sup>

In 1591, encountering storms [hurricanes], "29 ships were lost, many on Florida's coast" of the *United States*.<sup>141</sup>

In 1591, Spanish ships were lost in the *Atlantic Ocean* or *Caribbean Sea* [due to storms].<sup>141</sup>

In 1591, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Yüeh-ch'ing.

— Hupeh (now Hubei province) in central *China* at Han-ch'uan, Chung-hsiang, Ch'ien-chiang and Mien-yang.

— During the period between 25 March and 22 April, floods struck Shansi (now Shanxi province) in northern *China*. The floods caused a famine.

In 1591, a drought engulfed Yunnan province in southwest *China* at Ch'êng-chiang. During the period between 6 May and 8 August, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1591 during the summer, there was a drought in Fuhkien and Yünnan provinces in *China*. In Fuhkien, this was a great drought.<sup>165</sup>

In 1591, in the vicinity of Shanghai, *China*, there was a famine and an epidemic.<sup>166</sup>

---

**1592 A.D.** In *England*, there was an extreme drought and want of water.<sup>47, 72</sup>

In *England*, there was an excessive drought and a great death of cattle from want of water. Springs and brooks were dried up. Horsemen could ride the River Thames at London.<sup>72</sup>

In June, the River Thames, in *England* was dry at London-bridge and many people passed and repassed on the riverbed.<sup>40</sup>

The drought continued in *England* into the year 1592. The River Trent and other rivers were almost dried up. In the River Thames, the water was so low that a man might ride over it on horseback near London Bridge.<sup>212</sup>

On 6 September 1592, the wind being southwest as it had been for 2 days before and very boisterous, the River Thames [in London, *England*] was made void of water, by forcing out the fresh [water] and keeping back the salt [water]. As a result, men in diverse places might go 200 paces over the [dried river bank] and fling a stone to land [on the opposite bank].<sup>225</sup>

The winter was so cold in *Austria* that wolves entered Vienna and attacked men and beast.<sup>28</sup>

In 1592 during the 10<sup>th</sup> moon [early winter], there was a storm of thunder, lightning and hail in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1593 A.D.** In 1593, floods struck Yunnan province in southwest *China* at Yao-an. In the same year, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Yüeh-ch'ing and Szechwan (now Sichuan province) in southwest *China* at Hsü-yung. At Yüeh-ch'ing, the drought led to a famine.<sup>153</sup>

In 1593, there was a drought in Chêhkiang and Kweichow provinces in *China*.<sup>165</sup>

In 1593, the plague continued in *England*. At Lichfield in Staffordshire, eleven hundred people perished. It also struck Canterbury.<sup>212</sup>

On 21 March 1593, there was a great gale in *England*. At Alrewas in Staffordshire, *England* “This yeare was an exceeding great tempest of winde, which continued all the daye longe, and did great hurte in many places, in blowing down of steeples, dwellinghouses, barnes, trees innumerable in every place. Within the parish there weare seven barnes overthrowen. In Lichfield the toppes of the steeples of St. Michael and St. Marie’s were blowen downe, which hurt the churche and chancel, and houses.”<sup>212</sup>

On 15 June 1593 very early in the morning [in *Germany*] a great storm with thunder and lightning arose. It caused 6 fires. In the afternoon hailstones fell that were the size of goose eggs. Many were formed in wonderful ways. Some looked like human heads, others looked like grapes together and others were round like apples. The hailstones were so hard they could not be broken in half. Hailstones fell that killed people, livestock and everything on the field. The tile roofs of the castle, church and town hall were completely shattered.<sup>172</sup>

---

**1594 A.D.** In *England* during the 36<sup>th</sup> year of Queen Elizabeth’s reign “In May fell many great showers of raine, but in June and July much more, for it commonly rained day and night till St. James’s eve; and on St. James’s day in the afternoon it began again, and continued for two days together. Notwithstanding there followed a fair harvest. But in September great raines rayseed high waters, such as stayed the carriages, and bore down bridges, as at Cambridge, Ware, and elsewhere. Also graine grew to be a great price – a bushel of wheat at 6s., 7s., 8s., etc., which dearth happened more through the merchants’ overmuch transporting than the unseasonableness of the weather past.”<sup>47</sup>

In 1594 in *England*, there were floods in Surrey, Cambridgeshire and Hertfordshire.<sup>92</sup>

On 11 May, there were great floods at Surry, England caused by rain and hail. In September, there were great floods at Cambridge.

On 21 March 1594, there was a terrible tempest, hurricane and most destructive effects on trees and forest in *England*. On 11 April, there was an excessive rain, great floods and losses. In May and all summer and harvest time (except August), there were great rains and land floods. Corn [grain] was very dear.<sup>57, 72</sup>

In 1594, there was a dearth [in *England*] due to rain from the beginning of May to 25 July.<sup>212</sup>

In 1594 in *England* and *Hungary*, there was a famine.<sup>72, 91</sup> During the siege of Paris, *France*, by King Henry IV, owing to the famine, bread which had been sold, while any remained for a crown a pound, was at last made from the bones of the charnel-house of the Holy Innocents [bones of dead children].<sup>57</sup>

In 1594, ships were lost in the *Caribbean Sea* [due to storms].<sup>141</sup>

In 1594, floods struck Shansi (now Shanxi province) in northern *China* at Kao-p'ing. During the period between 8 August and 8 November, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Huai-chi.<sup>153</sup>

In 1594 during the autumn, there was a drought in Kwangsi province in *China*.<sup>165</sup>

---

**Winter of 1594 / 1595 A.D.** *Europe* experienced a cold winter. The Lagoons of Venice froze and didn't thaw until February 1595.<sup>28</sup>

In 1594 in *Italy*, the Port of Venice was frozen.<sup>58, 80</sup>

In 1594 A.D., the sea at Marseilles, *France* and Venice, *Italy* froze.<sup>38, 60</sup>

In 1594, the sea froze on the coast of Marseille, *France*.<sup>79</sup>

In 1594, the Rhine River in *Germany*, the Po River in *Italy* were frozen as well as the sea at Marseilles, *France* and Venice, *Italy*.<sup>62</sup>

In *Europe*, the Rhine and Scheldt Rivers, and the *Adriatic Sea* at Venice froze.<sup>47, 90, 93</sup>

In 1594, the rivers of *Northern Europe* were frozen before Christmas. The Cattegat froze, together with a large part of the *Baltic Sea*. The Sea of Venice froze so that during three weeks no boats could be used. The Tiber River froze at Rome, *Italy* and men crossed it on the ice, a thing never known before or since.<sup>63</sup>

The extreme cold of the winter of 1594-95 began on 23 December 1594. The cold weather began again on 13 April 1595, which was as cold as Christmas, 1594. This period brought about many sudden deaths in Paris, *France* "particularly in young children and women". The Rhine River in *Germany*, the Po River in *Italy* and the lagoons of Venice were all frozen.<sup>62</sup>

During the winter of 1594-95, the severe cold broke on December 23. The extreme frost resumed April 13, 1595. On that day it froze as strongly as the day preceding Christmas, the sea on the coast of Marseille, *France*.<sup>79</sup>

---

**1595 A.D.** In *Germany*, there were considerable floods.<sup>47, 92</sup> The floods occurred in February and flooded all *Germany*.<sup>72</sup>

In 1595 in Holland [now *the Netherlands*], *Guelderland*, the tract of the Rhine, *Austria*, Bohemia [now western *Czech Republic*], *Saxony*, *Silesia* and other parts of *Germany*, were shocking and extraordinary floods, which overturned many villages, and made terrible slaughter of many cattle and people.<sup>72</sup> [Guelderland is now located in east-central *Netherlands*.]

In 1595 and 1596 in *England*, there was great scarcity and dearth with profound shocking rains and great floods. There raged a sore famine over all *Italy*, which reached *Germany* that forced people to eat uncommon and unwholesome food, such as green hedge crabs, mushrooms, dogs, cats, reptiles and etc.<sup>72</sup>

In 1595, there was a plague at Canterbury in *England*.<sup>212</sup>

In 1595-96 in *Italy*, *Germany*, etc. there was a famine.<sup>57, 72, 91</sup>

There was so great a famine among the Turks in *Hungary* from 1595-97, that the Tartar women who followed the camp were forced to roast their own children and eat them. There was a great dearth in *England* and *Hungary* during these three years.<sup>72</sup>

In *England* in 1595, during the 36<sup>th</sup> year of Queen Elizabeth's reign – Since grain has lately been transported to foreign lands; grain in *England* has grown to exorbitant prices. In some parts of the realm it has risen from 14s. to 4 marks the quarter ton. This is having a dire effect on the poor. And likewise all other things made to sustain man have also increased in price, without conscious and reason. To remedy this condition, our merchants have imported much rye and wheat from Danshe [Gdańsk, *Poland*]. Because these food was scarce, and even though the quality was not the best, yet it served our need in the extreme condition that we find ourselves in. Some apprentices and other young people about the city of London, without as much food as they are accustomed to, took butter from the market folks in Southwark, paying only 3d. when the owners could not afford to sell it under 5d. per pound. For this disorder, the said young men were punished on the 27<sup>th</sup> of June by whipping, setting on the pillory and long imprisonment.<sup>57</sup>

In Holland [now *the Netherlands*] and *Germany*, there was a tempest and also one at Worcester, *England* with hail.<sup>72</sup>

In 1595, floods struck Yunnan province in southwest *China* at Yao-an. During the same year, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-chin. During the period between 8 August and 8 November, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*.<sup>153</sup>

In 1595 during the autumn, there was a drought in Kwangsi and Shansi provinces in *China*. In Shansi, this was a great drought.<sup>165</sup>

---

**1596 A.D.** In *England*, there were floods all summer.<sup>47, 72, 92</sup>

In Wells, *England* in December, there was a great hailstorm.<sup>57, 72, 93</sup>

In 1595 and 1596 in *England*, there was great scarcity and dearth with profound shocking rains and great floods. There raged a sore famine over all *Italy*, which reached *Germany* that forced people to eat uncommon and unwholesome food, such as green hedge crabs, mushrooms, dogs, cats, reptiles and etc.<sup>72</sup>

In 1596, wheat was very dear [scarce] in *England*. At Chester, wheat sold for 40 shillings per bushel and barley for 31 shillings.<sup>212</sup>

In 1596 [in *England*], there was a tempest and famine.<sup>72</sup>

The winter of 1596 [in *Europe*] was unusual because "The nature of the weather was sultry, cloudy and rainy; for we had this year the summer in April, the autumn in May and the winter in June."<sup>62</sup>

The weather in 1596 was unstable, unfriendly and rainy. It seemed that year consisted of summer in April, fall in May and winter in June. The grape harvest in Burgundy, *France* took place very late on 4 October.<sup>62</sup>

The summer of 1596 was hot in southern *France*.<sup>79</sup>

The winter of 1596 was very rainy in northern *France*. The Marne River covered one third of the town of Lagny.<sup>79</sup>

In 1596, there was a famine in *Central India*, which extended over the whole in *Asia*.<sup>156</sup>

— In 1596 “there was a scarcity of rain throughout the whole of Hindustan, and a fearful famine raged continuously for three or four years. The king ordered that alms should be distributed in all the cities; and Nawab Sheikh Farid Bokhari being ordered to superintend and control the distribution, did all in his power to relieve the general distress of the people. Public tables were spread, and the army was increased in order to afford maintenance to the poor people. A kind of plague also added to the horrors of the period, and depopulated whole houses and cities, to say nothing of hamlets and villages. In consequence of the dearth of grain, and the necessities of ravenous hunger, men ate their own kind. The streets and roads were blocked up by dead bodies, and no assistance could be rendered for their removal.”

In 1596 A.D., during the 41<sup>st</sup> year of Akbar’s reign [Akbar the Great], there was a famine in Delhi and its neighborhood in *India*. During this famine, Emperor Akbar sent officers in every direction to supply food every day to the poor and destitute and had also public tables opened at various centers of distress.<sup>179</sup>

In 1596, several regions of *China* experienced flooding including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing, Hu-chou and Ningpo.

— During the period between 27 May and 25 June, floods struck Kweichow (now Guizhou province) in southwestern *China* at An-shun.

— During the period between 24 August and 21 September, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ho. Pools overflowed.

In 1596, a severe drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hai-k’ang. During the period between 6 May and 8 August, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên. During the period between 22 September and 20 October, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hu-chou.<sup>153</sup>

In 1596 during the summer and autumn, there was a great drought in Chêhkiang, Kwangtung and Shansi provinces in *China*.<sup>165</sup>

**1597 A.D.** In 1597 and 1598, the plague ravaged Penrith in Cumbria, *England*. In 15 months, 2,260 persons perished.<sup>212</sup>

**Winter of 1597 / 1598 A.D.** In *England*, there was a very severe frost in January.<sup>47, 93</sup>

In *England* in 1598, there was a frost from 1-10 January.<sup>72</sup>

This winter was memorable in *Germany*.<sup>62</sup>

**1598 A.D.** [In *England*] on 26 March, there was a terrible storm of thunder and lightning.<sup>72</sup>

In *England*, there was a very great drought with flies and gnats.<sup>47, 72</sup>

In *England*, the summer was excessive heat and drought. Swarms of fleas, flies and gnats abound. Armenian apples were very plentiful.<sup>72</sup>

The summer of 1598 was extremely hot and dry in *England*. In Dijon, *France*, the grape harvest fell on 23 September.<sup>62</sup>

In Rome, *Italy*, there were considerable floods.<sup>47, 92</sup> in December.<sup>72</sup>

In Pegu [now Bago in lower *Myanmar/Burma*] in 1598, there was a very severe famine.<sup>57, 72, 91</sup>

[There was a famine not attributed to weather. In Pegu [*Myanmar*], one of the richest and fruitfulest countries of the world, yet it metropolis, lately replenished with millions of inhabitants, was wasted by a terrible famine from war. There were scarce 7,000 men, women, and children left alive. The inhabitants fed on human flesh. Parents ate children and children ate parents. The stronger ate up the weaker.<sup>72</sup>]

In 1598, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü, Shao-hsing, Chin-hua and Taichow. During the same year, floods struck Chekiang province at Chien-tê. During the period between 8 August and 8 November, floods struck Shensi (now Shaanxi province) in central *China* at Fu-shih where many people and cattle drowned.<sup>153</sup>

In 1598, there was a great drought in Chêhkiang province in *China*.<sup>165</sup>

**1599 A.D.** In *England*, it was cold and dry during the months of April and May; and dry and hot during the months of June and July.<sup>47, 72</sup>

In *England* during the months of March, April, and May, it was cold and dry. During June and July, it was hot and dry.<sup>72</sup>

The months of June and July in 1599 were hot in *England*. The grape harvest in Dijon, *France* was held on 13 September.<sup>62</sup>

In *England* in November, there were floods.<sup>47, 92</sup> on November 24.<sup>72</sup>

In 1599 during the period between 22 June and 21 July, floods struck Yunnan province in southwest *China* at Pao-shan. During the period between 6 May and 8 August, floods struck Shansi (now Shanxi province) in northern *China* at Jung-ho and Yunnan province at Hao-ch'ing. At Hao-ch'ing, the crops were damaged by the floodwaters and this resulted in a famine.<sup>153</sup>

In 1599 during the period between 6 May and 8 August, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên, Hsiang-ling, Fên-ch'êng, Fên-hsi, and Ch'in.<sup>153</sup>

In 1599 during the spring, there was a great drought in Shansi province in *China*.<sup>165</sup>

**Winter of 1599 / 1600 A.D.** The winter in *France* was severe. The cold lasted from late November to late May, with interruptions in the southern provinces of *France*. The cold was so great that it killed nearly all fruit trees and a large number of animals.<sup>62</sup>

The winter of 1599-1600 in southern *France* began in late November 1599 and lasted until the end of May. The winter killed a large number of cattle and almost all the fruit trees.<sup>79</sup>

During the winter of 1600 in Lyon, *France*, many people lost limbs because they froze in the extreme cold.<sup>80</sup>

On 14 April 1600, fell a great snow in *England*. The rest of April and all May were cold and dry. The late cold spring raised the price of all corn [grain].<sup>72</sup>

**1600 A.D. – 1602 A.D. Russia. Famine**

One of the earliest famines in *Russia* of which there is any definite record was that of 1600, which continued for three years, with a death toll of 500,000 peasants. Cats, dogs, and rats were eaten; the strong overcame the weak, and in the shambles of the public markets human flesh was sold. Multitudes of the dead were found with their mouths stuffed with straw.<sup>84</sup>

In *Russia* in 1600, there was a great drought.<sup>47</sup>

In *Russia* in 1600, there was a famine and plague, of which 500,000 died and 30,000 in Livonia [currently *Latvia* and *Estonia*].<sup>57, 91</sup>

---

**1600 A.D.** In *England*, there was a cold, dry summer.<sup>57, 91</sup> . . . which produced a dearth.<sup>72</sup>

In 1600, there was a great flood in *England*. The River Trent, during a heavy flood, changed its course near the village of Holme, by Newark, through which means the township became situated on the east side of the river, whereas it had previously been on the west side.<sup>212</sup>

On 12 September 1600, a hurricane struck offshore *Mexico* causing more than 60 deaths.<sup>141</sup>

On 26-27 September 1600, a hurricane struck offshore *Mexico* causing between 103 and 940 deaths. [Marx (1983) indicates that, in combination, the storms of 12 and 26-27 September 1600 caused about 1000 deaths.]<sup>141</sup>

On 8 December 1600 at Venice, *Italy*, a strong southeast wind caused the highest tide. “Inundatio ventis 6 ped. temp. Sirocco.” [translation from Latin: During the Sirocco, the wind caused a 6-foot surge/overflowing.] [Sirocco is a Mediterranean wind that comes from the Sahara and reaches hurricane speeds in North Africa and Southern Europe.]<sup>225</sup>

In 1600, floods struck Yunnan province in southwest *China* at Fu-min, Ch’u-hsiung, T’êng-ch’ung, Mêng-hua and Yung-peï. Houses and crops were damaged by the floodwaters. During the period between 7 September and 6 October, floods struck Shansi (now Shanxi province) in northern *China* at Lin-fên and Hsin-chiang.<sup>153</sup>

In 1600 during the period between 8 August and 8 November, a drought engulfed Yunnan province in southwest *China* at Hsin-t’ien. This drought led to a famine.<sup>153</sup>

In 1600 during the autumn, there was a drought in Yünnan province in *China*.<sup>165</sup>

*Also refer to the section 1600 A.D. – 1602 A.D. for information on the drought and famine in Russia during that timeframe.*

---

**1601 A.D.** During the winter of 1601, the olive trees in *Provence* were damaged by the cold.<sup>62</sup>

The winter of 1601 in southern *France* killed all the olive trees.<sup>79</sup>

On 1 February 1601, a tempest struck London, *England*.<sup>72</sup>

[In *Belgium* and *England*], the month of June was very warm, and excessive heat remained during July and August. The drought lasted continuously for four months. The trees were laden with fruit, but the fruit turned black because it was burned by the sun before reaching maturity. In Dijon, *France*, the grape harvest began on 8 October.<sup>62</sup>

At the beginning of June 1601 at Maen-Clochog [Maenclochog] in Pembrokeshire, *Wales*, caterpillars were so abundant that a man could not thread without killing twenty or thirty. On this hill, they destroyed all the grass.<sup>212</sup>

In 1601, the sea being forced in by a strong northwest winds, did damage at Ostend, *Belgium*.<sup>225</sup>

On 26 October 1601, there was a great tempest at Ostend, *Belgium*. The west-northwest winds caused much higher tides than usual.<sup>225</sup>

On 23 December 1601 during the siege of Kinsale, in *Ireland*. “Our horsemen did see lamps burn at the point of their spears in the midst of these lightning flashes.” [St. Elmo’s fire] Similar appearances are mentioned by Theophrastus, Plutarch, Pliny, Seneca, Caesar, and Livy. Seneca says “Gylyppo Syracusas petenti visa est stella super ipsam lancem constitisse”; and that in “Romanorum castris vis a sunt ardere pila, ignibus scilicet in illa delapsis.” Caesar, in his history of African war, in a violent, stormy night, says, “Legionis pilorum cacumina sua sponte arserunt.”<sup>212</sup>

In 1601, a hurricane struck Veracruz, *Mexico* causing 1,000 deaths.<sup>141</sup>

In *Ireland* in 1601 to 1603, there was great scarcity and want. Cannibalism again reported.<sup>57, 91</sup>

In *England*, there was a drought this year of four continuous months. In *Switzerland*, the winter and spring were rainy and June and July was excessively hot. At Pisaurum [Pesaro, *Italy*], the winter was uncommonly snowy and rainy. The spring and the whole summer were hot and moist. The wind was from the south. The inhabitants ate plentifully of fruit and fish and of lamb. In July and August, the weather was excessively sultry hot.<sup>72</sup>

In 1601, a drought engulfed Ching-tang [uncertain name]. During the period 2-31 May, a drought engulfed several regions of *China*. During the period between 6 May and 8 November, a drought engulfed Yunnan province in southwest *China* at K’un-ming. This drought resulted in a famine. During the period 1-29 June, a drought engulfed Hopei (now Hebei province) in northern *China* at Peiping. During the period between 30 June and 28 July, a drought engulfed Yunnan province at Ch’eng-chiang.<sup>153</sup>

In 1601 during the summer and autumn, there was a drought in Chihli, Hunan, Hupeh, Kweichow and Yünnan provinces in *China*. In Hu-kwang [Hukwang - the rice bowl of China comprising the provinces of Hunan and Hupeh], this was a great drought.<sup>165</sup>

In 1601 during the period between 29 July and 27 August, floods struck Shansi (now Shanxi province) in northern *China* at Jung-ho. Fields were damaged by the floodwaters. During the period between 8 August and 8 November, floods struck Szechwan (now Sichuan province) in southwest *China* at Chao-hua. Houses and crops were damaged by the floodwaters.<sup>153</sup>

*Also refer to the section 1600 A.D. – 1602 A.D. for information on the drought and famine in Russia during that timeframe.*

---

**1602 A.D.** On 23 and 24 February 1602, there blew a terrible northwest wind at Ostend, *Belgium* which made the water rise higher than usual.<sup>225</sup>

In *England*, it was dry and cold during the harvest and winter with north winds.<sup>47, 72</sup>

The plague visited *England* beginning in September 1602 at Chester and continued to February 1605.<sup>212</sup>

In Pisaurum, Pesaro e Urbino Province in east-central *Italy* in 1602, the year was long cold and humid with a dry harvest and winter with north winds.<sup>72</sup>

There were rains and floods in the years 1602 in northern *France*.<sup>79</sup>

In 1602, flood struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. Innumerable people drowned. During the same year, floods struck Hupeh (now Hubei province) in central *China* at Hanyang. During the period between 20 June and 18 July, floods struck Shansi (now Shanxi province) in northern *China* at Kao-p'ing. Fields were damaged. During the period between 19 July and 16 August, floods struck Shansi province at Hsin-chiang. During the period between 8 November 1602 and 5 February 1603, floods struck Yunnan province in southwest *China* at Chien-shui. Dikes were damaged.<sup>153</sup>

In 1602 during the spring and autumn, four fus [prefectures] in the vicinity of Shanghai, *China*, experienced excessive and continuous rain. As a result, the wheat crop was damaged.<sup>166</sup>

*Also refer to the section 1600 A.D. – 1602 A.D. for information on the drought and famine in Russia during that timeframe.*

---

**1603 A.D.** Loaded carriages passed the Rhône River in *France* on the ice.<sup>38, 60, 62</sup>

In 1603 in southern *France*, the carriages crossed the Rhône River on the ice.<sup>79</sup>

In 1603, the Rhône River in *France* froze.<sup>58, 80</sup>

In 1603, the winter in the south of *France* was very severe. Wagons passed over the frozen Rhône River on the ice.<sup>62</sup>

In 1603, the plague struck Boston in Lincolnshire, *England*. On 2 April it began at Aylesbury. In London, 30,578 people died of the plague. At Chester, 650 people perished.<sup>212</sup>

[There was a famine not attributed to weather. In 1603, wars occasioned such a famine in *Transylvania*, that roots, herbs, and leaves of trees were people's usual food. Horses, dogs, cats, and rats were dainties to the poor. A mother ate six children and two men their own mother.<sup>72</sup> *Transylvania* or the Principality of *Transylvania*, during this time period, was a semi-independent state, ruled primarily by Hungarian princes and included areas of modern day *Hungary*, *Romania* and *Serbia*.]

In 1603 during the period between 5 September and 4 October, floods struck Fukien (now Fujian province) on the southeast coast of *China* at T'ung-an. Innumerable houses damaged by the floodwaters and innumerable persons drowned.<sup>153</sup>

---

**1604 A.D.** On 1 March 1604, the wind was very great at west and northwest, with a furious tempest, the tide at Ostend, *Belgium* rising so high, as it had not done in forty years before.<sup>225</sup>

In 1604 from July to September, the plague struck Colston Bassett in Nottinghamshire, *England*. There 83 persons perished. The plague was also present in London, *England* and *Ireland*. The plague carried off 600 persons at Stamford, *England*. At Chester, 986 persons died (at one period at a rate of 55 weekly). The fairs were not held, the Court of Exchequer was held at Tarvin, and the Assizes at Nantwich. Most of the inhabitants fled. At York and Beverley, 3,512 died.<sup>212</sup>

In 1604, floods struck Shansi (now Shanxi province) in northern *China* at Fan-chih. Many houses were damaged by the floodwaters and many people drowned. During the same year, floods struck Shansi province at P'ing-yao. Crops were damaged by the floodwaters. During the period between 27 June and 26 July, floods struck Yunnan province in southwest *China* at Chien-shui. Houses and fields were damaged.<sup>153</sup>

---

**1605 A.D.** In 1605, there was a plague in London, *England*.<sup>212</sup>

In 1605, from a hurricane that struck *Haiti, Dominican Republic* and *Cuba*, three ships were lost but some men escaped.<sup>141</sup>

In 1605, a hurricane struck the Caribbean island of Santa Margarita off the coast of *Venezuela*. Four galleons were lost.<sup>141</sup>

In 1605, a hurricane struck offshore in *Nicaragua* causing 1,300 deaths. [Marx (1983) is probably describing the same storm when indicating no survivors of 4 wrecks resulting from "a hurricane between Serrana and Serranilla banks" in 1605.]<sup>141</sup>

In 1605, floods struck Shansi (now Shanxi province) in northern *China* at Chieh-hsiu and Hsiang-ling. At Chieh-hsiu, the occupants were drowned. At Hsiang-ling, hundreds of persons were drowned. Also in 1605, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Taichow. At Chia-hsing, the drought was severe. At Taichow, the drought was accompanied by a plague of locusts.<sup>153</sup>

In 1605, there was a great drought in Chêhkiang province in *China*. This drought was accompanied by a plague of locusts.<sup>165</sup>

In 1605, a couple of dragons fought at Whangpu [Huangpu River, *China*] and tore up a large tree, and demolished several tens of houses. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

---

**1606 A.D.** In *England* on 29 March, there were general floods.<sup>47, 72, 92</sup>

On the Eve and Easter Day 1606, a terrible wind shook *France* and *Europe*.<sup>79</sup>

In 1606, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Fukien (now Fujian province) on the southeast coast of *China* at P'u-t'ien. During the same year, floods struck Hopei (now Hebei province) in northern *China* at Shu-lu; Hupeh (now Hubei province) in central *China* at Huang-kang; and Yunnan province in southwest *China* at Lu-hsi. During the period between 5 June and 4 July, floods struck Kweichow (now Guizhou province) in southwestern *China* at Kuan-ling and Ch'ih-shui. Over 300 families were flooded. During the period between 5 July and 3 August, floods struck Shansi (now Shanxi province) in northern *China* at I-ch'êng. Houses were damaged by the floodwaters.<sup>153</sup>

In 1606, there was a great drought in Chêhkiang and Fuhkien provinces in *China*. As a result, the land tax was remitted in Fuhkien.<sup>165</sup>

---

**Winter of 1606 / 1607 A.D.** [During the winter of] 1606-07, on 20 January, there was a great inundation of the River Severn that did much damage in Somersetshire and Gloucestershire, *England*.<sup>225</sup>

The winter of 1607 [in *Europe*] passed without a significant frost.<sup>62</sup>

---

**1607 A.D.** In *England* in 1607, the waters rose above the tops of the houses, and upwards of 100 people perished in Gloucestershire and Somersetshire.<sup>47, 90</sup> Flood also in Coventry, which destroyed 257 houses.<sup>47, 92</sup>

In *England* on April 16, there was a terrible storm of thunder, lightning and rain at Coventry and another at Somersetshire on January 10.<sup>72</sup>

In *Great Britain*, “Upon Tuesday, being the twentieth of January last past 1607, in diuers [diverse] places, as well in the westerne [western] parts of *England*, as also in diuers [diverse] other places of the realme [realm], there happened such an overflowing of waters, such a violent swelling of the seas, and such forcible breaches made into the firme [firm] land, namely, into the bosomes [bosoms] of these counties following, that is to say, in the counties of Gloucester [Gloucester], Sommerset [Somerset], together with the counties of Munmouth [Monmouth], Glamorgan, Carmarthen, and diuers [diverse] and sundry other places of *South Wales*; that the like never in the memory of man hath ever bin seine [been seen] or heard of; the suddayne terror whereof stroke such an amazed feare [fear] into the hearts of al [all] the inhabitants of those parts, that eury one [everyone] prepared him selfe [himself] ready to entertayne [entertain] the last period of his lives distruction [destruction], deeming it altogether to be a second deluge, or an universal punishment by water.”<sup>47</sup>

In 1607, there was a flood in Somerset and Gloucestershire, *England*. The water rose above the tops of houses, and about one hundred people perished.<sup>212</sup>

In *England*, both the summers of 1607 and 1608 were dry and hot.<sup>47, 72</sup>

In *England*, a strong west wind brought in the Sea into the River Severn with such violence; the water in several towns and villages ran higher than the housetops. So 80 persons drowned, and other damages to the value of 20000*l*.<sup>72</sup>

Other accounts place the Great Flood event in Great Britain in the year 1606. [On 20 January 1606, there was a Great Flood. Hundreds of people drowned between Minehead and Slimbridge as salt water to a depth of 2 meters swept across the land both sides of the estuary. Strong westerly gales blew in the channel, most likely the offshoot of an extreme depression off southern Ireland. John Paul [Vicar of Almondsbury] described the incident thus...”*But the year 1606, the fourth of King James, the river of Severn rose upon a sodden Tuesday morning, the 20th January, being the full prime day and highest tide after the change of the moon, by reason of a mighty strong western wind. So that Minehead to Slimbridge the low grounds along the river Severn were, that turning tide, overflown, and in Saltmarsh many houses overthrowen, sundry Christians drowned, hundreds of rudder cattle and horses perished, and thousands of sheep and lambs lost. Unspeakable was the spoils and losses on both sides of the river.*”<sup>150</sup>

In 1607, floods struck Shantung (now Shandong province) on the east coast of *China* at Shan and Hupeh (now Hubei province) in central *China* at Huang-kang, Yün and Fang. During the period between 6 May and 8 August, a drought engulfed Shansi at Lin-fên, Hsia and P’ing-lu. [P’ing-lu is located at longitude 111.00° East and latitude 34.51° North.]<sup>153</sup>

In 1607 during the summer, there was a drought in Shansi province in *China*.<sup>165</sup>

---

**Winter of 1607 / 1608 A.D.** *England* experienced a severe winter. In *Scotland* the Firth of Forth froze on January 20. The River Thames froze in December in London and there were frost fairs on the river until February. In Danzig, [now Gdańsk, *Poland*] the ditches were still frozen on May 15.<sup>28</sup>

The winter of 1607 in *England* had a great frost that lasted off and on for 7 weeks.<sup>72</sup>

On the River Thames, London, *England* in 1608 from 10-15 January “the frost grew so extreme, as the ice became firme, and removed not, and then all sorts of men, women, and children, went boldly upon the ice in most parts; some shot at prickes; others bowled and danced, with other variable pastimes, by reason of which concourse of people, there wore many that set up boothes and standings upon the ice, as fruit-sellers, victuallers, that sold beere and wine, shoemakers, and a barber's tent, &c.” In these tents were fires. The ice lasted till the afternoon of the 2nd of February, when “ it was quite dissolved and clean gon.”<sup>29</sup>

During the winter of 1607-08 in *England*, fires and diversions on the frozen River Thames lasted for seven weeks.<sup>47, 90, 93</sup>

During the first week of December in 1607 in London, *England*, [they built] fires [bonfires] on the ice on the frozen River Thames.<sup>212</sup>

During the winter of 1607-08, there was a great frost and snow in *England* as observed in Alrewas in Staffordshire. It began on 5 December 1607 and continued until 14 February 1608. At this time all the rivers were frozen, and in most parts, they would bear the weight of horse, men and loaded wagons. Many of the mills were frozen up and could not grind any corn [grain]. The cold did great damage to wheat, gresse [grouse?] and herbs. The River Thames was frozen over and the people crossed on the ice from Southwark to Lambeth. At York, the River Ouse was frozen over, and horses crossed the ice.<sup>212</sup>

In January 1608, the frost was very severe in London, *England*. The River Thames was frozen over. Wheat rose in the Windsor market from 36 shillings to 56 shillings per quarter [quarter ton].<sup>212</sup>

In *England*, there were fairs on the frozen River Thames in 1607-08.<sup>90</sup>

In 1608 in *Germany*, the most rapid and deepest rivers are so cold and ice covered that loaded wagons drove over them. The River Thames in London, *England* supports the weight of wagons. The Scheldt River is frozen at Antwerp, *Belgium* and the *Zuiderzee* froze. All the rivers in *France* are frozen.<sup>62</sup>

The winter of 1608 was long known as a great winter. The cold reigned almost without cessation from 20 December 1607 until about mid-March 1608 in *France*, *England*, Holland [now *the Netherlands*], *Germany* and *Italy*. The historians provided full detail about the effects of frost. On 10 January, it was so cold in the church of Saint-André-de-Arcs [Paris, *France*] that the wine froze in the chalice. “You had to bring a brazier [bucket of hot coals] to melt it.” The bread served to King Henry IV of France on 23 January was frozen. In the northern part of *Europe*, all the rivers were frozen. The ice was so thick in Flanders [now *Belgium*], that as the historian Mathieu says, “Antwerp [*Belgium*], when they saw the Schelde (Scheldt) River so frozen as in the year 1563, they set up several tents in which they feasted.” Many people died in cities and in the countryside from this cold; while others remained paralyzed, and a large number had frozen hands and feet. The greater part of the young trees were destroyed, and a portion of the [grape] vines froze to the roots, and the cypresses, and many walnut trees were hit by the severe cold. *England* saw almost all its cattle destroyed. In London, the River Thames was so frozen that loaded carriages went over the ice. Many birds were killed and a large portion of the plants was destroyed. The spring thaw caused great devastation. The ice from the rivers destroyed the ships, roads and bridges and the melting snow-swollen rivers flooded all the valleys. Dams on the Loire River in *France* broke causing a second deluge, flooding neighboring lands. In *Italy*, the waters of the Tiber River almost flooded Rome. These waters came down from the Apennines Mountains with such violence that several houses were thrown down and destroyed. In Padua, *Italy*, a tremendous amount of snow fell.<sup>62</sup>

In 1608, all our rivers in *France* froze. The cold lasted from December until March. The cold killed all the [grape] vines.<sup>79</sup>

[Another account places this winter in 1608-09] During the winter of 1608-09 in Paris, *France*, many people lost limbs because they froze in the extreme cold.<sup>80</sup>

In 1608, the *French* historians cite great mortality of animals due to cold during this year.<sup>58, 80</sup>

---

**1608 A.D.** [In *Germany*], the summer of 1608 was one of the hottest and it burned everything that had survived the great winter. Only cereals and the offspring of grape vines remain. In Dijon, *France*, the grape harvest began on 1 October.<sup>62</sup>

On 19 February 1608, the River Thames in *England* ebbed and flowed twice at noon.<sup>212</sup>

In 1608, a tremendous hurricane did incalculable damage at Beverley in Yorkshire, *England*.<sup>212</sup>

In *England*, both the summers of 1607 and 1608 were dry and hot.<sup>47, 72</sup>

[In *England*], on 26 July 1608, there was a tempest of thunder, lightning and rain.<sup>72</sup>

In 1608 in *France*, the Loire River overflowed its banks and caused destruction of property.<sup>47, 92</sup>

The spring in *Italy* was warm and moist. The harvest inconstant. Corn [grain] and grapes ill got; hence an epidemic.<sup>72</sup>

In 1608, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Chu-chi; Yunnan province in southwest *China* at Mi-lei; and Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang. At Mi-lei, the houses were damaged by the floodwaters. In Chekiang and Kiangsi provinces, the floods led to a famine.<sup>153</sup>

In 1608 during the 4<sup>th</sup> moon in the vicinity of Shanghai, *China*, a gyrating dragon was seen over the decorated summit of a pagoda; all around were clouds and fog; the tail only of the dragon was visible; in the space of eating a meal, it went away, leaving the marks of its claws on the pagoda. [In early *China*, tornadoes and waterspouts were commonly described as dragons. When one looks at the devastation left behind by a tornado, the splintered and uprooted trees, buildings torn asunder in an instant, one could imagine that only a great dragon could swoop down from the sky and cause such damage. In this account only the tail of this mighty beast (the funnel of the tornado) was seen.]<sup>166</sup>

---

**Winter of 1608 /1609 A.D.** The winter of 1609 [in *Europe*] passed without a significant frost.<sup>62</sup>

---

**1609 A.D.** In 1609, a hurricane struck southeastern *Bahamas* causing 32 deaths.<sup>141</sup>

On 4 August 1609, an Atlantic hurricane struck near *the Bahamas*, one ship was sunk.<sup>141</sup>

On 19 January 1609, the River Thames in *England* ebbed and flowed twice in an hour. And then on 6 February at London, there was a strange shifting of the tides.<sup>212</sup>

In 1609, the plague at Southborough, *England* caused 500 deaths. The plague was also present at Chesterfield.<sup>212</sup>

In 1609, a severe drought engulfed Honan (now Henan province) in central *China* at Ch'in-yang and Hupeh (now Hubei province) in central *China* at Mien-yang. During the same year, a drought engulfed Shensi (now Shaanxi province) in central *China* at Fu-shih and Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.<sup>153</sup>

In 1609 during the summer, there was a great drought in Chêhkiang, Honan, Hupeh, Shansi and Shensi provinces in *China*. In Chêhkiang, wells and rivers dried up.<sup>165</sup>

In 1609, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Ch'êng, Hangchow and Sui-ch'ang. During the period 2-30 June, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Kuang-tsê, T'ai-ning, Chien-ning, Chiang-yüeh, Shun-ch'ang and Shao-wu, . At Shao-wu, the fields and houses were damaged by the floodwaters and innumerable people drowned. At Chien-ning, the city walls and houses were damaged by the floodwaters and tens of thousands of people drowned. At Chiang-yüeh and Shun-ch'ang, the floods were the severest in these localities during the last 200 years.<sup>153</sup>

In 1609 during the 6<sup>th</sup> moon, a white dragon was seen at Whangpu [Huangpu River, *China*]. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

**Winter of 1609 /1610 A.D.** In 1609, *England* experienced a severe winter beginning in October. The frost lasted 4 months and the River Thames was frozen.<sup>28</sup>

In *England*, the winter of 1609 was most rigorous hard frost from December to April. The River Thames became a highway. Birds and garden stuff were killed.<sup>72</sup>

In 1609, in *England*, the frost was severe and long.<sup>47, 72, 93</sup>

In 1610, The River Thames in *England* was frozen and carried [the weight of] pedestrians.<sup>62</sup>

During the winter of 1609-10, the weather in *England* from December to April was very cold. The River Thames froze so that it was passable on the ice. The birds and plants were killed.<sup>62</sup>

**1610 A.D.** In *England*, it was excessively hot and dry; harvest inconstant.<sup>47, 72</sup>

In *England*, being an excessive hot dry summer after the frost, there was plentiful wine.<sup>72</sup>

On 3 July 1610, a major storm of thunder, hail and lightning struck Humberstone [Humberston], near Grimsby, *England*. The corn [grain] was destroyed.<sup>212</sup>

In 1610, the plague began at Beverley, *England* in June and lasted till November. It raged violently at Leicester.<sup>212</sup>

The summer of 1610 [in *England*] was excessively hot and dry and there was a great abundance of wine. The grape harvest began in Dijon, *France* on 20 September.<sup>62</sup>

In 1610, Dresden in east-central *Germany* was visited by a famine.<sup>57, 91</sup>

In 1610 during the period between 6 May and 8 August, a severe drought engulfed Yunnan province in southwest *China* at K'un-ming. During the period between 21 June and 19 July, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Fên-yang, Liao and Ch'in.<sup>153</sup>

In 1610 during the summer, there was a drought in Shansi and Yünnan provinces in *China*. In Yünnan, this was a great drought.<sup>165</sup>

In 1610 during the period between 21 June and 19 July, floods struck Szechwan (now Sichuan province) in southwest *China* at Ch'ien-chiang. Houses and dikes were damaged and over 1,000 person and cattle were drowned.<sup>153</sup>

In 1610, there was a famine in the vicinity of Shanghai, *China*.<sup>166</sup>

**1611 A.D.** [In *England*] summer and winter wet and rainy, then great snows.<sup>72</sup>

In 1611, the plague raged violently in Leicester, *England*.<sup>212</sup>

In *England*, there were floods from the greatest rains all November and December.<sup>47, 72, 92</sup>

[In *England*] in 1611, there was heavy snowfall that lay on the ground for 2 months.<sup>72</sup>

In 1611, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chin-yün and Ningpo. During the period between 11 June and 9 July, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Huai-chi.<sup>153</sup>

In 1611 during the period between 6 May and 8 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Lin-fên. During the period between 11 June and 9 July, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.<sup>153</sup>

In 1611 during the spring and summer, there was a drought in Chêhkiang and Shansi provinces in *China*. The land tax in Shansi was remitted.<sup>165</sup>

**1612 A.D.** In *England* from 1<sup>st</sup> January to 1<sup>st</sup> May, there was a north wind, which produced dry, cold weather.<sup>47, 72</sup>

In 1612, there was a great drought in *England*. At Senogallia in Tuscany, *Italy*, the months of January, February and March was very dry, cold, and windy weather, preceded by a watery, moist, snowy season.<sup>72</sup>

**1613 A.D.** In *Germany* and *France*, all the grain was destroyed by rain.<sup>47, 92</sup> This resulted in a scarcity.<sup>72</sup>

On 25 June 1613, with a terrible thunder storm, with rain and hail struck Rouen in Normandy in northern *France*. It was felt over a distance of five leagues (15 miles, 24 kilometers), including La Bouille and Darnetal, *France*. Some hailstones were the size of walnuts. Others were the size of eggs. A few hailstones weighed half a pound; while other weighed three quarters of a pound.<sup>79</sup>

On 26 June 1613 at Alrewas in Staffordshire, *England*, there was “A mightie great tempeste of rayne, lightning, and thunder” [a mighty great tempest of rain, lightning and thunder] at 4 p.m. It was also violent at Southampton.<sup>212</sup>

In 1613, floods struck several regions of *China* including:<sup>153</sup>

— Hupeh (now Hubei province) in central *China* at Ch'i-ch'un, Kuang-chi and Mien-yang.

— During the period between 6 May and 8 August, floods struck Shansi (now Shanxi province) in northern *China* at Hsin-chiang and P'ing-yao. Houses and fields were damaged by the floodwaters.

— During the period between 16 August and 13 September, floods struck along the Ching River in Shensi (now Shaanxi province) in central *China*. Houses were damaged.

— During the period between 8 August and 8 November, floods struck Shansi province at Lin-fên, Hsiang-ling, Hung-tung, Ch'ü-wo, Chao-ch'êng, Fên-ch'êng, Hsia, Yüan-ch'ü, Chi, Hsi and Chung-yang.

In 1613 during the period between 8 August and 8 November, a severe drought engulfed Fukien (now Fujian province) on the southeast coast of *China* and Shansi (now Shanxi province) in northern *China* at Yung-chi, Lin-chin, I-shih, Jung-ho, Wan-ch'üan, An-i, P'u and P'ing-lu. [P'ing-lu is located at longitude 111.00° East and latitude 34.51° North.]<sup>153</sup>

In 1613 during the autumn, there was a great drought in Fuhkien and Shansi provinces in *China*.<sup>165</sup>

**Winter of 1613 / 1614 A.D.** In 1614, there was a severe winter at Boston, *England*.<sup>212</sup>

In January 1614 at York, *England*, there was a heavy snow and 11 weeks of frost. Then the River Ouse overflowed and flooded the streets. The flood lasted 10 days and destroyed many bridges.<sup>212</sup>

In 1614 on 19 February, fell such a storm of snow in the peak of Derbyshire, and over all the west of *England*, as was a full yard deep on the level. And because of such high winds, the snow was blown into vast snowdrifts. As a result, travelers on horseback or on foot went over hedges, fences, stonewalls, etc. The snow laid on the ground for a long time. It destroyed many cattle and sheep. A great scarcity of hay [immediately] followed. Corn [grain] next summer was very good and cheap.<sup>72</sup>

**1614 A.D.** In Lincolnshire, *England*, the sea came 12 miles inland during the flood.<sup>47, 72, 92</sup>

In 1614 at York, *England*, after the great flood, there was a drought that continued until August. This caused a scarcity of hay and corn [grain]. Hay sold for 30 to 40 shillings per load. At Leeds, it sold for 80 shillings.<sup>212</sup>

Thunderstorms or rainstorms desolated Provence, *France* in 1614.<sup>79</sup>

Southern *France* was very dry in 1614.<sup>79</sup>

In 1614, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Huang-kang and Fukien (now Fujian province) on the southeast coast of *China* at Lo-yüan.<sup>153</sup>

In 1614, there was a great drought in Fuhkien and Hupeh provinces in *China*.<sup>165</sup>

In 1614, floods struck Shansi (now Shanxi province) in northern *China* at An-tsê where fields were damaged and Hupeh (now Hubei province) in central *China* at Mien-yang. During the period between 8 August and 8 November, floods struck Fukien (now Fujian province) on the southeast coast of *China*. Houses and fields were damaged by the floodwaters.<sup>153</sup>

**Winter of 1614 / 1615 A.D.** [There appears to be some overlap of accounts between the winter of 1613/1614 and the winter of 1614/1615 in England. I am inclined to believe that there was only one severe winter and it occurred in 1614/1615.]

On 1 January 1615, a tempest of thunder and lightning struck Thuringia, *Germany*.<sup>72</sup>

On 16 January 1615 at Youlgrave [Youlgreave] in Derbyshire, *England*, began the greatest snow which ever fell upon the earth in man's memory. It covered the earth 5 quarters deep upon the plane [on the

level], and for heaps or drifts of snow, they were very deep, so that passengers, both horse and foot, passed over yates [gates], hedges and walls. It fell at ten several times, and the last was the greatest. The snow continued daily increasing until 12 March, when the sight of earth was no longer visible either upon hills or valleys. Then the snow began to decrease and was consumed little by little until 28 May. And then all the drifts were consumed, except for the one at Kinder Scout, which lay till Witson [Witsun] week [Pentecost, the seventh Sunday after Easter]. [A quarter is a unit of measurement, usually for measuring cloth, equal to nine inches. Therefore 5 quarters would be equivalent to 45 inches.]<sup>212</sup>

In *England*, there was frost from 17<sup>th</sup> January to 7<sup>th</sup> March. (An article from 1615 A.D. was reprinted in 1815 titled “The Cold Years: a Deep Snow in which Men and Cattle perished; written in Dialogue between a London Shopkeeper and a Northcountryman.”<sup>47</sup>

In *England* in 1615, there was frost from 17 January to 7 March.<sup>72, 93</sup>

During the winter of 1615, a very severe cold descended on *Germany*, *Hungary* and the neighboring provinces on 20 January. This cold froze and damaged many [grape] vines and a significant amount of fruit trees.<sup>62</sup>

---

**1615 A.D.** The summer of 1615 was very dry throughout *Europe* and very hot. In the fields, everything was destroyed. In Picardy, a church was destroyed by lightning, which also killed several people. The drought was so great that in *Germany* more than 3,000 houses were consumed by fire. In Dijon, *France* the grape harvest was held on 21 September.<sup>62</sup>

In 1615, there was a great drought throughout *Europe*.<sup>212</sup>

In 1615, there was a great flood at Boston, *England*.<sup>212</sup>

In 1615, there was a great mortality among sheep at Boston, *England*.<sup>212</sup>

On 30 August 1615, off the coast of *Mexico*, the San Miguel (400-ton) was sunk in a storm. Nothing was saved, not even the crew or passengers.<sup>141</sup>

On 12 September 1615, an Atlantic hurricane struck *Puerto Rico* causing some deaths.<sup>141</sup>

In 1615, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chu-chi. During the period between 24 August and 22 September, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Yung-t'ai. The city walls and fields were damaged by the floodwaters and innumerable people and cattle drowned.<sup>153</sup>

In 1615, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsinan and Yunnan province in southwest *China* at K'un-ming. At Tsinan, the drought resulted in a famine. Also during the same year, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü. During the period between 5 February and 8 November, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Kuang-ch'ang. During the period between 6 May and 8 August, a drought engulfed Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1615 during the spring, summer and autumn, there was a great drought in Chêhkiang, Fuhkien, Shansi, Shantung and Yünnan provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shantung.<sup>165</sup>

---

**Winter of 1615 / 1616 A.D.** In 1616, the Seine River in *France* froze in the beginning of the year; the ice takes place on 30 January.<sup>62</sup>

The winter of 1616 brought cold weather to *France*. The cold was very severe on the royal army, which escorted the Queen of Poitiers to Tours, *France*. In Paris, the ice flow destroyed a support column of the bridge, Pont Saint-Michel.<sup>62</sup>

---

**1616 A.D.** In *England*, during the summer there was a drought and it was excessively hot.<sup>47</sup>

In *England*, the summer was excessively scorching hot and droughty.<sup>72</sup>

In 1616, there was a great drought in *England*. Because of the drought, the country would not afford provisions for Sir Thomas Hutchinson's stables, so he was forced to remove from Owthorpe to winter in the town of Nottingham.<sup>212</sup>

[In *England*] the summer of 1616 was dry and heat was devouring. The harvest began on 12 September in Dijon, *France*, i.e. 12 days earlier than the average harvest time, dating back to the year 1590, the earliest date of the excellent harvest.<sup>62</sup>

In Manchester, *England*, there was an extraordinary flood.<sup>47, 92</sup>

[In *England*] on 8 November, there was a terrible storm of thunder and lightning with rain.<sup>72</sup>

In 1616, floods struck Kiangsi (now Jiangxi province) in southern *China* at Chi-an. This flood led to a famine. During the period between 14 July and 11 August, floods struck Shensi (now Shaanxi province) in central *China* at Ching-yang. Over 70 villages were flooded and the floods extended 100 li (about 35 miles). Also during the period between 14 July and 11 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Wên-shui, Yung-chi, An-i, Wên-hsi, Chi-shan, I-shih and Wan-ch'üan.<sup>153</sup>

In 1616 during the spring and summer, there was a drought in Shansi province in *China*.<sup>165</sup>

---

**1617 A.D.** [In *England*] on 29 January, there was a tempest of thunder, lightning and earthquakes.<sup>72</sup>

In Catalonia in northeastern *Spain*, there were great floods; 15,000 people perished.<sup>47, 92</sup>

In 1617, an inundation occurred at Catalonia, *Spain*, where 50,000 persons perished.<sup>90</sup>

The winter of 1617 [in *Europe*] passed without a significant frost.<sup>62</sup>

In 1617, a drought and also floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. In the same year, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Huang-an.<sup>153</sup>

In 1617, there was a drought in Anhwei, Hupeh, Kiangsi and Kiangsu provinces in *China*. In Hupeh, this was a great drought.<sup>165</sup>

---

**1618 A.D.** [In *Europe*], there were extraordinary tempest, inundations of rivers, eruptions of the sea, earthquakes, bloody rain, snow, hurricanes and meteors in the air.<sup>72</sup>

In 1618, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo and Hunan province in south-central *China* at Yüan-ling. In the same year, a severe drought engulfed Hupeh (now

Hubei province) in central *China* at Huang-an and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam*. In Kwangsi province, the drought led to a famine.<sup>153</sup>

In 1618 during the summer, there was a drought in Hupeh and Kwangsi provinces in *China*. This resulted in a great mortality in Kwangsi.<sup>165</sup>

In 1618 during the 12<sup>th</sup> moon [winter] at midnight there was a great thunder and lightning storm in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1618 / 1619 A.D.** During the harsh winter of 1618-19, on 22 February, Marie de Medici escaped from the castle of Blois, in central *France*. The Loire River carried along large icebergs, which began to pile up under the bridge, opposite the castle. [After two years of virtual imprisonment "in the wilderness" as she put it, she escaped from Blois in the night]<sup>79</sup>

**1619 A.D.** In Thuringia, *Germany* in July, there were great rain floods.<sup>47, 72, 92</sup>

The winter of 1619 [in *Europe*] passed without a significant frost.<sup>62</sup>

**1620 A.D.** In *Germany* in November, there were great floods.<sup>47, 72, 92</sup>

In 1620, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chu-chi and Yunnan province in southwest *China* at Ch'êng-chiang, Yao-an, Lu-hsi, An-ning, Fu-min, Yü-ch'i, Mi-lei and Ho-hsi. During the period 1-29 June, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu. During the period 29 July and 27 August, floods caused by a typhoon struck Shantung (now Shandong province) on the east coast of *China* at Wên-têng. Over 70 junks were sunk.<sup>153</sup>

**Winter of 1620 / 1621 A.D.** The winter of 1620-21 was very severe in the north and south [of *Europe*]. The *Zuiderzee* froze all over. A part of the *Baltic Sea* was covered with very thick ice. In *Italy*, the ice on the lagoon in the *Adriatic Sea* held back the Venetian fleet. The cold was very severe in *Provence*.<sup>62</sup>

In 1620, there was a great snow in *Scotland*. There was a snowstorm lasting 13 days and known as the "thirteen days' drift" in *Scotland*, where on Eskdale Moor, out of 20,000 sheep, only 45 were left alive.<sup>212</sup>

In *England*, there were fairs on the frozen River Thames in 1620.<sup>90</sup>

During the winter of 1620-21, the *Zuiderzee* freezes up entirely. The Venetian fleet is frozen in the ice of the lagoons of the *Adriatic Sea*.<sup>62</sup>

During the winter of 1620, the Sea between Constantinople (Istanbul) and Iskodar (Üsküdar) *Turkey* was frozen.<sup>1</sup>

In 1620, the sea between Constantinople (Istanbul) and Iskodar (Üsküdar) *Turkey* was passable on the ice.<sup>30, 41</sup>

**1621 A.D.** On 18 and 24 June, there was a tempest with great winds [in *England*].<sup>72</sup>

[In *England*], it was rainy all harvest and winter.<sup>72</sup>

In 1621, a severe drought engulfed Yunnan province in southwest *China* at Mi-lo. During the period between 19 July and 16 August, a drought engulfed Yunnan province at K'un-ming.<sup>153</sup>

In 1621 during the spring and summer, there was a great drought in Yünnan province in *China*.<sup>165</sup>

---

**Winter of 1621 / 1622 A.D.** In 1621 in *England*, the frost was very severe from the 24<sup>th</sup> of November to the 7<sup>th</sup> of December.<sup>47, 72, 93</sup>

In *Italy*, during the winter of 1621-22, the Venetian fleet was arrested by the ice in the lagoons of Venice.”<sup>38, 60</sup>

The winter of 1621-22 was excessive in *Europe*. The Adriatic Sea froze from December to January.<sup>79</sup>

In 1622, the rivers in *Europe* and the Zuyder Zee were frozen. Ice covered the Hellespont [in *Turkey*].<sup>90</sup> [Hellespont is an ancient name of the narrow passage between the Aegean Sea and the Sea of Marmara. Today, it is known as Dardanelles.]

In 1622 during the winter, it was so cold that all the rivers in *Europe* were frozen along with the Zuyder Zee [*Zuiderzee*].<sup>212</sup>

In 1621 in *Italy*, the Port of Venice was frozen.<sup>58, 80</sup>

In 1622, *Europe* experienced a cold winter. All the European rivers and the Zuyder Zee (*Zuiderzee*) in the *Netherlands* froze.<sup>28</sup>

In 1622 in *Turkey*, ice covered the Hellespont.<sup>47, 93</sup>

The frost was very strong in the winter of 1621-22 in Flanders [now *Belgium*] and northern *France*. The Dutch lost half their army due to the cold and hunger before Sluis [in southwestern *Netherlands*].<sup>62</sup>

---

**1622 A.D.** In 1622 and 1623, there was a famine [in *England*].<sup>72</sup>

[In *England*] during the summer it was excessively wet and sultry hot.<sup>72</sup>

In 1622, an Atlantic hurricane struck in the *Bahama Channel*. Two Spanish ships were lost in the hurricane.<sup>141</sup> [The Old Bahama Channel is a strait off the northern coast of Cuba and the Sabana-Camagüey Archipelago and south of the Great Bahama Bank. It is approximately 100 miles (161 kilometers) long and 15 miles (24 kilometers) wide.]

In 1622, a hurricane struck off the coast of Florida in the *United States*. A Spanish ship *Santa Ana Maria*, 180-ton, was lost during the storm.<sup>141</sup>

On 5 September 1622, a hurricane struck the Straits of Florida in the *United States*. More than 1,090 individuals were killed.<sup>141</sup>

In 1622, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui and Hupeh (now Hubei province) in central *China* at Yün. During the period between 7 August and 4 September, a drought engulfed Hupeh province in central *China* at Yün.<sup>153</sup>

In 1622 during the autumn, there was a drought in Hupeh province in *China*.<sup>165</sup>

---

**Winter of 1622 / 1623 A.D.** On 15 and 19 December 1622, tempest struck [*England*].<sup>72</sup>

In *Europe*, during the winter of 1622, the month January was very warm, even in northern *Germany*. During the month of February all the trees were in bloom.<sup>62</sup>

---

**1623 A.D.** In 1622 and 1623, there was a famine [in *England*].<sup>72</sup>

In 1623, there was a plague in London, *England*.<sup>212</sup>

[In *England*] on 19 & 31 May and on 19 July, there were terrible storms of thunder and lightning.<sup>72</sup>

On 14 & 15 February, 13 March and 23 June, tempests struck Strasburg [Strasburg might refer to Strasbourg, *France*; Straßburg, *Austria*; or Strasburg, *Germany*].<sup>72</sup>

In *Austria* and *Hungary*, the Danube River greatly overflowed.<sup>47, 92</sup>

On 12 and 18 February 1623, there were great floods on the Danube River.<sup>72</sup>

In September 1623, a hurricane struck *Cuba*. One account lists 250 deaths, while another account cites 150.<sup>141</sup>

On 19 September 1623, a hurricane struck St. Christopher's island [St. Kitts] in the *West Indies* and destroyed the crop of tobacco.<sup>145</sup>

In 1623, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Chi-an. This drought led to a famine.<sup>153</sup>

In 1623, there was a drought that cause great distress in Kiangsi province in *China*.<sup>165</sup>

---

**Winter of 1623 / 1624 A.D.** In 1623 in *Eastern Europe*, the Danube River froze during the winter.<sup>47, 93</sup>

In 1624, the Danube River froze in *Germany*.<sup>62</sup>

In *England*, there was frost from 14 December 1623 to 11 January 1624. The Danube River was frozen.<sup>72</sup>

This winter of 1623-24 was very severe and as a result foiled the attack on Antwerp, *Belgium* by the army of the Prince of Orange. The winter produced a tremendously heavy snowfalls and great disasters. The winter lasted in *England* from mid-December to mid January; and in *Germany*, the Danube River froze.<sup>62</sup>

---

**1624 A.D.** In Dijon, *France*, the harvest took place on 14 September. During the summer, lightning struck the powder mill at Verona, *Italy*; four monasteries, together with their inhabitants were buried under the rubble.<sup>62</sup>

[In *England*] tempest struck on 24 June, 18 July and 22 to 28 October 1624.<sup>72</sup>

[In *England*] on 18 August and 12 November, there were terrible storms of thunder and lightning.<sup>72</sup>

In 1624, floods struck Shansi (now Shanxi province) in northern *China* at An-tsê. Fields were damaged. During the period between 15 July and 13 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow. Dikes were damaged.<sup>153</sup>

In 1624, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Yang-shuo. This drought led to a famine. During the period between 5 February and 8 August, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Ching-yüeh.<sup>153</sup>

In 1624 during the spring and summer, there was a great drought in Shansi and Kwangsi provinces in *China*. This drought led to an insurrection in Hunan.<sup>165</sup>

---

**Winter of 1624 / 1625 A.D.** A meteorologist living at the time [in *Belgium*] reported that: "After a harsh winter fell in February, westerly winds generate a large amount of snow. Some days, especially towards the end of February, brought very rough north wind chills. Moreover, most of the year was cold. Several species of trees, especially the walnut trees that were already far advanced froze up on the trunk."<sup>62</sup>

---

**1625 A.D.** In Noremberg [Nuremberg, *Germany*] in July, there was a terrible storm of thunder, lightning and rain that lasted continuously for 15 days.<sup>72</sup>

In 1625 in London, *England*, there was a fearful plague during June, July, August and September. In London, there was a great mortality, 35,417 people died. The plague was also violent at Boston, *England*.<sup>212</sup>

In 1625, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing. During the period between 4 July and 2 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Wên-shui.<sup>153</sup>

In 1625 during the summer, there was a drought in Chêhkiang and Shansi provinces in *China*.<sup>165</sup>

In 1625, there was a famine, after excessive rains in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**Winter of 1625 / 1626 A.D.** The winter of 1625-26 was severe [in *England*]. This winter followed the infectious summer of 1625.<sup>212</sup>

About 5 April 1626 (old style [Julian Calendar]), there was a great snowfall [in *England*].<sup>212</sup>

---

**1626 A.D.** In *England*, there were great hailstorms on the 29<sup>th</sup> of March and on the 25<sup>th</sup> to 30<sup>th</sup> of April.<sup>57, 72, 93</sup>

In *England* on 6 June, there were great floods.<sup>47, 72, 92</sup>

There were tempests on 10 & 13-16 February, 20 March, 31 August, 1 September, 5 & 8-9 December, and 10 & 13-14 February.<sup>72</sup>

In *England*, during the summer there was a drought and it was excessively hot.<sup>47, 72</sup>

In *England*, the summer was excessively hot. In November, the weather was excessively cold. December was mild soft warm weather, like a fine spring, yet it totally ceased and vanished.<sup>72</sup>

In the summer of 1626, excessive heat was in *England*. The first grape harvest in Dijon, *France* was held on 1 October.<sup>62</sup>

On 15 September 1626, a hurricane struck *Puerto Rico* causing 38 deaths.<sup>141</sup>

In 1626, floods struck Hopei (now Hebei province) in northern *China* at Shu-lu where crops were damaged and Shensi (now Shaanxi province) in central *China* at Fu-shih. During the same year, a drought engulfed Shensi province at Fu-p'ing.<sup>153</sup>

In 1626, there was a drought in Shansi province in *China*.<sup>165</sup>

In 1626 during the 3<sup>rd</sup> moon; wind, rain, and hail, damaged the wheat crop in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1626 / 1627 A.D.** In *England* in 1627, there was a frost from the 20<sup>th</sup> January to 12<sup>th</sup> February.<sup>47, 72, 93</sup>

On 28 January 1627, there was a terrible south gale as reported in Alrewas in Staffordshire, *England*. Many houses and trees were thrown down.<sup>212</sup>

**1627 A.D.** In *Austria* on the Danube River on 10 September, "A cloud loaded with a sea of water burst and fell."<sup>47, 72, 92</sup>

In Apulia (Naples), *Italy*, there were great floods.<sup>47, 72, 92</sup>

In Apulia (Naples), *Italy*, 16,000 souls were lost by great floods.<sup>72</sup>

In 1627, there were tempests on 3-4 March, 13 & 27 October, 17 December, Bohemia [now western *Czech Republic*].<sup>72</sup>

In 1627, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao and Chin-yün. During the period between 13 June and 12 July, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at San-chiang. Many houses were damaged by the floodwaters. During the period between 8 November and 7 December, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chiang. One thousand families were flooded.<sup>153</sup>

In 1627 during the 2<sup>nd</sup> moon, there was a storm of wind, rain, and hail that damaged wheat crop in the vicinity of Shanghai, *China*. During the 7<sup>th</sup> moon on the 1<sup>st</sup> day, there was a typhoon with rain, which destroyed trees and dwellings. Then a few days later, another typhoon struck.<sup>166</sup>

**Winter of 1627 / 1628 A.D.** In 1627 during the 12<sup>th</sup> moon, in the vicinity of Shanghai, *China*, there was a great fall of snow, over five feet in one night; bamboo and other trees broken; birds and animals died.<sup>166</sup>

**1628 A.D.** In 1628, the plague was ushered into Ausburgh [Augsburg, *Germany*] by a great famine in August and September.<sup>72</sup>

[In *England*] on 28 December 1628, there was a tempest.<sup>72</sup>

In 1628, floods struck several regions of *China* including:<sup>153</sup>

— Shansi (now Shanxi province) in northern *China* at Ch'ing-yüan.

— Hupeh (now Hubei province) in central *China* at Hanyang.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Sung-chiang and T'ai-ts'ang. Innumerable persons drowned.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing, Hu-chou, Ningpo, Shao-hsing, Taichow, Chin-hua, Ch'ü, Chien-tê, Wên-chou and Li-shui. Innumerable persons drowned.

In 1628, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Pao-ting and a drought engulfed Hupeh (now Hubei province) in central *China* at Yün. During the period between 8 August and 8 November, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Huai-chi and Shansi (now Shanxi province) in northern *China* at Fên-ch'êng, Hsi, Jung-ho and Yung-chi.<sup>153</sup>

In 1628 during the autumn, there was a drought in Chihli, Hupeh, Kwangsi and Shansi provinces in *China*. In Chihli, this was a great drought.<sup>165</sup>

In 1628 during the 2<sup>nd</sup> moon, there was a fall of snow (in the spring) in the vicinity of Shanghai, *China*.<sup>166</sup>

**1629 A.D.** [In *England*] on 9-10 June, there was a tempest.<sup>72</sup>

In Mexico City in central *Mexico* on 30 June, there was a deluge from the mountains. The effects continued for several years.<sup>47, 92</sup>

In 1629 and 1630, there was a dearth in *England*. In London, they made bread from turneps [turnips].<sup>234</sup>

In 1629, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shao-hsing and Hupeh (now Hubei province) in central *China* at Hanyang. During the same year, a severe drought engulfed Shensi (now Shaanxi province) in central *China* at Mi-chih.<sup>153</sup>

In 1629, there was a great drought in Shensi province in *China*.<sup>165</sup>

### **1630 A.D. – 1631 A.D. India. Famine**

In 1630 a devastating drought afflicted the province of Gujarat and whole centers were depopulated. A Dutch merchant, returning from Swally [Suvali, *India*], reported that of 260 families only 11 had survived, while in Surat, *India*, a great and crowded city, he saw hardly a living soul, but at each street corner found piles of dead with none to bury them.<sup>84</sup> [Gujarat is a state in northwestern *India* on the Arabian Sea. Swally, Suvali and Surat are all located in Gujarat.]

In 1631 in *India*, there was a great drought and this drought extended through *Asia*.<sup>47</sup>

In 1631 in *India*, there was a general famine caused by drought and war. This extended throughout *Asia*.<sup>57</sup>

In 1631 A.D., there was a very general and terrible famine in *India*. In this terrible famine, Shah Jahan opened a number of soup kitchens or alms-houses (langar), gave away a lac of Rupees in charity, and remitted taxes to the amount of nearly 70 lacs of Rupees (80 crores of rupees) or one-eleventh part of the whole revenue.<sup>179</sup>

In 1631, there was a great famine in the Deccan region in *India*.<sup>156</sup>

— “There was a great deficiency of rain, and the drought was so intense that not a drop of dew could be found. The scarcity became so great that nothing but the herb bugloss [a coarse hairy plant of the borage family] was to be found in the shops of the bakers and druggists. The number of the dead exceeded all computation or estimate. Coffins and burial were not thought on in the Deccan. The distress compelled emigration to the north and east; but the poor wretches were reduced to such a state of weakness, that they did not accomplish the first stage. The towns and their environs, and the country, were strewn with human skulls and bones instead of seed. Men ate each other, parents devoured their children. Bakers ground up old bones, or whatever else they could get, and mixing the dust with a little wheat-flour, sold

the cakes as valuable rarities to the wealthy. Human bodies dried in the sun were steeped in water and devoured by those who found them. Cities were depopulated by the death and emigration of the inhabitants. No such famine has been recorded in history. The Emperor (Shah Jehan) ordered distribution of provisions to be made in the cities and towns, especially at Burhanpore. Khandesh and Balaghat, with many other districts, were quite depopulated. Sultanpore remained waste for forty years.” — The foregoing account refers especially to that part of India known as the Deccan; but other accounts indicate this famine was prevalent over all of *India* and also extended over the whole of Asia. — In describing this famine, the Orissa Commissioners remarked, “that money could not purchase bread, and a prodigious mortality ensued. Disease followed famine, and death ravaged every corner of *India*.”

**1630 A.D.** In *Scotland*, there were great floods on the River Clyde.<sup>47, 72, 92</sup>

In *England* in 1630, there was a dearth. Bread made of turnips, etc.<sup>57, 72, 91</sup>

In 1629 and 1630, there was a dearth in *England*. In London, they made bread from turneps [turnips].<sup>234</sup>

In 1630, there was a dreadful plague at Cambridge, *England*. It caused the business at the University to be suspended, and the Assizes [court] to be moved to Royston.<sup>212</sup>

During the drought summer of 1630, it was very dry in Alrewas in Staffordshire, *England*.<sup>212</sup>

On 5 November 1630, Zealand [the largest island in *Denmark*] was completely overflowed with saltwater [by the sea]. “Anno ter deno poft fequemille, Novembris Quinta, fiat falfis Zelandia tota fub Undis” [translation from Latin as written in Middle English: On November 5<sup>th</sup> in the third year by tens {hence 30} after the sequemille {1600}, Zelandia stands completely under salty waves.]<sup>225</sup>

Also refer to the section **1630 A.D. – 1631 A.D.** for information on the drought and famine in India during that timeframe.

**1631 A.D.** In 1631, the plague struck Dalton in Lancashire, *England* and the Isle of Walney. It began in July 1631 and continued until Easter 1632. At Dalton, three hundred and 3 score [360] people died of this sickness. At the Isle of Walney, it resulted in 120 deaths. At Louth in Lincolnshire, it caused 754 deaths.<sup>212</sup>

On 21 October 1631, a storm struck the *Gulf of Mexico* causing 300 fatalities. The storm appears to be a “norther”.<sup>141</sup>

On 6 December 1631, at the Gulf of Volo off *Greece*, riding at anchor, about 10 o’clock at night, it began to rain sand and ashes. This continued until 2 o’clock the next morning. It was 2 inches thick on the deck of the ship. The crew cast it overboard using shovels, as they did snow the day before. There was no wind stirring when these ashes fell. This strange ash fell in other places. Ships coming from St. John D’Acre [Acre, *Israel*] over 100 leagues [300 miles, 483 kilometers] away also encountered this ash. Comparing the ash from these ships, they found that the ash were the same. This shower of ash was due to the eruption of Mount Vesuvius.<sup>234</sup>

In 1631 during the 12<sup>th</sup> moon [winter], there was a storm of thunder in the vicinity of Shanghai, *China*.<sup>166</sup>

Also refer to the section **1630 A.D. – 1631 A.D.** for information on the drought and famine in India during that timeframe.

**Winter of 1631 / 1632 A.D.** Captain [Thomas] James wintered at Charleton [Charlton] Island at the

southern end of James Bay, *Canada* during the winter of 1631-32. He was obliged to take harbor in the beginning of October 1631, the snow and ice began in that month, but the Sea was not frozen close to the island until the middle of December. [On 29 November, the ship was deliberately sunk to keep it from being swept away or crushed by ice.] The cold was very intense until the middle of April. They endured great hardship in so long a winter, surrounded by a sea all covered with ice. On the 29<sup>th</sup> of April, it rained all day. On the 3<sup>rd</sup> of May, the snow was melted in many places on the island. On the 13<sup>th</sup> of May, the weather was warm in the daytime, but there was still frost in the night. On the 24<sup>th</sup> of May, the ice was consumed along the shore, and cracked all over the bay, and began to float by the ship. On the 30<sup>th</sup> of May, the water was clear of ice between the shore and the ship. On the 15<sup>th</sup> of June, the Sea was still frozen over, and the Bay full of ice. The 16<sup>th</sup> was very hot with thunder. On the 19<sup>th</sup> of June, they saw some open sea, and on the 20<sup>th</sup> all the ice was driven to the northward. [The ship was refloated in June.] The sea to the northward was full of floating ice until the 22<sup>nd</sup> of July.<sup>292</sup>

---

**1632 A.D.** In *Italy* in 1632, they suffered from exceptional drought and heat. The first grape harvest in Dijon, *France* fell on 4 October.<sup>62</sup>

The drought of 1632 in *France* lasted from 12 July until 15 September.<sup>79</sup>

In 1632, floods struck Hupeh (now Hubei province) in central *China* at Hanyang.<sup>153</sup>

In 1632 during the autumn and winter, there was a great drought in Chêhkiang province in *China*.<sup>165</sup>

---

**Winter of 1632 / 1633 A.D.** The winter of 1632-33 began early and was very hard. The *Mercure de France* reported that on 4 October 1632, the cold between Montpellier and Béziers in southern *France* was so severe that 16 Gardes du Corps (bodyguards) of Louis XIII, 8 of his Swiss and, 13 sutlers [civilian merchants who sell provisions to an army] died from the extreme cold.<sup>62</sup>

---

**1633 A.D.** In Cork in southern *Ireland*, there was a “prodigious flood of the sea”. The flood swept away some of the public buildings and bridges.<sup>47,92</sup>

In 1633, a severe drought engulfed several regions of *China* including:<sup>153</sup>

— Shensi (now Shaanxi province) in central *China* at Mi-chih and Sian. At Sian, the drought led to a famine.

— During the period between 10 March and 7 April, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Sui-ch’ang.

— During the period between 8 August and 8 November, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Fên-ch’êng, P’u, An-i, Hsi, Fên-hsi and Yung-chi.

In 1633 during the autumn, there was a great drought in Shansi and Shensi provinces in *China*. The resulting famine was so severe that it led to cannibalism in Shensi.<sup>165</sup>

In 1633, floods struck Yunnan province in southwest *China* at Chiang-ch’uan. The city walls were damaged by the floodwaters. During the period between 5 August and 2 September, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Nanning and Ts’ang-wu. At Nanning, the houses were damaged by the floodwaters.<sup>153</sup>

In 1633, there was a famine in the vicinity of Shanghai, *China*. As a result, rice was extremely dear.<sup>166</sup>

---

**1634 A.D.** On 5 October 1634, a hurricane struck western *Cuba* causing 40 deaths.<sup>141</sup>

In 1634, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui and

Yü-yao. During the period between 6 May and 8 August, floods struck Kiangsi (now Jiangxi province) in southern *China* at P'o-yang where the crops were damaged by the floodwaters.<sup>153</sup>

In 1634 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a storm of great wind and rain, which damaged houses and the grain crop. During the 8<sup>th</sup> moon, there were three tides in one day at Nanhwai, *China*.<sup>166</sup>

---

**1635 A.D.** In *England*, there was a severe frost from the 15<sup>th</sup> of December to the 11<sup>th</sup> of February.<sup>47, 72, 93</sup>

In *England*, the spring was warm and moist. The summer was excessively hot and droughty. During harvest, the weather was still hotter and drier. The winter was temperate and mild, neither dry nor wet.<sup>72</sup>

In *England*, it was hot and dry during the summer and harvest (fall).<sup>47, 72</sup>

[In *England*] on 1 August and 9 September, there were terrible storms of thunder and lightning.<sup>72</sup>

In 1635, the plague struck Kingston-on-Hull in *England*. It raged violently to the middle of June 1638. The number of persons who perished from the plague was 2,730, exclusive of those who fled out of the town and died elsewhere, who are said to have more than doubled that number. It raged at Canterbury from the beginning of August to the end of October.<sup>212</sup>

In 1635 in Holstein in northern *Germany* was so great a flood as drowned 6,000 people and 50,000 cattle.<sup>72</sup>

On 14 August 1635, a great storm struck the early settlers in New England in what was to become the *United States*. The winds from the gale caused the tides to rise to height unknown before. At Boston, Massachusetts, the tides measured 20 feet [6 meters]. The Narragansett Indians had to climb to the tops of trees to save themselves. Many failed to do so and were swallowed up by the surging waters. Trees were broken in two or torn up by the roots. The Indian corn, the main dependence of the colonists, was beaten down and destroyed. Houses were blown over. Several shipwrecks were caused by the storm, for there were at this time large immigration of settlers, and a number of ships were near the coast, having onboard many passengers and goods for New England. The ship *Great Hope* was driven aground near Charlestown, Massachusetts. The ship *James* with about one hundred passengers was almost driven onto the rocky shore of Piscataqua but the wind changed direction in the final minutes. The ship *Angel Gabriel* was dashed against the foam covered rocks off Pemaquid Point in Maine.<sup>199</sup>

On 24 August 1635, a hurricane struck the western *Atlantic Ocean* and the east coast of the *United States* causing 35 deaths.<sup>141</sup>

In 1635, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. During the same year, a drought engulfed Shansi (now Shanxi province) in northern *China* at Chi-shan and Yüan-ch'ü.<sup>153</sup>

In 1635, there was a drought in Shansi province in *China*.<sup>165</sup>

---

**Winter of 1635 / 1636 A.D.** In *Western Europe*, the carts drive on the ice on the Maas [Meuse] River.<sup>62</sup>

During the winter of 1635-36 [in *Western Europe*], the frost began in December 1635, and took a portion of January 1636. The wagons drove over the ice on the River Meuse.<sup>62</sup>

In *England*, the winter was uncommon and unseasonably warm.<sup>72</sup>

In *England* on the 30<sup>th</sup> of January 1636, there was hail, with rain, snow and thunder.<sup>57, 72, 93</sup>

In Noremberg [Nuremberg, *Germany*] on 27 January 1636, there was a tempest of rain and floods.<sup>72</sup>

---

**1636 A.D.** In 1636, the spring at Derby in Derbyshire, *England* was very forward [early].<sup>212</sup>

In *England*, it was hot and dry during the summer and harvest (fall). The winds came from the south or west.<sup>47, 72</sup>

In *England*, the summer was hot and droughty. There were winds from spring to winter from either the south or west.<sup>72</sup>

In 1636, East and West Bridgeford, Cotgrave, and Bingham in Nottinghamshire, *England* were severely visited by the plague. The plague also revisited Derby in Derbyshire, *England*. It desolated Bury St. Edmonds in Suffolk, *England*.<sup>212</sup>

On 4 November 1636, a furious and destructive storm struck Northamptonshire, *England*.<sup>195</sup>

In 1636 in Dijon, *France*, they collected the wine on 4 September, which is 20 days earlier than the average beginning in the year 1559.<sup>62</sup>

In 1636, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Li-shui. During the same year, a severe drought engulfed Chekiang province at Chin-hua, His-ch'ang and Ch'êng. During the period between 6 May and 8 August, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at An-i and other regions of *China*.<sup>153</sup>

In 1636 during the summer, there was a great drought in Chêhkiang, Kiangsu and Shansi provinces in *China*.<sup>165</sup>

In 1636 during the spring, there was a flood in the vicinity of Shanghai, *China*. Then during the summer, there was a drought.<sup>166</sup>

---

**Winter of 1636 / 1637 A.D.** In *England*, there were seven days of very hard frost in February 1637.<sup>72</sup>

---

**1637 A.D.** In *England*, it was excessively hot and dry.<sup>47, 72</sup>

The summer of 1637 was unusually hot and dry [in *England*]. In *France*, the grape harvest began at Dijon on 3 September, which is 21 days earlier than average. This is the earliest date for the harvest since the year 1523.<sup>62</sup>

In East Friesland, Holland [now *the Netherlands*] on the 1<sup>st</sup> of September, there were great floods.<sup>47, 72, 92</sup>

In Friesland, *Holland* on 10 September, there was a terrible storm of thunder and lightning.<sup>72</sup>

In 1637, floods struck Kiangsi (now Jiangxi province) in southern *China*.<sup>153</sup>

---

**Winter of 1637 / 1638 A.D.** In 1637 during the 12<sup>th</sup> moon, it was very cold in the vicinity of Shanghai, *China*. The Whangpu [Huangpu River, *China*] and lakes froze.<sup>166</sup>

---

**1638 A.D.** In *England*, it was excessively hot and dry.<sup>47, 72</sup>

This summer of 1638 was extremely dry and hot [in *England*]. In Dijon, *France*, the grape harvest took place on 9 September, or 15 days earlier than average.<sup>62</sup>

In October 1638, an Atlantic hurricane struck off the southern coast of *Puerto Rico*. Two British ships were lost; two known survivors.<sup>141</sup>

During the winter of 1638, the French galley ships were arrested by the ice at the *Marseilles Sea*.<sup>38, 60, 62</sup>

The winter of 1638 in southern *France* cause more damage than the winter of 1599-1600. The port of Marseille froze around the galleys.<sup>79</sup>

The winter of 1638 was so severe in *Provence* that in the port of Marseille (*France*), the water froze around the ships.<sup>62</sup>

In 1638, during the period between 8 August and 8 November, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow.<sup>153</sup>

In 1638 in the autumn, there was a drought in Kiangsu province in *China*.<sup>165</sup>

---

**1639 A.D.** In Montbéliard in east-central *France* on 21 June 1639, a cold wave struck that was so strong as in the full cold of winter.<sup>62</sup>

In 1639, almost no snow fell on the Alps. There was no rain in *Provence, France*. Durance and other rivers dried up. The water level on the Rhône River was down very low.<sup>79</sup> [Durance is a major river in southeastern *France*. Its source is in the southwestern Alps.]

In *England* in October, there were great floods.<sup>47, 72, 92</sup>

[In *England*] on 6, 24 and 27 December, there were tempests and hurricanes.<sup>72</sup>

In 1639, a drought engulfed Hupeh (now Hubei province) in central *China* at Chung-hsiang. During the period 1-29 July, floods struck Hupeh province) at An-lu. During the period between 8 November 1639 and 5 February 1640, a drought engulfed Shansi (now Shanxi province) in northern *China* at Ch'ang-chih.<sup>153</sup>

In 1639 during the winter, there was a drought in Hupeh and Shansi provinces in *China*. No snowfall.<sup>165</sup>

---

**1640 A.D.** On 8 April 1640 there was a sudden overflowing or inundation of the River Weland in Northamptonshire, *England* to an incredible height. It was called the Easter Flood. The water rose five feet, eight inches above the ground. At the same time there was a great and sudden overflowing of the River Nyne. This caused a great flood. The floodwater flowed into the lower rooms of the houses on both sides of Bridge Street in Peterborough. The rains that caused this flood did not fall on Peterborough but rather in the upper part of the county.<sup>195</sup>

On 11 September 1640, a hurricane struck the western coast of *Cuba*. Thirty-six vessels were affected by the storm. Four ships were thrown on shore. Nearly all the sailors drowned, except 260 that were saved.<sup>141</sup>

In Dresden, *Germany* on the 23<sup>rd</sup> of September, there were great floods.<sup>47, 72, 92</sup>

In *England*, on October 11 through 14, there was a most severe frost. It froze up all the rivers and brooks.<sup>72</sup>

[In *England*] on 18 October, there was a terrible storm of thunder and lightning.<sup>72</sup>

During 1640-1655, there was a famine throughout *India*, principally felt in Deccan in southern *India* and in Bengal [today this is *Bangladesh* and the state of West Bengal in *India*].<sup>182</sup>

In 1640, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* leading to a famine. Also during the year, a drought accompanied by a plague of locusts engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing and Shao-hsing. During the period between 6 May and 8 August, a drought engulfed Chekiang province at Chu-chi.<sup>153</sup>

In 1640 during the summer, there was a universal great drought and distress in Chêhkiang and Shantung provinces in *China*. In Chêhkiang, the drought was accompanied by a plague of locusts. The resulting famine was so severe that it led to cannibalism in Shantung.<sup>165</sup>

In 1640 during the period between 17 August and 15 September, floods struck Fukien (now Fujian province) on the southeast coast of *China* at Fu-an. Houses were damaged by the floodwaters and innumerable people and cattle drowned. During the period between 8 August and 8 November, floods struck Chekiang (now Zhejiang province) on the east coast of *China*. As a result, the price of rice rose.<sup>153</sup>

---

**1641 A.D.** In *England*, there were hailstorms on the 25<sup>th</sup> of June and the 14<sup>th</sup> and 19<sup>th</sup> of August with rain.<sup>57</sup>

In *England*, there was a great hailstorm on 25 June 1641. There were further hailstorms in *England* on August 24 and 29 and rain.<sup>72, 93</sup>

In 1641, the plague struck Stamford, *England*. Between 500 and 600 people died.<sup>212</sup>

In Montbéliard, *France*, on 27 July 1641 it froze. In Burgundy, *France*, the grape harvest began only on 3 October.<sup>62</sup>

On 24 September 1641, an Atlantic hurricane struck from *Hispaniola* to Florida, in the *United States*. Eight ships were lost and many people perished. Many ships were lost in the *Bahama Channel*. There were no survivors on four of the wrecked ships. There were some survivors on a fifth ship that was lost along the northeast coast of Florida in the *United States*.<sup>141</sup>

Governor Winthrop in his journal mentioned that the frost was so great that the Boston Bay in Massachusetts, *United States* was frozen over from the 18<sup>th</sup> of November to the 21<sup>st</sup> of December. The ice was so thick that horses and carts crossed over parts where ships had sailed. Loads of wood drawn by six oxen passed from Muddy River to Boston. It was frozen as far out to sea as one could discern. The great bay at Virginia was also frozen over, and all their great rivers.<sup>38</sup>

In 1641 during the period between 8 June and 7 July, floods struck Fukien (now Fujian province) on the southeast coast of *China*.<sup>153</sup>

In 1641, there was a drought in the vicinity of Shanghai, *China*. The drought was accompanied with a plague of locusts.<sup>166</sup>

---

**1642 A.D.** [In *England*] on 22 & 27 January and on 17 February, there were terrible storms of thunder and lightning.<sup>72</sup>

In *England*, in 1642 and 1643, the summers were excessively hot.<sup>47</sup>

On 27 August 1642, a gale struck Nottingham, *England*.<sup>212</sup>

In *Germany* in September, there was a great flood at Dresden.<sup>72</sup>

In the news of the siege of Perpignan in southern *France* written by Louis XIII, we read, under date of May 24, 1642, the army experienced excessive heat.<sup>79</sup>

During 1642, there were three hurricanes in the *West Indies*. The second lasted twenty-four hours, during which, at St. Christopher's island [St. Kitts], twenty-three fully laden vessels were wrecked upon the coast. One of them belonged to the celebrated De Ruyter. The houses were all blown down, and the whole of the cotton and tobacco plants were destroyed. The salt lakes overflowed their banks, and were for some time afterwards unproductive.<sup>145</sup> [Michiel Adriaenszoon de Ruyter was the most famous and one of the most skilled admirals in Dutch history.]

On September 1642, an Atlantic hurricane struck the *Lesser Antilles*. Men in 22 ships were drowned.<sup>141</sup>

In 1642, a hurricane destroyed all the houses on St. Kitts in the *West Indies*.<sup>144</sup>

[In 1642 in Kaifong [Kaifeng] in the Henan province of central *China*, the area was besieged by rebels, and the embankments destroyed which caused a man-made flood. It was computed that 300,000 people perished by this inundation.<sup>92</sup>]

In 1642, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo. During the period between 6 May and 8 August, floods struck Kiangsi (now Jiangxi province) in southern *China*.<sup>153</sup>

In 1642, there was a drought in Chêhkiang province in *China*.<sup>165</sup>

In 1642, there was a drought in the vicinity of Shanghai, *China*. The drought was accompanied with a plague of locusts.<sup>166</sup>

In 1642 during the 8<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a storm [typhoon] of great wind, rain, and hail, which damaged the rice crops. During the same time, at Wangpoo [now Huangpu, *China*], there were three tides in one day, and violent wind and rain injured the crops there also.<sup>166</sup>

---

**1643 A.D.** In Thuringia, *Austria*, there were great floods on 2 December.<sup>47, 72, 92</sup> On 6 February, there was a great flood at Maes.<sup>72</sup>

On 23 January 1643, there was a terrible high water flood at Friesland [now in *the Netherlands*] whereby much damage was done to the dikes and at the city of Gaes near Haerlingen [Harlingen, *the Netherlands*], the dead bodies streamed out of the earth [buried dead corpse floated to the surface].<sup>225</sup>

In *England*, in 1642 and 1643, the summers were excessively hot.<sup>47</sup>

[In *England*] on 16 March and 3 May, there were terrible storms of thunder and lightning.<sup>72</sup>

In *England*, the spring was very moist, almost constant rain. The summer was excessively hot.<sup>72</sup>

In *Italy* in 1643, there was excessive heat. In *France*, this was a year of great scarcity of grain. In Dijon, *France*, the grape harvest began on 1 October.<sup>62</sup>

In 1643, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo. This drought led to a famine. During the period between 18 April and 17 May, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu. During the period between 6 May and 8 August, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Hui-min.<sup>153</sup>

In 1643 during the summer, there was a drought in Chêhkiang and Yünnan provinces in *China*. In Yünnan, this was a great drought.<sup>165</sup>

In 1643 during the 10<sup>th</sup> moon, there was at night a storm of violent thunder, rain and wind in the vicinity of Shanghai, *China*. It broke trees and carried off [clay roof] tiles.<sup>166</sup>

---

**1644 A.D.** In *Spain* on 6 June, there were great floods.<sup>47</sup>

On 1 October, there was a great flood in *Spain*.<sup>72</sup>

In *Spain* and Holland [now *the Netherlands*], there were considerable floods.<sup>47, 92</sup>

On 15 & 16 May 1644, there was a hailstorm in Staffordshire and Warwickshire, *England*. Some of the hailstones were the size of walnuts and others the size of half crown pieces. "Maii 15 and 16, in divers places there fell great stormes of haile with haile stones of divers formes, some round as big as walnuts, and some flat as big as half crown pieces; with thunder and lightning in three or four several places at one instant; the like seldom seen."<sup>212</sup>

[In *England*] on 16-18 June, there was a tempest with high winds.<sup>72</sup>

In August 1644, the plague was violent in Leeds in West Yorkshire, *England*.<sup>212</sup>

In Montbéliard, *France* in 1644, the heat for more than two weeks was so strong that the fish died in the rivers. In Dijon, *France*, the grape harvest began on 15 September.<sup>62</sup>

In October 1644, a great Atlantic hurricane struck the western coast of *Cuba* and the Straits of Florida causing approximately 1,500 deaths.<sup>107</sup>

In October 1644, a hurricane struck western *Cuba* and the Straits of Florida in the *United States* causing less than 1,500 deaths. [Thirteen ships carried 1,500 people. Ten of these ships sank.]<sup>141</sup>

In 1644 during the period between 1 September and 30 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Tung-yang and Hopei (now Hebei province) in northern *China* at Hsing-t'ai. During the period 1-30 September, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu.<sup>153</sup>

---

**1645 A.D.** During the winter of 1645, there was a furious wind that struck near Geneva, *Switzerland*. It took the roof off a house and laid dry the bed of the River Rhone above the bridge in view of the town. Many people crossed over the dry river to the little island with dry feet. One of the sons of Mr.

D'aubigny picked up some medals he found in the dry riverbed along his way. The river was dry for an hour and then the waters returned. A book printed in the year 1560 recorded a similar episode.<sup>234</sup>

In 1645, the plague was very violent in Leeds in West Yorkshire, *England*. 1,325 persons died between 12 March and 1 June. "The air very warm and so infectious that dogs, cats, mice, and rats died, and several birds in their flight over the town dropped dead."<sup>212</sup>

[In *England*] March 8, September 4 great rains and floods, a rainy floody winter.<sup>72</sup>

On 6 June 1645, a hailstorm struck Loughborough in Leicestershire, *England*. Some of the hailstones were as big as small hens' eggs and the least as big as musket bullets.<sup>194</sup>

In *England* on the 3<sup>rd</sup> of July, there was a hailstorm with rain.<sup>57, 72</sup>

In France there was a flood. On 11 July 1645, the Seine River in Paris, *France*, at the bridge "Pont de la Tournelle" reached a height of 9.04 meters (29.7 feet) above the zero mark [the low water mark of the year 1719].<sup>71</sup>

In *England*, the summer was excessively hot and dry.<sup>72</sup>

The summer of 1645 was short but hot in *England*. In Dijon, *France*, the grape harvest took place on 11 September; 13 days earlier than the mean.<sup>62</sup>

In *England*, there was a severe frost from the 8<sup>th</sup> of December to the 17<sup>th</sup> of January.<sup>47, 72, 93</sup>

In 1645 during the period between 26 April and 24 May, floods struck Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai and Hopei (now Hebei province) in northern *China* at An-tz'ü. At Wan-tsai, the crops were damaged by the floodwaters. During the period between 21 August and 19 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'êng and Hopei province at Hsing-t'ai, Kao-yang [possibly a misprint], Tsao-ch'iang, Chêng-ting and Chi-tsê.<sup>153</sup>

In 1645 during the autumn in the vicinity of Shanghai, *China*, there was a storm of great wind; the sea broke the dike, salted the land, and thereby destroyed the rice.<sup>166</sup>

**1646 A.D.** In Friesland, Holland [now *the Netherlands*] and Zealand, *Denmark*, there were great inundations. The Sea drowned 110,000 people.<sup>47, 72, 92</sup>

The sea broke in at Dordrecht [Dordrecht] in Holland [now *the Netherlands*] and thereabout, and drowned 10,000 people. About Dullar in *Friesland* and *Zealand*, it drowned 100,000 people, and 300 villages, some of whose steeples and towers yet appear when the tide is out.<sup>72</sup>

In 1646, it was excessively hot [in *England*].<sup>212</sup>

In 1646, the plague ravaged Bideford in Devon, *England*. It also struck Bingham in Nottinghamshire where it raged violently.<sup>212</sup>

In 1646, the price of wheat [in *England*] averaged 48 shillings per quarter [quarter ton].<sup>212</sup>

[In *England*] on 26 June, there was a terrible storm of thunder and lightning with rain.<sup>72</sup>

In *England*, there were hailstorms on the 4<sup>th</sup> of May; 11<sup>th</sup> and 12<sup>th</sup> of July; and 17<sup>th</sup> of August.<sup>57, 72, 93</sup>

In 1646 during the period between 7 March and 8 October, a severe drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh and Mêng-shan; and Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang, P'ing-hsiang and Wan-tsai. During the same time period, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chin-hua, P'u-chiang, Taichow, Shao-hsing and Tung-yang.<sup>153</sup>

In 1646 during the period between 17 March and 15 April, floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang and Po. During the period between 13 June and 12 July, floods struck Yunnan province in southwest *China* at K'un-ming and Mêng-tzū; and Shantung (now Shandong province) on the east coast of *China* at Tzū-yang and Lin-i. At Tzū-yang, houses were damaged by the floodwaters. [Lin-i is located at longitude 118.24° East and latitude 35.07° North.] During the period between 11 August and 8 September, floods struck Shansi (now Shanxi province) in northern *China* at Kao-p'ing and Shantung province at Lin-tzū.<sup>153</sup>

---

**1647 A.D.** In *England*, the weather was variable in 1647, but very rainy in 1648.<sup>72</sup>

[In *England*] form the harvest in 1647, both of the years [1647 & 1648] southerly windy, cold; all very rainy and floody.<sup>72</sup>

In *England*, “this was a most exceedingly wet year; neither frost nor snow all the winter for more than six days in all. Cattle died everywhere of a murrain [cattle disease].”<sup>47</sup>

In 1647, the price of wheat was high [in *England*]; averaging 73 shillings per quarter [quarter ton].<sup>212</sup>

In 1647, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 5 May and 2 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai.

— During the period 2-31 July, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh; Kiangsu (now Jiangsu province) on the east coast of *China* at Hsiao and Suchow; and Anhwei (now Anhui province) in eastern *China* at Wang-chiang, Wu-wei, Po, and Fou-yang.

— During the period 1-29 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Shui-an; Shantung (now Shandong province) on the east coast of *China* at Ch'ü-fou, I-shui, Kuang-jao, Wên-shang, Ch'ang-yüeh and An-ch'iu [it is possible the word order is inverted “Ch'iu-an”].

— During the period between 30 August and 27 September, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Mao-ming; Kiangsu province at Kao-yu; and Shantung province at Ning-yang.

In 1647 during the period between 6 May and 8 August, a drought engulfed Hopei (now Hebei province) in northern *China* at T'ung [uncertain name]. During the period between 8 August and 8 November, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at K'ai-hua.<sup>153</sup>

---

**1648 A.D.** In 1648, the price of wheat was high [in *England*]; averaging 85 shillings per quarter [quarter ton].<sup>212</sup>

Over the 100-year period from 1646 to 1745, the highest true market price of wheat at Windsor, *England* occurred in the years 1648 and 1649. The true-market price was computed averaging the price on Lady Day and the price at Michaelmas. In 1648, the price was 4£ 5s per Quarter [Quarter ton]. In 1649, the price was 4£ per Quarter [Quarter ton]. [This high price denotes a scarcity.] Over this time period, malt exceeded 2£ per Quarter in 1648, 1649, 1659 and 1662.<sup>297</sup>

In 1648, floods struck many regions of *China* including: <sup>153</sup>

— During the period between 5 February and 6 May, floods struck Anhwei (now Anhui province) in eastern *China* at Wu-ho and Shantung (now Shandong province) on the east coast of *China* at P'ing-yüan and Wên-shang.

— During the period between 21 June and 19 July, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh; Hopei (now Hebei province) in northern *China* at Mi-yün, Hsien, Hsin-ho, Pai-hsiang and Pa; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Tzū-chin [uncertain name – Yung-an].

— During the period between 20 July and 18 August, floods struck Hopei province at Wu-ch'iang, Chin, P'ing-hsiang, Nan-ho, Yung-nien, Tsao-ch'iang, and Mi-yün; Anhwei province at Su-sung; and Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê.

— During the period between 19 August and 16 September, floods struck Anhwei province at Po, Ying-shang and T'ai-p'ing; and Chekiang province at Ch'ang-shan.

In 1648 during the period between 6 May and 8 August, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Jao-p'ing. <sup>153</sup>

In 1648 during the 4<sup>th</sup> moon on the 3<sup>rd</sup> day in the vicinity of Shanghai, *China*, there was a hailstorm. The hailstones were the size of a [man's] fist. The hailstones wounded cattle and damaged crops. <sup>166</sup>

In 1648 during the 7<sup>th</sup> moon on the 21<sup>st</sup> day in the vicinity of Shanghai, *China*, there were three tides in one day. <sup>166</sup>

In 1648 during the autumn, there was a flood in the vicinity of Shanghai, *China*. <sup>166</sup>

**Winter of 1648 / 1649 A.D.** In *England* on 22<sup>nd</sup> January, "Now was the Thames frozen over and horrid tempests frown'd." <sup>47, 93</sup>

There was a great frost in *England* in January 1649. The River Thames was frozen over in London. On 22 January, there was a horrid tempest of wind. <sup>212</sup>

**1649 A.D.** In France there was a flood. In January 1649, the Seine River in Paris, *France*, at the bridge "Pont de la Tournelle" reached a height of 7.65 meters (25.1 feet) above the zero mark [the low water mark of the year 1719]. <sup>71</sup>

In 1649, continuous rain swelled the River Seine in Paris, *France*. The waters shook the small bridge "Pont Saint-Michel." In the living memory of the oldest bourgeois, they had not witnessed so great a rise of floodwaters in the Place de Grève [now called the Place de l' Hôtel de Ville] and the surrounding streets. The floodwater even overran the cemetery of St. John. <sup>79</sup>

In *England*, there were very general floods. <sup>47, 92</sup>

[In *England*], on 17 January (at Oxfordshire) and 17 June, there were great floods. All September and October rainy and floods. <sup>72</sup>

On 24 August 1649, there was a hailstorm at Peterborough in eastern *England*. Some of the hailstones were 9 inches in circumference. <sup>195</sup>

In 1649, the price of wheat was high [in *England*]; averaging 80 shillings per quarter [quarter ton]. <sup>212</sup>

Over the 100-year period from 1646 to 1745, the highest true market price of wheat at Windsor, *England* occurred in the years 1648 and 1649. The true-market price was computed averaging the price on Lady Day and the price at Michaelmas. In 1648, the price was 4£ 5s per Quarter [Quarter ton]. In 1649, the price was 4£ per Quarter [Quarter ton]. [This high price denotes a scarcity.] Over this time period, malt exceeded 2£ per Quarter in 1648, 1649, 1659 and 1662.<sup>297</sup>

In 1649 there was a famine in *Scotland* and northern *England*. The plague raged in *Ireland* and Shropshire in west Midlands *England*.<sup>72</sup>

In 1649 and 1650, there was a famine in *Scotland* and the North of *England* from rains and wars.<sup>57, 72, 91</sup>

In 1649 in Lancashire, *England*, there was a famine caused by the ravages of the armies. A plague followed.<sup>57</sup>

In 1649, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 11 May and 9 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Kiukiang and Hupeh (now Hubei province) in central *China* at Chung-hsiang and Hanyang.

— During the period between 10 June and 9 July, floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang. Innumerable houses were damaged by the floodwaters.

— During the period between 8 August and 6 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yen-ch'êng and Hopei (now Hebei province) in northern *China* at Wên-an, Chêng-ting, Hsing-t'ai, Kuang-p'ing, Ta-ming and Ho-chien.

In 1649 during the period between 5 February and 8 August, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Chi-an.<sup>153</sup>

**1650 A.D.** During the night of 18 January in *England*, there was a terrible storm. The cattle were so frightened that most of them broke out of the fields. Some in leaping broke their necks, others their legs. Some ran four miles off and when found were excessively hot.<sup>72</sup>

In Leicester, *England* on the 29<sup>th</sup> of April, there was a hailstorm.<sup>57, 93</sup> . . . with thunder and lightning.<sup>72</sup>

In Rome, *Italy*, during the summer of 1650, the heat was very strong and extremely dry. [In *France*], this year was noted for a great scarcity of corn; the price was three times higher than in the previous five years.<sup>62</sup>

In Rome, *Italy*, during the whole year, there was most excessive heat and drought, especially in the summer. After the harvest, the scorching heat was succeeded by very great rains and these were followed by a most rigorous cold.<sup>72</sup>

In 1650, an Atlantic hurricane struck St. Kitts in the *West Indies*. Twenty-eight ships were thrown on the roadstead of St. Christopher island; the sailors drowned. During two different hurricanes, a total of twenty-eight merchantmen [merchant ships] were lost along with a great number of lives.<sup>141</sup> [St. Christopher island is commonly known as St. Kitts. A roadstead is a place outside a harbor where a ship can lie at anchor.]

In 1650, the price of wheat was high [in *England*]; averaging 77 shillings per quarter [quarter ton].<sup>212</sup>

In 1650 and 1651 in *Ireland*, there was a famine throughout the country. Siege of Limerick in western *Ireland* and Siege of Galway in west-central *Ireland*.<sup>57, 91</sup>

In 1650, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 1 February and 1 March, floods struck Hupeh (now Hubei province) in central *China* at Hanyang.

— During the period between 30 May and 28 June, floods struck Shantung (now Shandong province) on the east coast of *China* at Ch'i-ho, Chang-ch'ing, T'an-ch'êng [probably a misprint, "Yen-ch'êng"], and Jih-chao. Nearly all the villages in the region of Chang-ch'ing were flooded.

— During the period between 29 June and 27 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at Ts'ang-wu; Chekiang (now Zhejiang province) on the east coast of *China* at Taichow, Sui-ch'ang and Hu-chou; and Shensi (now Shaanxi province) in central *China* at An-k'ang.

— During the period between 8 August and 8 November, floods struck Shantung province at Tung-a, Tung-ming, Shih-p'ing [probably a misprint, "Jên-p'ing"], Ch'ang-i, Chiao, Ên, T'ang-i and Hui-min. At Tung-a, 67 villages were flooded. At Ch'ang-i, the crops were damaged by the floodwaters. Also during this time period, floods struck Kiangsi (now Jiangxi province) in southern *China* at Shih-ch'êng [uncertain name].

— During the period between 25 October and 22 November, floods struck Hopei (now Hebei province) in northern *China* at Fu-ning and Luan-ch'êng; and Chekiang province at Hsien-chü. At Hsien-chü, the city walls, fields and houses were damaged by the floodwaters and many people drowned.

In 1650 during the period between 6 May and 8 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Wan-ch'üan. During the period between 1 April 1650 and 18 May 1651, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yai.<sup>153</sup>

**1651 A.D.** In France there was a flood. In January 1651, the Seine River in Paris, *France*, at the bridge "Pont de la Tournelle" reached a height of 7.8 meters (25.6 feet) above the zero mark [the low water mark of the year 1719].<sup>71</sup>

On 23 February 1651 occurred St. Peter's high flood, whereby much damage was done to the dikes in Friesland [now in *the Netherlands*], Embderland, and elsewhere, and not far from Dockum [Dokkum in *the Netherlands*] by Oudt-woudumer-ziil, there was a breach of 42 roods [42 rods, 693 feet, 211 meters] long broken in the dike.<sup>225</sup>

[In *England*] on 22 August, there was a terrible storms of thunder and lightning.<sup>72</sup>

In Dorchester in southwestern *England* on the 23<sup>rd</sup> of August, there was a hailstorm with stones 7 inches in circumference.<sup>41, 43, 56, 57, 93</sup>

In *England* in 1651, it was very hot days at the time of harvest. In Dijon, *France*, the grape harvest began on 22 September. This was another year in *France* where wheat was very scarce.<sup>62</sup>

In *England*, the years 1651-54 produced scorching hot dry summers and dry years.<sup>47, 72</sup>

In 1651, the price of wheat was high [in *England*]; averaging 73 shillings per quarter [quarter ton].<sup>212</sup>

Thunderstorms or rainstorms desolated Provence, *France* in 1651.<sup>79</sup>

The Seine River at Paris, *France* was so flooded that all houses near it were in danger, and great damage was done. On 4 March, a great tide broke down St. Anthony's banks, and overflowed all Dimermeer. There was significant damage in north *Holland* and Amsterdam.<sup>72</sup>

The thunderstorms of the year 1651 produced a great flood year in *France*. All the rivers overflowed their banks. In Provence, *France* on September 8th, the Durance River ascended to the gates of Avignon. In November at Grenoble, the Isère River overflowed bridge and fifty houses, drowned fifteen hundred beasts in the country and three hundred in the city. The flood left three or four feet of sand in the streets. The waters rose, they say, more than twenty feet above their usual height.<sup>79</sup>

During the period between 1 April 1650 and 18 May 1651, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yai. In 1651 during the period between 19 May and 12 November, a drought engulfed Shensi (now Shaanxi province) in central *China* at Kan-ch'üan, Yen-ch'ang and An-ting.<sup>153</sup>

In 1651, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 21 January and 19 February, floods struck Anhwei (now Anhui province) in eastern *China* at Shih-tai; Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow; and Hopei (now Hebei province) in northern *China* at Ching.

— During the period between 9 May and 17 June, floods struck Anhwei province at Ch'ien-shan and Wang-chiang. At Ch'ien-shan, innumerable houses were damaged by the floodwaters. At Wang-chiang, there was a great storm.

— During the period between 18 June and 16 July, floods struck Anhwei province at Ching-tê. Innumerable people and cattle drowned.

— During the period between 15 September and 13 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Shui-an; and Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-ch'un and T'ai-ts'ang. The crops were damaged by the floodwaters.

— During the period between 13 November and 12 December, floods struck Hopei province at Nan-ho, Kuang-tsung, Nan-yüeh, Yü-t'ien, Hsing-t'ai, and Ning-ho.

**1652 A.D.** In *England*, the years 1651-54 produced scorching hot dry summers and dry years.<sup>47, 72</sup>

In *England*, the summer was excessively hot and dry.<sup>72</sup>

In 1652, the price of wheat [in *England*] averaged 49 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1652, there was a drought in *Scotland*. The warmth was very great, the summer being the driest ever known in *Scotland*.<sup>212</sup>

The summer of 1652 was very hot and very dry in *Denmark* and *England*. At Dijon, *France*, the grape harvest began on 20 September. This was the third famine year of the grain.<sup>62</sup>

In Copenhagen, *Denmark*, the summer was excessively hot and dry.<sup>72</sup>

On 23-24 September 1652, an Atlantic hurricane struck the *Leeward Islands*. Three ships and crew went missing.<sup>141</sup>

In 1652, Prince Maurice was lost in a hurricane in the *West Indies*. [Prince Maurice was a prince of the elector Palatine region of *Europe*.] He was in a fleet under the command of his brother Prince Rupert.<sup>145</sup>

The River Arve falls into the River Rhone, about 1000 paces beneath [Lake] Geneva, *Switzerland*. In December 1652, the River Arve swelled so that it not only overflowed its banks but also interrupted the course of the Rhone, and forced it to reenter in the Lake for a space of 14 hours.<sup>234</sup>

In 1652, floods struck many regions of *China* including:<sup>153</sup>

- During the period between 10 March and 7 April, floods struck Anhwei (now Anhui province) in eastern *China* at Tung-liu.
- During the period between 8 April and 7 May, floods struck Shantung (now Shandong province) on the east coast of *China* at Ch'i-tung.
- During the period between 6 June and 5 July, floods struck Shantung province at Lin-ch'ing, Hui-min, Shang-ho and Yüeh-ling; and Shansi (now Shanxi province) in northern *China* at P'ing-ting, Hsi-yang and Shou-yang. Nearly all the villages in these districts were flooded.
- During the period between 6 July and 3 August, floods struck Shantung province at Shou-kuang, Ch'ang-yüeh, An-ch'iu and Kao-wan; and Shansi province at Hsi-yang, An-tsê, Lin-fên and Jung-ho.
- During the period between 4 August and 2 September, floods struck Shantung province at Mêng-yin; Kansu (now Gansu province) in northwest *China* at T'ien-shui and Lung-hsi; Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou; Hupeh (now Hubei province) in central *China* at Chung-hsiang; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at K'ai-p'ing.
- During the period between 3 September and 2 October, floods struck Kwangtung province at P'u-ning and Chekiang province at T'ung-hsiang.

In 1652, a drought engulfed several regions of *China* including: <sup>153</sup>

- During the period between 5 February and 6 May, a drought engulfed Anhwei (now Anhui province) in eastern *China* at T'ung-ling, Wu-wei, Lu-chiang, Wuhu and Tang-t'u.
- During the period between 6 June and 5 July, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Shanghai.
- During the period 3-31 October, a drought engulfed Hopei (now Hebei province) in northern *China* at Wu-ch'iang.

In 1652 during the 4<sup>th</sup> moon on the 5<sup>th</sup> day, great rains cause the river to flood in the vicinity of Shanghai, *China*.<sup>166</sup>

**1653 A.D.** On 13 July 1653, an Atlantic hurricane struck Barbados in the *Lesser Antilles* and St. Thomas in the *Virgin Islands*. One ship and crew was lost. At *St. Vincent* in the Caribbean Sea, there was "death of many savages".<sup>141</sup>

In July 1653, it was so furiously hot in *Poland*, that in the regiment of foot [soldiers] which was the King's Guard, marching most of them barefooted upon sand, more than 100 fell down altogether disabled [heat stroke], whereof a dozen died outright, without any other sickness.<sup>234</sup>

In *England*, the years 1651-54 produced scorching hot dry summers and dry years.<sup>47, 72</sup>

In 1653, the price of wheat [in *England*] averaged 35 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In *Dijon, France* in 1653, the grape harvest began on 11 September; 13 days earlier than the mean. In *France* the price of corn fell by half.<sup>62</sup>

In 1653, floods struck many regions of *China* including: <sup>153</sup>

- During the period between 27 April and 26 May, floods struck Hupeh (now Hubei province) in central *China* at Shih-shou, Chih-chiang and Sung-tzū. At Sung-tzū, the dikes were damaged.
- During the period between 27 May and 24 June, floods struck Shansi (now Shanxi province) in northern *China* at Ch'in-shui and Shou-yang; Shensi (now Shaanxi province) in central *China* at An-k'ang; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'in.

— During the period between 25 June and 23 July, floods caused by a typhoon struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow. Many people drowned. During the same time floods struck Shensi province at An-ting and Pai-ho. The occupants drowned. Also during this time, floods struck Shantung (now Shandong province) on the east coast of *China* at Yang-ku and Wên-têng. At Yang-ku, crops and houses were damaged by the floodwaters. At Wên-têng, houses and over 4,000 acres of land were damaged.

— During the period between 23 August and 21 September, floods struck Kiangsu province at T'ai-ts'ang and Hsiao; and Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing.

— During the period between 22 September and 20 October, floods struck Shantung province at Hsin and Lin-ch'ing.

In 1653 during the period between 6 May and 8 August, a drought engulfed Hopei (now Hebei province) in northern *China* at Yüeh-t'ing. During the period between 8 August and 8 November, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning and Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu.<sup>153</sup>

In 1653, there was a very hurtful drought in the vicinity of Shanghai, *China*. The drought caused a famine.<sup>166</sup>

**1654 A.D.** In *England*, the years 1651-54 produced scorching hot dry summers and dry years.<sup>47, 72</sup>

In 1654, the price of wheat [in *England*] averaged 26 shillings per quarter [quarter ton].<sup>212</sup>

There was a great drought in southern France in 1654-56. Rains were very rare.<sup>79</sup>

In 1654 during the period between 17 April and 15 May, floods struck Hupeh (now Hubei province) in central *China* at Ao-ch'êng and Mien-yang. At Mien-yang the dikes were damaged. During the period between 15 June and 13 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsing-ning and Lung-ch'uan. During the period between 14 July and 11 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Shih-p'ing [probably a misprint, "Jên-p'ing"]. Villages were flooded.<sup>153</sup>

In 1654 during the period between 16 May and 14 June, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at T'ien-t'ai. During the period between 12 August and 10 September, a drought engulfed Shansi (now Shanxi province) in northern *China* at Hsiang-yüan and Ch'in. During the period between 9 December 1654 and 7 January 1655, a drought engulfed Hopei (now Hebei province) in northern *China* at Wu-ch'iang.<sup>153</sup>

In 1654 during the 3<sup>rd</sup> moon in the vicinity of Shanghai, *China*, there was a storm of great wind and hail. During the 5<sup>th</sup> moon, there was great rain for ten days. Again in the next month there was a storm that damaged the rice crop.<sup>166</sup>

**Winter of 1654 / 1655 A.D.** Mr. Fehre, Chief Secretary to Prince Radzivil, assures us, that in the war against the Muscovites and Cossacks in January 1655 at the siege of Bichow in White Russia [now *Belarus*], all their provisions of Spanish wines and peterfimen, and beer were in one night frozen upon the sledge, notwithstanding they were covered with straw. Insomuch that they were constrained to carry them into a stove to thaw them, which they could not do in two whole days, and were obligated to break the vessels, and put pieces of the ice wine into kettles, to thaw them over the fire in order to drink them. But he observed that the Hungarian wine resisted the cold better than the peterfimen. The scrue [screw lid] of a flagon of Aqua Vitæ [ethanol] being put to his mouth stuck close to his lips [froze to his lips] that

he could not draw it off without drawing blood. The pool of the village (where they quartered) was so thoroughly frozen, that there was but very little water left between the ice and the bottom.<sup>234</sup>

---

**1655 A.D.** In *England* in January 20, there were considerable floods.<sup>47, 72, 92</sup>

In 1655, there was a plague in London, *England*.<sup>212</sup>

In 1655, the price of wheat [in *England*] averaged 33 shillings per quarter [quarter ton].<sup>212</sup>

There was a great drought in southern *France* in 1654-56. Rains were very rare.<sup>79</sup>

In 1655 during the period between 6 February and 7 March, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Yen-ch'êng. Innumerable persons were drowned. During the period between 6 May and 3 June, floods struck Anhwei (now Anhui province) in eastern *China* at Shih-tai; Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing; and Hupeh (now Hubei province) in central *China* at Chung-hsiang and Ch'ien-chiang. During the period between 4 July and 1 August, the Chang River flooded in Shansi (now Shanxi province) in northern *China* and Honan (now Henan province) in central *China*.<sup>153</sup>

In 1655, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 6 February and 7 March, a severe drought engulfed Hopei (now Hebei province) in northern *China* at Hsing-t'ia.

— During the period between 6 May and 8 August, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Sui-an.

— During the period between 6 May and 3 June, a drought engulfed Chekiang province at Chin-hua.

— During the period between 4 June and 3 July, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsou-p'ing.

— During the period between 31 August and 29 September, a severe drought engulfed Shantung province at Ch'ang-yüeh; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ü-chiang and Lung-mên; and Chekiang province at Hu-chou, Ch'ü, K'ai-hua and Chiang-shan. The crops were damaged by the drought.

— During the period between 29 October and 27 November, a drought engulfed Kwangtung province at Chieh-yang and Anhwei (now Anhui province) in eastern *China* at Ch'üan-chiao.

In 1655 during the winter, Mau and Tien lakes in *China* were frozen over. For several days, people could walk over them.<sup>166</sup>

---

**Winter of 1655 / 1656 A.D.** In 1655-56, the Seine River in *France* was frozen from the December 8<sup>th</sup> to the 18<sup>th</sup>. It froze again without interruption from 29 December to 28 January. A new frost occurred a few days later and the river again froze which lasted into March.<sup>38, 60</sup> [Another account gives this as the winter of 1656-57.] “The Seine froze from 8 to 18 December 1656.”<sup>62</sup>

This winter of 1655-56 in *France* and *Germany* was very severe. In Paris, *France*, it froze on 25 and 26 November 1655. In the first days of December, it snowed. From 8 to 18 December the cold was the very great. The Seine River froze. From 18 to 28 December, the air was damp. On 29 December, the frost began again and lasted until 28 January 1656. Then a new frost began after a few days, which lasted until March. During the later frost, the cold was less severe than in December. In *Germany*, the cold was so great that one could get in Wismar (Mecklenburg-Schwerin) onto the frozen *Baltic Sea* with a loaded four-horse wagon and travel a distance of 5-6 German miles, which has not been the case for many years. On the land, the wells were frozen to the bottom. On the roads in Bohemia [now western *Czech Republic*], several people were found frozen to death.<sup>62</sup>

In 1655, the frost began on November 25 in northern *France*. The frost became intensive from December 8 to 10, and continued, after two short thaws, until March. The Seine River was taken [frozen].<sup>79</sup>

In 1655, it was very cold in *Scotland*. The excessive snow and rain did great injury this winter.<sup>212</sup>

---

**1656 A.D.** In Rome, *Italy*, there were floods.<sup>47, 72, 92</sup>

In 1656 and 1657 in Rome, *Italy*, there was a famine.<sup>57, 72, 91</sup>

There was a great drought in southern *France* in 1654-56. Rains were very rare.<sup>79</sup>

In *England* beginning on 20 July 1656, there was two separate hailstorms in Norwich in quick succession. The following accounts were published.<sup>93</sup>

*The most Lamentable and Dreadful Thunder and Lightning in the County of Norfolk and the City of Norwich, on July 20, being the Lord's Day in the afternoon: the Whirlwind and thick darkness, and most prodigious hailstones, which being above 5 inches about, did so violently batter down the windows of the City, that three thousand pounds will hardly repair them. Divers [diverse] men and women struck dead. The firing of some towns, and whole fields of corn, by lightning, which also destroyed the birds of the air and the beasts of the field.*

*Together with another most violent Storm, which happened on Saturday last, in the same County, for almost thirty miles together, performed the like terrible effects. Attested by ten thousand witnesses, who were either spectators, or partakers of the loss. Entered according to order, the 31 July, 1656.*

The drought in *England* lasted to the spring. On 8 October, the River Thames ebbed and flowed thrice in three hours space. In July, there were so great rains, which caused the Danube River to flood over its banks. It broke down all the bridges and most of the mills. Many people were lost and a great number of cattle were carried away. Sixteen towns and villages were swept off by the irresistible torrents.<sup>72</sup>

[In *England*] it was excessively rainy, unequal and southerly.<sup>72</sup>

In 1656, the price of wheat [in *England*] averaged 43 shillings per quarter [quarter ton].<sup>212</sup>

In *Denmark*, the summer was very unequal with heat, rain and south winds.<sup>72</sup>

In 1656, a hurricane struck Guadeloupe in the *Lesser Antilles*. Every vessel at anchor in the roads was wrecked and most of their crews drowned.<sup>141</sup>

The island of Guadeloupe in the *Lesser Antilles* in 1656 was desolated by a tremendous hurricane. Most of the houses were destroyed. All the domestic animals were killed. All the plantations were laid waste. Every vessel at anchor in the roads was wrecked, and most of their crews drowned.<sup>143</sup>

In 1656 during the period between 24 May and 21 June, floods struck Hopei (now Hebei province) in northern *China* at Wu-ch'iang; Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsing-ning. During the period between 22 July and 19 August, floods struck Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai, P'ing-hsiang and Ning-tu. During the period between 16 November and 15 December, floods struck Chekiang province at P'ing-hu, Hu-chou and T'ien-t'ai.<sup>153</sup>

In 1656 during the period between 5 February and 6 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Chang-ch'iu and Shansi (now Shanxi province) in northern *China* at Lu-ch'êng, Kao-p'ing and Ch'in-shui. These regions were also affected by floods. During the period between 18 October and 15 November, a severe drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Chieh-yang.<sup>153</sup>

---

**1657 A.D.** In *England*, this year produced a scorching hot dry summer.<sup>47, 72</sup>

In *England*, the spring to the end of summer was most excessively hot, even scorching both night and day.<sup>72</sup>

In 1657, the price of wheat [in *England*] averaged 46 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1656 and 1657 in Rome, *Italy*, there was a famine.<sup>57, 72, 91</sup>

There were great thunderstorm outbursts in 1657 that were similar to those of 1651 in *France*. These caused great floods. Camargue, *France* was buried by the Rhône River.<sup>79</sup> [Camargue is the area where the two arms of the Rhône River form a delta in southern *France*.]

In 1657, a hurricane struck off *the Bahamas*. Two salvage vessels were sunk in a storm off Gorda Cay.<sup>141</sup>

On 2 August 1657 at Feversham in Kent, *England*, there was a very high spring tide. The interesting thing was the winds were at southeast, which deadens [deadens, diminishes] the tide there.<sup>225</sup>

In 1657, during the period between 12 June and 10 July, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Hsiao and Anhwei (now Anhui province) in eastern *China* at T'ai-hu. Rivers and wells dried up. During the period between 11 July and 9 August, floods struck Anhwei province at T'ai-p'ing, Shih-tai and T'ung-ling. During the period between 8 August and 8 November, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Wan-mên Mountain and Kao-yao; and Shantung (now Shandong province) on the east coast of *China* at An-ch'iu. During the period between 8 September and 6 October, a drought engulfed Shensi (now Shaanxi province) in central *China* at Ching-yang and Shang-nan.<sup>153</sup>

---

**Winter of 1657 / 1658 A.D.** King Charles X Gustav of *Sweden* was at war with *Denmark*. An intense cold wave descended on the Small Belt in the middle of December 1657 and it appeared that *Baltic Sea* might freeze over. Charles X moved his army from *Poland* and approached Copenhagen from the south. He arrived at Haderslev in South Jutland on 28 January 1658. The cold on the night of 29 January was very severe. On the next morning, he gave the orders and his army crossed the frozen Small Belt on foot and invaded and conquered the island of Funen. He then traveled on the frozen Great Belt and leapfrogged through the islands of Langeland, Lolland, Falster, and finally his army reached Zealand on 11 February.<sup>35</sup> [The Small Belt is the strait between the Danish island of Funen and the Jutland Peninsula. The Great Belt is the strait between the main Danish islands of Zealand and Funen.]

In 1658, Charles X, King of *Sweden*, traversed the *Little Belt* with his army, artillery, caissons, baggage, etc.<sup>38, 60</sup>

In 1658, Charles X of *Sweden* crossed the *Little Belt* over the ice from Holstein, *Germany* to *Denmark*, with his whole army.<sup>90</sup>

In 1658, the bays and inlets of *Northern Europe* froze over early in December. Charles X of *Sweden* crossed the strait to *Denmark* with his whole army, including the artillery, baggage and provision trains.<sup>63</sup>

In 1658 in *Northern Europe*, the army of Charles X of *Sweden* crossed the ice from *Holstein* to *Denmark* – horse, foot and artillery.<sup>47,93</sup>

During the winter of 1657-58 in *France*, an uninterrupted frost occurred from the 24<sup>th</sup> of December 1657 to the 8<sup>th</sup> of January 1658. Then the cold moderated. But then an extreme cold wave set in and the *Seine* River in *France* was entirely closed due to the ice. A slight thaw took place on 8 February, but the frost again recurred and continued from the 11<sup>th</sup> to the 18<sup>th</sup> of February.<sup>38,60</sup>

*Europe* experienced a cold winter. There was great snow in *Rome, Italy* on 27 February 1658.<sup>28</sup>

In 1658, the *Seine* River in *France* was completely frozen from the first days of January to the 21<sup>st</sup>. The rivers of *Italy* froze deep enough to bear the heaviest carts. The army of Charles X, King of *Sweden*, marched on the ice on the *Little Belt*.<sup>62</sup>

The winter of 1658 in *France* destroyed the olive trees. The winter was accompanied by deep snows.<sup>79</sup>

In *England*, there was a frost from 1<sup>st</sup> December to 10<sup>th</sup> March with a “north wind”.<sup>47,93</sup> . . . with a north wind even to January.<sup>72</sup>

During the winter of 1658, it was excessively cold [in *England*] and the price of wheat doubled.<sup>212</sup>

In *England*, the winter was severely cold. From 1 December 1657 to the Equinox [around March 20/21], the earth was covered with snow. There were north winds the whole time. It continued till 1 June like a winter.<sup>72</sup>

The winter of 1657-58 was very severe in *Europe*, from the *Baltic Sea* to where Charles X of *Sweden* his whole army, cavalry, artillery, ammunition and baggage wagons, etc. went on the ice from *Funen* to *Zealand*. In *Italy*, the rivers were frozen deep enough to carry the heaviest wagon. In *Rome* there was a tremendous amount of snow. In *Provence* many olive trees were lost to the cold.<sup>62</sup>

The winter in *Paris, France*: "it was cold, 24 December 1657 until 20 January 1658, but the cold at that time was not very sharp. On 20 January, however; an unusually sharp violent north wind; very few people could remember to have seen such a piercing cold. Everything was frozen. This intense cold lasted until 26 January. On 27 January the weather turned somewhat milder and a hoped for thaw was in the air. But on 28 January, a very deep penetrating cold again reappeared and last until 8 February. On 9 and 10 February, the ice and the snow that had fallen in abundance began to melt. But at 2 o'clock in the morning on Monday the 11th, the wind again came from the north and northeast, and it froze the waters anew, and the frost was unusually severe. At sunrise no trace of the previous thaw could be seen. This severe cold lasted until 18 February. Finally on the 19th the winds changed to a northwesterly, and then the winds began to blow from the west. The snow and ice again began to thaw and continued without interruption. On 21 February the ice broke, which completely covered the *Seine* River. On the 22<sup>nd</sup> the river began to swell. On the 27<sup>th</sup> and 28<sup>th</sup> the river came out of its banks and the inundation was greater than anyone could remember. From 6 o'clock in the evening of the 27 February until noon on the 28<sup>th</sup>, the water washed the walls of the church of *St. Andre-des Arcs*. One needed wooden planks to cross the street. At noon on the 28<sup>th</sup>, the water began to fall. Due to the cold several people were killed, others suffered with the loss of family members. During the night of 28 February to 1 March was carried away a great part of the *Marienbrücke* (*Mary's Bridge*) from the river, and several people were killed. The following day, the water carried away the back building on the waterfront along with houses standing on the waterfront."<sup>62</sup>

In France, there was a flood [caused by spring melt]. On 1 March 1658, the Seine River in Paris, *France*, at the bridge “Pont de la Tournelle” reached a height of 8.8 meters (28.9 feet) above the zero mark [the low water mark of the year 1719].<sup>71</sup>

---

**1658 A.D.** In 1658, there was a plague in London, *England*.<sup>212</sup>

On 22 August 1658 at Feversham in Kent, *England*, there was a very high tide in the afternoon, though the wind was southerly, and blew very stiff, which the seaman there wondered at.<sup>225</sup>

In *Europe*, “the day that Oliver Cromwell died (3<sup>rd</sup> September), a storm so violent and terrible extended all over Europe.”<sup>40, 41, 43, 56, 57</sup>

On 3 September 1658, the day that Cromwell died, there was a hurricane throughout *Europe*, which did very considerable damage.<sup>90</sup>

On May 22 at Faversham (Kent), *England*, there were considerable floods.<sup>47, 72, 92</sup>

In *England* during the spring, the north wind and cold continued so rigorous and long, that farmers lost hope of their corn [grain] either growing or ripening. But from 1 August came such an excessive heat, as was truly uneasy. In Modena in northern *Italy*, there was excessive heat and drought. In Abdera in *Thracia*, there was an excessively hot summer. In *Denmark* and Copenhagen, there was drought and excessive heat.<sup>72</sup> [Abdera in Thracia was a city-state on the coast of Thrace, 17 kilometers east-northeast of the mouth of the Nestos, and almost opposite Thasos. The site now lies in the Xanthi peripheral unit of modern mainland *Greece*.]

The summer of 1658 in *England* was remarkably warm, especially towards the end of the season. In Dijon, *France*, the harvest began on 30 September.<sup>62</sup>

On 3 September 1658, a very alarming and destructive storm struck *England* in which many houses were blown down and others unroofed. Churches, steeples, and whole groves of trees were prostrated, and immense damage done to the shipping. Among a great many other vessels which were lost with most of their crews, were eight frigates and ships of the line, and two thousand officers and seamen perished.<sup>1</sup>

On 3 September 1658, there was a great gale in *England*. “It was such a night in London as had rarely been passed by dwellers in crowded streets. Trees were torn from their roots in the park, chimneys blown down, and houses unroofed in the city. Cromwell died that night.” There was another great gale immediately before this one, which struck throughout *Europe*.<sup>212</sup>

In 1658 in London, *England*, the tide in the River Thames ebbed and flowed twice in three hours.<sup>212</sup>

In 1658, the price of wheat [in *England*] averaged 65 shillings per quarter [quarter ton].<sup>212</sup>

In 1658, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 3 April and 1 May, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.

— During the period between 6 May and 6 August, floods struck Chekiang province at Ch’êng; Kiangsi (now Jiangxi province) in southern *China* at Hsia-chiang; and Hupeh (now Hubei province) in central *China* at Tzū-kuei, I-ch’ang, Sung-tzū, Ao-ch’êng, Huang-kang, Hanyang, An-lu, Kung-an, I-ch’êng, Tang-yang and Ching-mên. At I-ch’êng, the fields were damaged by the floodwaters. At Tang-yang, the city walls, dikes, houses and fields were damaged by the floodwaters and innumerable people drowned. At Ching-mên, crops and houses were damaged.

— During the period between 8 August and 8 November, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow; Anhwei (now Anhui province) in eastern *China* at Shu-ch'êng, Wu-ho, Shih-tai and Wu-yüan; and Hupeh province at Ch'ien-chiang and Chung-hsiang. At Chung-hsiang, the dikes were damaged.

In 1658, during the period between 29 May and 26 September, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Ch'ang-yüeh.<sup>153</sup>

---

**Winter of 1658 /1659 A.D.** During the winter of 1659 [in *Europe*], there was no frost or snow.<sup>62</sup>

---

**1659 A.D.** In 1659, there was a great hailstorm in Staffordshire in the west Midlands of *England* that destroyed poultry and hares.<sup>93</sup>

On the Sunday before the Feast of Saint James in 1659, there was a hailstorm in Staffordshire, *England*. The hailstones were as big as pullets' eggs.<sup>194</sup>

In 1659, the price of wheat [in *England*] averaged 66 shillings per quarter [quarter ton].<sup>212</sup>

In 1659, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 21 May and 19 June, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsin-i.

— During the period between 20 June and 18 July, floods struck Hupeh (now Hubei province) in central *China* at Chiang-ling and Chekiang province at Ch'ü, Chiang-shan and Ch'ang-shan.

— During the period between 19 July and 17 August, floods struck Hupeh province at Han-ch'uan, Wuchang and Mien-yang.

— During the period between 14 December 1659 and 11 January 1660, floods struck Chekiang province at Hsien-chü; Kiangsu (now Jiangsu province) on the east coast of *China* at Nan-t'ung [uncertain name]; and Shensi (now Shaanxi province) in central *China* at Yen-ch'uan.

During the period between 25 November 1658 and 19 June 1659, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Lung-chou. In 1659 during the period between 20 June and 18 July, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hui-lai and Kweichow (now Guizhou province) in southwestern *China* at Ts'ên-kung, Yü-p'ing and An-nan.<sup>153</sup>

---

**Winter of 1659 / 1660 A.D.** In *Provence* and in *Italy* the winter was very cold again. The olive trees were destroyed, almost completely.<sup>62</sup>

In 1659, the frost was severe [in *England*]. The price of wheat doubled during the winter.<sup>212</sup>

In 1660, it was very cold [in *England*], and the price of wheat doubled during the winter.<sup>212</sup>

On 8 December 1659, a gale struck *England*. A remarkably high wind, such as had never before been experienced in this country, did great damage to the houses in York.<sup>212</sup>

---

**1660 A.D.** In *England* on the 11<sup>th</sup> of November, there were great floods in the River Thames valley.<sup>47, 72, 92</sup>

In *England*, the winter was stormy and tempestuous, causing great harm in many places. In the midst of it much thunder and lightning.<sup>72</sup>

In 1660, the price of wheat [in *England*] averaged 56 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1660 during the period between 12 January and 10 February, floods struck Hopei (now Hebei province) in northern *China* at Wang-tu and Hsien. During the period between 5 February and 6 July, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at San-shui [uncertain name]. During the period between 8 August and 8 November, a drought engulfed Kwangtung province at Hui-yang and Chekiang (now Zhejiang province) on the east coast of *China* at Chên-hai and T'ien-t'ai.<sup>153</sup>

In 1660 during the 1<sup>st</sup> moon in the vicinity of Shanghai, *China*, a dragon was seen, attended with great rain. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

---

**1661 A.D.** In *India*, there was a great drought in the Punjab.<sup>47</sup> [The region known as the Punjab in now in the northwest region of *India*, and eastern *Pakistan*.]

In *India*, there was a famine caused by a drought, confined to the Punjab.<sup>57</sup>

In 1661 there was a famine in the Northwest Provinces and Punjab region in *India*.<sup>156</sup>

— A famine struck *India* during the third year of the reign of Aurungzebe. “The rents of the husbandmen [farmers] and other taxes were remitted. The treasury of the Emperor was opened without limit; corn [grain] was bought in the provinces where the produce was least, conveyed to those in which it was most defective, and distributed to the people at reduced rates. The great economy of Aurungzebe, who allowed no expense for the luxury and ostentation of a court, and who managed with skill and vigilance the disbursements of the state, afforded him a resource for the wants of the people.”

In 1661, there was a famine in *India* during the third year of the reign of Aurungzeb, who attempted to levy 50% of the produce.<sup>182</sup>

In 1661 A.D., there was a very general and terrible famine in *India*. Muhammad Amin Razwiny wrote: “Life was offered for a loaf, but none cared for it; rank was to be sold for a cake, but none cared for it. For a long time dog’s flesh was sold for goat’s flesh and the pounded bones of the dead were mixed with flour and sold. Destitute at length reached such a pitch that men began to devour each other and the flesh of a son was preferred to his [son’s] love. The numbers of the dying caused obstruction in the roads.” Emperor Aurangzeb carried relief through every corner of his dominions. Whole provinces were delivered from impending destruction and many millions of lives were saved. He accomplished this by remitting taxes that were due. He expended immense sums out of the treasury in procuring grain from Bengal and the countries, which lie on the five branches of the Indus (which suffered less on account of the great rivers) and transported the grain by land and water to the interior provinces. The grain was purchases at any price, with public money; and it was resold at a very moderate rate.<sup>179</sup>

On 18 February 1661, a great and dreadful storm of wind accompanied by thunder, lightning, hail and rain struck *England*. The damage was estimated at a little less than 2 million of money [2 million pounds {£240 million in today’s currency using the retail price inflation index}].<sup>209</sup>

— Several people were killed by falling chimneys, houses, trees, barns, and windmills. Five or six were killed in London; one in Chilterham [Cheltenham]; one in Scaldwel [Scaldwell]; one in Tewksbury [Tewkesbury]; two near Elsbury; one at Northampton; one at Colchester; two near Ipswich; and 3 near Langton, to name a few.

— Many churches were damaged by the wind. This damage included broken windows, stonework. The lead was torn up. Pinnacles, spires and steeples were thrown down. In some cases, the timberwork in the church was broken and the pulpit and pews were damaged. These included the churches at Tewksbury

[Tewkesbury], Red Marly [Redmarley], Newin, Worcester, Hereford, Leighton Beau-defart, Eaton-Soken [Eaton Socon], Shenley, Waddon [Whaddon], Woolston [Little Woolstone], Finchinfield [Finchingfield], and Ipswich, to name a few.

— Many houses and buildings were blown down, and others extremely shattered and torn.

— Many barns were destroyed. These included 30 barns near Ipswich; an incredible number near Tewsbury [Tewkesbury]; 11 barns at Twynning; 7 or 8 in Ashchurch; 5 in Lee; a great number at Norton; 140 in Worcestershire; 16 in Finchinfield [Finchingfield]; and at least 15 at Wilchamsted [Wilshamstead], to name a few.

— Many trees were blown down. These included 1,300 trees in Bramiton Bryan Park; 600 in Hopton Park; and 3,000 oak trees in the his Majesty's Forest of Dean, to name a few. Several persons lost whole orchards of trees in the counties of Gloucester, Hereford and Worcester.

— The winds were strong enough to take people up into the air. On the bridge near Wallingford House in London, several people were blown off and landed on top each other. In Herefordshire, a man was blown over a very high hedge. In a pond at James's Park, 2,000 fish were blown out and landed on the banks. Several people were blown into the air at Hereford.

— The rain that fell was as salty as brine.

On February 21, in Kent, *England*, there were considerable floods.<sup>47, 72, 92</sup>

In *England*, there were great hailstorms on 11<sup>th</sup> April and 11<sup>th</sup> October.<sup>57, 72, 93</sup>

In 1661, the price of wheat [in *England*] was high averaging 70 shillings per quarter [quarter ton].<sup>212</sup>

In 1661, there was a drought in *England*. The River Derwent was so wonderfully dried up that in many places there was no water, and people might go over dryshod [without wetting the feet].<sup>212</sup>

In 1661, upon Michaelmas day, there was a great overflowing of the River Severn in *England* that drowned the low grounds lying by it.<sup>225</sup>

In 1661, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 28 May and 25 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lung-ch'uan; and Kiangsi (now Jiangxi province) in southern *China* at Hsia-chiang and Wan-tsai.

— During the period between 26 June and 25 July, floods struck Kwangtung province at Ho-yüan; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh and Ts'ang-wu; and Hopei (now Hebei province) in northern *China* at Wu-ch'iang.

— During the period between 23 September and 22 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'un-an and Ch'ing-yüan; and Kiangsi province at Nan-ch'ang.

In 1661, a drought engulfed many regions of *China* including:<sup>153</sup>

— Kweichow (now Guizhou province) in southwestern *China* at Nan-lung.

— Shansi (now Shanxi province) in northern *China* at Yung-chi.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hai-yen and Shou-ch'ang.

— Kiangsu (now Jiangsu province) on the east coast of *China* at Chiang-yin.

— Shantung (now Shandong province) on the east coast of *China* at Tung-a.

— During the period between 6 May and 8 November, a drought engulfed Chekiang province at Ningpo and Tung-yang.

— During the period between 23 September and 22 October, a drought engulfed Chekiang province at Yü-yao, Hangchow, Chien-tê and T'ung-hsiang.

In 1661 during the 7<sup>th</sup> moon on the 26<sup>th</sup> day in the vicinity of Shanghai, *China*, there were three tides in

one day.<sup>166</sup>

---

**1662 A.D.** A great storm struck London, *England* on February 18.<sup>40, 41, 43</sup>

On 30 July there was a prodigious storm of hail at Ormskirk in West Lancashire, *England*. Hailstones were four inches about and more. In the afternoon, on Macclesfield Forest, Cheshire, rose a pillar of smoke twenty yards broad and as high as a church steeple, which making a hideous noise, went along the ground for six or seven miles, leveling all before it. It threw down strong stone fences, and carried the stones to a great distance from their former places. But falling on a moorish ground, it did little damage. Its noise frightened cattle; they ran out of its way and were saved. A cornfield it passed over was laid flat with the ground, as though it had been trodden with feet. It went through a wood and tore up 100 trees by the root. Coming into a mowed field with hay ready to be carried off, it swept all away so as scarce a handful was ever found. From this forest it went to Taxhall, then to Waily-bridge, and then to the Derbyshire Mountains, where it vanished. [This is an interesting description of a tornado. Storms that produce tornados are very energetic and also produce hailstorms. The pillar of smoke is the funnel of debris brought up by the tornado. Tornados create loud sounds like freight trains. They either break large trees in half or uproot them.]<sup>72</sup>

In 1662, the price of wheat [in *England*] was high averaging 74 shillings per quarter [quarter ton].<sup>212</sup>

In 1662, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 16 June and 14 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton.

— During the period between 15 July and 13 August, floods struck Shensi (now Shaanxi province) in central *China* at Pai-ho, An-k'ang, Yü-lin and Hsüan-yang [probably a misprint, "Hsün-yang"].

— During the period between 14 August and 11 September, floods struck Hupeh (now Hubei province) in central *China* at Hsiao-kan, Mien-yang, Chiang-ling, and Sung-tzū; Hopei (now Hebei province) in northern *China* at Chü-lu; Kiangsu (now Jiangsu province) on the east coast of *China* at Yangchow, Hsing-hua, Hsiao and P'ei [P'ei is located at longitude 117.00° East and latitude 34.47° North.]; and Kiangsi (now Jiangxi province) in southern *China* at Hsiu-shui [uncertain name].

— During the period between 12 September and 11 October, floods struck Hopei province at Ch'êng-an; and Hupeh province at Chung-hsiang, Ch'ien-chiang and T'ien-mên. At T'ien-mên, the dikes were damaged.

— During the period between 12 October and 10 November, floods struck Hopei province at Chi and Fou-ch'êng. [Chi is located at longitude 115.34° East and latitude 37.34° North.]

In 1662 during the period between 12 October and 10 November, a drought engulfed Hopei (now Hebei province) in northern *China* at Ch'ang-li.<sup>153</sup>

In 1662 during the 1<sup>st</sup> moon, there were great rains in the vicinity of Shanghai, *China*. During the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there were three tides in one day. During this year, there was a great drought in the vicinity of Shanghai, *China*. This caused a bad harvest and a very scarce year.<sup>166</sup>

---

**Winter of 1662 / 1663 A.D.** There was intense frost at Paris, *France* from the 5<sup>th</sup> of December 1662 to the 8<sup>th</sup> of March 1663.<sup>38, 58, 60, 80</sup>

During the winter of 1662-63, the Seine River in *France* froze in December 1662 completely.<sup>62</sup>

During this winter of 1662-63, which was very severe, the frost in Paris, *France* lasted from 5 December until 8 March. The Seine River was frozen in December 1662 completely.<sup>62</sup>

In 1662 in northern *France*, there was a sustained frost from 5 December until 8 March. The cold moderated on three occasions. The Seine River froze in December.<sup>79</sup>

In *England*, a very hard frost occurred on 28<sup>th</sup> November 1662. A severe frost occurred from the 28<sup>th</sup> of January to 11<sup>th</sup> of February 1663.<sup>72</sup> The 8<sup>th</sup> of February 1663 being a very hard frost.<sup>47, 93</sup>

In 1662, the winter produced a strong frost in *England*. In London, the River Thames was partially frozen over towards the end of November. In this frost, ice skates were introduced into *England* from Holland [now *the Netherlands*]. On 1 December, the king witnessed the performance of skating.<sup>212</sup>

---

**1663 A.D.** On 24 May 1663, there was a very high tide in London, *England*.<sup>225</sup>

In *England*, on the 28<sup>th</sup> of August “Cold all night and this morning, and a very great frost, they say, abroad; which is much, having had no summer at all, almost.”<sup>47, 93</sup>

[In *England*], it was rainy and floody.<sup>72</sup>

In *England*, there was a great death of cattle from a most severely rainy wet autumn.<sup>72</sup>

In 1663, the price of wheat [in *England*] averaged 57 shillings per quarter [quarter ton].<sup>212</sup>

In 1663 in London, *England*, there was a fog in August.<sup>212</sup>

The summer of 1663 was cold and rainy in Doubs in eastern *France*. The grapes in Dijon, *France*, were not harvested until 8 October.<sup>62</sup>

[Although this is cited as 1662, it is out of chronological order and these entries appear to belong within the year 1663.] In 1662, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 10 March and 2 August, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Tung-kuan and Shantung (now Shandong province) on the east coast of *China* at Yün-ch’êng.

— During the period between 7 May and 5 June, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Chiang-yin.

— During the period between 6 June and 4 July, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai and Hupeh (now Hubei province) in central *China* at Huang-kang.

— During the period between 5 July and 2 August, a drought engulfed Chahar province (now eastern *Inner Mongolia*) at Huai-lai.

— During the period 2-30 September, a drought engulfed Shensi (now Shaanxi province) in central *China* at Pao-an [uncertain name], Hupeh province at Lo-t’ien; and Kiangsu province at Hsiao.

— During the period between 12 October and 10 November, a drought engulfed Hopei (now Hebei province) in northern *China* at Ch’ang-li.

In 1663, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 5 July and 2 August, floods struck Hopei (now Hebei province) in northern *China* at Chiao-ho; and Shensi (now Shaanxi province) in central *China* at Nan-chêng and along the Han River.

— During the period between 3 August and 1 September, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Mêng-shan, P’ing-yüeh and Kuei; Shensi province at Sian; and Hupeh (now Hubei province) in central *China* at Ta-yeh, Ch’i-ch’un and Chiang-ling.

— During the period 2-30 September, floods struck Hopei province at Chü-lu; and Hupeh province at Huang-kang, I-tu, Chung-hsiang, Ma-ch’êng, Sung-tzū, Kung-an and Chih-chiang. At Sung-tzū, the

dikes were damaged. At Kung-an, innumerable people drowned. At Chih-chiang, houses were damaged by the floodwaters and many people drowned.

— During the period 1-30 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at P'u-chiang; and Anhwei (now Anhui province) in eastern *China* at Tang-t'u and Wang-chiang.

The year 1663 was a year of great abundance in the vicinity of Shanghai, *China*. Rice was excellent and double the usual quantity.<sup>166</sup>

**Winter of 1663 / 1664 A.D.** The winter was very mild and rainy in *Prussia*.<sup>72</sup> [After the year 1618 Brandenburg and the Duchy of Prussia were combined to form Brandenburg-Prussia. Today this region comprises parts of *Poland* and *Lituania* and Brandenburg in now east *Germany*.]

**1664 A.D.** In London, *England* in January, there was a great hailstorm at Charing Cross.<sup>57, 72, 93</sup>

[In *England*], it was rainy and floody.<sup>72</sup>

[In *England*] on 26, 27 and 28 January 1664, there was an irregular tide when the sea flowed without ebbing.<sup>72</sup>

On 4 May 1664, heavy rains fell at Daintrey and the vicinity. At Dadford in Buckinghamshire, *England* in a short period of time rose at least 8 feet above the ordinary surface of the rill that runs through that town. The flood either on the 4<sup>th</sup> or 5<sup>th</sup>, broke down the two middle arches of the South Bridge at Northampton and overthrew many hundred yards of walling. On the 5<sup>th</sup> or 6<sup>th</sup> of May at Peterborough, two men who went out in the morning, upon their return home in the dark of night (knowing nothing about this unexpected flood on the River Nyne) were accidentally drowned. [The country in the lower part of the Rivers Weland and Nyne, particularly in the regions of Stamford and Peterborough have seen great inundations in no more than four hours space, yet not so much as a drop of rain in many miles about the towns.]<sup>195</sup>

In 1664, the price of wheat [in *England*] averaged 40 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1664 there was a great plague in London, *England* that began in December. It slumbered between Christmas to February.<sup>212</sup>

On 29 July 1664, a hailstorm struck Padua in northern *Italy*. "This storm happen'd July 29, about three o'Clock in the afternoon, at the bottom of the Euganean Hills, about fix [six] Miles from Padua, it extended upwards of thirty Miles in length, and about fix [six] in breadth; and the Hail-Stones which fell in great quantities were of different fizes [sizes]; the largeft [largest] of an Oval form, as big as Turkey Eggs [Eggs], and very hard; the next fize [size] Globular, but fomewhat [somewhat] comprefs'd [compressed]; and others that were more numerous, perfectly round, and about the bignefs [bigness] of Tennis Balls."<sup>194</sup>

In 1664, a violent hurricane at Guadeloupe in the *Lesser Antilles* destroyed their potato crop.<sup>143</sup>

In 1664, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 29 December 1663 and 27 January 1664, floods struck Hupeh (now Hubei province) in central *China* at P'u-ch'i, Ta-yeh, Mien-yang, T'ien-mên and Chiang-ling. At Chiang-ling, the dikes were damaged.

— During the period between 27 March and 25 April, floods struck Hopei (now Hebei province) in northern *China* at Fou-ch'êng; and Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai.

— During the period between 24 June and 22 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ta-pu; Hupeh province at T'ien-mên; Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning; and Shansi (now Shanxi province) in northern *China* at P'ien-kuan [possible a misprint, "P'ien-lü"]. At P'ien-kuan, many houses were damaged by the floodwaters.

— During the period between 23 July and 20 August, floods struck Shensi (now Shaanxi province) in central *China* at Yen-ch'ang; and Hopei province at Ch'ang-li.

— During the period between 21 August and 19 September, floods struck Hopei province at Chiao-ho; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu.

— During the period between 20 September and 18 October, floods struck Chekiang province at Yü-yao, Shao-hsing, Hsien-chü and T'ung-hsiang. At Yü-yao and Shao-hsing, the crops were damaged by the floodwaters.

In 1664, a drought engulfed many regions of *China* including: <sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Chieh-yang and Hopei (now Hebei province) in northern *China* at Chiao-ho, Hsing-t'ai and Nei-ch'iu.

— During the period between 6 May and 9 August, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Ch'ang-shan, P'ing-yüan, Yü-ch'êng, Tsou, Lin-i [uncertain name, "Lin-tao"], Hui-min, Fei, Ting-t'ao, Hsin and Mou-p'ing [uncertain name, "Ning-hai"]; Anhwei (now Anhui province) in eastern *China* at Fou-yang; and Szechwan (now Sichuan province) in southwest *China* at Hua-yang.

---

**Winter of 1664 / 1665 A.D.** In *England*, there was a frost from 28<sup>th</sup> December to 7<sup>th</sup> February. The 6<sup>th</sup> of February "one of the coldest days, they all say, ever felt in *England*." <sup>47, 93</sup>

In *England* in the latter end of 1664 began a most severe frost which continued to the latter end of March 1665. <sup>72</sup>

In 1664 [in *England*] until the beginning of March, there was a very violent frost that froze up all things from the beginning of winter. <sup>212</sup>

In January and February 1665, there were sharp frosts [in *England*]. <sup>212</sup>

On 2 January 1665, the frost was so bitter in *Poland* that three soldiers died from the cold in passing a long ditch; and that diverse persons lost some of their limbs [to frostbite]. <sup>234</sup>

The winter was very severe [in *France*]. In *Belgium* there were very severe frosts and heavy snowfalls. The winter of January 1665 was similar to the winter of January 1655 in *Poland*. The winter in *Poland* was so severe that most of the wines froze and several people lost their limbs [due to severe frostbite], and others froze to death. <sup>62</sup>

---

**1665 A.D.** In *England*, there were great flooding of rivers, and inundations from the sea. <sup>47, 72, 92</sup>

[In *England*], there were very great floods, both from rains and from the Sea. <sup>72</sup>

In *England* in February, there was a great tempest, accompanied by thunder, and lightning. <sup>72</sup>

In *England*, the whole summer was very temperate; neither cold nor hot; dry nor rainy; but pleasant mild breezes which fanned the air and kept it healthy. Great plenty of all sorts of fruits, good and cheap. <sup>72</sup>

In 1665, there was a great plague in *England*. One account gives the death toll at 68,000 people in London. Another account by Defoe reports the plague “May to July severe; August and September 8000 persons died weekly; in the middle of September, 12,000 persons in one week, and 4000 in one night; and in the whole 100,000 died.” After an order to kill cats and dogs, it is said that 40,000 dogs and 200,000 cats were destroyed. In a third account in 1665-66, “in London 68,596 persons are said to have died of the plague”. At Yarmouth, great havoc was made by the plague. The plague was very fatal at Derby. “The country people refused to bring their commodities to the marketplace, depositing them outside town; then retired to a distance till the buyer had deposited his money in a vessel filled with vinegar.” At Winchester, the dead were carried out by cartloads at a time, and the plague was as bad as in London. At Eyam, 259 persons perished.<sup>212</sup>

In 1665, there was a cattle plague in London, *England*.<sup>212</sup>

On 25 October 1665, there was a great gale in London, *England*.<sup>212</sup>

In 1665, the price of wheat [in *England*] averaged 69 shillings per quarter [quarter ton].<sup>212</sup>

In 1665, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 16 January and 14 February, floods struck Shansi (now Shanxi province) in northern *China* at Fên-yang.

— During the period between 15 April and 14 May, floods struck Anhwei (now Anhui province) in eastern *China* at Fou-yang and Fên-yang; and Hopei (now Hebei province) in northern *China* at Wang-tu.

— During the period between 11 August and 8 September, floods struck Shansi province at P’ing-ting; Hopei province at Ching, Fei-hsiang, Wang-tu and Chi-tsê; Hupeh (now Hubei province) in central *China* at T’ien-mên; Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Li-shui; and Kiangsi (now Jiangxi province) in southern *China* at P’ing-hsiang.

— During the period between 9 September and 8 October, floods struck Hopei province at Kao-i; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Jên-hua; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P’ing-yüeh and Ts’ang-wu.

In 1665, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a severe drought engulfed Shantung (now Shandong province) on the east coast of *China* at Ch’ao-ch’êng, Ch’êng-wu, Ên, T’ang-i, Hsia-ching and Yeh; and Hopei (now Hebei province) in northern *China* at Tung-ming, Ling-shou and Wu-i.

— During the period between 15 April and 2 June, a severe drought engulfed Shantung province at Kao-mi.

— During the period between 6 May and 8 August, a severe drought engulfed Shantung Province at P’êng-lai.

— During the period between 11 August and 8 September, a drought engulfed Honan (now Henan province) in central *China* at Mêng; Shansi (now Shanxi province) in northern *China* at P’ing-ting, Tai, Shou-yang, P’u and Wên-shui.

— During the period between 9 September and 8 October, a drought engulfed Shantung province at Tzū-yang and Chi-ning.

In 1665 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a typhoon. The sea broke embankments. People floated out to sea on the wrecks of houses. Some people were rescued by an officer.<sup>166</sup>

---

**Winter of 1665 / 1666 A.D.** On 17 December 1665, it was very cold in London, *England*.<sup>212</sup>

---

**1666 A.D.** There was a very great drought in *England*. On 24 January, there was a tempest at Hampshire. On 10 May, there was a tempest of thunder and lightning at Oxford. On 17 July, there was a hailstorm on the coast of Suffolk with some hailstones nine inches about.<sup>72</sup>

On 24 January 1666, there was a thunderstorm at Andover, *England*. And on 12 May at Oxford.<sup>212</sup>

In 1666 at Cransted in Kent, *England*, there was a shower of fishes. A great tempest of thunder and rain, and, although no ponds about, two acres were scattered over with whittings of the size of a man's little finger. This occurred on the Wednesday before Easter.<sup>212</sup>

In 1666, the price of wheat [in *England*] averaged 36 shillings per quarter [quarter ton].<sup>212</sup>

In 1666, there was a plague at Sandwich and Stamford, *England*. At Stamford, upwards of 380 people died.<sup>212</sup>

In 1666, diarrhea prevailed in London, *England* and lasted until 1672.<sup>212</sup>

During the summer of 1666, there was an extreme drought in Somerset, *England*. In the moors [bogs] between Yeovil and Bridgewater, the dried pasture showed the outline of trees beneath. They were dug up and there was hundreds of oaks as black as ebony.<sup>234</sup>

The summer of 1666 was hot and dry in *England*. In Dijon, *France*, the grape harvest began on 10 September; 14 days before the mean.<sup>62</sup>

On 17 July 1666, a violent storm of hail fell on the coasts of Norfolk and Suffolk in east *England*. At North Yarmouth, the hailstones were comparatively small; but at Snape Bridge, one was taken up which measured a foot in circumference; at Seckford Hall, one which measured nine inches; and at Melton, one measured eight inches. At Friston Hall, one of these hailstones, being put into a balance, weighed two and a half ounces. At Aldborough, several of them were as large as turkeys' eggs. A carter [a person who hauls goods in a cart] had his head broken by hailstones even though he was wearing a stiff felt hat. In some places the wound bled, and in others, tumors arose. His horses were so pelted that they fled taking his cart with them. The hailstones were white, smooth without, and shining within.<sup>191</sup>

On 17 July 1666, there was a hailstorm in Suffolk, *England*. "At Seekford House, one stone [hailstone] 9 inches [23 centimeters] about [in circumference]; at Melton 8 inches [20 centimeters] about; at Snapebridge one hailstone 12 inches [30 centimeters] about; at Friston Hall, one weighed 12s. 6d.; at Aldborough some were full as bigg [big] as turkey's eggs (a hen egg weighs about 9s.); at Yarmouth hail small." <sup>212</sup>

On 17 July 1666, a hailstorm struck Aldborough [Aldeburgh] in Suffolk, *England*. The hailstones were as big as turkey's eggs.<sup>295</sup>

In *England* on the 31<sup>st</sup> of July, there was a severe hailstorm and rain.<sup>57, 72, 93</sup>

[In *England*] in 1666, there was a sundry of [many] tempest of thunder, lightning, rain, hail and wind.<sup>72</sup>

In 1666, a hurricane struck Antigua in the *West Indies*. During the hurricane, two English warships were lost in the English harbor with a great loss of life.<sup>141</sup>

On 28 July 1666, Lord Willoughby fleet set sail with seventeen sails [sailing ships] and nearly 2,000 troops [and took possession of St. Lucia.] On 2 August, his fleet was off *Guadeloupe*. On 4 August,

three frigates and some smaller vessels were sent in, and destroyed the French ships in the Saints [*Barbados*]. Symptoms of an approaching hurricane made Lord Willoughby extremely anxious for the return of the ships from the Saints; but the commanding officer's ship had suffered some damage, and could not be refitted before night. At 6 p.m., the gale began from the north, and continued with great violence till midnight, when after a calm, which lasted for a quarter of an hour, it shifted suddenly to the east-southeast driving every thing before it with irresistible violence. Every vessel and boat upon the coast of *Guadeloupe* was dashed to pieces. All the vessels in *the Saints* were driven on shore. The whole of Lord Willoughby's fleet, only two were ever heard of afterwards. An armée-en-flute of twenty-two guns got to Montserrat with only the stump of her mizenmast standing, and a fire ship got to Antigua, dismasted. The bottom of one ship was washed on shore at Cabsterre [Capesterre], *Guadeloupe*, and another at the Saints: the whole coast was covered with the wrecks of masts and yards) a figure from the stern of Lord Willoughby's ship was recognized among the ruins. The hurricane lasted twenty-four hours: houses and trees were blown down, and a great number of cattle killed. The sea rose, and was driven to an unusual height. All the batteries — walls of six feet thickness, near the sea, were destroyed, and guns, fourteen pounders, were washed away. The storm was felt at St. Christopher's island [St. Kitts] and Martinico, [Martinique] but with less violence.<sup>143</sup>

On 14-15 August 1666, a hurricane struck *Guadeloupe* in the Leeward Islands of the *West Indies* and *Martinique* in the eastern *Caribbean*. The hurricane caused < 2,000 deaths. [Alexander (1902) notes, "17 sail with 2000 troops...only two were ever heard of afterwards". Other references indicate that additional ships may have survived.]<sup>141</sup>

On 14-15 August 1666, a great Atlantic hurricane struck the islands of *Guadeloupe* and *Martinique* causing approximately 2,000 deaths.<sup>107</sup>

In *England*, it was intensely hot and dry.<sup>72</sup> There were east winds. The Great Fire of London occurred.<sup>47</sup> [The largest fire that ever occurred in London, *England* commenced on 2 September 1666 and continued for four days, and consumed thirteen thousand houses, eight-six churches and public buildings. St. Paul's Cathedral was among the number. The buildings were all destroyed on 400 streets.<sup>1</sup>]

In *England* in October, there were great floods.<sup>47, 92</sup> on October 14 and 16.<sup>72</sup>

In 1666, Lake Constance in *Switzerland* flooded.<sup>175</sup>

In Lincolnshire, *England* on 13 October 1666, there was a dreadful storm of thunder, accompanied with hail, the stones as large as pigeon or even pullet eggs, followed by a storm or tempest, attended with a strange noise. It came with such violence and force, that at Welbourn, it leveled most of the houses to the ground. It broke down some trees and tore up other trees by the roots. It scattered abroad much corn and hay. One boy only was killed. It went on to Willingmore, where it overthrew some houses and killed two children in them. Thence it passed on and touched the skirts of Nanby and ruined a few houses. Keeping its course to the next town, where it dashed the church steeple in pieces, furiously damaging the church itself, both stone and timber work. It left little of either standing, only the body of the steeple. It threw down many trees and houses. It moved in a channel, not a great breadth. Otherwise it would have ruined a great part of the country. It moved in a circle and looked like fire. It went through Nottinghamshire, where the hailstones were nine inches about. The whirlwind was about 60 yards broad. On Nottingham Forest, it broke down and tore up at least 1,000 trees, overthrew many windmills, overturned boats on the River Trent. In a village of 50 houses, it left only 7 standing. [description of a tornado]<sup>72</sup>

In 1666, a drought engulfed several regions of *China* including:<sup>153</sup>  
— During the period between 6 March and 3 April, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Chieh-yang.

- During the period between 4 April and 3 May, a drought engulfed Kwangtung province at San-shui.
- During the period between 3 June and 1 July, a drought engulfed Hupeh (now Hubei province) in central *China* at Chung-hsiang and Ta-yeh.
- During the period 2-31 July, a drought engulfed Hunan province in south-central *China* at Hêng-yang and Chekiang (now Zhejiang province) on the east coast of *China* at Ning-hai [uncertain name].
- During the period 8 August 1666 and 22 May 1667, a severe drought engulfed Chekiang province at Hsüan-p'ing and Sung-yang.

In 1666, there was a great drought in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1666 / 1667 A.D.** At the end of December 1666, there was a very hard frost in London, *England*.<sup>212</sup>

In the beginning of January 1667 [in *England*], there was a hard frost.<sup>212</sup>

In *England*, there was a frost from the 15<sup>th</sup> of February to the 19<sup>th</sup> of March.<sup>47, 72, 93</sup>

In 1667, “On the 16<sup>th</sup> of March, a sharp northeast wind began to freeze very strongly, the sea that lies before Amsterdam; the Y on the 17<sup>th</sup> was solid; on the 18<sup>th</sup> we went from this city on the ice to *North Holland*; the *Zuiderzee* was completely frozen, and several ships were stuck in the middle of ice, which by the 1<sup>st</sup> of April is stopped.”<sup>62</sup> [The “IJ” which sometimes shows up on old maps as “Y” or “Ye” is a river formerly a bay in the Dutch province of *North Holland*. So the “Y” reference in this instance is the old *Zuider Zee*, that today in the area of Amsterdam is the *IJmeer Lake*.]

The winter in 1667 was very severe in Holland [now *the Netherlands*], but extreme cold occurred late in the season, from 16 March to 1 April.<sup>62</sup>

**1667 A.D.** [In *England*], the air was cold and wet. Winds were from the north. Summer was very unequal.<sup>72</sup>

In 1667, Nottingham and London, *England* were visited by the plague.<sup>212</sup>

In 1667, the price of wheat [in *England*] averaged 36 shillings per quarter [quarter ton].<sup>212</sup>

On 19 August 1667, a hurricane struck the island of *Nevis* in the Leeward Islands of the West Indies. Before the hurricane struck, there was a high mountain that was all green with trees. But afterwards, in most places it was bare. The wood lying is such a condition, with half trees, or stumps, or quarters, that one would think it almost incredible.<sup>234</sup>

In Montbéliard, *France* in 1667 the summer was very cold and dry. There was not a single month throughout the year in which it had not frozen. In Burgundy, *France*, the grape harvest began on 28 September.<sup>62</sup>

On 1 September 1667, a tremendous hurricane desolated the island of St. Christopher [St. Kitts] in the *West Indies*. The hurricane blew with such violence, that all the houses and buildings were blown down. The inhabitants sought shelter from its fury by throwing themselves flat upon the ground in the fields.<sup>143</sup>

In 1667, a hurricane struck St. Kitts in the *West Indies* destroying all the houses on the island. The French governor reported:<sup>143, 144</sup>

I hold myself obliged to inform you that this island is in the most deplorable state that can be imagined and that the inhabitants could not have suffered a greater loss, or been more unfortunate

except they had been taken by the English. There is not a house or sugar works standing, and they cannot hope to make any sugar for fifteen months to come. As for the manioc, which is the bread of the country, there is not one left, and they are more than a year in growing ... I assure you that if peace is not made, or men-of-war sent to this country to facilitate the bringing of cassava from the other islands, that the inhabitants and troops will die of famine.

On 6 September 1667, an Atlantic hurricane struck Virginia in the *United States*. [Virginia was originally called Wingandacoa.] Buried in the ruins were much goods and many people. Many lives were lost.<sup>141</sup>

In 1667 during the period between 18 September and 16 October, floods struck Hunan province in south-central *China* at Lei-yang; and Hopei (now Hebei province) in northern *China* at Huai-lai, Ho-chien and Li.<sup>153</sup>

In 1667, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period 8 August 1666 and 22 May 1667, a severe drought engulfed Chekiang province at Hsüan-p'ing and Sung-yang.

— During the period 5 February and 6 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton, Hui-yang, Hai-fêng and Hui-lai.

— During the period 23 April and 22 May, a drought engulfed Hupeh (now Hubei province) in central *China* at Huang-kang.

— During the period 6 May and 8 November, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai.

— During the period 21 June and 20 July, a severe drought engulfed Hupeh province at Ying-shan, Huang-an, Lo-t'ien and Ch'i-shui.

In 1667 during the 6<sup>th</sup> moon on the 14<sup>th</sup> day in the vicinity of Shanghai, *China*, dragons were seen fighting in the air; there was a violent wind and excessive rain; the canal rose four or five feet; many houses were destroyed, a tree above ten arms-length in circumference was torn up. [In early *China*, tornadoes and waterspouts were commonly described as dragons.]<sup>166</sup>

The year 1667 produced a great harvest in the vicinity of Shanghai, *China*. One *hok* of rice (133 pounds) cost only two *tsien* [around 70 or 80 cash] at that time in Hukwang, *China* and on the right side of the river it was still cheaper. The fields did not yield enough to pay the taxes. The granaries of the rich were overflowing. They discarded the bountiful produce. Goods of every description were without purchasers. People called this the year of the "ripe dearth".<sup>166</sup>

**1668 A.D.** On 24 July 1668, there was a flood at Sutton Pool in Warwickshire, *England*. At Sutton Coalfield, owing to a sudden rain, a great flood took place. The waters flowed over a stone wall 10 feet [3 meters] high. Two large pools of 20 acres each, called Windley and Bracebridge, had their dam heads both broke through the force of the water, probably occasioned by the bursting of a waterspout.<sup>212</sup>

In 1668, the price of wheat [in *England*] averaged 40 shillings per quarter [quarter ton].<sup>212</sup>

In 1668 in London, *England*, a small pox epidemic killed 1/9 of the inhabitants.<sup>212</sup>

In *England*, on the 17<sup>th</sup> of December, there was a great hailstorm with rain.<sup>57, 72, 93</sup>

In 1668, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 9 June and 8 July, floods struck Hupeh (now Hubei province) in central *China* at Ma-ch'êng; Hopei (now Hebei province) in northern *China* at Yü-t'ien; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ta-pu.

— During the period between 9 July and 7 August, floods struck Hopei province at Luan-ch'êng, Tz'ü, Nan-kung and Kao-ch'êng.

— During the period between 8 August and 5 September, floods struck Hopei province at Chao, Kao-i, Lin-ch'êng, Shen-tsê, An'p'ing, Yung-nien, Li and Chü-lu; Chekiang (now Zhejiang province) on the east coast of *China* at Huang-yen and Yüeh-ch'ing; and Kiangsi (now Jiangxi province) in southern *China* at P'ing-hsiang.

— During the period between 5 September and 5 October, floods struck Hopei province at Chiao-ho and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu.

In 1668 during the period between 9 July and 7 August, a drought engulfed Hupeh (now Hubei province) in central *China* at Huang-an and Lo-t'ien; Chahar province (now eastern *Inner Mongolia*) at Huai-an and Yang-yüan; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lung-mên. During the period between 8 August and 5 September, a drought engulfed Hopei (now Hebei province) in northern *China* at Ching-hai.<sup>153</sup>

In 1668 during the 6<sup>th</sup> moon on the 14<sup>th</sup> day, there was violent wind with sudden torrents of rain in the vicinity of Shanghai, *China*. The river swelled four or five feet and destroyed innumerable houses. The storm was accompanied with a waterspout.<sup>166</sup>

In 1668 during the 12<sup>th</sup> moon [during winter], there was thunder and a rainbow in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1668 / 1669 A.D.** During the winter of 1668-69, Captain [Zachariah] Gillam on the *Nonsuch* catch wintered in the southern end of the Hudson Bay in *Canada*. He anchored in Rupert River on the 29<sup>th</sup> of September 1668. On the 9<sup>th</sup> of December, the river was frozen up. In April 1669, the cold was almost over.<sup>292</sup>

**1669 A.D.** In *England*, the entire year was dry.<sup>47, 72</sup>

On 20 June at Inspurg, there was a violent tempest of rain, hail, thunder and lightning. At Schwatz in northeastern *Germany*, the river overflowed, drowned all the neighboring fields and carried down 30 houses and drowned 200 people. In July at Holstein, *Germany* was a tempest with thunder and lightning, which so frightened the cattle, that many hundreds of them were lost. At Mecklenburg, *Germany*, there were many fires kindled by lightning in several parts of the country.<sup>72</sup> [Inspurg might possible be Insberg which is located south of Salzburg in the Austrian Alps.]

[In *the Netherlands*] in 1669, the spring and early summer by the continued influence of the north wind were exceptionally cold. The months of July, August and September influenced by a west wind were intolerable hot. In Dijon, *France*, the grape harvest began on 11 September.<sup>62, 72</sup>

In *England* on 7, 8, 9, 12, and 20 August, there were severe storms of thunder and lightning.<sup>72</sup>

On 18 August 1669, there was a mighty torrent of water from Pendle Hill, which flooded the village of Worston in Lancashire, *England*. The furniture floated about in the houses.<sup>212</sup>

In 1669, the price of wheat [in *England*] averaged 44 shillings per quarter [quarter ton].<sup>212</sup>

On 17 August 1669, a hurricane struck a *Caribbean Island* near Nevis and *Cuba* causing 182 deaths.<sup>141</sup>

On 1 September 1669 at Weymouth in Dorset, *England*, there was a very high tide. It was unusual because the weather was very calm and the little wind that was being at northeast, in the past contributed nothing at all to the tides in this haven.<sup>225</sup>

A little before 23 September 1669 in the *Atlantic Ocean*, a hurricane struck and several Newfoundland ships were cast away by a storm. The news was reported by a vessel from Rochel.<sup>141</sup>

Before 9 December 1669, an Atlantic hurricane struck St. Kitts in the *West Indies*. During the storm, 25 merchant ships and others were cast away. [Another account relates to a 19 December 1670 account that a violent hurricane lasting eight hours struck St. Christopher's island [St. Kitts] about the end of September last. [Thus this event may have occurred in September 1669.]]<sup>141</sup>

On 30 October 1669, there was a frightful hurricane of whirlwind in Northamptonshire, *England*.<sup>72</sup>

On 30 October 1669, a tornado passed through Ashley [Ashley Green] in Northamptonshire, *England*. It was 60 yards wide and was on the ground for only around 6 minutes. It took a milkmaid's pail from off her head and carried it many score of yards distance. In one yard, it threw over a wagon breaking off the wheels and axles, and blowing three of the wheels over a wall. It demolished the roof of the parsonage.<sup>195</sup>

In 1669 during the period between 28 June and 27 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at San-shui, Mao-ming, Tung-kuan and Hua; and Hupeh (now Hubei province) in central *China* at Fang. At Fang, house and fields were damaged by the floodwaters. During the period between 28 July and 25 August, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.<sup>153</sup>

---

**Winter of 1669 / 1670 A.D.** In *England* in 1669, the frost was severe with some remissions.<sup>47, 72, 93</sup>

In 1670 between 25 January and 11 February, there was frost in *England*.<sup>72</sup>

In 1669 at Christmas in *England*, there was a hard frost. Another account reported that on 26 December 1669 in London, *England*, there was a great cold spell, freezing quickly for several days. After which there was a great snow. This cold spell was much colder than the winter of 1665 and the winter of 1666.<sup>212</sup>

In 1670, the frost [in *England*] was most intense this winter.<sup>212</sup>

In 1670, the winter was intensely cold. The *Little and Great Belts* were frozen, and many people perished. [The Great Belt in *Denmark* (Danish: Storebælt) is a strait between the main Danish islands of Zealand (Sjælland) and Funen (Fyn). The Little Belt separates Fyn from Jylland.]<sup>1</sup>

In 1670, the cold was intense throughout *Europe*.<sup>30</sup>

In 1670, sleighs traveled safely across the *Little and Great Belts*.<sup>62</sup>

The winter in 1670 was severe in *Europe*. The *Great and Little Belts* were traveled by sleigh without any danger. The Danube River was frozen so hard that it carried people, horses and wagons. In *Italy* and *France*, there was severe cold. The extreme cold [in *France*] during January and February destroyed a large number of trees.<sup>62</sup>

The Academy of Sciences compares the cold from 1669-70 in northern *France* to the winters of 1608 and 1709. Rigor, in January and February, killed lots of trees.<sup>79</sup>

In *Prussia* in 1670, the waters of the Rhine River frozen at Coblenz [now Koblenz in west-central *Germany*] from the 11<sup>th</sup> to 17<sup>th</sup> of January, so that the artificers (artistic craftsman) exercised their several trades upon the ice (ice fair on the Rhine).<sup>47, 93</sup>

The winter was most severe, especially about the end of January, when a great flood was the next night followed by such a frost, that the Danube River was frozen so hard in one night, the it carried the weight of men, horses and carts. Whether the flood or the frost did the most damage is hard to determine for both killed multitudes of people.<sup>72</sup>

---

**1670 A.D.** In Bridgewater (Somerset), *England*, there were great floods on October 9.<sup>47, 72, 92</sup> another flood in *England* on March 10.<sup>72</sup>

On 7 October 1670, a hurricane drove all the fleet on shore in the harbor [Île à Vache, *Haiti*], except [the bloodthirsty pirate Henry] Moran's vessel, all of which, except three, were got off again and made serviceable.<sup>143</sup>

In 1670, the price of wheat [in *England*] averaged 41 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

On 13 October 1670, there was a very violent gale at Braybrook in Northamptonshire, *England*. It was only 6 yards wide. [This most likely refers to a tornado event.]<sup>212</sup>

On 13 October 1670, there was a frightful hurricane of whirlwind in Northamptonshire, *England*.<sup>72</sup>

The year 1670 was hot and dry in southern *France*.<sup>79</sup>

In 1670, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Ch'ing-p'u; Anhwei (now Anhui province) in eastern *China* at Ch'üan-chiao, Wu-ho and Fêng-yang; Hopei (now Hebei province) in northern *China* at Po-yeh; and Hupeh (now Hubei province) in central *China* at P'u-ch'i, Chung-hsiang, Ying-ch'êng, Ch'ung-yang and Chih-chiang; and Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo and Shang-yü; and Chekiang (now Zhejiang province) on the east coast of *China* at Ningpo, Shang-yü and Hu-chou. At Hu-chou, innumerable people and cattle drowned and innumerable houses damaged by the floodwater.<sup>153</sup>

In 1670, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a severe drought engulfed Hopei (now Hebei province) in northern *China* at P'u-yang, Tung-ming, Li, Kuang-p'ing, Jên, Wu-ch'ing, Ta-ch'êng, Ching, Ch'ing-yün, Ling-shou, Sha-ho, Tz'ü and Ta-ming. The drought damaged the crops.

— During the period between 6 May and 8 August, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Tung-yang and Hupeh (now Hubei province) in central *China* at Lo-t'ien.

— During the period between 8 November 1670 and 5 February 1671, a severe drought engulfed Hupeh province at Tsao-yang and An-lu; and Kiangsi (now Jiangxi province) in southern *China* at Tê-an.<sup>153</sup>

---

**Winter of 1670 / 1671 A.D.** During the winter of 1670-71, Captain [Zachariah] Gillam on the *Nonsuch* catch wintered in the southern end of the Hudson Bay in *Canada*. The ice began in Rupert River on the 10<sup>th</sup> of October, but they had warm weather after that. The river was frozen over the 6<sup>th</sup> of November. The snow that year was 7 or 8 feet thick [2.1-2.4 meters]. On the 1<sup>st</sup> of February, there was an abrupt change of weather that it rather thawed than froze. About the 20<sup>th</sup> of March it began to thaw and the river was thawed on the 20<sup>th</sup> of April.<sup>292</sup>

---

**1671 A.D.** In Dijon, *France* in 1671, the grape harvest began on 16 September.<sup>62</sup>

In 1671, the price of wheat [in *England*] averaged 42 shillings per quarter [quarter ton].<sup>212</sup>

In December 1671 in London, *England*, there was the thickest and darkest fog ever known in the memory of man.<sup>212</sup>

[In *England*], there were tempests or thunder, rain and wind on 3 & 12 September, 2 November, and 30-31 December.<sup>72</sup>

In 1671, a drought engulfed many regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at T'ung-hsiang. This drought was severe.

— During the period between 8 November 1670 and 5 February 1671, a severe drought engulfed Hupeh province at Tsao-yang and An-lu; and Kiangsi (now Jiangxi province) in southern *China* at Tê-an.

— During the period between 5 February and 6 May, a drought engulfed Hopei (now Hebei province) in northern *China* at Pa and Hupeh province at Kung-an and Shih-shou.

— During the period between 9 May and 6 June, a severe drought engulfed Hunan province in south-central *China* at Lung-shan and Hupeh province at Huang-an, Ma-ch'êng and Kuang-chi.

— During the period between 7 June and 1 November, a severe drought engulfed Chekiang province at Chin-hua and Hu-chou.

— During the period between 6 July and 4 August, a drought engulfed Chekiang province at Ningpo, Hsiang-shan, Ning-hai, T'ien-t'ai, Hsien-chü, Hu-chou and Lan-ch'i.

— During the period between 5 August and 2 September, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Ch'i-ho; Hopei province at Tung-ming, Hsing-t'ai, Kuang-p'ing, Jên, Ch'êng-an; and Kiangsu (now Jiangsu province) on the east coast of *China* at Chiang-p'u, Soochow and T'ai-ts'ang.

— During the period between 3 September and 2 October, a drought engulfed Anhwei (now Anhui province) in eastern *China* at T'ai-hu; Hopei province at Hsin-ch'êng and T'ang-shan; and Chahar province (now eastern *Inner Mongolia*) at Yang-yüan and Huai-an.

— During the period between 3 October and 1 November, a severe drought engulfed Chekiang province at Shao-hsing.

In 1671 during the period between 5 August and 2 September, floods struck Hupeh (now Hubei province) in central *China* at Sung-tzū and I-tu. During the period between 3 September and 2 October, floods struck Mu-yang [uncertain name]; Hopei (now Hebei province) in northern *China* at Wên-an and Hsü-shui; Shantung (now Shandong province) on the east coast of *China* at Chi-ning; and Hupeh province at Shih-shou.<sup>153</sup>

In 1671 during the 4<sup>th</sup> moon on the 11<sup>th</sup> day, there was excessive rain in the vicinity of Shanghai, *China*. In the next month the rains came again but with violent winds, which tore up trees and leveled houses. This storm continued for three days and nights. The next day, there was a freshet [flood]. Later that year, there was a famine.<sup>166</sup>

---

**Winter of 1671 / 1672 A.D.** On 9-11 December 1671, a storm of freezing rain struck Bristol, *England* causing vast destruction of trees about Bristol, Wells, Shepton-Mallet, Bath and Burton. There was no ice on any water but the rain froze as it fell. A branch from an ash tree weighed  $\frac{3}{4}$  pounds [0.3 kilograms] had 16 pounds [7.3 kilograms] of ice on it. The ice being five inches [13 centimeters] in circumference on the branch. The trees along the highway from Bristol to Shepton were all thrown down. Also at Burton, the roads were all blocked up by fallen trees. The same ice storm struck Oxford. This weather was immediately followed by great heat. The bushes and the flowers were as forward as usually seen in

April. An apple bloomed before Christmas.<sup>212</sup>

Freezing rain fell in Somersetshire, *England* on 9-11 December 1672 [1671]. It made incredible destruction of trees in all the villages and highways from Bristol towards Wells, and towards Shepton-Mallet, and towards Bath and Bruton, and other places of the west. A sprig of an ash tree of just three quarters of a pound, which was brought to my table, the ice on it weighed 16 pounds, besides what was melted off by the hands of them that brought it. Even though the trees and hedges were loaded with ice, there was no ice on the rivers or standing pools of water. Some travelers were almost lost [died] from the coldness of the freezing air and freezing rain. All trees, young and old, on the highway from Bristol to Shepton, were so thrown down on both sides of the ways, that the road was unpassable [impassable]. Due to similar obstructions, the [mail/newspaper] carriers of Bruton were forced to return back. Some told me that riding on the snowy downs, they saw this freezing rain fall upon the snow, and immediately freeze to ice, without sinking at all into the snow, so that the snow was covered with ice all along, and had been dangerous, if the ice had been strong enough to bear them. Many travelers were stranded on the roads during their journey and were in great distress. On the 8<sup>th</sup> much snow had fallen. The incidences of freezing rain seemed to vary by elevation. The frost was very fierce and dangerous on the tops of hills and plains. On 11 December, one young man returned from a 5 mile journey, as he entered a warm room, he cried out in extreme torment in all parts of his body because of the unsufferable [insufferable] cold. After these frost were over, there was an excessive heat wave. As a result an apple tree blossomed before Christmas. On New-Years-Tide, this apple tree bore apples as big as one's finger end. This freezing rain also affected the countryside around Oxford. And when the heat wave came, green apples were observed in diverse trees, particularly in the parish of Holywell.<sup>234</sup>

On 8 December [1671] fell a great snow. On 9 December, there was much rain, which swept off the snow. On 10 December, sudden fits of cold and warmth. Some travelers were almost lost by the freezing air and rain. Trees young and old, were torn and broken down; for the freezing rain falling on the freezing snow on the boughs, and presently turning to ice, broke down the trees. This frost was the same in Oxfordshire as in Somersetshire, a raining of ice or rain freezing as it fell and succeeded by the like heat.<sup>72</sup> Great was the damage done to exotic plants by this and the frosts of 1683, 1684, 1709, 1716 and 1740.<sup>72</sup>

---

**1672 A.D.** The winter [in *France*] was severe and the cold weather lasted for three months.<sup>62</sup>

In May 1672, the drought lowered the water in the l'Yssel [sometimes called Gelderse l'Jssel River in eastern *Netherlands*] and the Rhine River [in *Germany*]. The river was fordable on one arm of the river at several locations. This allowed the army of Louis XIV, to cross the river on June 5.<sup>79</sup>

In 1672, several great and violent rains fell in many parts of *England* in summer and harvest and washed away both corn [grain] and soil of many great fields. After this [winter], very long heats, causing excessive sweating both by day and night. Trees budded, flowers appeared as in April or May. On 2 September, there was shocking thunder and lightning at Leeds in West Yorkshire in north-central *England*.<sup>72</sup>

In 1672, the price of wheat [in *England*] averaged 41 shillings per quarter [quarter ton].<sup>212</sup>

In 1672, an epidemic of measles prevailed in London, *England*.<sup>212</sup>

On 2 September 1672, there was a thunderstorm at Leeds, *England*.<sup>212</sup>

[In *England*], there were tempests on 24-25 July, 2 September, 29 October, 19-20 December and 28 December. Some tempests produced great tides.<sup>72</sup>

In 1672 during the period between 5 February and 6 May, a drought engulfed Shansi (now Shanxi province) in northern *China* at Jui-ch'êng and Chieh. During the period between 27 April and 26 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Fu-shan. During the period between 27 May and 24 June, a severe drought engulfed Shantung province at Kao-mi. During the period between 21 September and 20 October, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Lin-ch'ü.<sup>153</sup>

In 1672, floods struck Szechwan (now Sichuan province) in southwest *China* at Chungking, Chung, Fêng-tu and Sui-ning; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh and Mêng-shan; and Hopei (now Hebei province) in northern *China* at Jên. During the period between 25 June and 23 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at I-hsing and Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou. Houses were damaged by the floodwaters. During this same time period, floods also struck Chekiang province at Hangchow; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ying-tê; Hopei province at Hsing-t'ai; Hupeh (now Hubei province) in central *China* at I-tu, Ch'ien-chiang; and Anhwei (now Anhui province) in eastern *China* at T'ai-p'ing.<sup>153</sup>

In 1672 during the 7<sup>th</sup> moon, there was a great drought in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1673 A.D.** [In *England*] on 25 May and 23 June, there were terrible storms of thunder and lightning.<sup>72</sup>

[In *England*], there were several tempests, which occurred on: 16 February, May 25 (rain, thunder, lightning), June 23 (rain, a spout), September 10-11, and October 11.<sup>72</sup>

At Hartshead in Yorkshire, *England*, an inundation struck on 11 September.<sup>40, 41, 43</sup>

In *England* in 1673, the year was cold and full of rough days. The harvest was late and the yield was poor. In Dijon, *France*, the grape harvest only took place on 5 October.<sup>62</sup>

In *England*, 1673 was a cold unseasonable bad year, and a very late lean harvest.<sup>72</sup>

In 1673, the price of wheat [in *England*] averaged 46 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1673, an Atlantic hurricane struck off the coast of *Puerto Rico*. A warship was wrecked but most of the (500) pirates made it ashore to *Puerto Rico* [alive].<sup>141</sup>

In 1673 during the period between 14 July and 11 August, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Kao-yao; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu, Anhwei (now Anhui province) in eastern *China* at Szü; and Shantung (now Shandong province) on the east coast of *China* at Tsinan.<sup>153</sup>

In 1673 during the period between 5 February and 8 November, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Chieh-yang. During the period between 5 February and 6 May, a drought engulfed Kwangtung province at Hui-lai. During the period between 6 May and 8 August, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Yang-hsin. During the period between 10 October and 8 November, a severe drought engulfed Kwangtung province at Kao-ming and Hsing-ning.<sup>153</sup>

In 1673 during the 7<sup>th</sup> moon on the 20<sup>th</sup> day in the vicinity of Shanghai, *China*, there was a hailstorm. The hailstones were two or three catties weight, killing horses and oxen. [A catty or Chinese pound was

historically about 605 grams weight. Therefore these individual hailstones weighed around 2.7 to 4.0 pounds.]<sup>166</sup>

---

**Winter of 1673 / 1674 A.D.** The *Zuiderzee* is completely frozen; 16 March we crossed it on foot, on horseback and sleigh on the ice between Stavoren and Enkhuizen in *the Netherlands*.<sup>62</sup> [Stavoren is a town in Friesland on the coast of then Zuyder/Zuidersea, now the IJsselmeer Lake. Enkhuizen is now in North Holland also on but the opposite side of the IJsselmeer Lake. Today, a ferry for pedestrians and cyclists operates between Stavoren and Enkhuizen.]

The winter of 1674 was remarkable in Holland [now *the Netherlands*] because of its severity and because of the late arrival in February. On 4 April we skated on the sea at Haarlem, *the Netherlands*.<sup>62</sup> [Haarlem is in the peninsular region of North Holland.]

[In *Europe*] near Marienburg and Borussia on 5 February, there was a severe frost, which lasted to 25 March. [In *England*] this year, it snowed 11 days together.<sup>72</sup> [Marienburg could be Malbork in northern Poland, during this time period the Polish province of West Prussia. Borussia is a Latin name for Prussia.]

---

**1674 A.D.** [In *England*] there was a tempest on 7 & 10 April 1674.<sup>72</sup>

On 7-8 May 1674, there was a great flood on the rivers Trent and Tame in *England*.<sup>212</sup>

In 1674, the price of wheat [in *England*] averaged 68 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1674, an epidemic of smallpox was very violent in London, *England*. It destroyed 1/8<sup>th</sup> of the people.<sup>212</sup>

In 1674, a great storm of whirlwinds [tornados], thunder, lightning and hailstones of prodigious bigness struck *Holland* [*the Netherlands*]. At Amsterdam, many trees were tore up by the roots, ships sunk in the harbor, boats in the channels, houses beaten down, and several people were snatched from the ground as they walked the streets, and thrown into the canals. The great and ancient Cathedral Church at Utrecht was torn in pieces by the violence of the storm and utterly destroyed. The vast pillars of stone that supported it were wreathed like a twisted club. Hardly any church or house in the town escaped the violence. *France* and Brussels [in *Belgium*] also suffered infinite damage from this storm.<sup>209</sup>

[In *England*], the summer and harvest were mostly rainy and unequal. September and October were hot.<sup>72</sup>

On 21 December 1674, a northwest gale struck Tarbut [Tarbert], *Scotland*. Whole forests were torn up by the roots.<sup>212</sup>

The Camargue [river delta] in *France* was covered by the floodwaters of the Rhône River in 1674.<sup>79</sup>

Thunderstorms or rainstorms desolated Provence, *France* in 1674.<sup>79</sup>

On 10 August 1674, a hurricane struck Barbados in the *Lesser Antilles* causing 200 deaths.<sup>141</sup>

On 10 August 1674, a hurricane struck Barbados in the *Lesser Antilles* blowing down 200 houses, and destroying the plantations, so that the inhabitants made but little sugar the two succeeding years. Eight ships were wrecked in the harbor, and 200 persons killed.<sup>143</sup>

In 1674 during the period between 6 April and 5 May, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Hopei (now Hebei province) in northern *China* at Pa. During the period between 4 June and 3 July, floods struck Hopei province at Jên; Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'iung-shan. At Ch'iung-shan, houses were damaged by the floodwaters and innumerable people and cattle were drowned.<sup>153</sup>

In 1674, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Honan (now Henan province) in central *China* at Hsü-ch'ang and Shantung (now Shandong province) on the east coast of *China* at Fei, Yüeh-ling and T'an-ch'êng.

— During the period between 6 May and 3 June, a drought engulfed Shantung province at Tsinan.

— During the period between 4 July and 1 August, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu and Shantung province at Kuan-t'ao and Ên.

— During the period 2-30 August, a drought engulfed Hupeh (now Hubei province) in central *China* at Yün, Huang-an, Ma-ch'êng, Lo-t'ien.

---

**Winter of 1674 / 1675 A.D.** The winter of 1674-75 in *Ireland* was very mild and warmer than expected with very little rain. It did not rain more than 2 or 3 times in February. During the past 2 or 3 years, *Ireland* had scarcely any frosts or snow. But [the decade or two] before then it was not unusual to have frost and deep snows of a fortnight [2 weeks] and some that continued for 3 weeks and there were great rivers and lakes frozen completely over.<sup>234</sup>

---

**1675 A.D.** [In *England*] on 24-25 May, there was a terrible storm of thunder and lightning.<sup>72</sup>

[In *England*], there were tempest on 24-25 May (thunder & lightning), and 26-27 December (with hurricane).<sup>72</sup>

On 10 September 1675, a hurricane struck Barbados in the *Lesser Antilles* causing greater than 200 deaths.<sup>141</sup>

In Burgundy, *France* in 1675, the grape harvest began on 14 October.<sup>62</sup>

In November 1675, a storm so violent struck *Holland* [*the Netherlands*] and caused several breaches in the great diques [dikes] near Enchusen and others between Amsterdam and Harlem [now Haarlem]. Forty-six vessels were cast away at Texel and almost all the men drowned. These breaches caused a great inundation, which caused much damage. Many people, cattle and houses were lost.<sup>209</sup>

In *England*, the summer was exceedingly rainy. The harvest was very unequal, like the months of March and April, sometimes clear; sometimes cloudy or rainy. The winter of this year was not so severe. There was neither rain nor snow. A north wind in spring made intermittents very rife.<sup>72</sup>

In 1675, the price of wheat [in *England*] averaged 61 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

Lightning can change the polarity of magnets. “Towards the year 1675 two English vessels went together on a voyage from London to Barbadoes [Barbados]. Near the *Bermudas*, lightning broke the mast of one of them and tore the sails; the other received no damage. The captain of the second vessel having remarked that the first turned about and appeared to wish to return to England, asked the cause of this sudden determination, and learnt, not without astonishment that his companion thought he was following the route as at first. An attentive examination of the compasses of the vessel that had been struck showed them that the *fleur de lys*, or arrowhead, which usually stands on the compass-card for the north-pointing

pole now indicated the south; so that the poles had been completely reversed by the lightning. It continued in this state during the whole remainder of the voyage.”<sup>271</sup>

In 1675 during the period between 23 July and 20 August, floods struck Anhwei (now Anhui province) in eastern *China* at Wu-ho and Hopei (now Hebei province) in northern *China* at Hsin-ch'êng, Su-ning and Li. During the same period of time, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning. During the period between 21 August and 18 September, a drought engulfed Hupeh (now Hubei province) in central *China* at Huang-an and Lo-t'ien. Then during the period between 19 September and 18 October, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu.<sup>153</sup>

In 1675 during the 6<sup>th</sup> moon, there was great wind and a flood in the vicinity of Shanghai, *China*. Then during the 10<sup>th</sup> moon, there were protracted rains.<sup>166</sup>

**Winter of 1675 / 1676 A.D.** The winter of 1675-76 in *Ireland* was very fair or rather no winter at all. There were only 5 or 6 mornings with frost this winter and the frost lasted no longer than noon. It snowed only 3 times. The first snow occurred before Christmas, the second on 11 January, and the third on 17 January. The last snowfall was the longest; it continued less than 48 hours but thawed. There were only 2 or 3 rainy days during the winter. On 14 March, there was a shower of rain and hail.<sup>234</sup>

**1676 A.D.** On 23 May 1676, the French ship *Le Vansour* sails along the coast of the island *Tristan da Cunha* located about midway between Africa and South America, and observed the peak on the main island was covered with snow.<sup>105</sup>

In 1676, the price of wheat [in *England*] averaged 38 shillings per quarter [quarter ton].<sup>212</sup>

On 16 June 1676, a hailstorm struck Dunstal [Dunstall] in Staffordshire, *England*. The hailstorm was 1½ miles [2.4 kilometers] long and ¼ mile [0.4 kilometers] broad. The hailstones were 4 inches [10 centimeters] about [in circumference] and of unequal and various shapes.<sup>212</sup>

[In *England*] on 19 June, there was a terrible storm of thunder and lightning.<sup>72</sup>

[In *England*] on 9 August, there was a tempest with great wind and high tides.<sup>72</sup>

[In *England*], the summer was exceedingly cold.<sup>72</sup>

In Dijon, *France* in 1676, the grape harvest began on 9 September.<sup>62</sup>

On 20 September 1676, a violent storm struck the coast of New England in what was to become the *United States*. It cause ships to sink and coastal damage. One of the ships placed in peril by the storm was a ketch, of about seventeen tons burden, commanded by a sea captain Ephraim Howe. During the storm, the ship lost a rudder and as a result any means of controlling the vessel. It floated aimlessly out to sea for three months. Over half the passengers and crew died of exposure. The ship finally struck a reef off the coast of Cape Sable in Nova Scotia. The survivors made their way onto an uninhabited desolate island. They were finally rescued and returned to Salem, Massachusetts on 8 July 1677, ten months after they left Boston.<sup>199</sup>

In 1676, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 14 February and 13 March, floods struck Hupeh (now Hubei province) in central *China* at Ch'ien-chiang, Ku-ch'êng and I-ch'êng. At I-ch'êng, houses and crops were damaged by the floodwaters and people and cattle were drowned.

— During the period between 11 June and 10 July, floods struck Shensi (now Shaanxi province) in central *China* at Pai-ho; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Mêng-shan, P'ing-yüeh and Ts'ang-wu; and Hupeh province at Ao-ch'êng, Ta-yeh, P'u-ch'i, Huang-p'o, Hsiao-kan, Mien-yang, Kuang-chi, I-ch'êng and Tien-mên.

— During the period between 11 July and 8 August, floods struck Kwangsi province at Huai-chi; Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Ch'ing-p'u, Wu-chiang and Hsiao; and Hupeh province at Huang-kang, Chiang-ling, Chien-li and Kuang-chi.

— During the period between 7 October and 5 November, floods struck Kiangsu province at Suchow; and Hopei (now Hebei province) in northern *China* at Nan-yüeh.

In 1676 during the period between 5 February and 6 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsing-ning [uncertain name].<sup>153</sup>

**Winter of 1676 / 1677 A.D.** The Seine River in *France* was frozen for thirty-five consecutive days from 9 December 1676 to 13 January 1677.<sup>38,60</sup> The Maas (Meuse) River remained frozen from Christmas until the 15<sup>th</sup> of January.<sup>62</sup>

In 1676 in Paris, *France*, there were 35 days of frost.<sup>58,80</sup>

Extreme cold reigned from 2 December 1676 to 13 January 1677 in northern *France*. The earth was covered with snow, and the river remained frozen thirty-five days.<sup>79</sup>

This winter was very severe in *France*. Particularly intense was the cold from 2 December 1676 until 13 January 1677. "Thirty-five consecutive days the earth was covered with snow and the Seine River frozen. Then came wet weather. In February we had a few mild frosts and frequent rains. The same weather conditions prevailed in March. The sky was almost completely overcast. The beginning of April was still cold and wet, but around the middle of the month, the temperature was mild, but soon afterwards came the cool weather again which held until 22 May." On the frozen river Meuse, they travelled from Christmas to 15 January with heavily laden wagons over the ice.<sup>62</sup>

**1677 A.D.** [In *England*] on 1 June and on 8 & 29 July, there were terrible storms of thunder and lightning.<sup>72</sup>

[In *England*], there were tempests on 11 August (of wind) and 1 & 29 June (of rain, hail, thunder, lightning and wind).<sup>72</sup>

In 1677, the price of wheat [in *England*] averaged 42 shillings per quarter [quarter ton].<sup>212</sup>

[In 1677, Richard Towneley made the first regular measurement of rainfall in the north of *England*.] In Townley [Towneley Hall] in Lancashire, *England* the rainfall of January was 4.7 inches [12 centimeters]; of June 5.2 inches [13 centimeters]; of August 4.8 inches [12 centimeters]; of November 4.3 inches [11 centimeters]; of December 4.0 inches [10 centimeters]; whole year 43.6 inches [1.1 meters].<sup>212</sup>

In 1677, floods struck many regions of China including:<sup>153</sup>

— During the period between 4 March and 1 April, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu, Suchow and Hsiao.

— During the period 2-30 May, floods struck Hupeh (now Hubei province) in central *China* at Ch'ien-chiang and Anhwei (now Anhui province) in eastern *China* at Wang-chiang.

— During the period between 30 July and 27 August, floods struck Hopei (now Hebei province) in northern *China* at Ho-chien, Jên and Chi-tsê; Shantung (now Shandong province) on the east coast of

*China* at An-ch'iu; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'in; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu, Hêng and Kuei-p'ing.

In 1677 during the period between 3 May and 27 August, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and Kiangsi (now Jiangxi province) in southern *China* at Wan-tsai.<sup>153</sup>

In 1677 during the 6<sup>th</sup> moon, there was a flood in the vicinity of Shanghai, *China*.<sup>166</sup>

During the winter of 1677, there was a thunderstorm with snow [thunder-snow] in the vicinity of Shanghai, *China*.<sup>166</sup>

**1678 A.D.** In *England* on the 18<sup>th</sup> of January, there was a great hailstorm.<sup>57, 72, 93</sup>

[In *England*] on 19 January and 11 August, there were terrible storms of thunder and lightning.<sup>72</sup>

[In *England*], there were tempests on 19 January (thunder and lightning), on 22 March and 8 October.<sup>72</sup>

In Middlesex, *England*, there were considerable floods on 11 June.<sup>47, 72, 92</sup> another flood in *England* in September.<sup>72</sup>

In *England*, the year was all dry, hot and clear.<sup>47, 72</sup>

In *England*, the wind for the last two years and now [1678] having kept mostly north-northeast and east and sometimes northwest but mainly north the whole spring. Summer and harvest was droughty, hot and clear.<sup>72</sup>

In the beginning of July 1678, after some gentle rainy days, which had not swelled the waters of the River Garonne more than usual, one night the river swelled all at once so mightily, that all the bridges and mills above Toloufe [Toulouse in southwestern *France*] were carried away. In the plains which were below the town, the inhabitants who built in places which by long experience they had found safe enough from any former inundation, were by this surprised, some were drowned, together with their cattle, others only saved themselves by climbing trees or getting to the tops of houses. Others who were looking after their cattle in the field were warned by the horrible noise and furious torrents of water and fled but could not escape without being overtaken. At the exact same time the two rivers of Adour and Cave, which fall from the Pyrenæan Hills [Pyrénées Mountains], as well as the Garonne, and some other little rivers of Gascoygne, which have their source in the plain, as the Gimone, the Save, and the Rat, overflowed in a similar manner and cause the same devastation. This flood was believed primarily due to the release of subterraneous waters. This observation was derived from the mineral content of the water and the formation of new river channels in the mountains formed by the furious torrents, which tore up the trees, earth, and great rocks.<sup>234</sup>

In 1678, the price of wheat [in *England*] averaged 59 shillings per quarter [quarter ton].<sup>212</sup>

In *England*, there was a frost from the 9<sup>th</sup> of December to the 9<sup>th</sup> of February, with one remission.<sup>47, 72, 93</sup>

In 1678, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at T'ai-an and Anhwei (now Anhui province) in eastern *China* at Tung-liu, Shou, Ch'üan-chiao and Wu-ho.

— During the period between 6 May and 8 August, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at T'ung-hsiang; Kiangsu (now Jiangsu province) on the east coast of *China* at Chia-ting; and Hupeh (now Hubei province) in central *China* at Huang-kang.

— During the period between 16 September and 15 October, a drought engulfed Chekiang province at Chin-hua; Kiangsu province at Kao-ch'un; and Kiangsi (now Jiangxi province) in southern *China* at Hsiu-shui [uncertain name, "Ning"].

In 1678, floods struck many regions of *China* including: <sup>153</sup>

— During the period between 20 May and 18 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lung-ch'uan and Ho-p'ing; and Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou.

— During the period between 19 July and 16 August, floods struck Kwangtung province at Ch'in and Hui-lai; and Szechwan (now Sichuan province) in southwest *China* at Sui-ning and Ho-chiang.

— During the period between 17 August and 15 September, floods struck Hopei (now Hebei province) in northern *China* at Jên and Hsing-t'ai; Kiangsu (now Jiangsu province) on the east coast of *China* at Hsiao and Suchow; Shensi (now Shaanxi province) in central *China* at Yen-ch'ang; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh.

In 1678 during the 5<sup>th</sup> moon, there was a hailstorm in the vicinity of Shanghai, *China*.<sup>166</sup>

**1679 A.D.** [In *England*], October was a month of continued rains.<sup>72</sup>

[In *England*], there were tempests on 10-11 February (wind), 8 July, 6 August (rain, thunder and lightning).<sup>72</sup>

In 1679, the price of wheat [in *England*] averaged 60 shillings per quarter [quarter ton].<sup>212</sup>

In 1679, it was very hot in *England* and *Scotland*. There was no rainfall beginning in May and all summer.<sup>212</sup>

In 1679, a drought engulfed many regions of *China* including: <sup>153</sup>

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, K'un-shan, Ch'ing-p'u, Shanghai, Wu-chin and I-hsing. This drought was severe. Creeks dried up.

— During the period between 5 February and 6 May, a drought engulfed Hopei (now Hebei province) in northern *China* at Man-ch'êng.

— During the period between 10 May and 7 June, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow.

— During the period between 8 June and 4 October, a severe drought engulfed Hupeh (now Hubei province) in central *China* at Huang-an, Lo-t'ien, I-tu, Ma-ch'êng and Kung-an.

— During the period between 8 July and 5 August, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Yeh and P'ing-tu.

— During the period between 6 August and 4 September, a severe drought engulfed Anhwei (now Anhui province) in eastern *China* at Ho-fei, Lu-chiang, Ch'ao, Wu-wei, Shu-ch'êng and Tang-t'u.

— During the period between 5 October and 2 November, a severe drought engulfed Shansi (now Shanxi province) in northern *China* at Lin.

The year 1679 was a very scarce year in the vicinity of Shanghai, *China*. This scarcity was caused by a drought.<sup>166</sup>

In 1679 during the period between 9 August and 4 September, floods struck Hopei (now Hebei province) in northern *China* at An-kuo and Su-ning. During the period between 5 September and 4 October, floods

struck Shensi (now Shaanxi province) in central *China* at Nan-chêng and Hupeh (now Hubei province) in central *China* at Ch'ien-chiang. At Ch'ien-chiang, the dikes were damaged.<sup>153</sup>

---

**1680 A.D.** [In *England*] on 11 February 1680, there was an irregular tide when the sea flowed three times in 5 hours.<sup>72</sup>

In Oxford, *England* in June, there were great floods.<sup>47, 72, 92</sup>

On 26 June 1680, there was a monstrous inundation near Londonderry, *Ireland*. It was believed that this inundation came from the release of subterraneous waters imbedded in the hills and from whence the waters gushed forth.<sup>234</sup>

In *England*, the summer was hot and dry.<sup>47, 72</sup>

The summer of 1680 was extremely hot in *England*. In Dijon, *France*, the grape harvest began on 9 September. This year was a good grain market in *France*.<sup>62</sup>

In 1680, the price of wheat [in *England*] averaged 45 shillings per quarter [quarter ton].<sup>212</sup>

In 1680, 1720, 1739 and 1740 [in *Europe*], storms of hail of one foot thickness fell.<sup>190</sup>

In *Ireland*, there was “an inundation near Londonderry.”<sup>47, 92</sup> [Londonderry is located in Northern Ireland near Lough Foyle.]

In Breslaw [now Wrocław in southwestern *Poland*], there was great heat during the summer.<sup>72</sup>

On 3 August 1680, a hurricane struck Martinique Island in the *Caribbean Sea*. During the violent hurricane over twenty large French ships and two English ships were totally lost in Cul-de-Sac Bay and the loss of life was great.<sup>141</sup>

On 15 August 1680, an Atlantic hurricane struck the *Dominican Republic*. The storm submerged many vessels including 25 ships of France, causing the death of most. Several Spanish ships were also lost as well.<sup>141</sup>

[In *England*] on 13 September, there was a terrible storm of thunder and lightning.<sup>72</sup>

[In *England*], there were tempest on 30 January, 28 February, 18 June, 24 August and 23 September (rain, thunder and lightning).<sup>72</sup>

In 1680, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 26 June and 25 July, floods struck Hupeh (now Hubei province) in central *China* at Kuang-chi, I-tu and I-ch'ang; Kiangsu (now Jiangsu province) on the east coast of *China* at I-hsing and Wu-chin; and Shantung (now Shandong province) on the east coast of *China* at Fu-shan, I-shui, Mêng-yin and T'êng.

— During the period between 26 July and 23 August, floods struck Kiangsi (now Jiangxi province) in southern *China* at Hsia-chiang and Hupeh province at I-ch'ang and I-tu.

— During the period between 24 August and 22 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou.

In 1680 during the period between 6 May and 8 August, a drought engulfed Hopei (now Hebei province) in northern *China* at Li. During the period between 8 August and 8 November, a drought engulfed

Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien, K'ai-chieh and Wêng-yüan.<sup>153</sup>

In 1680, there was a great drought in the vicinity of Shanghai, *China*. There was no rain from 3<sup>rd</sup> to 8<sup>th</sup> month.<sup>166</sup>

---

**Winter of 1680 /1681 A.D.** [In *England*], the winter was a long severe frost and an intense cold. The summer was excessively hot.<sup>72</sup>

In 1680 in *England*, the frost was long and hard.<sup>47, 72, 93</sup>

The winter was intensely cold in *Europe*. The Little and Great Belts in *Denmark* were frozen, and many people perished.<sup>1</sup>

This year the cold was so severe as to split whole forests of oak trees.<sup>30</sup>

In 1680 in southern *France*, the cold kills all the olive trees.<sup>79</sup>

The winter in 1680 was in *Italy* and *Provence* very severe. In *Provence*, the olive trees froze to death.<sup>62</sup>

During the period from 1718 to 1734, Antoine-Simon Le Page du Pratz lived in the early Louisiana Territory and documented *North America*. The following is a passage from his memoirs providing an account of the travels of Moncacht-Apè [name translates to “the killer of pain and fatigue”], a civilized Indian of Louisiana from the tribe of Yazoo: “Having lost my wife and children, I resolved to travel, in order to discover our original country [ancestral roots], notwithstanding all the perswasions [persuasions] of my parents and relations to the contrary. I took my way, by the high grounds that are on the eastern bank of the river of St. Louis, that I might only have the river Ouabache [Wabash River] to cross in order to join the Illinois, at the village of Tamaroua [near the site of East St. Louis, Illinois], a considerable settlement of the Canadian French. As the grass was short [These countries are all either woods, or vast plains or meadows, and when the grass of these meadows is long, travelling through them is very troublesome and fatiguing.] I arrived there in a little time. I stayed there 8 days to rest myself, and then continued my rout [route] along the eastern bank of the same river St. Louis, till I was a little above the place where the river Missouri falls into it. I then made a raft of canes, or reeds, and cross'd the river St. Louis, and when I was near the opposite side, I suffered my raft to be carried down the stream till I came to the conflux of the two rivers. Here I had the pleasure of seeing the rivers mix, and of observing how clear the waters of the river St. Louis are, before they receive the muddy streams of the Missouri. I landed her, and travell'd along the north side of the Missouri for a great many days, till at last I came to the nation of the Missouris; with them I stay'd a considerable time, not only to repose myself after my fatigues, but also to learn their language, which is spoken or understood by a great many nations. In this country one scarce sees any thing but large meads [meadows], above a days journey over, and cover'd with large cattle [buffalo]. The Missouris seldom eat any thing but flesh [meat], they only cultivate as much maiz [maize, corn] as may serve for a change, and prevent their being cloy'd [cloyed, sickened with an excess of] with beef and game, with which their country abounds. During the winter which I spent with them, the snow fell to the depth of 6 feet [1.8 meters].”<sup>299</sup> [It is believed that Moncacht-Apè journey across the continent occurred in the second half of the 17<sup>th</sup> century. I have arbitrarily placed this account in the year 1680.]

On 30 December 1708, the temperature at Upminster [a suburban town in east London, *England*] fell to 1° F [-17.2° C].<sup>300</sup>

During the period between 21 December 1680 and 19 January 1681, a severe drought engulfed Chahar province (now eastern *Inner Mongolia*) at Wan-ch'üan.<sup>153</sup>

---

**1681 A.D.** [In *England*], there were tempest on 15 January (rain, hail) and 10-11 December.<sup>72</sup>

In *England*, all the spring and summer was dry.<sup>47, 72</sup>

The spring and summer of 1681 [in *England*] were so hot and so dry that no one remembered a state of vegetation, equal to the likes seen this year. The herbs and grasses were burned, and in the air, no trace of moisture could be detected.<sup>72</sup> In Dijon, *France*, the grape harvest began on 9 September.<sup>62</sup>

In 1681, the price of wheat [in *England*] averaged 46 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1681, an epidemic of smallpox was violent in London, *England*. It killed 1/8<sup>th</sup> of the inhabitants.<sup>212</sup>

In *England* on the 1<sup>st</sup> of May, there was a great hailstorm.<sup>57, 72, 93</sup>

In 1681, a hurricane struck the western *Caribbean Sea*. The loss of life was considerable from several ships.<sup>141</sup>

In 1681, the island of Antigua in the *Leeward Islands* was desolated by a tremendous hurricane.<sup>143</sup>

In 1681, a drought engulfed several regions of *China* including:<sup>153</sup>

— Anhwei (now Anhui province) in eastern *China* at T'ai-p'ing and Chekiang (now Zhejiang province) on the east coast of *China* at Huang-yen, Hsien-chü and I-wu. Wells and springs dried up.

— During the period between 5 February and 6 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at An-ch'iu.

— During the period between 6 May and 8 August, a drought engulfed Chekiang province at Wên-chou and Ningpo. Wells and springs dried up.

— During the period between 8 August and 8 November, a drought engulfed Chekiang province at Fêng-hua. Wells dried up.

In 1681 during the period between 18 May and 15 June, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-shan and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Fêng-ch'uan. During the period between 16 June and 14 July, floods struck Chekiang province at Ch'ang-hua and T'ang-ch'i; Hupeh (now Hubei province) in central *China* at Chiang-ling and Chien-li; and Kiangsi (now Jiangxi province) in southern *China* at Hsin-chien. In Chekiang and Hupeh provinces, innumerable people were drowned.<sup>153</sup>

In 1681 during the 5<sup>th</sup> moon, there was a flood in the vicinity of Shanghai, *China*. Then during the 8<sup>th</sup> moon, there was a sudden torrent of rain and rise of water, which undermined and overturned part of the Shanghai walls and killed several persons.<sup>166</sup>

---

**Winter of 1681 /1682 A.D.** In the *United States*, on 11 December 1681, the Delaware River near Philadelphia was frozen solid in one night so as to be passable on the ice.<sup>1</sup>

---

**1682 A.D.** In *England*, "Rain, hail, floods, all the summer."<sup>47, 72, 92</sup>

On 22 March 1682, the tide on the River Thames in London, *England*, ebbd and flowed three times in four hours.<sup>212</sup>

In 1682 there was a storm and flood at Brentford, in West London, *England* that did much damage. The sudden flood occasioned by the tempest was so great that the whole place was laid underwater. Boats rowed up and down the streets and several houses were carried away by the force of the current.<sup>212</sup>

In 1682, the price of wheat [in *England*] averaged 44 shillings per quarter [quarter ton].<sup>212</sup>

On 6 June, at Tortorica in the Valley of Demana in *Sicily*, at 7 o'clock in the evening, there arose such a tempest of rain, thunder and lightning, which continued for 36 hours. At 1 o'clock the next morning, great torrents of water caused by these rains, fell down from the neighboring mountains with so great rapidity, that they carried down trees of extraordinary bulk, which demolished the walls and houses of the town. They overthrew St. Nicholas's Church, drowned the Archdeacon and many people with him. It left only fifty shattered houses, which fell soon after. It drowned 600 inhabitants, the rest were employed in their fields about their silk, fled to the mountains where they suffered much for want of provisions. The materials carried down by the flood, were so much, that they made a bank above the water, near two miles in length, near the mouth of the river, where the Sea was deep before. Several other towns near were much damaged by it.<sup>72</sup> [Tortorica or Tortorici in Sicilian is located in a province of Messina in Sicily, a region of *Italy*.]

In 1682, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing.

— During the period between 6 June and 4 July, floods struck Chekiang province at Chien-tê; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Fêng-ch'uan; and Hupeh (now Hubei province) in central *China* at Chih-chiang.

— During the period between 3 August and 1 September, floods struck Chekiang province at Chien-tê; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh and Ts'ang-wu; Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chiang; Anhwei (now Anhui province) in eastern *China* at T'ai-hu and Su-sung; and Shantung (now Shandong province) on the east coast of *China* at Tsou-p'ing.

In 1682 during the period between 6 June and 4 July, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien-p'ing. During the period 1-29 October, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Po-pai and Pei-liu.<sup>153</sup>

**1683 A.D.** In 1683, the price of wheat [in *England*] averaged 40 shillings per quarter [quarter ton].<sup>212</sup>

In 1683, there was a flood at New Braintford [Brentford] in Middlesex, *England*.<sup>212</sup>

In 1683, there was a flood at Runswick in Yorkshire, *England*.<sup>212</sup>

In Dijon, *France*, the grape harvest began on 13 September.<sup>62</sup>

In 1683, a hurricane struck the east coast of Florida in the *United States* causing 496 deaths.<sup>141</sup>

In 1683, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 27 January and 25 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Chieh-yang.

— During the period between 28 March and 26 April, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Huang and Kwangtung province at Hui-lai and P'u-ning.

— During the period between 6 May and 8 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Ch'ü-wo and Shantung province at Wên-shang, Tsou and Tzū-yang.

— During the period between 22 August and 20 September, a drought engulfed Anhwei (now Anhui province) in eastern *China* at T'ai-p'ing.

In 1683 during the period between 22 August and 20 September, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Mêng-shan and Ts'ang-wu. During the period between 18 November and 17 December, floods struck Hopei (now Hebei province) in northern *China* at Kao-ch'êng; Shantung (now Shandong province) on the east coast of *China* at Shan; and Kansu (now Gansu province) in northwest *China* at Ning [uncertain name].<sup>153</sup>

The year 1683 was a very productive year in the vicinity of Shanghai, *China*. Single stems of rice had double heads, some three or four. (Specimens were rolled up, and deposited in a temple, with a written account. These circumstances became known from the discovery eighty-four years later when the temple was repaired.)<sup>166</sup>

---

**Winter of 1683 / 1684 A.D.** During the winter, the River Thames in *England* was frozen below Gravesend.<sup>1</sup>

The frost in *Britain* lasted for 13 weeks.<sup>2, 40</sup>

During the winter of 1683-84, there was a great frost in *England*. At the beginning of December, due to the extreme cold, there was fearful destruction of the trees and plants. Great oaks suffered; the bark was rifted [cracked] by the frost in the estates of Lords Weymouth, Chesterfield and Ferrars, and Sir W. Fermor. The figs killed to the ground. Elm, ash and walnuts cleft [split] by the frost, but not so much as oaks; the oaks in being cleft made a noise like a gun. Yew, holly and furze [gorse bush] in some places entirely killed and in many places lost their leaves. Rosemary, Laurustinus, Laurel, Arbutus, and Phyllyrea generally killed throughout the country. In dry mountainous places, trees escaped tolerably well. Firs and pines escaped the effects of the cold. There was great destruction of the herbs, plants, and flowers, except where covered with snow. There were coaches on the ice on the River Thames [at London]. There were shops on the River Thames until February. About 40 coaches plied for hire on the river daily. This was the longest frost on record, and the ice on the River Thames was 11 inches [28 centimeters] thick. Nearly all the birds perished. The frost lasted till 4 February. Small pox raged in London.<sup>212</sup>

In 1684, the frost in *England* began at Christmas and lasted 91 days, and mortality increased. Coaches drove along the Thames, which was covered with ice 11 inches [28 centimeters] in thick. Almost all the birds perished.<sup>212</sup>

On 5 January 1684, frost was very intense in London, *England*; the temperature was 8 degrees below zero.<sup>212</sup> [This entry is very suspicious. That is because the Fahrenheit temperature scale was invented by Daniel Gabriel Fahrenheit in 1714. The Réaumur scale was named after René Antoine Ferchault de Réaumur, who first proposed it in 1730. The Celsius temperature scale was invented by the Swedish astronomer Anders Celsius in 1742. The Kelvin temperature scale was invented by Lord Kelvin in 1848. Other historical temperature scales were the Rankine invented in 1859; the Newton invented in around 1700; the Rømer invented in 1701; and the Delisle invented in 1732. Early temperature measuring devices called thermoscopes existed since 1593, but these instruments were very crude and without a temperature scale, “8 degrees below zero” does not carry any meaning.] [But this brings up an interesting question “How cold did it get during the winter the English Channel froze? The answer partly lies in the splitting of oak trees.] The cold (in *England*) was so intense that the trunks of oak, ash, walnut, and other trees, were cleft asunder, so that they might be seen through; and the cracks were often attended with

noises as loud as the firing of musketry.<sup>29</sup> [Both *France* and *England* reported that the trees split apart with the sound like a musket shot. My property has a number of large oaks, walnuts and ash trees and even though the temperature during winter does many times fall below zero degrees Fahrenheit, I have not had the trunks of any of my trees split by the cold nor make the sound of rifle shot during the split. In the 35 years I have been here, the temperature dipped down below -20° F [-29° C] during a couple of these winters.] Shirley Loudon recorded in *Good Fruit Growers*, that at -47° F [-44° C], that many trees exploded in their orchard in Carlton, Oregon. Linda Runyon recorded in *The Essential Wild Food Survival Guide*, that at -40° F [-40° C], maple trees exploded due to the cold. Mikael Strandberg recorded that in his trip to Siberia, during the winter, “mercury will freeze solid and brandy becomes the consistency of syrup. It is so cold that trees explode, blue sparks fly from falling timber.” [The mercury solidifies (freezes) at -37.89° F [-38.83° C].] Mark Prangle reported that at -40° F [-40° C], it was cold enough for trees to explode and for mercury to freeze. My brother David Marusek who lives up in Fairbanks, Alaska and who experiences winter temperature that drop down to -50° F [-46° C] says that this indeed does happen when temperature fall below -40° F [-40° C]. In his backyard, he has a four-foot [1.2 meter] split in his spruce tree from this phenomenon. [Therefore I will suggest that the temperature in *England* on 5 January 1684 fell to -40°F or colder during this intense cold spell.]

[Temperatures along coastal regions are somewhat moderated by the ocean temperature whereas temperatures inland will feel the full severity of an extreme temperature fall. Thus in *England*, coastal regions such as London would not experience the same drop in temperatures as interior regions.]

The winter of 1683-84 was so severe in *England*, where it could expunge [destroy] the more defensible and such as were enclosed, it has ravaged all that lay open, and were abroad, without any mercy. Many of the older trees, especially the oaks, were damaged by cleaving or splitting due to the severe frost. Many of these trees split apart. Nor has this damage been limited to only the standing timber, but to that which has been felled and seasoned, as Mr. Shish, the master-builder in his Majesty’s Shipyard here, informed me. Some of the splits in the trees were large enough for a man to see through it, and many times the cracks came with so great a noise, that as it was related from Needwood Forest, they made such a noise, that the keepers there thought that the deer were shot by the people of the country; and that in several parts they were heard as loud as guns, some having been cruelly frightened, especially in the evenings or nights, as they have passed within the hearing of this so unexpected and surprising a noise.<sup>234</sup>

During the winter of 1683 and 1708, coaches were driven over the ice [on the River Thames in London, *England*] and large fires were made on the ice.<sup>235</sup>

In *England*, the frost of 1683 and 1684 were both the severest. One lasted for 13 weeks.<sup>72</sup>

In *England*, there were fairs on the frozen River Thames in 1683-84.<sup>90</sup>

In *England* on 9 September 1683, it was very rainy and then to the 16<sup>th</sup>, warm and pleasant, that night a great frost. This was the coldest winter in *England*, the longest hoar frost known in the memory of any living.<sup>72</sup>

In 1684, the River Thames at London, *England* froze eleven inches (28 centimeters) thick and was traversed by loaded wagons.<sup>38, 60, 80</sup>

In 1648 [misprint for 1684], the Thames River in *England* was covered with ice over a foot thick. Booths were erected for a fair, which was held on the river. Coaches plied to and fro on the ice as on dry land. All the *French* ports were closed for three or four weeks, the harbors being frozen over.<sup>63</sup>

Severe winter in *England*. The River Thames froze for 2 months and there was a frost fair that began on 1 January.<sup>28</sup>

From December 1683 to February 1684, the forest trees, and even the oaks in *England* were split by the frost. Most of the hollies were killed. The River Thames covered with ice eleven inches thick. Nearly all the birds perished.<sup>90</sup>

“The people kept trades on the Thames as in a fair, till 4 February 1684. About forty coaches daily plied on the Thames as on drye land. Bought this book at a shop upon the ice in the middle of the Thames.”<sup>90</sup>

In *England*, there was a terrible frost of long continuance. “Many forest trees split. In the severe frost of 1683-84, not only oaks, but elms and ash of considerable bulk, and also walnut trees, were very much rent by the violence of the cold; oaks were most of all affected, and some split in such a manner as to be seen through, with a noise like the report of a gun. These clefts were not towards the same point of the compass.”<sup>47, 93</sup>

In *England*, on the 20th of December, 1688 [misprint for 1683], a very violent frost began, which lasted to the 6th of February, in so great extremity, that the pools were frozen 18 inches (46 centimeters) thick at least, and the Thames was so frozen that a great street from the Temple to Southwark was built with shops, and all manner of things sold. Hackney coaches plied there as in the streets. There were also bull baiting, and a great many shows and tricks to be seen. This day the frost broke up. In the morning I saw a coach and six horses driven from Whitehall almost to the bridge (London Bridge) yet by three o'clock that day, February the 6th, next to Southwark the ice was gone, so as boats did row to and fro, and the next day all the frost was gone. On Candlemas Day (2 February) I went to Croydon market, and led my horse over the ice to the Horseferry from Westminster to Lambeth; as I came back I led him from Lambeth upon the middle of the Thames to Whitefriars' stairs, and so led him up by them. And this day an ox was roasted whole, over against Whitehall. King Charles and the Queen ate part of it.<sup>8</sup>

A whole street of booths, contiguous to each other, was built from the Temple Stairs to the barge-house in Southwark, which were inhabited by traders of all sorts, which usually frequent fairs and markets, as those who deal in earthenwares, brass, copper, tin, and iron, toys and trifles; and besides these, printers, bakers, cooks, butchers, barbers, coffee-men, and others, who were so frequented by the innumerable concourse of all degrees and qualities, that, by their own confession, they never met elsewhere the same advantages, every one being willing to say they did lay out such and such money on the river of Thames.<sup>29</sup>

During the Great Frost of (1683–84) in *England*, the River Thames was completely frozen for two months; the ice was 11 inches (28 centimeters) thick at London. Solid ice was reported extending for miles off the coasts of the southern North Sea (*England*, *France* and the *Low Countries*), causing severe problems for shipping and preventing the use of many harbors.<sup>7</sup> According to some sources, ice formed for a time between Dover (*England*) & Calais (*France*), with the two sides joined together.<sup>9</sup>

[One of the ways that a river freezes occurs when great mass of broken chunks of ice flow downstream and then there is an extreme drop in temperature, which then freezes these icebergs together. I believe a similar process occurred in the English Channel.]

It is also credibly attested that vast solid cakes of ice, of some miles in circuit, breaking away from the eastern countries of Flanders [now *Belgium*] and Holland [now *the Netherlands*], &c. have been by the east and north-east winds driven upon the marine borders of Essex, Suffolk, and Norfolk, to their no small damage.<sup>29</sup>

The London Gazette reported that in Dover on February 1: "This Road being almost clear of Ice, one of our Pacquet-Boats put to Sea yesterday with the Mails for Calais, though we cannot think they will be able to land them on that side; for from Dover Cliffs we can discern the Coast of *France* to be very full of ice. The Men on board the Dutch Doggers, which we told you in our last were put in here, reported that on the coast of Holland [now *the Netherlands*], and particularly off Sceveling, the Sea was frozen eight Leagues (24 nautical miles) from shore, and that in 16 fathom (96 feet deep) Water they had met with ice strong enough to bear, and that some of them had been upon it."<sup>10</sup>

From a letter by Guillaume Fillastre, monk at Fécamp, *France*: "Some sailors from St. Valery en Caux, setting out to go fishing, were surrounded by ice nearly three leagues (9 nautical miles) out to sea, opposite the port of Veules, from which people could see them indicating by signs the danger they were in, but could not give them any help. In this extremity, they risked returning to land on foot, across the ice; which they achieved, happily, thanks to two planks which they placed one after the other as they advanced, to serve as a bridge over the icebergs, which were by no means neatly joined."<sup>10</sup>

From "The World of Wonders: A Record of Things Wonderful in Nature, Science, and Art ..." (London, 1869), A private letter of the date of February the 9th of that year (1684), mentions the appearance of a great deal of ice in the *Channel*, adding that it was reported that the ice between Dover and Calais was within about a league of joining.<sup>10</sup>

On February 9 there was sea ice in the *English Channel*. The ice between Dover and Calais were "joined together".<sup>28</sup>

The frost was also very severe in *Northern Europe*. Ice 27 inches (69 centimeters) thick in the harbor of Copenhagen.<sup>47, 93</sup>

The winter of 1684 was excessively cold in northern *France*.<sup>79</sup>

Since the water in tree sap acquires greater volume when it freezes, in extreme cold, trees burst apart with a loud noise. In Strasbourg, *France* more fruit trees burst when the cold reaches  $-16^{\circ}$  Reaumur ( $-20^{\circ}$  C,  $-4^{\circ}$  F). A great number of trees in *France* burst in the winter of 1683-84.<sup>58, 80</sup>

In 1684, the River Thames at London, *England* froze 11 inches thick. Loaded carts drive over it. The frost in February and March was so severe that one can almost cross all the rivers in Flanders [now *Belgium*] with carts.<sup>62</sup>

The winter of 1684 was so cold in the northern *France*, but it was mild and dry in the south.<sup>79</sup>

The winter of 1683-84 was severe in *Europe*. There was very severe cold in Paris, *France* from 11 to 17 January. During those seven days, the alcohol decreased in the bulb [alcohol thermometer] down to a point where it had not yet reached during other winters. The academics timed how long it would take wine to freeze in the open. It took 10-12 minutes time. There was an extraordinary amount of snow in the south [southern *France*]. The effects of the cold were very significant, especially in *England*. At London, the River Thames was during a large part of this time frozen so strong that huts and booths were erected on the ice and a market was held there for 14 days. From 9 January, they drove across the ice on the River Thames by carriages and wagons, and in all directions the same as on the mainland. A bullfight and a foxhunt were organized on the river, and White Hall roasted a whole ox on the ice. On the shores of *England*, *France*, Flanders [now *Belgium*] and Holland [now *the Netherlands*], the sea was frozen a few miles wide in such a way that for more than 14 days, boot packages could not enter the ports on or off. Most birds were killed; in the next summer we saw none. In the woods, many oak trees burst. The frost destroyed almost all the plants and the hopes of the peasants. Several people were victims of the

violent cold weather. As a result in the main streets of London large piles of wood were lit so that the inhabitants who were forced to flee their homes could warm up. In Holland [now *the Netherlands*] and *Belgium* in February and March, all the rivers were frozen over.<sup>62</sup>

[The dates of this entry appear to be a year off] On 5 or 6 February 1683 [1684] there was a very destructive flood throughout the whole Trent valley in *England*, and in many other parts, occasioned by the breaking up of a frost with much snow. The frost commenced early in September 1682 [1683] and continued without interruption till 5 February 1683 [1684]. The Trent Bridge at Nottingham, then composed of wood on stone piers, was almost completely destroyed by pieces of ice floated down the stream.<sup>212</sup>

---

**1684 A.D.** In *England*, the spring was dry and cold and the summer was very hot and dry.<sup>47, 72</sup>

In *England*, the summer was intensely hot and dry, and preceded by a very cold severe winter, and droughty spring.<sup>72</sup>

In 1684, the price of wheat [in *England*] averaged 44 shillings per quarter [quarter ton].<sup>212</sup>

Jean-Dominique Cassini ranked the year 1684 among the warmest in an array spanning 82 years of great heat in Paris, *France*. Cassini developed a Fahrenheit thermometer, which he placed against the window of the tower northeast of the Observatory. He took his measurements between noon and three o'clock each day. The summer of 1684 produced sixty-eight days of a temperature of 77° F (25° C), sixteen days of a temperature of 87.8° F (31° C), and three days of a temperature of 95° F (35° C).<sup>79</sup>

The summer of 1684 was the first hot summer, over which we have thermometric data. In *England*, it was preceded by a very harsh winter and a wet spring. The summer was hot and dry. In *France*, the drought was exceptionally severe. In Dijon, *France*, the grape harvest began on 4 September. In Paris, *France* there were:

Hot days	68 days
Very hot days	16 days
Extremely hot days	3 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

These peaks occurred on 10 July and on 4 & 8 August.<sup>62</sup>

In 1684 during the period between 15 February and 14 March, floods struck Anhwei (now Anhui province) in eastern *China* at T'ung-ling and Shantung (now Shandong province) on the east coast of *China* at Liao-ch'êng. During the period between 14 May and 12 June, floods struck Kansu (now Gansu province) in northwest *China* at Ning [uncertain name]; Shantung province at Hsin and Kuang-jao; and Hopei (now Hebei province) in northern *China* at Kao-ch'êng.<sup>153</sup>

In 1684 beginning during the 1<sup>st</sup> moon, there began steady rainfall for five months in the vicinity of Shanghai, *China*. This rain damaged the wheat crop.<sup>166</sup>

In 1684, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 13 June and 8 October, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at P'êng-shui and Pi-shan.

— During the period between 12 July and 10 August, a drought engulfed Szechwan province at P'êng-an and Lin-shui; Kiangsi (now Jiangxi province) in southern *China* at Hêng-fêng [uncertain name,

“Hsing-an”]; Hupeh (now Hubei province) in central *China* at Hanyang; Shansi (now Shanxi province) in northern *China* at An-i; Shensi (now Shaanxi province) in central *China* at Hsün-yang and Sui-tê; and Kansu (now Gansu province) in northwest *China* at T’ien-shui.

— During the period between 8 August and 8 November, a drought engulfed Hopei (now Hebei province) in northern *China* at Hsing-t’ai, Tsao-ch’iang, Huo-lu and Ching-ching; and Szechwan province at Fêng-tu, Sui-ning and Wu-shan. Wells dried up.

**Winter of 1684 / 1685 A.D.** The winter in *England* in 1684-85, was a little short of the previous winter either in severity or duration.<sup>72</sup>

In 1684 during the 12<sup>th</sup> moon [winter], It was excessively hot, like summer in the vicinity of Shanghai, *China*. At night, there were heavy peals of thunder, with torrents of rain.<sup>166</sup>

**1685 A.D.** In 1685, the price of wheat [in *England*] averaged 46 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1685, there was a flood in the historical county of Cumberland in northwest *England*. “Ye overflowing of Kirganton Waters in ye County Cumberland.”<sup>212</sup>

In 1685, there was an epidemic of smallpox in London, *England*, where 1/9<sup>th</sup> of the population died.<sup>212</sup>

On 23 October 1685, lightning struck 2 ships, the *Royal-James* and the *Cornation* in the harbor at Portsmouth, *England*.<sup>234</sup>

In 1685 during the period between 5 February and 6 May, a drought engulfed Shensi (now Shaanxi province) in central *China* at An-ting [uncertain name]. During the period between 5 February and 8 August, a drought severe enough to cause wells and springs to dry up, engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Shui-an and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch’ü-chiang and Yüeh-ch’ang.<sup>153</sup>

In 1685, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 3 February and 4 March, floods struck Shantung (now Shandong province) on the east coast of *China* at Tung-p’ing; and Hopei (now Hebei province) in northern *China* at Jao-yang, Lin-ch’êng, Ch’ien-an, Hsien, Ho-chien and Yüeh-t’ing.

— During the period between 6 May and 8 August, floods struck Shantung province at Kao-wan; Hopei province at An-p’ing and Wu-ch’iang; and Hupeh (now Hubei province) in central *China* at Wuchang, Huang-kang, Ch’i-shui, Ma-ch’êng, Huang-p’o, Huang-mei, Kuang-chi, Lo-t’ien, Mien-yang, Chien-li, T’ung-ch’êng, Chiang-ling, Chung-hsiang, Hsiao-kan, P’u-ch’i and Kung-an [“Kung” uncertain name, the “-an” may have been omitted by mistake].

**Winter of 1685 / 1686 A.D.** The winter in *England* in 1685-86, was a mild and warm winter with no cold weather or storms.<sup>72</sup>

**1686 A.D.** In *Italy*, during the years 1686-89 there was a great drought.<sup>47, 72</sup>

The summer of 1686 was very hot in Paris, *France*. There was:

Hot days	46 days
Very hot days	8 days
Extremely hot days	5 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 19-23 June. In Dijon, *France*, the grape harvest began on 4 September.<sup>62</sup>

On 25 May, there fell at Lille, a storm of prodigious hail, some stones above a pound weight. People broke one that had brown matter in it and threw it in the fire. It produced an explosion. The storm broke down trees and most glass windows and killed partridges and hares.<sup>72</sup>

On 25 May 1686 the city of Lille in Flanders [now in *Belgium*], was visited by a tremendous hailstorm. The hailstones weighed from a quarter pound to a full pound, and even more. One among the rest, was observed to contain in its center a dark brown matter, and being thrown into the fire, gave a very loud report [like a gunshot]. This storm passed over the city and citadel, leaving not a whole pane of glass in the windows on the windward side unbroken. The trees were broken, and some beaten down, and partridges and hares killed in abundance.<sup>191</sup>

There was a severe hailstorm in Lille, Flanders [now in *Belgium*] in 1686. Some of the hailstones were not only vastly large, but appeared dusky in the center. Those that came down chimneys into fires, when the icy part was melted, and this brown substance was exposed to the fire, burst with a loud report [like a gunshot].<sup>192</sup>

In 1686, the price of wheat [in *England*] averaged 34 shillings per quarter [quarter ton].<sup>212</sup>

In June 1686, a flood came down from the mountains and nearly destroyed the towns of Kettlewell and Starbottom in Yorkshire, *England*.<sup>212</sup>

In 1686, there was an inundation in Yorkshire, *England*, when a rock opened, and poured out water to the height of a church steeple.<sup>90, 92, 212</sup>

In June 1686, the inhabitants of Kettlewell and Starbottom in Craven, in the County of York, *England*, suffered a great loss by a sudden overflow of water. The towns are situated under a great hill on the east and west. The country is very mountainous and rocky. The descent of the rain after a thunderclap continued for 1½ hours with extraordinary violence. The rocks on the east side opened visibly, and the water they beheld thence into the air the height of an ordinary church steeple, so that the current of water came down the hill into the respective towns, as in one entire body, and with a breast [to rise over] as if it would have drowned the whole towns. Several houses were quite demolished, and not a stone left. Others graveled to the chamber windows. Some inhabitants were [permanently] driven from their houses. Currents of water ran through the houses. Mighty rocks descended from the mountains into the valley, and there they lay unmovable. Many fair meadows were covered with sand and stone. Household goods taken away into the great River Wharfe, and so lost, besides many quick goods [consumer goods]. Many families were quite ruined.<sup>234</sup>

In July 1688 [June 1686], the villages of Kettlewell [Kettlewell] and Starbottom [Starbottom] in Yorkshire, *England* were utterly destroyed. During a violent thunderstorm, an immense chasm opened in an adjacent mountain, and the mass of water that gushed from it contributed, as much as the rain, to the destruction of these towns.<sup>205</sup>

In 1686, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 21 June and 16 October, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Kung-ch'êng.

— During the period between 20 July and 18 August, a drought engulfed Shansi (now Shanxi province) in northern *China* at Ch'in and Hopei (now Hebei province) in northern *China* at Kao-ch'êng, Jao-yang and Chin [possibly a misprint, P'u-chou].

— During the period between 19 August and 17 September, a drought engulfed Hupeh (now Hubei province) in central *China* at Hsiao-kan, Huang-an and Ma-ch'êng.

In 1686 during the period between 20 July and 18 August, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-shan and Shantung (now Shandong province) on the east coast of *China* at Kuang-jao, Shou-kuang, Ch'ang-yüeh and P'êng-lai. During the period between 19 August and 17 September, floods struck Chekiang province at Taichow and Hopei (now Hebei province) in northern *China* at Chi. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

---

**1687 A.D.** “By excessive rains, and a violent storm, there happened a great inundation in Dublin in east-central *Ireland*, which put the lower part of the city under water, up to the first floor; so that boats plied in the streets. At which time Essex-bridge was broken down, when a coach and horses passing over it, fell into the river, where the coachman and one horse perished.”<sup>39</sup>

In 1687, there was a great estuary flood in the River Severn in *Great Britain*.<sup>150</sup>

On 3 March 1687, there was a thunderstorm at Cloyne, *Ireland*. The next morning the barometer read 28.4 inches, the lowest that had been before seen there.<sup>212</sup>

In *Ireland*, there were excessive rains; great flood in Dublin.<sup>47, 92</sup>

In *England*, the year was very rainy and the earth produced plenty of watery crude fruits. In summer the rivers were terribly flooded. Brooks overflowed their banks. Extraordinary tempest of rains demolished houses and buildings. Torrents carried along with them and drowned multitudes of people. At the time of ripe fruits were great swarms of gnats and insects.<sup>72</sup>

[In *England*], the year produced frequent tempest and hurricanes.<sup>72</sup>

In 1687, the price of wheat [in *England*] averaged 25 shillings per quarter [quarter ton].<sup>212</sup>

All summer rainy in *Germany*.<sup>72</sup>

In *Italy*, during the years 1686-89 there was a great drought.<sup>47, 72</sup>

The summer of 1687 in Paris, *France* was characterized by:

Hot days	34 days
Very hot days	6 days
Extremely hot days	3 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 29 June, 10 July and 16 August. In Dijon, *France*, the grape harvest began on 29 September.<sup>62</sup>

In 1687 in *England*, the season was very dry and extremely hot and on 15 August, there was a waterspout seen at Hatfield in Yorkshire.<sup>212</sup>

On 15 August 1687 at Hatfield, Yorkshire, *England*, there was a land-spout [tornado], like those at sea [waterspout].<sup>72</sup>

[There was an inundation not caused by weather, but rather a tsunami triggered by a massive earthquake. On 10 October at 4 o'clock on Monday morning, there was a terrible shock of an earthquake, with a

horrible roaring of the Sea at Lima in central *Peru*. Many houses fell and killed several people. At 5 o'clock a second shock and at 6 o'clock the greatest of all. The Sea bellowed, swelled and overflowed. This city was wholly overthrown. Several seaports were flooded. By the inundation, which carried off several ships nine miles into the land, much people and cattle drowned. At one place near the seaside were found 5,000 dead bodies and more were daily cast up so that at last the number of the dead was not known.<sup>72]</sup>

In *England*, the frost lasted from the 8<sup>th</sup> of December to the 30<sup>th</sup> of January with some remissions.<sup>47, 72, 93</sup>

In 1687, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 6 May and 8 November, a severe drought engulfed Yin-yang [uncertain name].

— During the period between 10 May and 9 June, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yüeh-ch'ang.

— During the period between 10 June and 5 October, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Chien-tê. The drought damaged crops.

— During the period between 8 August and 6 September, a drought engulfed Yunnan province in southwest *China* at Hao-ch'ing and Kwangtung province at K'ai-chien and Hai-fêng.

In 1687, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Kao-ming and Lien. During the period between 8 August and 8 November, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chiang and Shantung (now Shandong province) on the east coast of *China* at Kao-wan.<sup>153</sup>

---

**1688 A.D.** In *Italy*, during the years 1686-89 there was a great drought.<sup>47, 72</sup>

The summer of 1688 in Paris, *France* was characterized by:

Hot days	40 days
Very hot days	12 days
Extremely hot days	1 day

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperature occurred on 9 September. In Dijon, *France*, the grape harvest began on 27 September.<sup>62</sup>

In 1688, there was an epidemic fever in Dublin, *Ireland* that lasted from July to the middle of August and in London, *England* that lasted from May to June.<sup>212</sup>

In *Germany*, spring and summer was most inconstant.<sup>72</sup>

In 1688, John Clayton wrote to the Royal Society and described his stay in Virginia in the *United States*. He related the following accounts of thunder and lightning storms in Virginia. Dr. A. was smoking a pipe of tobacco and looking out the window when he was struck dead [by lightning], and immediately became so stiff that he did not fall, but stood leaning in the window, with the pipe in his mouth in the same posture he was in when he was struck. Lightning generally breaks in at the gable end of the houses, and often kills persons in, or near the chimney's range, darting most fiercely down the funnel of the chimney, more especially if there be a fire. Thunder split a mast of a boat at James Town [Jamestown]. It is dangerous when it thunders standing in a narrow passage, or between two windows. Several people have been killed in the open fields. It is incredible to tell how it will strike large oaks, shatter and shiver them, sometimes twisting round a tree, sometimes as if it struck the tree backwards and forwards. I had noted a fine spreading oak in James Town Island, in the morning I saw it fair and flourishing, in the evening I

observed all the bark of the body of the tree, as if it had been artificially peeled off, was orderly spread round the tree, in a ring, whole semi diameter was four yards, the tree in the center; all the body of the tree was shaken and split, but its boughs [branches] had all their bark on; few leaves were fallen, and those on the boughs as fresh as in the morning, but gradually afterwards withered, as on a tree that is fallen. I have seen several vast oaks and other timber trees twisted, as if it had been a small willow that a man had twisted with his hand, which I could suppose had been done by nothing but the thunder. I have been told by very serious planters, that 30 or 40 years since [1650-1660 A.D.], when the country was not so open, the thunder was more fierce, and that sometimes after violent thunder and rain, the roads would seem to have perfect casts of brimstone; and frequently after much thunder and lightning for the air to have a perfect sulphurous smell.<sup>229</sup> [Lightning struck one of my large trees selectively peeling off the bark as it traveled down the length of the tree. When it was done, the tree had the appearance of a large candy cane.]

In 1688, the price of wheat [in *England*] averaged 46 shillings per quarter [quarter ton].<sup>212</sup>

In 1688, there was a plague of cockchafer [also called May bug, mitchamador, billy witch, or spang beetle] in County Gallway [Galway] in *Ireland*. They covered the trees and clung to each other like a swarm of bees. Towards evening when they flew, they made a strange humming sound and darkened the air for 2 or 3 miles [3.2-4.8 kilometers] square. They ate up all the leaves off the trees for miles round making them as bare as in winter. Their grubs destroyed all the roots of the grass.<sup>212</sup>

In Noremberg [Nuremberg in Bavaria in southern *Germany*], there was a rainy cold harvest.<sup>72</sup>

In 1688, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Hsiu-shui [uncertain name, "Ning"]. During the period between 6 May and 8 November, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Shui-an. Then during the period between 29 May and 27 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ên-hai; Shansi (now Shanxi province) in northern *China* at Chin-ch'êng; and Shensi (now Shaanxi province) in central *China* at Chên-pa.<sup>153</sup>

In 1688 during the 7<sup>th</sup> moon on the 10<sup>th</sup> day in the vicinity of Shanghai, *China*, there was a storm [typhoon] of great wind, rain, thunder, and lightning. The next day the storm was still worse, it extended over a thousand *li* [around 370 miles]; destruction of life and property in every direction.<sup>166</sup>

---

**Winter of 1688 / 1689 A.D.** The winter in *England* was severe. The River Thames was frozen until 6 February 1689. There was a frost fair on the river.<sup>28</sup>

In the winter of 1688, in January, there was very severe frost in *England*. The River Thames was frozen.<sup>212</sup>

In *England*, there were fairs on the frozen River Thames in 1688-89.<sup>90</sup>

The winter in 1688 in *Germany* was very severe.<sup>62</sup>

The winter in 1688 was severely cold in *Germany* with great snow, followed by a sudden thaw and heat.<sup>72</sup>

---

**1689 A.D.** In *Italy*, during the years 1686-89 there was a great drought.<sup>47, 72</sup>

At Modena and all over *Italy*, for three or four years previous, there had been an uncommon drought. During the drought there were plenty of provisions. But in 1689 about the vernal Equinox [around March 20/21], there fell great rains, which returned quickly after, rendering the whole spring frightful and good

for nothing. The summer following was most rainy. About the Solstice and much more after all sorts of corn [grain] was wholly blasted and mildewed. But there were still hopes from the remains of the old store. At the beginning of September, and much more about the Equinox [around September 22/23], greater rains fell, which continued the whole month of October; so that it was with much labor and difficulty that the rivers were prevented from breaking down their banks, and drowning the country. The last two months concluded the year pleasantly.<sup>72</sup>

The summer of 1689 in Paris, *France* was characterized by:

Hot days	27 days
Very hot days	7 days
Extremely hot days	1 day

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperature occurred on 10 August. In Dijon, *France*, the grape harvest began on 27 September. “You sing the vintage of Burgundy 27 September. You reap little wine, but it was excellent.”<sup>62</sup>

In 1689, LaHire in *France* began taking observations using precipitation gauges. The year 1689 ranked as the driest year for next thirty years.<sup>79</sup>

In 1689, the price of wheat [in *England*] averaged 30 shillings per quarter [quarter ton].<sup>212</sup>

In 1689, there was a famine at Londonderry in Northern *Ireland*. “The inhabitants glad to eat rats, tallow and hides.”<sup>212</sup>

Beginning on 4 October 1689, there was rainfall at Bungay in Suffolk, *England* that lasted till noon on 10 October. The rain was continuous except for a few hours on the 6<sup>th</sup>. This caused a great flood that overflowed the lower part of Norwich and broke down the bridges at Bungay.<sup>212</sup>

In 1689, a hurricane struck *Jamaica*. The hurricane was not very severe.<sup>124</sup>

In 1689, an Atlantic hurricane struck Nevis. A dreadful mortality swept away one-half of the inhabitants of Nevis in the *West Indies*.<sup>141</sup>

In 1689, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 6 May and 8 November, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hsüan-p’ing. Wells and springs dried up.

— During the period between 17 June and 11 November, a drought engulfed Hupeh (now Hubei province) in central *China* at Lo-t’ien, Shih-shou and Chih-chiang.

— During the period between 17 July and 14 August, a drought engulfed Chahar province (now eastern *Inner Mongolia*) at Wan-ch’üan; Honan (now Henan province) in central *China* at Hsin-an [uncertain name]; and Hopei (now Hebei province) in northern *China* at Ching, Pao-ting, Hsien, Tung-Kuang, Chin [uncertain name, “P’u-chou”], Ch’ü-yang, Wu-ch’iang and Sha-ho.

— During the period between 8 August and 8 November, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at K’ai-chien and Hupeh province at Ying-ch’êng. Rivers dried up.

In 1689 during the period between 6 May and 8 August, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ho-yüan and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Mêng-shan and P’ing-yüeh.<sup>153</sup>

**1690 A.D.** An awful snowstorm pounded *Scotland*. The storm lasted thirteen days and nights. During that time nine-tenths of the sheep were frozen to death, and many shepherds lost their lives.<sup>30</sup>

In 1690 in *Ireland*, there was famine and disease.<sup>57, 91</sup>

In London, *England* on 11 January 1690: “This night there was a most extraordinary storme of wind, accompanied with snow and sharp weather; it did greate harme in many places, blowing down houses, trees, &c. killing many people. It began about 2 in the morning, and lasted till 5, being a kind of hurricane, which mariners observe have begun of late yeares to come Northward. This winter hath ben hitherto extremely wet, warm, and windy.”<sup>29</sup>

In France there was a flood. In March 1690, the Seine River in Paris, *France*, at the bridge “Pont de la Tournelle” reached a height of 7.5 meters (24.6 feet) above the zero mark [the low water mark of the year 1719].<sup>71</sup>

The summer of 1690 in Paris, *France* was characterized by:

Hot days	34 days
Very hot days	2 days
Extremely hot days	1 day

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperature occurred on 31 July. In *Dijon, France*, the grape harvest began on 4 September. The summer in the area of Burgundy was very stormy. It produced a lot of wine of medium quality.<sup>62</sup>

In 1690 in *Italy*, there was a famine from rains.<sup>57, 72, 91</sup>

In the beginning of 1690, the rains in *Italy* returned much severer than before, and were almost continual. The winter had been rainy and cloudy with some little cold and snow, which melted as it fell. The beginning of March was uncommonly dry and calm. But at the Equinox [around March 20/21], the heavens seemed to open their bosom and pour out their whole great reservoir of water. By one night’s rain, all the country about Modena, Finlan, Ferraria, Mirandola, etc. were laid under water, deluged like a Sea. These cities standing up like little islands. This rainy weather continued the whole spring and summer, scarce one fair day. The wind was mostly from the north and cold. The mercury all the while stood higher in the barometer than ordinary in such a season. Frogs croaked over all the country. Fish was never more plentiful or freely eaten, from the scarcity of corn [grain]. In the beginning of June, mildew appeared on the corn again, and increased to its total destruction both on low and high grounds. Of all the products of the earth, nuts alone escaped this plague. They were uncommonly good and plentiful. At the latter end of July, the rains stopped and we had two months very dry but cold weather. Near the end of September, the rains returned again, but were moderate and useful. The last two months of the year were dry but moderately cold.<sup>72</sup> [Modena, Finlan, Ferraria, Mirandola are all in the Emélia–Rumâgna administrative region of northern Italy. Ferraria is now Ferrara.]

In 1690, the price of wheat [in *England*] averaged 34 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1690 during the period between 9 May and 6 June, a drought engulfed the entire province of Hupeh (now Hubei province) in central *China*. During the period between 6 May and 8 November, a drought engulfed Hupeh province at Chu-ch’i. During the period between 6 July and 4 August, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Yüeh-p’ing [uncertain name]. Then during the period between 3 September and 1 October floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Yü-yao, Chu-chi and Shang-yü. At Chu-chi and Shang-yü, crops were damaged by

the floodwaters. During the same time, floods struck Hopei (now Hebei province) in northern *China* at Chi and Pao-ti. [Chi is located at longitude 117.24° East and latitude 40.03° North.]<sup>153</sup>

In 1690, in the vicinity of Shanghai, *China*, there was a famine from drought.<sup>166</sup>

In 1690 during the 9<sup>th</sup> moon, there was rain without clouds in the vicinity of Shanghai, *China*. There was no harvest that season.<sup>166</sup>

**1691 A.D.** In *Italy*, it was hot and dry.<sup>47</sup>

The summer of 1691 in *Italy* was too hot and no rain. The summer in Paris, *France* was characterized by:

Hot days	44 days
Very hot days	12 days
Extremely hot days	5 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 8, 9, 22, 23, and 28 August. In Dijon, *France*, the grape harvest began on 17 September; 10 days earlier than the average from the years 1689-1800. There was little wine but it was of good quality. There was excessive heat and severe drought in *Jamaica*.<sup>62</sup>

[In *England*] on 26 July, there was a terrible storm of thunder and lightning.<sup>72</sup>

On 27 July 1691, there was a violent thunderstorm at Daventry in Northamptonshire, *England*.<sup>212</sup>

On 27 July 1691, a violent storm of thunder, lightning and rain struck in Everdon Field, near Daventry in Northamptonshire, *England*. Several people were at work reaping the corn [grain] in the fields when the storm appeared. The reapers, 20 in all, retreated for shelter to a quickset hedge [plant cuttings set in the ground to grow especially in a hedgerow] with a ditch by the side of it. Lightning killed 4 outright, 8 others were dangerously hurt. Of the rest, several were struck down, but recovered. One of those dangerously injured was a pregnant woman named Mary Bird. She had over her body nearly a hundred wounds, some as large as a man's hand, on each arm one, and one on each side of her belly. Out of most of her wounds came cores, some bigger, some less. The biggest were bigger than a walnut, dry and black like leather. She had two sores on the soles of her feet, but her shoes and stockings were not touched. She sat next to those that were killed. She was sensible of the stroke, and sensible that her husband looked pale, and then swooned away. She and her husband were both blooded [had blood drained], she within an hour after and her husband eight hours after, and they bled freely. Their legs were mightily swelled before they were carried out of the field. The woman was very sore and full of pain, so that she could hardly bear any clothes to touch her. She was three weeks ill before she could rise [to her feet]. She continued ill for about a quarter of a year. No medicine used for burns did any good, but occasioned some great torment to her. The first [medicine] that they perceived to do good to her was oil of St. John's Wort, and after the cores were coming out, the black salve [drawing salve]. She went to full term and the child she bore had no marks or blemishes [and lived a healthy life].<sup>234</sup>

In 1691, the price of wheat [in *England*] averaged 34 shillings per quarter [quarter ton].<sup>212</sup>

In 1691 [in *the Netherlands*], there was a frosty dry winter; an excessive hot summer without rain. Winds were mostly east, northeast or north. The only stagnant water to be had were in the marshy countries, which was greedily drunk by thirsty parched laborers.<sup>72</sup>

In 1691 in *Italy*, the year was as hot and dry as the previous two years were wet and rainy. The year began with a north wind and great frost. Roads were as dusty as in August. The summer was intensely hot.<sup>72</sup>

In 1691, floods struck Szechwan (now Sichuan province) in southwest *China* at Hsü-yung. Over 3,300 acres of land was damaged by the floodwaters.<sup>153</sup>

In 1691 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a storm and flood that damaged the crops.<sup>166</sup>

In 1691, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 29 January and 27 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yang-ch'un.

— During the period between 5 February and 6 May, a drought engulfed Kwangtung province at Hua, K'ai-p'ing and Chieh-yang.

— During the period between 28 May and 25 June, a drought engulfed Shansi (now Shanxi province) in northern *China* at Chieh-hsiu.

— During the period between 25 July and 23 August, a drought engulfed Hopei (now Hebei province) in northern *China* at Hsing-t'ai and Chahar province (now eastern *Inner Mongolia*) at Huai-an.

**Winter of 1691 / 1692 A.D.** The winter was awfully severe in *Russia* and *Germany*, and many people froze to death, and many cattle perished in their stalls.<sup>1</sup>

Wolves came into Vienna, *Austria* and attacked men and women, owing to the intense cold and hunger.<sup>30</sup>

In 1691, the wolves, driven by the cold, entered Vienna, *Austria*, and attacked cattle and men.<sup>90</sup>

In 1691 in *Europe*, the severity of the weather drove the wolves into the cities, Vienna, etc.<sup>47, 93</sup>

In 1691, the cold was so severe in *Eastern Europe* that packs of starving wolves entered Vienna, *Austria* and attacked men and women in the streets. All the canals of Venice, *Italy* were frozen, and the principal mouth of the Nile River in *Egypt* was blocked with frozen ice for a week.<sup>63</sup>

In 1691 during the 12<sup>th</sup> moon, there was snow for four or five days in the vicinity of Shanghai, *China*. Men, horses, and animals froze to death. For half a month it was so cold that no one went abroad.<sup>166</sup>

**1692 A.D.** In Noremberg [Nuremberg in Bavaria in southern *Germany*], the winter was very wet and cold. The harvest was very cloudy, rainy and cold.<sup>72</sup>

[In *Italy*] in 1692, the winter was exceedingly regular and agreeable to the climate. Spring, summer and harvest the same. So was winter again neither too wet nor too dry; too hot nor too cold.<sup>72</sup>

In the spring of 1692, a deluge, called the Great Flood, occurred at Delaware Falls (Trenton, New Jersey) in the *United States*. The first settlers of the Yorkshire tenth in West Jersey had built on the lowlands near the Falls and had been making improvements there nearly sixteen years. This flood, caused by the melting of the snow above, almost entirely demolished their settlement. The water rose to the upper stories of some of the houses, and many people were conveyed from their homes by canoes. Two persons, in a house were swept away by the torrent and were lost. Many cattle were drowned. The inhabitants, taught by experience the evils, of which the natives had forewarned them, fixed their habitations on higher grounds.<sup>174</sup>

This year in *Jamaica*, the weather was very dry and hot in March, which was normally a very boisterous rainy month. From then until 7 June, it was excessively hot, calm and dry.<sup>72</sup>

On 7 June 1692, an earthquake struck *Jamaica*. Within 2 minutes, most of the town of Port Royal was destroyed. The earth opened up and swallowed an abundance of houses and people. The water gushed out of the openings of the earth and people tumbled into it in heaps. Some people had the good fortune of catching hold of beams and rafters of houses, and these individuals were later saved by boats. Several ships were cast away in the harbor. The frigate *Swan* was carried away over the tops of sinking houses. Luckily the ship did not capsize and several hundred people retreated to this boat and were saved. Major Kelley, who was in the town at the time said that the earth opened and shut very quickly. He saw some people sink down to the middle and others sunk so low that just their heads were above ground and they were squeezed to death. The sky, which was clear before the earthquake, became in a minutes time as red and as hot as an oven. The fall of the mountains made a terrible crack, and at the same time dreadful noises were heard under the earth. The principal streets, which lay next to the key, with large warehouses and stately brick building all sunk. But part of the town near the neck of the land, which ran into the sea, was left standing. At the end of this strip of land stood the castle, which was shattered but not demolished. Then the town was struck by a large tsunami. It drove most of the ships from their anchor. Then the sea immediately went out two or three hundred yards. It left the fish dry on the land. But the sea returned two minutes later and overflowed part of the shore. After the first great shock, as many people as were able got onboard the ships left in the harbor. They dared not venture back on shore for some weeks. The aftershocks still continued. It is estimated that 1,500 people died in the earthquake. And as many more by sickness from the noxious vapors that came out of the openings in the earth. The earthquake struck the entire island of *Jamaica*. Two mountains, which lay between St. Jago and Sixteen-Mile-Walk joined together and stopped the current of the river, so that it overflowed several woods and savannahs. On the north side of the island, over a thousand acres were sunk with houses and people inside them and a huge lake formed. This lake latter dried up, but there were no sign of the houses. At Yellows, a great mountain split and destroyed several plantations with people. One plantation was removed a mile from where it formerly lay. Houses were destroyed or damaged all over the island. It was estimated that 3,000 people were killed with those that were lost in Port Royal.<sup>227, 234</sup>

In 1692, a severe hurricane struck *Jamaica* causing more than 100 deaths.<sup>141</sup>

In *England*, the summer was very rainy.<sup>72</sup>

In July of 1692, there were big floods in the north. In Burgundy, *France*, the grape harvest did not begin until 9 October. It produced little wine and a great part of it was sour. The year was barren.<sup>62</sup>

There were rains and floods in the years 1692 in northern *France*.<sup>79</sup>

In 1692, the summer in *England* was cold and there was a great deluge of rain until reaping [harvest] time.<sup>212</sup>

In 1692, the price of wheat [in *England*] averaged 44 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1692, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 18 March and 15 April, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsou-p'ing and Hopei (now Hebei province) in northern *China* at Hsin-ch'êng [uncertain name] and An-hsin [uncertain name, "Hsin-an"].

— During the period between 12 August and 10 September, floods struck Szechwan (now Sichuan province) in southwest *China* at Yüeh-shan, Mei-shan, Mien-yang, Kuan and Hsin-ching. Houses and crops were damaged by the floodwaters.

— During the period between 10 October and 7 November, river water suddenly shot up into the air.

In 1692 during the period between 16 April and 15 May, a drought engulfed Shensi (now Shaanxi province) in central *China* at Lin-t'ung. During the period between 6 May and 8 August, a drought engulfed Hupeh (now Hubei province) in central *China* at Hsiao-kan. During the period between 10 October and 7 November, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Ch'ing-p'u [uncertain name].<sup>153</sup>

---

**Winter of 1692 / 1693 A.D.** In 1692 in *Germany*, the winter was extremely warm.<sup>62</sup>

---

**1693 A.D.** The year 1693 was all unseasonable in *Italy*. The whole winter [1692/1693] with rain, cold, frost or snow. The spring cold and almost constant rain, and north wind. The summer rainy and all corn mildewed. Harvest was intolerably hot and dry. The winter [1693/1694] was also very warm and dry.<sup>72</sup>

In *Italy*, the winter 1693 was cold and much snow (which is rare in *Italy*). The spring was cloudy and wet. The summer was temperate and showery.<sup>72</sup>

On 20 March 1693 at Oundle in Northamptonshire, East Midlands, *England*, there was a stormy day and a terrible tempest at night. There was great rain, winds from the southwest, and thunder with blue lightning, hail and rain most terrible.<sup>72</sup>

On 20 March 1693, there was a considerable thunderstorm at Oundle in Northamptonshire, *England*. The storm produced hail and [the lightning] set fire to the steeple of Oundle.<sup>212</sup>

In 1693, the price of wheat [in *England*] averaged 67 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In *Italy*, there was excessive scorching heat and great drought in 1693.<sup>72</sup>

In *Italy*, it was hot and dry.<sup>47, 72</sup>

In *Sicily*, after the sun entered Virgo, the heat was great and at noon intolerable. On 1 August there was the most tempestuous day of hail, rain, and thunder. After that the earthquake struck. Another quake on the 11<sup>th</sup> desolated *Sicily*. Of the 254,936 inhabitants; 59,963 were swallowed up or killed. *Sicily*, late the most fruitful, rich and beautiful island in the world was left in rubbish and desolation.<sup>72</sup>

The summer of 1693 in *Italy* had excessive heat at the time of harvest. In *England*, the heat was intense in September; and at noon it was unbearable. The summer in Paris, *France* was characterized by:

Hot days	33 days
Very hot days	9 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The spring in Burgundy, *France*, was very cold and the grape harvest began on 27 September. It produced little wine, but the quality was good.<sup>62</sup>

In 1693 in *France*, there was an awful famine.<sup>57, 90, 91</sup>

[In *Germany*] during the beginning of the year it was very rainy; the latter part cold and frosty. The spring and summer were excessively hot.<sup>72</sup>

In *Britain* and *Ireland*, October produced moderately warm weather, but there was some snow falling in the mountains and in the country. It turned suddenly extremely cold and was quickly followed by a hard frost for some few days at least.<sup>72</sup>

On 20 October 1693, there was a plague of locust at Marthery in Pembrokeshire, *Wales*. A swarm of locust was seen in the air near Dôl-gelheu [Dolgellau] in Merionethshire [Merionethshire], *Wales*.<sup>212</sup>

In 1693, there was an epidemic of the cold in London, *England*, which was very severe in October lasting 4 or 5 weeks. It also occurred in Dublin, *Ireland* in November where it was very severe for 4 or 5 weeks. It was also present in *France*, Holland [now *the Netherlands*] and Flanders [now *Belgium*].<sup>212</sup>

On 19 October 1693 in Virginia in the *United States* there was a most violent storm, which stopped the course of ancient channels, and opened new ones, which never existed before.<sup>72</sup>

In 1693, a dreadful storm was experienced in Virginia and the neighboring region in the *United States*.<sup>174</sup>

In 1693, there was such a dreadful storm in Virginia in the *United States*, that some rivers were stopped up and channels opened for others that were so large as to allow them to be navigated.<sup>208</sup>

In 1693 and 1694, there were several occurrences of will-o'-the-wisp reported in *Wales*. About Christmas 1693 at Harlech in Merionethshire [Merionethshire], sixteen ricks of hay and two barns which were filled with corn [grain] and other hay were set on fire by the "kindled exhalation", which were often seen to come from the sea and lasted at least a fortnight or three weeks. It annoyed the country, as well by poisoning the grass, as firing the hay, for the space of a mile or thereabouts. Those that saw the fire, say it was a blue weak flame, easily extinguished, and that it did not the least harm to any of the men, who attempted to save their hay, though they ventured close to or sometimes into the flame. All the damage sustained occurred constantly during the night. There were three small tenements in the same neighborhood (called Tydthin Sion Wyn [Tyddyn Sion Wyn]) whereof the grass was so infected, that it absolutely killed all manner of cattle that feed upon it. The grass was so infected these three years but not thoroughly fatal till this last [year]. As of August 1694, the strange fires continued there. It was observed to come from a place called Morva Bychan [Morfa Bychan] in Caernarvonshire [Caernarfonshire], about eight or nine miles off (over part of the sea). Cattle of all sorts, as well as sheep, goats, hogs, cows, and horses still continue to die. The place where it comes is both sandy and marshy.<sup>234</sup>

In 1693, there was a dearth [scarcity] of all sorts of corn [grain] in *England*. Many poor people in Essex resorted to making bread from turnips.<sup>234</sup>

In 1693, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 5 February and 8 August, a severe drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Chia-hsing and Hai-yen. The drought damaged the crops.

— During the period between 3 July and 1 August, a drought engulfed Chekiang province at T'ung-hsiang.

— During the period 2-30 August, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chiang, K'un-shan, Chia-ting, Ch'ing-p'u [uncertain name] and Tan-yang. Rivers dried up.

In 1693 during the period 2-30 August, floods struck Shansi (now Shanxi province) in northern *China* at Yang-kao; Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu; Hopei (now Hebei province) in northern *China* at Pao-ting, Peiping and Ho-chien; and along the Wu-ting River in Shensi (now Shaanxi province) in central *China*.<sup>153</sup>

---

**Winter of 1693 / 1694 A.D.** In 1693, in *Germany* and *Italy*, the frost was severe in November and December.<sup>47, 72, 93</sup>

In 1693 in *Europe*, there was great snowfalls and frost.<sup>72</sup>

In *Italy*, the winter was characterized by the most severe and scarcely to be paralleled cold frost and snow.<sup>72</sup>

---

**1694 A.D.** In *Italy*, it was hot and dry.<sup>47, 72</sup>

In *Italy*, there was burning hot droughty summer in 1694, in which five months passed without one shower of rain. Then came rain in October 1694 and the weather did not become fair again before April 1695.<sup>72</sup>

In 1689, LaHire in *France* began taking observations using precipitation gauges. The rainfall in Paris in 1694 was 12.5 inches (318 millimeters). The year 1694 ranked just after 1689 as the driest year for thirty years.<sup>79</sup>

On 20 June 1694, there was a hailstorm in Lohja and Siuntio, *Finland* (about 60° 10' N, 24° 10' E). Window glasses were shattered. Window glass was thick in those days, so the hailstones could not have been small. The hailstones destroyed the crop entirely on 3 farms, 2/3 of the crop on another farm, 1/2 of the crop on 2 other farms and 1/3 of the crop on another farm.<sup>151</sup>

In 1694, the price of wheat [in *England*] averaged 64 shillings per quarter [quarter ton].<sup>212</sup>

On 1 August 1694, a tornado struck Warrington in Northamptonshire, *England*. It carried 80 or 100 shocks of corn into the air out of sight, to a distance of one, four and five miles.<sup>212</sup>

In 1694 at Topsham and Exeter, *England*, in Acremont Close, there was a waterspout. It lasted for 30 minutes and 3 or 4 wagonloads of corn [grain] were in the air at one time.<sup>212</sup>

On 7 August 1694 at Exeter, *England*, there was a land-spout [tornado], like those at sea [waterspout].<sup>72</sup>

On 27 September 1694, a hurricane struck offshore Barbados in the *Lesser Antilles* causing more than 1,000 deaths.<sup>141</sup>

Three weeks before 4 November 1694, a hurricane struck Barbados in the *Lesser Antilles* putting most of the ships in the road ashore.<sup>143</sup>

The severe sandstorm struck *Scotland* on 2 November 1694. The village Culbin was covered over and lost for 230 years.<sup>28</sup> [Culbin is now Culbin Sands on the River Findhorn, on the southern bank of the Moray Firth in northern *Scotland*.]

From 1694-1699 in *Scotland*, there was a famine. In *England*, there was a great dearth from rains, colds, frosts, snows; all bad weather.<sup>57, 72, 91</sup>

In 1694 during the period between 8 August and 8 November, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Hsing-kuo and Hupeh (now Hubei province) in central *China* at Wuchang, Huang-kang, Ch'i-shui, Huang-an, Kuang-chi, Ao-ch'êng and Ta-yeh.<sup>153</sup>

In 1694, there was a great drought in the vicinity of Shanghai, *China*. This resulted in a bad harvest and a scarce year.<sup>166</sup>

---

**Winter of 1694 / 1695 A.D.** La Hire [Philippe de la Hire] has the cold from the winter of 1694-95 in northern *France* was among the most intense.<sup>79</sup>

The winter in 1695 was very harsh. La Hire's thermometer stood the whole time of the frost at 15° to 20° F (-12.1° to -8.5° C), except on 7 February, when it fell to 7° F (-17.9° C).<sup>62</sup>

In 1694, the frost [in *England*] was so intense that many forest trees and oaks were split by the frost.<sup>212</sup>

During the winter of 1694-95 in London, *England*, the frost was of 7 weeks duration.<sup>212</sup>

Sea ice completely surrounded the whole island of *Iceland*. *England* experienced a cold winter. There was continuous snow for 5 weeks. In Bohemia [now western *Czech Republic*] during June, the summer was very cold and 3 intense frosts occurred leading to famine.<sup>28</sup>

At Augsburg [Augsburg, *Germany*], from the middle of December 1694 to 11 March 1695, the wind was mostly east and exceedingly cold and cloudy. The harvest and beginning of winter were very wet.<sup>72</sup>

At Ulm in southern *Germany*, the winter of 1694/1695 was intensely cold and dry. The frost continued even to the spring then suddenly there was a cloudy, rainy thaw about the end of March.<sup>72</sup>

During the winter of 1694, there was ice in the Whangpu [Huangpu River, *China*].<sup>166</sup>

---

### **1695 A.D. – 1697 A.D. Finland and Estonia. Famine**

In the years 1694 to early 1697, cold winters and cool and wet springs and autumns led to extreme famine in northern Europe, particularly in *Finland*, *Estonia*, and *Livonia*. It is estimated that in *Finland* about 25–33% of the population perished, and in *Estonia-Livonia* about 20%. The famines to a lesser extent also affected *Sweden* (especially in the northern region), *Norway*, and northwestern *Russia*. The famine decimated the population of *Finland* and *Estonia-Livonia* either through prolonged starvation, epidemics and other diseases promoted by undernourishment, or the reliance on unwholesome or indigestible foods, and the contamination of water supplies.<sup>151</sup>

The summer of 1693 was dry in *Finland* and then a frost destroyed the meager harvest, especially the crop of barley. The harvests of 1693 and of 1694 were below normal.

In *Finland*, the beginning of 1695 was the coldest winter since the year 1658. Wolves attacked people in their homes. Spring was late in coming and generally cold. Sowing of seeds could not be finished before midsummer, leaving too short a time for the crops to mature. The summer was also cold. The grains could not ripen before a killing frost came. The autumn was rainy and in most regions, it was impossible to plant the seeds for the winter crop. In the region of Uusimaa, *Finland*, the rye did not blossom before the end of July and a frost in September destroyed the half mature grain.

The summer in *Estonia* in 1695 was very rainy. It rained from Johann's Day (June 24) till Michael's Day (September 29). As a result, the lowlands were flooded which destroyed the hay and crops.

In *Finland*, the beginning of 1696 was deceptively mild. The extraordinary snowy early winter of 1695-96 halted the forest work and traffic. But this was interrupted by a thaw in January. Spring came very early and the fields turned green. But on 7 March, winter struck back with a vengeance. Lakes and bays froze thick, so thick that people were able to drive across them [with wagons]. When spring finally returned it was very late and summer was rainy. The crops were

slow in ripening. During the night of 17/18 August a frost struck. In the morning the grains were coated with a thick layer of ice. A second frost occurred which finished off the rest of the crops.

*Estonia* experienced a similar weather pattern in 1696. The first part of the winter of 1695-96 was very cold and the snow was very high. But early in 1696, a thaw came. This pattern also happened in *Sweden*. Winter returned with a vengeance in March and it was impossible to sow the seeds until the end of May. The heavy rains of summer ruined the crops. The harvest amounted to about one-fourth the seeds sown. Shortly after summer, there was no hay to be had for any price.

In *Estonia* in 1696, landlords could no longer feed their farmhands and servants and began dismissing them. Many of these recently unemployed along with destitute, hungry peasants turned to begging. Even some members of the nobility were reduced to this state. In the autumn of 1696, the famine became terrible. There was a pronounced rise in the death rates. "The peasants died like flies." Bodies of the dead were lying everywhere. The winter of 1696-97 was extremely harsh. The snow was very high so corpses were left unburied until springtime and then placed in mass graves. Cases of cannibalism were reported in *Estonia*.

In *Finland* in 1697, the famines, death and epidemics closely followed. This famine was so horrific that it brought on cases of cannibalism. In Ostrobothnia, *Finland*, "parents ate the corpses of their children, and children of their parents, brothers and sisters. In northern Karelia, *Finland*, court documents describe cases of cannibalism. In one township in Karelia, there were so many funerals that the church bell cracked. Storehouses and manor houses were plundered.

---

**1695 A.D.** In *Ireland*, in the spring and summer of 1695, there were many stinking fogs in Limerick and Tipperary.<sup>72</sup>

In the cold-wet hunger years of 1695-99, *Scotland* lost between 5% and 15% of its people.<sup>151</sup>

In *England* in April 1695, the weather was extraordinarily fair for the most part and almost cloudless. May was remarkably wet, to the destruction of all fruits. All the dog-days [of summer] were exceedingly cold, like winter. The winter was warm and fair except two or three days of hard frost in the end of December.<sup>72</sup>

On 24 July 1695, there was a violent thunderstorm with hail at Aberdeen, *Scotland*.<sup>212</sup>

In 1695, the price of wheat [in *England*] averaged 53 shillings per quarter [quarter ton].<sup>212</sup>

In Lappee [present-day Lappeenranta, *Finland* at 61° N, 27° 35' E] on Petersmas day in 1695, there was an unusual hailstorm that quickly beat down the crops in all the fields.<sup>151</sup>

[In *Italy*], there were profound deluges in 1695.<sup>72</sup>

In 1695 the Po River in northern *Italy* overran meadows, fields, and destroyed crops, leading to a severe famine in the area. Lake Zurich (in *Switzerland*), Lake Constance (in *Germany, Switzerland* and *Austria*) and Lake Neuchâtel (in *Romandy, Switzerland*) froze completely and one could walk over them as one would travel over a bridge. There were ice flows in the River Thames in *England*.<sup>151</sup>

In 1695 a violent hurricane struck the Mauricius [*Mauritius*] Island [in the Indian Ocean off the coast of Africa].<sup>234</sup>

At Poson, [Poznań, *Poland*], the summer and harvest of 1695 was one continued winter of cold rain, raw frosts, mildew, etc.<sup>72</sup>

At Ulm, *Germany*, all August to 1 September, it was cold and rainy. September and October were very cloudy and excessively cold.<sup>72</sup>

On 4 October 1695, a hurricane struck the Florida Keys in the *United States*. The hurricane caused the loss of a 933-ton warship offshore.<sup>141</sup>

In October 1695, a hurricane struck offshore the *Caribbean Island* of Martinique causing greater than 600 deaths.<sup>141</sup>

At Poson, [Poznań, *Poland*], the summer began on 10 September and lasted till 10 December.<sup>72</sup>

Rivers over a great part of *Europe* were in heavy floods in 1695-1697. Many of the rivers and lakes remained frozen for comparatively longer periods of time and didn't thaw until the late spring.<sup>151</sup>

In 1695, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 15 January and 12 February, floods struck Hopei (now Hebei province) in northern *China* at Tung-ming and Kiangsu (now Jiangsu province) on the east coast of *China* at Suchow, Wu-chin and Kao-yu.

— During the period between 12 June and 10 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou and T'ung-hsiang; Hupeh (now Hubei province) in central *China* at Kung-an; Shantung (now Shandong province) on the east coast of *China* at Kuang-jao; Kiangsu province at Wu-chiang; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ên-hai and San-shui [uncertain name].

In 1695 during the 9<sup>th</sup> moon, there were great rains; sudden rise of rivers and calamities [flood damage] in the vicinity of Shanghai, *China*. Then during the 12<sup>th</sup> moon [winter], there was thunder and lightning at night with great rain.<sup>166</sup>

In 1695 during the period between 6 May and 8 August, a drought engulfed Szechwan (now Sichuan province) in southwest *China* at Ch'ang-ning [uncertain name] and Shansi (now Shanxi province) in northern *China* at Shuo. During the period between 8 August and 8 November, a drought engulfed Shansi province at Li-shih and Lin.<sup>153</sup>

*Also refer to the section 1695 A.D. – 1697 A.D. for information on the famine in Finland and Estonia during that timeframe.*

---

**Winter of 1695 / 1696 A.D.** During the winter of 1695 and the spring of 1696, strange dews fell upon *Ireland*. “We had of late in the county of Limerick and Tipperary, showers of a sort of matter like butter or grease; if one rub it upon one's hand it will melt, but lay it by the fire and it dries and grows hard, having a very stinking smell. Some of it fell here at Kilkenny on 14 November 1695, which I did see myself the next morning. Having very diligently enquired concerning a very odd phenomenon which was observed in many parts of Munster and Leinster, the best account I can collect thereof, is as follows: for a good part of the winter of 1695, and the spring following, there fell in several places a kind of thick dew which the country people called butter, from the consistency and color of it, being soft, clammy, and of a dark yellow; it fell always at night, and chiefly in Moorish low grounds, on the top of the grass, and often on the thatch of cabins; it was seldom observed in the same place twice, it commonly lay on the earth for near a fortnight without changing its color, but then dried and turned black. Cattle fed in the fields where it lay indifferently as in other fields. If fell in lumps, often as big as the end of one's finger; very thin and scatteringly. It had a strong ill scent, somewhat like the smell of a churchyard or graves. And indeed we had during most of that season very stinking fogs, some sediment of which might possibly occasion this stinking dew, though I will by no means pretend to offer that a reason of it. I cannot find that it was kept

long, or that it bred any worms or insects. Yet the superstitious country people, who had scalled [scabby] or sore heads, rubbed them with this substance, and said it healed them.”<sup>234</sup>

Early in 1696, the cold in *England, the Netherlands* and northern *Germany* was excessive. Doctor Derham reported that at the Gresham College, London, *England*; the thermometer indicated a temperature equal to 1.6° F (-16.9° C).<sup>62</sup>

On 26 January 1696, there was an intense frost in London, *England*. The temperature fell to 9 degrees below zero.<sup>212</sup>

At Posen, [Poznań, *Poland*], the winter continued to 10 March 1696.<sup>72</sup>

At Posen, [Poznań, *Poland*], after 10 December 1695, there came a great snow and a strong frost, which had no thaw or remission till 10 March 1696. All corn and herbs died and rotted under the snow.<sup>72</sup>

At Hildesheim in central *Germany*, up until 10 March there was warm moist winter weather. Following that was some weeks of severe winter weather.<sup>72</sup>

**1696 A.D.** In *England* in 1696, the first three weeks of January was like a summer, clear with gentle gales; no frost or rain. Snow drops, daisies and primroses the first week. The rosebush in leaves and trees budding. In February, gooseberries in London begin to have a body. In March, dull, gloomy cold weather, blasting all the buds and ruining the spring. From Easter to 26 June, there were cold, wet excessive rains and great inundations. The rains rotted the hay. The spring till then was at a standstill. In May, there was an extraordinary flood. From 26 June to 6 July, the weather was fair and then the rains returned. From 10 July, it rained incessantly 36 hours. From 12 to 17 July, the weather was fair. From the 17<sup>th</sup> of July to the 14<sup>th</sup> of August, both night and day, there were heavy showers daily. It laid all barley and oats. To the 23<sup>rd</sup> of August, the weather was fair. The remainder of August was mostly rainy. To the end of the year, the weather was variable. On 24 December, there were three tides in the River Thames in one day. From the 1st to the 11<sup>th</sup>, there was a hard frost. No snow this winter, two inches deep.<sup>72</sup>

On 3 February 1696 on the Isle of Portland in the *English Channel*, there was a landslip [landslide]. The great pier was demolished and much damage done, owing to excessive rain.<sup>212</sup>

In June 1696, there was an inundation of the River Nyne in Northamptonshire, *England*.<sup>195</sup>

In the cold-wet hunger years of 1695-99, *Scotland* lost between 5% and 15% of its people.<sup>151</sup>

In 1696, it was a bad year for the crops and food was very dear [scarce] [in *England*].<sup>212</sup>

In 1696, the price of wheat [in *England*] was high averaging 71 shillings per quarter [quarter ton].<sup>212</sup>

In *England*, there was a great storm on the east coast; 200 coasters and other vessels, and most of their crews, lost.<sup>57</sup>

In 1696, a strong gale struck on east coast of *England*: 200 colliers and coasters lost, with most of their crews.<sup>90, 212</sup>

In *England*, 200 sail of colliers and some coasters were lost, with all their crews in a great storm, in the bay of Cromer, in Norfolk.<sup>40, 41, 43, 56</sup>

In 1696, a hurricane struck northwest *Cuba*. An unidentified ship was wrecked at Playa de Sabarimar, 7 leagues east of Havana in 35 feet of water during the storm.<sup>141</sup>

The winter of 1696 was colder than had been known in New England in the *United States*, since the first arrival of the English. During a great part of the winter, sleighs and loaded sleds passed on the ice from Boston as far as Nantasket (Hull, Massachusetts). So great a scarcity of food, afterwards during the next year, had not been known; nor any grain ever been at a higher price.<sup>174</sup>

At Posen, [Poznań, *Poland*] went without rain in 1696; hence a great scarcity in 1697.<sup>72</sup>

Rivers over a great part of *Europe* were in heavy floods in 1695-1697. Many of the rivers and lakes remained frozen for comparatively longer periods of time and didn't thaw until the late spring.<sup>151</sup>

In 1696, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period 1-30 May, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow.

— During the period between 31 May and 28 June, a drought engulfed Chekiang province at Ch'ü and Shansi (now Shanxi province) in northern *China* at Ching-yüeh.

— During the period between 8 August and 8 November, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Mêng-shan, P'ing-yüeh and Ts'ang-wu.

In 1696, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 29 June and 28 July, floods struck Shantung (now Shandong province) on the east coast of *China* at Chi-mo and Hopei (now Hebei province) in northern *China* at Kao-ch'êng and An-hsin [uncertain name, "Hsin-an"].

— During the period between 29 July and 26 August, floods struck Huang-t'u [uncertain name] and Hupeh (now Hubei province) in central *China* at Wuchang, P'u-ch'i, Chiang-ling and Chih-chiang. At Chih-chiang, most of the houses were damaged by the floodwaters.

— During the period between 27 August and 25 September, floods struck Hupeh province at Huang-kang; Hopei province at Jao-yang and Ch'ien-an; Kansu (now Gansu province) in northwest *China* at T'ien-shui; Anhwei (now Anhui province) in eastern *China* at Hsi; and Kiangsu (now Jiangsu province) on the east coast of *China* at P'ei. [P'ei is located at longitude 117.00° East and latitude 34.47° North.]

— During the period between 26 September and 25 October, floods struck Hopei province at Shen-tsê and Jung-ch'êng.

In 1696 during the summer, there were long rains, which injured the crops in the vicinity of Shanghai, *China*.<sup>166</sup>

*Also refer to the section 1695 A.D. – 1697 A.D. for information on the famine in Finland and Estonia during that timeframe.*

**Winter of 1696 / 1697 A.D.** In *England*, the frost was severe.<sup>47, 72, 93</sup>

At Posen, [Poznań, *Poland*], from the end of summer in 1696, then to the end of March 1697, there was cold rains by day and frost snow and severe cold by night.<sup>72</sup>

**1697 A.D.** In the *United States*, the winter was intensely cold in the American northeast. Boston harbor was frozen as far down as Nantucket. The Delaware River was closed with thick ice for more than three months so that sleighs and sleds passed from Trenton to Philadelphia, and from Philadelphia to Chester on the ice.<sup>1</sup>

At Mansfeld in central *Germany*, January and February were intensely cold. March and part of April were unsettled, cloudy, snowy, rainy, frosty and clear. April the 1<sup>st</sup> and May began with hot summer weather, but followed by great storms of hail, especially the 21<sup>st</sup>, which did much damage. On the 27<sup>th</sup> sleet snow and an east wind to the end. Summer was often cold with frequent rains and very changeable winds. August was clear, but very cold. September 10<sup>th</sup> to October, great rains and shifting winds. November was cloudy and snowy. December was mild and rainy, but ended cold.<sup>72</sup>

In the cold-wet hunger years of 1695-99, *Scotland* lost between 5% and 15% of its people.<sup>151</sup>

In London, *England* from 15 January to 11 February, there was a hard frost with some small remissions. From March to 11 April, there were cold northeasterly winds. The gooseberries not yet budded. On 13 April, there was rain; and by 18 April, there were trees green with leaves, though no spring before. From 29 April to 4 May, there was cloudless, intolerably, sultry, fainting, hot days. The heat was both day and night. From 4 to 25 May, it was cold. From 4 to 19 May, it was wet. On 19 May, it was a frosty night. The rest of May was fair and hot to the end, with a north wind. June was seasonable enough. On 20 June, there was high winds and rain. On the 21<sup>st</sup> of June, there was excessive cold. On 16 and 17 July, frost and mildew blasted the corn. August to the 10<sup>th</sup>, still calm; daily rain till the corn grew in the ear as it stood. 12 August frost to 10 September dry sun shiny weather, excellent harvest. On 28 September, there was great hail in the night. October was a pleasant month. On 8 October, there was a great wind.<sup>72</sup>

On 22 March 1697, the river near Noordwyck [now an abandoned town] on the Mauricius [*Mauritius*] Island [in the Indian Ocean off the coast of Africa] swelled in the space of 15 minutes to great heights. The sugar mill and sugar works and most of the ground were ruined. Most of the sugar canes were torn out by the roots by the violence of the currents. Then fifteen minutes later, the water was back to its normal level. The cause of this flood was unknown. There was only light rain at the time and no earthquakes.<sup>234</sup>

On 9 April 1697 in *Wales*, hailstones fell in Flintshire weighing 5 ounces.<sup>93</sup>

In 1697, a tremendous hailstorm struck the part of Denbighshire in northeast *Wales* bordering on the sea. All the windows on the weather side were broken by the hailstones. Poultry and lambs, together with a large mastiff [breed of dog] were killed. In the north part of Flintshire, several persons had their heads broken, and were grievously bruised in their limbs. The main body of this hailstorm fell on Lancashire in northwest *England*, in a line from Ormskirk to Blackburn, on the borders of Yorkshire. The breadth of the storm cloud was about two miles, within which it did incredible damage, killing all descriptions of fowl and small creatures, and scarcely leaving a whole pane of glass in any of the windows where it passed. What was still worse, it ploughed up the earth, and cut off the blade of the green corn [grain] utterly destroying them. The hailstones struck with sufficient force to bury themselves in the ground. These hailstones, some of which weighed five ounces, were of different forms, some round, others semi-spherical; some smooth, others embossed and crenulated, like the foot of a drinking glass, the ice being very transparent and hard; but a snowy kernel was in the midst of most of them, if not of all. The force of their fall showed that they descended from a great height.<sup>191</sup>

On 29 April 1697, there was a thunderstorm, which produced great hail at Snowdon in Denbighshire, *Wales*. It also struck Flintshire, Chester, West Kirkby [West Kirby], Ormskirk, and Blackburn. The cloud was 2 miles [3.2 kilometers] wide and the length of the track 60 miles [97 kilometers] long. Hailstones of 5 ounces [142 grams] and of various shapes, broke nearly all the window, killed many fowls, and destroyed the green corn [grain]. Some hailstones were 5 inches [13 centimeters] round. Scarcely any stones were as little as musket balls. But some were as large as hen's eggs and ½ pound [227 grams] in weight. Many sea fowl [sea birds] were killed. Poultry and sheep were also killed.<sup>212</sup>

In Cheshire and Lancashire, *England* on the 29<sup>th</sup> of April, “a storm of hail, which killed fowls and small animals, and knocked down horses and men; some of the stones weighing half a pound.”<sup>40, 41, 43, 56, 57</sup>

In Cheshire and Lancashire, *England* on the 20<sup>th</sup> of April, “a storm of hail, which killed fowls and small animals, and knocked down horses and oxen; some of the stones weighing half a pound.”<sup>93</sup>

On 29 April 1697 at Cheshire and Lancashire, *England*; on 4 May at Hertfordshire, *England* on 6 June at Monmouthshire, *Wales* on 9 June at Herefordshire, *England* fell shocking tempests of prodigious hail.<sup>72</sup>

On 29 April 1697 in *England* and *Wales* there was a hailstorm where the stones weighed three-quarters of a pound. The astronomer Hailey communicated a paper to the Royal Society on this storm.<sup>93</sup>

Toward the end of April in 1697, a hailstorm struck Cheshire in northwest *England*. The storm was 2-miles wide and traveled a path for 60 miles before it was dissipated. The hailstones were as big as eggs and some were the size of a man’s fist. They were pieces of clear, transparent, and very hard ice, with a white kernel in the middle, which seemed like a lump of snow. Some of these vast hailstones were smooth, others rough and sharp on the surface. They fell with a prodigious force, and killed fowls, lambs, and calves. They beat down the young crops of every kind. In some places where the wind drove them at a slanting angle, they plowed up the surface of the ground burying them an inch or two in depth. Trees were broken and shattered to pieces in many places. Houses were damaged. Many people who were outside during the storm were harmed.<sup>192</sup>

An extraordinary hailstorm struck *Wales* and *England* on 29 April 1697. The track of this storm was over 60 miles in length. The storm formed with southwest winds out of Carnarvanshire [Caernarfonshire], passing near Snowdon with a horrid black cloud attended with frequent lightning and thunder. It traveled as far as can be determined no further westward than Denbighshire, where it left St. Asaph to the right, and did much damage between it and the Sea, breaking all the windows on the weather-side, and killing poultry and lambs, and at Sir John Conway’s at Desert, a stout dog. In the northern part of Flintshire, several people had their heads broke, and were grievous bruised on their bodies. From Flintshire, *Wales* it crossed over the Arm of the Sea that comes up to Chester, *England* and was only felt in Cheshire, at the very northwest corner of the peninsula called Wiral, between Æfluaria of Chester and Leverpoole [Liverpool], at a town called West Kirby, where it hailed only 3 minutes. It was at Chester about 3 o’clock in the afternoon. The main body of the hail fell upon Lancashire, in a right line from Ormskirk to Blackburn [Blackburn], which is on the border of Yorkshire; but whether it crossed the ridge of hills into Yorkshire, we know not. The breadth of the cloud was about 2 miles within which it did incredible damage, killing all sorts of birds and small creatures. It scarcely left a whole pane of glass in any of the windows it passed. It plowed up the earth and cut off the blade of green corn [grain] so utterly destroying it. The hailstones buried themselves in the ground. On the bowling greens, where the earth was anything soft, they were defaced, so as to be rendered unserviceable for a time. Some of the hailstones weighed 5 ounces. They were of different forms. Some were round, some half round, some smooth, others embossed and crenulated, like the foot of a drinking glass, the ice very transparent and hard, but a snowy kernel was in the midst of most of them, if not all of them. Because of the force of the fall, the hailstones must have fallen from a great height. Near Bootle in Merseyside, *England* where the storm skirted, one of the hailstones measured 5 inches in circumference. At Bootle-Mill, the sea seemed to have risen to an extreme height and took on the appearance of a forest of woods. [As the hailstones struck with great force, they sent spouts of water up almost 5 feet high.] The hailstones were as big as Poot Eggs. Many sea-fowl and land fowl were killed by the hail. The storm was very violent at Linaker. It made holes in William Halsall’s barns, broke branches off his apple trees, and made wounds in the green brow [hill] by his house. The holes were generally an inch to an inch and a half deep. William Halsall said that these hailstones fell so violently into the marl-pit [a pit from which marl is dug] beside his house that the spouts of water rose a yard and a half high. The hailstones were as big as duck eggs at Aughton Common and at

Sephton [Sefton]. One of the hailstones at Sephton weighed a full half-pound. Two hailstones were weighed at Ormskirk. Each weighed  $\frac{3}{4}$  of a pound. The hailstones at Ince [in Lancashire, *England*] varied between the size of duck eggs and goose eggs. In a little town next to the sea, they gathered birds killed by the hail by the bushels. On the seaside, at least seven varieties of dead birds were gathered including curlew [curlew], sea-pye [oystercatcher, sea pie], sea swallow and gorre. At Bootle, a young woman who was running for shelter during the storm had her hat fall off and a hailstone hit her from behind the ear and made her tumble. A man was knocked off his horse. Another man pulled down his hat to save his face and a hailstone tore the brim from the crown, so far that he could put his hand through the hole. At Ormskirk, the hailstones rebounded 2 yards high. At Ince, two horses were knocked down in the plough and a man fell at the same time. At Crosby, some beasts were knocked down by the hail. Joseph Holland was found dead after the storm but it couldn't be ascertained whether his death was caused by hail or lightning. Two women were so badly beaten by the hail before they could find cover that the next morning, they could hardly turn them over in their beds.<sup>234</sup>

In Hertfordshire in eastern *England* on the 4<sup>th</sup> of May, hailstones fell 14 inches in circumference; destroyed trees and corn in a most dreadful manner.<sup>40, 41, 43, 56, 57</sup>

After a severe storm of thunder and lightning on 4 May 1697 in Hertfordshire, *England*, a shower of hail ensued " by which some persons were killed, their bodies beat black and blue, and oaks were split and fields of corn cut down as with a scythe. The stones measured from 10 to 14 inches in circumference; their figures are said to have been various—some oval, others picked, and some flat." Another source cites the hailstones in Hertfordshire as measuring 14 inches in circumference.<sup>93</sup>

In the beginning of May in 1697, a hailstorm struck Herefordshire in the West Midlands region of *England*. In this terrible storm, not only fowls and young animals of all kinds were killed, but some of the larger ones. Some persons laboring in the fields, who could not reach shelter, suffered the same fate. Their bodies were black and blue, as if beaten to death with clubs. Oak trees were split in two. The branches of many other trees were torn down. The fields of rye were, in some places, cut down as if mowed off with a scythe. Many of the hailstones measured fourteen inches round.<sup>192</sup>

On 4 May 1697, a hailstorm struck Hitchin, *England*. Hailstones were 7 or 8 inches [18-20 centimeters] about [in circumference]. At Sir J. Spencer's, 7,000 quarries [a square or diamond shaped pane] of glass were broken. The hail split great trees, and destroyed several hundred acres of wheat; and there were some stones 13 or 14 inches [33-36 centimeters] about. The ground was torn up, and there were at least 100,000 cartloads of hailstones. A southwest gale occurred at the same time. In Staffordshire, some of the hailstones were nearly 12 inches [30 centimeters] in circumference.<sup>212</sup>

On Tuesday, 4 May 1697, at Hitchin in Hertfordshire [Hertfordshire], *England*, about 9 o'clock in the morning, it began to lightning and thunder extremely, some great showers intervening. This continued until around 2 o'clock in the afternoon, when a black cloud appeared and there was a sharp shower of hail. Some of the hailstones measured 7 and 8 inches in circumference. But the most extreme part of this storm fell at Offley, where a young man was killed, one of his eyes stuck out of his head; his body was all over black with bruises. Another person nearer to Offley escaped with his life, but was much bruised. There was a house of Sir Joseph Spencer in which 7,000 quarries of glass were broken. The hail fell in such vast quantities, and so great, that it tore up the ground, split great oaks and other trees in great number. It cut down great fields of rye, as with a scythe, and destroyed several hundred acres of wheat, and barley. So much so that they ploughed it up and sowed the field with oats. The tempest was such when it fell that in 4 poles of land, from the hills near us, it carried away all the staples of the land, leaving nothing but chalk. The hail broke a vast number of pigeon's wings, crows, rooks, and other birds. The flood [of hail] came down, spreading 4 or 5 acres of land, [roaring] like the Bay of Biscay; and which is very strange, all this fell in the compass of one English mile. I was walking in my garden, which is

very small, perhaps about 30 yards square, and before I could get out, it took me to my knees, and was through my house before I could get in, which I can modestly say was within a minutes time. It went through like a sea, carrying all wooden things like boats on the water. The greatest part of the town experienced this misfortune. The surprise was so great, that we had scarcely enough time to save our children and wives. There fell some hundred thousand cartloads of hail. I saw them 4 days later, and if the beds of hail had not been broke by people coming and going or trampled by horses, it might have laid until Michaelmas. The hailstones were measured from one to thirteen and fourteen inches certain. Some people said they found hailstones that measured 17 and 18 inches. The hailstones had various shapes, some oval, others round, others picked, some flat. The damage done to our town was near 4,000 pounds. [In present currency, that would be equivalent to £463,000 using the retail price inflation index.]<sup>234</sup>

In 1697, there was a northwest gale in Lancashire, *England* with hailstones 6-9 inches [15-23 centimeters] in circumference. Rooks and hares [birds and rabbits] killed, and vast quantities of glass broken.<sup>212</sup>

On 6 June 1697, there was a hailstorm at Pont-y-pool [Pontypool] in Monmouthshire, *Wales*. The storm extended a mile and lasted half an hour. Some hailstones were eight inches [20 centimeters] about [in circumference] and very irregular. The hail broke all the beans and wheat.<sup>212</sup>

On 6 June [9 June] 1697, there was a hailstorm at Westhild, near Hereford, *England*. The hail fell in so great quantity that it destroyed all the poultry, garden stuff, corn [grain], grass and windows. Some stones were 9 inches [23 centimeters] about [in circumference].<sup>212</sup>

In 1697, there was a hailstorm in Herefordshire, *England*. "Hail stones 13 and 14 inches round [33-36 centimeters]." <sup>212</sup>

On 7 June 1697 in Charleville, *Ireland* near Limerick there had been a very wet spring, and as a result a bog moved over 40 acres of good ground, burying it sixteen feet [5 meters] deep.<sup>212</sup>

In 1697, it was a bad year for the crops and food was very dear [scarce] [in *England*].<sup>212</sup>

In 1697, the price of wheat [in *England*] averaged 60 shillings per quarter [quarter ton].<sup>212</sup>

Excessive heat reigned again in July 1697 in northern *France*.<sup>79</sup>

On 14 July 1697, in the region around the villages of Nummi and Pusula, *Finland* (at 60° 30' N, 24° E), there fell a "furious" shower of hail. The hailstones struck the cattle and made holes in the walls and roofs of houses. The crops on 19 farms was totally destroyed, 3 farms lost ½ of their crops, and another 3 farms lost 1/3 of their crops.<sup>151</sup>

In mid-July 1697 in Kalanti [present-day Uusikirkko, *Finland* (at 60° 50' N, 21° 35' E)], a hailstorm produced hailstones the size of hen's eggs causing great destruction on 5 farms.<sup>151</sup>

Universal rains during the summer of 1697, made all the rivers overflow in *France*. The rains lasted at least two months. The rain fell so hard for eight days from the Feast of Saint Peter [29 June], that in one night the Seine, the Loire and the Meuse rivers rose seven feet. The rivers continued to grow and overran their banks and flooded all the countryside, with the farmland, houses and their inhabitants.<sup>79</sup>

At Posen, [Poznań, *Poland*], May and June most unequal, the heavens were terrible with clouds and cold rains. In July and August, the heat was excessive but often mixed with cold showers.<sup>72</sup>

Rivers over a great part of *Europe* were in heavy floods in 1695-1697. Many of the rivers and lakes remained frozen for comparatively longer periods of time and didn't thaw until the late spring.<sup>151</sup>

In 1697, a drought engulfed several regions of *China* including:<sup>153</sup>

- During the period 5 February and 6 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yang-chiang and Yang-ch'un; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Mêng-shan and P'ing-yüeh.
- During the period 18 July and 16 August, a drought engulfed Hopei (now Hebei province) in northern *China* at Hsing-t'ai.
- During the period 15 September and 14 October, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at T'ung-lu and Sung-yang.

In 1697 during the 5<sup>th</sup> moon, there was a great drought in the vicinity of Shanghai, *China*. Then during the 6<sup>th</sup> moon on the 1<sup>st</sup> day in the vicinity of Shanghai, *China*, there was a typhoon that destroyed life and property.<sup>166</sup>

In 1697 during the period between 17 August and 14 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at K'un-shan and Hopei (now Hebei province) in northern *China* at Lin-yü.<sup>153</sup>

*Also refer to the section 1695 A.D. – 1697 A.D. for information on the famine in Finland and Estonia during that timeframe.*

**Winter of 1697 / 1698 A.D.** During the winter of 1697, there was a severe frost [in *England*].<sup>212</sup>

On 25 November 1697 in London, *England*, there was ice three inches thick. December 12<sup>th</sup> and 15<sup>th</sup> it was hot; the 12<sup>th</sup>, 18<sup>th</sup>, 19<sup>th</sup> and 20<sup>th</sup>, there was mist, hot and moist. From 10 to 30 December, it was as hot as in August; one could not bear the bedclothes. Yet there were frosts before and snow 12 inches deep. In January, there was much snow in deep drifts. All January, there was ice upon the water, which on the 26<sup>th</sup> was eight inches thick (i.e. within 2 ½ times as thick as at any time on the Canal of St. James's Park in 1740). Yet on the 29<sup>th</sup> of January, there was lightning and five claps of thunder. The winds were northeast almost the entire month of February with little sunshine, except for six days during the second week. On 14 February there was a great storm, and the lanes were blown up with snow several yards deep, that lasted the rest of the month. But the fields lay bare. [The winds blew the snow in from the flat fields into great snowdrifts.] On the 26<sup>th</sup> of February, the ice was four inches thick. On March the 24<sup>th</sup> and 26<sup>th</sup>, thunder and lightning, warm sunshine all day with sulfurous clouds and hot evenings. On April the 11<sup>th</sup>, there was thunder followed by showers. On April 22, it snowed hard from morning till noon, then a little sunshine; then snowed again very fast; then, sunshine followed with large hail (similar to the storm of April 1740). On April 25<sup>th</sup>, there were showers of fierce great hail with thunder and sunshine mixed. On April 27<sup>th</sup>, there was thunder and a storm of hail after. April was a cold month. On the 30<sup>th</sup> of April, the first cuckow [observed]. Gooseberries not yet blossomed. On 3 May, there was a great deep snow over all of *England*. On 15 May, the woods were like winter.<sup>72, 212</sup>

**1698 A.D.** In London, *England* on 17 May, there was a great hailstorm. On 31 May, the wheat very low; cold weather. On 3 June, it was cold with great lightning and thunder, loud and near, with fierce large hail three inches deep on the ground. On 16 June in a warm rich soil, the first wheat ear was seen near London. This was the backwardest spring in 47 years. On July the first part was wet. On the evening of 15 July, there was a great rain. From 18 to 26 July, there was cloudless sunshine. On the 9<sup>th</sup> there was a great deal of red lightning with unceasing thunder. There were no gooseberry tarts till July. On the 30<sup>th</sup> of July, the apple trees in small blossoms as in the spring. On 13, 14 and 15 August there were frosts. The latter half of August was the most pleasant time in this year. On the 6<sup>th</sup>, there was one clap of

thunder and then a shower of the biggest water droplets ever known. The four last months had scarce two days together without rain (and with the exception of the period from 18 to 26 July) the wettest season known. Whole fields of corn [wheat] spoiled even in Kent; much more [spoilage] in the north. Horses were turned into [fed] the peas and barley. The earliest wheat not cut till the middle of September. In Kent, September the 29<sup>th</sup>, barley standing uncut there; much lay in the swath till December. That which was brought in was soaked with wetness and almost useless. Much corn in the north was got at Christmas. And in *Scotland*, they were reaping in January and beating the deep snow off it, as they reaped the poor green empty crop. Bread made from what was harvested would not stick together, but fell in pieces, and tasted sweet as if made of malt. On 3 October, there was much lightning and pretty much thunder. On 15, 16 and 17 October, there were extreme cold nights with winds from the north-northwest. On 30 October, there was a great deal of rain and snow with the winds from the northeast. On 17 November, there was lightning and thunder. December was warm. On the 7<sup>th</sup> of December there was a hot steam. On 22 December, wheat was sown, which proved as forward in harvest as any. The seed time was so wet that there was hardly above half a crop sown this year.<sup>72, 212</sup>

In 1698, the price of wheat [in *England*] was low averaging 18 shillings per quarter [quarter ton].<sup>212</sup>

On 6 August 1698 in *England*, “Biggest rain-drops known. The most rain last four months known. Whole fields of corn [grain] spoilt. The first wheat cut in the middle of Sept., and much barley in swathe till December. In the North much corn ungot at Christmas, and in *Scotland* corn was reaped in January 1699, and the snow beaten off it. Bread made of it fell in pieces, and tasted sweet like malt.”<sup>212</sup>

On 5 November 1698, there was a terrible flood, which destroyed a great part of St. Werburgh’s Church in Derby, *England*.<sup>212</sup>

On 22 December 1698, there was a thunderstorm at Warley Town near Halifax in West Yorkshire, *England*.<sup>212</sup>

In the cold-wet hunger years of 1695-99, *Scotland* lost between 5% and 15% of its people.<sup>151</sup>

In 1698 during the period between 10 May and 7 July, a drought engulfed Honan (now Henan province) in central *China* at An-yang. During the period between 8 June and 7 July, a drought engulfed Anhwei (now Anhui province) in eastern *China* at T’ung-ling. Also during the period between 8 June and 7 July, floods struck Anhwei province at Wu-yüan, Fêng-yang and Wu-ho; Shantung (now Shandong province) on the east coast of *China* at T’ang-i [possible misprint] and Liao-ch’êng; Hopei (now Hebei province) in northern *China* at An-hsin [uncertain name “Hsin-an”]; and Kiangsi (now Jiangxi province) in southern *China* at Yung-hsiu [uncertain name, “Chien-ch’ang”].<sup>153</sup>

In 1698 during the autumn, there was a flood in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**Winter of 1698 / 1699 A.D.** The year 1698 [in *England*] was the coldest year between 1695 and 1742.<sup>212</sup>

The winter of 1698-99 was extremely cold [in London, *England*]. On 30 January, the River Thames was full of ice.<sup>227</sup>

In 1699, there was a severe frost [in *England*]. The price of wheat, which in preceding years had seldom reached 30 shillings per quarter [quarter ton], now rose to 713 shillings per quarter.<sup>212</sup>

---

**1699 A.D.** On 7 February 1699, there was a tempest and hurricane [in *England*].<sup>72</sup>

On 7 February 1699, there was a west-northwest gale that struck Upminster, *England*. It was a terrible

gale that did much damage.<sup>212</sup>

In 1699, the price of wheat [in *England*] averaged 64 shillings per quarter [quarter ton].<sup>212</sup>

In *Britain*, the harvest was hottest and driest; drought until the following January.<sup>47</sup>

In *England* in 1699, there was plenty [plentiful harvest].<sup>72</sup>

*England* was hit with a stifling heat wave on 22 June 1699. The summer in Paris, *France* was characterized by:

Hot days	55 days
Very hot days	5 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

There were heavy rains in April and September. In Paris, the three summer months produced 130 mm (5.1 inches) of rain. In Burgundy the spring was late and wet. There were hot days in August. In Dijon, *France*, the grape harvest began on 5 September. It produced little wine but the quality was good.<sup>62</sup>

In Breslaw [now Wrocław, *Poland*], January was cloudy, rainy, windy and cold. The latter end of February was no better. March began terrible with snow and hoar frost, till the milder spring came in. [There was a famine at the time and many people were consuming unwholesome foods.]<sup>72</sup>

In Augsburg, *Germany*, in January, the winds were from the east or south. There were frequent snows, but they melted as they fell. But before the equinox [around March 20<sup>th</sup> or 21<sup>st</sup>] fell a great snow and the cold continued till May. The cold ended in long rains.<sup>72</sup>

Charleston, South Carolina in the *United States* was nearly depopulated by an awful tempest and inundation.<sup>1</sup>

In 1699, a powerful cyclone struck Sunderbans coast, *Bangladesh* causing 50,000 deaths.<sup>98</sup>

In *England* in January, some of the days were perfectly warm. Although on some mornings there was frost. Terrible storms struck on 7 and 12 February. On 24 March, there was a storm of thunder and lightning, high winds and hail. There was another violent hailstorm on 30 March with loud thunder and yet very cold. During the first half of April, the weather was very cold. People were forced to put on again their winter clothes, which they threw off in February. The last half of April had flying clouds and honey dews. [For the past 9 years, June and July have been so cold that they were difficult to distinguish from the winters] But this year, 1699, produced one of the first of several hot summers. June and July were so hot that wheat began to be harvested on 1 August. And though there was only a half a crop sown, the price of wheat fell from 9 and 10s. a bushel to a reasonable price, which continued for several years. June the 22<sup>nd</sup> and 23<sup>rd</sup>, it was sultry hot, like the summers of old. The 24<sup>th</sup> was sultry, and abundance of thunder, the sky being clear; only a few fleecy clouds, and sometimes a few small drops from one. It was intolerably hot to the end of June. The weather was kind to the wheat but not to oats and barley. Those crops were poor for want of rain. July was intolerably hot. There was little grass and no rain. On 11 August the nuts were full and on the 28<sup>th</sup> they fell out of the hulks. September was mostly sultry hot, beyond what any month had been for nine summers before this. On 18 September, the sown wheat was already green on the ground. In October, the weather was warm, cloudless sunshine and very calm; as pleasant summer weather as in any month. The year 1699 was not only the hottest, but driest harvest of many years. In *Scotland*, some of their mosses took fire from small sparks and burnt till after Christmas. In November and December it was all like summer; warm pleasant sunshine. On 26 November, there was

snow yet it was warm. On 30 November, the snow laid 8 or 9 inches deep. The middle two weeks of December were perfectly warm.<sup>72</sup>

In the cold-wet hunger years of 1695-99, *Scotland* lost between 5% and 15% of its people.<sup>151</sup>

In 1699 during the period between 5 February and 8 August, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and T'ung-hsiang. During the period between 31 March and 29 April, a drought engulfed Hupeh (now Hubei province) in central *China* at Huang-p'o. During the period between 8 August and 8 November, a drought engulfed Hupeh province at Ao-ch'êng and Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin.<sup>153</sup>

In 1699, floods struck several regions of *China* including:<sup>153</sup>

— During the period between 27 June and 26 July, floods struck Yü-ch'êng [possibly a misprint]; Chekiang (now Zhejiang province) on the east coast of *China* at T'ai-shun and Chien-tê; and Hopei (now Hebei province) in northern *China* at Wu-chi and An-hsin [uncertain name "Hsin-an"].

— During the period between 25 August and 22 September, floods struck Chekiang province at Hangchow.

— During the period between 23 September and 22 October, floods struck Chekiang province at Taichow, Chin-hua, T'ang-ch'i, Ch'ü, Chiang-shan and Ch'ang-shan; Kiangsi (now Jiangxi province) in southern *China* at Kan; and Hupeh (now Hubei province) in central *China* at Mien-yang.

In 1699 during the 6<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was an overflow of the sea and lakes.<sup>166</sup>

**1700 A.D.** In *England*, January and February was no different than summer in warmth. There were some stormy days, some days with a little frost and rain and hail. On 8 and 9 March, the weather was burning hot and dry. On 18 March, the ground was chopped and dust was flying as in summer. There was no rain until the latter end of March. On 30 March, there was hail the size of small nuts. From 5 to 16 April, the weather was excessively hot. The month of April ended hot. On 9 May, there was thunder. The gooseberries were large and the peas were a week in blossoms. On 18 May, the hartichoaks [artichokes] were full and large. After a few days of cold rain beginning on 21 May, the month ended very hot. The first half of June was summer weather, but the latter half was uncertain rainy weather. July was fair to the 10<sup>th</sup> followed by stormy weather and much rain but the month ended very hot. On 1 and 3 August, there was wind and rain and then to the 16<sup>th</sup> of August it was glorious summer weather. The remainder of August was variable. After the rain on 31 August, the trees and meadows were as delightful as spring. September weather was variable. On 9 September, there was a hailstorm. On 18 September, there was a great frost, which was destructive to everything it could hurt, especially the grapes. On 23 and 24 September, there was much rain. The 26<sup>th</sup> was glorious sunshine and hot, then dreadful thunder and lightning at night with pouring rains. It was a tempest at first remote, then near, loud and long. October set in stormy, then fine sunshine weather to the 19<sup>th</sup>. After that there was various rain and frost. December had several pleasant days. On 11, 14 and 19 November, there was a hard frost. But on 20 and 29 November, there were summer days. December set in with frost and snow. On 7 December, ice bears; on the 8<sup>th</sup> a hard frost and then rains; on the 13<sup>th</sup> a dreadful storm; but from the 15<sup>th</sup> to the 18<sup>th</sup> it was mild; from the 24<sup>th</sup> to the 29<sup>th</sup> there was sunshine and fine weather; but on the 31<sup>st</sup> it was frost.<sup>72</sup>

The summer of 1700 in Paris, *France* was characterized by:

Hot days	29 days
Very hot days	2 days
Extremely hot days	2 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 9 and 12 September.<sup>62</sup>

At Mulchus on the border of the Hessen region of *Germany*, the winter to 10 March was most inconsistent with cold winds from the north and winds from the south that brought great snow, fog, clouds and rain. Spring was more temperate and dry. The winds were from the east and there were a few showers. The weather of 1699 produced a crop of wheat with black spots. The wheat was unwholesome and caused nausea both in man and beast. There was a great scarcity and dearth. After the equinox [around March 20/21], there was a moist rainy season to the end of October. The weather then turned most inconstant until the winter solstice [around December 21/22].<sup>72</sup>

At Breslaw [now Wrocław, *Poland*], the summer, harvest and winter were pretty temperate.<sup>72</sup>

At Leeds, *England* on 27 April, there was a terrible storm of thunder and lightning.<sup>72</sup>

On 27 April 1700, there was a thunderstorm that was very violent at Leeds, *England*.<sup>212</sup>

In 1700, the price of wheat [in *England*] averaged 40 shillings per quarter [quarter ton].<sup>212</sup>

In 1700, there was a famine in *England* from the rain and cold of the previous year.<sup>57, 72, 91</sup>

In 1700, it was extremely warm [in *England*].<sup>212</sup>

On 14 September 1700, a hurricane struck Charleston, South Carolina in the *United States* causing 97 or 98 deaths.<sup>141</sup>

During the autumn of 1700, a dreadful hurricane damaged Charlestown [Charleston], South Carolina in the *United States*, and threatened its total destruction. The sea rushing in with amazing impetuosity, obligated the inhabitants to fly to the second stories of their houses, where they generally were secure. A large vessel, belonging to Glasgow, which had come from Darien with a part of the unfortunate Scotch settlers, and was riding at anchor off the bar, was driven from her anchor, and dashed to pieces against the sand banks; and every soul on board perished.<sup>174</sup>

In 1700 during the period between 21 March and 18 April, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou. During the period between 17 June and 15 July, a drought engulfed Hopei (now Hebei province) in northern *China* at Sha-ho. During the period between 8 August and 8 November, a drought engulfed Chekiang province at Ch'ang-shan. Then during the period between 15 August and 12 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu and Shantung (now Shandong province) on the east coast of *China* at T'an-ch'êng [probably a misprint, "Yen-ch'êng"] and Lin-i [Lin-i is located at longitude 118.24° East and latitude 35.07° North.]<sup>153</sup>

---

**1701 A.D.** On the Feast of Candlemas [2 February] 1701, there arose in Paris, *France*, a furious hurricane. No one remembered having seen anything like it. The top of Saint Louis Church sank in on the assistants. This hurricane destroyed the kingdom.<sup>79</sup>

The summer of 1701 was the most remarkable since the year 1682 because of its long duration of the heat and its high temperatures. In *Italy*, it produced intolerable heat. In Paris, *France* the summer was characterized by:

Hot days	62 days
Very hot days	11 days
Extremely hot days	9 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 10, 11, 13, 26, 27, 28 July, 17 & 31 August and 1 September. On 17 August the temperature almost reached 104° F (40° C). In Dijon, *France*, in Burgundy the grape harvest began on 22 September.<sup>62</sup>

The summer of 1701 was also very hot in Paris, *France*. The summer produced, sixty-two days of a heat of 77° F (25° C), eleven days of a heat of 87.8° F (31° C), and nine days of heat 95° F (35° C). The highest temperature was reached on August 17 with a reading of 104° F (40° C).<sup>79</sup>

In 1701, the price of wheat [in *England*] averaged 37 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1701 [in *England*], there was an excessively warm summer.<sup>212</sup>

At Breslaw [now Wrocław, *Poland*], January was changeable. February weather was quite frightful, with clouds, shifting winds, cold and snow. March was milder, but often rainy, stormy, cloudy with hail and shifting winds. April was the most inclement from the changes of wind, cold, hail, clouds, snow and rain. May was mostly foggy, cloudy and rainy. June had its rain and thunder.<sup>72</sup>

*Russia* suffered from a major famine in 1701. Many of the famines in *Russia* were accompanied by such horrors as eating of bark, grass, and dung, and cannibalism. In 1701 in Moscow, pies were made of human meat and sold openly in the streets.<sup>96</sup>

In 1701, floods struck many regions of *China* including:<sup>153</sup>

— Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh.

— Yunnan province in southwest *China* at Hao-ch'ing.

— Hopei (now Hebei province) in northern *China* at Kuang-p'ing.

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien and Canton.

— During the period between 6 July and 3 August, a flood struck Hupeh (now Hubei province) in central *China* at Huang-kang and Kwangtung province at Ta-pu and Ch'ao-an.

In 1701 during the period between 6 June and 5 July, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at T'ang-i. During the period between 6 July and 3 August, a drought engulfed Kansu (now Gansu province) in northwest *China* at Lin-hsia and Lanchow. During the period 2-30 October, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ung-shan.<sup>153</sup>

In *England*, the frost that began on 31 December 1700 lasted until 8 January 1701. The ice [on ponds or lakes] was only two inches thick because it was covered [insulated] with snow six inches thick and later ten inches deep. The next few days produced a mixture of rain, snow, frost and fine days. On 17 and 18 January, it was windy, with flooding rains, a terrible storm with great loss at sea and damage to land. The weather to the 26<sup>th</sup> consisted of rain, wind and snow. There was frost to the end of January. From the quantity of snow and rain, and the suddenness of the thaw, came a great flood, which made low grounds like a sea. February weather varied with wind, hail, and rain in abundance and some pleasant days towards the end of the month. On 6 February, there was a dreadful storm with lightning and one clap of thunder. The first of March was a half rainy day. It was a sober and calm season to the 12<sup>th</sup> of March, and then the rest of the month was sunshine and still calm with no winds. But there were pretty hard frost from 20 March to the end of the month. Yet it was mixed in with heat in the mornings or evenings. April was a pleasant month but dry and frosty. So spring came but slowly on. On 10 April there was the first sighting of the cuckoo; on the 13<sup>th</sup> a nightingale. On 9 and 12 April, there was frost; but soon it was hot.

From 16 to 19 April, there was snow and hail every day and very cold. Only gooseberries were in blossom. On 1 May, the elm trees were just budding at London. On 10 May, there was a white frost. There was no rain since 29 April and the ground was very dry. From 16 to 22 May, there was thunder with fine showers. May ended with some stormy days. The month of June produced lovely weather. On 5 June, there was thunder. On 25 June, the thunder was long and loud and produced all flooding rains. On 30 June, there was continual rolling thunder with little or no rain. Several days in June were sultry hot. In general the weather in July was sultry hot with no rain. On the 15-18 July there was lightning with dreadful thunder and short outbursts of smart showers. August was intolerably hot both night and day, with much lightning and thunder. Even though it was a hot month with frequent showers, yet there was some white frost. September was hot still and a little remarkable. There was a mixture of hot sunshine and dull mists. There were some frost in October and periods of exceedingly cold weather, but the rest was pleasant glorious weather. There was ice at the end of October, 1 inch thick. The 16<sup>th</sup> of October was remarkable for a prodigious number of beetles driving in a great fog. November was generally warm and pretty dry. With the exception of 4 days, the first twelve days of December were dull days. From 15 to 21 December, there were hard frost and the ice was 4 inches thick. On 26 December, there was a terrible storm. This was followed by an abundant rainfall.<sup>72</sup>

---

**1702 A.D.** In 1702, the winter was very mild in *Italy*.<sup>62</sup>

On 3 February 1702, there was a violent gale at Upminster in East London, *England* with a great depression of the barometer of 28.43 inches; at Townley 27.39 inches.<sup>212</sup>

In 1702, *England* suffered drought. March, April and May were very dry in Lancashire and the crops of grass very poor. From April 23 to May 29, Upminster had scarcely any rain. March had been a dry month but during April up to the 23<sup>rd</sup>, it had been wet. After May 29<sup>th</sup>, there was a great shower. In *England*, it was excessively hot during the summer.<sup>212</sup>

In 1702, there was a most destructive gale at Chester in Cheshire, *England*.<sup>212</sup>

In 1702, there was a flood that ruined the watermills at Congleton in Cheshire, *England*.<sup>212</sup>

In 1702, the price of wheat [in *England*] averaged 29 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

The summer of 1702 was again unusually hot. The summer in Paris, *France* was characterized by:

Hot days	47 days
Very hot days	5 days
Extremely hot days	3 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 28 & 29 July and 5 August. In Dijon, *France*, in Burgundy the grape harvest began on 16 September.<sup>62</sup>

At Augsburg, *Germany*, the weather had a southerly moist constitution till after 11 March, then a clear east wind to 1 April. Then there was a strong south wind and often snow and sleet, succeeded by frequent rains till after the 1<sup>st</sup> of May. Then an east wind brought clear weather. But the spring was very dry, late and slow. June set in with a south wind and great rain, with the exception of a few clear days. July began very hot, but with thunder, lightning and cool rain soon followed. From the rising of the Dog-Star [Sirius], there was clear hot weather. August was mostly clear and hot. In November began an early winter with frost and often snow. But these were soon thawed by mild air and rain. This variety of frost, rain, and snow with south winds chiefly finished the year.<sup>72</sup>

In *England*, to the latter end of February it was very rainy and floody. On 3 February, there was a dreadful storm that did great damage. To the latter end of February, there was pleasant weather with a mixture of frost and snow. During 5 to 24 March in Hertfordshire, there was such unseasonable heat, normally the weather found in July. During March of this year, there were no clouds or rain; the ground was all dust. (There was no March like this from 1695 to 1741). On 24 and 25 March at night there were high winds and storms of hail. The 26<sup>th</sup> of March was so cold that it froze within doors. The weather was backwards until the middle of April. On 22 April, there were fine large dews, which brought spring on again. After this, there was perpetual dry weather. Hay harvest began in the beginning of May. All of June had fine weather. On 16 July, wheat was cut. There was an excellent summer until the beginning of October. Beginning on 6 October, there were some rainy days, a great deal of lightning and very loud thunder with a fierce storm of rain. To 8 November there was fine sunshine weather, with frosty nights. Then to the end of December, continual rains and wind, except some small frost that closed November.<sup>72</sup>

In Yorkshire, *England*, the first attempt at tillage was made on 10 April, when the weather was so intolerably sultry hot, that in about six miles compass, 37 or 38 draughts of oxen were killed. The likes of which occurred in severe other places.<sup>72</sup>

On 21 June 1702 at Hatfield, Yorkshire, *England*, there was a land-spout [tornado], like those at sea [waterspout].<sup>72</sup>

In 1702, a severe drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu. During the period between 27 May and 24 June, a flood struck Anhwei (now Anhui province) in eastern *China* at Ying-shan; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ên-hai; and Kansu (now Gansu province) in northwest *China* at Ning.<sup>153</sup>

---

**1703 A.D.** [In *Germany*], the south winds and mild weather continued to 18 January. Then there was severe cold cloudy weather that produced snow, which lasted until 26 January. Then gentle showers prevailed. The cold spring hindered vegetation till a mild season hastened on the fruitful year. The dog-days began clear and moist, but ended clear and hot, but rainy at last. After this the weather was inconstant. About 8 September, south winds brought in much rain and a frightful wind. A humid southerly constitution prevailed till after the solstice; then a clear east wind brought in severe cold, which prevailed until the end of the year.<sup>72</sup>

The River Thames in London, *England*, rose so high at Westminster, that the lawyers were brought out of the hall in boats.<sup>40</sup>

This was a very mortal summer in *England*. The rainy season, which began in November 1702, continued till far into February 1703. From the 14<sup>th</sup> to the 28<sup>th</sup> of February, there was fine sunshiny weather. But there was a hard frost from 17 to 23 February. It was the greatest frost this year with some little snow. With the exception of a few storms, all March and April was lovely mild sunshine weather, hot and dewy, often sultry hot, an early spring. From 4 to 11 May, there were continual cold rains. From 11 to 16 May, there was hot sunshine. On the 16<sup>th</sup>, it was excessively hot with much thunder and lightning and soaking showers. From 16 to 21 May, it was pleasant. Then to the 30<sup>th</sup>, there was an abundance of cold rains. From 1 to 5 June, the weather was pretty good. From 5 to 18 June, there was not a day free from rain. This was dark blustering dismal weather, like November. Bees were swarming in May, starved with cold and rains. All roads were flooded. From 18 to 20 June, the weather was good. But then to the 24<sup>th</sup> it was still worse with cold wet weather and much hail. The roads were never worse in any winter. Then to 28 July, there was fine summer weather and no rain. Then to the end of July all rain. On 31 July from nine o'clock at night to nine o'clock in the morning there was incessant dreadful thunder and lightning and much hail. August had no rain. Never was such a crop of hay and grass everywhere, except in the marshes. September began with nipping frosts. There was terrible thunder and

lightning on 11 September. After this was much rain. October was mild to the 23<sup>rd</sup>, then very wet and blustery weather to the end. On 22 November, there was calm sunshine but the thunder could be heard roar all day five miles distance from the shore. The 23<sup>rd</sup> was bright and the 24 & 25 there were steams, and then on the 26<sup>th</sup> began a memorable hurricane, or dreadful storm, which as far exceeded all others, as stormy were above a common gale. This Nation sustained more loss at sea by this storm, then ever it had by any engagement with an enemy. It was followed by a length of dry weather, which was happy. All the houses were striped, and only covered with deal boards, till tiles could be got. The demand for them was such, that they were 30s. per 1,000.<sup>72</sup>

In 1703, it was very wet from April to July and from September to November in Southern *England*. In Northern *England* it was not so rainy. July was dry.<sup>212</sup>

On 15 May 1703 in northern *France*, at Illiers [now Illiers-Combray] there were hailstones as large as a fist.<sup>93</sup>

In 1703, the price of wheat [in *England*] averaged 36 shillings per quarter [quarter ton].<sup>212</sup>

On 18 October 1703, an Atlantic hurricane struck Virginia and Maryland in the *United States*. Several vessels were driven to sea, and no more heard of.<sup>141</sup>

In 1703, a violent hurricane struck Virginia in the *United States* causing much damage to ships and plantations of the colonists.<sup>174</sup>

In 1703, several gales struck *England*. November 3 produced a violent gale. November 25 - 27 produced an extremely violent gale at Upminster. At Lewes, it caused great destruction; also at Norwich, Beccles, Sudbury and Colchester. From November 26 to December 1, there was the "Great Gale" that was so disastrous as to fill a volume of the "Philosophical Transactions of the Royal Society" with accounts of it. Probably surpassing all others on record. On December 8, there was a dreadful hurricane in *England*. On December 27 & 28, there was a violent gale at Leeds.<sup>212</sup>

From 26 November to 1 December 1703, a great gale struck *England*. Twelve men-of-war (with 1300 [1800] men on board) were lost in sight of land. London sustained a damage of £2,000,000. In Kent alone 17,000 trees were uprooted. Eddystone lighthouse was destroyed. The Lord Bishop of Bath and Wells and his wife were killed in bed in his palace. In the floods occasioned by it on the river Severn and river Thames and coast of Holland [now *the Netherlands*], 8000 persons lost their lives. In one place 15,000 sheep were drowned. It was called the Great Storm, and probably the most terrible that ever occurred in *England*. In Kent, 1107 houses and barns were destroyed, 500 grand trees in Penshurst destroyed, and 920 wherries, ships, boats, and barges sunk. Tiles rose from 50s. to £10. Defoe says, "Horror and confusion seized upon all, no pen can describe it, no tongue can express it, no thought conceive it, unless some of those who were in the extremity of it."<sup>212</sup>

On 26 November 1703, a destructive storm struck the coast of *England*, in which thirteen sail of British men-of-war were lost, and fifteen hundred and nineteen officers and seamen perished. A great many other vessels, with their crews, were also lost and an immense amount of other damage was sustained.<sup>1</sup>

In *England* on 26 November 1703, there was a great hurricane. "All the ships in the river, from London Bridge to Limehouse, with the exception of four only, were broken from their moorings and thrown on shore. Upwards of four hundred wherries were entirely lost, more than sixty barges were driven foul of London Bridge, and as many more were either sunk or staved above bridge. The loss of life was also very considerable."<sup>29</sup>

On 26 & 27 November in *England*, one of the most terrible storms on record; known as the “Great Storm” occurred. The devastation on land was immense, while on the coasts and in the harbors the loss of shipping was terrible. The loss of life was very large, and sheep and cattle were drowned by thousands from the floods occasioned, especially in the Severn and Thames valleys. The loss of property in London was estimated at 1,000,000*l*. Eddystone lighthouse was destroyed and its constructor (Winstanley) in it. On the coast of Holland [now *the Netherlands*] great damage was done.<sup>47, 57</sup>

On 26 November 1703, a great hurricane struck *England*. Several thousand persons were drowned in floods along the River Thames, in London. The hurricane destroyed property in London valued at \$10,000,000. [In present currency, that would be equivalent to \$272 million in damages based on the Consumer Price Index (CPI) inflation rates.] This tempest was known as the "Great Storm".<sup>197</sup>

The most terrible storm that had ever been known in *England*; attended with flashes of lightning occurred on November 27. The storm unroofed many houses and churches, blew down several chimneys and the spires of many steeples, tore whole groves of trees up by the roots, and the leads of some churches were rolled up like scrolls of parchment, and several vessels, boats, and barges were sunk in the River Thames – but the Navy suffered the greatest damage, being just returned from the *Mediterranean*, one 2nd rate, four 3rd rates, four 4th rates, and many other of less force, were cast away upon the coast of *England*, and over 1,500 seamen lost, besides those that were cast away in the merchants’ service – in London only, the damage was estimated at a million.<sup>40, 41, 43, 56</sup>

During the night of November 26, commenced the most dreadful tempest ever known in *England*, attended with vivid flashes of lightning. Houses were unroofed; steeples of churches blown down; while the largest trees were torn up by the roots. Several vessels were sunk in the Thames, and the royal navy in particular was seriously injured, and 1,500 seamen perished, besides those cast away in mercantile vessels. The loss sustained by London alone was computed at a million sterling, while Bristol lost 200,000*l*. Among the persons drowned was Admiral Beaumont.<sup>55</sup>

On 26-27 November 1703, the "Great Storm," was one of the most terrible that ever raged in *England*. The devastation on land was immense; and in the harbors and on the coasts the loss in shipping and in lives was still greater. The loss sustained in London alone was calculated at 2,000,000*l*. Sterling. The number of persons drowned in the floods of the Severn and Thames rivers in *England*, and lost on the coast of Holland [now *the Netherlands*], and in ships blown from their anchors and never heard of afterwards, is thought to have been 8,000. Twelve men-of-war, with more than 1,800 men on board, were lost within sight of their own shore. Trees were torn up by the roots; 17,000 of them in Kent, *England* alone. The Eddystone lighthouse was destroyed, and in it the ingenious contriver of it, Winstanley, and the persons who were with him. [The Eddystone lighthouse is located on the Edystone reef, 14 miles off Plymouth.] The Bishop of Bath and Wells and his lady were killed in bed in their palace in Somersetshire, *England*. Multitudes of cattle were also lost: in one level 15,000 sheep were drowned.<sup>90</sup>

Kinder, the Bishop of Bath, and his lady were killed in a great storm in *England* in 1703 from falling chimneys.<sup>40</sup>

In 1703, a dreadful tempest struck *England*.<sup>128</sup>

On the night of 26/27 November 1703, a tempest of extreme violence struck *England*. It was preceded by a very wet season lasting about 6 months. “About 10 o’clock [in the evening] the barometers informed us that the night would be very tempestuous – the mercury sunk lower than ever I had observed it on any occasion.” Because of the severity of the storm, between 1 and 2 o’clock in the morning, most people lying in their beds, expected the fall of their houses. The bricks, tiles, and stones, from the tops of the houses, flew with such force, and so thick in the streets, that no one thought fit to venture out, though

their houses were near demolished within. The fury of the wind was greater than was ever known; the noise had also something in it more formidable; it sounded aloft, and roared not very much unlike remote thunder. From 2 o'clock the storm continued and increased to 5 o'clock. Between 5:30 and 6 o'clock, the storm reached its peak. During this time several ships, that rode it out until now, gave up all – for no anchor could hold. Even ships in the River Thames were all blown away from their mooring, and from Execution-dock to Limehouse hole, there were but four ships that rode it out. The rest were all driven down into the Bight, as the sailors called it, from Bell wharf to Limehouse, where they were huddled together and drove on shore, heads and sterns, one upon another, in such a manner as any one would have thought it had been impossible. The storm continued for seven days but to a lesser degree. The storm spread over a great part of northern Europe. Over most parts of south *Britain* and *Wales*, the tallest and stoutest timber trees were uprooted or snapped in the middle. It was estimated that 25 parks in several counties each lost a thousand trees and those of New Forest, Hants above four thousand. Whole sheets of lead were blown away from the roofs of strong buildings. Seven steeples, over four hundred windmills and eight hundred dwelling houses were blown down in addition to barns, out-houses and a great number of orchards. About 120 persons lost their lives on land. At least eight thousand seamen perished. The estuary of the Severn suffered much by the breaking in of the sea. The country for a great extent was inundated, the vessels driven upon the pastureland, and many thousand sheep and cattle were drowned. The spray of the sea was carried far inland in such quantities, as to form little concretions or knobs of salt on the hedges; and 25 miles from the sea, in Kent, made the pasture so salty, that the cattle for some time would not eat it. The total damage was estimated to exceed that of the Great Fire of London.<sup>175</sup>

A vessel laden with tin, being left in a small port of Helford near Falmouth, *England*, with only a man and two boys on board, drove from her four anchors at midnight [26/27 November 1703], and went to sea. This vessel made such speed from the wind, almost without a sail, that by 8 o'clock in the morning, by the presence of mind of one of the boys, she was put into a narrow creek in the Isle of Wight, and the crew and cargo saved. This run may give us some conception of the velocity of the wind. For if we consider that the course of the vessel, even by the winds, could not have been direct, but in a large curve outwards from the coast; the rate at which she went exceeded 30 miles per hour on average. As a result the winds from this hurricane must have been three or four times greater.<sup>175</sup>

On 26 November 1703, a dreadful hurricane struck *Great Britain*. The great storm, set in at ten at night, and raged violently until seven the next morning. It extended its destruction to every part of the kingdom. In the capital [London], upwards of two thousand stacks of chimneys were blown down. The lead on the tops of several churches was rolled up like skins of parchment. Many houses were leveled with the ground, and by the fall of the ruins, 21 persons were killed, and more than 200 wounded. The ships in the River Thames broke from their moorings: four hundred wherries [a type of boat that was traditionally used for carrying cargo or passengers on rivers and canals in England] were lost, and many barges sunk, with a great loss of lives. At sea, the destruction was still greater: twelve ships of war, with upwards of eighteen hundred men onboard, were totally lost, together with many merchantmen.<sup>191</sup>

On 26 November 1703, a Great Storm of wind devastated *England*. The storm lasted from noon on Wednesday 24 November to noon on Wednesday 1 December with the storm reaching the intensity of a perfect hurricane on 26 November [Julian Calendar].<sup>209</sup>

— The *Paris Gazetteer* stated there were 30,000 seamen lost in several ports of *England* and 300 sail of ships [sailing ships] were destroyed in this great storm. [I have seen several estimates of the damage caused by this storm on the shipping and they vary significantly from one another. And the final count will never be known. I can understand the difficulties of coming up with an exact count of the number of seamen lost and the number of sailing ships destroyed in this great disaster. On the River Thames near London, almost 700 ships were smashed together in one great heap. In many cases these ships were manned by only a skeleton crew with most seaman on shore leave. Had they been fully manned, the casualties would be astronomical. Many of the ships that took shelter along the coast, were terribly

battered and suffered great damage during the storm and only then broke anchor in the final fury of the storm and drifted out to sea and were never seen again. The ships in British ports and along the coast hailed from around the globe. There was a Russian Fleet of nearly 100 sails. There was a great fleet of colliers, nearly 400 sails. There was a fleet of ships from the Royal Navy just arrived from the Mediterranean. There was a fleet of transports and tenders from Ireland and another fleet of victuallers, tenders, storeships and transports. These two fleets were set to accompany the King of Spain to Lisbon. There was the Grand Fleet of about 300 sails. There were hundreds of merchant ships including East Indiamen. There was a fleet of ships from America (the Virginia fleet). There was the Barbadoes [Barbados] fleet. In Holland [now *the Netherlands*] there was a fleet of 180 sails that included a fleet of transports, several English Men of War and the Dutch Fleet. Therefore an exact account of losses was left in historical obscurity. Although the original copy of the book contained a listing of the ships of the Royal Navy lost in this storm, they unfortunately were not in the copy I had access to; therefore I was unable to report on these vessels.]

— Many ships fled into British ports ahead of the advancing storm. Of the ships that could not make it into port, and rode out the great storm at sea, 43 sails [sailing ships] were lost. Captain Soanes was Commandore [Commodore] for a Squadron of Men of Wars located at Milford Haven, *Wales* when the storm struck. He reported that in that harbor, there were about 130 merchant ships. During the storm, 30 of the merchant ships were lost, and 3 additional ships went missing. At Grimsby Road [seaport on the Humber Estuary in Lincolnshire, *England*], of the eighty sails [sailing ships] at the seaport, only 16 remained, the rest were blown away. Three ships were cast ashore on Den Island at the mouth of the River Humber. One of these ships completely overturned. There were 26-27 ships driven out to sea from the River Humber and most of these ships were never heard of again. In the port in the county of Norfolk, 7 ships were lost in the storm and about 20 seamen perished. An account from Bristol related that the storm moved most of the ships in King Road a considerable way inland, some ships were much shattered and several seamen were lost. One large vessel broke all in pieces with nearly all the seamen lost. At Huntspill in Somersetshire, 5 vessels were driven ashore. In the harbor at Swanzy in *Wales*, 9 vessels were driven ashore and one vessel was staved to pieces, and 3 seamen drowned. BRIGHTHELMSTONE [now Brighton] in Sussex reported it lost 3 ketches [sailing ship with 2 main masts] and 1 pink [small ship with narrow stern, generally flat bottom, large cargo capacity and square rigged]. Of these ships all but 7 of the ships company were drowned. An additional ketch and pink were driven ashore and stranded. LYMINGTON reported that one ship was cast ashore, and 14 seamen perished. LYME reported one vessel lost and a privateer of 8 guns was cast ashore. The privateer lost 40 seamen. The Isle of Thanet reported that a ship *Latchford* was lost with all the men and women passengers aboard, along with a pink that was blown away. At Southampton, most of the ships on the river and of the keys were blown ashore, some partly torn to wrecks. A sailor at the Downs reported that four 3<sup>rd</sup> Rate ships, the *Mary*, *Northumberland*, *Sterling Castle*, and *Rejuvenation* were all sunk and the sailors drowned, over 1,500 seamen. He also reported that four other ships including 3 hospital ships were split, some sunk and most of the men drowned. Also there were 40 merchant ships that were cast away and sunk. In King Road at Bristol, the *Canterbury* store ship was driven ashore, and 25 seamen drowned. Also the *Richard*, *John*, *George* and *Grace* were sunk with many seaman lost. Overall, there were about 70 seamen lost at Kings Road. At Yarmouth Road, there was a great Fleet of about 330 colliers, and a great fleet from Russia and a reserve frigate convoy. There were 2 Men of War and about a hundred sails of coasters. Many of these ships sustained significant damage during the Great Storm and many broke anchor. The fate of many of these is not known. But at Yarmouth, one ship from the Russian Fleet was sunk, not one man saved. Another ship from the Russian Fleet broke anchor and smashed into a Collier and they both sank. The Reserve Frigate [Frigate] foundered in Yarmouth Roads and all her men were lost. A Man of War was lost off of Harwich but its crew was rescued. At Plymouth, the ships *Edystone* and *Winchelsea* were lost. Three other merchant ships were cast away in Plymouth Road and most of their men lost. At Portsmouth, several ships were blown out to sea and never heard from again. One of these ships, the *Newcastle* was lost off the Coast of Sussex with all their men but 23 drowned. The ships *Resolution*, *Eagle*, and *Litchfield* were also lost except their crews were saved. Several ships from Cows [Coves] were driven

out to sea. One of these ships full of soldiers ran aground in Stokes Bay. Two merchant ships that were driven out to sea were never heard from again. At Falmouth, 11 sails of ships were washed ashore. In Barstable Harbor, a merchant ship was overturned, and the expert advice boat was very much shattered, and the Key of the Town almost destroyed. Of the 11 or 12 ships that fled to the Coast of Holland [now *the Netherlands*], most were lost.

— The author of the book estimated that 8,000 men were lost at sea, counting those lost on the coast of *Holland*, those on ships that were blown away and never heard from again, those that drowned in the flood of the River Severn and in the River Thames. He also estimated around 123 people were killed on land in *England* during the storm. The author estimated that the losses from the Great Storm far exceeded the losses sustained in the Great Fire of London (which some have estimated at 4 million sterling [£571 million in present currency using the retail price index inflation rate]). The Great Fire was concentrated in the city of London, among the wealthiest part of the people. The Great Storm was spread out over the entire country affecting rich and poor alike, and almost everyone lost something in this storm.

— There were several great ships fast aground at Goodwin Sands. Many seamen off these broken wrecks managed to make their way ashore at Goodwin Sands during low tide but were trapped there and frantically signaled for help. But in the town of Dover in Kent, *England*, even though the townsfolk saw the signals, no one responded with a helping hand. Mr. Thomas Powell, the mayor asked the Custom House Officers to aid these seamen in their distress but they refused. He then rounded up several stout honest men from the village and offered them out of his own pocket, 5s per head for each sailor they saved. They then went to the Custom House and took their boats by force. As a result, the lives of 200 seamen were saved. Upon bringing these seamen, who were almost dead from cold and hunger, back to town, the mayor requested assistance from the Queen's Agent for Sick and Wounded Seamen, but the agent would not relinquish one penny. Mr. Powell then provided the seamen with meat, drink and lodging out of his own pocket.

— On the River Thames, all the ships, except 4, between the upper part of Wapping and Ratcliff Cross were blown away. They were all driven into the bay from Ratcliff Cross and Limehouse Hole. This great number of ships, around 700 sails of ships [sailing ships], was smashed into one large heap. Some vessels lay heeling off with the bow of another ship over her waist and the stem of another upon her fore-castle. The boltsprits [bowsprits] of some drove into the cabin windows of others. Some lay with their sterns tossed up so high, that the tides flowed into their fore-castles. Some lay so leaning upon others, that the undermost vessels would sink before the others could float. Near Gravesend, many ships were driven ashore below Tilbury Fort. There were also 500 wherries [a boat used for carrying cargo or passengers on rivers and canals] lost, dashed to pieces, along with 300 smaller ship boats. There were 60 barges and lighters that were driven foul of the Bridge and another 60 that were sunk or staved between the Bridge and Hammersmith.

— The city of London was devastated. The houses looked like skeletons and there was a universal air of horror on the people who emerged from their homes after the storm. The city streets were rubble heaps. About 2,000 chimneys were blown down. The chimneys in the city buildings were built of large stacks. The houses being so high, that when these chimneys fell, they demolished the houses they fell upon. The storm also destroyed the gable ends of houses, blew off some roofs and demolished 16-20 houses completely. In addition many garden walls came down. The lead on top the churches and other buildings were rolled up like a roll of parchment. These included Westminster Abby, St. Andrews Holbourn [Holborn], and Christ Church Hospital.

— After the storm, the streets of London were covered with [roof] tiles and slates that fell from the tops of houses. As a result, the price of tiles rose astronomically from 21s to £6 per thousand for plain tiles. Also the bricklayers increased their labor prices to extraordinary levels. As a result, many individuals refused to pay these exorbitant prices and instead resorted to wood (deal boards) to repair the roofs of their houses. Many houses were open to the elements and a rainstorm could easily destroy the contents of these buildings in this state. But the weather held for 3 weeks and in that time the roofs of many houses were covered with deal boards, old tiles, pieces of sail cloth, tarpaulin, and the like.

— Twenty-one people died on land in the storm in London and 200 were wounded or maimed; many of

these from falling chimneys. In addition there were 14 people drowned in a Wherry [a boat used for carrying cargo or passengers on rivers and canals] going to Gravesend and 5 in a Wherry from Chelsey [Chelsea]. Others drowned in the river but their bodies were never recovered.

— In the countryside, towns and villages reported damage similar to that seen in London in the counties of Oxfordshire, Berkshire, Somersetshire, Gloucestershire, Northamptonshire, Yorkshire, Wiltshire, Warwickshire, Hampshire, Hartfordshire, Herefordshire, Kent, Devon, Worcestershire, Southampton, Cambridge, Cornwall, Suffolk, Sussex and Surrey in *England* and in the cities of Cardiff, Laneloe and Monmouth in *Wales*. The storm was of greater intensity in the south of *England*. The River Severn rose to great heights and flooded inland over a mile. The storm destroyed seawalls. The storm blew down many trees by the roots, even large 80-foot [24-meter] tall trees. In the county of Kent, 1107 dwelling houses, outhouses and barns were blown down. Many cattle, sheep and other animals were drowned. The damage done by the tide on the banks of the River Severn, amounts to over £100,000; 15,000 sheep drowned. At North Marsh, the water broke with such violence that it drove 6 miles [10 kilometers] into the country drowning many cattle. Over 80 people drowned in the marshes and river at Bristol, several whole families perished together. The high tide at Bristol spoiled 1,500 hogsheads [approximately 95,000 gallons, or 360,000 liters] of sugar and tobacco. Throughout *England*, the storm took down many chimneys and roof tiles. There was incredible damage done to the churches, houses and barns. About 400 windmills were blown down.

— Throughout *England*, most of the high trees were broken down by the fury of the storm. The storm caused great destruction to the orchards throughout *England*. In Slimbridge, the storm took down a vast flourishing elm tree by the roots. The roots were 1 ell [3.75 feet, 1.1 meters] deep, and 18.5 feet [5.6 meters] in diameter. At Swanzy in *Wales*, one gentleman had 2,500 trees blown down. Many of the large trees were broken in the middle; others were uprooted. At White Larkington Park, 400-500 tall trees were blown down. In Brocket Hall Park, two miles outside Hatfield, about 1,000 trees were blown down. In her Majesty's forest called New Forrest near Limington, 4,000 trees, some of great bulk, were torn up by the roots. During a circuit through Kent, over 17,000 fallen trees were counted. Twenty-five parks scattered over several counties, had over 1,000 trees blown down. And 450 parks and groves, had between 200 and 1,000 large trees blown down.

— The force of the wind was great. At Ewell, it blew the lead off a flat roof, over a brick wall 10 feet [3 meters] high carrying it a distance of 6 rods [99 feet, 30 meters] from the house. The lead weighed 10 tons. At Whitstable, the winds lifted a boat out of the water and flung it 50 rods [825 feet, 252 meters] onto dry land, breaking the knee of a man to pieces, who was standing in its way. At Chartham, the lead from a church was rolled up and blown 20 rods [330 feet, 100 meters] distance. The lead weighed over 2,600 weight [about 2,910 pounds]. At Leamington Hastings, six sheets of lead were rolled up like cloth and hurled 151 feet [46 meters] away. The lead roll weighed 50 hundredweight [5,600 pounds]. It most likely would have traveled further except it flew into a tree.

— At Besselsleigh in Berkshire, this Great Storm spawned a tornado.

— The rainwater was brackish [saltwater] 25 miles [40 kilometers] from the sea to the windward direction. The cattle and sheep would not eat the grass for several days because of the salt.

— This storm reached beyond *England*. In Dunkirk, *France*, the 23-27 vessels in the road [roadstead] were dashed to pieces at Peer Heads. The effects of the storm were felt in Diepe [Dieppe] and in Paris and in the northeast countries such as Holland [now *the Netherlands*]. Her Majesty's ship *Association*, a second rate of 96 guns was anchored off Long Sand Head [in the Thames Estuary] during the hurricane. She was driven from her anchor and almost floundered taking in vast quantities of water. She was then driven north to the bank of *Flanders* [now *Belgium*], then the coast of *Holland* and *Friesland* [now the *Netherlands*] to the entrance of the Elb [Elbe] River where the storm was almost as violent as it was when they broke anchor in *England*. She was then driven to the coast of *Norway*.

In 1703, there was a famine in *India* in Thar and Parkar districts of Sind [now Sindh in southwestern *Pakistan*].<sup>57</sup>

In 1703, there was a famine in the Bombay Presidency in *India*.<sup>156</sup>

In 1703, floods struck many regions of *China* including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Kao-t'ang, Tung-a, Ch'ing-ch'êng, Yang-ku, Lin-i, P'ing-yao and Ên. [Lin-i is located at longitude 118.24° East and latitude 35.07° North.]

— Hopei (now Hebei province) in northern *China* at Nan-yüeh, Ning-ching and Kuang-p'ing.

— Hupeh (now Hubei province) in central *China* at Chiang-ling and Chien-li.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou.

— Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at P'ing-yüeh.

Houses were damaged by the floodwaters.

— During the period between 13 August and 10 September, floods struck Shantung province at P'êng-lai.

— During the period between 8 December 1703 and 6 January 1704, floods struck Shensi (now Shaanxi province) in central *China* at Nan-chêng and Shantung province at Tsinan.

In 1703 during the 3<sup>rd</sup> moon in the vicinity of Shanghai, *China*, there was an overflow of the sea. Then during the autumn, there was a flood.<sup>166</sup>

In 1703 during the period between 16 April and 15 May, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hsüan-p'ing. During the period between 14 June and 13 July, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Hêng. During the period between 14 July and 12 August, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien.<sup>153</sup>

---

**1704 A.D.** In *England*, it was the hottest and driest summer known for previous twenty years.<sup>47, 72</sup>

In *England*, January set in with a hard frost. Ice was three inches thick. On the 19<sup>th</sup> of January, there was stormy weather. On the 20<sup>th</sup>, there was a very great storm with a tempest of thunder, lightning and hail in Cornwall in extreme southwestern *England*. The grand fleet with the King of Spain driven back, and 11 lesser ships lost on the back of the Isle of Wight. There was warm weather. On 11 February, there was the first rain worth notice. Since the great storm, weather was exceeding dry. The shower of 11 February was succeeded by clear hard frosty nights and days of sunshine. There was no more rain until June and then only a little. July and August was exceedingly dry. This was the best salt [making] season, Yarmouth had in 20 years. September began still dry, and then there was much rain by stormy showers. The last four days of September was glorious summer weather. In October, there was a great scarcity of water for cattle. It was remarkably warm and no ice. On the second week, there was a little rain. On 21 October, there was a storm with extremely high tides. November began with dismal rain and wind, but the temperature was warm. On 8 and 9 November, there was a great storm. Then there were some fine days. On the 23<sup>rd</sup>, there was a little ice. December began dull, but from 4 to 14 December, there was warm sunshine. But there were frosts at night. Afterwards it was sunshine with blustery winds till Christmas, then good to the end of the year. This was a most droughty year. The grass was all burnt up.<sup>72</sup> [The grand fleet with the King of Spain was an Anglo-Dutch Fleet carrying Charles VI, Holy Roman Emperor, the Hapsburg claimant to the Spanish Throne as Charles III, against (French) claims to the Throne in the War of Spanish Succession. The Fleet, carrying Charles, sailed from Portsmouth for Portugal on January 5 but were driven back by a storm and remained until February 12 when it sailed for Lisbon.]

In July 1704, there was an inundation of the River Nyne in Northamptonshire, *England*.<sup>195</sup>

The summer of 1704 was remarkably hot and dry [in *England*]. “We had in this county [Northamptonshire] more lightning and thunder than ever I have known before or since.”<sup>195</sup>

In 1704 in Venice, *Italy*, the drought was so considerable that water had to be fetched five leagues [15 miles, 24 kilometers] off.<sup>212</sup>

In 1704, the price of wheat [in *England*] averaged 46 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

On 26 November 1704, a furious and destructive storm struck Northamptonshire, *England*. At Cranford, it caused great damage including breaking the steeple of St. John down to the battlements, which then caused the destruction of much of the church.<sup>195</sup>

The summer of 1704 in Paris, *France* was characterized by:

Hot days	41 days
Very hot days	11 days
Extremely hot days	9 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 13, 24, 26, 27, 29 July and 23, 28, 29, 30 August. In Dijon, *France*, in Burgundy the grape harvest began on 12 September.<sup>62</sup>

At Augsburg, *Germany*, this was a temperate favorable year throughout.<sup>72</sup>

In 1704, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 6 March and 3 April, floods struck Hopei (now Hebei province) in northern *China* at Ching; the Han River in Shensi (now Shaanxi province) in central *China*; and Hupeh (now Hubei province) in central *China* at T'ien-mên, Mien-yang and Chien-li.

— During the period between 2 June and 1 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien; Kiangsu (now Jiangsu province) on the east coast of *China* at Huai-an [uncertain name, “Shan-yang”]; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu; Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou; Hupeh province at Hanyang, Han-ch'uan and Chien-li; and Hopei province at Hsing-t'ai.

In 1704, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Ch'ing-p'u, P'ei and Lin-ch'ü; and Shantung (now Shandong province) on the east coast of *China* at Lin-i and Kuang-jao. [P'ei is located at longitude 117.00° East and latitude 34.47° North and Lin-i is located at longitude 118.24° East and latitude 35.07° North.]

— During the period between 2 June and 1 July, a drought engulfed Kansu (now Gansu province) in northwest *China* at Ching-ning and Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ü.

— During the period 2-31 July, a drought engulfed Shansi (now Shanxi province) in northern *China* at Chiang.

— During the period 30 August and 28 September, a drought engulfed Yunnan province in southwest *China* at Yung-p'ing.

**Winter of 1704 / 1705 A.D.** The winter was intensely cold and stormy in the Philadelphia area in the *United States*. In December, snow fell to the depth of three feet (0.9 meters) on the level. The Delaware River was fast with ice two feet (0.6 meters) thick, from the 10 December 1704 to the 10 March 1705.<sup>1</sup>

In Philadelphia, Pennsylvania in the *United States* the winter of 1704 was long and severe, with many deep snows.<sup>1</sup>

Norris describes the cold winter in Philadelphia, Pennsylvania in the *United States*: “We have had the deepest snow this winter, that has been known by the longest English liver here. No traveling; all avenues shut’ the post has not gone these six weeks; the river fast; and the people bring loads over it as they did seven years ago. Many creatures are like to perish.”<sup>27</sup>

---

**1705 A.D.** In *England*, it was very dry until the end of August.<sup>47, 72</sup>

In *England* from the winter to March, the weather was exceeding dry. Only February began with a little rain. In March to the 15<sup>th</sup>, the weather was mild and dark with fogs. On the 19<sup>th</sup>, there was a storm and continued cold. It was a time of extremity, several cold hails, no rain and a backwards spring. April was full of clear sunshine. On the 20<sup>th</sup>, there were two loud claps of thunder to the west without rain. The month ended with a few showers. From 1 to 8 May, there were some showers, but generally dry and calm all the month. On 1 to the 15<sup>th</sup> of May, there was exceedingly cold weather both day and night. It killed the fern. June was hot with little rain. July had fine weather with some thunder about the middle of the month. On 11 August, there was a dreadful storm or hurricane. There were 800 sailors lost. The news was full of losses by sea and by land. There was a great drought in some places. No rain since May-day, in other places no rain since Lady-day. But from August the 15<sup>th</sup>, all showery and wet. Much corn grown and spoiled. The month of August ends cold. September begins cold and rainy, yet generally every other day is hot. The middle of September was pretty dry and the hottest. On 24 September, there was a great tempest at Yarmouth of rain, lightning, thunder, loud and near. This was followed by fair weather and sunshine. From 1 to 4 October, there was fair weather and sunshine; the 6<sup>th</sup> was rain; from 7<sup>th</sup> to 19<sup>th</sup>, there was calm and glorious sunshine; to the 24<sup>th</sup> cold dry blustering weather, then clear cold airy, sunshine to the end of the month. November was extremely cold. There was frost and snow lying unthawed from the 15<sup>th</sup> to the 19<sup>th</sup>. On 19 November there was rain and stormy weather. November ended with sunshine, frost, sleet, and much rain by squalls (showers with a gust of wind). December was extremely wet. In general, more rain fell in the latter end of November and through December than in the entire year. Hence in December, there were great and frequent showers on 6, 7, 8, 9, 19 and 28 December. On the 29<sup>th</sup> of December, a dreadful storm struck *France*. Tides rose up in the Loire River, 25-feet beyond normal – 118 ships, 6 of them Men of War driven ashore. The same occurred in *Ireland*. Half of Limerick was drowned. The ships came onto the keys. Such a flood was never seen before.<sup>72</sup>

In 1705, gales struck Upminster, *England* on March 30, April 5, August 11 and September 29.<sup>212</sup>

In *England* in June, the weather was excessively hot and dry. The tempest of 11 August was followed by much rain; yet so great was the drought before, that in September, all ponds were dry, and grass burnt up.<sup>72</sup>

In *Ireland*, there was a flood in Limerick; half Limerick drowned.<sup>47, 92</sup>

There were great rains and floods over the continent of *Europe*.<sup>47, 92</sup>

In 1705, the price of wheat [in *England*] averaged 30 shillings per quarter [quarter ton].<sup>212</sup>

In *Germany*, to the 1<sup>st</sup> of June, it was very uncomfortable, cold, snowy, rainy, windy with a late spring. In June it was clear and cold to the 8<sup>th</sup>, then rainy to the 11<sup>th</sup>, hot to near the end of the month and then cooler. The dog days were excessively hot and dry, but these were followed by a moist cold season. The rest of the year was moist and the weather changeable.<sup>72</sup>

The summer of 1705 was extraordinary because of the unusual heat in southern *France*. In Montpellier in southern *France*, especially on the 30<sup>th</sup> of July. "In my memory," Francois de Plantade, an assistant of Cassini wrote, "is not to find similar to this day, the air almost as hot as hell, as that which emanates from

the furnace of a glass factory, and found no" other refuge than the basement. At several places, eggs were boiled in the sun. In Hubin's thermometer, the liquid broke through the top. Amontons thermometer, although it was attached to a place where the air had no free access, rose almost to the degree in which it melts the tallow. The greater part of the [grape] vines burned on that single day, a phenomenon that had not happened in living memory in this country.<sup>62</sup>

The summer of 1705 in Paris, *France*, hardly produced any rain. The rainfall during 1705 was equal to around two-thirds of the average annual rainfall. Lyon was also affected by the drought.<sup>79</sup>

The summer in Paris, *France* was characterized by:

Hot days	33 days
Very hot days	13 days
Extremely hot days	5 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 30 June, 5 & 27 July, 2 & 6 August. On 6 August the tube of Cassini's thermometer completely broke when the liquid met the top of the instrument. La Hire's thermometer broke the same day as well. The highest temperature of 6 August, calculated from the specification of a Fahrenheit thermometer, would be 102.2° F (39° C). In *England*, in the month of August there was a period of short intense heat. In Burgundy, as well as in Lyon, *France*, the heat of summer was not very great. The grape harvest began only on 15 September.<sup>62</sup>

The summer of 1705 produced extreme heat. In Montpellier, *France*, the fearsome heat appeared July 17 and lasted until August 30, almost without interruption. The maximum occurred on July 30, and this occurred about three o'clock in the evening [afternoon], to a degree really frightening. The air seemed to come from a fiery inferno. Everyone was choking and took refuge in the cellars. We could cook eggs in the sun. The heat of the day scorched most of the grapevines and fruit trees. A famous academician measured the temperature at 107.6° F (42° C) degrees in the shade and 212° F (100° C) in direct sunlight, the temperature of boiling water. The summer of 1705 was not extraordinary in Lyon or Paris. The peak temperature occurred in Paris on 6 August with a reading of 93.7° F (34.3° C).<sup>79</sup>

In 1705, a hurricane struck Havana, *Cuba*. Four men of war with most of their crew were lost.<sup>141</sup>

In 1705, a hurricane or waterspout struck Havannah [Havana], *Cuba* and four men-of-war, with most of their crews, were lost in the harbor of the Havannah, though the period of its lasting was not more than twenty-four hours.<sup>244</sup>

In December 1705 in the north of *France*, the furious winds of the south and southwest blew two or three times. On the evening of 3<sup>rd</sup>, thunder joined the hurricane.<sup>79</sup>

In 1705, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Jehol province at Ch'ao-yang. Jehol (formally Rehe province) was located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*.

— During the period between 23 April and 22 May, a drought engulfed Hupeh (now Hubei province) in central *China* at Lo-t'ien and Kiangsu (now Jiangsu province) on the east coast of *China* at Shanghai.

— During the period between 18 October and 15 November, a drought engulfed Hopei (now Hebei province) in northern *China* at Chü-lu.

In 1705, floods struck many regions of *China* including:<sup>153</sup>

- Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang, Fêng-ch'êng, Chi-an and Chi-shui.
- During the period between 8 August and 8 November, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Ch'ing-p'u and Lu-ho; and Hopei (now Hebei province) in northern *China* at Pai-hsiang.
- During the period between 16 December 1705 and 14 January 1706, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Chia-hsing; and Hupeh (now Hubei province) in central *China* at Sui, Wuchang, Han-ch'uan, Ch'ien-chiang, T'ien-mên, Mien-yang, Chien-li and Tang-yang. At Sui, houses were damaged by the floodwaters.

In 1705 during the 4<sup>th</sup> moon [early summer], there was a great rain for ten days, as cold as winter in the vicinity of Shanghai, *China*. Then during the 7<sup>th</sup> moon, there was a great drought.<sup>166</sup>

---

**1706 A.D.** In *England*, from 14 December 1705 to 3 January 1706, the sun was not seen three times. The 3<sup>rd</sup> of January was a fine day. The 3<sup>rd</sup> to the 7<sup>th</sup> was overcast. On 7 January, it was very cold. On the 8<sup>th</sup>, it snowed all day. On the 9<sup>th</sup>, there was frost with some snow. On the 10<sup>th</sup>, there was an inch and a half of snow. On the 11<sup>th</sup>, there was a cold thaw, sleet, various weather, but mostly cold. There was frost and snow to the 25<sup>th</sup>. Then it snowed all day, three inches deep. There was wet weather to the end of January. February was dry, with fine sunshine, and frosty mornings. March began the same. From 8 to 14 March, it was blustering and very cold. The latter end of March was more moderate with three foggy days, yet hot at noon and sunshine. In April to the 9<sup>th</sup>, it was exceedingly cold with squalls of wind and rain. From 9 to 23 April, there was sunshine but very cold. Not normal April weather. On April 23<sup>rd</sup>, there was a hot sun but a cold night. April was a very dry month. In May to the 4<sup>th</sup>, there were rains and some thunder. From the 3<sup>rd</sup> to the 20<sup>th</sup>, it was very dry. On the 20<sup>th</sup>, there were fine ground showers, then showery till 8 June. Then there was dry weather to 10 July. There was a perpetual drought (except for some showers near London) till near the end of August. The beginning of September was wet and stormy. From 15 to 22 September, there was thunder and lightning. There was rainy foul weather. The winds were southwest for 14 weeks, which kept the Fleet from sailing all while in the channel. From 28 September to 8 October, there was fine sunshine moderate weather. October 8<sup>th</sup> was rainy. From 8 to 20 October, the weather was mostly fine. It was misty to the 24<sup>th</sup>. On 25 October, there was a great storm. Eight or nine vessels at Yarmouth were washed ashore; most in a wreck. On 26 October, it rained excessively. So much rain fell before 4 November, that the roads were never worse. On the 5<sup>th</sup> of November, there was frost and sunshine. The 6<sup>th</sup> to the 10<sup>th</sup> produced much rain, except on the 8<sup>th</sup> there was sunshine. From 10 to 12 November, there were such rains, that the post could not get into Yarmouth till the 14<sup>th</sup>, and even then he was fetched in a boat. To the 17<sup>th</sup> of November, nothing but rains, great and long. Then to the end of November, the weather was fine. From the beginning of December to the 4<sup>th</sup>, there was calm winds, overcast or fog. From 4 to 17 December, it was very wet with all sorts of weather. From the 18<sup>th</sup> to the 31<sup>st</sup>, the winds were southerly, most partly overcast, but a few clear days. December ended very cold.<sup>72</sup>

During the summer of 1706, there was extreme heat and drought in *England* and *northern Europe*. The summer in Paris, *France* was characterized by:

Hot days	43 days
Very hot days	1 day
Extremely hot days	1 day

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 8 August. In Dijon, *France*, the grape harvest began on 13 September.<sup>62</sup>

The year 1706 produced remarkable weather that was very warm, very dry and very long. The persistent heat lasted during the months of June, July and August. It reached its peak on 8 August when Father

[Père Louis] Cotte measured 97.2° F (36.2° C) [at Montmorency (a northern suburb of Paris), *France*]. Montpellier also felt this dry heat. There it lasted nearly four months, but with less intensity than in Paris.<sup>79</sup>

In *Germany*, January began tolerably well. February was cloudy. From 15 April to August, it was a very hot and dry year. There was a great drought that affected cows milk. The rest of the year was more temperate. Only the wind was very changeable.<sup>72</sup>

On 16 July 1706, a rainstorm began at 8 a.m. in Denbigh, *Wales*. It rained incessantly for 30 hours, with thunder and lightning. All the rivers in Denbighshire, Flintshire, and Merionethshire overflowed, and spoiled much corn [grain]. The stream was so choked with mown hay as to break down a dozen large bridges. Great oaks were uprooted and swept away.<sup>212</sup>

On 7 October 1706, there was a prodigious flood in the north of *Ireland*, which broke down several bridges.<sup>212</sup>

In 1706, the price of wheat [in *England*] averaged 26 shillings per quarter [quarter ton].<sup>212</sup>

In *England*, there was excessive heat and drought during the summer. In October, there was excessive rain and floods in Denbighshire, *Wales*.<sup>72</sup>

On 6 November 1706, an Atlantic hurricane struck the east coast of the *United States*. Fourteen ships foundered and other ships were given up for lost.<sup>141</sup>

In 1706 during the period between 5 February and 6 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ung-shan. During the period between 11 June and 9 July, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Huang-yen.<sup>153</sup>

In 1706, floods struck several regions of *China* including:<sup>153</sup>

— Kiangsi (now Jiangxi province) in southern *China* at Ch'ing-chiang, Hsin-kan [possibly a misprint, "Hsin-t'u"] and Shui-chin.

— Hupeh (now Hubei province) in central *China* at Ku-ch'êng, Chung-hsiang and T'ien-mên.

— During the period between 8 August and 8 November, floods struck Anhwei (now Anhui province) in eastern *China* at T'ung-ling and Fou-yang; and Kiangsu (now Jiangsu province) on the east coast of *China* at P'ei. [P'ei is located at longitude 117.00° East and latitude 34.47° North.]

In 1706 during the summer, there was a drought in the vicinity of Shanghai, *China*. Then in autumn, there were continuous rains and floods and a dearth and famine.<sup>166</sup>

**Winter of 1706 / 1707 A.D.** In *England*, the frost lasted from the 1<sup>st</sup> of January to April.<sup>47, 93</sup>

**1707 A.D.** In Dagenham (Essex) *England* in May, there was a great inundation, continuing over several years.<sup>47</sup>

In Dagenham, in Essex, *England*, on December 17, 1707; there was an inundation of the sea. These inundations continued until 1721.<sup>40, 41, 43</sup>

In *England* on 7 and 8 July 1707 was the greatest heat that had been observed in 46 years. In Paris, *France* the heat was very great and on 21 August was measured at 98.4° F (36.9° C).<sup>62</sup>

In Essex, *England*, the year began with very dry cold weather. Hay was very dear. June was cold and wet. Hay was ill got and much of it was lost or marred; hence it became dear, even though there was a great plenty of it. The 8<sup>th</sup> of July was a most memorable excessive hot day; many horses on the road died. In November and December, the air was moist and often cold.<sup>72</sup>

In *England*, there was moderate weather from the beginning of the year until the end of February. March was dry and cold on the whole. April was warm with fogs at first, often hazy yet often sunshine days. The only April showers occurred from 21 to 29 April. In May from the beginning of the month to the 22<sup>nd</sup>, there were gentle breezes, hazy air; often sunbeams. In the 3<sup>rd</sup> week of May, there was a little rain yet the ground remained dusty. June produced a little rain. From the beginning of July to the 6<sup>th</sup>, there were blowing winds and small showers. On the 7<sup>th</sup> and 8<sup>th</sup>, it was the hottest in 46 years. Many of Prince Eugene's Army died of heat in their march from *Italy* these two days. The heat continued to the 11<sup>th</sup> and there was lightning at night. From 14 to 17 July, there was much rain and smart showers. On 17 July, there was a tempest of thunder great and loud, lightning, rain and hail. On 31 July, there was thunder and lightning at Yarmouth. The first half of August was cold. It was stormy on the 5<sup>th</sup>. From 8 to 12 August there was a good harvest and calm sea. But on the 12<sup>th</sup>, there was a sudden shower of prodigious drops of rain. From the 18<sup>th</sup> to the 25<sup>th</sup>, there was a dead calm ending in a fog. On 27 August, there was dreadful lightning at night. During September the winds often blew hard. From the 3<sup>rd</sup> to the 5<sup>th</sup>, it was very cold. From the 6<sup>th</sup> to the 11<sup>th</sup>, it was hot. From the 11<sup>th</sup> to the 17<sup>th</sup>, it was most cold. From the 21<sup>st</sup> to the 26<sup>th</sup>, it was mild. From the 23<sup>rd</sup> to the 26<sup>th</sup>, there were almost continual rains with intervals of flying clouds of wind. On 27 September, the sea roared terribly. From 5 to 21 October, the winds were mostly blowing hard from the northeast with many dark nights. The 3<sup>rd</sup>, 6<sup>th</sup>, 23<sup>rd</sup>, and 30<sup>th</sup> of October were pretty much rain, with the rest of the month dry. November had alternating winds and periods of calm with dull and pleasant weather. It was dry to the 19<sup>th</sup>. Then there was some hail, snow and rain. The 23<sup>rd</sup>, 24<sup>th</sup> and 25<sup>th</sup> of November was calm with fogs. The 26<sup>th</sup> and 27<sup>th</sup> produced small showers. On 8 November, the high tide flooded all the deans [dunes?] like a sea; at the same time there was dreadful lightning with thunder and dark clouds to the northeast with great squalls. In December, the winds blew hard on the 3<sup>rd</sup> and 4<sup>th</sup>. The only frost was on the 14<sup>th</sup>. On 26 December, there was rain.<sup>72</sup>

In *Germany*, the weather from the beginning of the year was moist with mild temperatures until March. Then there was four days of snow. This was followed by an early spring. But that was checked by a cold east wind. At harvest time, there were south winds. December began with early cold and much snow. But a south wind melted it. The rest of December was cloudy and stormy.<sup>72</sup>

May, June, July and August was all very dry in *Italy*.<sup>72</sup>

On 3 and 26 July, there were great floods in *Ireland*. August the 9<sup>th</sup> in the county of Down in northeast *Ireland*, the day being calm, overcast, sultry and hot; there was a terrible thunder and lightning storm.<sup>72</sup>

On 3 July 1707, in the north of *Ireland*, there was a sudden great flood.<sup>212</sup>

On 26 July 1707 at Antrim in Northern *Ireland*, there was a flood. Two bridges were washed away on Six Mile Water. There was also a great flood on the River Roo.<sup>212</sup>

In 1707, the price of wheat [in *England*] averaged 28 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

On 9 August 1707, there was a violent thunderstorm at New Forge [Newforge] in Northern *Ireland*.<sup>212</sup>

In 1707 in London, *England*, there was an extraordinary fall of flies. These insects covered the clothes of persons and lay so thick that the impressions of the people's feet were visible on the pavement, as they are in a thick fall of snow.<sup>212</sup>

In August 1707, a hailstorm burst over the town of Como, *Italy*. Several of the hailstones weighed 10 ounces.<sup>205</sup>

In 1707, the inhabitants of the *Caribbean* island of Nevis were nearly ruined by a dreadful hurricane.<sup>143</sup>

In 1707 during the period between 31 May and 29 June, floods struck Yunnan province in southwest *China* at Hao-ch'ing; Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lung-mên and Ho-yüan; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu; and Shantung (now Shandong province) on the east coast of *China* at Tsou-p'ing.<sup>153</sup>

In 1707, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 6 May and 8 August, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Kuei-ch'ih; and Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou, Ch'ung-tê, Hai-yen and T'ung-hsiang. As a result, the rivers dried up.

— During the period between 8 August and 8 November, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Ch'ing-chiang; Anhwei province at Tang-t'u, Tung-liu, Han-shan and Wuhu; and Shantung (now Shandong province) on the east coast of *China* at Tsinan.

---

**Winter of 1707 / 1708 A.D.** During the period between 8 November 1707 and 5 February 1708, floods struck Hopei (now Hebei province) in northern *China* at Pa.<sup>153</sup>

---

**1708 A.D.** In *Germany*, this was a seasonable mild year until after the 1<sup>st</sup> of September. Then there were 16 clear days with little rain. Then after several changes of the wind, it settled down to 14 days of wind from the north. After this came a south wind and much rain. Then came an east wind with very great snow, followed by clear good weather. After that to 11 December; cold, snowy, cloudy weather. Then the rest of December was clear and cold.<sup>72</sup>

In *England*, January was a moist, wet, rainy, variable month. From 28 January to 12 February, there was frost. On the 9<sup>th</sup> and 10<sup>th</sup> of February, there was snow six inches deep. The ice was three to four inches thick before the snow. On the 12<sup>th</sup> began a thaw. On the 15<sup>th</sup> a little rain. From 26 January to 21 February, there was no more rain. February ended with spring weather. No more rain to 5 March and then on the 6<sup>th</sup> came showers. On the 8<sup>th</sup> and 9<sup>th</sup> of March, there was frost and ice. There was snow in the morning of the 10<sup>th</sup> and sleet in the afternoon. In March, there were no general rains but flying showers of rain, sleet, snow in many places. April was a glorious month though some cold days. On 1 and 2 April, it was rainy. From the 3<sup>rd</sup> to the 7<sup>th</sup>, the sun gleams hot. From the 4<sup>th</sup> to the 8<sup>th</sup>, there was hoarfrost. The 12<sup>th</sup> of April was hot like in July. There was no rain in April between the 2<sup>nd</sup> and the 28<sup>th</sup>. May was a dry month with very little wind. It was a dry cold month. In June from the 1<sup>st</sup> to the 22<sup>nd</sup>, there were cold easterly or northerly winds. The first week of June was dry. From the 16<sup>th</sup> to the 24<sup>th</sup>, there were claps of thunder with rain. On the 17<sup>th</sup> or 21<sup>st</sup>, there were cold rains. The month of June ended with small showers. On the 9<sup>th</sup> of July, there was thunder. On the 16<sup>th</sup> of July, there was dreadful thunder and lightning, especially in the night and much rainfall. Up to this time, there was no summer, just cold and wet weather. But the next week was very hot and it remained hot for the rest of July. The first three weeks of August were dry. On 2 and 3 August, it was very hot. After the 10<sup>th</sup>, the heat drops. There is a flying fog or mists but mostly sunshine. From the 13<sup>th</sup> to the end of August, the weather was moist. There was thunder and lightning from the 22<sup>nd</sup> to the 30<sup>th</sup>. On 30 and 31 August, it was very rainy. On the 1<sup>st</sup> and 2<sup>nd</sup> of September, the weather was temperate, yet faint. There were some small rains. On the 6<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, and 12<sup>th</sup> of September, there was loud thunder, lightning and rain. The last half of September was generally dry. October the 1<sup>st</sup> to the 20<sup>th</sup>, it was cold both day and night. The winds were northerly, but moderate, except for the 14<sup>th</sup>, 15<sup>th</sup>, 19<sup>th</sup> and 20<sup>th</sup>; thence to the end of the month, the winds were moist

and southerly. On the 1<sup>st</sup>, 11<sup>th</sup>, 16<sup>th</sup> and 18<sup>th</sup> of October, there was ice. The 30<sup>th</sup> was hot. From 1 to 11 November, the weather was dry with still winds. From the 11<sup>th</sup> to the 13<sup>th</sup> there were drizzles or squalls with little rain. The 19<sup>th</sup> and 20<sup>th</sup> was dry. From the 23<sup>rd</sup> to the end of November, the snow laid two inches deep. On the 25<sup>th</sup>, 26<sup>th</sup> and 27<sup>th</sup>, it was hard ice. In December to the 19<sup>th</sup> it was dry, blowing winds. On the 15<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, 20<sup>th</sup>, 23<sup>rd</sup>, and 24<sup>th</sup>, there was misty foggy weather. On the 23<sup>rd</sup>, there was a halo with fog and a rainy evening. On the 25<sup>th</sup>, there was easterly misting rain all day, which blew hard at east-northeast in the night. With this wind began one of the most remarkable winters for cold that had been upward of 58 years. This last summer, spring and harvest, was the coldest of any summer since 1647 (except for the year 1698).<sup>72</sup>

Thunderstorms or rainstorms and an earthquake desolated Provence, *France* in 1708.<sup>79</sup>

On 16 July 1708, there was a violent thunderstorm at Ipswich and Colchester in *England*.<sup>212</sup>

In 1708, the price of wheat [in *England*] averaged 41 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1708, a hurricane struck the southwest *Caribbean Sea* causing 578 deaths.<sup>141</sup>

In 1708 during the period between 6 May and 8 August, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing, P'ing-yüan, Chan-hua and Lin-ch'ü. During the period between 8 August and 8 November, a drought engulfed Hupeh (now Hubei province) in central *China* at Huang-kang; and Shantung province at Ên, Shih-p'ing and Lin-ch'ing.<sup>153</sup>

In 1708, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 18 June and 17 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow; Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-ch'un, Nan-hui and K'un-shan; and Anhwei (now Anhui province) in eastern *China* at T'ai-p'ing, Ch'ao, T'ung-ling, Wu-wei, Lu-chiang, T'ai-hu and Nan-ling.

— During the period between 18 July and 15 August, floods struck Anhwei province at T'ai-hu.

— During the period between 16 August and 13 September, floods struck Chekiang province at Ch'ü and Ch'ang-shan; Hupeh (now Hubei province) in central *China* at Chiang-ling; and Kiangsu province at Shanghai, Wu-chin, Tan-yang, and Soochow.

— During the period between 8 November 1708 and 5 February 1709, floods struck Anhwei province at Tang-t'u and Wuhu.

In 1708 during the summer, there was a great drought in the vicinity of Shanghai, *China*. This caused a very scarce year.<sup>166</sup>

**Winter of 1708 / 1709 A.D.** The winter in *Europe* was very severe and it lasted until March.<sup>28</sup>

Early January 1709 temperatures were dropping over most of *Europe*. The cold remained for three weeks, and was followed by a brief thaw. Then temperatures plunged again and stayed there. From *Scandinavia* in the north to *Italy* in the south, lakes, rivers and even the sea froze. At Upminster, shortly northeast of London, *England* temperature fell to 10° F, (-12° C) on 10 January 1709, while it sank to 5° F, (-15° C) in Paris, *France* on 14 January, and stayed at that level for the next 11 days. It has been estimated that the winter air temperature in *Europe* was as much as 13° F (7° C) below the average for 20th century *Europe*. Not only was January very cold, it also turned out to be unusually stormy.<sup>32</sup>

In *England* the winter of 1709 became known as the Great Frost, while it in *France* entered the legend as Le Grand Hiver. In *France*, even the king and his courtiers at the Palace of Versailles struggled to keep warm. In *Scandinavia*, the *Baltic Sea* froze so thoroughly that people could walk across the sea as late as

April 1709. In *Switzerland*, hungry wolves became a problem in villages. Venetians were able to skid across the frozen lagoon in *Italy*.<sup>32</sup>

The winter of 1708-09 produced a severe frost throughout *Europe*. In *England*, the frost lasted from December 1708 until March 1709. It was very severe throughout *Europe* but scarcely felt in *Scotland* and *Ireland*. At Uppminster, *England*, the coldest day was on 30 December when the temperature fell to 0° F [-18° C]. In London, the coldest day was on 3 January. The cold was very severe in southern *England* but much milder in Cumberland and Westmoreland; none of the lakes or rivers froze. The oldest man never recalled before having seen such extraordinary flocks of swans. There was much snow in the south of *England*, but very little in south of Yorkshire. In Edinburgh, *Scotland*, the frost lasted from early in October until the end of April. The cold was not severe but there was much snow. In Dublin, *Ireland*, the winter was harder than usual, but not so severe as it was in the south of *England*. The River Thames [at London, *England*] was full of ice, but not solid like 10 January 1684, when coaches drove over. In shallow ponds fish were destroyed; many birds and plants perished. In *Italy*, the cold was greater than for the past 20 years, and most of the oranges and lemons perished. The sea on the coast of Genoa and Leghorn was frozen. There were many deaths in Venice, *Italy*. At Namur, 80 soldiers were killed by the cold. At Pisa, many plants were destroyed. The winter was severe in *Switzerland*. At Paris, *France*, 60 men and many cattle were frozen to death. At Copenhagen, *Denmark* on 4 May 1709, the ice in Copenhagen harbor was 27 inches [69 centimeters] thick. On 9 April, people crossed the ice from *Denmark* to Schonen. The winter was very severe in Northern *Germany*.<sup>212, 231</sup>

During the great winter of 1708-09, in Lusatias [in *Germany*], many cows were frozen to death in their stalls. And many travelers on the road were frozen to death, or lost their hands, feet, noses, or ears, and others fainted, and were in great danger of life or limb, when brought to soon near the fire. Two gentlemen and a smith were frozen to death in *England*. Over 60 men and many cattle lost their lives near Paris, *France*. The same occurred at Venice, *Italy*. Eighty French soldiers were killed on the road by the cold near Namur, *Belgium*. On the Italian coast, several mariners on board a British man-of-war died of the cold, and several lost part of their fingers and toes.<sup>231</sup>

During the winter of 1708-09 [in London, *England*], the two coldest days were 30 December 1708 and 3 February 1709. This winter was great and universal.<sup>235</sup>

On 9 January 1709 [in *England*], it was extremely cold. The frost was so intense that in less than 24 hours rivers froze, so as to bear loaded wagons. Horses' feet were frozen to the ground. Cattle, sheep and birds perished. Great quantities of snow fell, and the storm continued for three months.<sup>212</sup>

During the winter of 1683 and 1708, coaches were driven over the ice [on the River Thames in London, *England*] and large fires were made on the ice.<sup>235</sup>

In *England* on 28 December 1708, there was a great storm at night. On the 29<sup>th</sup>, the winds blew hard from the northeast and froze water, urine and lakes and within doors with good fires in the rooms, it froze all liquors in the cellars. The sun and clouds alternated. On the 30<sup>th</sup>, it severely froze in the house with a dreadful cold. On the 31<sup>st</sup>, there was an unusual degree of cold. There was a storm with winds from the east, spitting snow and with the coldest wind with snow. Several ships were driven ashore. The wrecks with 5,000*l.* worth of cargo sold for 60*l.* In January 1709, the winds were often very high and stormy, as on 1, 3, 12, 15, 24, and 25 January and during the first and second weeks of February. This weather in 4 days time froze over the River Thames, notwithstanding the motion of the water by tides and stormy winds. Many booths were built upon it. The thermometer on 31 December 1708 was lower than it had been in the past 18 years. And the next day, it was a little less. It was much the same from the 12<sup>th</sup> to the 15<sup>th</sup> of February 1709. Several thermometers suck within the bubble; others at 90, or colder than the middle state of the air under the Pole. Urine froze under the bed, though there was a good fire in the

room. Bread and meal were all ice. Bottled beer in deep cellars froze. A nine-gallon barrel of small beer set in the chimney corner to thaw, afforded a gallon of ale; all the rest was dead water. Ships in great number came ashore in Yarmouth road, not merely by the violence of the wind, but from the impotence of the sailors to find their hands, and from the impossibility of sending the cables, which were cased thickly with ice.<sup>72</sup>

In *England*, the latter end of the second week, and the beginning of the third, countless thousands of geese by flights of five or seven minutes distance were continually making to the southward to find open waters. They crept low and slowly along the shore, as the weakest among them were able to fly, some of which were often dropping. But the moment they came to the mouth of any river, they ascended strong and swiftly in the air, whence they might take a view of the waters many miles into the land. And when they observed they were all ice, descended and crept again as before. The further south, the severer the winter. For this extreme cold reached not only the northern countries, but over *France* also and fiercer by their accounts than here [in *England*]. Even *Portugal* itself felt the severity of it. Ink froze in my pen, even though I was by a good fire, that I could not write a line at once. The ice was said to be a foot thick at land, but on the coast where it never freezes so hard, it was eight inches. On the 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, and 17<sup>th</sup> of January, there were thaws. But from the 22<sup>nd</sup> to the 28<sup>th</sup> there was frost again but less cold and milder, yet it froze two inches during the night. There was frost again from 8 to 20 February. From then till the end of February, there was a thaw. Yet the ice of the first frost still remained despite all these thaws. And indeed from February the 12<sup>th</sup> to the 15<sup>th</sup>, it froze five or six inches. From 26 February to 6 March, it was a hard frost. Thus far no appearance of spring, even in the south. From 25 December 1708 to 12 March 1709, above 50 days frost. This has not happened in many years. There were 50 days of wind somewhere in the east at most 30 days of northeast winds blowing hard, and above half of these dreadful storms or a scout of wind. The coldest weather was on 30 December and 12 February. In the end of the 4<sup>th</sup> week of May, it still continued cold, the Elm trees yet naked [without leaves] in Norfolk and Suffolk, *England*.<sup>72</sup>

In 1709, the winter began with wind, rain, snow and fog. From January to April was the greatest frost all over *Europe* that had been in the memory of man. There were only a few short breezes of south wind and temperate air between. In many places the earth had become quite barren. The husbandmen's [farmers] labor and sown seed were lost. The fruit trees were either blasted or brought forth little fruit. And the fruit that did come forth was either wormy, or blasted with red and black specks. The [grape] vines were dead to the roots. The very rocks and stones mouldered down to sand. The severity of the cold killed many cattle and many people were frozen to death.<sup>72</sup>

In 1709, the *Adriatic Sea* was frozen and the olive trees killed in *Southern Europe*.<sup>42</sup>

In 1709, the *Adriatic* and *Mediterranean Seas* were frozen at Genoa, *Italy*; Marseille, *France*; and Celle, *Germany*.<sup>60</sup>

1709 A.D. (Perhaps the most intense season which has ever occurred within the range of history), the *Adriatic Sea*, and the *Mediterranean Sea* from Genoa, *Italy*, by Marseilles, *France* to Celle [Cette now Sète, *France*], frozen. All the rivers and narrow seas of *Europe* frozen.<sup>38</sup>

The chill of 1709 broke out on 6 January and lasted until the 24<sup>th</sup>. The frost began again in February and the beginning of March. All the rivers in *France*, except perhaps the Seine in Paris and the Rhone to Viviers, were completely frozen. The large lakes and pond in the Languedoc and Provence also froze. The freezing up of the Thau Lake, very deep, very stormy, and was so complete and so solid that it opened an unknown road connected up with the Sea from Balaruc and from Bouzigues to Cete (now Sète) on the ice. Finally, even the sea froze off the coast of Cete (now Sète), of Marseille and in the

English Channel. Frosts and snows of 1709 almost ruined most of the crops. All the olive trees died from Perpignan to Nice in *France*.<sup>79</sup>

In 1709, in this memorable winter despite the continuing severe cold, left unfrozen the middle of the Seine River; however, large ice floes floated there. The *Adriatic* and the *Mediterranean Sea* were frozen at Venice, Genoa, Marseille, Cette, etc. The Garonne River in southwest *France* was frozen completely. In the Port of Copenhagen the ice was 73 centimeters (29 inches) thick, even in places where it was not at all piled up. The *Baltic Sea* was still frozen on 10 April.<sup>62</sup>

In *Italy* in 1709, the Venetian lagoon froze over allowing people to skate on the ice; this is illustrated by a painting of the time.<sup>33</sup>

Due to the extreme cold and hard frost, the Lagoons in Venice, *Italy* in 1709 froze to a depth of several inches in thickness. The freezing of the whole Venice Lagoon in 1709 caused a grave inconvenience to the city because the ice prevented the usual traffic by boat.<sup>81</sup>

In 1709 in *Italy*, the Port of Venice was frozen.<sup>58, 80</sup>

In 1709, the vines and fruit trees in *France* were killed [by the extreme cold].<sup>58, 80</sup>

According to a canon from Beaune in *Burgundy*, "travelers died in the countryside, livestock in the stables, wild animals in the woods; nearly all birds died, wine froze in barrels and public fires were lit to warm the poor". From all over the country came reports of people found frozen to death. Roads and rivers were blocked by snow and ice, and transport of supplies to the cities became difficult. Paris waited three months for fresh supplies.<sup>32</sup>

The winter of 1709 was one of the strictest, known to history. In *France, Italy, Spain, Germany* and all the northern countries there was a very severe cold. The most rapid rivers of *France*, even in the south were completely frozen over. The seas and gulfs, which bathe the southern coasts of *Italy* and *France* were covered with ice. Towards the end of January we drove across the ice of Lake Constance and Lake Zurich with loaded wagons/coaches.<sup>62</sup> [Lake Constance borders *Germany, Austria* and *Switzerland*. Lake Zurich is located in *Switzerland*]

At Paris Observatory, La Hire observed the following temperatures in Paris, *France*:  
on 4 January 1709 (18.5° F, -7.5° C); on 6 January (29.5° F, -1.4° C); on 7 January (18.3° F, -7.6° C);  
on 10 January (-0.4° F, -18.0° C); on 13 January (-9.6° F, -23.1° C); on 14 January (-6.3° F, -21.3° C);  
from 15 January the thermometer rose slightly but then fell again; on 20 January (-4.7° F, -20.4° C);  
on 21 January (-5.0° F, -20.6° C); in February the cold was less severe; and on March 13, the  
thermometer read (21.6° F, -5.8° C).<sup>62</sup>

At Montpellier in southern *France*, the following temperatures observations were recorded:  
on 10 January (23.4° F, -4.8° C); on 11 January (3.0° F, -16.1° C); on 12 January (9.5° F, -12.5° C);  
on 13 January (24.6° F, -4.1° C); on 14 January (14.7° F, -9.6° C); on 15 January (14.9° F, -9.5° C);  
on 16 January (14.7° F, -9.6° C); on 17 January (18.0° F, -7.8° C); on 18 January (19.6° F, -6.9° C);  
on 19 January (9.5° F, -12.5° C); on 20 January (17.2° F, -8.2° C); on 21 January (18.1° F, -7.7° C);  
on 25 February (21.9° F, -5.6° C).<sup>62</sup>

Seine River in *France* was frozen over completely. The Garonne River is covered with ice, and at Balaruc was travelled across on the ice.<sup>62</sup>

In Holland [now *the Netherlands*], *England and Prussia*, the cold was slightly less severe than in Paris, *France*. In London, *England*, the frost began at Christmas and continued until the end of March, the lowest observed temperature occurred on 14 January at Gresham College (1° F, -17.2° C). In Berlin, *Germany*, the observed temperature on 9 and 10 January was (2° F, -16.6° C). The ice of the River Meuse at Namur, *Belgium* was 1.6 meters thick, and the thermometer fell there to (-2° F, -19.1° C). The Ebro River was frozen over in *Spain*. [The Ebro River rises in northern *Spain*, flows southeast across *Spain* with its delta on the Mediterranean Sea.] On 8 April, the *Baltic Sea* was completely covered with ice as far as anyone armed with a telescope could see.<sup>62</sup>

The effects of this extraordinary cold on humans, animals, plants and seeds are described in various memoirs of the time. Some species of small birds and insects in *England* and the north of the *European* continent were almost destroyed. William Derham counted 20 species of birds from the cold zone, which were seen on the coasts of *England* and killed by the frost. Many travelers succumbed to the extreme cold, and in several provinces of the cattle died. Many forest trees froze down to the sapwood. Twenty of thirty years later, the scar from the 1709 cold year was distinctly visible in the tree rings. Laurel trees, cypresses. Holly oaks, chestnut trees and walnut trees were the oldest and strongest in large quantities as a basis. In *Provence* the orange and olive trees were destroyed. From 9 to 11 January the cold at Montpellier in southern *France* was (3.0° F, -16.1° C). After the thaw the leaves of the olive trees were wilted, withered branches and the bark had become gangrenous detached from the stem. The vine disappeared in several parts of *France*. Gardens were stripped of their fruit trees. Many apple trees, indeed, produced leaves and blossoms, as if they had not suffered, but died prematurely. Even the corn had been damaged so that an unprecedented famine occurred and mortality followed this winter.

The pastor of Feings, near Mortagne, *France*, discussed in his Church logs the extreme winter:

*On Monday, January 7, began a cold, most violent and intolerable, and which lasted until the 3rd or 4th February. During this time, there was a snowfall of about half a foot high. A few days after the snowfall there was a very cold wind from the north and northwest, which piled the snow to the deep-lying positions, exposing the grain, which then froze nearly all. Few people realized when it thawed; it was destroyed.*

Fortunately, some prudent farmers had plowed their fields and sown them with winter cereal fields and barley. These were the bread grains in times of scarcity. People ate aronswurzeln, couch grass and asphodel. The famine was so great that a regulation was issued in April, which directed kitchens under penalty, even capital punishment to all citizens without distinction and the communities in to state their stores of grain and food. Equally significant were the result of an unprecedented thaw floods. The Loire River broke through its embankments, rose to a height not seen in two centuries, burying everything in its course.<sup>62</sup>

During the winter in London, *England*, the River Thames was frozen below Gravesend. The winter was recorded as being intensely cold throughout *Europe*.<sup>1</sup>

[In *England*], a great frost for three months, with heavy snows, from December 1708 to March 1709.<sup>2, 41, 43, 90</sup>

In 1709 in *England*, there was a great frost for three months, with snow. Mr. Derham supposed that this frost was greater than any within the memory of man. There was very little frost in *Scotland* and *Ireland*.<sup>47, 93</sup>

The River Thames in *England*, was again frozen over at intervals, and some persons crossed on the ice, but the frost was not sufficiently permanent to allow another Frost Fair.<sup>29</sup>

On December 25, 1709 [it seems more likely the date is 1708], in *England*, a severe frost set in, after which there fell an immense quantity of snow, the frost continuing with scarcely any intermission for

three months. The River Thames was, in consequence, frozen over, and booths erected, while every species of pastime was carried on upon the ice.<sup>55</sup>

In *England*, the year 1709 was the coldest.<sup>72</sup>

In 1709, there was a severe winter in *Switzerland*.<sup>193</sup>

A description of the Great Frost in the winter of 1708-09 was provided in the Philosophical Transaction, number 324, page 454.<sup>282, 283</sup>

— In it Mr. Derham asserts that the frost of 1708-09 was greater (if not more universal) than any other within the memory of man. The frost that happened in 1683 was the longest frost, but the frost of 1708 though of shorter duration was more intense. The frost was more severe in the southern parts of *England* than the northern parts. The cold in Zurich, *Switzerland* was unusual and excessive. The cold in *Italy* was so great that for 20 years past, they had not felt greater. The ice in the harbor of Copenhagen, *Denmark* was 27 inches [69 centimeters] thick. On 9 April 1709, individuals had traveled between Schonen and Denmark on the ice

— The northern part of *Germany* experienced the same extreme cold as *Denmark*. “Such a frost had not been known in the memory of man in these countries.” In the book *Consideratio Physico-Mathematica Hyemis proximè præterlapsæ, &c.* published by the University of Hall on 13 June 1709, by G. Remus, a Dantzicker [one from Gdańsk, *Poland*?], the author divided up the winter into 5 periods.

\* The first period began [in *Germany*] on 19 October 1708. At which time the cold weather began, the northerly winds then blowing, and frosty weather accompanied it. (But at Upminster, *England*, it began sooner. For all the latter end of September, the winds were northerly. There were hoarfrost on Michaelmas [feast of Saint Michael the Archangel, 29 September], and the following days. A great part of October to the 23<sup>rd</sup> the weather was hoar-frosty, or frosty.) According to Mr. Remus, this period ended on 3 November. (The same with our 23 October. It appears Mr. Remus was using the new style Gregorian calendar while Mr. Derham was using the old style Julian calendar.)

\* The second period occurred in November and December. The weather alternated between warm and cold in both *Germany* and *England*, and the winds also were not very different. The furious wind, that blew the night before 13 December [Gregorian calendar] in *Germany* did not strike *England* until noon the next day on 3 December [14 December in the Gregorian calendar] at which time it had much spent itself, and was only a brisk easterly wind, but no storm.

\* The third period began on 5 January 1709 [Gregorian calendar] in *Germany*. The weather abruptly changed, and to the astonishment of all *Europe* a period began, which was very remarkable for its unusual cold. At the same time, 25 December 1708 [Julian calendar] the wind and weather began to change in *England*. The temperature fell dramatically sliding into intense cold. This third period ended on 25 January [Gregorian calendar] or 14 January [Julian calendar] with a westerly wind, and a thaw, which held for a few days. In *England*, the wind was southerly and the thaw accompanied it for a few days likewise.

\* The fourth period began on 31 January [Gregorian calendar] or 20 January [Julian calendar] in which both *Germany* and *England* observed similar temperatures, and those days on which he noted the westerly winds to have been strong.

\* The fifth period took place between February 17 and March 17 using the Gregorian calendar in *Germany*, which would correspond to February 6 to March 6 using the Julian calendar. In both *Germany* and *England* the cold weather returned and continued long. But *Germany* experienced more snow. And the force of the winds was more extreme in *England*. And the mild weather returned to *England*, 2 days sooner than in *Germany*.

— In *England*, the waters were the first things that felt the dire effects of this frost. And these were in many places frozen to an extraordinary depth, although not to the extent as in the Long Frost of 1683. Of which frost we have a sufficient instance in our River Thames; whose waters were so frozen, that above [London] Bridge, 'tis well known, many booths were erected, fires made, and meat dressed; and on 10

January 1684, I saw a coach and two horses drive over the river into Southwark, and back again, a great number of people accompanying it. But this last winter [1708-09] the case was greatly different, according to the account I received from Mr. Lowthorp, who says, "He saw several people cross the Thames at some distance above the Bridge, but that was only towards low-water, when the great flakes of ice that came down, stopped one another at the Bridge, till they made one continued bed of ice from thence almost to the Temple. But when the flood came, the ice broke, and was all carried with the current up the river. I was told the like happened between Westminster and Lambeth, a little above Whitehall."

— As for other waters, they also had their share; especially where they lay exposed to the northerly and northeasterly winds. The seawaters were covered with ice in many places near the shore, in harbors, and where they lay calm and still. Of this I have already mentioned an instance in the Harbor of Copenhagen, and the Sea between Denmark and Schonen. And in a letter from Dr. Newton, he tells me, "The Sea was frozen both on the Coast of Genoa and Leghorn [Livorno, *Italy*]."

— As for the northern parts of *Germany*, the last cited dissertation gives this account of its effects on fluids: water was frozen into ice beyond the usual depth, and other liquids appeared to be congealed, which in midst of winter are thought to be out of danger of freezing. A fountain in a certain village of *Silesia*, which though at other times was found to be cool in summer and warm in winter, yet this winter it was covered with pretty thick ice, to the great wonder of everyone. The public news has sometimes told us of hot baths converted into ice. Though this cannot happen to those that are very hot. At Hall [Halle now Saale, *Germany*] we saw icicles adhere to the salt fountains, which are reported not to have happened for an Age. D. Breynius assures me by letter, that the sea [Baltic Sea] itself was covered with ice on the 8<sup>th</sup> of April, as far as his eye could reach. The observations of Hall relate, that spittle hardly dismissed from a man's mouth became ice. The rivers were froze thrice, even those, which for their rapid flow were always proof against freezing.

— These effects, I am apt to think, the waters felt not only in *England, Denmark, Germany, France* and *Italy*; but in all the *Northern World* also, excepting *Scotland, Ireland*, and probably some other islands, or places near the Sea; although even some of these appear from the foregoing account to have been great sufferers too. This universality of the frost, I suspect from the multitudes of divers [diverse] kinds of birds (utter strangers to these parts, and many of them inhabitants of the northern colder countries), which were seen and killed [by the cold] in many parts of *England*. In our Essex-Marshes, we had many wild swans, brent-geese, many of the rarer gull-kind, and divers [diverse] other sorts of birds, utter strangers to these parts.

— Mr. Durham further mentioned that the fresh water fish were destroyed, that near Dantzick [Gdańsk, *Poland*] small birds dropped down for want of strength; that near Paris, *France* 80 men and several cattle were frozen to death, and 80 French soldiers all killed on the road from the extreme cold, near Namur [in *Belgium*]; that some marines in an English men-of-war ship on the coast of *Italy* died of cold, others lost their fingers and toes; that larks and small birds, which used to be numerous, became rarities in *England*. As to the vegetables, plants, garden herbs, and fruit trees, few escaped destruction or damage. That the frost in 1683 cleft oaks and the bodies of vines, but in this frost of 1708-09, there were intervals and falls of snow, which proved a good defense to the ground; but what is strange, that the wheat suffered more by the sun than the fruit, that is, the sun melting away the snow on the southern side of the furrows, and opening the ground, it was exposed to the nocturnal frost. But the snow lying thicker on the northern parts of the island, they had a plentiful harvest.

— Mr. Durham observed, that this severe cold did not destroy the noxious insects; that in *Switzerland*, though this frost had dismal effects on the vines and even the largest walnut trees, yet some places defended towards the north by very high ridges, namely at Vesena near the Lake Rivarius, the vines and trees were not only unhurt, but loaded with fruit the following season; and at Vettis, a village at the foot of the high mountain Galanda they had scarcely ever felt a milder winter, though in the next village, Valentia, the people felt the extremity of the cold, and thought their neighbors at Vittia had perished with it.

A New England writer in the *United States* recorded on 14 December 1708 that it was the coldest day ever known there up to that time! But he forgot to say how cold it was!<sup>1</sup>

During the period between 8 November 1708 and 5 February 1709, floods struck Anhwei (now Anhui province) in eastern *China* at Tang-t'u and Wuhu.<sup>153</sup>

---

**1709 A.D.** After such a remarkable winter of 1708-09, the year 1709 produced a very cold summer. In Paris, *France* the summer produced only 6 hot days when the heat rose between 77° and 86° F (25° to 30° C); which is five times less days than average. The months of May and June were very rainy. The highest temperature of summer was 85.1° F (29.5° C) which occurred on 10 August. In Burgundy, *France*, the grape harvest began on 27 September.<sup>62</sup>

In 1709 [in *England*], there was a backwards [late] spring and a general scarcity.<sup>212</sup>

In 1709, the price of wheat [in *England*] was high, averaging 78 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In *France* in 1709, there was a severe famine throughout the kingdom.<sup>57, 91</sup>

In *England* in 1709, chiefly *Scotland*, there was a famine from the rains and cold.<sup>57, 72, 91</sup>

In *England* after a hard winter, on 19 May, the hawthorns just began to blow, and on the 21<sup>st</sup> the elm trees began to green. Wheat was 10s. a bushel. At the end of May, there was little appearance of spring in Norfolk and Suffolk. On 17 June, the wheat ear was breaking the enclosure. Hawthorne was still in blossom but fading. On the 25<sup>th</sup> of June, the wheat was not all eared. The first half of June was fine weather, but the latter half was wet with a great deal of rain during the last three days. The first half of July was wet. The last four days of July were summer. The month of August was a mixture. Part of the month was very hot and the other part as cold. On the 8<sup>th</sup> of August, barley and oats first cut in the south. On the 27<sup>th</sup>, wheat was cut. Wheat over the Kingdom was generally destroyed on the northeast side of the furrows. September had much wind and rain. October had some windy and many dead calm days in it. There were no great rains. November began and ended cold, but in general was a mostly mild month. November produced little rain. In December, the year concluded nearly as cold as the last, for on the 31<sup>st</sup>, it froze within doors. The first half of the year was as cold as any for the last 60 years. In 1698, the cold continued till September. This year the cold continued only to June or July at the farthest.<sup>72</sup>

In *Germany*, April was hot like summer. May was very cold with rain. Summer and harvest were more regular, temperate and healthy in Lübeck in northern *Germany*. In other places, from 20 March there were frequent cool rains mixed with clear warm days. From these morning showers came fruitfulness of the earth; the sky being clear, the sun hot, as soon as the showers were over with. This was a wet year in *England*.<sup>72</sup>

In 1709, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow and Anhwei (now Anhui province) in eastern *China* at Ying-shang and Fou-yang.

— During the period between 8 June and 6 July, floods struck Chekiang province at Ch'ing-yüan and Hupeh (now Hubei province) in central *China* at Chiang-ling, Chien-li, Ying-ch'êng, Ching-mên, Hanyang, Han-ch'uan, Hsiao-kan, Ch'ien-chiang and Kuang-hua.

— During the period between 7 July and 5 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Shan; Hopei (now Hebei province) in northern *China* at An-tz'ü [uncertain

name, “Tung-an”]; Chekiang province at Taichow; and Anhwei province at Wu-yüan. At Wu-yüan, houses were damaged by the floodwaters.

In 1709 during the summer, there was continued rain and floods in autumn in the vicinity of Shanghai, *China*. There was a famine. Rice was very dear, owing to flood.<sup>166</sup>

In 1709 during the period between 10 May and 7 June, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Li-shui. During the period between 8 August and 8 November, a drought engulfed Kiangsu province at Wu-chin and Hopei (now Hebei province) in northern *China* at Man-ch’êng. During the period between 8 November 1709 and 5 February 1710, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou.<sup>153</sup>

---

**Winter of 1709 / 1710 A.D.** The Spaniards were the first who discovered *Canada*, but at their first arrival, having found nothing considerable in it; they abandoned the country calling it *il Capo di Nada*, that is, a Cape of Nothing. During this time, the region contained many vast nations and kingdoms; including the two Maqua’s, and the Kingdoms of the River Sachem and Ganajohhore, seated between the Lake of Hurons on one side, Virginia, Carolina, New England and New France on the other. The River Canada runs quite through the country, which bears between 42 and 55 degrees North latitude. The region encompasses the four great lakes: the Lake Huron, the upper Lake, the Lake of the Illinois, and the Lake Erie or of the Cat [Lake Huron, Lake Superior, Lake Michigan and Lake Erie]. In this region [now Quebec and Ontario, *Canada*], as reported in 1710, the winter is very long, by reason of the northwest wind, which blows most part of the winter season, and brings with it so thick a snow that it continues upon the ground most commonly ‘till after May.<sup>291</sup>

---

**1710 A.D.** In *England*, the first week of January produced moderate weather from the 3<sup>rd</sup> to the 7<sup>th</sup>. The second week spits a little snow. The third week had dark easterly winds. On the 12<sup>th</sup> and 13<sup>th</sup> and from the 19<sup>th</sup> to the 24<sup>th</sup> of January, there was frost, and ice 1 ½ inches thick. Then the rest of the month, there were perpetual flying thicks and fogs, with calm weather and great dews. February began mild, mostly foggy. March begins wet, which brought on an early spring. On the 3<sup>rd</sup> of March, there were gooseberry leaves. On the 10<sup>th</sup>, all the bushes were green. Currants knot their flowers. The first two weeks were warm, but the third week was cold rain. Then there was pretty much rain to the end of March. April began hazy. The 6<sup>th</sup> was warm with frequent lightning in the evening. Spring was delayed because of cold days and extremely cold nights, especially between 16 and 19 April. The 24<sup>th</sup> to the 27<sup>th</sup> was hot. The 28<sup>th</sup> was a showery day. The currants were not yet out of flower. Apples blow not [had not blossomed]. In May, the ground was exceedingly dry and chopped [cracked]. Barley and peas were burnt. Vermin devoured all the fruits and the leaves of trees, so they were as naked as in winter (the same thing happened in 1741 and 1742). On the 1<sup>st</sup> of June, the wheat ears opened their enclosure. There was much thunder at noon on 13 June. There was an abundance of showers during the last two weeks. There were rains to the north of Norwich and dust to the south. The second week of June was very cold of which only the second day was only hot. July began dry and dusty, but on the 5<sup>th</sup> and 6<sup>th</sup>, there was a great deal of rain to lay the corn. On the 14<sup>th</sup>, there was thunder. The 20<sup>th</sup> of July was the first very hot day. This was followed from 24 to 26 July with overcast days. August began misty. There was significant rain on the 8<sup>th</sup>. There were several squalls on other days with some very fine days in between. The 16<sup>th</sup> of August produced thunder, the 23<sup>rd</sup> was sultry, and the 25<sup>th</sup> to the end of the month produced fogs with little wind. All September, there were clear nights. There was some rain from squalls. October was generally mild with several glorious days in it. On the 10<sup>th</sup> of October, there was a dreadful storm to the northward, high spring tides and wind. November was mostly warm and dry. From 30 November to 3 December, there was a continuous storm. And again from 6 to 10 December. This last storm reached its peak on the evening of the 9<sup>th</sup> with a dreadful storm of wind with floods of rain.<sup>72</sup>

The summer of 1710 was cooler than the previous summer. Paris, *France* had only one single hot day that occurred on 3 August with a temperature of 80.6° F (27.0° C). In *England* the summer was quite warm. In Burgundy, *France*, the grape harvest began on 25 September.<sup>62</sup>

In *Germany* in the end of March 1710, there were three insufferably hot days. From 7 to 11 April, there was a north wind, sleety and cold. Then came six days of excessive heat with east winds cooled by the rain. In June, there were several unseasonably sharp and cold storms. The harvest was less changeable. The year was fruitful and healthy; the winter late. In the latter end of October and November, there were great floods. The winds after were very variable, but mostly from the south, the air was foggy, thick, moist, often stagnant, long without sun and very unwholesome in Carniola [now *Slovenia*] and Augsburg, *Germany*.<sup>72</sup>

In 1710, the price of wheat [in *England*] was high, averaging 78 shillings per quarter [quarter ton].<sup>212</sup>

In 1710, there was an epidemic of smallpox in London, *England* that killed 1/8<sup>th</sup> of the population.<sup>212</sup>

[In *England*] on 1 December, there was a severe storm of thunder and lightning.<sup>72</sup>

On 5 & 12 December 1710, there were thunderstorms at Branham Moor in Yorkshire, *England*.<sup>212</sup>

In 1710, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 8 November 1709 and 5 February 1710, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou.

— During the period between 28 February and 29 March, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ên-hai and Chieh-yang.

— During the period between 28 May and 26 June, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Lin-ch'ü; Kiangsi (now Jiangxi province) in southern *China* at Li-ch'uan [uncertain name, "Hsin-ch'êng"]; and Hopei (now Hebei province) in northern *China* at Wu-ch'iang.

— During the period between 8 August and 8 November, a drought engulfed Chekiang province at Taichow, Hu-chou and Hsien-chü.

In 1710 during the period between 23 September and 21 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'êng and Anhwei (now Anhui province) in eastern *China* at T'ung-ling, Wu-wei, Shu-ch'êng and Ch'ao.<sup>153</sup>

In 1710 during the autumn, there were protracted rains in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1710 / 1711 A.D.** During the period between 20 December 1710 and 18 January 1711, floods struck Hupeh (now Hubei province) in central *China* at Ch'ung-yang and Hopei (now Hebei province) in northern *China* at Tsao-ch'iang, Pa and Ch'ing-yün.<sup>153</sup>

**1711 A.D.** On 11 January 1711, a hailstorm struck near Rotherham in Yorkshire, *England*. The storm was about a half mile [805 meters] in breadth. The hailstones for the most part were as big as cherries, and some were from 3 to 5 inches [8-13 centimeters] in circumference. It cut off the corn [grain] in the fields as if it had been reaped. It killed pigeons, and broke windows and boughs [branches] from trees.<sup>295</sup>

In *England*, the frost was severe up to March.<sup>47, 72, 93</sup>

In *England*, there was moderate weather from the 1<sup>st</sup> to the 12<sup>th</sup> of January. From the 16<sup>th</sup> to the 18<sup>th</sup>, there were squalls of hail. From 18 January to 4 February, there was a most severe frost. It froze indoors

and in the [bed] chambers. Ice on the 5<sup>th</sup> of February was three inches thick on the coast. Then there was a thaw to the 8<sup>th</sup>, yet the old ice remained three inches thick. There were mixed days of frost and thaw to the 13<sup>th</sup>. The old ice was still ½ inch thick. On the 15<sup>th</sup>, there was a snowstorm that ended in rain. On the 16<sup>th</sup> of February, there was frost. On the 20<sup>th</sup> to the 27<sup>th</sup>, there was all frost. On the 24<sup>th</sup>, there was a very high tide and the winds blew hard producing a squall of hail. On the 17<sup>th</sup>, primroses were thick with blossoms. The first two days of March were rainy. There were small showers to 10 March with hazy sunshine and mild temperatures. Gooseberry leaves began opening on 10 March. There were winds from 10 to 18 March with some frosts, snow and sleet. From 22 to 24 March, the winds were variable with much rain. Rains continued to the 27<sup>th</sup> and the rest of March produced fogs. Gooseberries and currants began to bloom. In April the gooseberries and currants come into full bloom. During the last part of April, there were vast quantities of cold rain. Currants remained only in flower. The codlings in bloom and many of the blooms blasted. On the 18<sup>th</sup> of April at Norwich, there was a dreadful tempest of thunder, lightning and rain. On the 21<sup>st</sup>, there was thunder. Black thorn blown [destroyed]; white only budded. May was mostly calm, very fine spring weather, but not hot until the end of the month. Spring was in all its glory about the 19<sup>th</sup> of May, but apples not out of bloom till the 26<sup>th</sup>. June began as May ended, with cloudless sun, and starlight to the 7<sup>th</sup> of June. On the 7<sup>th</sup>, there was a dreadful tempest of thunder with prodigious hail. On the 18<sup>th</sup> was thunder and showers. On the 19<sup>th</sup>, there was a very high tide. It was a cold week. July began showery. The 10<sup>th</sup> to the 19<sup>th</sup> was fine weather. The first part was hot and the next 5 days cold. The 21<sup>st</sup> to the 28<sup>th</sup> of July was showery at London. August produced a variety of weather. September was the finest month since May. October produced squally weather. The 2<sup>nd</sup> to the 12<sup>th</sup> was warm; the 14<sup>th</sup> to the 16<sup>th</sup> – hot; on the 12<sup>th</sup> – wind and rain; on the 18<sup>th</sup> and 19<sup>th</sup> – gray dews or hard frost; on the 23<sup>rd</sup> – rain; on the 26<sup>th</sup> and 27<sup>th</sup> of October – rain, wind and darkness. November was mostly warm with a great deal of rain. On the 15<sup>th</sup>, there was a frost. In December, there was some fine weather. From the 9<sup>th</sup> to the 13<sup>th</sup>, there was fog with a little wind. The same from the 17<sup>th</sup> to the 19<sup>th</sup>. Then there was snow and frost to the 29<sup>th</sup>. The ice was three inches thick.<sup>72</sup>

[In *England*] in January and 7 October, there were severe storms of thunder and lightning.<sup>72</sup>

In France there was a flood. In March 1711, the Seine River in Paris, *France*, at the bridge “Pont de la Tournelle” reached a height of 7.55 meters (24.8 feet) above the zero mark [the low water mark of the year 1719].<sup>71</sup>

In Paris, *France*, the rainfall of 1711 was 26.8 inches (681 millimeters) water. This was 7.8 inches (199 millimeters) greater than the average rainfall. Marseille was not only affected by rainfall but also suffered from storms. Lyon felt a terrible flood. The Rhône River meets the Saône River at the end of the Mall. The gate of the church of Charity was covered by nearly two feet of water. The suburb of Guillotière was almost entirely submerged. The city communication with the countryside stopped, except by the Red Cross and Saint-Just. The rains fell mainly in January and February.<sup>79</sup>

The year 1711 again produced the same meteorological character as the previous year – a cool summer. The peak temperature in Paris, *France* reached 83.8° F (28.8° C) on 16 June and the whole summer produced only 11 hot days. In Burgundy, *France*, the year was rainy, and the grape harvest began on 24 September and ended in the snow.<sup>62</sup>

On 7 June 1711, there was a violent thunderstorm and hailstorm at Rotherham in Yorkshire, *England*. The hailstones were 3 to 5 inches [8-13 centimeters] in circumference, which broke a vast amount of glass, cut off ears of corn [grain] and small boughs [tree branches], and killed some pigeons.<sup>212</sup>

In 1711, the price of wheat [in *England*] averaged 54 shillings per quarter [quarter ton].<sup>212</sup>

In 1711 in *Silesia*, Pastor Herman, discovered fulgurites or lightning-tubes, caused by lightning strikes.

These are natural hollow glass tubes formed in quartzose sand, silica, or soil by lightning strikes. These tubes can reach a length of 10 yards [9 meters] or more.<sup>271</sup>

On 7 October 1711, there was a violent thunderstorm with great darkness at Samford-Courney [Sampford Courtenay] in Devon, *England*.<sup>212</sup>

On 5 November 1711, there was a thunderstorm at Southwell in Nottinghamshire, *England*. [The lightning] set fire to the south spire of the minster causing £4000 damage to the church. [Another account places the date as 11 November.]<sup>212</sup>

In 1711, there was a cattle plague in *England*.<sup>212</sup>

In the region of Carniola, Austria [now *Slovenia*] in 1711, there was a famine from rain and mildew.<sup>72</sup> This famine continued several years.<sup>57, 91</sup>

In 1711 in Mobile, Alabama in the *United States*, the city was almost destroyed by an inundation at the mouth of the Mobile River.<sup>92</sup>

The first known storm [hurricane], accompanied by a high flood [storm surge] in Mobile Bay, was in 1711, when the water overflowed the newly organized town [Mobile, Alabama in the *United States*] and caused its removal to the present site.<sup>117</sup>

On 11-13 September 1711, a hurricane destroyed churches and buildings in New Orleans, Louisiana in the *United States* and was felt at Mobile, Alabama.<sup>117</sup>

In 1711 during the period between 16 June and 15 July, floods struck Shantung (now Shandong province) on the east coast of *China* at I-shui. During the period between 14 August and 12 September, a drought engulfed Hupeh (now Hubei province) in central *China* at Ying-ch'êng, Chih-chiang, An-lu and Lo-t'ien. During the period between 10 November and 9 December, floods struck Shansi (now Shanxi province) in northern *China* at Lin-fên, where several hundred persons drowned.<sup>153</sup>

In 1711 during the summer, there were protracted rains and a flood in the vicinity of Shanghai, *China*.<sup>166</sup>

---

**1712 A.D.** In *England*, January began mild. The evening of the 1<sup>st</sup>, there was southerly rains. To the 22<sup>nd</sup> of the month, there were overcast days and dark nights, mixed in with some fine days, and some frosts. January ended moderately. February began with hail and snow, and then variable weather with cold northerly winds with some snow and often squalls with rain and white frosts. February ended with rains. Gooseberry leaves were just beginning to open. On the 8<sup>th</sup> of February, there was small hail. Hoarfrost and snow laid on the ground. There was frost and snow on the 9<sup>th</sup>. February produced little rain. March began with wind. On the 4<sup>th</sup> to the 12<sup>th</sup>, there was a clear frost, with snow lying four inches deep, with a very cold thaw. On the 13<sup>th</sup> and 14<sup>th</sup>, ice not exposed to the sun was 1 ½ inches thick. On the 26<sup>th</sup> of March, it rained all day. April began with rain and sleet. From the 2<sup>nd</sup> to the 5<sup>th</sup>, there were some free showers. In the afternoon on the 16<sup>th</sup>, there were some fierce showers. On the 18<sup>th</sup> and 19<sup>th</sup>, there were hot days with much lightning. The rest of April was hot and fine weather to the end of the month. On the 26<sup>th</sup>, there were thunder and a shower. May was mostly a fine month both night and day. On the 4<sup>th</sup>, elm trees were in flower. There were evening showers from 14 to 16 May. On 9, 10 and 22 May, there were thunder. June produced fine weather. There was loud thunder and great hail on 1 June. There was thunder and rain on 16 June. There was thunder with fierce rain on 21 June. The 27<sup>th</sup> and the 29<sup>th</sup> were showery. July produced hot weather. It was a glorious month. July began on the 1<sup>st</sup> with thunder, wind and showers. On the evening of 8 July, there was great rain. On the 15<sup>th</sup>, there was great rain at Norwich. August the 1<sup>st</sup> rained hard. From the 2<sup>nd</sup> to the 6<sup>th</sup>, there was a hazy sunshine. On the

18<sup>th</sup> of August, there were fierce showers. On the 29<sup>th</sup>, it rained hard with thunder. On 3 September, it rained for 24 hours. On the 6<sup>th</sup>, it rained all morning. On the 20<sup>th</sup>, it rained all night. On the 26<sup>th</sup> and 29<sup>th</sup> of September, it rained until 2 or 3 o'clock in the afternoon. This produced a very wet and bad seedtime. October and November were very rainy months. On 14 November, there were great dews on the glass, yet some hard frost. On the 17<sup>th</sup>, there was lightning. From the beginning of December to the 8<sup>th</sup>, there was a hard frost. The ice was 1 ½ inches thick. December produced calm weather with little wind. The last half of December had fogs both night and day. On the 15<sup>th</sup> and 16<sup>th</sup>, there was frost with hail and rain. On the 17<sup>th</sup>, there was snow 1 ½ inches deep. On the 18<sup>th</sup>, three more inches of snow fell.<sup>72</sup>

It was noted that on 6 August 1712 in *low-Hungary*, the heat was excessive. [Lower Hungary during this period of time included parts of *Hungary*, *Slovakia* and *Croatia*.] The rain fell at the end of the month and the weather turned a bit fresher, but then heat came back quickly. In Paris, *France* there were:

Hot days            61 days

Very hot days    4 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperature was on 16 June. In Dijon, *France*, in Burgundy, the grape harvest began on 27 September. In the south there was high temperatures and a severe drought.<sup>62</sup>

The summer of 1712 was very hot in *France*.<sup>79</sup>

Drought and heat in southern *France* caused the sources [of water – springs, creeks, small rivers and lakes] to dry up in 1712 and destroyed crops.<sup>79</sup>

In 1712, the price of wheat [in *England*] averaged 46 shillings per quarter [quarter ton].<sup>212</sup>

On 28 August 1712, a hurricane struck *Jamaica*.<sup>124</sup> [Jamaica is an island in the *West Indies* in the Caribbean Sea.]

In 1712, a hurricane struck *Jamaica*. New colonist and old pirates and seamen were drowned in the hurricane waves and river floods. Many others were killed in the wreckage of the English houses built out of flimsy boards.<sup>141</sup>

On 28 August 1712, a terrible hurricane, attended with lightning and rain, struck *Jamaica*. It lasted 6 hours and destroyed several ships belonging to London and Bristol and fourteen ships belonging to the island. In the harbor of Port Royal and Kingston, four hundred sailors were drowned. Many people were killed by destruction of houses and the sugarworks. The canes and provisions of the Negroes throughout the island were generally destroyed.<sup>174</sup>

On 8 September 1712, a hurricane struck *Jamaica* causing greater than 400 fatalities.<sup>141</sup> [I wonder if the account of a hurricane was actually an account of the damage from a tsunami. On 28 August 1712, a massive earthquake struck *Jamaica*. This earthquake generated a tsunami. Savanna la Mar, a small seaport, was overwhelmed by the sea, which in a few moments swept both man and beast from the face of the earth. Not an individual survived to relate the calamity - not a single habitation escaped the deluge. The town, with its inhabitants and wealth was in the most literal sense of the word, washed away.]<sup>145</sup>

In 1712, a hurricane struck near Havana, *Cuba* drowning several men.<sup>141</sup>

In 1712 during the period between 4 June and 3 July, a drought engulfed Hopei (now Hebei province) in northern *China* at Ku-an, Ting, Ching-ching and Pao-ting. During the period between 30 September and

29 October, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yai.<sup>153</sup>

---

**1713 A.D.** In *England* from 1 to 5 January, there was frost. The ice was three inches thick. The rest of the month produced hoarfrost mixed with rain and showery weather. On the 25<sup>th</sup>, there was a storm. From the beginning of February to the 7<sup>th</sup>, there was wind and rain every day. The 8<sup>th</sup> to the 16<sup>th</sup> produced fine days and nights. From 19 to 23 February, there was rain, sleet and hail. The 22<sup>nd</sup> produced very great rain. The 24<sup>th</sup> to the 28<sup>th</sup> was mostly dry. Gooseberries began to look green and currant bushes were considerably started. On March the 3<sup>rd</sup>, gooseberry blooms appeared. The first week of March was showery. But then cold winds set in and the gooseberry blooms were blasted. At the end of March, spring made no progress. In April, the same northeast winds prevailed (except from the 15<sup>th</sup> to the 21<sup>st</sup>) so that spring was still held back. Both leaves and blooms were blasted by the end of April. The black thorn scarce blossomed. All the trees were naked [without leaves]. The first half of April was squally with hail and snow, and the last half was dry. The northeast winds continued to 6 May. But there were fine days and nights from 28 April to 8 May. The rest of May had variable winds and stirring weather; a wet month on the whole. On the 16<sup>th</sup>, there was thunder with rain and hail. On the 30<sup>th</sup> – thunder, and on the 31<sup>st</sup> - fierce showers. The hawthorns and pears were in bloom on the 9<sup>th</sup>. The apples and some gooseberries were in bloom on the 19<sup>th</sup>. The winter apples were in full beauty on May 29. June had little rain. On the 20<sup>th</sup> of June, the hawthorns were still blossoming. There were frequent showers from 2 to 16 July. From the 15<sup>th</sup> to the end of July, there were great rains lasting several whole days. August began with great rains and stormy weather. On the 13<sup>th</sup> to the 15<sup>th</sup>, there were fogs early and fine hot weather during the days. Then to the 23<sup>rd</sup>, there was the most glorious sunshine and moonshine. September began with squally blowing rain, hail and snow. From the 4<sup>th</sup> to the end of September, there was not much wind, but hot sunshine, glorious weather. From the 14<sup>th</sup> to the 18<sup>th</sup>, there were remarkable dews. The weather was squally at times from the 20<sup>th</sup> to the end of September. October was generally calm. October began showery. On the 8<sup>th</sup>, 10<sup>th</sup>, and 20<sup>th</sup>, it rained all day. There were great rains from the 17<sup>th</sup> to the 24<sup>th</sup>. There was showery weather to the end of the month. On 30 October, hail lay on the ground. On the 4<sup>th</sup>, 5<sup>th</sup>, and 16<sup>th</sup> of November, it rained all day. Towards the end of November, the rains tapered off. Some days produced hard frosts. From 1 to 7 December, there were fogs. From 10 to 12 December, the days were fine. There was a great fog on the 13<sup>th</sup>. The weather was so warm that primroses blossomed. There were great dews from the 20<sup>th</sup> to the 26<sup>th</sup>. The thermometer ended this year as high as it is mostly in May or June. Primroses, lettuce, and hartichoaks [artichokes] grown in the summer, their foliage cut down in the latter end of November, shot a foot in length in six weeks time. Gooseberry leaves were open.<sup>72</sup>

On 9 March 1713, there was a thunderstorm at Clogher, *Ireland*. The next day, there was a sinking of a hill, around 4¾ acres, probably owing to the constant great rains from the previous autumn and winter.<sup>212</sup>

In 1713, there was a flood on the River Trent in *England*.<sup>212</sup>

In 1713, the price of wheat [in *England*] averaged 51 shillings per quarter [quarter ton].<sup>212</sup>

In *England*, the years between 1713-1719 produced a moderate drought. There were few rains but there were rich dews. The years 1714, 1717, 1718, and 1719 produced very hot summers.<sup>72</sup>

On 4-5 September 1713, a hurricane struck the *Caribbean* island of Martinique causing 100 deaths.<sup>141</sup>

On 16-17 September 1713, a hurricane struck South Carolina in the *United States* causing 70 deaths.<sup>141</sup>

In 1713, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 24 May and 22 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ao-an; Yunnan province in southwest *China*

at Hao-ch'ing; and Kiangsi (now Jiangxi province) in southern *China* at Hsing-an, Shih-ch'êng [uncertain name] and Kan. At Shih-ch'êng, houses and fields were damaged by the floodwaters. At Kan, the city walls were damaged.

— During the period between 20 September and 18 October, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Anhwei (now Anhui province) in eastern *China* at Ho-fei.

In 1713 during the period between 6 May and 17 December, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Taichow and Ch'ang-shan. During the period between 8 August and 8 November, a severe drought engulfed Anhwei (now Anhui province) in eastern *China* at Wu-ho.<sup>153</sup>

The year 1713 was a year of abundance in the vicinity of Shanghai, *China*.<sup>166</sup>

**1714 A.D.** In Philadelphia, Pennsylvania in the *United States* the winter of 1714 was very mild after the 15<sup>th</sup> of January; trees and shrubbery were in bloom the first week in February, and the spring was unusually mild.<sup>1</sup>

In *England* in January, the month was mostly cold but there were little frosts. On the 6<sup>th</sup>, there were some flights of small snow. Small showers occurred on 18, 25, and 29 January. The first half of February was generally fair and mild, like the month of May. There was squally weather with some white frosts from 14 February to the end of the month. On 17 February, gooseberries were in bloom. On the 19<sup>th</sup>, there was a dreadful storm, which was combined with the high tide, and overflowed all the deans. On 15 February, the winds were blowing hard in the morning, and then there was a small storm. A great number of ships were in the road sunk, shored, or driven from their anchors. And the houses were stripped [of their roof shingles]. In March, there were glorious days and nights from the 1<sup>st</sup> to the 12<sup>th</sup>, yet hard frost in the morning. This was followed by still warmer winds and showery weather, with clear nights. From 20 to 31 March, the weather produced sundry pleasant days. "Grass grew so fast, that my grass plot was mown the 13<sup>th</sup> and the 31<sup>st</sup>." By 16 March, the currants had grown to an inch long. From the 26<sup>th</sup> to the 31<sup>st</sup>, the leaves of the gooseberries were blasted. In the beginning of April, the weather set in so cold with hail and snow lying two inches thick. On the 3<sup>rd</sup> of April, it froze indoors. This frost lasted four or five days, and the nights were cloudless. From the 9<sup>th</sup> to the 12<sup>th</sup>, the 15<sup>th</sup>, and the 17<sup>th</sup> of April, the temperature was warmer than normally seen in May or June. The 12<sup>th</sup> was especially hot. From 19 to 28 April, there were showers and some fogs. The first days of May were warm. There was squally weather from the 4<sup>th</sup> to the 6<sup>th</sup>. It was mostly cold, very dry and clear to the 24<sup>th</sup>. Gooseberries and currants were not all out of bloom. On the 19<sup>th</sup>, there was distant thunder with hail and rain. On the 27<sup>th</sup>, it rained almost the whole day. The artichokes, which were fruited in winter, were now no bigger than large apples. June began dry from the 1<sup>st</sup> to the 3<sup>rd</sup>. It was stormy from the 6<sup>th</sup> to the 10<sup>th</sup>. The rest of the month was dry and not very hot. In July, the currants began to ripen and gooseberries the next week. There was remote thunder on 2, 10 and 20 July. The latter half of July was showery, with a great deal of rain during the last week. On 24 July, the new corn [grain] was brought to the mills. From 9 to 12 August, there were great fierce rains. At 7 p.m. on 2 August, there was very loud thunder with a prodigious shower of fierce rain, which flooded gardens in 5 minutes. This rain lasted all afternoon with much lightning. At the same time 17 miles to the southwest, there was a dreadful storm of hail with hailstones five inches about, with 20 icicles forming on some of them, some icicles nearly an inch in length. The last half of August was showery. There was no great heat. September produced variable winds and weather. On the 24<sup>th</sup>, the sea roared loud. Then on the 25<sup>th</sup> the winds blew hard. On the 26<sup>th</sup> there was a prodigious high tide that overflowed all the deans land left by the sea. October was all mild. Lettuce which sowed itself was now fit to be harvested on the 23<sup>rd</sup>, and it was very fine. On the 26<sup>th</sup>, lettuce was sown which by the end of the year was green and unhurt by the frost. November was one whole month of mild, calm, dry weather. The month began with vast dews all day seen on the glass, with low creeping morning and evening fogs, glorious sunshine days and clear nights. There were hard frosts

on 5, 13, 20, 26 and 27 November. On the 24<sup>th</sup>, the temperature was 30.5° F (- 0.8° C). December began mild. From the 7<sup>th</sup> to the 9<sup>th</sup>, there was a hard frost and the ice was 1 ½ inches thick. The 16<sup>th</sup> was rainy. From the 11<sup>th</sup> to the 18<sup>th</sup>, there was frost with some snow. On 20, and 26 to 29 December, there was a hard frost. On the 31<sup>st</sup> of December, there was green salad in perfection in common earth, which next week was killed with the very primroses that were almost in full blossom.<sup>72</sup>

In *England*, the years between 1713-1719 produced a moderate drought. There were few rains but there were rich dews. The years 1714, 1717, 1718, and 1719 produced very hot summers.<sup>72</sup>

In the region of Carniola, Austria [now *Slovenia*] in 1714, there was a famine from changeable, rainy weather.<sup>72</sup>

In the middle of July 1714, there was cattle distemper at Islington, *England*. By the end of September, there was an alarming increase. In October, it also appeared in Norfolk, Suffolk and Hertfordshire. It was violent for 3 months, and the loss to farmers was £24,500 [£3 million in today's currency using retail price index inflation rates]. In Holland [now *the Netherlands*], it had lasted two or three years, and 300,000 beasts had died.<sup>212</sup>

In 1714 in London, *England*, there was an epidemic of smallpox. One-ninth of the population died.<sup>212</sup>

In 1714 at Upminster, *England*, there was a remarkable drought. Only 11.2 inches [28 centimeters] of rain fell during the year.<sup>212</sup>

In 1714, the price of wheat [in *England*] averaged 50 shillings per quarter [quarter ton].<sup>212</sup>

In Mobile, Alabama in the *United States*, the city was almost destroyed by an inundation at the mouth of the Mobile River.<sup>47</sup>

In late June 1714, a hurricane struck the Florida Keys in the *United States*. Many ships sank and the bodies of many dead men and women floated away, but still many men somehow made it to land.<sup>141</sup>

On 29 August 1714, a hurricane struck *Jamaica*.<sup>124</sup>

In September 1714, a hurricane struck *Cuba*. The frigate *San Juan* was lost.<sup>141</sup>

In 1714, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Lin-ch'ü.

— During the period between 6 May and 8 November, a drought engulfed Hopei (now Hebei province) in northern *China* at Ching.

— During the period between 12 June and 11 July, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hsüan-p'ing and Hopei province at Tung-ming and Yüan-shih.

— During the period between 12 July and 9 August, a drought engulfed Chekiang province at Taichow and Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow, Wu-chiang and Wu-chin.

In 1714 during the period between 12 June and 11 July, floods struck Kiangsi (now Jiangxi province) in southern *China* at Shih-ch'êng [uncertain name] and Kansu (now Gansu province) in northwest *China* at Chiu-ch'üan.<sup>153</sup>

---

**1715 A.D.** In *England*, from the beginning of the January to the 5<sup>th</sup>, there was a hard frost with winds blowing hard. On the 2<sup>nd</sup>, 3<sup>rd</sup>, and 6<sup>th</sup>, it froze indoors. On the 9<sup>th</sup> and 10<sup>th</sup>, there was a hard frost. The

rest of January produced moderate weather. There were some overcast days and many bright days mixed with fogs and rains. Lettuce sown in December came up thick. February began warm with a terrible storm of four hours duration. It untiled houses, threw down chimneys, gable ends and barns in abundance and forced ships from their anchors. The same day there was a dreadful hurricane at Dublin and Roan in *Ireland*; and Hamburg and Lübeck in *Germany*. On the 19<sup>th</sup> at noon to three the next morning, there was a storm especially on the North Sea that produced one of the highest tides at Yarmouth ever witnessed. It is said to be the highest tide at Hull in the past 32 years. February was a moderate month. There were frosts on 5, 8, 21, 22, and 28 February. On the 22<sup>nd</sup>, the ice was 1 ½ inches thick. March was variable with soft showers at times. On the 7<sup>th</sup>, the ground was dry to the diggers. Currants shot scarce an inch long. There were soft showers during the beginning of April. From the 16<sup>th</sup> to the 24<sup>th</sup>, it was dry. April ended with squalls or large rains. On the 11<sup>th</sup> of April, the hawthorn blossomed. On the 20<sup>th</sup>, currants shoot from 5 to 11 inches. This was the earliest spring in many years. There was lightning and thunder with some showers on 1, 9, 10 and 11 May. The first two weeks of May produced wind, rain, and some hail. The third week of May was variable. There were some showers in the fourth week. On the 28<sup>th</sup>, there was thunder, lightning and some showers in the evening. May ends dry. May as a whole was more temperate than hot. June produced many showers. There were some dry days followed by large rains. There was thunder sometimes with a great deal of rain on 11, 12, 20, 24, 27 and 30 June. On 11 June, currants began to ripen in Norfolk. There was thunder on 1, 3 and 9 July. From the 2<sup>nd</sup> to the 9<sup>th</sup> of July, there were vast rains and floods. On the 3<sup>rd</sup> and 9<sup>th</sup> of July began a kind of rain which was not usual so far north. The rain rather than falling by showers, fell by spouts from the sky, in such quantities and with so great a force that at particular spots of the ground, it carried away soil into the sea. In one place on the 3<sup>rd</sup>, the rain which fell on one field bore away 100 feet of ground to a depth of 30 feet into the Sea, and left on the beach the bed as it were of a deep river. The soil is sand and gravel. Some of these rains fell in showers of numberless minute spouts, with space in between. Others in single spouts more plainly seen, where they fell into the sea. And even as far north as Tinmouth Bar, they fell with such force into the Sea, as to dash the water of the Sea half mod high into the air. This type of rainstorm continued into the year 1716. The rest of July was showery. It was hot and dry about the middle of the month and cold at the end. August began with a showery weather. On the 2<sup>nd</sup> at Saxmundham in Suffolk in eastern *England*, there was showers of plentiful rain and in the afternoon it became exceedingly hot. The rest of the month had showers but more fogs towards the end of the month. September was a glorious month. There was little rain. There were some rokes or fogs from the 5<sup>th</sup> to the 7<sup>th</sup>. Then blowing weather from the 7<sup>th</sup> to the 10<sup>th</sup>. The middle of September was very hot with large dews. The month ended with showers on the 25<sup>th</sup> to the 27<sup>th</sup>. The first half of October was warm weather with a great deal of rain or large dews. The 17<sup>th</sup> was hot and faint. The 18<sup>th</sup> was sultry hot. The 20<sup>th</sup> was excessively hot. Thence there was rain and warm or hot weather to the end of October. From 2 to 8 November, it was warm.<sup>72</sup>

In *England*, the years between 1713-1719 produced a moderate drought. There were few rains but there were rich dews. The years 1714, 1717, 1718, and 1719 produced very hot summers.<sup>72</sup>

[Taine estimated that in the year 1715 more than one third of the population of *France* (6 million people) perished from hunger and destitution. The cause of this famine and those that followed was due to *taille* (land tax). *France* is a land of good soil and fine weather, almost like a Garden of Eden. But for over a hundred years leading up to the French Revolution in 1789, it became a land of dire want and famines. *Taille* robbed the peasants of even their meager existence. These oppressive taxes drained and crushed the agricultural might of *France*. This was obvious even in 1689 when La Bruvère wrote “Certain savage-looking beings, male and female, are seen in the country, black, livid and sun burnt, and belonging to the soil which they dig and grub with invincible stubbornness. They seem capable of articulation, and, when they stand erect, they display human lineaments. They are, in fact, men. They retire at night into their dens where they live on black bread, water and roots. They spare other human beings the trouble of sowing, ploughing and harvesting, and thus should not be in want of the bread they have planted.” Over the next several decades, they continued to be starved by “want of bread” and they died in herds.<sup>87</sup>]

In 1715, the price of wheat [in *England*] averaged 43 shillings per quarter [quarter ton].<sup>212</sup>

In 1715, there was a severe cattle plague [in *England*].<sup>212</sup>

In 1715, the River Ribble in Northern *England* was for a time dry, except in deep places.<sup>212</sup>

In 1715, there was a violent gale. As a result in London, *England*, the River Thames at London Bridge was emptied to the size of a brook of 10 or 12 feet over [across], and people walked on the bottom and found treasures there.<sup>212</sup>

On 30 July 1715, a hurricane struck the southern *Bahamas* and the Straits of Florida in the *United States*. The storm caused between 1,000 and 2,500 deaths.<sup>141</sup>

In 1715, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu and T'ien-pao; Kiangsu (now Jiangsu province) on the east coast of *China* at K'un-shan; and Hupeh (now Hubei province) in central *China* at Wuchang.

— During the period between 3 May and 1 June, floods struck Kwangsi province at Ch'üan.

— During the period 2-30 June, floods struck Shantung (now Shandong province) on the east coast of *China* at Ch'iu, Shou-kuang, Hui-min, Pin, Wu-ti, Yang-hsin and Ch'ang-shan; Hopei (now Hebei province) in northern *China* at Huo-lu and Hsien; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch'ên-hai. At Ch'ên-hai, the dikes were damaged.

— During the period 1-29 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow; Hupeh province at Chih-chiang; and Kiangsu province at Soochow. At Soochow, houses and fields were damaged by the floodwaters.

— During the period between 8 August and 8 November, floods struck Shantung province at Liao-ch'êng.

— During the period between 26 November and 25 December, floods struck Shantung province at Tê-p'ing.

In 1715, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Yang-chiang and Shansi (now Shanxi province) in northern *China* at I-ch'êng and Chieh.

— During the period 1-29 July, a drought engulfed Anhwei (now Anhui province) in eastern *China* at T'ung-ling and Ho-fei.

— During the period between 30 July and 28 August, a drought engulfed Yunnan province in southwest *China* at Hao-ch'ing.

— During the period between 29 August 1715 and 5 February 1716, a drought engulfed Kwangtung province at Hui-lai.

In 1715 during the summer, there was a great drought in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1715 / 1716 A.D.** The winter was recorded as being intensely cold throughout *Europe*.<sup>1</sup>

The winter was cold in *Europe*. On 22 January 1716, the temperature in Paris, *France* was -4° F (-20° C). Frost fair was held on the River Thames in London, *England*.<sup>28</sup>

The winter was very cold. In Paris, *France*, the thermometer fell on 22 January 1716 to -3.5° F

(-19.7° C). During the course of this month, significant quantities snow fell. The severity of the cold was particularly noticeable in *England* where the River Thames in London froze so solid that stalls and booths were set up on the ice.<sup>62</sup>

In 1716 the cold temperature reached was -3.8° F (-19.9° C) in Paris, *France*. This compares to 1729 at 4.3° F (-15.4° C); to 1742 at -0.8° F (-18.2° C); to 1747 at 5.2° F (-14.9° C); to 1754 at 5° F (-15° C); to 1758 at 7.2° F (-13.8° C); and to 1767 at 2.8° F (-16.2° C). The Seine River totally froze over during most of these winters.<sup>79</sup>

In *England* in 1716, there was a great frost.<sup>72</sup>

On 7 January 1716, the temperature at Upminster [a suburban town in east London, *England*] fell to 11° F [-11.7° C].<sup>300</sup>

During the winter of 1716, the River Thames in London, *England* was frozen over for several miles and streets of booths were erected on the ice and an ox roasted on it, coaches driven, and many diversions exercised above the bridge. And so strong was the ice below the bridge, that people walked and skait [ice skated] at their pleasure on it. The coldest temperature was observed on 7 January. The river freezing that year was not so much caused by the extreme cold but rather the long duration of the cold.<sup>235</sup>

In *England* on the 10<sup>th</sup> and 11<sup>th</sup> of November 1715, there was frost. On the 13<sup>th</sup> and 14<sup>th</sup>, it was very cold. There were frequent rains to the 18<sup>th</sup>. The month ended with large rains, with hail and snow and colder weather. After and exceedingly mild autumn, December introduced a very severe winter. The 1<sup>st</sup> of December was mild. The 2<sup>nd</sup> produced a hard frost. On the 3<sup>rd</sup>, it rained all day. From the 3<sup>rd</sup> to the 15<sup>th</sup>, there was a hard frost. The 15<sup>th</sup> produced frost with a little snow. On the 16<sup>th</sup>, it spits snow. From 17 to 21 December, there was a hard frost. On the 21<sup>st</sup>, it snowed all day and all night. On the 22<sup>nd</sup>, it snowed all day. The snow was 4 inches deep on the level. On the 23<sup>rd</sup>, the winds moved the snow into drifts. The fields were now naked. To the 30<sup>th</sup>, there were severe frosts. On 30 and 31 December, the ice along the coast was six inches thick.<sup>72</sup>

On 24 November 1715, there was a great frost [in London, *England*]. There was a fair [on the ice] of the River Thames. The frost lasted until 9 February 1716, during the whole of which time the River Thames was frozen over, and in January strongly frozen. The coldest day occurred on 16 January 1716.<sup>212</sup>

In *England* in January 1<sup>st</sup>, it thawed a little; on the 2<sup>nd</sup> there was frost and snow; on the 3<sup>rd</sup> frost. On the 4<sup>th</sup>, it spits snow all day, there was frost and it snowed three inches deep at night. From the 6<sup>th</sup> to the 10<sup>th</sup>, there was a hard frost. On the 10<sup>th</sup>, there was frost and snow; the thermometer was nearly as low as it had been in 1709. On the 11<sup>th</sup>, there was frost, snow and the ice was 8 inches thick. From the 12<sup>th</sup> to the 15<sup>th</sup>, there was a hard frost, and snow at times. On the 18<sup>th</sup>, the frost relented but it snowed in the afternoon. On the 19<sup>th</sup> and 20<sup>th</sup>, there was frost and it snowed all day. On the 22<sup>nd</sup>, it thawed. On the 23<sup>rd</sup>, there was a hard frost and snow. On the morning of the 24<sup>th</sup>, there was frost, snow, and fog and then it thawed at night and rained. On the 25<sup>th</sup>, there was a small rain. On the 26<sup>th</sup>, there was fog, thaw and then frost. On the 27<sup>th</sup>, there was frost, fog and in the afternoon wetting fog. On the 28<sup>th</sup> fog; on the 29<sup>th</sup> frost. On the 30<sup>th</sup>, there was frost with much old ice. The new ice was 9 inches thick. On the 31<sup>st</sup>, there was frost and in the afternoon a thaw and wetting fog. (On the 16<sup>th</sup> of January, the spirits in the thermometer were as low as in 31 December 1709.)<sup>72</sup>

In *England*, from the beginning of February to the 8<sup>th</sup>, the weather was often foggy, cloudy and wet. On the 8<sup>th</sup>, there was hail, snow and a frost. There was a hard frost on the 9<sup>th</sup> and 10<sup>th</sup>. On the 11<sup>th</sup>, there was a frost with the old ice still thick on the water. From the 12<sup>th</sup> to the 14<sup>th</sup>, there were fogs, spitting snow or rain. The 15<sup>th</sup> was clear with most of the snow gone. The 16<sup>th</sup> and 17<sup>th</sup> were clear with some mist. The

18<sup>th</sup> and 19<sup>th</sup> produced a hard frost. The 20<sup>th</sup> to the 27<sup>th</sup> was mostly clear. The 27<sup>th</sup> produced snow, sleet, hail, and squally weather. The 28<sup>th</sup> was clear. And the 29<sup>th</sup> produced a small shower. The first half of this month was cold, the rest moderate.<sup>72</sup>

On the 1<sup>st</sup> of March in *England*, there was frost, squalls of rain and hail. On the 2<sup>nd</sup>, there was snow two inches and frost. On the 3<sup>rd</sup>, frost indoors, squalls of snow and small hail. The 4<sup>th</sup> and 5<sup>th</sup> was clear. The 6<sup>th</sup> and 7<sup>th</sup> were sweet days. The 8<sup>th</sup> was good. On the 9<sup>th</sup> and 10<sup>th</sup>, there were squalls of snow and hail. The gooseberry leaves were just opening, yet the trees looked naked. On the 11<sup>th</sup>, the weather was good. On the 12<sup>th</sup>, there were small rains. The 13<sup>th</sup> and 14<sup>th</sup> were clear. There was a hard frost on the 15<sup>th</sup>. On the 16<sup>th</sup> and the 17<sup>th</sup>, there were small showers. During the night of the 18<sup>th</sup>, there was rain. The 19<sup>th</sup> was smirry, yet clear. The 20<sup>th</sup> was clear. There were fierce squalls on the 21<sup>st</sup>. The 22<sup>nd</sup> was gray with some little hail. The 23<sup>rd</sup> was a little smirry. The 24<sup>th</sup> was a dull day. On the 25<sup>th</sup> and 26<sup>th</sup>, the weather spits small hail. From the 27<sup>th</sup> to the 31<sup>st</sup>, there was frost and thick ice. March was mostly cold. On the 24<sup>th</sup>, there were blooms on some gooseberries. The currants were open. On the 1<sup>st</sup> of April, there was frost and thick ice.<sup>72</sup>

In 1715-16 in *England*, a fair was held on the River Thames.<sup>2, 41, 43, 90</sup>

In *England* in 1716, the River Thames froze at London and many set up shops on the ice.<sup>58, 60, 62, 80</sup>

In *England* in 1716, a fair held on the Thames; oxen roasted.<sup>47, 93</sup>

In *England* there was a severe frost from 24 November 1715 to 9 February 1716, and as a result, a fair was held on the frozen River Thames and oxen roasted.<sup>90</sup>

In 1716 A.D., booths were erected on the ice on the River Thames at London, *England*.<sup>38</sup>

Dawkes' News Letter of the 14th of January says, "The Thames [in *England*] seems now a solid rock of ice; and booths for sale of brandy, wine, ale, and other exhilarating liquors, have been for some time fixed thereon; but now it is in a manner like a town; thousands of people cross it, and with wonder view the mountainous heaps of water that now lie congealed into ice. On Thursday a great cook's-shop was erected, and gentlemen went as frequently to dine there as at any ordinary. Over against Westminster, Whitehall, and Whitefriars, printing presses are kept on the ice."<sup>29</sup>

---

**1716 A.D.** In *England*, the years 1716 to 1719 were exceedingly hot and dry.<sup>72</sup>

In *England* on the 2<sup>nd</sup> and 3<sup>rd</sup> of April 1716, the weather was clear. The morning of the 4<sup>th</sup> was misty. The 6<sup>th</sup> was clear. The 7<sup>th</sup> produced fog. The 8<sup>th</sup> and 9<sup>th</sup> was frost and clear. The 10<sup>th</sup> to the 12<sup>th</sup> were clear. The 13<sup>th</sup> was clear with some fog. On the 14<sup>th</sup>, it was clear with some fog in the valley. The 15<sup>th</sup> was clear. The 16<sup>th</sup> was clear, but produced 2-inch hail at Norfolk. The 17<sup>th</sup> produced small rain. The morning of the 18<sup>th</sup> produced small rain. To the 27<sup>th</sup>, the weather was clear, or cloudy with some smirrs. The 27<sup>th</sup> was hazy. The 28<sup>th</sup> was squally, rain and hail and in the afternoon small rain. On the morning of the 29<sup>th</sup>, it was rainy and then clear. The middle of the month was moderate, but the end of the month was warm.<sup>72</sup>

In *England* from the beginning of May to the 15<sup>th</sup>, the weather was cold, dry and mixed. On the 15<sup>th</sup> and 16<sup>th</sup>, there was thunder and rain. On the 17<sup>th</sup>, the weather changed from foggy, to clear, to rain, to great rain. On the 18<sup>th</sup>, there was thunder. In the morning of the 19<sup>th</sup>, there were showers and thunder. The 23<sup>rd</sup> had an overcast rainy night. The 24<sup>th</sup> was hot with small showers. The 25<sup>th</sup> was cloudy. The 26<sup>th</sup> was showery with thunder, hail and rain. From the 27<sup>th</sup> to the 29<sup>th</sup>, there was showers and thunder, often

cloudy. By the Journal from Holland, it appears, that the very wet and tempestuous weather at Yarmouth, on the 26<sup>th</sup>, 27<sup>th</sup>, and 28<sup>th</sup> did not reach Holland [now *the Netherlands*].<sup>72</sup>

In *England*, June began with northwest winds with small showers and then southwest winds to the 10<sup>th</sup> at Yarmouth. But there was not a drop of rain in *Holland*. Whirlwinds prevailed mostly all the rest of the month with moderate weather. On the 20<sup>th</sup> and 21<sup>st</sup>, there was loud thunder, and fierce rain at Yarmouth, with hard gales that damaged ships. Notwithstanding the rains of 17, 26, 27, and 28 May and the June showers; at the beginning of July, all the ponds near Yarmouth were dry. They had not been this dry in the 9 previous years. The year 1704 was remarkably dry and this drought began in 1714 and continued to 1719; dried up the very rivulet [very small streams], which rises at this springhead [natural springs].<sup>72</sup>

In *England*, the winds in July were westerly, most with showers and squalls. On the 6<sup>th</sup>, there was thunder. On the 11<sup>th</sup>, there was loud thunder.<sup>72</sup>

In *England*, in August the winds were variable. The first half of the month was dry with some sweet smirrs. On the 14<sup>th</sup> and 15<sup>th</sup>, there was much rain. On the 16<sup>th</sup> everywhere was dry; except Yarmouth had showers.<sup>72</sup>

In *England*, it was excessively dry until the end of August.<sup>47, 72</sup>

In 1716, the price of wheat [in *England*] averaged 48 shillings per quarter [quarter ton].<sup>212</sup>

In 1716, in consequence of a long drought and a west-southwest wind, the River Thames [in London, *England*] was blown so dry that thousands of persons passed across on foot, under the arches of the London Bridge.<sup>212</sup>

In *England*, the years between 1713-1719 produced a moderate drought. There were few rains but there were rich dews. The years 1714, 1717, 1718, and 1719 produced very hot summers.<sup>72</sup>

The River Thames in *England* on September 14, was dry both above and below the bridge (London bridge).<sup>40</sup>

In *England* on September 14, the River Thames lay perfectly dry both above and below the bridge, leaving only a very narrow channel, which extraordinary circumstances was occasioned by a strong westerly wind, that blew all the preceding day and night, which forced back the tide, and drove forward the ebbing water.<sup>55</sup>

In *England*, September was squally weather. The barometer dropped for the 1<sup>st</sup> to the 14<sup>th</sup> finally reaching 28.0. On the 5<sup>th</sup>, there were sudden furious rains and winds. On the 8<sup>th</sup>, there was thunder. On the 11<sup>th</sup>, there was lightning. The 12<sup>th</sup> was calm. On the evening of the 13<sup>th</sup>, there rose a [massive] storm on the east coast, which destroyed a vast number of loaded colliers [bulk cargo ships that carry coal] and other ships. This storm was most fatal to Leostoss, Ipswich and Yarmouth. There were terrible wrecks of fisher boats. The River Thames ran dry for the space of several miles. In London at Westminster and Limehouse, the people walked over the river on foot for 14 hours; there was only a narrow gutter in the middle. Grainger, an expert sailor, and others that rode the anchor beyond Southwold, observed that their ships never parted all night, and were lost by expecting more water on the sands than they found. In Yarmouth road, the ebb was observed to run 12 hours. (A similar event is mentioned by Hollingshead during the reign of King Henry the 1<sup>st</sup>.)<sup>72</sup>

In *England*, in October the weather was temperate during the first three weeks but often with quite a bit of rain. On the 2<sup>nd</sup>, it rained for 24 hours; but not a hard rain. The 4<sup>th</sup> was similar but with less rain. From the 14<sup>th</sup> to the end of the month, the weather was mostly dry. The 24<sup>th</sup> and 29<sup>th</sup> produced hard frosts.<sup>72</sup>

In *England*, from the beginning of November to the 17<sup>th</sup>, the weather was dry and calm. From the 19<sup>th</sup> to the 24<sup>th</sup>, there was abundant rain and fierce squalls.<sup>72</sup>

In *England*, from the 1<sup>st</sup> to the 9<sup>th</sup> of December, there were flights of hail, which made the ground white. On 2, 3, 5 and 11 December, the weather produced all frosts with overcast skies. Then there were some thicks and fogs till the 18<sup>th</sup>. The weather to the end of the month was variable.<sup>72</sup>

In 1716, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 23 February and 23 March, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hai-fêng and Jehol province at Ch'ao-yang. Jehol (formally Rehe province) was located north of the Great Wall, west of Manchuria, and east of Mongolia. In 1955, the area was divided between Hebei province, Liaoning province and *Inner Mongolia*.

— During the period between 20 June and 18 July, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Fu-shan; Kwangtung province at Chieh-yang; and Hopei (now Hebei province) in northern *China* at Mi-yün and Huai-jou.

— During the period between 6 May and 8 November, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-shan.

In 1716, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 22 April and 20 May, floods struck Hupeh (now Hubei province) in central *China* at Huang-mei, Kuang-chi, Chiang-ling and Chien-li.

— During the period between 20 June and 18 July, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-hua and Ch'ang-shan; Shansi (now Shanxi province) in northern *China* at Ning-wu; Jehol (formally Rehe province) in *China* at Ling-yüan [uncertain name, "Chien-ch'ang"]; Shantung (now Shandong province) on the east coast of *China* at Kuang-jao, Ning-yang, Chi-ning and Wên-shang; Hupeh province at Ch'ung-yang and T'ien-mên; Hunan province in south-central *China* at Hsiang-t'an [uncertain name, "Huang-ling"]; and Anhwei (now Anhui province) in eastern *China* at T'ung-ling and T'ai-hu.

— During the period between 15 October and 13 November, floods struck Shantung province at Tsinan and Hupeh province at Ch'ien-shan.

In 1716 during the spring and autumn, there were continuous rains in the vicinity of Shanghai, *China*. During the 7<sup>th</sup> moon, there was a typhoon. These events led to a bad harvest and a year of scarcity.<sup>166</sup>

**Winter of 1716 / 1717 A.D.** The winter near Philadelphia, Pennsylvania in the *United States* was long and severe, and there were the deepest snows remembered by the oldest inhabitants. In the Carolinas in February, the snow fell to the depth of six feet (1.8 meters). In New England it fell to a much greater depth. A Salem, Massachusetts's newspaper published immediately after the storm, said, "the snow was blown into banks from fifteen to twenty feet high (4.6 to 6.1 meters)."<sup>1</sup>

Winter started early in 1716 in New England in the *United States*. By December there was already 5 feet (1.5 meters) of snow on the ground. Snow fell considerably several times during the month of January 1717. By February 6, there were drifts twenty-five feet (7.6 meters) in some places, and in the woods a yard (0.9 meters) or more on the level. The month of February was 'very ordinary' at first. But a snowstorm continued for a couple of days and the farmers commenced to think that perhaps it would be a severe one. A week went by and still the snow fell. It had not stormed continuously all of that time but

there was no clearing of the skies. It stopped for a few hours perhaps and then more clouds gathered and then came the snow. Storm after storm swept down on the country and village until two weeks had elapsed. Finally when the sun did come out and the skies became clear, what a sight was before people! Snow lay at a depth of ten to fifteen feet (3-5 meters) on the level, and in some places for long distances it was twenty feet (6.1 meters) deep. Indians, who were almost a hundred years old, said that they had never heard their fathers tell of any storm that equaled this.<sup>24, 25</sup>

In the *United States*, at that time the forests were near at hand. Bears and wolves were numerous then. Due to the great storm, they became desperate in their cravings of hunger, and as soon as night fell, in their ravenous state they followed the deer in droves into the clearings, at length pouncing upon them. In this way vast numbers of these animals were killed, torn in pieces, and devoured by their fierce enemies. It was estimated that nineteen out of every twenty deer were thus destroyed. The snowstorm also drove wolves, foxes, bears and wildcats into the settlements. These animals made nightly raids on the sheep pens and hog pens. In many places the cattle and sheep were allowed to roam about in the large yards during the winter and such was the fall of snow that scores of these were buried and then of course they froze to death before help could reach them. In the spring some of the cattle were found standing erect, frozen solidly in their tracks. In other places the sheep had huddled together for mutual warmth and had succumbed in that way. On the farms of one gentleman upwards of eleven hundred sheep were lost in the snow. Twenty-eight days after the storm, while the search for them was still in progress, more than a hundred were found huddled together, apparently having found a sheltered place on the lee side of a drift, where they were slowly buried as the storm raged on, being covered with snow until they by sixteen feet (5 meters) beneath the surface. Two of the sheep were alive, having subsisted during the four weeks of their entombment by feeding on the wool of their companions.<sup>24, 25</sup>

In the *United States*, many a one-story house was entirely covered by the snow, and even the chimneys in some instances could not be seen. Paths were dug under the snow from house to barn, to enable the farmers to care for their animals, and tunnels also led from house to house among the neighbors if not too far apart. Most of the houses in fact were covered to the third story windows on the wind shaken side, and the barns were entered through the windows or traps to the haylofts, the doors being so deeply buried that they could not be shoveled out.<sup>24, 25</sup>

Every village organized searching parties to hunt for widows or elderly people who could not care well for themselves. Among the inhabitants of Medford, Massachusetts in the *United States* was a widow, with several children, who lived in a one-story house on the road to Charlestown. Her house was so deeply buried that it could not be found for several days. At length smoke was seen issuing from a snow bank, and by that means its location was ascertained. The neighbors came with shovels, and made a passage to a window, through which they could gain admission. They entered and found that the widow's small stock of fuel was exhausted, and that she had burned some of the furniture to keep her little ones from suffering with the cold.<sup>24, 25</sup>

In New England in what was to become the *United States*, the winter of 1716-17 was remembered for its great snowfalls. In December 1716, snow fell to a depth of 5 feet [1.5 meters], rendering travel very difficult, and almost impossible except for snowshoes. The temperature throughout the winter was moderate, but the amount of snow that fell has never been equaled in New England. Snow fell in considerable quantities several times during January. On 6 February, the snow lay in drifts in some places 25 feet [7.6 meters] deep and in the woods 3 feet [0.9 meters] on the level. A great storm struck on 18 February, which continued to pile snow until the 22<sup>nd</sup>. Snow fell so violently on the 24<sup>th</sup> that all communications between houses and farms ceased. During this storm, snow buried the earth to a depth of 10-15 feet [3.0 – 4.6 meters] deep on the level and in some places over long distances it was 20 feet [6 meters] deep. Indians, who were almost 100 years old, said that they had never heard their fathers tell of any storm that equaled this.<sup>199</sup>

— Many cattle were buried in the snow, where they were smothered or starved to death. One farmer lost 1,100 sheep in the snow. Almost a month after the storm, he found a hundred of his sheep huddled together buried under 16 feet [5 meters] of snow. Two of the sheep were alive by feeding on the wool of their companions. A couple hogs buried alive dug their way out of a snow bank, 27 days later. Poultry survived several days after being buried alive. Hens were found alive after 7 days, and turkeys from 5 to 20 days.

— Wild animals were common in the forest of New England during this time. But during this storm, they were deprived of food. Bears and wolves were numerous then, and as soon as night fell, in their ravenous state they followed the deer in droves into the clearings, at length pouncing upon them. In this way vast numbers of deers were killed, torn to pieces, and devoured by their fierce enemies. It was estimated that nineteen out of every twenty deer were thus destroyed.

— Bears, wolves and foxes nightly assaulted the sheep in the farmer's sheep pens. Many ewes that were about to give birth to young, were so frightened at these assaults, that most lambs born the next spring were of the color of foxes, the dams being either white or black.

— This snowstorm damaged the orchards. The snow was above the top of trees, and when it froze, it formed a crust of ice, which broke most of the branches to pieces. The crust was thick enough that cattle grazed on its surface feeding on the tender twigs that poked through the ice and snow.

— Many one story houses were completely covered with snow even the chimneys. The farmers dug tunnels in the snow between their house and the barn in order to care for their animals. In places where houses were close together, tunnels were dug between houses.

In February 1717, snow fell in such great quantities in New England in the *United States* that it was called "The Great Snow". The Boston Gazette on February 25 stated, "the snow lies in some parts of the streets about six foot high."<sup>174</sup>

---

**1717 A.D.** In *England* in January, there were few frosts. It was a dry month with variable winds; some thick and foggy days; many days of sunshine. In February from the 2<sup>nd</sup> to the 9<sup>th</sup>, there were frosts. The five weeks up to this point had been dry and calm. From the 9<sup>th</sup> to the 16<sup>th</sup>, there were rain and shifting winds. From 17 to 28 February, the weather was calm and dry with fogs and rokes. March produced variable frosts, fogs, sleet and small rains. On the 29<sup>th</sup> of March, some gooseberries began to bloom. The month of April began dry and cold. The cold continued to the 12<sup>th</sup> with squally weather. On the 12<sup>th</sup>, it rained. On the 20<sup>th</sup>, gooseberries and currants blossomed. It was squally through April. May began as April ended. May was a temperate month. On the 4<sup>th</sup> of May, codlings bloomed. From the 16<sup>th</sup> to the 19<sup>th</sup>, there was much rain. From the 20<sup>th</sup> to the 25<sup>th</sup>, there were smirrs at times and cold northerly winds. On the 26<sup>th</sup>, there was rain; on the 28<sup>th</sup>, there was thunder. June began dry and sultry hot. From 7 to 21 June, it was dry. On the 9<sup>th</sup>, there was thunder and lightning with a free shower. On the 15<sup>th</sup>, there was a shower. On the 29<sup>th</sup>, there was thunder. The latter end of June produced a few free showers; but the ground remained dry. The first week of July produced a few showers. On the 9<sup>th</sup>, there was rain in the evening. The rest of the month was hot and dry.<sup>72</sup>

West Friesland and Groningen in *the Netherlands* were laid under water in consequence of a great inundation, when several villages were lost, and numerous persons and cattle perished. Part of Zealand, *Denmark* was also overflowed, and 1,300 inhabitants were drowned. The city of Hamburg [Hamburg], *Germany* and all the flat country near the Elbe, at the same period, sustained great damage in consequence of that destructive overflowing of the water.<sup>55</sup>

An inundation in Holland [now *the Netherlands*] and Zealand, *Denmark* caused 1,300 inhabitants to be drowned. The inundations also struck Holstein, *Germany* the same year.<sup>40, 41, 43</sup>

In 1717, there was an inundation from the sea in Zealand, *Denmark*; 1,300 inhabitants were drowned. There was incredible damage done at Hamburg, *Germany*.<sup>47, 90, 92</sup>

In *England*, during three years (1717-19) there was little rain but rich dews.<sup>47</sup>

In *England*, the years 1716 to 1719 were exceedingly hot and dry.<sup>72</sup>

In *England*, the years between 1713-1719 produced a moderate drought. There were few rains but there were rich dews. The years 1714, 1717, 1718, and 1719 produced very hot summers.<sup>72</sup>

In 1717, the price of wheat [in *England*] averaged 45 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In *France*, there was not a cloud in the sky between the 11<sup>th</sup> and 22<sup>nd</sup> of July. On the 22<sup>nd</sup> at Versailles, there was loud thunder at noon. The thunder was dreadful in Paris. It is said that the thunder arrived earlier at London. On the 27<sup>th</sup> of July, there was great thunder and rain between Paris and Clermont. On the 30<sup>th</sup>, it rained. In the first of August at St. Omers in northern *France*, it was showery. The same at Dunkirk in northern *France* early on the 2<sup>nd</sup>.<sup>72</sup>

In *England*, there was rain at a distance in Dover on the 3<sup>rd</sup> of August. On the 5<sup>th</sup>, it was squally. There was dry cloudless sunshine till the 16<sup>th</sup> of August. On 16 August at Ipswich, there were evening showers. It was the same on the 17<sup>th</sup>. On the 18<sup>th</sup> at Leostoss, it was showery. On the 19<sup>th</sup> at Yarmouth, there was lightning followed by rain. On the 20<sup>th</sup>, there was rain and wind at night and by the next morning a vast flood and furious rivers running over all Yarmouth Key into the Haven; the alleys were running like rivers. By noon the sky cleared. But then latter during the 21<sup>st</sup>, from 3 to 10 p.m., there was furious rains. In this dreadful storm 14 ships were stranded in 8 or 9 miles. Many were blown out of the road, and great numbers unmastered. September began hot for the season. There were little wind, with fogs and overcast skies. On the 3<sup>rd</sup> of September, there was continual loud thunder with intermittent lightning and rain. On the 7<sup>th</sup> it was squally and then smirry to the 21<sup>st</sup>. On the 21<sup>st</sup>, it rained early and then it was mostly dry to the 29<sup>th</sup>. On 30 September there was rain by squalls. October was a warm month, and the roads were dry; notwithstanding the rains of September. There was a great deal of rain on 26 and 27 October. It rained for 30 hours. Yet the ground was as dry as before. In November, there was little wind until the last week. From the 6<sup>th</sup> to the 9<sup>th</sup>, there was rain. On the 21<sup>st</sup>, 28<sup>th</sup> and 29<sup>th</sup>, there was frost. On the 21<sup>st</sup>, there was small or thick rain all day, then hail in the evening and a great dew on all the glass. On the 23<sup>rd</sup>, there were dreadful squalls of rain, flashes of lightning. December was a mild month. There were some days of hard frost with a little snow. On the 14<sup>th</sup> was the highest tide in the past 35 years doing a great deal of damage. The night tides were worse than the day tides. Most of the last three weeks of December were stormy and rainy.<sup>72</sup>

“In autumn 1717, a most terrible hurricane arose, which extended all over California [the unexplored territory on the North American west coast] and its gulf [Gulf of California], accompanied with such violent rains as swept every thing away before it. The church and Father [Juan] Ugarte’s house were laid level with the ground, and he himself saved his life under a rock, where he stood exposed to all the severity of the weather for twenty-four hours. The channel for conveying the water away was choked up, the sluice [water channel controlled at its head by a gate] at San Xavier [San Javier mission located on the peninsula in Baja California, *Mexico*] carried away, and the land which had been sown both there and at Mulege [a town located on the peninsula in Baja California, *Mexico*] was utterly destroyed, and covered with stones. Such was the force of the blasts, that at Loretto [a mission located on the peninsula in Baja California, *Mexico*], a Spanish boy, called Matheo, was taken up by one of its gyrations [winds], and never seen more, though the strictest search was made after him. Several barks [a sailing ship of three or more masts having the foremasts rigged square and the aftermast rigged fore-and-aft] belonging to the divers [sundry], on the coast of California, were also lost, and two belonging to [the city of] Compostella [Compostela, *Mexico*], in which four persons perished; but the rest saved themselves in two large bilanders [a small merchant ship with two masts, used on the coasts], which happened to lie near them,

and were strongly moored under the shelter of a rock.”<sup>201</sup>

Near the end of August 1717, a hurricane struck the Isle of Dauphin (Dauphin Island, Alabama) in the *United States* and laid the whole island underwater.<sup>174</sup>

In 1717, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Fu-shan.<sup>153</sup>

### Winter of 1717 / 1718 A.D.

The winter of 1717-18 in New England in what was to become the *United States* was unusually cold and the spring that followed was late, windy and uncomfortable. On 26 April 1818, a violent easterly storm struck along the coast of Massachusetts. The storm wrecked the notorious pirate ship *Whidah*, which was driven ashore near Cape Cod. A great number of the crew were drowned. One hundred and two bodies washed ashore and were buried. A vessel captured by the pirates also was driven ashore on the back of Cape Cod near Truro.<sup>199</sup>

In December 1717, the weather was very mild at London, *England*.<sup>212</sup>

**1718 A.D.** In *England*, during three years (1717-19) there was little rain but rich dews.<sup>47</sup>

In *England*, the years 1716 to 1719 were exceedingly hot and dry.<sup>72</sup>

In *England*, the years between 1713-1719 produced a moderate drought. There were few rains but there were rich dews. The years 1714, 1717, 1718, and 1719 produced very hot summers.<sup>72</sup>

On 14 April 1718, a flash of lightning struck Conesnon [Coesnon], in northwestern *France* near Brest. The lightning overthrew the roof and walls of the church as if done by the explosion of a mine. Stones were thrown in all directions to the distance of sixty yards [55 meters].<sup>271</sup>

On 3 June 1718, a waterspout [tornado] struck in Emmot Moor [Emmott Moor] in Lancashire, *England*. Within a few minutes, the water in the brook rose 6 feet [1.8 meters] and flooded the meadows. Ten acres of ground was destroyed. Sixty feet [18 meters] above the brook was torn up 7 feet [2.1 meters] deep down to solid rock.<sup>212</sup>

In 1718, the price of wheat [in *England*] averaged 38 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

The summer of 1718 was hot and dry in *England*, especially in July and August. The heat in *Italy* was excessive. The summer in Paris, *France* was characterized by:

Hot days	29 days
Very hot days	5 days
Extremely hot days	4 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 22 August and rose to 100.6° F (38.1° C) as determined by Cassini. According to La Hire the four very hot days occurred on 11, 21, 22 and 23 August and reached 95.9° F (35.5° C). In Dijon, *France*, in Burgundy the grape harvest began on 2 September.<sup>62</sup>

The years 1718 and 1719 produced dry heat that was violent [extreme], long and sustained. In Paris, *France* on 7 August 1718, the thermometer of Lahire [Philippe de la Hire], despite its adverse exposure, measured a temperature of 95° or 96.8° F (35° or 36° C) about three o'clock in the afternoon. These temperatures were again observed on the 11<sup>th</sup>, 21<sup>st</sup> and 23<sup>rd</sup>.<sup>79</sup>

In 1718 during the period between 5 February and 6 May, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Nan-ch'ang. During the period between 30 April and 29 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Lin-ch'ü. During the period between 8 August and 8 November, a drought engulfed Hupeh (now Hubei province) in central *China* at Ch'ung-yang and Shantung province at Ning-yang.<sup>153</sup>

In 1718, floods struck many regions of *China* including:<sup>153</sup>

— During the period 1-29 April, floods struck Chahar province (now eastern *Inner Mongolia*) at Wan-ch'üan and Hupeh (now Hubei province) in central *China* at Kuang-hua.

— During the period between 30 May and 27 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ta-pu.

— During the period between 28 June and 27 July, floods struck Shantung (now Shandong province) on the east coast of *China* at Wu-ti; Kwangtung province at P'u-ning and Mei [possibly a misprint, "Chia-ch'ing-chou"]; Hupeh province at Ch'ung-yang and Huang-an [possibly a misprint, "Huang-ting"]; and Anhwei (now Anhui province) in eastern *China* at Ching-tê. At Ching-tê, innumerable people drowned.

— During the period between 8 August and 8 November, floods struck Hupeh province at Huang-p'o.

**Winter of 1718 / 1719 A.D.** This winter was very mild in *France*. Most trees were covered with flowers from the months of February and March 1719.<sup>79</sup>

The winter in 1719 in *France* and *Italy* was remarkable for its mildness. In Paris, *France*, the thermometer was often only 36.0° F (2.2° C) in January (as the lowest temperature of 24 hours). Only in a single day did the temperature fall below zero; on 2 January it fell to 28.4° F (-2.0° C). Most of the trees in February and March were flowering. But the blooms were destroyed by the cold at the end of March and the frosts of April. At Marseille, *France*, the trees continued to flourish since the previous October, and bore new fruit (which was small but drove to maturity). On 18 December one could pick perfectly ripe cherries and apples. In most parts of Genoa, *Italy*, the same was true for plums, cherries, figs and peaches. The orange and lemon trees in the open field were blooming since November and bore fruit. In January in Provence, *France*, the olive tree were as far advanced as during ordinary years in April and May.<sup>62</sup>

In 1718 in *England* there was a short severe frost.<sup>47, 72, 93</sup>

In 1719, there was a great frost in London, *England*.<sup>212</sup>

[In February 1719 approximately] 7,000 Swedes perished in a storm of snow upon the mountain of Rudel or Tydel, in their march to attack Drontheim (the city of Trondheim located in *Norway*).<sup>40, 41, 43, 56</sup>

In *Sweden*, a great snowstorm, wherein 7,000 Swedes, on their way to attack Drontheim, perished on the mountains.<sup>47, 57, 90</sup>

[Another account places this event in 1715] In February 1715, "seven thousand Swedish soldiers and their officers perished from the cold on the mountain of Ruden, which separates Jempteland [Jämtland] in *Sweden* from Drontheim [the city of Trondheim located in *Norway*]. Charles XII after his departure from Bender, sent a body of 10,000 men to clear a passage for his main army to Drontheim. They learned that Count Sponeck was in full march towards them, and at the same time received orders to retreat over the mountains. This they immediately attempted, but just as they had reached the confines of their own country, they were overtaken by an enemy more formidable than those from whom they had fled. A dreadful storm of wind arose, attended with the most intense frost, and driving before it a thick snow; in this fatal mist they were soon bewildered, being able to see nothing before them, nor to trace any path upon the ground, the cold was every moment converting some of them into statues, whose attitudes

expressed the utmost distress, and whose countenances were fixed in the agonies of death. The last efforts of life were employed in cutting their muskets to pieces, and burning whatever was combustible about them. When this scanty portion of fuel was exhausted, they sunk under the fate of their companions, and some Norwegian sledgmen [a sledge is a sled or sleigh] who were ordered out to observe their retreat, found them frozen to death, some sitting, others lying, and some in a posture of prayer.”<sup>301</sup>

---

**1719 A.D.** On 3 July 1719, a hailstorm struck Seighford in Staffordshire, *England*. A most dreadful tempest of hail, of various curious shapes, most of which were 5 or 6 inches [13 or 15 centimeters] in circumference, and some 9, 10 and 11 inches [23, 25 and 28 centimeters] in circumference.<sup>212</sup>

On 3 July 1719 in Seighford in Stafford County, *England*, it was a hot and clear day. At about 2 o'clock in the afternoon clouds suddenly began to rise in the west. A soft shower followed, after which storm came from the north about 4 o'clock. Hailstones of various shapes and sizes, some 11 inches in circumference. "They seemed to be fragments of some cylindrical body of ice broken and dashed to pieces in the fall.”<sup>93, 294</sup>

In *England*, during three years (1717-19) there was little rain but rich dews.<sup>47</sup>

In *England*, the years 1716 to 1719 were exceedingly hot and dry.<sup>72</sup>

In 1719, the price of wheat [in *England*] averaged 35 shillings per quarter [quarter ton].<sup>212</sup>

In 1719, there was a violent epidemic of smallpox in London, *England*. One-ninth of the population died of it.<sup>212</sup>

In *England*, the years between 1713-1719 produced a moderate drought. There were few rains but there were rich dews. The years 1714, 1717, 1718, and 1719 produced very hot summers.<sup>72</sup>

Severe heat reappeared with the month of June 1719. The heat was more intense than the previous year, and lasted a lot longer. In Paris, *France* the thermometer of Lahire observed a maximum temperature 98.6° F (37° C). Cassini recorded forty-two days of a temperature of 87.8° F (31° C). The heat persevered for three and a half months, from June until the middle of September. As a result of the heat at Marseille the trees bloomed for a second time in October, and began to grow new fruits. But the cold during December prevented these fruits from growing as usual, but it did not prevent them from reaching a perfect ripeness. Cherries and apples were gathered on December 18 and they were completely ripe.<sup>79</sup>

The summer of 1719 was one of the driest summers that had ever been observed in *Europe*. In *England* in the county of York from 1 May to the end of autumn, the region experienced unprecedented heat and drought, with the exception of a break lasting 15 days. The summer in Paris, *France* was characterized by:

Hot days	42 days
Very hot days	4 days
Extremely hot days	2 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 16 July and 7 August. The heat lasted from early June to mid-September. In Dijon, *France*, in Burgundy, the grape harvest began very early on 28 August. In Marseille, *France*, the heat was very persistent and summer was without rain. The peak temperature occurred on 15 August. The wheat dried up and produced no grain.<sup>62</sup>

In 1719 in Paris, *France*, the rainfall measured 10 inches (253 millimeters). This resulted in the extreme lowering of the water level of the Seine River at Pont de la Tournelle. This year was very dry. The low level of the river became the zero mark standard for comparisons of future water height measured at the bridge.<sup>79</sup>

In 1719, the Spaniards sailed from Havana, *Cuba* with a fleet of 14 ships and a force of 1,200 men against South Carolina, in the *United States*. The greatest part of this fleet was lost in a storm.<sup>174</sup>

In 1719 during the period between 19 February and 20 March, floods struck Hopei (now Hebei province) in northern *China* at Ching-ho. During the period between 21 March and 19 April, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Ch'ü-fou. During the period between 6 May and 8 August, a drought engulfed Shantung province at Fu-shan and Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-shan, Chin-yün and Hsia-chiang. During the period between 16 August and 13 September, floods struck Shantung province at Fu-shan, Jih-chao, Wei and Chiao. At Chiao, the city walls were damaged by the floodwaters and innumerable houses were damaged. During the period between 14 September and 12 October, a drought engulfed Chekiang province at I-wu.<sup>153</sup>

In 1719, there were protracted winds and rains in the vicinity of Shanghai, *China*. This produced a bad year.<sup>166</sup>

In 1719 during the 9<sup>th</sup> moon on the 19<sup>th</sup> day, there were three tides in one day at Lau, *China*.<sup>166</sup>

**1720 A.D.** In Northampton, *England*, a great flood did considerable damage.<sup>47, 92</sup>

In 1720, the price of wheat [in *England*] averaged 37 shillings per quarter [quarter ton].<sup>212</sup>

In 1680, 1720, 1739 and 1740 [in *Europe*], storms of hail of one foot thickness fell.<sup>190</sup>

In 1720, a hurricane struck offshore *Puerto Rico* causing greater than 500 fatalities.<sup>141</sup>

In 1720, a drought engulfed several regions of *China* including:<sup>153</sup>

— During the period between 6 May and 8 August, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tung-p'ing; Shansi (now Shanxi province) in northern *China* at An-tsê, Ch'ü-wo and Lin-fêng; and Chekiang (now Zhejiang province) on the east coast of *China* at Hu-chou, T'ung-hsiang and Ch'ung-tê.

— During the period between 8 August and 8 November, a drought engulfed Shansi province at Ch'in and Shantung province at Lin-ch'ü.

In 1720, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 6 June and 4 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lung-ch'uan, Ch'ao-an and Ch'ên-hai; Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ing-yüan and T'ung-hsiang; and Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-yu.

— During the period between 5 July and 3 August, floods struck Hupeh (now Hubei province) in central *China* at P'u-ch'i, Hanyang, Han-ch'uan, Mien-yang and Shih-shou. At Shih-shou, almost all the houses were damaged by the floodwaters.

— During the period between 4 August and 1 September, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Hêng, Lung-an [possibly a misprint, "Chiang-an"], Yung-ch'un, Ts'ang-wu and Nanning.

**1721 A.D.** In Adige in northern *Italy*, terrible floods occurred in the valley through which this river (the ancient Athesis) runs.<sup>47, 92</sup>

In 1721, the price of wheat [in *England*] averaged 37 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1721, there was a dry fog [in *England*].<sup>212</sup>

It was cold, moist and rainy to September in *England*.<sup>72</sup>

Towards the end of August 1721, a strong storm passed near the Bay of Conception [Bahía Concepción] on the peninsula in Baja California, *Mexico*. This storm generated a waterspout.<sup>201</sup>

In 1721, a drought engulfed many regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-hua, T'ung-hsiang and Hai-ning. The rivers dried up.

— During the period between 28 January and 20 September, a severe drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at I-shan. The drought damaged the crops.

— During the period between 5 February and 6 May, a drought engulfed Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Hsing-ning; Kwangsi province at Ch'üan; Hopei (now Hebei province) in northern *China* at An-hsin; Shantung (now Shandong province) on the east coast of *China* at P'êng-lai; Chekiang province at Hangchow; and Shensi (now Shaanxi province) in central *China* at Sian, Fu-shih and Fêng-hsiang.

— During the period between 5 February and 8 November, a drought engulfed Yunnan province in southwest *China* at Hao-ch'ing.

— During the period between 5 February and 24 June, a drought engulfed Hopei province at Huai-jou. The drought damaged the crops.

— During the period between 6 May and 20 September, a drought engulfed Chekiang province at T'ung-lu. The drought damaged the crops.

— During the period between 23 August and 20 September, a drought engulfed Chekiang province at Hsüan-p'ing; Kiangsi (now Jiangxi province) in southern *China* at Ning-tu; and Hupeh (now Hubei province) in central *China* at Huang-kang and Fang.

— During the period between 25 June and 18 November, a drought engulfed Kwangsi province at Hêng.

— During the period between 21 September and 20 October, a drought engulfed Shantung province at Hsia-ching.

**1722 A.D.** In Yorkshire, *England*, extensive rains caused great damage; known as “Ripponden Flood” occurred on May 18, 1722.<sup>40, 41, 43, 47</sup>

Ripponden is situated on the River Riburn in *England*, and is memorable on account of the immense flood that took place on the sudden swelling of the river, on the 18<sup>th</sup> of May, 1722, called the Ripponden flood, which commenced between the hours of three and five in the afternoon; the water rose seven yards (21 feet, 6.4 meters), destroying several bridges, mills, and a number of houses; many people lost their lives on this melancholy occasion. The church at Ripponden was very much damaged, part of the churchyard washed away, the graves laid open, and a coffin was lodged in a tree at a considerable distance.<sup>59</sup>

[Another source places this event in 1771] In 1771, in Yorkshire, *England*, there was a dreadful inundation, called Ripon Flood.<sup>90, 92</sup>

On 18 May 1722, there was heavy rainfall at Ripponden in Yorkshire, *England*. The beck [River

Ryburn?] raised 6 feet [1.8 meters], destroying several houses, six stone bridges, eleven wooden bridges, and drowned 15 people.<sup>212</sup>

On 18 May 1722, a violent rainstorm caused a massive flood in Riponden [Ripponden] near Halifax in West Yorkshire, *England*. The inundation was caused by the dashing (as they call it) of two large watery clouds upon the hills. “Whatever was the more immediate cause, the effects were dismal and so sudden, that tho’ it happen’d in the day-time, between the hours of four and five o’clock in the afternoon, the people could not save their lives. By the modestest [most modest] computation the [River] Beck was rais’d at least two yards in perpendicular height above what was ever known before [this was corrected to “a rise of water above 20 feet”], which may be easily conceived by the situation of the place, implied in the termination *den*, which signifies a deep valley between pretty steep hills on each side. *Fontes in convallibus*, Ps. [Psalm] 103.2 is in the Saxon version render’d *pillar on denum*; and *valley of tears*, Ps. 83.6 *dene teowa*. Several houses, four mills, (according to some six) 9 stone, and 10 or 11 wooden bridges were carried down by the flood and the wheels, dams and sluices (or goits as they call them in Yorkshire, from the verbal noun *geotan, funacre*) of most of the mills, that were left standing, broken and damaged, and a great deal of cloth gone. Fifteen persons were drowned; 7 out of 8 in one house were either kill’d by the fall of it or drowned. The rapidity of the torrent was so violent, that it took down the north side of Riponden chapel, and carry’d off most of the seats. The rector of Castleford inform’d Mr. Thoresby, that several goods were carried down so far, tho’ upwards of 20 miles [32 kilometers] off. It tore up the dead out of their graves. It swept away all the corn-land [grain fields], as deep as the plough had gone. Some persons sav’d themselves by forcing a way out at the roofs of their houses, and sitting upon the ridges, till the flood abated.”<sup>295</sup>

In 1722, the price of wheat [in *England*] averaged 36 shillings per quarter [quarter ton].<sup>212</sup>

In *England*, it was cold moist and rainy to Midsummer.<sup>72</sup>

On 28 August 1722, a hurricane struck *Jamaica*.<sup>124</sup> [Other accounts give the date as 20 August. A hurricane struck *Jamaica* on August 20, 1722.<sup>40, 41, 42</sup>]

Port-Royal in *Jamaica* destroyed by a hurricane on August 28, 1722.<sup>40, 41, 43, 56</sup>

The hurricane of 28 August 1722, left only six out of fifty ships afloat in Kingston Harbor and caused the water to rise 5 meters above the usual mark at Port Royal, *Jamaica*. The Rio Cobre river flowed at the time of the European discovery of *Jamaica* in 1494 at the foot of the White Marl Hill, winding at the base of the mountains and entering the sea by way of the Fresh – now known as the Ferry-River. The hurricane of 1722 changed the course of the Rio Cobre and opened a more direct route to the harbor.<sup>152</sup>

On August 28, twenty-six ships were cast away by a dreadful storm at Barbados and a great part of Port Royal in *Jamaica* destroyed. Many families were swept away and perished by the breaking in of the sea, and much damage was done to the plantations. The dreadful tempest wrecked 26 ships at *Jamaica* and a great part of Kingston was destroyed. A dreadful hurricane also happened at the same time in Georgia and Florida in the *United States*.<sup>55</sup>

On 28 August 1722, the town of Port Royal, *Jamaica* was overwhelmed by the sea: twenty-six merchant vessels and 400 persons perished in the harbor. Mr. Atkins, purser of his Majesty's ship *Weymouth*, gives the following description of the hurricane:<sup>143</sup>

The hurricane came about a week after our arrival. It began at eight in the morning, two days before the change of the moon. It gave at least forty-eight hours notice, by a noisy breaking of the waves upon the Kays, very disproportioned to the breeze, a continued swell without reflux of the water — and the two nights preceding, prodigious lightning and thunder; which all the old

experienced men foretold would be a hurricane, or that one already had happened at no great distance.

I was ashore at Port Royal, and found all the pilots returned from the windward part of the island (where they customarily attend the coming down of ships), and observing upon the unusual intumescence of the water, so great the day before, and beat so high, that our boats could not possibly put on shore at Gun Kays, to take the men off that were set there, to the number of twenty, for trimming up our casks; themselves making signals not to attempt it. Betimes next morning, the wind began in flurries at N.E. and flew quickly round to S.E. and S.S.E., where it continued the stress of the storm, bringing such quantities of water that our little island was overflowed four feet at least: so that, what with the fierce driving of shingles (wooden staves, used instead of tiling upon their houses) about our ears, and the water floating their boats, empty hogsheads, and lumber about the streets, those without doors were every moment in danger of being knocked on the head or carried away by the stream. Within it was worse; for the waters sapping the foundations, gave continual and just apprehensions of the houses falling, as in effect half of them did, and buried their inhabitants. Nor indeed, after the storm had began, was it safe to open a door, especially such as faced the wind, lest it should carry the roofs off; and escaping thence, there was no place of retreat, we remaining in a very melancholy situation, both from wind and water.

It may be worth notice, what became of the purser in this common danger. I was regardless at first, as suspecting more of timidity in the people — till finding myself left alone proprietor of a shaking old house, the streets full of water and drift, with shingles flying about like arrows, I began to meditate a little more seriously upon my safety, and would have compounded all my credit in the office, my hoops and bags, for one acre (as Gonzalo says in the *Tempest*) of barren ground, long heath, or brown furze, to have trod dry upon!

Our neighbors had retreated towards the church, as the strongest building and highest ground, which I was luckily too late to recover; but endeavoring to stem upwards for a safer station, was taken into a house in the lower street, with an old woman wading in the same manner from her ruined habitation. We were no sooner in, but new fears of this also falling, thrust us into the yard (the water then at eleven o'clock breast high), where we helped one another upon a low brick-built out-house, that being more out of the wind, and surrounded by others, kept the waters still. The unhappiness of those who suffered in stronger houses was their facing the wind, which brought the sea upon them with violence. A platform of one and twenty guns and mortars were drove, some of them, to the market place: the two lines of houses next the sea, with the church, were undermined and leveled with the torrent; and in their ruin was our safety; for although we had a greater depth, they were by such a bank made motionless. The whole rise of the water was computed at sixteen or eighteen feet, very admirable, at a place where it is not ordinarily observed to flow above one or two. At five in the evening the waters abated, and with so quick a retreat as to leave the streets dry before six; when every one was congratulating his own safety, in condolences upon the loss of their friends.

Of fifty sail in this harbor, only four men-of-war and two merchant ships rode it out, but with all their masts and booms blown away. All the men we left at Gun Kay were washed off and perished, except one Indian that drove into harbor, upon a broken gallows that had been there erected. Wrecks and drowned men were everywhere seen along shore; general complaints of loss at land (least at St. Jago [now called Spanish Town]), which made it a melancholy scene; and to finish the misfortune, the slackness of the sea-breezes, calms, and lightning, stagnating waters, broods of insects thence, and a shock or two of earthquake that succeeded to the hurricane, combined to spread a baneful influence, and brought on a contagious distemper, fatal for some months throughout the island.

On 28 August 1722, a tremendous hurricane reduced Port Royal, in *Jamaica* to a heap of rubbish. About 400 persons lost their lives from an irruption of the sea. Of 26 sails of vessels and 10 sloops in the

harbor, only 10 were seen after the hurricane and half of these were irreparably shattered. The inhabitants of Port Royal moved to the opposite side of the bay and built the town of Kingston.<sup>174</sup>

On 28 August 1722, a violent storm and inundation [hurricane] destroyed Port Royal, *Jamaica*. The sea was raised by the wind to a much greater height than ever was known before, broke over its ancient bounds, and suddenly overflowed a large tract of land; carrying away, with irresistible fury, men, houses, cattle and everything that stood in its way. At Port Royal, “the sea broke in upon us from all quarters with an impetuous force, concurring with the violence of the wind to cut off all hopes of safety; for we had no other choice but to perish in the waters if we fled from our houses, or of being buried under the ruins if we remained in them. In this dreadful suspense we were held for several hours; for the storm began about eight in the morning and did not sensibly abate till between twelve and one; during which time the wind and sea together demolished a considerable part of the town, laid the church even with the ground, destroyed above one hundred and twenty of the white inhabitants, and an hundred and fifty slaves; and ruined all the store-houses, with the goods and merchandise in them. The situation of the place, it being surrounded on all sides with the sea, rendered it more exposed than any other to the fury of this element; for our only defense against the sea, is a great wall running all along the eastern side of the town, where we used to apprehend most danger. This wall is raised about nine foot above the surface of the water, and is about seven foot thick, and for twenty years had proved a sufficient security to the town; but in this storm it broke over the wall with such a force as nothing was able to withstand. Two or three rows of houses that run parallel to the wall were entirely washed away, among which the church, a handsome building, and very strong, was so perfectly demolished that scarce one stone was left upon another. Great part of the castle also was thrown down, though’ it was of a prodigious thickness, and founded upon a rock: And the whole fortress was in the utmost danger, the sea breaking over the walls which stood thirty foot high above the water. In the highest streets of the town, most removed from the sea, the water was five foot deep, and so rapid that the strongest man could not stem it, so that we were obligated to keep in our upper-rooms, though’ we were in danger of perishing every minute by the fall of houses, which shook in a very terrible manner, and the roofs were generally blown off.” The morning, in which the storm struck, there was a great fleet of merchant ships riding in the harbor. Most of these had taken a full load of freight and were to have returned home in a few days. The storm left only one vessel in the harbor, besides four sail of men of war; and all of these had their masts and rigging blown away. The most sensible proof of the irresistible force of the storm was the vast quantities of stones that were thrown over the town wall, of which such a prodigious number were forced over, that a hundred Negroes were employed six weeks in throwing them back into the sea. Some of these stones were so large that nine or ten men could not heave one of them back again over the wall. The town of Kingston also received great damage. Many houses were blown down and many more shattered and unroofed. An abundance of rich goods were spoiled by the rain, which fell at the same time. Some people were killed onshore. All the vessels, which rode in Kingston harbor, which were between forty and fifty sails, were either driven ashore or overset and sunk. An abundance of seamen were lost. Some of the large ships with all their cargo were thrown upon dry land.<sup>227</sup>

Carolina in the *United States* was greatly damaged by the storms in August 1722.<sup>40, 41, 43, 56</sup>

On 8-9 September 1722, a hurricane struck *Jamaica* and the Cayman Islands in the *Caribbean Sea* causing 400 deaths.<sup>141</sup>

On 12-13 September 1722, a hurricane struck Louisiana in the *United States*. A large number of ships were sunk at or near New Orleans.<sup>141</sup>

In September 1722, a terrible hurricane struck from Biloxi, Mississippi to Natches in the *United States*. In New Orleans, Louisiana, it overthrew the church, the hospital and 30 houses and the barracks of New Orleans. It destroyed a great number of boats, canoes and other small craft in the harbor. Three vessels

were driven ashore on the banks, where the water rose eight feet. All the houses above and below the town were overthrown. At Biloxi, all the houses and magazines were beaten down and the fortifications were inundated.<sup>174</sup>

In 1722, a drought engulfed many regions of *China* including:<sup>153</sup>

— Chekiang (now Zhejiang province) on the east coast of *China* at Sung-yang.

— Hupeh (now Hubei province) in central *China* at Chung-hsiang, Chiang-ling and Ching-mên.

— During the period between 17 March and 15 April, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsinan.

— During the period between 6 May and 8 November, a drought engulfed Hopei (now Hebei province) in northern *China* at An-kuo.

— During the period between 13 July and 11 August, a drought engulfed Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin; Anhwei (now Anhui province) in eastern *China* at Wu-wei and Han-shan; Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning and Hu-chou; Shantung province at Ch'ing-ch'êng; and Hopei province at Ning-ching.

In 1722 during the period between 13 July and 11 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Tung-hai and Shantung (now Shandong province) on the east coast of *China* at Tung-a, I-shui, Ho-tsê, Shan, P'u and Ch'i-ho.<sup>153</sup>

In 1722, there was a famine in the vicinity of Shanghai, *China*.<sup>166</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

February 5<sup>th</sup> – moderate weather. February 12<sup>th</sup> – fine weather. February 28<sup>th</sup> – wet, stormy weather. March 5<sup>th</sup> – fine weather again. March 16<sup>th</sup> – charming day. April 9<sup>th</sup> – thunder and lightning, rain and hail. April 30<sup>th</sup> – thus far it was a very cold, dry spring. May 31<sup>st</sup> – fair weather concludes the month. July 30<sup>th</sup> - the hottest day that has been this year. An exceeding dry time, as ever was. September 30<sup>th</sup> – very hot for this time of year. October 20<sup>th</sup> – very cold. October 27<sup>th</sup> – excessively cold. December 2<sup>nd</sup> through the 9<sup>th</sup> – very hot indeed for the time of year, more so than ever was known before.<sup>78</sup>

**Winter of 1722 / 1723 A.D.** The winter in 1723 was mild in *England*. In December 1722 and the following January in Algarve, *Portugal* and Lisbon, *Portugal*, the trees were green and full of flowers, as in the springtime. Plums and pears were as ripe as they were in June. Figs were as great as normally in the months of April and May. And so were the grapevines; even the unripe grapes contributed.<sup>62</sup> [Algarve is located in the southernmost region of mainland *Portugal*.]

In December 1722, the weather was very mild at London, *England*.<sup>212</sup>

In 30 January 1723, snow crystals were observed at Petworth in Sussex, *England*, similar to those described by Descartes, Dr. Grew, and Mr. Morton. [René Descartes described these ice crystals as "These were little plates of ice, very flat, very polished, very transparent, about the thickness of a sheet of rather thick paper...but so perfectly formed in hexagons, and of which the six sides were so straight, and the six angles so equal, that it is impossible for men to make anything so exact." Today, we would describe these snow crystals as "diamond dust".]<sup>212</sup>

**1723 A.D.** In *England*, it was cold and dry after February.<sup>47, 72</sup>

On 24 February 1723, a great storm struck New England in what was to become the *United States* causing a great tide. The most severe damage was in Massachusetts and New Hampshire. Although in Rhode Island several wharves were broken into pieces, cellars and warehouses inundated. On the inside of Cape Cod, Massachusetts, the tide rose 4 feet [1.2 meters], and on the outside, it was said to have risen from 10

to 12 feet [3.0-3.7 meters] higher than ever was known. At Plymouth, Massachusetts, the tide was 3-4 feet [0.9-1.2 meters] above the highest watermark. The inundation in Boston, Massachusetts “looked most dreadful”. The tide at Boston was 20 inches [51 centimeters] higher rise than ever was known before. The water rose and flooded the street of Boston. A boat could sail from the south battery to the most elevated part of King Street and then to the hill where the North church stood. In Salem, Massachusetts, the tide flowed inland several miles and people were compelled to climb trees for safety. At Hampton, New Hampshire, the storm caused the great waves to break over the banks and flow inland for several miles. This flooding continued for several hours. The tide also did damage in Piscataqua, New Hampshire and Falmouth, Massachusetts, where it destroyed wharves and articles in cellars and warehouses.<sup>199</sup>

In Madrid, *Spain*, there were great floods; many persons of distinction drowned.<sup>47, 92</sup>

In 1723, at Madrid, *Spain*, several of the Spanish nobility and other persons of distinction perished from an inundation.<sup>90</sup>

In 1723, a mission church was under construction at St. Anne, lying 30 leagues [90 miles, 145 kilometers] from La Paz [on the peninsula in Baja California, *Mexico*] and 5 leagues [15 miles, 24 kilometers] from the gulf [Gulf of California]. The church was finished to the level that the beams and rafters were laid for a roof. A terrible hurricane arose and blew down the church killing several Indians who were sheltering inside from the storm.<sup>201</sup>

The drought of 1723 in Paris, *France* surpassed that of any recorded year. The year produced only 8.2 inches (207 millimeters) of rainfall; a little over a third of the annual average. In April particular, only 0.08 inches (2 millimeters) of rainfall fell in that month. The Seine River descended lower than in 1719. The south of *France* experienced very abundant rains during the spring.<sup>79</sup>

The year 1723 was a very dry at Lyndon in Rutland, *England*.<sup>212</sup>

In 1723, the price of wheat [in *England*] averaged 34 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1723, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, a drought engulfed Hopei (now Hebei province) in northern *China* at Yüan-shih.

— During the period between 6 May and 8 August, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning, Hu-chou and T’ung-hsiang; Kiangsu (now Jiangsu province) on the east coast of *China* at Wu-chin; Shantung (now Shandong province) on the east coast of *China* at Chü, Mêng-yin and Liao-ch’êng; and Hopei province at Ching-ching and An-kuo.

— During the period between 8 August and 8 November, a severe drought engulfed Hopei province at Chi-tsê; Chekiang province at Chia-hsing; and Kiangsu province at Soochow, Kao-ch’un and K’un-shan. The drought caused rivers to dry up.

In 1723 during the period between 6 May and 8 August, floods struck Anhwei (now Anhui province) in eastern *China* at Tung-lui; Hupeh (now Hubei province) in central *China* at Fang and Pao-k’ang; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch’ao-an [uncertain name, “Hai-yang”]. During the period 1-30 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Shanghai and Kwangtung province at Ta-pu.<sup>153</sup>

In 1723 during the summer, there was a great drought in the vicinity of Shanghai, *China*. This was a scarce year.<sup>166</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as: January 3<sup>rd</sup> – raw, cold weather. February 1<sup>st</sup> – a summer day. February 24<sup>th</sup> – the greatest storm and highest tide that has been known in this country. April 30<sup>th</sup> – it is thought this was the forwardest [earliest] spring that was known in the country, inasmuch as the blossoms have dropped from the trees, and the 1<sup>st</sup> of the month, a man in Cambridge mowed a quantity of English grass. May 2<sup>nd</sup> – cooler weather. May 25<sup>th</sup> – cool weather throughout the month. October – it was for a month past very stormy and uncomfortable weather as ever was known this time of the year. November – this was a very cold month; snowed but once.<sup>78</sup>

---

**1724 A.D.** In Adige, *Italy*, there were great floods in the valley.<sup>47, 92</sup>

In *England*, the summer of 1724 was hot and dry. In *Italy* the summer produced very hot days. In Paris, *France*, the summer was hot and dry. The summer in Paris was characterized by:

Hot days	40 days
Very hot days	4 days
Extremely hot days	1 day

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The heat began in June and lasted until September. The peak temperatures occurred on 11 August and was measured at 98.4° F (36.9° C). In Burgundy, the winter and spring had been moderate with a very hot mid-summer. In Dijon, *France*, in Burgundy, the grape harvest began early on 9 September. The wine was abundantly and quite good.<sup>62</sup>

[In *England*] on 10 June, there was a severe storm of thunder and lightning.<sup>72</sup>

On 10 June 1724, there was a thunderstorm at Worcester, *England*.<sup>212</sup>

In 1724, the price of wheat [in *England*] averaged 37 shillings per quarter [quarter ton].<sup>212</sup>

In August 1724, there was a smallpox epidemic in Plymouth, *England*, that lasted till June 1725.<sup>212</sup>

The heat of the summer of 1724 followed a spring and a very temperate winter. In Paris, *France* the heat began in June, and increased in the months of July, August and into September. The temperature reached its peak on September 1. The southeast [wind] almost always accompanied [the heat].<sup>79</sup>

In 1724, several regions of *China* experienced flooding.<sup>153</sup>

During the period of 24 February – 24 March, the following areas were affected:

— Hopei (now Hebei province) in northern *China* at Jao-yang, Su-ning [possibly a misprint, “Su-hsüan”], Hsin-yüeh, San-ho and Ning-ho.

During the period of 23 April – 22 May, the following areas were affected:

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Jao-p’ing.

During the period of 21 June – 19 July, the following areas were affected:

— Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ch’ên-hai experienced flooding. The dikes were damaged.

— Hupeh (now Hubei province) in central *China* at Kuang-hua, Fang, Ku-ch’êng, Chien-chiang, T’ien-mên, Chung-hsiang, Mien-yang and Chiang-ling experienced flooding. At Kuang-hua, people and cattle were drowned and crops damaged. At Fang, many houses were damaged. At Chung-hsiang, the dikes were damaged.

— Chekiang (now Zhejiang province) on the east coast of *China* at Ch’ing-yüan experienced flooding.

During the period of 20 July – 18 August, the following area was affected:

— Shantung (now Shandong province) on the east coast of *China* at Tung-a experienced flooding.

During the period of 19 August – 16 September, the following areas were affected:

— Kiangsu (now Jiangsu province) on the east coast of *China* at T'ai and Nan-hui experienced flooding. At T'ai, over 13,000 acres of land were damaged. At Nan-hui, there was a great storm. The sea overflowed. Houses and fields were damaged. People and cattle were drowned.

— Anhwei (now Anhui province) in eastern *China* at T'ai-hu experienced flooding.

— Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning, Yü-yao, Hai-yen, Ting-hai, Chên-hai, Ningpo, Tz'ü-ch'i, Fêng-hua, Hsiang-shan, Shang-yü, Hangchow, Hai-ning, P'ing-hu, Shao-hsing, Ch'êng, and Wên-chou experienced flooding. At Hai-ning, all the dikes were damaged. At Yü-yao, over 2,000 persons drowned and houses were damaged. At Ting-hai, there was a typhoon and the houses were damaged. At Chên-hai, there was a great storm.

During the period of 17 September – 16 October, the following areas were affected:

— Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow experienced flooding.

— Chekiang (now Zhejiang province) on the east coast of *China* at Yüeh-ch'ing experienced flooding.

— Shantung (now Shandong province) on the east coast of *China* at Chi-mo experienced flooding. Houses were damaged.

In 1724, a drought engulfed many regions of *China* including:<sup>153</sup>

— During the period between 24 February and 16 October, a drought engulfed Yunnan province in southwest *China* at Hao-ch'ing.

— During the period between 6 May and 8 August, a drought engulfed Chekiang (now Zhejiang province) on the east coast of *China* at Hai-ning and Chia-hsing.

— During the period between 19 August and 16 September, a drought engulfed Hopei (now Hebei province) in northern *China* at Ching; Shantung (now Shandong province) on the east coast of *China* at Hsia-ching [possible misprint, "Ching-ching"]; and Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ch'üan. Wells and springs dried up.

In 1724 during the 4<sup>th</sup> moon on the 8<sup>th</sup> day in the vicinity of Shanghai, *China*, there was a great hailstorm. The hailstones in lumps of fifty catties (approximately 67 pounds) killed one and wounded many persons. Then during the autumn, there was a great drought.<sup>166</sup>

On 12 September 1724, a hurricane struck the *Caribbean* island of Hispaniola causing 121 deaths.<sup>141</sup>

In 1724, a great storm accompanied by a very uncommon tide struck New England in the *United States*. At Boston, Massachusetts, the tide rose two feet higher than it had ever been known to rise before. At Hampton, the sea broke over its natural limits and inundated the marshes for many miles.<sup>174</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

April 11<sup>th</sup> – the peach trees now begin to blossom. July 23<sup>rd</sup> – a very great drought, everything burnt up. December 14<sup>th</sup> – first snow fell today. December 29<sup>th</sup> – considerable snow but followed and consumed by rain. This month we have had something like winter weather.<sup>78</sup>

**1725 A.D.** In Philadelphia, Pennsylvania in the *United States* the whole winter of 1725 was mild, but the spring was very cold. In March, snow fell to the depth of two feet in one night.<sup>1</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

April 30<sup>th</sup> – it is has been a very cold month. May 29<sup>th</sup> – this has been a cold month, and no rain.<sup>78</sup>

In 1725, there was a drought that lasted from the middle of January until the middle of April at Ketton in Rutland, *England*. The spring had been very warm. It was drier than ever known in this country. Then from the middle of April till August 27, it was cold and very wet. On 11 & 12 June, there was a great flood. On 23 August, there were 24 hours of heavy rain at Ketton, which caused a flood in the meadows for 4 or 5 days. The garden produce was one month later than usual. There were scarcely any kidney

beans, no caterpillars or flies. The fruit trees scarcely ripened, and corn [grain] was very dear [scarce]. In August, wheat sold for 5 to 6 shillings per strike, and barley for 4 shillings 6 pence.<sup>212</sup>

In 1725, the price of wheat [in *England*] averaged 48 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

The average temperature during the summer of 1725 in *France* was very low. The maximum temperature in Paris was 86.9° F (30.5° C) on 13 July. There were only 9 hot days. The sky was always overcast with frequent rains. This caused delays in the harvest. The harvest, which usually falls in the northern parts of the Kingdom [of *France*] in August, could not take place until September and October. Because of the rains, the grains when harvested were not dry and part of it germinated in storage in the barns. The heavy rains of May and June caused many grapes to fall. In August, September and October rains also prevented the full ripening of the remainder. In Burgundy, the grape harvest began on 10 October; the yield was plentiful, but the quality was poor. The grain harvest was bad in *France*.<sup>62</sup>

The cold, cloudy skies and continual rain filled almost the entire year of 1725. These cold rains delayed the harvests. In Paris, *France*, since the beginning of May, there were a few days without rain, but as the drops were small and slender, the rainfall sum of the year did not reach the average amount.<sup>79</sup>

In 1725, floods struck many regions of *China* including:<sup>153</sup>

- During the period between 14 January and 12 February, the Han River flooded in Hupeh (now Hubei province) in central *China*.
- During the period between 13 February and 13 March, floods struck Hopei (now Hebei province) in northern *China* at Pao-ti.
- During the period between 14 March and 12 April, floods struck Shantung (now Shandong province) on the east coast of *China* at Tsinan, Ch'i-ho, Chi-yang and Tê.
- During the period between 12 May and 10 June, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Canton.
- During the period between 11 June and 9 July, floods struck Kwangtung province at Jao-p'ing.
- During the period between 10 July and 7 August, floods struck Shantung province at Lin-i; Hopei province at Wu-ch'iang; and Kwangtung province at P'u-ning [possibly a misprint, "P'u-hsüan"] and Ch'ên-hai. At Ch'ên-hai, the dikes were damaged. At Wu-ch'iang, the crops were damaged by the floodwaters. [Lin-i is located at longitude 118.24° East and latitude 35.07° North.]
- During the period between 7 September and 5 October, floods struck Kwangtung province at Ta-pu; Hopei province at Ch'ü-yang, Wu-ch'iang, Chi-tsê, Hsing-t'ai, Tsao-ch'iang, Chi, Pao-ting and Tsun-hua; and Honan (now Henan province) in central *China* at Hsin-an [uncertain name]. At Hsin-an, the dikes were damaged. [Chi is located at longitude 117.24° East and latitude 40.03° North.]

In 1725, a drought engulfed several regions of *China* including:<sup>153</sup>

- During the period between 5 February and 6 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Chan-hua and Chü. Rivers dried up.
- During the period between 5 February and 8 August, a drought engulfed Shantung province at Hsia-ching.
- During the period between 8 August and 6 September, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ch'üan and Shantung province at Ch'iu.

In 1725 during the 7<sup>th</sup> moon on the 18<sup>th</sup> day in the vicinity of Shanghai, *China*, there was a typhoon. There was a sudden torrent of rain from morning till night; it whirled about; next month the sea overflowed.<sup>166</sup>

---

**Winter of 1725 / 1726 A.D.** In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

In 1726 on January 23<sup>rd</sup> and 24<sup>th</sup> – very severe cold. The river froze over. January 31<sup>st</sup> – this has been a very smart, close [overcast] winter. February 3<sup>rd</sup> – the river froze over last night. February 9<sup>th</sup> – more moderate, the river breaking up. February 16<sup>th</sup> – the river froze over again. February 28<sup>th</sup> – here (with this month) ends the winter. It has been all along a closed [overcast] and hard winter as has ever been remembered. There has been good sledding all winter. Never one thaw. It was observed that even though the winter had been so very severe, there had not been anything like a storm the whole time.<sup>78</sup>

---

**1726 A.D.** In *Europe*, there were great inundations and floods “all over Europe.”<sup>47, 92</sup>

On 8 March 1726, there was a great tide in *England*. The River Thames was four inches [10 centimeters] higher than had been known for the previous 40 years.<sup>212</sup>

The summer of 1726 in Paris, *France* was characterized by:

Hot days                      62 days

Very hot days                10 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The heat began in May, accelerating the maturity of the fruit for a month. In *France*, the heat was extraordinary in Béziers on 12 July; in Orange on 13 July; and in Toulon on 14 July. In Burgundy, the three months of summer were hot. In Dijon, *France*, in Burgundy, the grape harvest began early on 9 September. The harvest was extremely weak, but the wine pretty good.<sup>62</sup>

The summer of 1726 began in late May, then continued during the months of June, July and August. The highest temperatures in Paris, *France* was observed on 27 and 28 August with a reading of 93.2° F (34° C). The fruits ripen a month earlier than usual. The maximum heat was much earlier in Provence. At Toulon and Aix, the peak was observed on 13 and 14 July. Deslande from Brest in Brittany in northwestern *France* indicated his barometer was perfectly still from 2 February until 1 September of 1726.<sup>79</sup>

During the whole summer of 1726, there were terrible thunder and lightning storms [in *England*].<sup>72</sup>

In 1726, the price of wheat [in *England*] averaged 46 shillings per quarter [quarter ton].<sup>212</sup>

On 2 August 1726, there was a subterranean fire at Flinx Hall in Kent, *England*, 10 miles southwest of Canterbury. A moist turf burnt over 3 acres, and was hot 4 feet [1.2 meters] deep. It never flamed unless stirred. The ground was quite dry from the hot season. This fire was still burning on 4 September.<sup>212</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

March 2<sup>nd</sup> – more moderate. March 14<sup>th</sup> – the fish had not come upon the usual ground here. April 27<sup>th</sup> – people generally planting. This month has been wet and uncomfortable weather. 'Tis thought in these parts to be a very backward spring. May 20<sup>th</sup> – the peach and apple trees but now began to blossom. May 27<sup>th</sup> – there was very little pleasant weather this month. June 20<sup>th</sup> – there was a very great drought this spring. September 30<sup>th</sup> – this month had been cool, but no great frost yet. October 30<sup>th</sup> – several days past were pretty cold.<sup>78</sup>

On October 22, 1726 a tremendous hurricane occurred at *Jamaica*, which destroyed several plantations and a great fleet of ships.<sup>55</sup>

On 22 October 1726, a hurricane struck *Jamaica*.<sup>124</sup>

On 22 October 1726, about 9 in the morning, a hurricane came on in *Jamaica*. The storm continued till 12:30. The houses at Kingston, Spanish Town, and Port Royal, suffered very much; many were thrown

down. The east end and middle of the island suffered most. The hurricane hardly touched the west side. In the harbors of Kingston, Port Morant, Port Royal, and St. Anne's, above fifty vessels were destroyed.<sup>143</sup>

On 2 November 1726, a hurricane struck *Jamaica*. Many lives were lost [on land] and at least 18 at sea.<sup>141</sup>

The summer of 1728 in Carolina in the *United States* was uncommonly hot. The earth was parched. The pools of water dried up. The cattle were reduced to the greatest distress. Then during the last of August, there was a dreadful hurricane that caused an inundation of the sea, which overflowed Charlestown [Charleston], South Carolina and the low lands. The hurricane did incredible damage to the fortifications, houses, wharves, shipping, and the cornfields. The streets of Charlestown were covered with boats, and lumber. The inhabitants were obligated to take refuge in the upper stories of their houses. Twenty-three ships were driven ashore, most of which were either greatly damaged or dashed to pieces. Two men-of-war, stationed at Charlestown for the protection of trade, were the only ships that rode out the storm. The hurricane leveled many thousand trees in the maritime parts of the province; but it was scarcely perceived a hundred miles from the shore.<sup>174</sup>

In 1726 during the period between 5 February and 6 May, a drought engulfed Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Shou-kuang. During the period between 31 May and 29 June, a drought engulfed Anhwei (now Anhui province) in eastern *China* at Ying-shan.<sup>153</sup>

In 1726, floods struck many regions of *China* including:<sup>153</sup>

— Shantung (now Shandong province) on the east coast of *China* at Tsinan.

— During the period between 30 June and 28 July, floods struck Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Ta-pu; and Hupeh (now Hubei province) in central *China* at Ying-ch'êng, Huang-mei, Huang-kang, Chiang-ling, Chien-li, Ch'i-ch'un and T'ien-mên.

— During the period between 29 July and 26 August, floods struck Kwangtung province at Mei, Hsin-i, Jao-p'ing and P'u-ning; Kansu (now Gansu province) in northwest *China* at Ch'ing-yang; Hupeh province at Hanyang, Han-ch'uan, Huang-p'o, Wuchang, Huang-an and Ch'ung-yang; Hopei (now Hebei province) in northern *China* at Wu-ch'iang, An-kuo and P'ing-hsiang; Honan (now Henan province) in central *China* at Pi-yüan; Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu; and Shantung province at Chi-ning, Tzū-yang and Liao-ch'êng.

— During the period between 27 August and 25 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at T'ung-hsiang; Kiangsi province at Nan-ch'ang, Fêng-ch'êng, Chin-hsien, Ch'ing-chiang [uncertain name, "Ch'ing" with "-chiang" left off], Hsin-kan, Yung-hsiu and Kiukiang; Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-ch'un; and Yunnan province in southwest *China* at Hao-ch'ing.

---

**Winter of 1726 / 1727 A.D.** In 1726, sleighs passed over the ice from Copenhagen, *Denmark* to *Sweden*.<sup>38, 60</sup>

In 1727, they drove on carriage from Copenhagen, *Denmark* to *Sweden*. In February, the Seine River in *France* was frozen.<sup>62</sup>

The cold winter of 1726 was excessively [cold] without being too long in Montpellier and Marseille, *France*. The cold killed thousands of orange trees.<sup>79</sup>

The winter in 1726 was very severe in the northern countries [of *Europe*]. People traveled on sleighs from Copenhagen, *Denmark* to the *Swedish* province of Skåne [the southernmost region of *Sweden*]. In Paris, *France*, the cold was moderate, but at the Montpellier and Marseille coasts the cold was very severe; and despite its short duration, many orange trees were destroyed.<sup>62</sup>

During the period between 23 December 1726 and 21 January 1727, floods struck Shantung (now Shandong province) on the east coast of *China* at Ts'ao, Shan, Ho-tsê, Tzū-yang and Liao-ch'êng.<sup>153</sup>

**1727 A.D.** The Delaware River near Philadelphia, Pennsylvania in the *United States* was frozen and closed for three months of the winter.<sup>1</sup>

In *France*, the duration of the heat in 1727 was much longer than the previous year. After a moderate winter, the thermometer began to rise on February 7. On 10 May the temperature at sunrise was 64.4° F (18° C), and by two o'clock in the evening 80.6° F (27° C). The heat was sustained and increased during the months of July and August. On the 7<sup>th</sup> of August, at three o'clock in the afternoon, the temperature reached the peak of 95° F (35° C). The temperature remained high the rest of August and the month of September. Thus, the heat of 1727 includes no fewer than five full months.<sup>79</sup>

The summer of 1727 in Paris, *France* was characterized by:

Hot days	43 days
Very hot days	15 days
Extremely hot days	1 day

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The months of May, June and July were very hot and the heat continued into September. The peak temperatures occurred on 18 July. In Dijon, *France*, in Burgundy, the grape harvest began early on 9 September but it was a weak crop of mediocre quality.<sup>62</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

February 10<sup>th</sup> – snowed all day. February 11<sup>th</sup> – a very cold day. February 13<sup>th</sup> – the river froze over this morning but broke up in the afternoon. February 16<sup>th</sup> – a most charming pleasant day. February 24<sup>th</sup> – a very pleasant day. March 30<sup>th</sup> – we had very uncomfortable weather this month. The spring is thought to have been very backward.<sup>78</sup>

[In *Britain*] during 1727 and 1728, there was a dearth from cold and rains.<sup>72</sup>

In *Ireland* during the years 1727-29, corn [grain] was very dear. Many hundreds perished. Many immigrated.<sup>57, 91</sup>

In 1727, the price of wheat [in *England*] averaged 42 shillings per quarter [quarter ton].<sup>212</sup>

In 1727, floods struck many regions of *China* including:<sup>153</sup>

— Hupeh (now Hubei province) in central *China* at Ao-ch'êng, An-lu and Chiang-ling. The dikes were damaged.

— During the period between 19 June and 18 July, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Ts'ang-wu; Kweichow (now Guizhou province) in southwestern *China* at An-nan; and Hupeh province at Ching-mên, Huang-kang, Ch'i-ch'un and Kuang-chi.

— During the period between 19 July and 16 August, floods struck Shansi (now Shanxi province) in northern *China* at P'ing-lu; Kansu (now Gansu province) in northwest *China* at Ch'ing-yang; Kwangsi province at Ts'ang-wu; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Lien-chiang [uncertain name, "Shih-ch'êng"]. At P'ing-lu, the houses were damaged by the floodwaters. [P'ing-lu is located at longitude 112.06° East and latitude 39.46° North.]

— During the period between 17 August and 14 September, floods struck Chekiang (now Zhejiang province) on the east coast of *China* at Hangchow, Hsiao-fêng, Yü-hang, Hsin-têng, An-chi, Tê-ch'ing, Wu-k'ang and Ch'êng; Hupeh province at Ch'i-ch'un, Lo-t'ien, Shih-shou, Kung-an and Kuang-chi;

Hopei (now Hebei province) in northern *China* at Hsü-shui and Jung-ch'êng; and Anhwei (now Anhui province) in eastern *China* at Huo-shan. At Huo-shan, many people drowned.

— During the period between 13 November and 12 December, floods struck Anhwei province at T'ung-ling, Lu-chiang and Shu-ch'êng; Kiangsu province at Kao-yu; and Shantung province at Ch'ang-i. At Ch'ang-i, many people drowned.

In 1727 during the 8<sup>th</sup> moon, heavy and continued rain damaged the rice crop in the vicinity of Shanghai, *China*.<sup>166</sup>

In 1727 during the period between 19 June and 18 July, a drought engulfed Kansu (now Gansu province) in northwest *China* at Ch'ing-yang.<sup>153</sup>

**Winter of 1727 / 1728 A.D.** In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

In 1728 on January 1<sup>st</sup> – there was a great light seen in the northeast in the beginning of winter, which they say certainly predicts a very cold winter, which proved to be true. January 11<sup>th</sup> – for several days past, there was a spell of comfortable weather. January 13<sup>th</sup> – a very terrible snowstorm all day. The snow that fell today is almost two-feet (0.6 meters) deep upon a level. January 18<sup>th</sup> – the coldest day we had this year. February – there had been no thawing weather [weather that would thaw the snow and ice], but as closed [overcast] for six weeks past as ever was known. Great scarcity of hay on account of the drought last year. March 8<sup>th</sup> – until this day there was no appearance of winters breaking up. March 15<sup>th</sup> – a wonderful smile of providence, in the snow going away. The creatures were almost starved. A great many creatures had died this winter by reason of the deep snow and scarcity of hay, everywhere.<sup>78</sup>

**1728 A.D.** The summer of 1728 in Paris, *France* was very hot and very dry and characterized by:

Hot days	43 days
Very hot days	5 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak temperatures occurred on 17 July in Paris but in the south, the peak occurred on 19 August. In Dijon, *France*, in Burgundy, the grape harvest began early on 13 September. It was an average harvest but the wines were excellent.<sup>62</sup>

[In *Britain*] during 1727 and 1728, there was a dearth from cold and rains.<sup>72</sup>

In 1728, the price of wheat [in *England*] averaged 54 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

On 13 August 1728, an Atlantic hurricane struck North Carolina in the *United States*. Many ships were lost. One as far north as a few miles off Ocracoke Island [on the Outer Banks of North Carolina] where one ship sunk and lost all its crew.<sup>141</sup>

On August 15, twenty-three ships were forced on shore by a terrible hurricane at South Carolina, in the *United States*.<sup>55</sup>

Carolina in the *United States* was greatly damaged by storms in August 1728.<sup>40, 41, 43, 56</sup>

On 19 August 1728, a hurricane did considerable damage at Antigua in the *West Indies*.<sup>143</sup>

The Delaware River near Philadelphia, Pennsylvania in the *United States* was frozen and closed for three months of the winter.<sup>1</sup>

In 1728, floods struck Hupeh (now Hubei province) in central *China* at Ch'ung-yang, Hanyang and Ch'ien-chiang. During the period between 8 June and 6 July, a drought engulfed Shensi (now Shaanxi province) in central *China* at Lo-ch'uan. During the period between 6 August 1728 and 28 March 1729, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Hêng-fêng [uncertain name, "Hsing-an"]. Trees and bamboos withered.<sup>153</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

April 6<sup>th</sup> – thus far we had very pleasant, comfortable weather for the season. April 13<sup>th</sup> – as much rain fell today as ever did in one day. April 17<sup>th</sup> – there just began to be some young feed now. April 30<sup>th</sup> – the most of this month has been very cold. May 1<sup>st</sup> – last night there was a considerable frost. June 30<sup>th</sup> – things begin to suffer much, by reason of the drought. July 9<sup>th</sup> – our people, this day, began to cut their salt hay. A drought in Boston. November 30<sup>th</sup> – three days past has been really cold. Presumpscot River froze up. December 30<sup>th</sup> – winter set in with cold as ever remembered in December.<sup>78</sup>

---

**Winter of 1728 / 1729 A.D.** In 1728 in *England*, there was a month of severe frost.<sup>47, 72, 93</sup>

The winter of 1728-29 was severe [in *England*].<sup>212</sup>

A cold winter began in *Germany* on 19 September 1728. All the rivers froze until March 1729.

In either 1729 or 1730 a snowstorm visited *Scotland*, in which about twenty thousand sheep and many shepherds were lost – “by a single day’s snow.”<sup>30</sup>

During the evening of 1 January 1729, a fog appeared in London, *England*, so thick that several chairmen mistook their way in St. James’s park, and fell with their fares into the canal. Also many persons fell into Fleet-ditch and considerable damage was done on the Thames.<sup>2</sup>

The winter of 1728-29 was severe all over *Europe*. Pingrö wrote: “I was living in a small town in Lower Poitou, in western *France* (now called Mauléon). The intense cold began on the night of 24/25 December and held without interruption until 22 January. This whole time was for us a holiday season, because the ink in the pen froze even near the fire. And there was no stove in our house. Our breath froze on our clothes. A water tank 5-6 feet deep (1.62 to 1.95 meters), was soon frozen to the bottom. We heard the extreme cold surprised some people on the road and they froze to death.” In *Provence*, the olive trees froze to death. In Holland [now *the Netherlands*] and in *Germany* a large number of trees were destroyed. With the same rigor, the cold raged in *England*. The following are the coldest readings recorded during the winter:<sup>62</sup>

Wittenberg, <i>Germany</i>	( -4.0° F, -20.0° C)
Berlin, <i>Germany</i>	( -1.1° F, -18.4° C)
Leipzig, <i>Germany</i>	( 1.6° F, -16.9° C)
Utrecht, <i>the Netherlands</i>	( 3.9° F, -15.6° C)
Paris, <i>France</i>	( 4.5° F, -15.3° C) on 19 January 1729
London, <i>England</i>	(11.8° F, -11.2° C)

---

**1729 A.D.** [In March 1729], a young gentlemen traveling on a mountainous road at night, 10 miles south of Bologna, *Italy*, as he approached Rioverde River perceived a light which shone very strongly on some stones that lay on the banks. [This light was called ignis fatuus or will-o’-the-wisp.] The light seemed to be about 2 feet above the stones, and not far from the water of the river: in figure and size it had the appearance of a parallelepiped, somewhat above a Bolognese foot in length, and about half a foot high, its longest side lying parallel to the horizon. Its light was very strong, and one could very plainly distinguish the neighboring hedge, and the water in the river. The gentleman’s curiosity tempted him to examine it a little nearer. He advanced gently towards the place, but was surprised to find, that insensibly it changed from a bright red to a yellowish, and then to a pale color, in proportion as he drew nearer, and that when

he came to the place itself, it quite vanished. On this he stepped back, and not only saw it again, but found that the farther he went from it, the stronger and brighter it grew.<sup>235</sup>

In 1729 in *England* and *Ireland*, there were great rains and floods.<sup>47, 92</sup>

On 20 May 1729, there was a hurricane [in *England*].<sup>212</sup>

In June 1729, there was a drought in Ashby-de-la-Zouch in Leicestershire, *England*.<sup>212</sup>

In 1729, the price of wheat [in *England*] averaged 47 shillings per quarter [quarter ton].<sup>212</sup>

On 1 & 2 August 1729, a dreadful hurricane struck Carolina [Carolina at that time consisted of North Carolina, South Carolina and Georgia] in the *United States*. The winds north and north by east began on the 1<sup>st</sup>. By 7 a.m., the winds had increased to the point that 23 ships that were in the harbor were forced ashore. The winds became more easterly and from that time until 3 hours after, the wind was most violent. Of all the ships in the harbor, only the *Fox* and *Garland* man-of-war rode out this hurricane. The rice near the seacoast was all spoiled by the overflowing of the fields with salt water. It was thought that the town would have been destroyed, had it occurred during spring tides. About 1,500 barrels of rice, besides skins, were lost. On 2 August, about 11 p.m. the wind gradually ceased; yet many sea-faring men were drowned. On the twelfth past [July 12], a tornado struck which did much damage to the rice and corn in the country, but little or none to the shipping.<sup>227</sup>

On 10 September 1729, the ship *Campbell* was driven on Nevis Point in the *West Indies* and wrecked in a tornado.<sup>143</sup>

On 26 December 1729, there was a violent thunderstorm at Camarthenshire [Carmarthenshire], *Wales*.<sup>212</sup>

During the period between 6 August 1728 and 28 March 1729, a drought engulfed Kiangsi (now Jiangxi province) in southern *China* at Hêng-fêng [uncertain name, "Hsing-an"]. Trees and bamboos withered. Then in 1729 during the period between 5 February and 6 May, a drought engulfed Hopei (now Hebei province) in northern *China* at Yüan-shih. Then during the period between 28 May and 25 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Ta-yü and Nan-k'ang.<sup>153</sup>

---

**Winter of 1729 / 1730 A.D.** From mid-December 1729, the rain stopped in *England*. The winds came from the south and the weather was as mild and clear as in April. There was no snow or frost to the middle of January. Then a north wind brought a weak snowfall for two days. The weather was again clear and remained so with some intervals of little rain until the end of February. Then a little snow with cold rain until mid-March.<sup>62</sup>

On 1 January 1730, there was a great fog in London, *England*. Many lives were lost.<sup>212</sup>

A journal of the factories along the Albany River [a river in Northern Ontario, *Canada*] belonging to the [Hudson Bay] Company describes the winter of 1729-30. The frost began in October 1729. The creek near the factory was frozen over on the 13<sup>th</sup> of October. By the 21<sup>st</sup>, there was a great deal of ice floating in the river and by the 31<sup>st</sup>, it was frozen fast as far as Charles Creek. By the 5<sup>th</sup> of November, the whole river was frozen over, but not so strong as to bear [the weight of man]. The weather was temperate with some snow to the 27<sup>th</sup> of November. All the month of December was the same, three or four days' cold, and then a moderate frost with some snow. The month of January, much the same; cold and moderate. The month of February was variable, but mostly moderate, at intervals warm, and then sharp weather. In March to the 8<sup>th</sup>, was a warm temperate frost; from that time to the 17<sup>th</sup> fine clear weather, with some snow; thence to the 29<sup>th</sup> clear weather tolerably warm; on the 30<sup>th</sup> a storm of snow, and then it began to

thaw in the middle of the day. It continued thawing until the 5<sup>th</sup> of April, then there was two days of frost. It thawed again until the 13<sup>th</sup> and then to the 17<sup>th</sup> there was raw cold weather. April 18<sup>th</sup> was warm with rain, then interchangeably warm, and raw weather until the 28<sup>th</sup>, when the frost was broke up in the country by the freshes [spring floods] coming down. On the 29<sup>th</sup> of April, the ice gave way to the head of the island, and the next day drove down to Baily's Island, when all the marshes were overflowed, the Bay being not yet thawed. The ice continued driving in the river until the 5<sup>th</sup> of May; then the river fell 5 feet [1.5 meters], by the breaking up of the ice at Sea. The 7<sup>th</sup> of May, there was thunder and rain; the ice still driving in the river. On 13 May there was raw cold weather. On the 22<sup>nd</sup>, the tides began to flow regularly.<sup>292</sup>

---

**1730 A.D.** [In Chili (*Chile*), the city of Conception was inundated.<sup>40, 43, 47</sup> This inundation was not weather related. On 8 July 1730, the Valparaiso earthquake triggered a tsunami. Earthquakes and tsunamis razed the town in 1570, 1657, 1687, 1730 and 1751.]

[In 1730] an earthquake and inundation destroyed *Chili*. The earthquake lasted 27 days, wherein persons innumerable perished, with all the city of St. Jago. The inundation overflowed the city of Conception, and even reached as far as Calloo, where it mounted the walls, and filled the square with water. This flood was occasioned by the earthquake.<sup>273</sup>

The peak temperature in Aix, *France* during the summer reached 94.3° F (34.6° C).<sup>62</sup>

In 1730, the price of wheat [in *England*] averaged 36 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

On 30 July 1730, there was a thunderstorm at York, *England*.<sup>212</sup>

In August 1730, there was a drought at Ashby-de-la-Zouch in Leicestershire, *England*.<sup>212</sup>

In August 1730, there was a waterspout at Shelford at Nottinghamshire, *England*. There was observed a large column of water that reached from a cloud down to the River Trent, which came down with great violence, and forced the water in the river 300 yards beyond its usual bounds.<sup>212</sup>

On 1 September 1730, a hurricane struck *Jamaica*. One ship of war was lost. The ship was carrying the ex-President of Panama.<sup>141</sup>

In 1730, a hurricane struck the *Caribbean Sea*. One ship, the *Nuestra Senora del Carmen* sunk south of Jamaica.<sup>141</sup>

In 1730 during the period between 15 June and 14 July, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Soochow and Wu-chiang. During the period between 15 July and 13 August, floods struck Shantung (now Shandong province) on the east coast of *China* at Hui-min, Li-ching, Pin, Wu-ti, Chan-hua, T'êng, Ning-yang, Tzū-yang, Tsinan, Yeh, Kao-wan, Po-hsing and Kuang-jao. At Tsinan, crops were damaged by the floodwaters. At Yeh, crops were damaged and many people drowned. Also during the period between 15 July and 13 August, floods struck Hopei (now Hebei province) in northern *China* at Hêng-shui, Sha-ho, Chi-tsê, Ta-ming, Hsing-t'ai, Kuang-p'ing, Yung-nien and Ch'ing-yün; and Shensi (now Shaanxi province) in central *China* at Ch'ing-chien. At Ch'ing-chien, people and cattle drowned. During the period between 12 September and 11 October, a drought engulfed Hopei province at Tung-kuang and Ts'ang. During the period between 12 October and 9 November, a drought engulfed Hopei province at Hsing-t'ai and P'ing-hsiang; Shansi (now Shanxi province) in northern *China* at Ch'ang-chih [possible misprint, "Ch'ang-chao"]; and Kwangtung (now Guangdong province) on the south coast of *China* facing the South China Sea at Chieh-yang.<sup>153</sup>

---

**Winter of 1730 / 1731 A.D.** The winter in 1731 was severe. It was very rough in *Italy*. London, *England* observed the low temperature for the winter of (1.6° F, -16.9° C) and in Berlin, *Germany* the observed low temperature was (-5.6° F, -20.9° C). In Paris, *France*, the winter was less severe, and the lowest temperature occurred on 25 January (19.4° F, -7° C).<sup>62</sup>

In 1731, the snow in *England* was remarkably deep.<sup>41, 43, 56</sup>

The winter of 1730-31 [in London, *England*] was extremely cold in January.<sup>235</sup>

On 4 & 5 January 1731 at Ashby-de-la-Zouch in Leicestershire, *England*, there was great frost and great snow. On 25 January at Derbyshire, the snow was so deep in some places that the roads were hardly passable. On 30 January and 3 February, there was a great frost at Windsor. It was as cold as 30 December 1708, when the temperature fell to 0° F [-18° C].<sup>212</sup>

On 29 January 1731, the temperature at Upminster [a suburban town in east London, *England*] fell to 2° F [-16.7° C].<sup>300</sup>

On 20 January 1731, several parts of the northern roads were so covered with snow, that the *Scotch* Peers and Commissioners in their way to Parliament were obligated to alight and walk many miles on foot; and in some places the snow was so deep, that 50 men were employed to remove it to make it passable. The snow was deeper in Lancashire, *England* than it had been for 20 years past.<sup>273</sup>

On 25 January 1731, the snow was so deep in some parts of Derbyshire, *England* that the roads were hardly passable.<sup>273</sup>

A journal of the factories along the Albany River [a river in Northern Ontario, *Canada*] belonging to the [Hudson Bay] Company describes the winter of 1730-31. On the 29<sup>th</sup> of September 1730, there was some frost in the night. On 2-9 October, there was snow and some frost in the night followed by fine weather until the 12<sup>h</sup>. They stopped fishing because there was no frost to freeze the fish. The weather to the 24<sup>th</sup> of October was fine warm weather with small frost. On the 28<sup>th</sup>, there was ice on the river and the geese flew away. On November 13<sup>th</sup>, the river was full of heavy ice; the 18<sup>th</sup> it was frozen over, but still moderate weather. The winter was not so severe as the winter of 1729-30. The geese returned on the 14<sup>th</sup> of April 1731. The freshes [spring floods] came down May 5<sup>th</sup>, and by the 12<sup>th</sup> the ice was gone to Sea.<sup>292</sup>

---

**1731 A.D.** On 11 February 1731, a tornado passed over old Thorney Wood [in Nottinghamshire, *England*]. It traveled a considerable distance and tore up trees by the roots and splitting some from the top to the bottom of their trunks (twisted as one might twist a wisp of straw).<sup>212</sup>

On 19 February 1731, *Barbados* reported that the crop from the island is likely to be very small because of the drought.<sup>273</sup>

In March 1731, water was so scarce at Antigua in the *West Indies* that a pail of cistern water was sold for three shillings.<sup>143</sup>

On 22 March 1731, letters from Teneriff [Tenerife – The largest of the seven *Canary Islands*] advise, that a great storm had done incredible damage to that island, by blowing down houses and church steeples, destroying vineyards, and carrying goats and sheep into the sea.<sup>273</sup>

On 26 March 1731 a letter was received from Cadiz, *Spain* that reported that the sea being blown away in the late storm, they had discovered [uncovered] the ruins of a temple, which was believed to be that of

Hercules. Three statues were found within: one gilt in gold, another in silver and the third in brass. All three were exceedingly beautiful.<sup>273</sup>

On 28 March 1731, *Antigua* in the Leeward Islands reported “There is a great want of rain, little sugar, and many ships waiting for it; and if rain don’t fall, there will be no crop next year. The young canes are much burnt. The crops are very short at *Nevis* and Mountserrat [*Montserrat*]. The ponds are almost dry; the water so scarce, that a pail of cistern water is sold for 3s. [3 shillings].”<sup>273</sup>

On 30 March 1731, *Barbados* and the *Leeward Islands* reported a great want of rain, particularly at Antigua, from whence (the springs in that island being salt) they sent to Mountserat [*Montserrat*] for fresh water.<sup>273</sup>

It was reported on June 22, that a great drought was occurred in the *West Indies*, particularly at Antigua, where a pail of water, containing three gallons, had been sold for four shillings and eight-pence sterling.<sup>55</sup>

On 24 June 1731, letters from the West Indies reported a great drought particularly at *Antigua*; at which location a pail of water containing about 3 gallons was sold at 7s. in that countries money or 4s. 8d. Sterling.<sup>273</sup>

In Cheltenham, in Gloucestershire *England*, a storm caused 2,000*l.* damage in June, 1731.<sup>40, 41, 56</sup>

The summer of 1731 was hot and the driest since 1719. It had been in Paris, *France*:

Hot days	35 days
Very hot days	3 days
Extremely hot days	2 days

[It appears that hot days are defined as those with temperatures of 25° C and greater but less than 31° C, very hot days are those with temperatures 31° C or greater but less than 35° C, and extremely hot days are those with temperatures of 35° C or greater.]

The peak fell on the 10 & 11 August and was measured at 98.4° F, (36.9° C) in Paris. In the south of *France*, the peak occurred on 10 July. In Dijon, *France*, in Burgundy, the grape harvest began early on 9 September. The harvest produced an ordinary amount of wine but of excellent quality. The level of the Seine River in Paris was lower by 15 centimeters than the low of the year 1719.<sup>62</sup>

In 1731, a hurricane struck the Windward Passage [the strait in the *Caribbean Sea*, between the islands of Cuba and Hispaniola]. Most of the men on the ships *Bridget* and *Kitty* perished.<sup>141</sup> [The ship was out of Liverpool and was commanded by Captain Minshall. The survivors made their way to St. Christopher’s island, commonly called St. Kitts.]

On Thursday, 24 June 1731, the ship *Dolphin*, bound to Montserrat in the *Leeward Islands*, was upset in a squall. One of the men was drowned; the rest of the crew got upon the side of the vessel. They had neither water nor bread. But a Negro diving, found an adze and a handsaw; with these they cut away the rigging, and righted the ship. But the ship was full of water, and their cask water spoiled. Upon the 14<sup>th</sup> day after she had overset [overturned], the crew caught a shark, drank its blood, and eat its flesh. They had nothing to drink but what rain they could catch. Three of the crew and the Negro died for want of water. On 15 July the survivors were rescued by a French ship.<sup>143</sup>

On 13 July 1731, there was a thunderstorm at Huddersfield in Yorkshire, *England*.<sup>212</sup>

In 1731, the price of wheat [in *England*] averaged 33 shillings per quarter [quarter ton].<sup>212</sup>

On 21 September 1731, it was reported that the Spanish Galleons consisting of 11 ships convoyed by 4 men of war, in their voyage home met with a hurricane [in the *Atlantic Ocean*], which left but 8 of them together, and those without masts. The *Rosario* and *Almirante* fell foul of each other and sunk.<sup>273</sup>

On 30 October 1731, a terrible tornado struck Corne-Abbas [Cerne Abbas] in Dorset, *England*. The path of destruction was 200 yards wide. Trees were uprooted and houses unroofed. It only lasted 2 minutes.<sup>212</sup>

Rainfall in Paris, *France* in 1731 only exceeded by 1.5 inches (38 millimeters) the amount that fell in 1723. During this time the sky was extraordinarily serene. The Seine River was so low that it was no longer navigable. On 23 October, the water level of the river was 5.9 inches (149 millimeters) below the low water mark of 1719. This was one of the lowest levels that the river fell to until now.<sup>79</sup>

On the 17<sup>th</sup> [of December 1731], a violent storm struck *the Netherlands*. It produced “the highest tide at Rotterdam known in the memory of man; and had it not abated before the flood returned, the damms [dams] would have been overflowed, and the greatest part of the country drowned. An English and a Dutch ship were lost coming into the harbour. In Amsterdam the top of a house was blown down, in which three men were crushed to death.”<sup>273</sup>

In 1731, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 5 February and 6 May, floods struck Shantung (now Shandong province) on the east coast of *China* at Kuang-jao, Shou-kuang and Liao-ch’êng; Szechwan (now Sichuan province) in southwest *China* at Ch’ang-ning [uncertain name]; and Hopei (now Hebei province) in northern *China* at Ch’ing-yün.

— During the period between 6 May and 4 June, floods struck Hupeh (now Hubei province) in central *China* at I-ch’ang. Fields were damaged.

— During the period between 4 July and 2 August, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at Tang-shan and Shantung province at Ch’ang-shan.

— During the period between 31 October and 28 November, floods struck Shantung province at Tsinan and Tsou-p’ing.

The year 1731 was a year of great abundance in the vicinity of Shanghai, *China*.<sup>166</sup>

**Winter of 1731 / 1732 A.D.** The winter of 1732 was noted as remarkable for its severity, but in Paris, *France* the thermometer did not dropped below 18.5° F (-7.5° C).<sup>62</sup>

On 1 May 1732, a snowstorm struck Edinburgh, *Scotland*, producing a great fall of snow. The next day, the ice [on the river] was so strong as to bear the weight of a man and horse. Lambs were killed by the excessive cold. This storm also struck *England*. At Ashby-de-la-Zouch in Leicestershire, *England* on 2 May, there was heavy snow. Then on 7 May, there was a great flood.<sup>212, 274</sup>

**1732 A.D.** On 30 May 1732 in *Ireland*, there was a prodigious shower of hail.<sup>93</sup>

In 1732 [in *England*], there was a plague of locusts.<sup>212</sup>

In 1732, the price of wheat [in *England*] averaged 26 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

In 1732, a destructive hurricane struck Mobile, Alabama in the *United States*.<sup>117</sup>

In August 1732, it was reported that the harvest in *Spain*, *Portugal* and *Italy* for this year proved very bad.<sup>274</sup>

On 15 September 1732, London, *England* reported that a great number of ships were wrecked this week in diverse parts by stormy weather.<sup>274</sup>

During October 1732, Frankfort, *Germany* reported, “That the damages sustain’d [sustained] by inundations in Franconia [eastern part of the historic Duchy of Franconia in *Germany*], surpass all imagination. At Wertheim 25 houses were washed quite away; one side of the hospital, built of stone in the strongest manner, the Church at Swabach [Schwabach] in Auspach [Ansbach], part of the strong thick town walls, and the whole tower where the gunpowder was kept, were borne down by the torrent. In some places the water rose quite to the roofs of houses, and drowned man and beast; household goods and furniture of all sorts, corn, wine, beer, and other provisions, houses, barns, walls, mills, stone bridges, &c. were mixed together and beat to pieces. Many fields and meadows were half cover’d [covered] with the dead bodies of men and beasts, fragments of houses, &c. Abundance of dead were found clinging to the boughs of trees, some on bushes, and others hanging to the wheels of water-mills. Ships and other vessels, ship-mills, floats of timber, &c. lying upon the rivers, were carried quite away. No monks appearing to bring out the [sacred] host.”<sup>274</sup>

In October 1732, Lisbon, *Portugal* reported, “That what they call a thunderbolt [lightning bolt] had penetrated the tower of the city of Compost-Major, (in the province of Alantejo) and set fire to a magazine of gunpowder, consisting of 5700 arroves [arroba], each weighing 32 *l.* English [English pounds, 14.5 kilograms], 400 shells filled, &c. by which the whole city, except part of two streets, were laid in ruins; above 1000 persons were miserably shattered and torn, and many deemed incurable. The number of those buried under the rubbish was unknown, several hundreds had been already dug out. Upon the news the King of Portugal immediately sent all the surgeons, and apothecaries, that could be found in Lisbon to their assistance.”<sup>274</sup>

On 4 October 1732, Lisbon, *Portugal* reported, “there was a violent storm of wind for 3 hours, which brought in a most dreadful sea, so that scarce any ship in the Tagus [River] escaped without damage; 5 or 6 sails [sailing ships] were entirely lost, and near 60 persons. On land, the damage was as great among the vineyards and plantations.”<sup>274</sup>

In November 1732, Lisbon, *Portugal* reported, “That just before the late storm on the 15<sup>th</sup> past, the fisherman of Buarcos putting to Sea, were all lost in it to the number of 50, with their tackle valued at 3000 crusadoes [An old Portuguese coin of gold or silver having a cross pictured on the reverse.], whereby that little town was almost depopulated.”<sup>274</sup>

In 1732, floods struck many regions of *China* including:<sup>153</sup>

— During the period between 25 April and 23 May, floods struck Kwangsi (now Guangxi province) in southern *China* along the border with *Vietnam* at Fu-ch’uan.

— During the period between 24 May and 21 June, floods struck Kiangsi (now Jiangxi province) in southern *China* at Ta-yü, Nan-ch’ang, Lin-ch’uan, Kao-an and Chi-an; and Szechwan (now Sichuan province) in southwest *China* at Ya-an, Jung-ching and O-mei. At O-mei, 79 house-sections were damaged by the floodwaters and 95 people drowned.

— During the period between 22 July and 19 August, floods struck Hupeh (now Hubei province) in central *China* at Huang-kang.

— During the period between 20 August and 18 September, floods struck Kiangsu (now Jiangsu province) on the east coast of *China* at T’ai-ts’ang, K’un-shan, Chia-ting, Ch’ung-ming, Pao-shan, Soochow and Ch’ing-p’u. At Soochow, there was a great storm. Fields and houses were damaged by the floodwaters and innumerable people and cattle drowned. At T’ai-ts’ang, there was a typhoon. Innumerable people drowned. At Pao-shan, many people drowned. At Ch’ung-ming, innumerable people drowned. At Ch’ing-p’u, there was a typhoon.

— During the period between 19 September and 18 October, floods struck Kiangsu province at

K'un-shan. Innumerable people drowned.

In 1732 during the period between 27 January and 19 August, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Lin-i. [Lin-i is located at longitude 118.24° East and latitude 35.07° North.] During the period between 5 February and 6 May, a drought engulfed Shantung province at P'ing-yüan, Ch'ü-fou and Chü. During the period between 22 July and 19 August, a drought engulfed Shantung province at Lin-ch'ing and Fu-shan.<sup>153</sup>

In 1732 during the 7<sup>th</sup> moon in the vicinity of Shanghai, *China*, there was a typhoon that lasted several days. It tore up trees and leveled houses; sea overflowed; cities flooded.<sup>166</sup>

**Winter of 1732 / 1733 A.D.** In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

In 1733 on January 8<sup>th</sup> – cold. January 13<sup>th</sup> – this whole week produced a spell of warm weather. January 29<sup>th</sup> – it did not seem to be very cold, yet it froze over to Purpoodock [now Cape Elizabeth] last night. February 8<sup>th</sup> – prodigious blustering and cold. February 16<sup>th</sup> – it thawed all last night. February 22<sup>nd</sup> – ice still lies as far as North Yarmouth. A man may walk over to Hog Island [on the ice]. February 28<sup>th</sup> – it was melancholy to see so much snow as has fallen so late in the year. March 10<sup>th</sup> – there has been little of the snow melted yet. March 21<sup>st</sup> – comfortable weather. March 22<sup>nd</sup> – snow mostly consumed. March 27<sup>th</sup> – pleasant. March 29<sup>th</sup> – the snow in the woods is near four-feet (1.2 meters) deep. April 4<sup>th</sup> – cloudy and cold. April 13<sup>th</sup> – pleasant day. April 16<sup>th</sup> – Stroudwater River still froze over. April 20<sup>th</sup> – a cold and backward spring. April 23<sup>rd</sup> – it was said to have snowed at Saccarappa [now Westbrook] last night, knee deep.<sup>78</sup>

In December 1732, Prague in Bohemia [now *Czech Republic*] reported, “That the people were at work day and night to extinguish the flame, which lately broke out at openings in the adjacent mountains, and were greatly alarmed because they could not.”<sup>274</sup>

In January 1733, Vienna, *Austria* reported, “That the burning mountains in the neighbourhood of Prague [*Czech Republic*], had continued to flame out in a terrible manner.”<sup>275</sup>

In March 1733, Moscow, *Russia* reported, “That the cold had been so intense, that an hundred persons were froze to death, birds fell dead in the streets, and horses harness'd to the sledges, were frozen standing stiff as wood.”<sup>275</sup>

**1733 A.D.** On 1 March 1733, Rippon [Ripon in North Yorkshire, *England*] reported, “the greatest flood ever known there; about 4 miles [6 kilometers] from thence the waters came down so suddenly to a mill, that the miller was obligated to fly with 3 of his children to the uppermost room, where he broke out, and carried his children singly ashore in a large tub, which was overset [overturned] with his last cargoe [cargo], but assistance being ready, they got safe to land. Presently after, part of the house was carried away.”<sup>275</sup>

In April 1733, *Ireland* reported that on the Kerry coast of the Shannon, between the old Castles of Dune and Lick (which are half a mile asunder) and opposite to Carrick a Holt, the ancient seat of the earls of Clare, the cliffs rise to a great height above the sea, to 1, 2, or 300 feet [30-91 meters] perpendicular, from which height, by the undermining of the waves, they sometimes fall with mighty violence into the ocean. Nearly two years ago, a piece of one of these high cliffs fell off; whereupon there broke out a smoke attended with a strong sulphurous smell and it has continued burning ever since. From time to time, sections of the cliffs (100 feet by 60 feet) have been eaten away and fallen. Generally the flames of the fire are not visible during the daylight but only during nighttime.<sup>275</sup>

In May 1733, Marseille, France reported, that the *Capitana* of Algiers of 80 guns, and two other large ships of the Turkish Squadron going to the relief of Oran [in *Algeria*] were cast away in a storm, many thousand soldiers drowned, and the rest escaped to Scio, refused to embark again.<sup>275</sup>

In June 1733, Annapolis Royal [*Canada*] reported, “that about the 14<sup>th</sup> instant [of this month] at 8 o’clock in the morning it seemed very serene, tho’ the sun did not shine out, neither was it overspread with black clouds, or the air foggy. About 9 [o’clock] ensued a darkness, which was visible increased as the sun approached the meridian. Between 11 and 12 [o’clock] it became so dark, that the people were obligated to light candles. This strange phenomenon was the more extraordinary as there was no possibility of an eclipse at that time.”<sup>275</sup>

On 23-25 June 1733 at Ashby-de-la-Zouch in Leicestershire, *England*, the weather was very hot. On 26 June, there was a great thunderstorm. The next day the storm was very great and did much damage. On 29 July, there was another great thunderstorm. On 28-30 October, a gale struck.<sup>212</sup>

In *St. Kitts*, twenty ships were lost to a storm on June 30.<sup>40, 41, 43, 56</sup>

On 10-11 July 1733, a hurricane struck the *Lesser Antilles*. The crews from many ships were lost. Other losses occurred on land. One ship at *St. Kitts* sunk and lost its entire crew.<sup>141</sup>

On 15-16 July 1733, a hurricane struck southern *Bahamas*, Florida in the *United States* and the Florida Straits causing 56 deaths.<sup>141</sup>

In July 1733, it was very hot in London, *England*. “The weather was so excessively hot for the most part of this month that it was scarcely tolerable; horses dying on the roads. Some gentlemen thought the season too hot to take the journey to visit their corporations.”<sup>212</sup>

[In *England*] in July 1733 “The weather was so excessive hot most part of this month, that it was scarcely tolerable to man or beast. Several horses dy’d [died] on the roads, and numbers of people being tempted to go into rivers and ponds to cool themselves, above 20 were drowu’d [drowned] within the Bills of Mortality [a monthly listing of the dead]. Much mischief was also done by lightning. Some gentlemen thought the season too hot to take a journey to visit their corporations.”<sup>275</sup>

In 1733, the price of wheat [in *England*] averaged 28 shillings 6 pence per quarter [quarter ton].<sup>212</sup>

On 31 December 1733, *England* reported, “That about the middle of this month was very stormy; great damages were done at sea and land. The new steeple of *St. Michael’s* at Southampton was shattered by thunder and lightning.”<sup>275</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:  
June 29<sup>th</sup> – it was a wonderful year for grass. August – pigeons were very plentiful. We kill more than we could eat. August 20<sup>th</sup> – trout, with a net, got 16 dozen this morning. September – generally a pleasant month. October 24<sup>th</sup> – it froze in the shade all day. November 4<sup>th</sup> – turnips are exceedingly plentiful. November 24<sup>th</sup> – warm weather. December 7 – wonderfully pleasant most of this month.<sup>78</sup>

In *India* in 1733, there was a famine confined to the north western provinces.<sup>57</sup>

In 1733, there was a famine in the Bombay Presidency in *India*.<sup>156</sup>

In 1733 A.D., there was a famine in the North-Western Provinces of *India*.<sup>179</sup>

In 1733 during the period between 5 February and 6 May, a drought engulfed Shensi (now Shaanxi province) in central *China* at T'ung-kuan and Chekiang (now Zhejiang province) on the east coast of *China* at Ch'ang-shan. During the period between 8 September and 7 October, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Tsinan.<sup>153</sup>

In 1733, floods struck several regions of *China* including:<sup>153</sup>

— Hopei (now Hebei province) in northern *China* at Wu-ch'iang, Hsing-t'ai, Jao-yang, Fêng-jun, Chi, Su-ning [possible misprint, "Su-hsüan"], Sha-ho, Lu-lung, Ch'ang-li, Hsien and San-ho. [Chi is located at longitude 117.24° East and latitude 40.03° North.]

— Kansu (now Gansu province) in northwest *China* at Tunhuang. Over 570 house-sections damaged by the floodwaters.

— During the period between 8 September and 7 October, floods struck Shantung (now Shandong province) on the east coast of *China* at T'an-ch'êng and Kiangsu (now Jiangsu province) on the east coast of *China* at Kao-ch'un.

**1734 A.D.** In Holland [now *the Netherlands*], the frost was very severe; but none in *Sweden* or *Norway*.<sup>47, 93</sup>

On 28 February 1734, *Ireland* reported, "The warmth of the winter occasion'd [occasioned] the birds to breed in *Ireland* before the season; young wild-ducks were observ'd [observed] there the beginning of this month, which us'd [use to] not to lay their eggs till March."<sup>276</sup>

In Belper (Derbyshire), *England*, a flood carried away the bridge over the River Derwent and did other damage.<sup>47, 92</sup>

In northern *France* the rains of 1734 caused the Marne, the Meuse and Moselle rivers to overflow their banks at the beginning of July. There were heavy rainfalls again at the end of December.<sup>79</sup>

On two particular days [27 June and 20 & 25 July] in 1734, the temperature in Petersburg [St. Petersburg, *Russia*] rose on the de Lisle thermometer to 96° D [96.8° F, 36° C].<sup>296</sup>

On 13 July 1734, there was a great rain at Ashby-de-la-Zouch in Leicestershire, *England*. On 9-10 August, there was a thunderstorm. On 11 & 26 August, there were gales.<sup>212</sup>

In 1734, the price of wheat [in *England*] averaged 39 shillings per quarter [quarter ton].<sup>212</sup>

In Falmouth [now Portland, Maine] in the *United States*, the weather was recorded as:

January 11<sup>th</sup> – blustering and cold. January 19<sup>th</sup> – rain. January 28<sup>th</sup> – pretty comfortable. February – pleasant weather generally this month, though some days were cold. March – all along warmer and pleasanter than April last year. April 4<sup>th</sup> – as hot a day as found in summer. April 19<sup>th</sup> – Jack finished planting potatoes. April 25<sup>th</sup> – there was vastly more potatoes planted the year than ever. May 9<sup>th</sup> – though the spring was at first very forward, things didn't progress as promised. May 22<sup>nd</sup> – very warm and pleasant. June 21<sup>st</sup> – there never was (I believe) such a year for grass. July 4<sup>th</sup> – the raspberries began to ripe. July 8<sup>th</sup> – We hear that at Boston, people died of excessive heat. July 23<sup>rd</sup> – it is (I believe) as fruitful a year as ever was. September 6<sup>th</sup> – extraordinary cold. September 13<sup>th</sup> – pleasant. September 30<sup>th</sup> – we began to dig our potatoes, so early, because we have so many to dig. November 1<sup>st</sup> – feed is good yet. December – to the end of this month the weather was very moderate.<sup>78</sup>

In 1734, the island of Barbados in the *Lesser Antilles* suffered severely from want of rain. Several inhabitants perished from famine.<sup>143</sup>

In 1734, a hurricane did great damage on the island of *Jamaica* and to the shipping.<sup>143</sup>

A hurricane struck *Jamaica* on September 1, 1734.<sup>40, 41, 42, 43, 56</sup>

On 1 September 1734, a violent hurricane struck *Jamaica* which did unspeakable damage on that island, and not a little to the shipping.<sup>276</sup>

On 1 October 1734, there was a violent gale with heavy rains at Chester, *England*. This produced a great flood on the River Dee.<sup>212</sup>

On 1 October 1734, *England* reported, “By high winds and great rains the works for making the River Dee, near Chester, navigable were much damaged, the banks broken down, and such vast quantities of sand drove in as to render the design impracticable.”<sup>276</sup>

On 26 November 1734 in *England*, “It blew a hard storm in the Downs, and 2 ships, viz. the *Joseph and Jane*, and the *Two Friends*, were drove ashore but the men saved.”<sup>276</sup>

On 26 November 1734, there was a violent gale at the Downs [sea area between Goodwin Sands and the East Kent coast] in *England*.<sup>212</sup>

On 30 November 1734, *England* reported, three French and two Dutch ships were lately lost on the *Isle of Wight*, also the *Angola Merchant* was entirely lost but her men saved in a sudden squall in Hyle-Lake Harbor.<sup>276</sup>

In 1734 during the period between 5 February and 6 May, a drought engulfed Shantung (now Shandong province) on the east coast of *China* at Chiao. During the period between 4 April and 2 May, floods struck Chahar province (now eastern *Inner Mongolia*) at Huai-an. During the period 1-29 July, a drought engulfed Shensi (now Shaanxi province) in central *China* at T’ung-kuan and Kan-ch’üan.<sup>153</sup>

In 1734 during the summer, there was a great drought in the vicinity of Shanghai, *China* and an epidemic.<sup>166</sup>

**Winter of 1734 / 1735 A.D.** A very violent wind from the southwest reigned in Paris, *France* towards the end of December 1734. A great storm, accompanied by lightning and thunder, mingled with the winds on December 25<sup>th</sup>.<sup>79</sup>

On 6 January 1735, the temperature in Siberia at Kirenginiki in *Russia* was -120° F (-84° C).<sup>28</sup>

On 8 January 1735, a great gale struck *England*, *France* and *the Netherlands*. So violent a one has not been known since the memorable one of November 1703. In London, *England*, several houses were blown down, windows shattered, and almost every street covered with [roof] tiles. In the country churches were stripped, and many barns and some houses were blown over; trees without number were torn up by the roots, and [ship] wrecks without number everywhere along the coast. At Portsmouth and Plymouth several ships of the Royal Navy were driven ashore. In St. James’s Park, London, 36 large trees were laid flat; 300 in the parish of Stockton, Wiltshire; 100 in the Duke of Queensberry’s paddock, at Amesbury, and 80 in St. Pier’s Walk, Monmouthshire. Damages to the amount of £2000 was done in Mr. Scawen’s park, at Carshalton, Surrey; the great rains before and during the storm caused the rivers to overflow the lowlands, drowning sheep and cattle. Both gale and inundations general throughout *England*. Of 100 ships in the Texel, Amsterdam [in *the Netherlands*], only 17 rid [rode] out this great storm; and at Newport a fourth part of the houses were blown down. At Darlington, Durham [in *England*], the gale N.E., with snow. Barometer on the 7<sup>th</sup>, in the evening, 29.0 inches (wind S.W.), 8<sup>th</sup> a.m. 28.38 [inches], 4 p.m. 28.05 [inches], 10 p.m. 28.45 [inches]. At Ashby-de-la-Zouch [in *England*] the greatest gale ever heard of in the south of *England* (extending into *France* and Holland [now *the*

*Netherlands*]). Barometer on 4<sup>th</sup> at night 29.9 [inches]; 5<sup>th</sup> at night 29.7 [inches]; 6<sup>th</sup> at night 29.2 [inches]; 7<sup>th</sup> at night 28.1 [inches]; 8<sup>th</sup> at noon 27.9 [inches] (lower by 0.1 inches than ever known.<sup>212</sup>

On 8 January 1735, a storm struck *England*. “About an hour before noon, the wind increased to a storm, at W. [west] and W.S.W. [west southwest] so violent as has not been known since the memorable one November 27, 1703; in comparison of which it was of longer continuance, but some think not quite so violent. In London it threw down several houses and stacks of chimneys, shattered windows, and almost covered every street with [roof] tiles; in the country churches were stripp’d [stripped], many barns and some houses blown down, and trees without number torn up by the roots, and laid cross the roads. But the greatest damage was done to the shipping; wrecks were to be seen every-where along the coasts; several ships of the Royal-Navy, at Portsmouth and Plymouth were drove ashore, or lost their masts, and riggings; several boats were cast away on the [River] Thames, but larger vessels escaped better there than in other harbours. Thirty-six large trees were laid flat in St. James’s Park; 360 in the parish of Stockton, Wiltshire; 100 in the D. of Queensberry’s Paddock at Amesbury; 80 in St. Pier’s Walk in Monmouthshire [Wales]; 2000 *l.* damage done to the fine grotto, park and park walls of Mr. Scawen at Carshalton, Surry [Surrey]. The rivers being high from the great rains before, and during the storm, the waters were forced over their banks and overflowed the low lands; sheep and other cattle were lost in some places, in others the people took to their upper rooms to secure themselves from the inundations that were on every side. But we have not room to enumerate more particulars of the damage done before 6 o’clock in the evening, about which time it abated; nor indeed is it necessary; for the effects of it were perceived in much the same manner, at the same time, in every corner of the Kingdom, and consequently by all our readers. But we must not omit the good, occasioned by this dreadful tempest, to the Harbour of Wisbech, which is deepened by the freshes [freshets] to above 15 foot water, so that ships come up to the town, which saving Lighteridge, will be of great service to the trade of that part. The price of tiling and workmen was raised double in many places on this occasion.”<sup>277</sup>

---

**1735 A.D.** The peak summer temperature in Port Louis, *Mauritius*, occurred in January and was 90.7° F (32.6° C).<sup>62</sup> [Mauritius is an island nation off the southeast coast of the African continent in the southwest Indian Ocean.]

In February 1735, at Dagenham, and upon the coast of Essex, *England*, an inundation carried away the sea walls, and drowned several thousand sheep and black cattle.<sup>40, 41, 43</sup> [Dagenham is now London, in the Riverside section of the Thames Gateway redevelopment area.]
